San Diego, CA 92132-5190

To Whom It May Concern:

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. Keep this place open, I want to be able to enjoy it in the future with my friends and future family!

Sincerely,

Tyler Scott

Response to Comment N-10001:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Logan Jaybush

Response to Comment N-10008:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

In addition this is the area of a rapidly growing off road event, King of the Hammers. This event brings money and tourism to the local area. Please reconsider the decision to expand west into Johnson Valley.

Tim G.
Sincerely,
Tim Gochbauer

Response to Comment N-10011:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

Comment ID: N-10013

Response to Comment N-10013:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

To Whom It May Concern:

Dear Marine Correspondent and whom it may concern,

As a strong supporter of all the Armed Services of the United States, I support most decisions which would potentially aid in the training of our troops. However, I have to strongly disagree with the proposed expansion of the Marine Base 29 Palms into Johnson Valley California. I have been a long time advocate of Public Access lands, and recently these lands have been quickly disappearing due to federal action. Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. Please reconsider my and every one else's urge to protect Johnson Valley.

Sincerely,

Conor J Phillips

Response to Comment N-10026:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

I would like you to please consider expanding the base to the east and not into Johnson Valley OHV Park.
If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.
Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. I thank you for taking the time to read my letter.
Mike

Sincerely,

Michael Baker

Response to Comment N-10027:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

I strongly feel that the Marines should not expand into the Johnson Valley OHV area. The USFS has already restricted OHV use on public lands, and now we have the military taking away more of it!

These OHV areas should stay "OPEN" to the general public!

Sincerely,
Brian Lines

The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

This park is probably the most known OHV park in the US. People travel from all over the world to come experience this park and the enjoyment it brings to us each year. By shutting it down and are government taking it over, where are we supposed to go that is not all ready closed, off limits or private property? Our parks are being taken from us and no where for us left to go! You want the new generations to stop doing drugs and drinking alcohol and enjoy the world... But where can they go to pass the time and enjoy life, if are public lands keep getting taken away from us? Where are we supposed to go to get away from the city life and enjoy Gods country, relax peacefully in the wilderness? That is where I get away and regroup in life, is in the outdoors camping riding and relaxing in the company of friends!

There is a group of us that drive from Chico, Ca to Johnson Valley every year not only once but twice and even some years 3 times! It is an 11 hour drive for us and hours among hours for our friends from other cities and states meeting us. We meet people and friends that come from all over the US to enjoy a vacation and good time away!

PLEASE DON'T TAKE OUR LAND AND PARKS AWAY FROM US AND OUR CHILDREN!

Sincerely,
Beau Staples

Response to Comment N-10035:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of this OHV community needs to be done. OHV is one of the few remaining American motorsports. Most parts are American-Made and give 1000's of American's work. If you take OHV lands away from Americans it will give them no reason to have OHV's which in turn causes them to no longer need to buy OHV parts, which causes job loss/companies folding in America. Sure, lets close down more American shops and give more Americans unemployment. I love national debt!

Sincerely,

Bryan Coleman

The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Despite the massive increase of OHV enthusiasts in the United States, the public lands that are open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley - a premier location - will further add to the cumulative loss to OHV users without a suitable replacement. An in-depth study on the effects of the closure to the OHV community needs to be done.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Randy Charpentier

The community needs legal areas for people to be able to wheel. Otherwise, people are just going to wheel illegally which is going to cause even more issues.

Sincerely,
Lisa Peracchio

Response to Comment N-10047:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Response to Comment N-10048:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Sincerely,

Brittany Fuller

Response to Comment N-10049:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. Wheeling land is becoming scarce and if you extend to the west you'll be killing your local economy and a great American pass time.

Sincerely,

Bryan Coleman

Response to Comment N-10053:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

San Diego, CA 92132-5190

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. The proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions has been on my radar since it became an issue.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

I would suggest that the repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all stakeholders involved in Johnson Valley if 29 Palms were to expand East.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Randy Charpentier

Response to Comment N-10071:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

San Diego, CA 92132-5190

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Sincerely,

Jeff Carpenter

Response to Comment N-10072:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. To Whom It May Concern:

I have not been able to travel to JV but I want to and I don't think it should be taken from me. JV is just as important as the Grand Canyon. The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East.

Sincerely,

Chris Anderson

Response to Comment N-10073:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Many businesses thrive on the people that go there every weekend, especially during King of the Hammers, an event that hosts close to 10,000 people.

Sincerely,

Phil Rock

Response to Comment N-10074:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Comment ID: N-10075

Why would we want to work if your taking away all of our OHV parks and leaving us with these toys that we have no where to take and ride? You take are parks and were left with government land and private land and no where to ride! Can't drive them on the street... So, I guess were left with sitting at home and being couch potatoes! There is so many laws and regulations and attorneys, that we the people can't enjoy the world anymore! Taking are parks will be the final screw!

Sincerely,
Beau Staples

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.
One reason is the purchase of gas, diesel, and other oil products. I only live about 100 miles away and just for me to get there towing my sand rail and dirt bike with my diesel, I spend around three hundred dollars in gas and diesel. Just taxes alone from that help out federal and state funds aswell as local merchants purchased from.
Another reason is purchasing parts from local small businesses for my ohv's. I just like many others support alot of local businesses with spending alot of money maintaining our ohv's.
In conclusion there are hundreds of reasons we should keep this land open for ohv purposes. these are two important reasons besides that this is one of the closest ohv areas that I am able to go to, with family and friends that live in the area of landers aswell. Me and millions will be devastated.

Sincerely,
ryan hutchins

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

I personally spend thousands of dollars within 100 miles of Johnson valley every single trip. I am traveling from northern California so I wait until I am close to the area to do all my food shopping and fill my propane tanks. My whole group does this as well as fuel up before the drive home. I estimate my group spend at least \$10,000 per year within the area and we are just a tiny tiny part of the population that uses the area.

Sincerely,

Thomas Nemmer

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Sincerely,

Jeremy Morris

Response to Comment N-10098:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. I am from the east coast where we have to pay for OHV land use and in the last 5 years a local OHV park was closed down, resulting in a huge loss to the local economy, including many local business that were affected by the large amount of customers not being there anymore. Please look at moving east instead of west.

Thank you for your time

Sincerely,

Shawn Vangasbeck

Response to Comment N-10101:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). I love to off road, it is one of the most positive things I have in my life and a great way for my son and I to bond, with out JV I lose a great spot to enjoy the out doors and my family. If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Sincerely,

Matt Caskey

Response to Comment N-10102:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Or at least cost it irreparable harm. Does the USMC have any idea how much money is generated by the King of the Hammers event? And four wheeling in general by hundreds and hundreds of people every week? Destroying this area by making it part of a USMC training area would NOT be in the best interests of the United States, whose citizens are the very people the USMC fights, and sadly, dies for.

Please help save this area for the use of United States citizens, many of them, who consider this area to be the greatest Off Highway Vehicle Recreation Area on Earth.

PLEASE HEAR THIS MESSAGE!

Sincerely,

Dana Freeman

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,
Brittany Fuller

Response to Comment N-10114:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

We all know this is just a pacifying statement that will never come to fruition. The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

Gary Lawson

We all talk about family values but we also keep shutting down areas that are intrinsic to those same family values. The loss of JV OHV Area would be yet another hit to family values.

Response to Comment N-10147:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I have not been able to travel to JV but i want to and i dont think it should be taken from me. JV is just as important as the Grand Canyon. Many generations of families have recreated in Johnson Valley since it opened in the early 50's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Chris Anderson

To Whom It May Concern:

Johnson Valley has been a recreational area since it opened in the early 80's. Generations of families have come to Johnson Valley to spend time together doing the things that they love: OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be ended by the expansion of 29 Palms to the West. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. Keep this place open, I want to be able to enjoy it in the future with my friends and future family!

Sincerely,
Tyler Scott

Response to Comment N-10198:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. Go East!!

Sincerely,
Kyle Irvin

Response to Comment N-10206:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Jessica Fuller

Response to Comment N-10212:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Not only during the KOH race, but throughout the year, off-highway and other recreational uses brings thousands of users to the area. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Randy Charpentier

Colorado Springs, CO 80905

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. Please keep the desert safe for all users.

Sincerely,

Paul Chowaniec

Response to Comment N-10229:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Chris Anderson

Response to Comment N-10234:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

San Diego, CA 92132-5190

To Whom It May Concern:

I am against any expansion that would harm the lifestyle for Marines and their families at 29 Palms. There is already little to do there, do not take away one of the few remaining off-base activities in the area.

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,
Kyle Irvin

Response to Comment N-10236:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Response to Comment N-10237:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

We can't shoot fire works but live ordinance is no problem?
With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire
raging out of control in Johnson Valley will be greatly increased.

