Thank you for your comment. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. ~~Ultimately, Congress will make the final decision about proceeding with the proposed action.~~

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Deleted: The Marine Corps' Fiscal Year 2012 baseline budget totals \$25.9 billion and constitutes 16% of the DoN's baseline budget and just 4.7% of the DoD's baseline budget. Anticipated costs of land acquisition would be considerably less than 1% of the Marine Corps' budget.

To Whom It May Concern:

The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just waisted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Dröllinger

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Deleted: The Marine Corps' Fiscal Year 2012 baseline budget totals \$25.9 billion and constitutes 16% of the DoN's baseline budget and just 4.7% of the DoD's baseline budget. Anticipated costs of land acquisition would be considerably less than 1% of the Marine Corps' budget.

All too often we see government programs suddenly end mid-process due to loss of funding. In that case, this area would be close down both to the public and sit unused by the U.S. Marines. I'd much rather see this occur in an area already inaccessible by the general public, such as to the East.

Sincerely,

Joseph Parslau

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. PLEASE SAVE THIS AREA FOR FUTURE GENERATIONS!

Sincerely,

James McClammy

Response to Comment N-12892:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As with all things, if something is outlawed, outlaws will still participate. This disenfranchises law-abiding citizens with thousands of dollars tied up in their OHVs...their only options would be to sell and take a loss, drive further to wheel in open areas which requires more time and money, or resort to wheeling illegally on other nearby private properties.

Sincerely,

Joseph Panslau

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

While most responsible OHV enthusiasts refuse to participate in illegal use, it will become more common as lands are taken away. This increases the dangers to all around and simply creates more work for local authorities.

Please advise EAST Marines!

Regards,
David Gill

Sincerely,
David Gill

Response to Comment N-12897:

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. As time goes on more and more land is removed for OHV use. Most of us really try to be responsible and only ride on approved lands but many will have no legal land to use and could possibly seek out other places that may not be legal; thus creating a bad image for the overall community.

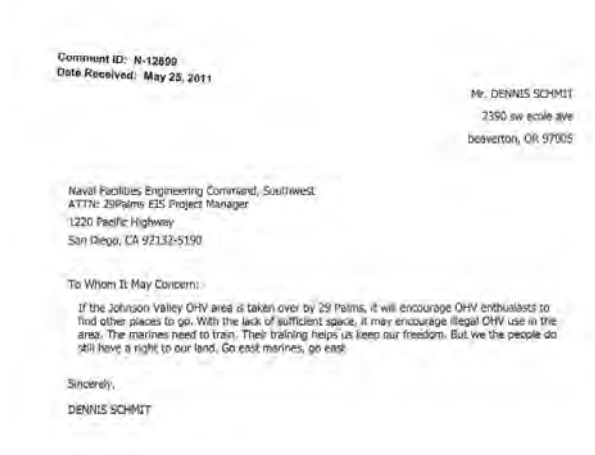

Sincerely,
Zachary Smith

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drillingier

Response to Comment N-12902:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS, including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

While I support our armed forces, I feel that the expansion into the Johnson Valley area is not necessary. After all, it is an open OHV area. The Marines are more than welcome to come join us on the trails.

Thanks for your time

Sincerely,

Thomas Heath

Response to Comment N-12903:

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. Off roaders often take great care of their environment and want to go places that are legal. Do not close this to the public.

Sincerely,
Chris Aplet

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. I myself would not illegally ride where I was not allowed to, and neither would most people I know who frequent the area, but there are always those who will, and forcing the public into a much smaller recreation area will only encourage people to disobey the law and find new places to ride that may be off limits.

Sincerely,

Nikolai Gromicko

Lompoc, CA 93436

Naval Facilities Engineering Command, Southwest
ATTN: 25Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. This shows the failure of leadership and the longstanding failure of teamwork between the branches. In today's "Joint Operations" teamwork and communication is vital. Failure to train as you fight only perpetuates real world operation. Scheduling conflicts and other administrative hurdles are leadership issues that mean nothing more than a "I don't want to do it" attitude. Infrastructure deficiencies equates only to rather than spending money for something that benefits all our nations troops and their training leaders want to continue to reject policies. This is no way to serve your country. None of this is solely on the Corps, but is indicative of the military as a whole.

Sincerely,
Darren Frazier

Response to Comment N-12915:

Thank you for your comment. As discussed in Section 2.7 of the Draft EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTAF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-12920:

Thank you for your comment. As discussed in Section 2.7 of the Draft EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTAF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

A solution can be found! Please don't take Johnson Valley!

Sincerely,

Andrew Moss

Response to Comment N-12925:

Thank you for your comment. As discussed in Section 2.7 of the Draft EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTAF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

Clinton Osborn

Response to Comment N-12933:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.
Thank for your time
Willis Olson

Sincerely,
Willis Olson

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just waisted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

Response to Comment N-12951:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,
Alan Olson

Almost 1 in 4 Americans enjoy some form of recreation off the highway. That's nearly 51 million people, and those people help fuel economies surrounding OHV areas like Johnson Valley all across the country. Shutting down this OHV will kill the local economy, hurt the growing off road industry, and have a negative environmental impact on a beautiful piece of country.

