From: Commanding Officer, Naval Ordnance Safety and Security Activity

Subj: NAVAL SEA SYSTEMS COMMAND SW020-AC-SAF-010, REVISION NINETEEN,  
"TRANSPORTATION AND STORAGE DATA FOR AMMUNITION, EXPLOSIVES,  
AND RELATED HAZARDOUS MATERIALS" OF 1 AUGUST 2016

1. This letter issues Naval Sea Systems Command (NAVSEA) SW020-AC-SAF-010, Revision Nineteen, which is replicated on the Explosives Safety Technical Manuals (ESTM) DVD. It supersedes NAVSEA SW020-AC-SAF-010, Revision Eighteen of 1 August 2015.
2. NAVSEA SW020-AC-SAF-010 provides information necessary for the safe storage and transportation of Navy and Marine Corps ammunition and explosives. This revision adds data for newly cataloged ammunition items and updates data for existing items in Table 3-1, "Detailed Ordnance Transportation and Storage Data." The text in the beginning of the manual has not been changed with Revision Nineteen.
3. The Naval Ordnance Safety and Security Activity's point of contact is Mr. Ed Walseman (N851) on commercial (301) 744-6021 or email: [ed.walseman@navy.mil](mailto:ed.walseman@navy.mil).

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

Reproduction for nonmilitary use of the information or illustrations contained in this publication is not permitted. This does not preclude reproduction and use of any part of this manual by contracted agencies responsible for the training and instruction of personnel who handle and transport military ammunition, explosives, and related hazardous materials. The policy for military use reproduction is established for the Army in AR 380-5, for the Navy and Marine Corps in [SECNAVINST 5510.36 \(series\)](#), and for the Air Force in Air Force Regulations 205-1.

### LIST OF EFFECTIVE PAGES

The total number of pages in this manual is TBD. They are all original Revision Nineteen pages. The date of issue for all pages in this manual is 1 August 2016. Change bars are included to assist the reader in identifying areas where changes to requirements/procedures have occurred.

This page left intentionally blank

## FOREWORD

1. "Transportation and Storage Data for Ammunition, Explosives, and Related Hazardous Materials (Formerly NAVSEA OP 5 Volume 2 and NAVSEA OP 2165 Volume 2)" provides safety and security sensitive information designed to ensure compliance with existing Federal, Department of Defense, Navy and Marine Corps safety and security regulations. This manual is intended for use by Navy and Marine Corps military and civilian personnel and contractor personnel who are tasked with duties and responsibilities that involve the safe and secure handling, storage, and transportation of military ammunition, explosives, and related hazardous materials. The data provided herein shall be used in conjunction with the explosives safety criteria provided by [NAVSEA OP 5 Volume 1](#), "Ammunition and Explosives Safety Ashore and [NAVSEA SW020-AG-SAF-010](#), "Navy Transportation Safety Handbook: Ammunition, Explosives, and Related Hazardous Materials".
2. This publication supersedes NAVSEA SW020-AC-SAF-010 Revision Eighteen dated 1 August 2015, which should be destroyed.
3. This publication is not intended to supersede, contravene, or modify any Federal, state, municipal, or local laws and their supplements. If any provision of this publication appears to conflict with any other published regulation, this fact should be reported in detail to the Commanding Officer, [Naval Ordnance Safety and Security Activity \(NOSSA\)](#) (Code N8).
4. A formal update to NAVSEA SW020-AC-SAF-010 is issued annually on the Explosives Safety Technical Manuals (ESTM) DVD. However, data applicable to the transportation and storage of Navy ammunition and explosives is updated on a continuing basis. The most current file containing the [table 3-1](#) is captured and published each month on the NOSSA website, <https://nossa.nmci.navy.mil>. This file is annotated "Data Current as of (Month/Year)" and may be considered the latest version of SW020-AC-SAF-010, [table 3-1](#), "Ammunition and Explosives Storage and Transportation Data". Where a conflict arises between the data contained on the latest ESTM DVD and the data found on the NOSSA website file discussed above, the NOSSA website file takes precedence. Comments on or questions relative to the data contained in this manual should be forwarded as specified in chapter 1.
5. Certain provisions of this technical manual ([paragraph 3-2.5.1](#)) are the subject of the international standardization agreement [NATO (STANAG) 1380]. When changes, revision, or cancellation of this technical manual is proposed which will modify the international agreement concerned, the technical manual management activity will take appropriate action through international standardization channels including departmental standardization offices to change the agreement or make other appropriate accommodations.

## SAFETY SUMMARY

This publication is a safety manual which provides in tabular format the various data and classifications necessary for safely handling, shipping and storing ammunition, explosives, and related hazardous materials. By the nature of the subject matter, the entire content of this manual is a warning to the user. Detailed safety precautions for storing and transporting Navy and Marine Corps ammunition are prescribed in [NAVSEA OP 5 Volume 1](#) and [NAVSEA SW020-AG-SAF-010](#) (formerly OP 2165 Volume 1) respectively, which should be used in conjunction with this manual.

### NOTE

[49 CFR 107.329 \(a\) and 171.1\(g\)](#) state that any person who knowingly violates a requirement of the Federal Hazardous Material Transportation Regulations is liable for a civil penalty of not more than \$75,000 for each violation, except that the maximum civil penalty is \$175,000 for a violation that results in death, serious illness or severe injury to any person or substantial destruction of property. There is no minimum civil penalty, except for a minimum civil penalty of \$450 for violations relating to training. When the violation is a continuing one, each day of the violation constitutes a separate offense. ([Page 1-2.](#))

### NOTE

The regulations contained in archived versions of 49 CFR are still referenced when applying grandfather provisions; see <http://www.gpo.gov/fdsys/browser/collectionCfr.action?collectionCode=cfr>. ([Page 1-2.](#))

### NOTE

Hazard Class 1 materials packaged prior to January 1, 1990 do not require POP test certification markings for highway, rail, and military air shipments within CONUS. Shipments can be made under IMDG using this clause. ([Page 1-2](#))

### NOTE

Forbidden explosives (substances, articles, devices) are defined in [49 CFR 173.54](#). Only those explosives that are hazard classified in accordance with 49 CFR can be offered for transportation in the public domain. Authority to assign hazard classifications for explosives is delegated to [NOSSA \(N851\)](#). ([Page 1-4.](#))

**NOTE**

Where sufficient stowage space is available, it is desirable to store bulk high explosives (HE) separately from ammunition containing HE even though they are both in the same compatibility group. (Page 2-6)

**NOTE**

Some compatibility group G articles may contain air activated (pyrophoric) material. These articles are assigned a “G” only if they are designed such that the pyrophoric properties in the storage and transportation configuration do not present a special risk. (Page 2-6)

**NOTE**

Shippers are cautioned that 49 CFR requires a final hazard classification signaled by an explosive (EX) number, an interim hazard classification, or other approved method to ship an explosive or explosive item. If an EX number is not listed in this publication, contact NOSSA (Code N851), Farragut Hall, 3817 Strauss Avenue, Suite 108, Indian Head, MD 20640-5151 on (301) 744-6021 for an interim hazard classification or other appropriate resolution. (Page 2-13.)

**NOTE**

DOT has determined that a combination or composite packaging may be marked as being “manufactured” on the date on which the packaging was assembled. “Assembly” is the physical act of placing inner packagings or a liner into an outer packaging. (Page 2-15)

**CAUTION**

Users should take note of the difference in structure of tables 2-4, 2-5, and 2-6. Table 2-6 is presented in the reverse format of the previous two tables; e.g., “X” denotes incompatibility in tables 2-4 and 2-5, and compatibility in table 2-6. (Page 2-21.)

**NOTE**

At locations that are designated by NOSSA and site approved by the DDESB to store ammunition and explosives packaged for rapid response (e.g., Rapid Deployment Force), compatibility groups may be mixed in storage as required to achieve the optimum load needed by the receiving troops. The total explosives content at these locations shall not exceed 8,820 pounds net explosive weight, based upon NAVSEA OP 5 Volume 1 paragraph 11-2.2.1.3 factors. QD requirements of OP 5 Volume 1 chapter 7 apply. (Page 2-22.)

**NOTE**

Prior to release of a commercial international shipment, explosives and explosive items must have a final hazard classification/EX number assigned. Domestic shipments may be shipped under a final hazard classification/EX number or an interim hazard classification. Procedures for obtaining hazard classifications are contained in [NAVSEAINST 8020.8 \(series\)](#). Further questions regarding hazard classifications should be directed to [NOSSA \(Code N851\)](#), Farragut Hall, 3817 Strauss Avenue, Suite 108, Indian Head, MD 20640-5151 on (301) 744-6021. ([Page 3-3.](#))

**NOTE**

POP test markings not contained in this publication will appear in revisions of this publication as the information becomes available. ([Page 3-3.](#))

**NOTE**

Data is continuously being added to the contents of this manual. Ordnance In-Service Engineering Activities (ISEAs) and other users are encouraged to provide data, such as outer pack shipping package drawing numbers and item weight/volume/dimensions, so that areas in which data is missing can be populated. ([Page 3-4.](#))

**NOTE**

Storage temperature limitations will appear in this publication as the information becomes available. Some items currently have temperature limits stenciled on their containers or on the item itself, and frequently storage temperature limitations are identified in the technical manual for the item. ([Page 3-6.](#))

**NOTE**

Transportation and storage NEW's, [figure 3-1](#), fields 9 and 10, may differ. See definitions for transportation and storage NEW's in [paragraphs 3-2.7.1 and 3-2.7.2.](#) ([Page 3-6.](#))

This page left intentionally blank

## CHAPTER 1

### INTRODUCTION

**1-1. PURPOSE.** This publication is intended to provide the most current data necessary for the safe storage and transportation of Navy and Marine Corps conventional ammunition, explosives, and related hazardous materials. Data is given on each explosive round or component, including its description, packaging details, requirements for international and domestic transportation, storage requirements, and any loading documentation available on the item.

**1-2. SCOPE.** All personnel, including contractors, at Naval and Marine Corps activities employed or under contract to the U.S. Government, or engaged in activities covered by this instruction, wherever situated, who are engaged in handling, reporting on, inspecting, storing or transporting ammunition and explosives are responsible for adhering to the criteria presented in this manual. Naval ordnance stations, weapons stations, magazines, ordnance facilities, air stations and facilities; Marine Corps air stations, bases; submarine support facilities; as well as commercial contractors and explosives drivers employed by the U.S. Government, shall refer to this publication for shipping and storage classifications and instructions. All personnel at Naval and Marine Corps activities who are concerned with handling, reporting on, inspecting, storing, or transporting ammunition and explosives are responsible for adhering to the criteria presented in this manual. As a general rule, inert and nonhazardous items are not listed in this manual. Not regulated items described in [paragraph 2-2.4](#) are listed. Ordnance which has not yet been assigned a National Stock Number (NSN) is not included in this manual.

**1-3. BACKGROUND.** This publication contains all ammunition, explosive, and related hazardous material transportation and storage classifications, including package marking, explosive weights, metric conversions, etc. in one comprehensive document, precluding the need to refer to separate source documents for other applications. The hazardous classifications shown herein have been assigned by the [Department of Defense \(DOD\)](#) in conjunction with the Department of Defense Explosives Safety Board (DDESB) and applied to the storage and transportation configuration of the item. The classifications coincide with the provisions established by the [Department of Transportation \(DOT\)](#) per the requirements of [49 Code of Federal Regulations \(CFR\)](#) and [NAVSEAINST 8020.8 \(series\)](#). Classifications are based upon explosives safety tests. In some instances, existing test reports and analyses of similar, previously classified ordnance items are used. Provided the item configuration or packaging does not change, final hazard classifications are issued for the life of the item. Final classification is tracked using an explosive registration number, or EX-number assigned by the DOT; see [paragraph 2-3.6.2](#).