Sincerely,

Gary Lawson

Response to Comment N-10251:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

Glenpool, OK 74033

Naval Facilities Engineering Command, Southwest
ATTC, 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

I am against any expansion that would harm the lifestyle for Marines and their families at 29 Palms. There is already little to do there, do not take away one of the few remaining off-base activities in the area.

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Sincerely,
Kyle Irvin

Response to Comment N-10253:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

Comment ID: N-10254

Response to Comment N-10254:

Thank you for your comment. Naval Facilities Engineering Command, Southwest
ATTN: 29Pams EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.

Sincerely,

James Somerville

Response to Comment N-10255:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

Jeremy Bickett

Response to Comment N-10265:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Response to Comment N-10277:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use." Go East!!

Response to Comment N-10283:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. To Whom It May Concern:

The EIS as it currently stands, does not address the problem of ordnance damage to the designated 'routes' through Johnson Valley. At the present time, there are still dangerous craters that resulted from Live Fire training during WWII. These craters create a potential hazard to all users of Johnson Valley, and it will only get worse with increased training. It would be less detrimental to the public for the Marine Corp to consider the expansion to the East, rather than into Johnson Valley.

Sincerely,

Richard Wilson

To Whom It May Concern:

The OHV Industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers. The Marines already have an insane amount of other land where they can train for combat situations. Another spot can most definitely be found in a different location. We all have to share the earth.

Sincerely,

Adam D

Response to Comment N-10296:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

I am against any expansion that would harm the lifestyle for Marines and their families at 29 Palms. There is already little to do there, do not take away one of the few remaining off-base activities in the area.

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers.

Sincerely,
Kyle Irvin

Response to Comment N-10299:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

To Whom It May Concern:

To whom it may concern,

I would like to voice my concern over the proposed expansion of the 29 Palms base into the OHV area known as Johnson Valley.

The OHV industry in itself would take a huge hit if Johnson Valley, currently many companies test products there in events such as the King of the Hammers.

The King of the Hammers event in itself has helped revitalize the economy of the OHV community in a time where very little money is being spent by consumers. Some companies have continued to grow and expand at a time when many are scaling back.

Taking away the premier OHV area on the west coast would be a major hit to the OHV business community not to mention the OHV enthusiasts.

Sincerely,

Tim Lund

Response to Comment N-10313:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Chris Anderson

Response to Comment N-10317:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

San Diego, CA 92132-5190

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? Keep this place open, I want to be able to enjoy it in the future with my friends and future family!

Sincerely,
Tyler Scott

Response to Comment N-10326:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addresses in the EIS if the marines will do this or not.

Sincerely,

Jeremy Morris

Response to Comment N-10339:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Brittany Fuller

Response to Comment N-10346:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

San Diego, CA 92132-5190

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addresses in the EIS if the marines will do this or not.

Sincerely,

Brittany Fuller

Response to Comment N-10347:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive. OHV vehicles produce a lot less emissions than a massive amount of military vehicles would.

Sincerely,

Andrew Marcellano

Response to Comment N-10351:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

To Whom It May Concern:

With all the concerns about soil conservations and the contamination from fluids, the alternatives to expanding into JV needs to be addressed.
The O&N community utilizes spill kits and tarps under vehicles to control fluid spills. However, with the vast amount of military vehicles proposed to use Johnson Valley, it is doubtful they will do so.
The impact on the area from these spilled fluids on the desert floor will be felt for many years to come. This issue is not addressed in the EIS study at this time.
With full support and respect for the Marine Corp, I would like to request that the alternative to the East be seriously considered.

Sincerely,
Richard Wilson

Response to Comment N-10352:

The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.
The proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions has been on my radar since it became an issue.

Johnson Valley is known throughout the world as a prime off-highway area – home to the famed King of the Hammers race.

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor as part of the training exercises. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. I have not seen it addressed in the EIS whether the Marines will do likewise or not.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Randy Charpentier

Response to Comment N-10358:

I have not been able to travel to JV but i want to and i dont think it should be taken from me. JV is just as important as the Grand Canyon. With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The ONV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addresses in the EIS if the marines will do this or not.

Sincerely,

Chris Anderson

Response to Comment N-10359:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

Comment ID: N-10360

Response to Comment N-10360:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Comment ID: N-10361

Comment ID: N-10361
Date Received: May 26, 2011

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hhs.doe.gov/nepa/comepa/sec1.pdf> begins by stating: "evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or non-federal) or person undertakes such other actions (40 CFR ~ 1506.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a major action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Tyler Gowans

Response to Comment N-10361:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Response to Comment N-10367:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

Comment ID: N-10368

Response to Comment N-10368:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Comment ID: N-10371 (Page 1 of 2)

Response to Comment N-10371 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10371 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Kyle Irvin

Response to Comment N-10371 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hss.doe.gov/nepa/regs/nepa/nepaepa.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12/pres/MCON_book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-10372 (Page 1 of 2):

Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Swain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive.

Sincerely,

Kyle Irvin

Response to Comment N-10372 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Long-term budgeting is not a pre-decisional activity under NEPA. Any funding plans that have begun would be updated following completion of the NEPA process.

To Whom It May Concern:

With a massive increase of OHV enthusiasts in the United States in recent years the public lands open to them are also closing at an alarming rate due to route designation and Wilderness areas. Johnson Valley will only further add to the cumulative loss to OHV. With the proposed expansion of the Marine Base at 29 Palms a large swath of Johnson Valley would be lost to future generations through expansion to the west. This is an area unlike any other and loss of continued use by future generations is not acceptable.

Sincerely,

Thomas Bank

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Johnson Valley is a place I recreate on a regular basis. I think going east would be a better alternative for all party's involved.

Sincerely,

Troy Holmes

Response to Comment N-10398:

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive.

Sincerely,

Michelle Hulzar

Response to Comment N-10399:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hhs.doe.gov/nea/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR -- 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Tyler Gowers

Response to Comment N-10405:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hss.doe.gov/nepa/regs/nepa/nepaqla.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

It'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCOH_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" how can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-10408 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10408 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice". 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Response to Comment N-10408 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Response to Comment N-10418:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

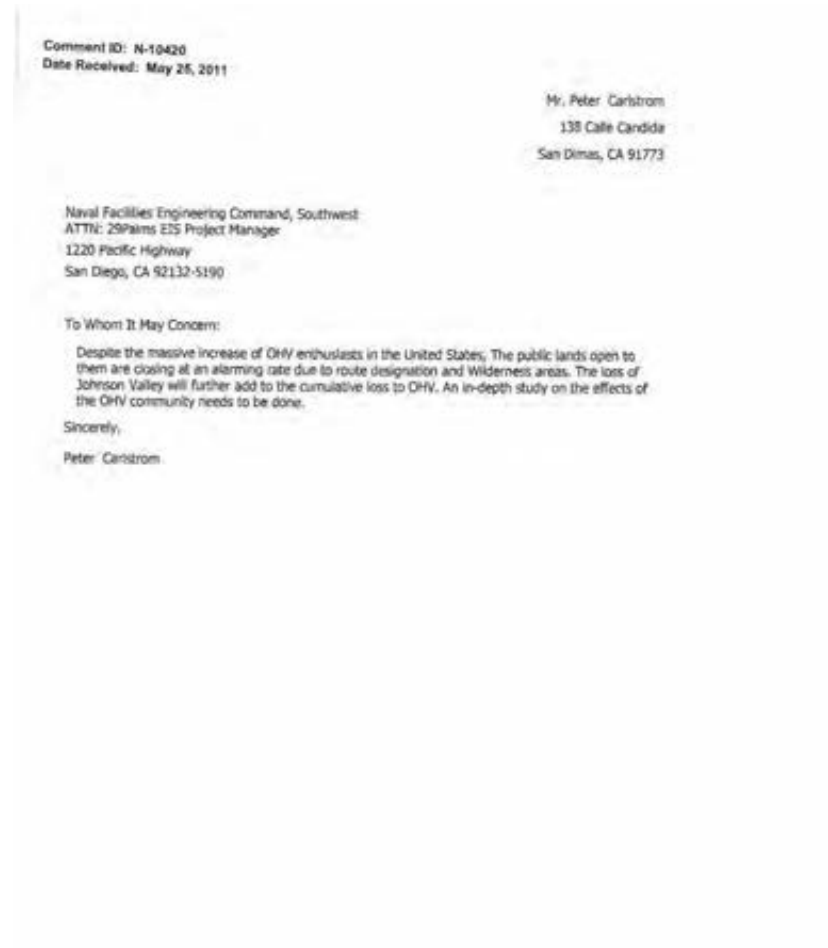

Comment ID: N-10419

Response to Comment N-10419:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Comment ID: N-10421

Response to Comment N-10421:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Feel free to use all or part of this long ass letter.

