NOSSA INSTRUCTION 8023.13A

From: Commanding Officer, Naval Ordnance Safety and Security Activity

Subj: TRANSPORTATION AND STORAGE DATA FOR POLARIS, POSEIDON, AND TRIDENT MISSILES AND EXPLOSIVE COMPONENT PARTS

Ref: (a) NAVSEAINST 8020.8
(b) Code of Federal Regulations, Title 49 (49 CFR) Parts 100-185

1. Purpose. To provide transportation and storage data for POLARIS, POSEIDON, and TRIDENT Missiles explosive component parts per references (a) and (b).

2. Summary of Changes. Changes include correction of typographical errors, updating transportation and storage guidance to match OP-5 and SW020-AC-SAF-010, adding new part numbers to existing items, adding new items, and updating packaging instruction information.

3. Background. In September 2001, DOT changed their Reference Number (EX number) format. Prior to that change the format was the letters "EX" followed by a dash, two digits for the year, two digits for the month, three digits for the sequential assignment during the month, and a letter suffix for special cases. The current format is the letters "EX" followed by four digits for the year, two digits for the month, four digits for the sequential assignment during the month, and the letter suffix. While DOT letters issued in the old format are still valid, the reference number would need to be revised to the new format to perform a search in the JHCS or DOT databases. For example, to search for a record for EX-9206140, revise the reference number format to EX1992060140 to perform the search.

4. Cancellation. This instruction cancels and supersedes NAVSEAINST 8023.13 of 28 Nov 00 and NAVSEAINST 8023.13 CH-1 of 6 Jan 03.

5. Responsibilities

a. The Strategic Systems Program (SSP) shall provide technical data required for hazard classification assignment for new components or for modification of existing components to Naval Ordnance Safety and Security Activity (NOSSA) (N8) for evaluation.

b. NOSSA (N8) shall assign appropriate hazard classification for new components or modify hazard classification data for existing components as required. NOSSA shall update this instruction with new data as required.

c. Naval Surface Warfare Center Division (NAVSURFWARCENDIV) DET Earle shall develop and maintain packaging Certifications of Equivalency (COE) for each component as required. NAVSURFWARCENDIV DET Earle shall provide updates to Table 4 of the instruction to NOSSA (N8) as required.

d. NAVSURFWARCENDIV Crane shall review SRC/CIICs for each component as required; recommend changes as appropriate. Crane shall provide updates to Table 2 to NOSSA (N8) as required.

e. Military Surface Deployment and Distribution Command (MSDDC) shall develop and maintain Special Permits per reference (b) as required for transportation purposes. MSDDC shall provide updates to Table 3 of this instruction to NOSSA (N8) as required.

6. Records Management. Records created as a result of this instruction, regardless of media and format, shall be managed in accordance with SECNAV Manual 5210.1.

UN HAZARDOUS MATERIAL REGULATIONS

CONUS, INTERNATIONAL AND MILITARY AIR EFFECTIVE DATES FOR COMPLIANCE WITH UN HAZARDOUS MATERIAL REGULATIONS

<u>DATE</u>	<u>REQUIREMENT</u>
1 January 1991	Full compliance with the UN packaging performance requirements and UN marking for international shipments of hazardous materials according to specific modal provisions of the IMDG, the ICAO Technical Instructions, and the IATA becomes mandatory.
1 December 1991	The Air Mobility Command (AMC), [formerly the Military Airlift Command (MAC)], adopts the UN packaging performance and communication requirements for all overseas shipments.
1 October 1994	DOT specification packagings that were eliminated under the new regulations may no longer be manufactured and marked as of this date: see note 1. Newly manufactured and marked packagings must conform to the revised 49 CFR 173 and 178.
1 October 1996	Marks the end of transition period for use of packagings manufactured under the old 49 CFR 173 and 178 requirements. Compliance with UN standard packaging becomes mandatory. This date has been extended until 1 October 1999 provided: (a) the package was filled prior to 1 October 1996 and (b) the package is in compliance with regulations in effect on 30 September 1996.
1 October 2001	Packages conforming to the old 49 CFR requirements in effect on 30 September 1991 may be offered for transportation and transported by rail or highway up until this date. Also, packages filled with hazardous materials prior to October 1, 1991, or marked "Inhalation Hazard" if appropriate, or packages which have not been emptied and refilled on or after 1 October 1991 may be offered for transportation or transported by rail or highway prior to this date.*

*Palletized packages meeting this exception can be offered for shipment by military air under certain conditions specified in note 3.

NOTES:

1. From 1 October 1994 to 1 October 1996 packagings manufactured and marked prior to 1 October 1994 in accordance with the current 49 CFR requirements are authorized out of inventory for depletion purposes.
2. Hazard Class 1 materials packaged prior to 1 January 1990 do not require POP test certification markings for highway, rail, and military air shipments within CONUS. Shipments can be made under IMDG using this clause. However, packages must be marked with UN communications markings.
3. All packages on each pallet must have identical hazard classifications and proper shipping names. The UN proper shipping name, UN identification number, and the UN hazard label must be marked on two opposite sides of the palletized load using marking panels. Shipping documents must reflect the UN proper shipping name, hazard classification and UN identification number, and shall declare that the packages are being shipped under this exception.