**NOTE**

49 CFR 107.329 (a) and 171.1(g) state that any person who knowingly violates a requirement of the Federal Hazardous Material Transportation Regulations is liable for a civil penalty of not more than \$75,000 for each violation, except that the maximum civil penalty is \$175,000 for a violation that results in death, serious illness or severe injury to any person or substantial destruction of property. There is no minimum civil penalty, except for a minimum civil penalty of \$450 for violations relating to training. When the violation is a continuing one, each day of the violation constitutes a separate offense.

**1-4. INCLUSION OF INTERNATIONAL REGULATIONS.** The DOT has converted to the United Nations (UN) system of hazardous material regulations. This includes the adoption of Performance Oriented Packaging (POP), which relies on performance testing criteria vice detailed packaging specifications as well as classification of materials, hazard communication (e.g., package marking, labeling, placarding, and shipping documentation descriptions), transportation, and handling. 49 CFR has been amended to reflect changes which align the CFR with international regulatory documents; e.g., [International Maritime Dangerous Goods \(IMDG\) Code](#) and the [International Civil Aviation Organization's \(ICAO\) Technical Instruction](#). This has aligned the U.S. regulations with the international hazardous material shipping regulations which went into effect for international shipments on 1 January 1991.

**NOTE**

The regulations contained in archived versions of 49 CFR are still referenced when applying grandfather provisions; see <http://www.gpo.gov/fdsys/browser/collectionCfr.action?collectionCode=cfr>.

**NOTE**

Hazard Class 1 materials owned by DOD and packaged prior to January 1, 1990 do not require POP test certification markings for highway, rail, and military air shipments within CONUS. Shipments can be made under IMDG using this clause.

**1-4.1 GRANDFATHER PROVISIONS.** This publication will address both the old and new hazard communication and transportation description requirements. This information is provided because shippers will be required to use both sets of data since some items will be transported using the pre-UN DOT markings and packaging when traveling under grandfather provisions. One grandfather provision applies to both domestic and international shipments. DOD hazard Class 1 materials which were packaged prior to 1 January 1990 do not require POP test certification markings. This exception is permitted under [49 CFR 173.7\(e\)](#) and applies to vessel, highway, rail, and military air shipments only. Packages offered for military air shipment must be marked with all other UN markings. Shipping documents must reflect the UN proper shipping name, hazard classification, UN identification number, and declare that the packages are being shipped under this exception. It does not apply to international and domestic commercial air shipments. The grandfather date applies to the date the item was physically packaged and not the manufactured date of the container. Under the grandfather

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

provision, a shipper can remove the item from the package without voiding the grandfather as long as the package is resealed to the same degree as it was prior to being opened.

1-4.2 METRIC SYSTEM OF MEASUREMENT. This publication also includes metric conversion data to facilitate transition to the metric system of measurement and in conjunction with the addition of metric units to the [49 CFR](#). Use of metric units has become essential with the adoption of the international modal regulations.

**1-5. ORGANIZATION OF MANUAL.** This manual is organized in the manner described in the following paragraphs.

1-5.1 INTRODUCTION. Chapter 1 contains the introductory material to this manual, including its purpose, scope, and the background and source of the data presented. Directions as to how to obtain data on items not listed are given in [paragraph 1-6](#).

1-5.2 ORDNANCE CLASSIFICATION. [Chapter 2](#) describes the various methods of ordnance classification, and provides details on how appropriate classifications are assigned to each ammunition item.

1-5.3 DETAILED ORDNANCE TRANSPORTATION AND STORAGE DATA. [Chapter 3](#) introduces [table 3-1](#), "Detailed Ordnance Transportation and Storage Data". In the first part of the chapter, each data element in the table is identified and explained. The remainder of the chapter consists of [table 3-1](#).

1-5.4 DEFINITIONS AND ABBREVIATIONS. The definitions of the terms and the meaning of the abbreviations used in this publication are listed in a separate file on this [DVD](#).

1-5.5 REFERENCE DOCUMENTS. A list of documents containing all types of information and data that are applicable to and referenced throughout this publication is presented in a separate file on this [DVD](#). These documents, together with station instructions and notices, technical publications, and Standard Operating Procedures (SOP's) shall be maintained in appropriate libraries as a collection of current information pertaining to storage of ammunition and explosives. These documents are essential for complete understanding of the safety regulations contained in this manual.

**1-6. SOURCES OF ADDITIONAL DATA.** For data not shown in this publication, urgently needed data shall be requested from the [Naval Ordnance Safety and Security Activity \(NOSSA\)](#), Code N851. When requesting data on an item not covered in this publication, provide as much of the following data as possible:

- a. Department of Defense Identification Code (DODIC) [Navy Ammunition Logistic Code (NALC)], National Stock Number (NSN), and nomenclature, or description of the item.
- b. Explosive type(s), weight(s) and characteristics of the item.
- c. A description of the function of the item (explosive power device, detonator, explosive release device, pyrotechnic, etc.) with supporting drawings, test data, and other information which will assist in the classification of the item.

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

d. A description of the packaging including the gross packaged weight; i.e., the weight of the packaging plus the weight of its contents.

### NOTE

Forbidden explosives (substances, articles, devices) are defined in [49 CFR 173.54](#). Only those explosives that are hazard classified in accordance with 49 CFR can be offered for transportation in the public domain. Authority to assign hazard classifications for explosives is delegated to [NOSSA \(N851\)](#).

**1-7. REPORTING OF ERROR/OMISSIONS IN MANUAL.** Ships, training activities, supply points, depots, Naval shipyards, and supervisors of shipbuilding are requested to arrange for the maximum practical use and evaluation of NAVSEA technical manuals. All errors, omissions, discrepancies, and suggestions for improvement to NAVSEA technical manuals shall be reported to the Commander, Naval Surface Warfare Center, Port Hueneme Division (NSWC/PHD) (Code 312), 4363 Missile Way, Port Hueneme, CA 93043-4307 on NAVSEA Technical Manual Deficiency/Evaluation Report (TMDER), NAVSEA Form 4160/1. A [copy of NAVSEA TMDER Form 4160/1](#) is included at the end of this publication. For activities with internet access, this form may also be completed and processed using NSWC/PHD website: <https://nsdsa.nmci.navy.mil>. To expedite a response, submit comments, recommendations for change, or requests for clarification directly to: [ihdiv\\_g\\_estm\\_pubs@navy.mil](mailto:ihdiv_g_estm_pubs@navy.mil). All feedback comments shall be thoroughly investigated and originators will be advised of resolution. If you prefer to submit a TMDER using a word format, [click here](#).

**1-7.1 OTHER REQUIRED DOCUMENTATION NOT SUPPLIED IN THIS PUBLICATION.** Refer to [NAVSEA SW020-AG-SAF-010](#) (formerly OP 2165 Volume I) for a discussion of all documents which must accompany a hazardous material shipment, and those reports required for conveyance and load inspection; accident, theft, and discrepancy reporting; and routing of shipments. Refer to [NAVSEA OP 5 Volume 1](#) for the logs which shall be maintained for magazines and their contents. Magazine storage layout information is located in [NAVSEA OP 5 Volume 1](#).

**1-7.2 ADDITIONAL INFORMATION REGARDING MARINE CORPS ORDNANCE.** Readers should also refer to the Naval Surface Warfare Center (NSWC)/ Crane document NSWC/CR/RDTR-96K for illustrations of packaging configurations and unit loads used for Marine Corps Class V(W) material.

**1-8. DATE OF PUBLICATION.** The date of publication of this technical manual, and of future changes and revisions issued to this manual as shown on the title page, is the estimated date of distribution. The manual, revision, or change is, however, effective upon receipt, regardless of the date shown on the title page.

## CHAPTER 2

### ORDNANCE CLASSIFICATION

**2-1. GENERAL.** This chapter describes the various methods of classifying ordnance for transportation and storage purposes. [Tables 2-1](#) and [2-2](#) are provided to explain some of the relationships among the classification elements, and [tables 2-4](#), [2-5](#), and [2-6](#) give the reader quick reference to the compatibility requirements applicable to each class.

**2-2. HAZARD CLASSIFICATION/COMPATIBILITY GROUPS.** Ordnance is classified by hazard Class/Division (C/D) and the compatibility group. A hazard classification is based on the chemical and physical characteristics of the item and its reaction in its packaged configuration under various test conditions.

**2-2.1 HAZARD CLASS.** Nine hazard classes, plus a not regulated category, for hazardous materials have been established by the [United Nations \(UN\)](#) Committee of Experts on the Transport of Dangerous Goods. Items or articles possessing more than one hazardous material or hazard are assigned to the class that represents an item's predominant hazard characteristic. The hazard classes are listed in [table 2-1](#).

**2-2.1.1 Hazard Class/Divisions.** Some hazard classes are further divided into divisions. These divisions have also been established by the UN Committee of Experts on the Transport of Dangerous Goods and are indicated in [table 2-1](#). Hazard C/D's are referred to using decimal notation. A Class 1, Division 1 hazard for example, is designated by "Class/Division 1.1". The degree of safety protection required by each explosive hazard C/D assignment is described in detail in [NAVSEA OP 5 Volume 1](#). Refer to [49 CFR 173](#) for complete hazard class/division definitions. In addition, DOD has further divided C/D 1.2 into three subdivisions for storage purposes only, C/D 1.2.1, 1.2.2, and 1.2.3; see [NAVSEA OP 5 Volume 1](#).

**2-2.1.2 Minimum Separation Distance.** A numerical figure in parentheses may be shown to the left of the C/D designators, indicating the minimum separation distance, in hundreds of feet, needed for protection from debris, fragments and firebrands, when distance alone is relied on for protection. The minimum separation distance is shown, for example, as "(18)1.1D". In this example, "(18)" indicates a minimum separation of 1800 feet, "1.1" indicates the hazard C/D and "D" indicates the compatibility group described in [paragraph 2-2.5](#).

**Table 2-1. Hazard Classes, Divisions and Associated Hazards\***

DIVISION DESIGNATOR	TYPE OF HAZARD
<b>Class 1. Explosives.</b>	
1	Mass explosion
2	Fragment producing; non-mass explosion
3	Mass Fire, minor blast and/or minor fragment; non-mass explosion
4	Moderate fire, no significant blast or fragment; non-mass explosion
5	Very insensitive explosive substance with a mass explosion hazard
6	Extremely insensitive explosive article; non-mass explosion
<b>Class 2. Gases.</b>	
1	Flammable gas
2	Non-flammable, non-poisonous compressed gas
3	Gas poisonous by inhalation
<b>Class 3. Flammable Liquids.</b>	
<b>Class 4. Flammable Solids.</b>	
1	Flammable Solid
2	Spontaneously combustible material
3	Dangerous when wet material
<b>Class 5. Oxidizing Substances and Organic Peroxides.</b>	
1	Oxidizer
2	Organic peroxide
<b>Class 6. Toxic and Infectious Substances.</b>	
1	Poisonous material
2	Infectious substance
<b>Class 7. Radioactive Materials.</b>	
<b>Class 8. Corrosive Materials.</b>	
<b>Class 9. Miscellaneous Hazardous Materials.</b>	

\*The numerical order of the classes and divisions is not that of the degree of danger.

## 2-2.2 ASSIGNING HAZARD CLASSIFICATIONS.

2-2.2.1 Final Hazard Classifications. A final hazard classification is the ultimate United States approval for transportation, and storage of explosives and explosive items. It has been reviewed and approved through [Department of Defense \(DOD\)](#) and [Department of Transportation \(DOT\)](#) channels. The completion of this process is with the DOT assignment of an Explosive (EX) number. A final hazard classification is valid for DOD storage worldwide and for all modes of transport departing, entering, or moving within the United States. Transportation within a foreign country may require coordination with the host nation's

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

Competent Authority. A final hazard classification is normally assigned after the operational evaluation and pre-production phase of development but prior to approval for full production.