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.gov/nepa/regs/nepa/nepaqa.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead Federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand

Response to Comment N-10444 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10444 (Page 2 of 2)

option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Sincerely,

Response to Comment N-10444 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Comment ID: N-10445

Response to Comment N-10445:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). Comment ID: N-10453
Date Received: May 25, 2011

I am writing this email to express my thoughts and concerns about the expansion of 29 Palms USMC base in Southern California into the Johnson Valley OHV area. There are many reasons I object to this decision and I have outlined many of them here. Thank you for taking the time to hear my opinion on this matter.

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Races such as the King of the Hammers and the year round four wheeling found at Johnson Valley bring millions of dollars to the area. With the current state of the economy, this income is greatly needed and would most definitely spell economic disaster for those who depend on Johnson Valley for their livelihood.

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East.

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. With less land and more people, closing off Johnson Valley would be a big blow to thousands of families around the country. Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Please reevaluate and consider going East instead. Thank you for reading my thoughts and opinions and I hope you remember them when it comes time to make a decision.

Sincerely,

Starr Penniman

Response to Comment N-10453 (Page 1 of 2):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would

Comment ID: N-10453 (Page 2 of 2)

Response to Comment N-10453 (Page 2 of 2):

be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Why do we even need to think about the impact it would have on web based businesses also. Everything from camping to auto repair parts to food industry based businesses would be effected. Todays economy cannot take such a hit. Stop the madness.

Sincerely,

Tim Oliva

Response to Comment N-10454:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. The lack of visitors to the area would have devastating affects on their tourism. Without the extra influx of people, the locals will have no one to buy from their stores, sleep in their hotels, and buy food from their shops.

Sincerely,

Garek Webster

Response to Comment N-10455:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). Comment ID: N-10469
Date Received: May 25, 2011

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hss.doe.gov/nepa/ce/epa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1506.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Tyler Gowans

Response to Comment N-10469:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.fns.doe.gov/nepa/regs/nepa/nepaenla.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCDN_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic". How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-10472 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10472 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Response to Comment N-10472 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Response to Comment N-10473:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

San Diego, CA 92132-5190

To Whom It May Concern:

Comparatively, there is a greater percentage of OHV users in the United States than there are of many minority groups. This makes the OHV enthusiast a culture to be recognized. For tens of thousands of people like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Jason Yanna

Comment ID: N-10480

Response to Comment N-10480:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

San Diego, CA 92132-5190

To Whom It May Concern:

The Corps has excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. For all that will be lost by the expansion into Johnson Valley, it is owed to the multiple use groups involved to consider alternative options with a clear and open mind.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Robbie McIntosh

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hss.doe.gov/nepa/ceqepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1506.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Sincerely,

Tyler Gowans

Response to Comment N-10496 (Page 1 of 2):

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hss.doe.gov/nepa/regs/nepa/nepaact.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

It'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-10500 (Page 1 of 3):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10500 (Page 2 of 3)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing sumpounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the instatation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Sincerely,

Kyle Irwin

Response to Comment N-10500 (Page 2 of 3):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. San Dimas, CA 91773

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Sincerely,

Peter Carlstrom

Response to Comment N-10504:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

Colleen Bowles

Response to Comment N-10507:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Response to Comment N-10509:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions, mainly because Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc.

All of these groups need to be made aware of the proposed changes and given the chance to add their input on the base expansion. To the best of my knowledge, 29 Palms has not made the effort to reach out to the full diversity of user groups who access Johnson Valley.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Matt Dresselhaus

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hqs.doe.gov/nepa/ceopa/lec1.pdf> begins by stating: "Evidence is increasing that like most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

Tyler Gowans

Response to Comment N-10525:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions, mainly because Johnson Valley is known throughout the world as THE prime off-highway area – home to the famed King of the Hammers race.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley – hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc.

All of these groups need to be made aware of the proposed changes and given the chance to add their input on the base expansion. To the best of my knowledge, 29 Palms has not made the effort to reach out to the full diversity of user groups who access Johnson Valley.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Brian Smith

Response to Comment N-10526:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.doe.gov/NEPA/regs/NEPA/NEPAEA.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-10527 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10527 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "Attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

Response to Comment N-10527 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

Different groups that use Johnson Valley certainly include members of our military, as well as civilians, and everybody in between. Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

Eric Longenecker

Response to Comment N-10538:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Response to Comment N-10541:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hqs.doe.gov/nepa/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public.OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Tyler Gowers

Response to Comment N-10551:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10553 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is no other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Kyle Irvin

Response to Comment N-10553 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions has been on my radar since it became an issue.

Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race and YEARS of countless other events.

I demand that the repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all stakeholders involved in Johnson Valley if 29 Palms were to expand East.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Darrell Drummer

I demand that the repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all stakeholders involved in Johnson Valley if 29 Palms were to expand East.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Matt Dresselhaus

Response to Comment N-10565:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process.

Go East Marines!!!!

The proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions has been on my radar since it became an issue.

Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race and YEARS of countless other events.

I demand that the repeal of Wilderness areas to the East. Expansion to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all stakeholders involved in Johnson Valley if 29 Palms went to expand East.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Go East Marines

I love all aspects of being outdoors whether hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hqs.doe.gov/nepa/ce/nepa/iec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR – 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East.

Sincerely,

Tyler Gowans

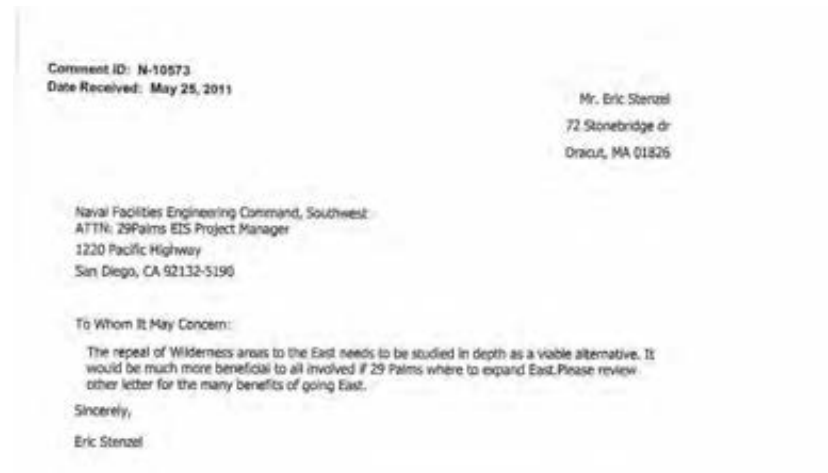

Response to Comment N-10572:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10574 (Page 2 of 2)

option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Sincerely,

Response to Comment N-10574 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Every time I turn on the news or read the newspaper I hear about how the wars of today are so much different than those of generations past. This makes me wonder if the training we did for past battle tactics even applies anymore. We aren't fighting other countries anymore, we're fighting small groups in urban and remote areas. I just don't see the need for large scale training exercises, and according to several reports from the military they don't either. The Corps failed to justify need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops.

Sincerely,

Sanjaya Vatak

Response to Comment N-10583:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs: In today's world, we do not need to train for the movement of this many troops.

I would like to reference this document:

<http://www.marines.mil/unit/29palms/...A1%20Jan04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page three of that document it states:

"The brigade-sized air-ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 (3). Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)..."

The key sentence I would like to point out is:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)."

Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING.

If the MEB was discontinued last time this happened, it may be discontinued again. Therefore, expansion of 29 Palms is not necessary.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF.

Sincerely,

Steve Rhoades

Response to Comment N-10591:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. San Diego, CA 92132-5190

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions, mainly because Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc.

All of these groups need to be made aware of the proposed changes and given the chance to add their input on the base expansion. To the best of my knowledge, 29 Palms has not made the effort to reach out to the full diversity of user groups who access Johnson Valley.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Need of 3 MEB's:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions, mainly because Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

The Corps failed to justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. Even if this IS the case, there is more room for them to train if 29 Palms expands to the East instead.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Response to Comment N-10592:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hsl.doc.gov/lepa/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. The Corps failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops.

Sincerely,

Tyler Gowans

Response to Comment N-10597:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.doe.gov/nea/regu/nea/neaqa.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-10600 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10600 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops.

Sincerely,

Kyle Irvin

Response to Comment N-10600 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

Comparatively, there is a greater percentage of OHV users in the United States than there are of many minority groups. This makes the OHV enthusiast a culture to be recognized. For tens of thousands of people like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Robbie McIntosh

I love all aspects of being outdoors whether hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hqs.doe.gov/nepa/compa/iec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Tyler Gowans

Response to Comment N-10623:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I personally saw a dry lakebed grow from nothing to 30,000+ people in just a few days. There are not many sports or events that can accomplish that. Judging from the amount of traffic in and out it had to have a pretty big effect on the local economy.

I hope to have the opportunity to vacation to Johnson Valley in february for many years to come.