Expand 29 Palms to the east into the designated wilderness area, if it must be expanded at all.

Sincerely,

Kyle Schubert

Response to Comment N-12959 (Page 1 of 2):

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the

Comment ID: N-12959 (Page 2 of 2)

Response to Comment N-12959 (Page 2 of 2):

EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. We spend a minimum of 6 weekends a year in Johnson Valley with our group of 6 to 7 families & prefer to go nowhere else. The Jeep trails are totally unique & are irreplaceable. Why do you need to take our recreational lands & freedom to enjoy them? The armed forces of the USA already have vast areas of land that they train on. They need to become more efficient in their use of them & use what they have.

Sincerely,

Robert Mitchell

Response to Comment N-12967:

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps appreciates your comment and involvement in the NEPA process.

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. The marines need to train. Their training helps us keep our freedom. But we the people do still have a right to our land. Go east marines, go east.

Sincerely,

DENNIS SCHMIT

Response to Comment N-12975:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. There is no reason why the marine base couldn't be expanded to the east. There is nothing to the east except for vast areas of desert and mountain ranges that are not currently being used. My father introduced me to Johnson valley and now I am taking my family there several times a year. My hope is that my children's children will be able to take their families there and for many generations to come.

Sincerely,
Kevin Haney

San Diego, CA 92132-5190

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hoarding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. Many areas which were previously open to the OHV users, and outdoor recreationalists as a whole, have been closed or severley limited. Expanding to the West will mean losing more of the limited space we currentley have available. Expanding to the East is a far better idea and will not close an area many locals use on a regular basis.

Sincerely,
Darin Floyd

Please consider our request to look at other options or wait until the 2012 Federal Budget is completed by Congress. There is a high likelihood that this project may be taken off the block before inception, tying up our OHV land in an ongoing political battle for funding. Consider us, your Marines are part of our group and I am a part of yours, VMFA 112 2003-2009.

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Kyle Irvin

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. This could have the same type of impact as a base closure. The local economy is set up to support OHV enthusiasts. When the revenue from legal OHV users goes away the local economy will suffer much like areas where the economy was supporting military usage and had to suffer base closures and changes in base activity. Please reconsider messing with an already fragile situation!

Sincerely,

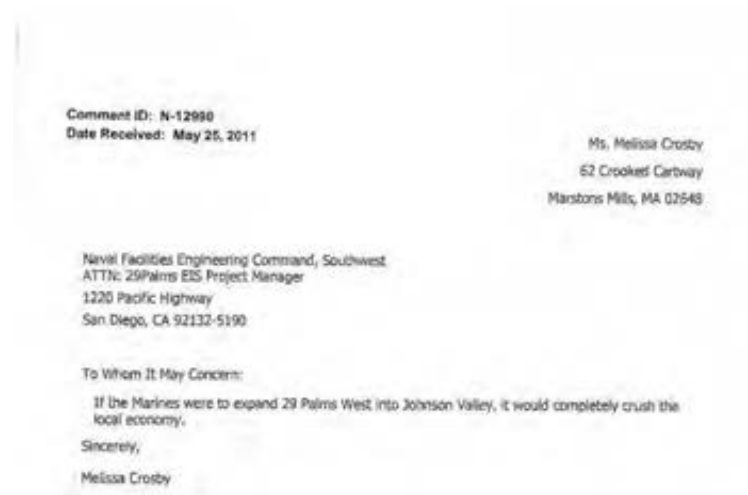

Dominick Montrose

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Off road enthusiasts generate a good bit of money for the local economy. Everything from buying fuel to buying food from local restaurants. It has been proven in other locations where public land was closed that the local economy took a dive. I hope to have the ability to spend my well earned money again in the Johnson Valley area. At a minimum I will end up spending \$2000.00-\$3000.00 per trip. To me it is well worth it to see some of the best scenery on the planet.

Sincerely,

Zachary Smith

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

The closure of OHV areas and public land could even have larger impacts on the national economy! There are countless off-road specific shops and American owned and operated companies that cater to the 4x4 community. If trails and areas to wheel are closed, then the 4x4 industry will most definitely follow the same fate!

The Johnson valley OHV area is iconic in the off road industry, similar to the Rubicon trail, and Moab. The news of a closure on this grand of a scale would immediately send shockwaves through the industry, and could potentially remove millions of dollars in revenue not only for the local economy, but also on a national scale!