2-2.2.2 Interim Hazard Classifications. Many new explosives and explosive items are assigned an interim hazard classification by DOD during item development. This satisfies communication requirements for transportation and storage of the explosive commodity during the operational evaluation and pre-production phase of development. Proper shipping name, compatibility group, UN identification number, and labeling requirements are assigned at the time of interim hazard classification. The interim hazard classification is issued for transportation for a period of up to one year. Extension beyond one year for transportation requires a renewal. The use of an interim hazard classification, exclusively for storage, is permitted beyond the one year expiration without renewal. An interim hazard classification is valid for DOD storage worldwide, for all modes of domestic transportation, and for military transport departing, entering, or moving within the United States. Transportation within a foreign country may require coordination with the host nation's Competent Authority. A copy of the interim hazard classification must accompany each shipment; i.e., it must be attached to the shipping papers. Each service within DOD has the ability to assign interim hazard classifications. An Army or Air Force interim hazard classification may be used to satisfy, and is acceptable for, Navy transportation and storage requirements.

2-2.2.3 Procedures for Obtaining Final and Interim Hazard Classification Assignments. Procedures for obtaining hazard classifications are contained in [NAVSEAINST 8020.8 \(series\)](#). Further questions regarding hazard classifications should be directed to [NOSSA](#), Code N851, located at Farragut Hall, 3817 Strauss Avenue, Suite 108, Indian Head, MD 20640-5151, telephone (301) 744-6021.

2-2.3 STORAGE AND TRANSPORTATION WITHOUT DOD HAZARD CLASSIFICATION. Occasions may arise in which it is necessary to store on DOD property, or offer for transportation by military or commercial carriers, explosive substances or articles containing explosives that do not have final or interim DOD hazard classifications assigned. Other types of hazard classifications may be used in these situations in accordance with the options and conditions described below. If in addition, the ammunition or explosive is non-DOD developed (owned or not owned), the requirements of [NAVSEA OP 5 Volume 1](#) also apply.

2-2.3.1 Storage and transportation of articles or substances in accordance with interim hazard classifications assigned by DOE is permitted, and conversely, DOE may use DOD interim hazard classifications. A copy of the interim hazard classification must be carried with the shipping papers onboard each conveyance being used to transport explosives under that interim classification. A copy of the applicable interim hazard classification must also be kept on file at the installation where items are stored.

2-2.3.2 Storage and transportation of articles or substances in accordance with final hazard classifications assigned by DOE is permitted, and conversely, DOE may use DOD final classifications. For storage using DOE final hazard classifications, installation records shall reflect the DOT EX-number, class, division, compatibility group and net explosive weight (NEW) for each item stored.

2-2.3.3 Storage and transportation of commercially produced articles or substances in accordance with DOT hazard classifications obtained by the manufacturer is permitted. For

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

storage using DOT classifications, installation records shall reflect the DOT EX-number, class, division, compatibility group and net explosive weight for each item stored. The classification assigned to small arms cartridges by the manufacturer as prescribed in [49 CFR 173.56\(h\)](#) may also be used for storage and transportation without a DOD hazard classification. The following exceptions and conditions apply to storing and shipping commercial explosive products without DOD hazard classifications.

a. This is not applicable to commercial explosive items adopted as standard DOD inventory items as evidenced by centralized Navy item management and assignment of a National Stock Number (NSN). Such items must be hazard classified by DOD.

b. This is not applicable to commercial fireworks. Commercial fireworks shall be stored in accordance with procedures established in [NAVSEA OP 5 Volume 1](#) paragraph 2-1.4.13.

c. A commercial product received as Black Powder for Small Arms, Class 4.1, Identification Number NA0027, must be stored as Black Powder, C/D 1.1D.

d. A commercial product received as Smokeless Powder for Small Arms, Class 4.1, Identification Number NA3178, must be stored as Powder, Smokeless, C/D 1.3C.

e. A commercial product received as Cartridges, Small Arms, ORM-D, must be stored as C/D 1.4C unless a different hazard classification based on packaging issued by a DOD or DOE interim hazard classification authority is on file at the installation.

f. Articles or substances hazard classified as C/D 1.5 must be stored as C/D 1.1 in accordance with the compatibility group assigned.

g. Articles or substances hazard classified by DOT as C/D 1.2 must be stored as C/D 1.2.1 in accordance with the compatibility group assigned by DOT.

h. For quantity-distance purposes, the storage NEW of articles hazard classified by DOT or DOE as not regulated will equal zero. For all other explosive articles, the storage NEW will equal the transportation NEW.

i. All commercial articles or substances must be stored or transported in the same or equivalent packaging in which the manufacturer or vendor offers the items for transportation. As a minimum, the packaging must comply with the DOT packaging instruction associated with the hazard classification assigned.

j. The requirements of [NAVSEA OP 5 Volume 1](#) are met.

2-2.3.4 In research, development, test and evaluation environments, explosives samples, substances, subassemblies, and items may be acquired or produced that must be stored without DOD interim or final hazard classifications. In this circumstance, [NAVSEA OP 5 Volume 1](#) establishes procedures for assigning and documenting the hazard classification and compatibility group for storage and on-base/on-post transportation. Unless such a substance or item is a commercial product that has been assigned a hazard classification by the U.S. DOT, it

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

shall not be offered for transportation from the installation or development location until the necessary DOD interim hazard classification is received.

2-2.3.5 Foreign-owned military munitions brought onto Navy installations to support multi-national military training, exercises, or operations may be stored in accordance with the hazard classifications assigned by the appropriate foreign competent authorities or the U.S. DOT provided the requirements of [NAVSEA OP 5 Volume 1](#) are met. Installation records shall reflect the class, division, compatibility group and NEW for each item stored (in addition to the customary ammunition distribution and control record keeping procedures).

2-2.4 NOT REGULATED ITEMS. Not regulated items contain a small amount of hazardous material, but not enough to warrant a hazard classification for shipping and storage purposes. The hazardous material may be an explosive, flammable, corrosive or other material with properties described in [49 CFR](#). For transportation purposes, not regulated items should be shipped as described in [NAVSEA SW020-AG-SAF-010](#). For storage purposes, not regulated items may be stored as inert; see [NAVSEA OP 5](#). They may be stored with explosive substances or articles provided a compatibility group is listed in [table 3-1](#). If stored with explosives, compatibility requirements must be followed. Explosives safety quantity-distance requirements do not apply to not regulated items. Container certification for not regulated items is not required. If an item is classified as not regulated, N.R will appear in the Hazard Class field in [table 3-1](#). The following note, which appears in field number 39 of [table 3-1](#), applies to not regulated items containing explosive material: "Mark, label or tag outer shipping container with: Contains a minimal amount of explosive. However, does not meet the definition of explosive for shipping purposes." For not regulated items without explosive material or that contain thermal batteries, the note will be specific to the hazardous material contained within the item.

2-2.5 COMPATIBILITY GROUPS. Ammunition and explosives are assigned to a compatibility group (CG) when they can be stored and/or transported together without significantly increasing either the probability of an accident or, for a given quantity, the magnitude of the effects of such an accident. All ammunition and explosives assigned Class 1 shall be assigned a CG which is used for both transportation and storage. Not regulated ammunition and explosives and those assigned to Classes 2 through 9 may have a CG assigned which can be used for storage ashore. For Navy shipboard stowage/transportation of Classes 2 through 9 ammunition and explosives, consult the requirements of [NAVSUP 485](#) or [OPNAVINST 5100.19 \(series\)](#). For Navy shipboard stowage/transportation of Class 1 ammunition and explosives, refer to chapter 3 of [NAVSEA OP 4](#). For other means of transport, consult the governing regulation for the applicable transportation mode.

Compatibility groups are described as follows:

a. Group A - Initiating (primary) explosives. Bulk initiating explosives that have the necessary sensitivity to heat, friction, or percussion to make them suitable for use as initiating elements in an explosive train. Examples include bulk lead azide, lead styphnate, mercury fulminate, tetracene, dry cyclonite (RDX), and dry pentaerythritol tetranitrate (PETN). Group A materials are prohibited aboard combatant ships.

b. Group B - Detonators and similar initiating devices not containing two or more effective protective features. Items containing initiating explosives that are designated to initiate

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

or continue the functioning of an explosive train. Examples include detonators, blasting caps, small arms primers, and fuzes.

c. Group C - Bulk propellants, propelling charges, and devices containing propellant with or without its own means of ignition. Examples include bulk single-, double-, or triple-base, and composite propellants, rocket motors (solid propellant), and propelled ammunition and explosives with inert projectile.

d. Group D - Bulk black powder, bulk high explosive (HE) and ammunition and explosives without a propelling charge but containing HE without its own means of initiation (i.e., no initiating device is present or the device has two or more effective protective features). Examples are bulk trinitrotoluene (TNT), Composition B, and black powder, wet RDX or PETN, bombs, projectiles, cluster bomb units (CBU), depth charges, and torpedo warheads.

### NOTE

Where sufficient stowage space is available, it is desirable to store bulk HE separately from ammunition containing HE even though they are both in the same compatibility group.

e. Group E - Ammunition and explosives containing HE, without its own means of initiation (i.e., no initiating device is present or the device has two or more effective protective features), and either containing, or with, a solid propelling charge. Examples include artillery ammunition and explosives, rockets, and guided missiles.

f. Group F - Ammunition and explosives containing HE with its own means of initiation; that is, the initiating device present has less than two effective, protective features, and with or without a solid propelling charge. Examples include HE grenades, sounding devices, and similar items having explosive trains with less than two effective, protective features.

g. Group G - Illuminating, incendiary, and smoke (including hexachlorethane) or tear-producing ammunition and explosives excluding those that are water-activated (without safety feature) or that contain White Phosphorus (WP) or a flammable liquid or gel. Examples include flares, signals and pyrotechnic substances.

### NOTE

Some compatibility group G articles may contain air activated (pyrophoric) material. These articles are assigned a "G" only if they are designed such that the pyrophoric properties in the storage and transportation configuration do not present a special risk.

h. Group H - Ammunition and explosives containing WP. Ammunition and explosives in this group contain fillers that are spontaneously flammable when exposed to the atmosphere. Examples include WP and plasticized WP.

i. Group J - Ammunition and explosives containing flammable liquids or gels other than those that are spontaneously flammable when exposed to water or the atmosphere.

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

Examples include liquid- or gel-filled incendiary ammunition and explosives, fuel-air explosive (FAE) devices, and flammable liquid-fueled missiles and torpedoes.

j. Group K - Ammunition and explosives containing toxic chemical agents. Ammunition and explosives in this group contain chemicals specifically designated for incapacitating effects more severe than lachrymation (tear-producing). Examples include artillery or mortar ammunition and explosives (fuzed or unfuzed), grenades, rockets and bombs filled with a lethal or incapacitating chemical agent.

k. Group L - Ammunition and explosives not included in other CGs. Ammunition and explosives having characteristics that present a special risk that does not permit storage with other types of ammunition and explosives, or other kinds of explosives, or dissimilar ammunition and explosives of this group. Examples include water-activated devices (without safety feature), pyrophorics and phosphides and devices containing these substances, prepackaged hypergolic liquid-fueled rocket engines, triethyl aluminum, plasticized triethyl aluminum, and damaged or suspect ammunition and explosives of any group.

l. Group N - Ammunition and explosives containing only extremely insensitive substance (EIS). An example is hazard Class/Division 1.6 ammunition and explosives.

m. Group S - Ammunition and explosives that present no significant hazard. Ammunition and explosives packaged or designed so that any hazardous effects from accidental functioning are limited to the extent that they do not significantly hinder firefighting. Projections shall not exceed 6 ft-lb (8 joules (J)) in energy. Examples include explosive switches or valves, and some small arms cartridges.

### 2-2.6 RELATIONSHIP BETWEEN CLASS, DIVISION AND COMPATIBILITY GROUP.

[Table 2-2](#) shows the number of classification codes. The classification code consists of the three parts of a classification including class, division, and compatibility group. Altogether, there are 35 possible classification codes for explosives.