Sincerely,

Jonathan pinkham

Response to Comment N-10627:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Response to Comment N-10629 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10629 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the outdoors and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Kyle Irvin

Response to Comment N-10629 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

To Whom It May Concern:

Safety:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Not only during the KOH race, but throughout the year, off-highway and other recreational uses brings thousands of users to the area. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Tracked Vehicles: (all subsequent topics use similar beginning and ending paragraphs to the topic paragraph as in the above example)

OHV vehicles are generally on rubber tires and stay to specific trails. Many times these tires are lined down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

Quality of Life:

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be affected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Affect on Families:

Response to Comment N-10639 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is

Comment ID: N-10639 (Page 2 of 2)

Johnson Valley has been a recreational area since it opened in the early 80's. Generations of families have come to Johnson Valley to spend time together doing the things that they love - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be ended by the expansion of 29 Palms to the West. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Training at Irwin:

The Corps has excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. For all that will be lost by the expansion into Johnson Valley, it is owed to the multiple use groups involved to consider alternative options with a clear and open mind.

Illegal OHV Use:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space or other alternatives, it may encourage illegal OHV use in the area and cause greater problems than maintaining the current use of Johnson Valley.

Importance of JV:

Johnson Valley Recreation area is NOT just a spot for people to go wheeled. Along with the other multiple uses, it is THE Mecca of off-roading that people from all over the world travel to in order to experience it. The King of the Hammer race has made Johnson Valley a household name throughout the world. I doubt that the USMC realizes the full importance of this area to our community and OHV "Culture" that it entails.

Sincerely,

Nick McMurray

Response to Comment N-10639 (Page 2 of 2):

legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

Joshua Taylor

Response to Comment N-10640:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

I love all aspects of being outdoors whether hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hhs.doe.gov/nepa/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

Tyler Gowans

Response to Comment N-10647:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hss.doe.gov/nepa/reg/nepa/nepaqa.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

TII reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FPMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-10652 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10652 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice". 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

Response to Comment N-10652 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://reg.hss.doe.gov/rep/ccenepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR - 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

Sincerely,

Tyler Gowans

Response to Comment N-10665:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games. With my sons school cutting weight training and sports in general this is on of our pass times. My son knows if he wants to go ride it's time to mow the lawn and whatever chores need to be done and ill take him riding. So keep taking away the things that mean the most to kids now days and lets see what they do next!!!

Sincerely,

Kurt Youngs

Johnson Valley has been a recreational area since it opened in the early 80's. Generations of families have come to Johnson Valley to spend time together doing the things that they love - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be ended by the expansion of 29 Palms to the West. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Robbie McIntosh

I love all aspects of being outdoors whether hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hss.doe.gov/nepa/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "The impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,
Tyler Gowans

Response to Comment N-10693:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://oiaq.hqs.doe.gov/nepa/regs/nepa/nepaqa.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

It'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCOH_book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" how can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-10694 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-10694 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice". 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family oriented" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Response to Comment N-10694 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Johnson Valley has been a recreational area since it opened in the early 80's. Generations of families have come to Johnson Valley to spend time together doing the things that they love – OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be ended by the expansion of 29 Palms to the West. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel t

Comment ID: N-10701

Response to Comment N-10701:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Comment ID: N-10706

Comment ID: N-10706
Date Received: May 25, 2011

First, I must begin by thanking the Marine Corps for their service to our country.

The executive summary of the DEIS on the Expansion of 29 Palms states that the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade sized Air Ground Task Force, and the existing facilities are inadequate.

However, I have found many current documents from the Marine Corps stating that the role of the Marine Corps is changing. Defense Secretary Robert M. Gates is even quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

In the fall of 2010, the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force in Readiness in a post Operation Enduring Freedom security environment.

In a document dated March 14th, 2010, entitled "Reshaping America's Expeditionary Force in Readiness, Report of the 2010 Marine Corps Force Structure Review Group" it clearly states that the 21st century Marine Corps force structure "must provide a strategically mobile, middleweight force optimized for rapid crisis response and forward presence."

The document further states that the Marine Corps will "Accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore."

The report states that the Marine Corps will be reshaped by reducing the end strength of the active component of the Marine Corps from 202,000 to approximately 186,800 following the completion of Marine Corps operations in Afghanistan.

This works out to:

- A 13% reduction in ground combat forces
- An 11% reduction in Infantry
- A 20% reduction in cannon artillery
- A 20% reduction in Armor
- A 16% reduction in fixed wing tactical aviation squadrons
- A 9% reduction in logistics
- A 7% reduction in Marines assigned to non-operational billets
- And a 13% reduction in the civilian workforce.

Page four of the DEIS clearly states that the training requirement put forward as the reasoning to expand 29 Palms comes from a Marine strategy put forward in the year 2000.

With this new strategy and re-vamping of the Marine Corps from the 2010 Marine Corps Force Structure Review group, the entire document must be discarded as it is based on outdated decisions and information.

In summary: in light of the changes in today's Marine Corps, the expansion of 29 Palms is not necessary

Sincerely,

Shaun Bootsma

Response to Comment N-10706:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-10708

Response to Comment N-10708:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

To Whom It May Concern:

The US Government (BUM) has determined that fireworks are illegal at the Johnson Valley OHV area due to the risk of wildfire.

How does the US Government (USMC) propose to mitigate the risk of wildfire at Johnson valley with the use of live fire rounds?

There seems to be a huge contradiction in the laws that the US Government wants to impose upon its citizens and the regulations it allows for itself.

Sincerely,

Chris Schutt:

Response to Comment N-10709:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

San Diego, CA 92132-5190

To Whom It May Concern:

Many OHV areas in the US have been closed due to noise complaints.

If the Federal Government has determined that this is a legitimate problem, then the noise of live fire exercises in the proposed 29 Palms expansion should be enough to halt this proposed action.

If, on the other hand, noise is not a legitimate problem, and the 29 Palms Marine Base expands into the Johnson Valley OHV Area, then the US Government must re-open OHV recreation areas in the US that were previously closed due to noise complaints. There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Chris Schutt

Response to Comment N-10710:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

First I must begin by thanking the Marine Corps for their service to our country.

The executive summary of the DEIS on the Expansion of 29 Palms states that the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade sized Air Ground Task Force, and the existing facilities are inadequate.

However, I have found many current documents from the Marine Corps stating that the role of the Marine Corps is changing. Defense Secretary Robert M. Gates is even quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

In the fall of 2010, the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force in Readiness in a post Operation Enduring Freedom security environment.

In a document dated March 14th, 2010, entitled "Reshaping America's Expeditionary Force in Readiness, Report of the 2010 Marine Corps Force Structure Review Group" it clearly states that the 21st century Marine Corps force structure "must provide a strategically mobile, midweight force optimized for rapid crisis response and forward presence."

The document further states that the Marine Corps will "Accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore."

The report states that the Marine Corps will be reshaped by reducing the end strength of the active component of the Marine Corps from 202,000 to approximately 186,800 following the completion of Marine Corps operations in Afghanistan.

This works out to:

A 13% reduction in ground combat forces
An 11% reduction in Infantry
A 20% reduction in cannon artillery

Response to Comment N-10711 (Page 1 of 2):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-10711 (Page 2 of 2)

Response to Comment N-10711 (Page 2 of 2):

A 20% reduction in Armor
A 10% reduction in fixed wing tactical aviation squadrons
A 5% reduction in logistics
A 7% reduction in Marines assigned to non-operational billets
And a 13% reduction in the civilian workforce.

Page four of the DEIS clearly states that the training requirement put forward as the reasoning to expand 29 Palms comes from a Marine strategy put forward in the year 2000.

With this new strategy and re-vamping of the Marine Corps from the 2010 Marine Corps Force Structure Review group, the entire document must be discarded as it is based on outdated decisions and information.

In summary: in light of the changes in today's Marine Corps, the expansion of 29 Palms is not necessary.

Marines-Thank You but Please go East!

Mike

Sincerely,

Mike Munding

To Whom It May Concern:

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

First I must begin by thanking the Marine Corps for their service to our country.

The executive summary of the DEIS on the Expansion of 29 Palms states that the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade sized Air Ground Task Force, and the existing facilities are inadequate.

However, I have found many current documents from the Marine Corps stating that the role of the Marine Corps is changing. Defense Secretary Robert M. Gates is even quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

In the fall of 2010, the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force in Readiness in a post Operation Enduring Freedom security environment.

In a document dated March 14th, 2010, entitled "Reshaping America's Expeditionary Force in Readiness, Report of the 2010 Marine Corps Force Structure Review Group" it clearly states that the 21st century Marine Corps force structure "must provide a strategically mobile, midweight force optimized for rapid crisis response and forward presence."

The document further states that the Marine Corps will "Accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore."

The report states that the Marine Corps will be reshaped by reducing the end strength of the active component of the Marine Corps from 202,000 to approximately 136,000 following the completion of Marine Corps operations in Afghanistan.