2-2.7 CHEMICAL GROUPS. For the purpose of storing and handling, chemical agents are divided into groups, based on the action of the agent, the degree and type of hazard and the type of protection required. Chemical groups are further described in [NAVSEA OP 5 Volume 1](#). The same group designations are used for agents and chemical ammunition. The chemical group is based on the chemical agent in the ammunition.

For more information on specific chemical agents, refer to NAVSEA SW073-AC-MMA-010 and [FM 4-02.285](#).

**2-3. TRANSPORTATION OF AMMUNITION AND EXPLOSIVES.** [49 Code of Federal Regulations \(CFR\)](#) provides the regulations and applicable dates for shipment of ammunition, explosives and related hazardous materials. For both domestic and international shipments, DOD hazard Class 1 materials which were packaged prior to 1 January 1990 may be transported under the grandfather goods provision of 49 CFR 173.7(e). This exemption applies to vessel, highway, rail, and military air shipments only. The obsolescent DOT transportation data in field 9 (see [figure 3-1](#)) of this manual is provided for shipments traveling under such grandfather provisions. The following paragraphs describe the various DOT and UN requirements when transporting ammunition, explosives, and related hazardous materials.

**NAVSEA SW020-AC-SAF-010 REVISION NINETEEN**

**Table 2-2. Classification Codes**

HAZARD DIVISION	COMPATIBILITY GROUP													
	A	B	C	D	E	F	G	H	J	K	L	N	S	A-S
1.1	1.1A	1.1B	1.1C	1.1D	1.1E	1.1F	1.1G	....	1.1J	....	1.1L	....	....	9

1.6	....	....	....	....	....	....	....	....	....	....	....	1.6N	....	1
<b>1.1 - 1.6</b>	<b>1</b>	<b>3</b>	<b>4</b>	<b>4</b>	<b>3</b>	<b>4</b>	<b>4</b>	<b>2</b>	<b>3</b>	<b>2</b>	<b>3</b>	<b>1</b>	<b>1</b>	<b>35</b>

2-3.1 BILL OF LADING (BL) DESCRIPTION. There are two kinds of BL acceptable for use in the DOD cargo transport system. They are the Government Bill of Lading (GBL) and the Commercial Bill of Lading (CBL). Specific instructions for completing the Bill of Lading (BL) are defined in the [Defense Transportation Regulation DTR 4500.9-R, Part II](#), Cargo Movement and [NAVSEA SW020-AG-SAF-010](#). The BL accompanies the shipment and must be annotated with a description of the hazardous materials included in the shipment. As a minimum, the BL must include:

- a. the name of the shipper.
- b. an emergency response telephone number [see [NAVSEAINST 8020.18 \(series\)](#)].
- c. a description of the hazardous material to be shipped, consisting of the following:
  - (1) the UN identification number;
  - (2) proper shipping name of the item;
  - (3) the hazard class and division of the item (see [paragraph 2-2](#));
  - (4) the packing group, in Roman numerals, prescribed for the material, preceded by the letters "PG" (see [paragraph 2-3.6.5](#)). Packing groups are not required to be listed on the BL for class 1 (explosives) material in accordance to 49 CFR 172.202(a)(4).

The hazardous material description specified in (1) through (4), above, must be shown in sequence with no additional information interspersed. For example: "UN 0280, Rocket Motor, 1.1C or UN 3090, Lithium Batteries, 9, PG II.

- (5) the Net Explosive Weight (NEW) of the item being shipped, and;

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

- (6) the total quantity/gross weight of material (e.g., 800 kilograms, or 50 liters) covered by the description.
- d. any technical chemical descriptions required. This applies when the phrase "N.O.S." appears in the shipping name.
- e. if shipment is being made under a DOT Special Permit (see [paragraph 2-3.6.1](#)), the notation "DOT-SP" followed by the number assigned.
- f. if shipment is being made under a Certificate of Equivalency (COE) (see [paragraph 2-3.6.3](#)), the notation "Packaged in accordance with [49 CFR 173.7\(a\)](#) by authority of CCN-(the applicable COE number)". A copy of the COE must be attached to the BL.
- g. if shipment is covered by a Competent Authority Approval (CAA) (see [paragraph 2-3.6.4](#)), the notation "Packaging authorized by authority of the United States of America, USA, CA-XXXXXXXXXX". These items require that the National Stock Number (NSN) also appear on the GBL and the outside of the package. Individual CAA's may specify additional shipping paper annotations. A copy of the packaging CAA must be attached to the BL.
- h. if shipment is covered by a packaging and marking grandfather clause (see [paragraph 1-4.1](#)), the notation "Government-owned goods packaged prior to 1 January 1990".

If necessary, any questions regarding the proper BL Description shall be directed to the Commanding Officer, [NOSSA \(Code N523\)](#), Farragut Hall, 3817 Strauss Avenue, Suite 108, Indian Head, MD 20640-5151, telephone (301) 744-6066.

2-3.1.1 UN Identification Numbers/Proper Shipping Names. The UN has specified an identification number for each type of hazardous material. The UN identification number directly relates to the UN proper shipping name, class, division, and compatibility group of the material. UN identification numbers and UN proper shipping names for explosives are listed in [49 CFR 172.101](#), the international modal regulations (e.g., ICAO, IMDG, IATA), and chapter 3.2 of the UN publication, "Recommendations on the Transport of Dangerous Goods". Some UN identification numbers cross reference to multiple proper shipping names (e.g., UN 0012, UN 0014, UN 0028, etc.). The shipping names provided in this manual reflect the most descriptive and primary shipping name assignments shown in [49 CFR 172.101](#). As a result, shipments of hazardous material from contractors and other military services may not be consistent with the Navy packaging markings and shipping paper descriptions in all cases. Shippers should refer to [49 CFR 172.101](#) for alternate shipping name designations when discrepancies arise. Use of the alternate descriptions from [49 CFR 172.101](#) is permissible. A Report of Discrepancy (ROD), SF 364, is not required to be written if an acceptable alternate shipping name is used to ship an item. Package remarking and shipping paper descriptions need not be changed.

2-3.2 CONTAINER MARKING. An external container marking is required by the DOT to identify the hazardous nature of the contents for transportation and emergency response purposes. Shipping activities are responsible for the marking of all containers. When preparing hazardous material for shipment, shippers shall inspect and ensure all hazardous material packaging contains the appropriate hazard marking and where required, the proper destination

markings. An example of the correct position for marking and labels on a container is shown in [figure 2-1](#). Refer to [MIL-STD-129](#) for basic requirements on marking ammunition containers. In addition, where the DOT has issued an special permit or CAA governing the shipment of an item, or a DOD Certificate of Equivalency (COE) pertains, the number of the permit or the Certification Control Number (CCN) of the COE shall also appear on the exterior of the container. The number shall be placed near the proper shipping name and any other required cautionary markings. See [figure 2-1](#).

2-3.3 NATIONAL MOTOR FREIGHT CLASSIFICATION (NMFC) AND STANDARD TRANSPORTATION COMMODITY CODE (STCC). The NMFC and the STCC are transportation tariffs that provide standard systems for codifying and categorizing commodities moving by motor vehicle or rail respectively in intrastate and interstate commerce. NMFC groupings are based on commodity density, stowability, ease of handling and liability. Commodities in the STCC are classed according to a formula based on product class, producing industry, minor or major industry groups, and specific commodity identification. Carriers, shippers, and consignees use the NMFC and STCC to identify a commodity, facilitate statistical reporting, established freight rate structures, estimate shipping costs, etc. NMFC and STCC codes are listed on each bill of lading according to Defense Transportation Regulation (DTR) requirements (see [DTR 4500.9-R, Part II](#), Cargo Movement, chapter 206 and appendix G for detailed information). NMFC data is published by the National Motor Freight Traffic Association in STB NMF 100 (series); STCC data is published by RAILINC, Business Services Department, in STCC 6001 (series).

#### NOTE

Effective 1 April, 2001, the index of articles and rating sections of the Uniform Freight Classification (UFC) tariff were cancelled. The UFC commodity classification system for rail movements has been superseded by the STCC system cited above. UFC publication 6000-M refers. Entries in field number 27 of table 3-1 will be updated accordingly to coincide with the new STCC information according to SDDC (formerly MTMC) Standard Tender Instruction Publication No. 364 (series).

2-3.4 WATER COMMODITY CODE (WCC). WCC numbers, noted in the description block on the GBL, classify items in preparation for overseas shipments.

2-3.5 LABELS/PLACARDS. Each hazardous material shipment must be labeled and placarded in accordance with the requirements of [49 CFR 172](#) Subparts E and F, 172.400 and 172.500.

2-3.5.1 Labeling. Hazard labels are required to be printed or affixed to a surface other than the bottom of a package. They are required to be located on the same surface and as close as possible to the proper shipping name and UN identification number. When primary and subsidiary hazard labels are required they shall be affixed adjacent to one another when space permits. Packages over 64 cubic feet (1.8m<sup>3</sup>) require two labels displayed on at least two sides other than the bottom. All labels must be clearly visible and may not be obscured by markings,