This works out to:

A 13% reduction in ground combat forces
An 11% reduction in Infantry
A 20% reduction in cannon artillery
A 20% reduction in Armor

Response to Comment N-10712 (Page 1 of 2):

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-10712 (Page 2 of 2)

Response to Comment N-10712 (Page 2 of 2):

A 16% reduction in fixed wing tactical aviation squadrons
A 9% reduction in logistics
A 7% reduction in Marines assigned to non-operational billets
And a 13% reduction in the civilian workforce.

Page four of the DEIS clearly states that the training requirement put forward as the reasoning to expand 29 Palms comes from a Marine strategy put forward in the year 2000.

With this new strategy and re-vamping of the Marine Corps from the 2010 Marine Corps Force Structure Review group, the entire document must be discarded as it is based on outdated decisions and information.

In summary: in light of the changes in today's Marine Corps, the expansion of 29 Palms is not necessary.

Marines-Thank You but Please go East!

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

First I must begin by thanking the Marine Corps for their service to our country.

The executive summary of the DEIS on the Expansion of 29 Palms states that the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade sized Air Ground Task Force, and the existing facilities are inadequate.

However, I have found many current documents from the Marine Corps stating that the role of the Marine Corps is changing. Defense Secretary Robert M. Gates is even quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

In the fall of 2010, the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force in Readiness in a post Operation Enduring Freedom security environment.

In a document dated March 14th, 2010, entitled "Reshaping America's Expeditionary Force in Readiness, Report of the 2010 Marine Corps Force Structure Review Group" it clearly states that the 21st century Marine Corps force structure "must provide a strategically mobile, middleweight force optimized for rapid crisis response and forward presence."

The document further states that the Marine Corps will "Accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore."

The report states that the Marine Corps will be reshaped by reducing the end strength of the active component of the Marine Corps from 202,000 to approximately 186,800 following the completion of Marine Corps operations in Afghanistan.

This works out to:

A 13% reduction in ground combat forces
An 11% reduction in Infantry
A 20% reduction in cannon artillery

Response to Comment N-10713 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-10715

Response to Comment N-10715:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-10716

Comment ID: N-10716
Date Received: May 25, 2011

According to the DEIS, on page 1-5 in Chapter one, purpose and need, it clearly states that one main task is to identify MEB training requirements, and that "The findings of this effort were published in a January 2004 report entitled MEB Training Exercise Study: Identifying MEB Training Requirements (Center for Naval Analyses 2004b)."

In examining the January 2004 report, I have found this:

"We used MEB 2015 [1] to shape our analysis. Key MEB 2015 characteristics include three battalion task forces, (two of which move via surface lift and one by vertical lift), three Joint Strike Fighter (JSF) squadrons, and a brigade service support group. Total manning for this MEB is about 17,000 to 20,000 Marines."

Basically the DEIS says that the reason for 29 Palms expanding is to be able to train three battalion task forces.

However, on April 15th, 2011, General James F. Amos, Commandant of the Marine Corps spoke at the Fletcher Luncheon. His remarks in full can be seen here:

<http://www.marines.mil/unit/hqmc/cmc/Documents/110415%20-%20Fletcher%20Conference%20Corrected.pdf>

In speaking about future military actions and where the Marines are going to operate once we come out of Afghanistan, he explained the "arc of instability." It is within this arc of instability that the Marines will most likely be engaging the enemy. These areas will be our future battlefields over the next two decades.

In speaking about this arc of instability, General Amos says:

"But we see that's probably what the world is going to look like for the next two decades. A lot more information there, but we think that's going to be our backyard because this is primarily the littorals, because these are kind of the nasty missions and things that, quite honestly, don't require 20,000 Marines on the ground."

If the future operations of the Marine Corps, according to the Commandant of the Marine Corps himself, are NOT going to require 20,000 Marines on the ground, then why are we expanding 29 Palms to train a MEB from about 17,00 to 20,000 Marines?

We have been told that 29 Palms must "Train as we fight." If this is true, then expanding 29 Palms will not be training as you fight in that future campaigns will be much smaller and not to the scale of campaigns like Afghanistan.

Sincerely,

Kurt Schneider

Response to Comment N-10716:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

Comment ID: N-10717

Response to Comment N-10717:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

A Marine Expeditionary Brigade (MEB) is a formation of the United States Marine Corps, a Marine Air-Ground Task Force of approximately 14,500 Marines and Sailors constructed around a reinforced infantry regiment, a composite Marine aircraft group, a logistics group and a command element.

The Commandant of the Marine Corps stated just months ago that the USMC's mission would be changing and that the Marines are not a second Army, and in past years have not been used like they should be used, so he is getting the Marines back to their roots.

Their roots do not consist of three simultaneous MEB's.

The US Army has just expanded Ft. Irwin for simultaneous battalion-level training. Leave the land army to the Army!

General James F. Amos promised the Armed Services committee promising that the Marines will only ask for what they NEED, not for what they WANT. I sincerely hope that Johnson Valley is on the "WANT" list and will be peacefully removed from that list!

Defense Secretary Robert M. Gates is quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

Sincerely,

Shaun Bootsma

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The Environmental Impact Statement FAILS to consider the Cumulative Effect on the closure of OHV routes due to route designation, Wilderness Study Areas, and route closures.

As with anywhere, there is only a finite amount of land. Vehicle users are being painted into a corner and the corner continues to shrink. This is not the only Desert resource management story, but it is one that hits home the most for vehicle users and must be an environmental consideration under "cumulative effects"!!!!

GO EAST MARINES. Leave the Johnson Area OHV open for all of the users that enjoy it and support the Marines

Sincerely,

Ryan Brown

Response to Comment N-10722:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-10724

Response to Comment N-10724:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

General James F. Amos, Commandment of the Marine Corps, spoke at the Fletcher Luncheon on April 15th, 2011.

General Fletcher spoke about future military actions and where the Marines are going to operate once we come out of Afghanistan, and he explained the "arc of instability." It is within this arc of instability that the Marines will most likely be engaging the enemy. These areas will be our future battlefields over the next two decades.

In speaking about this arc of instability, General Amos says:

"But we see that's probably what the world is going to look like for the next two decades. A lot more information there, but we think that's going to be our backyard because this is primarily the littorals, because there are kind of the nasty missions and things that, quite honestly, don't require 20,000 Marines on the ground."

If the Marines must train as they fight, then 29Palms does not need the capacity to simultaneously train 20,000 Marines.

Please keep Johnson Valley OHV area open to the public—including those Marines—who can come recreate at the OHV area when they are on leave from training, or redeployed home after fighting in that very arc of instability.

Sincerely,

Shawn Baker

Response to Comment N-10726:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. To Whom It May Concern:

Johnson Valley OHV area is a big part of the high quality of life in Southern California. Desert riding and rockcrawling are a huge part of the local culture. These activities are so well-established and the terrain so unique and desirable that many of us travel from outside California--from across the country--simply to enjoy Johnson Valley.

My friends have been engaged there.
My friends have been married there.
My friends have taught their children to ride dirtbikes there.
I ran my first rock trail there.
I love the sand, the granite rocks, the scrub brush, the sunrises, the sunsets, the clear desert air and the night stars.

An expansion of 29 Palms will be deleterious to our quality of life.

Sincerely,

Ryan Brown

To Whom It May Concern:

It's seems Ft. Irwin, which is the Army's National training Center went through an expansion similar to 29 Palms.

Ft. Irwin was 642,000 acres in size. An additional 150,510 acres was added for a grand total 792,510 acres.

29 Palms is currently 596,480 acres, and wants to expand by 422,000 acres for a grand total of 1,018,480 acres.

If a second Land Army is not desired, then why does the USMC need a 25% BIGGER training area than our actual Land Army? The EIS fails to provide any justification.

Sincerely,

Shawn Baker

The importance of Johnson Valley to the OHV industry is incalculable.

There has been more rockcrawling equipment created for, developed at, and tested and marketed in Johnson Valley than at any other singular location in the world.

A great many desert racing parts manufacturers test their new equipment at Johnson Valley.

The UTV industry has discovered Johnson Valley as a testbed for their new vehicles.

Not only will the closure of Johnson Valley have an economic impact on nearby local small businesses, it will have an economic impact to an entire nationwide industry.

Sincerely,

Shawn Baker

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

To Whom It May Concern:

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers.

Sincerely,

Jon Morelock

Comment ID: N-10753

Response to Comment N-10753:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordinance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,
William Knox

San Diego, CA 92132-5190

To Whom It May Concern:

Off roading is a great hobby that encourages family and good values, as well as enjoying nature. If JV is closed then all these people will be pushed to video games. Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,
Bob Gray

Response to Comment N-10758:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

As a Navy Veteran, I have first hand seen the negligence of attention to detail when it comes to clean up, rebuild, or repair projects on certain sites. I believe that any more corporate and/or military damage or development should cease in my home state.