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

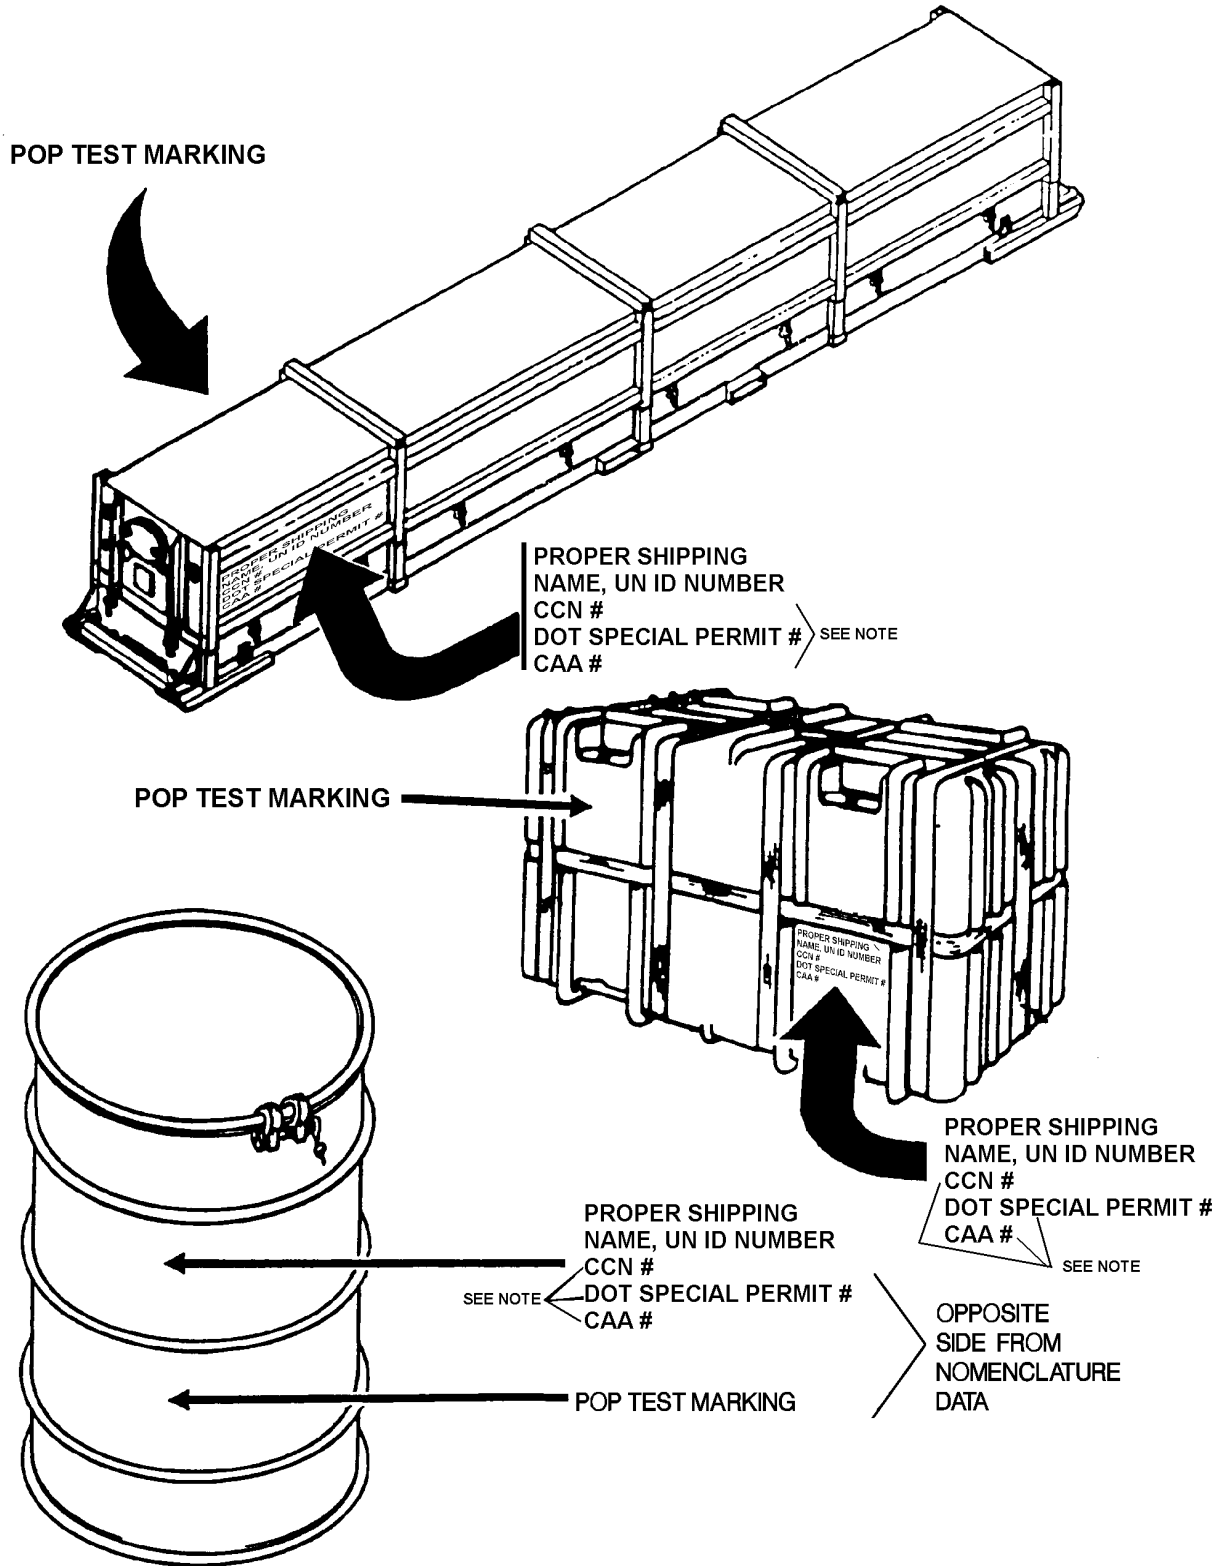

other labels, or attachments. Labeling of hazardous material packages is required for all shipments with the following exception: packages of military explosives shipped by or on behalf of the DOD when in freight container loads, car loads, or truck load shipments if loaded and unloaded by the shipper or DOD, are exempt from labeling requirements. Additionally, unitized or palletized breakbulk shipments by cargo ship under charter to DOD can be shipped with a single label per unit load. Packages coming from production should possess labels in all cases since the life cycle of ordnance involves many logistical shipments, and because ultimate and secondary destinations are not always known. When the logistics flow of the material is unknown, however, the general labeling requirements shall be met. See [NAVSEA SW020-AG-SAF-010](#) for shipping label guidance.

2-3.5.2 Placarding. Tables 1 and 2 of [49 CFR 172](#) Subpart F provide guidance for determining placarding requirements. For the purposes of transportation, each freight container, transport vehicle, or railcar containing hazardous material must be placarded on each side and each end with a placard. [NAVSUP PUB 505/AFR 71-4/TM 38-250/MCO P4030.190/DLAM 4145.3](#) details the requirements for military cargo aircraft placarding.

2-3.6 **AMMUNITION PACKAGING AND TRANSPORTABILITY**. Ammunition, explosives and related hazardous materials shall be shipped and stored in approved containers and in accordance with standard unitizing and conveyance loading procedures. Shipping and storage configurations for Navy approved ammunition items are listed in [table 3-1](#). The ammunition items listed in this technical manual have been determined to meet Navy and DOD transportation and storage safety requirements as well as federal and international transport safety regulations. The latter regulations include [49 CFR 100-178 and 301-399](#), the [International Maritime Dangerous Goods \(IMDG\) Code](#), and the [International Civil Aviation Organization \(ICAO\) Technical Instructions](#). The Navy Packaging, Handling, Storage and Transportability (PHST) Center located at Picatinny Arsenal, NJ is the cognizant activity responsible for establishing packaging design and test requirements, and approving the shipping configuration for Naval ammunition, explosives and related hazardous materials. The packaging approval process verifies the adequacy of the shipping configuration to meet the life-cycle logistical characteristics of each item. The process also ensures compliance with Navy and DOD safety and security requirements, and all applicable federal and international hazardous materials transport regulations. In the event an item is identified as being in a configuration other than that presented in [table 3-1](#) (non-standard packaging), contact the PHST Center (Code G13), Building 458, Whittemore Avenue, Picatinny Arsenal, NJ 07806-5000, (973) 724-3388 in accordance with Ammunition Information Notice(s) 062-2013 and 010-2015.

### NOTE

Deviation from approved logistical configuration can affect the characteristics of an item to include: hazard classification, electrostatic discharge, hazards of electromagnetic radiation, or shelf/storage life.

**FIGURE 2-1. Identification Markings and Placement of Labels for Ammunition Containers**

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

2-3.6.1 DOT Special Permits. DOT special permits (formerly DOT-Exemptions) are written approvals granted by the DOT. They are required to be marked on the outside of the shipping container; see [paragraph 2-3.2](#). [NAVSEA SW020-AG-SAF-010](#), appendix D provides a listing of DOD special permits and hyperlink connection to DOT for obtaining a signed, paper copy of the permit. It should be noted that many of the DOT exemptions/permits previously approved by the DOT are being phased out, and written into regulatory policy. See [paragraph 2-3.6.4](#).

2-3.6.2 EX-Number. EX-numbers are assigned by the Pipeline and Hazardous Materials Safety Administration, [Department of Transportation \(DOT\)](#), to identify an ammunition or explosive item which has been properly classified. Hazard Class 1 explosives and items containing explosives are assigned EX- numbers. The EX number is a fifteen-character, alphanumeric designation, formatted as Exyyyyymmnnnaaa with "EX" being constant for all numbers, "y" being the year, "m" being the month, "n" being the sequential number and "a" being the alpha designation assigned in certain situations. All previous EX numbers (format of Ex-8809966 or EX-8809966A) and documentation are still valid.

### NOTE

Shippers are cautioned that [49 CFR](#) requires a final hazard classification signaled by an explosive (EX) number, an interim hazard classification, or other approved method to ship an explosive or explosive item. If an EX number is not listed in this publication, contact [NOSSA](#) (Code N851), Farragut Hall, 3817 Strauss Avenue, Suite 108, Indian Head, MD 20640-5151 on (301) 744-6021 for an interim hazard classification or other appropriate resolution.

Shipping containers shall be marked with the item's applicable NSN, part number, or EX-number.

2-3.6.3 Certificates of Equivalency (COEs). Hazardous materials shipped by, for, or to the DOD, including commercial shipments prepared under U.S. contract, must be packaged in accordance with the regulations of [49 CFR 173](#) and [178](#). When packaging are not in accordance with the [49 CFR](#) regulations, the DOD can certify that the packaging used are of equal or greater strength and efficiency. These certifications are issued as COEs. COEs, unlike CAAs, can be issued for packages containing hazard Class 1 items that have an interim hazard classification assigned but do not have an EX number assigned. A COE can be issued in instances where the packaging differs from what is prescribed by [49 CFR](#) (e.g., wood box instead of a steel box) or when packaging instruction 101 is specified. Each COE is identified by a Certification Control Number (CCN), which is preceded by the issuing service: "NA" for Navy, "AR" for Army, and "AF" for Air Force. A typical COE might be identified by the CCN "NA 92-504".

2-3.6.4 Competent Authority Approval (CAA). A CAA is a written approval granted by the DOT that states that the Competent Authority has reviewed the explosive hazard classification or packaging; that it meets both domestic and UN standards, and that it is approved for transportation. The [DOT](#) is the only recognized Competent Authority for the U.S. A CAA may be required for explosive hazard classification or for packaging. Typically the CAA for hazard

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

classification is the DOT letter assigning the EX-number. CAAs which are issued for packaging authorize the use of containers which differ from those specified (e.g., aluminum instead of steel or wood), or containers which have been approved by methods of testing differing from those prescribed by DOT. Packaging CAAs are also required for Class 1 explosives assigned packing instruction 101 in 49 CFR, ICAO and IMDG. Packaging CAAs may be issued by DOT in the form of a separate document, or as a packaging note reference on the EX letter, approving both the explosive classification and packaging on a single document. Items which require CAA cannot be shipped overseas commercially until the DOT (the U. S. Competent Authority) grants a CAA. The commodity classification along with the type of packaging determines whether a CAA is required. Packaging CAAs must be attached to the shipping papers.

2-3.6.5 Packing Group. The assigned packing group is a group designated according to the degree of danger presented by a hazardous material packed within. Packing Group I indicates great danger, Packing Group II indicates medium danger, Packing Group III indicates minor danger. Packing groups are assigned to a material corresponding to the proper shipping name and hazard class for that material; see 49 CFR 172.101(f).

2-3.6.6 Performance Oriented Packaging (POP) Test Marking. Under the UN system, all packagings containing hazardous materials must be certified to meet specific performance standards through performance testing. Containers meeting these standards are issued a standardized POP marking, which is required to be marked by the manufacturer or packager on the outside of the container. The marking presents the following information in the sequence presented:

a. UN Packaging Symbol. Certifies that the package complies with UN requirements. The size of the circle shall be relative to the size of the packaging, and shall be readily visible. For metal receptacles, the capital letters "UN" may be applied in place of the symbol.

b. Packaging Identification Code. Designates the type of packaging, the material of construction, and when appropriate, the category of packaging under 49 CFR 178.502 through 178.523.

c. Packing Group and Gross Weight. Designates the packing group(s) for which the container design has been successfully tested:

- (1) Code "X" for packages meeting packing groups I, II, and III tests.
- (2) Code "Y" for packages meeting packing groups II and III tests.
- (3) Code "Z" for packages meeting only packing group III tests.

All packaging for hazard Class 1 materials at a minimum must meet packing group II requirements.

Accompanying the packing group designator is the maximum authorized gross weight (in kilograms) for which the container has been tested. For liquids, this number reflects specific gravity.

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

d. Descriptor. "S" indicates a packaging intended to contain solid or inner packagings. Most ammunition items are solids. In the case of liquids, the hydrostatic test pressure in kilopascals (kPa) rounded down to the nearest 10 kPa of which the package has successfully passed is used.

e. Year. Indicates the last two digits of the year during which the packaging was manufactured.

### NOTE

DOT has determined that a combination or composite packaging may be marked as being "manufactured" on the date on which the packaging was assembled. "Assembly" is the physical act of placing inner packagings or a liner into an outer packaging.

f. State. Shown as "USA".

g. Manufacturer/Certifying Authority. The name and address or symbol of the manufacturer or the approval authority. Symbols are required to be registered with the competent authority. Shown as "DOD".

h. Certifying Authority. Represents the technical authority for the container design that authorized the package configuration. The authority is also responsible for signing the packaging document. Unless otherwise specified, the package certifying authority is the activity who approved the packaging drawing, specification, or special packaging instruction. [NAVSUPINST 4030.55 \(series\)](#) identifies UN POP certification symbols. This portion of the POP test marking is optional.

2-3.6.7 Large Article Provision. Certain large or robust explosive articles that as part of their qualification have passed UN hazard classification test series 4 or an equivalently acceptable series of tests as part of the item design qualification do not require COEs or special approval by DOT. Title [49 CFR 172.101](#) column 8c, Bulk Packaging, recognizes large explosive commodities that are either transported unpackaged, or packaged provided they are being shipped in accordance with procedures approved by DOD. This provision is established by [49 CFR 173.60\(b\)\(14\)](#).

2-3.6.8 Large Packaging. Large packaging is packaging that:

- a. Consists of an outer packaging that contains articles or inner packagings;
- b. Is designated for mechanical handling;
- c. Exceeds a gross weight of 882 pounds; or
- d. Has a volume of over 119 gallons but not more than 792.516 gallons.

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

Containers that meet this criteria, have passed the test requirements for large packaging prescribed by [49 CFR 178.950](#), meet the construction, maintenance, and use descriptions of [49 CFR 173.36](#), and are marked as described in [49 CFR 178.910](#), are authorized for shipment of ammunition and explosive items. The [Naval PHST Center](#), Picatinny Arsenal, NJ is the cognizant activity responsible for approving the shipping configuration for Navy ammunition and explosives.

### NOTE

The POP test marking described in paragraph 2-3.6.6 varies slightly for ammunition items shipped/stored as large packagings. See [49 CFR 178.905](#) for marking requirements.

2-3.7 SECURITY RISK CATEGORY (SRC). The SRC relates to a DOD hazard and physical security control system whereby DOD-owned arms, ammunition, and explosives (AA&E) items are classified according to their level of inherent threat to public safety and/or security sensitivity. SRCs are assigned to AA&E items that have been identified as having characteristics that require them to be accounted for, stored, transported or otherwise secured and handled in a special manner to ensure their safety and integrity. SRCs are defined in [DOD 5100.76-M, appendix 1](#) and [DTR 4500.9-R, part II chapter 205](#).

2-3.8 CONTROLLED INVENTORY ITEM CODE (CIIC). The CIIC provides a means for identifying DOD supply system items that have characteristics that require that they be accounted for, secured, segregated, or handled in a special manner to ensure their safeguard and integrity. The CIIC designates the degree of security assigned to an item. CIICs are defined in [DOD 4000.25-2-M, chapter 7](#) and [NAVSUP Publication 485](#), appendix 9, part D. The correlation of CIICs to SRCs, discussed in [paragraph 2-3.7](#) above, is provided in [table 2-3](#).

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

**Table 2-3. Security Risk Category (SRC) and Controlled Inventory Item Code (CIIC)**

SRC	CIIC	DEFINITION
I	1	HIGHEST SENSITIVITY. Non-nuclear missiles and rockets in a ready-to-fire configuration (e.g., HAMLET, REDEYE, STINGER, DRAGON, LAW, VIPER) and explosive rounds for non-nuclear missile and rockets. This category also applies in situations where the launcher (tube) and the explosive rounds, though not in a ready-to-fire configuration, are jointly stored or transported ( <a href="#">see note 1</a> ).
II	2	HIGH SENSITIVITY. Arms, Ammunition, and Explosives ( <a href="#">see note 1</a> ).
III	3	MODERATE SENSITIVITY. Arms, Ammunition, and Explosives ( <a href="#">see note 1</a> ).
IV	4	LOW SENSITIVITY. Arms, Ammunition, and Explosives ( <a href="#">see note 1</a> ).
	5	HIGHEST SENSITIVITY (SRC I). Arms, Ammunition, and Explosives with a physical security classification of SECRET ( <a href="#">see note 2</a> ).
	6	HIGHEST SENSITIVITY (SRC I). Arms, Ammunition, and Explosives with a physical security classification of CONFIDENTIAL ( <a href="#">see note 2</a> ).
	7	UNCLASSIFIED/UNCATEGORIZED ( <a href="#">see note 3</a> ).
	8	HIGH SENSITIVITY (SRC II). Arms, Ammunition, and Explosives with a physical security classification of CONFIDENTIAL ( <a href="#">see note 2</a> ).
	9	Controlled Cryptographic Item (CCI). CCI is secure telecommunications or information handling equipment, associated cryptographic component, or other hardware item which performs a critical communications security function. Items are unclassified but controlled, will bear designation “controlled cryptographic item or CCI”.
	S	SECRET. Items coded “S”, SECRET, will be shipped as required by <a href="#">DOD Directive 5200.1-R</a> which is incorporated in <a href="#">SECNAVINST 5510.36 (series)</a> . All other security protection during the life cycle shall be in accordance with the standards specified for SRC II items.
	C	CONFIDENTIAL. Items coded “C” CONFIDENTIAL, will be shipped and protected during the life cycle the same as for SRC III items. An exception is the REDEYE man portable missile system which shall be shipped and protected as a SRC I item.
	U	UNCLASSIFIED/UNCATEGORIZED ( <a href="#">see note 3</a> ).
	P	PILFERABLE ( <a href="#">see note 4</a> ).

**NOTES:**

1. For storage inventory control guidance, see [NAVSUP P-724](#), chapter 6; for transportation protective service requirements, see [NAVSEA SW020-AG-SAF-010](#), chapter 8 and [DTR 4500.9-R, part II, chapter 205](#). Ammunition item assigned a demil code-demilitarization required prior to disposal.
2. Items will be stored and transported in accordance with the provisions of [DOD 5100.76-M](#) or [DOD 5200.1-R](#), whichever is more stringent. Ammunition item assigned a demil code-demilitarization required prior to disposal.
3. For storage inventory control guidance, see [NAVSUP P-724](#), chapter 6; for transportation protective service requirements, see [NAVSEA SW020-AG-SAF-010](#), chapter 8 and [DTR 4500.9-R, part II, chapter 205](#). Loss, theft unlawful disposition, and/or recovery of an item in this category will be investigated in accordance with [DOD 4000.25-2-M](#) and [DOD 7000.14-R, Volume 12, chapter 7](#). Ammunition assigned a demil code-demilitarization required prior to disposal.
4. Items that are easily concealed, especially subject to theft, and desirable for personal use or sale for profit. Transported same as CIIC “U” or “7” (see [NAVSEA SW020-AG-SAF-010](#), chapter 8 and [DTR 4500.9-R, part II, chapter 205](#)). For storage inventory control guidance, see [NAVSUP P-724](#), chapter 6. Ammunition item assigned a demil code-demilitarization required prior to disposal.

2-3.9 SEGREGATION DURING TRANSPORT. Federal and DOD hazardous material transportation regulations prohibit the combining of separate items of issue with varying hazardous material characteristics that may react dangerously with each other. The restrictions may apply either to a single conveyance or to a single stowage compartment aboard a conveyance. [Tables 2-4](#) and [2-5](#) describe the compatibility criteria for shipping ammunition, explosives and hazardous materials of varying compatibility groups together in one conveyance, over public highway or by rail. Refer to applicable hazardous material compatibility tables in [NAVSEA OP 4](#) for shipments of Navy and Marine Corps ammunition aboard U.S. Navy ships and Military Sealift Command-chartered cargo transport vessels. Compatibility regulations governing the transport of hazardous materials via commercial cargo vessels are addressed in [49 CFR 176.83](#) and IMDG Code, Volume I, Part 7. Compatibility regulations governing the transport of hazardous material via military aircraft are addressed in [NAVSUP Pub 505/AFMAN 24-204, paragraph 1.8](#) and [Attachment 18](#). Compatibility regulations governing the transport of hazardous material via commercial aircraft are addressed in IATA Dangerous Goods Regulations, section 9; [49 CFR 175.78](#); and ICAO Technical Instructions for the Safe Transport of Dangerous Goods by Air, Part 7. Compatibility groups are described in [paragraph 2-2.5](#).

2-3.9.1 General Segregation Requirements. [Table 2-4](#) provides the general requirements during transport by motor vehicle or railcar for segregation between the various classes of hazardous material, including Class 1 (explosives) as well as materials in classes other than Class 1, such as liquid-fueled rocket motors (Class 3), or lithium batteries (Class 4 or Class 9). [Table 2-4](#) has been developed based upon requirements provided in [49 CFR 174.81\(d\)](#) and [177.848\(d\)](#). Due to the varying properties of materials within each class, greater segregation within each hazard class may be required; see [paragraph 2-3.9.2](#). Explosives and hazardous material stowed on vessels as breakbulk cargo shall be separated according to the guidelines presented in [49 CFR 176.83\(c\)](#). Containerized explosives and hazardous materials stowed onboard container vessels, or on other types of vessels provided these cargo spaces are properly fitted for permanent stowage of freight containers during transport, shall be separated as described in [49 CFR 176.83\(f\)](#).

2-3.9.2 Segregation Requirements for Class (1) Explosive Materials. Class 1 (explosive) materials shall be loaded on or transported by motor vehicle or railcar in accordance with the requirements of [table 2-5](#), as extracted from [49 CFR 174.81\(f\)](#) and [177.848\(f\)](#). [NAVSEA OP 4](#) provides the applicable segregation requirements for Class 1 (explosive) items onboard U.S. Navy ships.

**Table 2-4. General Compatibility Requirements for Hazardous Material Loaded On and Transported by Motor Vehicle Over Public Highway, or Loaded On and Transported by Rail**

Class or Division	Notes	1.1 1.2	1.3	1.4	1.5	1.6	2.1	2.2	2.3 gas zone A	2.3 gas zone B	3	4.1	4.2	4.3	5.1	5.2	6.1 liquids PG I zone A	7	8 liquids only	
Explosives . . . . .1.1 and 1.2	A	*	*	*	*	*	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Explosives . . . . . 1.3		*	*	*	*	*	X		X	X	X		X	X	X	X	X			X
Explosives . . . . . 1.4		*	*	*	*	*	O		O	O	O		O				O			O
Very insensitive explosives . . . . . 1.5	A	*	*	*	*	*	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Extremely insensitive explosives . . . . 1.6		*	*	*	*	*														
Flammable gases . . . . . 2.1		X	X	O	X				X	O							O	O		
Non-toxic, non-flammable gases . . . . 2.2		X			X															
Poisonous gas zone A . . . . . 2.3		X	X	O	X		X				X	X	X	X	X	X				X
Poisonous gas zone B . . . . . 2.3		X	X	O	X		O				O	O	O	O	O	O				O
Flammable liquids . . . . . 3		X	X	O	X				X	O					O		X			
Flammable solids . . . . . 4.1		X			X				X	O							X			O
Spontaneously combustible materials . . . . . 4.2		X	X	O	X				X	O							X			X
Dangerous when wet materials . . . . . 4.3		X	X		X				X	O							X			O
Oxidizers . . . . . 5.1	A	X	X		X				X	O	O						X			O
Organic peroxides . . . . . 5.2		X	X		X				X	O							X			O
Poisonous liquids PG I zone A . . . . . 6.1		X	X	O	X		O				X	X	X	X	X	X				X
Radioactive materials . . . . . 7		X			X		O													
Corrosive liquids . . . . . 8		X	X	O	X				X	O		O	X	O	O	O	X			

Instructions for using [table 2-4](#) are as follows:

1. The absence of any hazard class or division or a blank space in the table indicates that no restrictions apply.
2. The letter "X" in the table indicates that these materials may not be loaded, transported, or stored together in the same motor vehicle, railcar, or storage facility during the course of transportation.
3. O - indicates that these materials may not be loaded, transported, or stored together in the same motor vehicle, rail car, or storage facility during the course of transportation, unless separated in a manner that, in the event of leakage from packages under conditions normally incident to transportation, commingling of hazardous materials would not occur. Notwithstanding the methods of separation employed, Class 8 (corrosive) liquid materials may not be loaded above or adjacent to Class 4 (flammable solid) materials or Class 5 (oxidizing) materials, except that shippers may carload or truckload shipments of such materials together when it is known that the mixture of contents would not cause a fire or a dangerous evolution of heat or gas.
4. \* - indicates that segregation among different Class 1 (explosive) materials is governed by [table 2-5](#).
5. A - means that, notwithstanding the requirements of the letter "X", ammonium nitrate (UN 1942) (on public highway) and ammonium nitrate fertilizer (on public highway or rail) may be loaded or stored with Division 1.1 or Division 1.5 materials.
6. When [49 CFR 172.101 table](#) or [172.402](#) requires a package to bear a subsidiary hazard label, segregation appropriate to the subsidiary hazard must be applied when that segregation is more restrictive than that required by the primary hazard. However, hazardous materials of the same class may be stowed, loaded, and transported together without regard to segregation required for any secondary hazard if the materials are not capable of reacting dangerously with each other and causing combustion or dangerous evolution of heat, evolution of flammable, poisonous, or asphyxiant gases, or formation of corrosive or unstable materials.