Sincerely,

Oliver Tanacio

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

Comment ID: N-10776

Response to Comment N-10776:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

To Whom It May Concern:

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Fire control is a very expensive issue. More roadblocks instead of leaving the area for the public!

Please reconsider!

Sincerely,

Ben Gross

Response to Comment N-10781:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. To Whom It May Concern:

The Hammers and the King of the Hammers race have reshaped the rock crawler world and design. Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Tyler Gowans

Response to Comment N-10792:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

This is just another reason that 29 Palms should be expanding east, instead of west into Johnson Valley.

Sincerely,

Wayne De Meyer

Response to Comment N-10794:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

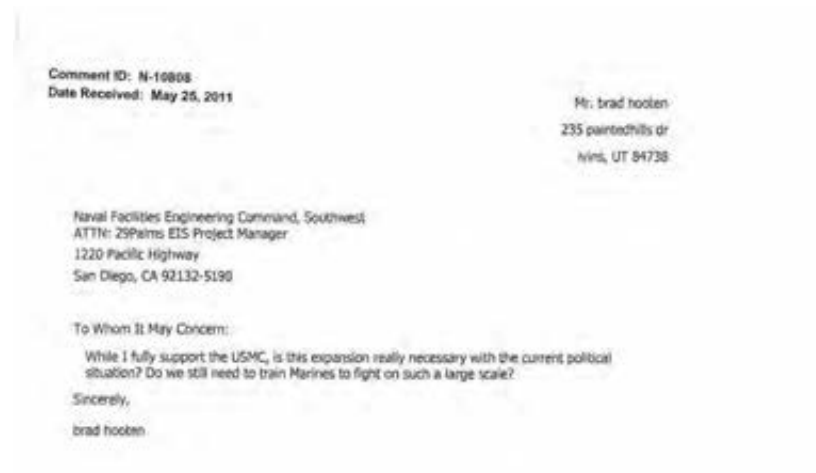

Sincerely,

Steven Fuller

Response to Comment N-10807:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Response to Comment N-10809:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? And if so how have the marines be training for desert wars? Are you saying that all your marines, are not trained properly. Since they don't have the hammers currently. How could this area be different than another section of desert that you already have.

Sincerely,

Brian Kirby

Response to Comment N-10810:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Doug La Crosse

Response to Comment N-10814 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of

Comment ID: N-10814 (Page 2 of 2)

Response to Comment N-10814 (Page 2 of 2):

supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

The beauty of Johnson Valley is one reason thousands people flock to the area every year - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, and others choose to use the area for camping, exploring, rock hounding, shooting, as well as other uses. Military operations, including the dropping of shells and the like, will destroy the natural beauty of the area.

Sincerely,
Chris Schutt

Response to Comment N-10829:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Comment ID: N-10831

Response to Comment N-10831:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-10855

Response to Comment N-10855:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Edward Munding

Response to Comment N-10861:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

There needs to be time to get more of the public aware of what is going on. In this time of MidEast wars, rising gas prices, election cycles, there is simply too much distraction for the average person to become aware of the long term effects of the decision in this case. More input is needed, therefore more time is needed.

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

To Whom It May Concern:

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period. The Marines neglected to give the correct mailing address for public comments on the home page of the website and the public documents for the 29Palms Marine Base proposed expansion. It is also missing from all the public documents including the Project Briefing Paper, the Project Overview, the Public Info Brief, the Trifold brochure, the Frequently Asked Questions (FAQ), the Contact, and the Public Comment Link on the home page.

Instead, the contact info is given only for the project office on the 29Palms Marine Base.

NEPA requires and encourages public comment, and the Marines have not given the public the information needed to send in their comments. This is a major NEPA violation, and you must rectify this serious oversight!

Sincerely,

Steve Rhoades

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period. It was nearly impossible for those out of state to comment as well. Sorry excuse for an attempt at appeasing the public for this issue. You can definitely do better. You are the MARINES for crying out loud! As a result of that, there are tons of internet forums now attempting to gather folks to send in mass numbers of letters to help sway the decision. All for something that shouldn't even be up for debate-it shouldn't even be on the Marine's radar any longer. Times have changed, this land is no longer needed for training. What was brought up an idea many years ago does not mean it needs to be acted on now. Do what is right and do what is good for the Marines and the People. Forget the expansion all together. It's not necessary. If you still feel you must expand, then move east. The Marines will win, the public will win-everyone can come together and enjoy the freedoms of the US that the Marines have fought so hard for. Thank You Marines and God Bless!

Sincerely,

Brianne Mundinger

Response to Comment N-10880:

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

The amount of time provided for the public comment period is too short for the public to thoroughly go over the documents effectively. Please extend the current public comment period.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Luke McCain

Response to Comment N-10881:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Naval Facilities Engineering Command, Southwest
ATTN: 29 Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

I support our troops and without them our freedoms would be worthless and non-existent. I want to thank each and every one of our US Marines. Expansion of 29 Palms into the Johnson Valley area will effectively destroy the entire area for the use of the OHV community. The EIS does not address or even contemplate the mitigation of this loss. The importance of the Johnson Valley area to the OHV community is one I'm sure you've received a large number of letters on and it is an huge oversight within the EIS.

Mitigation of any loss must be done in a like for like, kind for kind manner. The mitigation also must be done in a geographically similar area. There simply is no way to replace the Johnson Valley OHV area in a like for like, kind for kind manner. When appropriate mitigation is not available or the cost of that mitigation is prohibitive there is no other option but to remove the option requiring that mitigation from the study.

The EIS does not address the mitigation of the loss of Johnson Valley. The EIS does not identify any alternatives to the Johnson Valley OHV, nor does it address the cost for replacing the Johnson Valley OHV area as a form of mitigation. The westward expansion of 29 Palms should not and can not go forward without a realistic plan to mitigate these losses. If expansion is necessary, then you must go Eastward.

Go East Marines. I love to ride my dirt bike and see nature. JV is a mecca of off roading and natural beauty. OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

Sincerely,

Matt Caskey

Response to Comment N-10889:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

San Diego, CA 92132-5190

To Whom It May Concern:

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.

Sincerely,

Bridget Leon

Response to Comment N-10892:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

To Whom It May Concern:

Once this ground is used for testing, it can never be repatriated for recreation due to the use of live shells. It's proximity to Los Angeles means it must be preserved for recreational opportunities.

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.

Sincerely,

Jerome Gauthier

Response to Comment N-10900:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Response to Comment N-10914:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-10920:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

San Diego, CA 92132-5190

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not. The spilling of fluids into sand/desert/dirt is a major issue that can destroy the environment for decades. The amount of vehicles that would be used for training would devastate the desert, and the amount of money required to keep this from happening would be better spent elsewhere.

Sincerely,
Tim Oliva

It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

We fight hard to clean up after ourselves and in a constant battle with the eco-nazis to keep the public lands open. We do trail runs specifically to pick up trash, clean up oil spills, etc. and do general trail maintenance and such for things like erosion control and water run-off. Are the Marines going to continue this in their training? I think not. Please go East instead, leave JV to the folks who care.

Sincerely,
Brianne Munding

The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not. As an active duty soldier, I can say with confidence that military vehicles break down and spill kits are not readily available in most vehicles. Tight timelines make safe and responsible cleanup of leaking fluid difficult, and I have seen on many occasions a leaking vehicle just pour fluid onto the ground because that vehicle didn't even have a drip pan. Please think of how this will negatively impact the area. Off-road enthusiasts are responsible, and expect and prepare for fluid leaks. My off-road club has sponsored several clean up events at many parks and beaches we frequent because these places are important to us.

Sincerely,

Brian Reynolds

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Jordan Reeves

Response to Comment N-10936:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

San Diego, CA 92132-5190

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS. Not only does this need to be addressed but a plan also put together to help rectify damage already created by training exercises.

Sincerely,

Tim Oliva

Response to Comment N-10943:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? Please re-evaluate the need for the expansion in "today's" standards and reality of training/Marine troop use, then evaluate moving East instead.

Sincerely,

Greg Munding

Response to Comment N-10953:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Naval Facilities Engineering Command, Southwest
ATTN: 25Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? Piss poor reasons. No excuse. Stay put or go EAST.

Sincerely,
Mike Munding

Response to Comment N-10968:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Sincerely,

Jordan R.

Response to Comment N-10976:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-10991

Response to Comment N-10991:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordinance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,
Nicholas Nelson

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

I support our troops and without them our freedoms would be worthless and non-existent. I want to thank each and every one of our US Marines. Expansion of 29 Palms into the Johnson Valley area will effectively destroy the entire area for the use of the OHV community. The EIS does not address or even contemplate the mitigation of this loss. The importance of the Johnson Valley area to the OHV community is one I'm sure you've received a large number of letters on and it is an huge oversight within the EIS.