**Table 2-5. Compatibility Requirements for Class 1 (Explosive) Materials Loaded On and Transported by Motor Vehicle Over Public Highway or by Railcar**

Compatibility Group	A	B	C	D	E	F	G	H	J	K	L	N	S
<b>A</b>		X	X	X	X	X	X	X	X	X	X	X	X
<b>B</b>	X		X	X(4)	X	X	X	X	X	X	X	X	4/5
<b>C</b>	X	X		2	2	X	6	X	X	X	X	3	4/5
<b>D</b>	X	X(4)	2		2	X	6	X	X	X	X	3	4/5
<b>E</b>	X	X	2	2		X	6	X	X	X	X	3	4/5
<b>F</b>	X	X	X	X	X		X	X	X	X	X	X	4/5
<b>G</b>	X	X	6	6	6	X		X	X	X	X	X	4/5
<b>H</b>	X	X	X	X	X	X	X		X	X	X	X	4/5
<b>J</b>	X	X	X	X	X	X	X	X		X	X	X	4/5
<b>K</b>	X	X	X	X	X	X	X	X	X		X	X	4/5
<b>L</b>	X	X	X	X	X	X	X	X	X	X	1	X	X
<b>N</b>	X	X	3	3	3	X	X	X	X	X	X		4/5
<b>S</b>	X	4/5	4/5	4/5	4/5	4/5	4/5	4/5	4/5	4/5	X	4/5	

Numbers and symbols shown in this table are as follows:

A blank in the table indicates that no restrictions apply.

For motor vehicles the letter “X” in the table indicates that explosives of different compatibility groups may not be carried on the same transport vehicle. For railcars the letter “X” indicates that explosives of different compatibility groups may not be carried on the same railcar unless packed in separate freight containers (e.g. two or more freight containers mounted upon the same railcar).

1 - means explosives from compatibility group L may only be carried on the same transport vehicle or railcar with an identical explosive.

2 - means any combination of explosives from compatibility group C, D, or E is assigned to compatibility group E.

3 - means any combination of explosives from compatibility group C, D, or E with those in compatibility group N is assigned to compatibility group D.

4 - means detonators and detonating primers, Division 1.4S, may not be loaded in the same railcar with Division 1.1 and 1.2 materials as described in [49 CFR 174.81 \(g\)\(3\)\(iv\)](#). Also, see [49 CFR 177.835 \(g\)](#) for restrictions on detonator assemblies, boosters with detonators, and detonators when transported on public highway.

5 - means Division 1.4S fireworks may not be loaded in the same transport vehicle or railcar with Division 1.1 or 1.2 materials.

6 - means explosive articles in compatibility group G, other than fireworks and those requiring special handling or stowage, may be loaded, transported, and stored with other explosive articles of compatibility groups C, D and E, provided that no explosive substances (such as those not contained in articles) are carried in the same vehicle or railcar. See the Explosive Safety Terms and Definitions for definitions of “[article](#)” and “[substance](#)”.

# NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

## CAUTION

Users should take note of the difference in structure of [tables 2-4](#), [2-5](#), and [2-6](#). [Table 2-6](#) is presented in the reverse format of the previous two tables; e.g., "X" denotes incompatibility in [tables 2-4](#) and [2-5](#), and compatibility in [table 2-6](#).

**Table 2-6. Storage Compatibility Chart for Shore Activities**

GROUPS	A	B	C	D	E	F	G	H	J	K	L	N	S
A	X	Z											
B	Z	X	Z	Z	Z	Z	Z					X	X
C		Z	X	X	X	Z	Z					X	X
D		Z	X	X	X	Z	Z					X	X
E		Z	X	X	X	Z	Z					X	X
F		Z	Z	Z	Z	X	Z					Z	X
G		Z	Z	Z	Z	Z	X					Z	X
H								X					X
J									X				X
K										Z			
L													
N		X	X	X	X	Z	Z					X	X
S		X	X	X	X	X	X	X	X			X	X

**NOTES:**

1. The marking "X" at an intersection of the above chart indicates that these groups may be combined in storage. Otherwise, mixing is either prohibited or restricted per note 2 below.
2. The marking "Z" at an intersection of the above chart indicates that, when warranted by operational considerations or magazine nonavailability, and when safety is not sacrificed, logical mixed storage of some items of different groups may be authorized by [NOSSA](#) upon written request. Mixing of limited quantities of some groups, as authorized by note 5 below, does not require a written request. Authorization is not to be considered a waiver. Combinations that violate the principles of [paragraph 2-2.5](#) require justification by waiver or exemption. Examples of acceptable combinations of class 1 are:
  - a. Division 1, group A initiating explosives with division 1, group B fuzes not containing two or more independent safety features.
  - b. Division 3, group C bulk propellants or bagged propelling charges with division 3, group G pyrotechnics without their own means of initiation.
3. Equal numbers of separately packaged components of complete rounds of any single type of ammunition may be stored together. When so stored, compatibility is that of the assembled round; i.e., WP filler in group H, HE filler in groups D, E, or F, as appropriate.
4. Ammunition designated "practice" by NSN and nomenclature may be stored with the fully loaded ammunition it simulates.
5. Mixing of compatibility groups (except items in groups A, K and L) is authorized when the total quantity does not exceed 1,000 pounds NEW. Mixed storage that exceeds 1,000 pounds NEW must be approved by [NOSSA](#).
6. Group K requires not only separate storage from other groups, but may also require separate storage within the group. [NOSSA](#) shall determine which items in group K may be stored together and those which must be stored separately.
7. Ammunition items without explosives which contain substances properly belonging to another hazard class may be assigned to the same compatibility group as items containing explosives and the same substance, and be stored with them.

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

8. For purposes of mixing, all items must be packaged in approved storage/shipping containers. Items shall not be opened for purposes of issuing unpackaged munitions at storage locations. Outer containers may be opened in storage locations for purposes of inventorying; for removing munitions still inside an approved inner package in limited amounts, and for magazines storing only hazard division 1.4 items, unpacking, inspecting, and repacking the hazard division 1.4 ammunition.

9. When using the "Z" mixing authorized by note 2, articles of Compatibility Groups B and F each shall be segregated in storage from articles of other compatibility groups by means that prevent the propagation of Group B or F articles to articles of other compatibility groups.

10. Ammunition or ammunition components hazard classified as Classes 2-9 or as not regulated and assigned a compatibility group (CG), can be stored with Class 1 items in accordance with the CG assigned. The net explosive weight of these items is not to be considered for quantity-distance computations.

11. If dissimilar hazard Class/Division 1.6, group N munitions, such as Mk 82 and Mk 84 GP Bombs, are mixed together and have not been tested to assure non-propagation, the mixed munitions are to be considered hazard Class/Division 1.2.1 or 1.2.2, group D based on their storage NEW or overriding fragmentation characteristics.

12. Group L items presenting similar hazards may be stored together provided [NOSSA](#) authorization is obtained. Mixing with other storage compatibility groups is forbidden.

**2-4. STORAGE OF AMMUNITION AND EXPLOSIVES.** The hazard classifications for ammunition and explosives described in [paragraph 2-2](#) also apply for magazine storage purposes. All ammunition, explosives, and related hazardous materials shall be stored by compatibility group.

Different types of ammunition and explosives, by item and division, may be mixed in storage provided they are compatible, and as required, authorized for mixed storage by [NOSSA](#). Criteria for permissible storage of different kinds of explosives is given in [NAVSEA OP 5 Volume 1](#). Mixing of compatibility groups in storage is permitted as shown in [table 2-6](#) providing the material is in its proper packaging configuration.

### NOTE

At locations that are designated by [NOSSA](#) and site approved by the [DDESB](#) to store ammunition and explosives packaged for rapid response (e.g., Rapid Deployment Force), compatibility groups may be mixed in storage as required to achieve the optimum load needed by the receiving troops. The total explosives content at these locations shall not exceed 8,820 pounds net explosive weight, based upon [NAVSEA OP 5 Volume 1](#) paragraph 11-2.2.1.3 factors. QD requirements of [OP 5 Volume 1](#) chapter 7 apply.

2-4.1 SENSITIVITY GROUP CODES (SGCs). All C/D 1.1 and 1.2.1 ammunition and explosives are assigned a sensitivity group based upon the item's physical attributes. The sensitivity groups are described as follows:

- a. SG1 - Robust or thick-skinned
- b. SG2 - Non-robust or thin-skinned
- c. SG3 - Fragmenting
- d. SG4 - Cluster bomb/dispenser munitions
- e. SG5 - Other

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

SGCs are used to determine proper storage in High Performance Magazines (HPMs) or where ARMCO revetments or substantial dividing walls are present. Directional (focused) high explosive effect weapons are further defined by assigned the suffix "D" following the SGC designation.

This page left intentionally blank

## CHAPTER 3

## DETAILED ORDNANCE TRANSPORTATION AND STORAGE DATA

**3-1. INTRODUCTION.** This chapter introduces [table 3-1](#), "Detailed Ordnance Transportation and Storage Data". The first part of this chapter provides an explanation of [table 3-1](#), and of the fields for each ammunition item in the table. The meanings of the various abbreviations used are listed in a [separate file](#) on this DVD.

**3-2. ARRANGEMENT OF TABLE 3-1.** [Figure 3-1](#) shows the layout used for each ammunition item presented in [table 3-1](#). Referring to [figure 3-1](#), descriptions of the data in each field are supplied in numerical order in the following paragraphs.

**3-2.1 DEPARTMENT OF DEFENSE IDENTIFICATION CODE (DODIC) [NAVY AMMUNITION LOGISTIC CODE (NALC)]/FEDERAL SUPPLY CLASS (FSC) - NATIONAL ITEM IDENTIFICATION NUMBER (NIIN).** Field number 1 gives the DODIC (NALC), and/or the National Stock Number (NSN), consisting of the FSC (e.g., 1305) and NIIN (e.g., 00-28-6642), for each ammunition item listed in the table. Those items without DODIC (NALC) assignments are listed first in numerical ascending order of FSC, then the items with DODICs (NALCs) are listed alpha-numerically in ascending order. NALCs consisting of all numbers are located at the back of the table in numerical order (e.g., 1107, 2311, etc.)

**3-2.2 NOMENCLATURE.** Field number 2 gives the official Navy nomenclature or description. For each item, the full name appears first (e.g., Rocket Motor). This is followed by modifiers (e.g., Mk 45-0, w/o igniter, etc.). When available, the modifiers provided data on the components which make up the round.

**3-2.3 TRANSPORTATION DATA.**

**3-2.3.1 UN Identification Number.** The [United Nations \(UN\)](#) identification number specified for the type of hazardous material is shown in field number 3.