Mitigation of any loss must be done in a like for like, kind for kind manner. The mitigation also must be done in a geographically similar area. There simply is no way to replace the Johnson Valley OHV area in a like for like, kind for kind manner. When appropriate mitigation is not available or the cost of that mitigation is prohibitive there is no other option but to remove the option requiring that mitigation from the study.

The EIS does not address the mitigation of the loss of Johnson Valley. The EIS does not identify any alternatives to the Johnson Valley OHV, nor does it address the cost for replacing the Johnson Valley OHV area as a form of mitigation. The westward expansion of 29 Palms should not and can not go forward without a realistic plan to mitigate these losses. If expansion is necessary, then you must go Eastward.

Go East Marines. I love to ride my dirt bike and see nature. 29 is a mecca of off roading and natural beauty. Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordinance being dropped in the area, the Marines may make Johnson Valley un-usable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,
Matt Caskey

Response to Comment N-10995 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Naval Facilities Engineering Command, Southwest
ATTN: 29 Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers.

Sincerely,
Richard Favela

Response to Comment N-11019:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

Response to Comment N-11035:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

Not only during the KOH race, but throughout the year, off-highway and other recreational uses brings thousands of users to the area. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Luke McCain

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

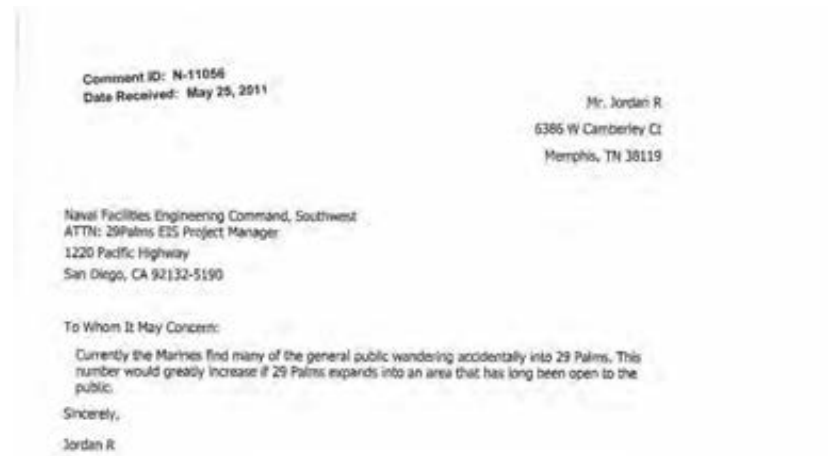

Sincerely,

William McDade

Response to Comment N-11055:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

Sincerely,

Lyn Bevil

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

OHV vehicles are generally on rubber tires and stay to specific trails. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Luke McCain

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,
Jordan R.

Response to Comment N-11078:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Response to Comment N-11088:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

David Simons

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

One aspect of any EIS is an evaluation of the fairness of the action and the equality of sacrifice if any to the community. Johnson Valley is an area utilized by countless user groups, but is the only place within hundreds of miles that offers the size and variety of terrain to OHV users that Johnson Valley does.

Expansion west will unduly impact the OHV community and its users. The EIS fails to address the fairness of this taking, especially when other options are available that wouldn't unduly burden one user group. If expansion is necessary, the best option is to Go East. This expansion will leave open to the public a long and often utilized area that is open to all user groups.

Go East Marines.

Sincerely,

Steve Rhoades

Response to Comment N-11097:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-11108

Response to Comment N-11108:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Has any thought gone into the impact on the surrounding homes and residents in terms of sound and disturbance? There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue. It seems that the Marines would be making themselves into very poor neighbors by moving next to people who have lived there for decades, then using explosives in close proximity. Many people in the area are large supporters of the military, but would be very displeased by this.

Sincerely,

Anna Vafuk

As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Eric Dinger

Response to Comment N-11116:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: N-11127

Response to Comment N-11127:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. Closing down lands always leads to more illegal off-highway use. Seen it in many states. Environment suffers, folks go to jail, land is destroyed, animals are killed. Do you really want other parts of California to end up like this due to a simple expansion in the wrong direction? Move East instead-we would all win.

Sincerely,

Brianne Munding

Response to Comment N-11148:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-11150:

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

I have not seen evidence that the Corps has adequately analyzed the DOD Budget and National Deficit Impact on the Project Viability of taking over the Johnson Valley area.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Luke McCain

To Whom It May Concern:

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. I respectfully request the consideration against the expansion for the 29 Palms training area. As I agree, we need the best training to keep the edge against our enemies. More than just annual training is required to produce the best warriors for the Marine Corps. There is news in The Globe, Marine Times and other publications about how the Marine Corps is downsizing and returning to it's amphibious roots. Every MOS and billet is to be reduced and or restructured in one form or another per the statements from CMC, so not to be a second land army. This would be the reasoning for not having a need for the expansion of the 29 Palms training area. Again, I make this request with the utmost respect, thank you.

Sincerely,

Jasmine Bouniady

Response to Comment N-11172:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Go-rat! While I support nearly every endeavor of our beloved Corps, I beg you to re-consider expanding this 29 Palms base into the Johnson Valley area. Besides the potential damage to the environment, the loss of such a great set of off road trails, and the destruction of this family oriented "playground", I object to the reasons for the expansion.

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops.

Our Leathernecks are "masters of all they survey". I agree with keeping it that way through training and practice, so that our boys can clear the beaches and make it safe for the Army to come ashore, destroy enemy surveillance installations making it safe for the Air Force to fly through hostile skies, and making the Navy feel safe that there are men with rifles aboard ship willing to do harm to our enemies.

But I do not believe that the Marines need to train for such large set-piece battles in our current political climate.

Please expand the 29 Palms base to the east and away from Johnson Valley.

Sincerely,

David Simons

Response to Comment N-11179:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

To Whom It May Concern:

The Corps failed to justify need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. We are in a time of troop reduction, now is not the time to be expanding military training facilities. We do not need to spend even more money with our deficit, they could much more easily restructure current facilities to be more efficient for training.

Sincerely,

Brian Reynolds

Response to Comment N-11182:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

To Whom It May Concern:

The Corps failed to Analyze DOD Budget and The expansion plans for 29 Palms Marine Base pushing into, and taking over, most of Johnson Valley's multiple-use recreation area appears to be ignorant of the process in doing a proper EIS. There are numerous areas that were left out of the EIS studies, including the impacts on an entire culture of recreationalists...multiple cultures actually.

The activities seen in the Johnson Valley Recreation Area are not just some pop-fad or single event taking place, never to be seen again, but instead are truly "lifestyles", dedicated to participation in a certain activity. Whether it be the rocketeer, the wind-sailer, the rock hound, the off-roader, or any other of the large number of activities taking place in the area, the individual participants invest tens of thousands of dollars, if not hundreds of thousands or even millions of dollars in order to participate. With that much invested, it proves that these activities go far beyond an "intermittent hobby" and are actually in a classification comparable to an entire culture of their own...very large cultures at that.

To ignore something as great as a culture, many cultures in fact, combined with the fact that Johnson Valley happens to be the "Mecca" of many of those cultures (especially in the off-road world), again shows that the EIS was NOT completed correctly and that the choice to expand into Johnson Valley would be a travesty against a large number of Americans, who are supposed to be protected by the EIS. There are reasons the EIS is a legal process...the way the EIS for the 29 Palms Marine Base expansion has been handled has NOT followed the reasoning for doing an EIS in the first place.

The cultures driven by the unique recreation activities possible in Johnson Valley would be GREATLY impacted by the 29 Palms Base expansion. Do the EIS right, or DO NOT expand the base. Deficit Impact on Project Viability.

Sincerely,

Nick McMurray

Response to Comment N-11196:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-road riding that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Dave Letcher

Response to Comment N-11214:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. Along with the other multiple uses, it is THE Mecca of off-roading that people from all over the world travel to in order to experience it. The King of the Hammers race has made Johnson Valley a household name throughout the world. I doubt that the USMC realizes the full importance of this area to our community and OHV "Culture" that it entails.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Luke McCain

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,
Mike Sullivan

It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected. OHV time to me and my family is a time to bond and enjoy the outdoors. We literally go camping with the Jeep 12 to 20 times a year; be it for a week or one night. My kids love it! Some of their (and my!) favorite, first, and BEST memories are "four-wheelin" in the Jeep. If you take one area away how long will it be before ALL of them are gone? That is why there is a "problem" in the East of the US.....NO NATIONAL OHV PARKS! Almost all of the ones that there are are privately owned. I thought public lands were for the public? For the families of this NATION! There are ALOT of better, cheaper, more low-key areas that the AirForce could utilize than JV.....Save it for the future. Your kids and mine will thank you for it later.....

Sincerely,

Eric Lock

San Diego, CA 92132-5190

To Whom It May Concern:

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,
Randy Ippolito

Response to Comment N-11244:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Ventura, CA 93001-1215

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 60's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Colleen Bowles

Response to Comment N-11276:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Erie, PA 16507

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Johnson Valley has been a recreational area since it opened in the early 80's. Generations of families have come to Johnson Valley to spend time together doing the things that they love - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be ended by the expansion of 29 Palms to the West. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Luke McCain

austin_astala

Response to Comment N-11291:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Sincerely,

Bridget Leon

Response to Comment N-11297:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

I am writing to voice my objection to expanding the 29 Palms Marine base training area into the off highway vehicle lands of Johnson Valley. I believe that Fort Irwin can make up for the perceived deficiencies of the current training area of 29 Palms. But, I don't believe that proper alternatives were considered and what is being proposed appears to be a giant land grab.

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Come on. The greatest fighting force the world has ever seen cannot overcome scheduling conflicts within its own bases? Who are we kidding?

Please expand 29 Palms to the east or consider better utilization of current assets like Fort Irwin.

Sincerely,

David Simons

Response to Comment N-11298:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. It seems to me that it would cost ALOT less money to turn this base into what is needed rather than turn PUBLIC lands into it. Why would you waste that much money to defile Johnson Valley when Fort Irwin could be made to work for one half to two-thirds the price? Its no wonder the country is falling apart and "Public" lands cant be used by the public unless you make six figures a year....

Sincerely,

Eric Lock

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups. The army's expansion turned into wasteland of the past. Don't let this happen to the premier destination area and Mecca of off-roading at JV. Go EAST!

Sincerely,

Edward Munding

Response to Comment N-11314:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups. I'm sure that if this was brought to the public's attention, support to STOP this travesty would grow. I'm on the Internet CONSTANTLY and this is the first I've heard of it; and there are only 2 days left before a decision is made! This is unbelievable.... Seems like the Government would make the public more aware that your "Public" lands aren't gonna be public for much longer.... An extension of the time limit needs to be made before anything is decided and MORE people need to be made aware of what is happening....

Sincerely,
Eric Lock

To Whom It May Concern:

Sirs,

Like many of my friends, I own an OHV. Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Considering the recent revelation of the omissions on the the website and public documents for the 29Palms Marine Base proposed expansion, please grant us a 60 day extension for further comments.

Thanks

Sincerely,

Robert Bourne

Comment ID: N-11341

Response to Comment N-11341:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Richard Favela

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. You have no idea how negative the impact will be if you continue this way... it will crush the local economy, put kids back on the streets, destroy the land we've fought so hard to preserve and maintain. Go EAST instead.

Sincerely,

Brianne Munding

Response to Comment N-11353:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The difference of needing, wanting and requiring something are very different. Unfortunately in my experience with the Marines, we often found ourselves entrenched between what was truly required to be effective and what was beneficial to the administration: new technology, larger scope, competition for contracts and unfortunately political aspects. More often that not we spent twice as much time learning a new piece of equipment that may have only marginally improved our processes and would cost millions of dollars. My point is this...I don't believe the Marine Corps will ever fully utilize the expansion of 29 Palms into Johnson Valley. I believe you will take over the area for expansion and then have the funding removed by politics or spending cuts and then it will be nearly impossible for the public to get access again.

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Sincerely,

Kyle Irvin

Response to Comment N-11372:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Folks work year round long and hard to keep the area clean, provide food, fuel, etc. for the yearly pilgrimage to JV at various times of the year for many folks, and for the official King of the Hammers event as well. This draws a lot of money into the local economy as a result and the community has become dependent on that. Please don't crush the local economy-move east instead, leave JV to the people, the community and the world.

Sincerely,

Brianne Mundinger

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Sincerely,

Randy Ippolito

Response to Comment N-11375:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Every time I go to Johnson Valley, I fuel up main and aux. fuel tanks, and buy all of the food and supplies I need for the weekend - either in Yucca Valley or Apple Valley. I know that this is true with THOUSANDS of other people travelling out to Johnson Valley every year, including active duty and retired Marines. Closing Johnson Valley to the public (even if there is a little piece left open) will have a devastating impact on local economy - especially with people spending more and more as time goes by due to rock crawling and rock racing becoming 'popular' and more mainstream. Thank you for regarding the impact that closing Johnson Valley will have on the area's economy and considering alternative areas to use for training.

Sincerely,

Luke McCain

Response to Comment N-11380:

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,
Jordan R

Response to Comment N-11388:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Charlotte, NC 2821

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

William McDade

Response to Comment N-11402:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Jordan R

Response to Comment N-11406:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Comment ID: N-11407

Response to Comment N-11407:

To Whom It May Concern:

Has the Marine Corps done any sort of research on the possible effects of large vehicle movements in regards to air quality and pollution in the area? With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive. Currently the majority of users are driving gasoline powered vehicles that are heavily controlled and tested for their emissions via the California Smog program. How much damage could we see to our air due to this expansion and the proposed exercises?

Sincerely,

Anna Vatauk

Response to Comment N-11412:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. To Whom It May Concern:

I support our troops and without them our freedoms would be worthless and non-existent. I want to thank each and every one of our US Marines. Expansion of 29 Palms into the Johnson Valley area will effectively destroy the entire area for the use of the OHV community. The EIS does not address or even contemplate the mitigation of this loss. The importance of the Johnson Valley area to the OHV community is one I'm sure you've received a large number of letters on and it is an huge oversight within the EIS.

Mitigation of any loss must be done in a like for like, kind for kind manner. The mitigation also must be done in a geographically similar area. There simply is no way to replace the Johnson Valley OHV area in a like for like, kind for kind manner. When appropriate mitigation is not available or the cost of that mitigation is prohibitive there is no other option but to remove the option requiring that mitigation from the study.

The EIS does not address the mitigation of the loss of Johnson Valley. The EIS does not identify any alternatives to the Johnson Valley OHV, nor does it address the cost for replacing the Johnson Valley OHV area as a form of mitigation. The westward expansion of 29 Palms should not and can not go forward without a realistic plan to mitigate these losses. If expansion is necessary, then you must go Eastward.

Go East Marines. I love to ride my dirt bike and see nature. 29 is a mecca of off roading and natural beauty. With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Matt Caskey

Response to Comment N-11414:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley, the carbon footprint of military training will be massive.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Luke McCain

Mrs. Brienne Munding
2364 Canyon Hills Dr.
East Wenatchee, WA 98802-8281

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive. Are the Marines going to clean up after themselves and monitor their carbon footprint? Highly doubtful...

Sincerely,

Brienne Munding

Response to Comment N-11432:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

The Marine Corps appreciates your comment and involvement in the NEPA process.

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Lyn Bevil

Response to Comment N-11433:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

San Diego, CA 92132-5190

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Please go EAST!

Sincerely,

Brianne Munding

Response to Comment N-11463:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. There are almost no available OHV areas within 200 miles of where I live. Even though Johnson Valley is on the other side of the country, it hosts one of the biggest and best OHV events in the country. Closing this location would be a crushing blow to the community and OHV enthusiasts nation wide. The Marines can use a different location just as easily.

Sincerely,

Brian Reynolds

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. Leave JV open to the public.

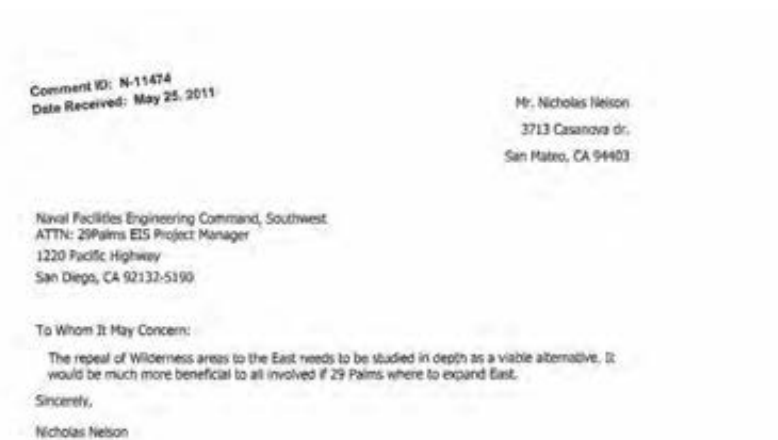

Sincerely,

Edward Munding

Response to Comment N-11473:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process.

ATTH: 29 Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. Johnson Valley is too important as an ecosystem, as a recreational area, and as one of the biggest off-roading landmarks in the nation. People come from all over the nation, and some even from as far as Europe and Australia, visit Johnson Valley. Please, reconsider this.

Sincerely,

Brian Reynolds

Response to Comment N-11491:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Crystal Providence

Response to Comment N-11510:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Response to Comment N-11526:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive.

Sincerely,

Ray Morrison

Response to Comment N-11527:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Crystal Provience

Response to Comment N-11541:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.