**3-2.3.2 Hazard Class.** Field number 4 provides the hazard classification, which consists of the hazard class/division (C/D) and the compatibility group. C/D followed by a dash (-) indicates that no compatibility group has been assigned to that item. If a minimum separation distance is applicable, this data will precede the hazard class shown in the block. [Paragraph 2-2.1](#) gives a detailed discussion of hazard classes.

**3-2.3.3 Packing Group.** Field number 6 provides the packing group (PG) designator assigned by [49 CFR 172.101](#). The PG is also indirectly reflected in field number 36: see [paragraph 2-3.6.6\(c\)](#).

**3-2.3.4 UN Proper Shipping Name/GBL/Container Marking.** Field number 7 provides the UN proper shipping name, which directly relates to the UN identification number shown in field number 3.

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

3-2.3.5 UN Label/Placard. Field number 8 provides the labels and placards required by the UN for shipment of the item. Since UN labels and placards are based on the UN hazard classification system described in [paragraph 2-2.1](#), and indicate the appropriate hazard classification for the item by class and division, the contents of field number 8 may be the same as field number 4 - Hazard Class.

3-2.3.6 Department of Transportation (DOT) Container Marking (Obsolescent). Field number 9 shows the external container marking for items which were marked according to previous DOT regulations, and are covered by the grandfather clause; see [paragraph 1-4.1](#).

3-2.3.7 Competent Authority Approval (CAA). The CAA number for items assigned a packaging CAA appears in field number 34.

3-2.3.8 EX-Number. EX-numbers, as assigned by the DOT to identify an explosive which has been approved, are presented in field number 35.

### NOTE

Prior to release for shipment overseas by a commercial conveyance, DOD-owned ammunition, explosives and explosive items must have a final hazard classification/EX number assigned. Domestic shipments may be shipped under a final hazard classification/EX number or an interim hazard classification. Procedures for obtaining hazard classifications are contained in [NAVSEAINST 8020.8 \(series\)](#). Further questions regarding hazard classifications should be directed to [NOSSA](#) (Code N851), Farragut Hall, 3817 Strauss Avenue, Suite 108, Indian Head, MD 20640-5151 on (301) 744-6021.

3-2.3.9 UN Performance Oriented Packaging (POP) Test Marking. Field number 36 presents the POP test marking which shall appear clearly visible on the outside container of the item. The contents of the marking are described in [paragraph 2-3.6.6](#).

### NOTE

POP test markings not contained in this publication will appear in revisions of this publication as the information becomes available.

3-2.3.10 Certificate of Equivalency (COE). If a COE has been issued for the item, the Certification Control Number (CCN) of the COE will appear in field number 37.

3-2.3.11 DOT Special Permit. Field number 38 presents the number for any DOT special permits which have been issued for the item.

3-2.3.12 National Motor Freight Classification (NMFC) and Standard Transportation Commodity Code (STCC). Field number 27 contains the NMFC for movements via motor vehicle and the STCC for movements via rail. The NMFC appears first, followed by a slash "/", then the "STCC." See [paragraph 2-3.3](#) of this publication for more information concerning

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

NMFC and STCC purpose and use. STCC data entries are in the process of being updated. Pending completion of the update, Traffic Managers/Transportation Officers must consult the SDDC Electronic Data Interchange (EDI) system and the Standard Tender Instruction Publication No. 364 (series) for the proper STCC data when preparing CBL's for movements by rail.

3-2.3.13 Water Commodity Code (WCC). WCCs are provided in field number 28, for use in preparing shipments for overseas destinations.

3-2.3.14 Controlled Inventory Item Code (CIIC). In field number 24, the assigned CIIC, as described in [paragraph 2-3.8](#) is presented. The CIIC definition and associated security risk category are provided in [table 2-3](#).

3-2.4 PACKAGING/ALTERNATE PACKAGING. The following fields provide packaging data for the item.

3-2.4.1 Rounds/Outer Pack/Packaging Instructions. Field number 29 provides the number of rounds per outside container, or indicates when the listing is for only one round. It also identifies the type of outer package by container name and designator. If available, the outer pack shipping package condition drawing number or other packaging data is identified in field number 29.

### NOTE

Data is continuously being added to the contents of this manual. Ordnance In-Service Engineering Activities (ISEAs) and other users are encouraged to provide data, such as outer pack shipping package drawing numbers and item weight/volume/dimensions, so that this information can be entered into the database.

3-2.4.2 Rounds/Inner Pack/Packaging Instructions. Field number 30 provides the number of rounds per inside container, if applicable. The inside container name and designator is also identified. If available, the number of the inner pack shipping package condition drawing is also shown in field number 30.

3-2.4.3 Package Dimensions. The length, width, and height, or length and diameter, as applicable for the item or the item packed in its outside container, are given in field number 31. Dimensions are presented in inches and centimeters, and are solely intended for use in computing the container's volume.

3-2.4.4 Gross Weight. Field number 32 provides the gross weight, in pounds and kilograms, of the item packed in its outside container. Gross weight is given for estimation purposes only, and is not to be used for shipping weight.

3-2.4.5 Volume (Cube). Field number 33 provides the volume of the item, in cubic feet and cubic meters, as packed in its outside container.

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

### 3-2.5 ELECTROMAGNETIC RADIATION HAZARD REQUIREMENTS.

3-2.5.1 Susceptibility Radiation Hazards Designation (SRAD) Code. SRAD Codes have been assigned to HERO SUSCEPTIBLE items in accordance with NATO Standardization Agreement 1380. They are provided in field number 22 of this publication.

3-2.5.2 Electroexplosive Device (EED)/Electronically Initiated Device (EID). Data shown in field number 23 indicates whether or not the item contains an EED or is an EID. When the word "YES" appears in this block, readers shall refer to [NAVSEA OP 3565 Volume 2](#) for the precautions and procedures for safe handling, transporting, and storing of electrically initiated ordnance in radio-frequency (rf) environments. When the word "NO" appears in the block, the item does not contain an EED, nor is it considered an EID. If the block is blank, this information for the item was not available at the time of printing. This publication will be updated with EED/EID data as it becomes available.

### 3-2.6 STORAGE.

3-2.6.1 Hazard Class/Division 1.2 Sub-Division. Hazard C/D 1.2 ammunition is separated into three sub-divisions in order to establish appropriate Q-D requirements. If an item is shown as being hazard C/D 1.2 in field 4, then field number 5 will reflect the assigned sub-division of C/D 1.2: either 1.2.1, 1.2.2, or 1.2.3. See [NAVSEA OP 5 Volume 1](#) for a complete explanation of C/D 1.2 sub-divisions.

3-2.6.2 Maximum Credible Event (MCE). Field number 12 shows the MCE for applicable 1.2.1 and 1.2.3 items, as described in [NAVSEA OP 5 Volume 1](#).

3-2.6.3 Maximum Height. The maximum stacking height of containers or unit loads allowed in storage is presented in field number 25. The value presented is calculated without considering seismic conditions, and is based on a 16-foot vertical limit. For earthquake prone areas, significant reductions in container stack height may be required to assure stack stability and to reduce the tip over risk for all stack heights in all zones. It is recommended that the local magazine storage authority decide how much risk can be tolerated based on past experience with seismic activity in the area. The local authority shall make a decision whether the value shown in [table 3-1](#) (for non-seismic conditions) will be used. The maximum number of stacked, loaded containers in magazines under seismic conditions is provided in table 4 of the Naval Packaging, Handling, Storage and Transportation Center [Technical Report 93003](#). If the values on [table 3-1](#) are used in a high seismic activity zone, additional restraint may be required. The number appearing in this field represents the greatest number of containers represented by the letter "C", or unit loads, represented by the letter "L", which may be placed, one on top another, in one stack under storage conditions.

3-2.6.4 Sensitivity Group Code (SGC). This code is an indicator of an item's physical attributes described in [paragraph 2-4.1](#). SGCs for C/D 1.1 and 1.2.1 ammunition are displayed in field number 26.

3-2.6.5 Temperature Minimum/Maximum. Field number 14 shows the minimum and maximum temperature limits to which the item may be exposed.

**NOTE**

Storage temperature limitations will appear in this publication as the information becomes available. Some items currently have temperature limits stenciled on their containers or on the item itself, and frequently storage temperature limitations are identified in the technical manual for the item.

3-2.6.6 Chemical Group and Symbol. For ammunition items which contain chemicals and chemical agents, field number 13 shows the chemical group to which the item is assigned, and the chemical hazard/fire direction symbol(s) required to be posted on buildings housing these items, as directed by [NAVSEA OP 5 Volume 1](#). The chemical hazard/fire division abbreviations in field number 13b are defined as follows:

- a. PC1 Red - Wear full protective clothing set 1 (Red rim and figure).
- b. PC2 Yellow - Wear full protective clothing set 2 (Yellow rim and figure).
- c. PC3 White - Wear full protective clothing set 3 (White rim and figure).
- d. WBA - Wear breathing apparatus.
- e. ANW - Apply no water.

See [NAVSEA OP 5 Volume 1](#) for definitions, posting requirements, illustrations, and national stock numbers.

3-2.7 NET EXPLOSIVE WEIGHT.

3-2.7.1 Transportation Net Explosive Weight (NEW). Transportation NEW, field 10, is the sum of all the explosive weights in the item, including high explosives, propellants, and pyrotechnics. The weights are expressed in pounds and kilograms.

3-2.7.2 Storage Net Explosive Weight (NEW). Storage NEW, field 11, is the sum of the weights of the high explosives plus the contribution from both the pyrotechnic and the propellant weights contained in the item. For ammunition hazard classified as Class/Division 1.3 and 1.4, the propellant and pyrotechnic contribution shall be 100% of their weights. A contribution other than 100% is possible for Class/Division 1.1 and 1.2 ammunition provided it is supported by hazard classification test data. See [NAVSEAINST 8020.8 \(series\)](#) for details.

**NOTE**

Transportation and storage NEW's, [figure 3-1](#), fields 10 and 11, may differ. See definitions for transportation and storage NEW's in [paragraphs 3-2.7.1](#) and [3-2.7.2](#).

## NAVSEA SW020-AC-SAF-010 REVISION NINETEEN

3-2.8 **LOADING.** The procedures for palletizing, truckloading, railcar loading and container loading of the item are listed in field numbers 15 through 21. These documents were originally created as Weapons Requirements (WRs), some of which were later converted to Military Standards (MIL-STDs); therefore the applicable field may reflect the WR or the MIL-STD designator. As they are updated, both WRs and MIL-STDs will be issued as NAVSEA drawings. The most recently issued loading documents will appear in fields 15 through 21 as NAVSEA drawing numbers. In the event that a unitizing document is not shown for the ammunition or explosives item to be shipped, contact the [Naval Packaging, Handling, Storage and Transportation \(PHST\) Center](#), (973) 724-5991, for instructions. When applicable, Army loading plans or drawings are presented. The various loading documents will be presented in the applicable field, as follows.

3-2.8.1 Truckloading. Field number 16 presents the available documentation on the loading of hazardous materials in trucks and trailers.

3-2.8.2 Carloading. Field number 19 presents the available documentation on railcar loading of hazardous materials.

3-2.8.3 Fleet Issue Pallet Load. Field number 17 presents the available documentation on palletizing fleet issue unit loads of ammunition and explosives for underway replenishment.

3-2.8.4 Domestic Pallet Load. Field number 18 presents the available documentation on palletizing unit loads of ammunition and explosives approved for domestic and overseas shipments.

3-2.8.5 Amphibious Pallet Load. Field number 20 presents the available documentation on palletizing amphibious unit loads of ammunition and explosives.

3-2.8.6 Intermodal Load. Field number 21 presents the available documentation on the loading of hazardous materials in intermodal containers.

3-2.8.7 Commercial Container Load. Field number 15 presents the available documentation for loading commercial containers with explosives and hazardous materials.

3-2.9 **REMARKS.** Field number 39 provides additional information regarding the item, such as hazard classification details or special storage instructions.