I beg the powers that be, to please consider all other options for a marines training site! Every public trail and OHV area is very near and dear to our community. These areas are greatly appreciated, and treated with nothing but the utmost respect by the motorized recreation community. Sadly, it seems our rights are constantly under attack, and it seems we loose areas every year. there has got to be other options, public lands, with no particular use?

thanks,

Concerned american citizen

Sincerely,

Ross Steldier

To Whom It May Concern:

Many of the businesses in the immediate area rely on OHV visitors for their income. People from across the country and around the world come to Johnson Valley to wheel in a world class OHV area. I personally make the trek from Arizona at least once a year.
To sum it up, if the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

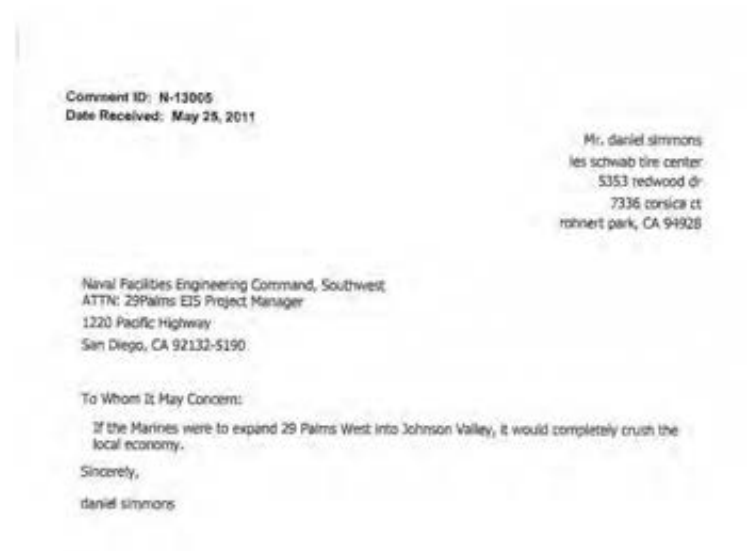

Sincerely,

Brent Rederick

Response to Comment N-13004:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. One of the biggest off-road races ever is held in Johnson Valley. If the Marines expand and making the race unable to happen. The thousands of people that flock to the valley for this one even of the many held there support an economy, something that alot of other places in the country simply cannot do right now.

Sincerely,

Matthew Trail

Response to Comment N-13008:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. The city of Lucern would virtually disappear overnight. These local businesses depend on the visitor traffic that passes through on the way to and from the Johnson Valley OHV area.

I am all for the military training being as realistic as possible, but this area is extremely important to the community.

Thank you for taking the time to read this letter.

Sincerely,

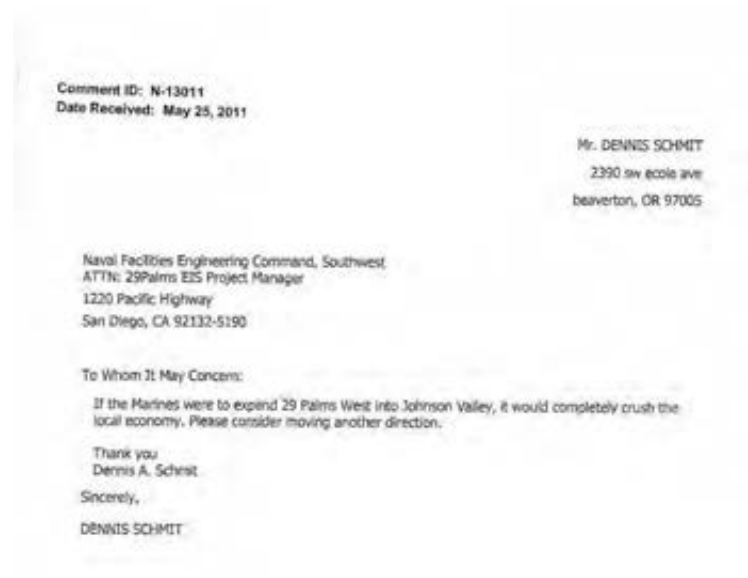

Mike Vincent

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. I traveled there in 2010 for a two week vacation of off-roading. During my time there, I spent over \$5,000 in the local economy, between fuel, food, and lodging. I'm guessing that several hundred thousand people visit Johnson Valley to off-road every year. How will that millions of dollars be replaced in the local economy? It won't. The locals will be hung out to dry.

Sincerely,

James Lambert

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

I know everytime myself, and the group of people I go with, make the eight hour journey to frequent the Johnson Valley OHV we end up spending a good sum of money with local businesses. Even if it's as simple as buying groceries and ice for the time out on the lakebed we spend a tidy sum with the communities of Lucerne Valley and Victorville. If we worse yet have vehicle failures we spend larger sums trying to repair them so our fuel money to get down there is justified.

I can tell you with certainty that if Johnson Valley OHV were to close I wouldn't be spending any more money with either of the previously mentioned communities. I simply would have no reason to be in the are to spend it.

Sincerely,

Kyle Crowley

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. As a member of the 4x4 community, I travelled to Johnson Valley this past winter for the first time in my life simply to watch the King of the Hammers race. Along with several friends, we all travelled from New England just to see the greatest off-road race in the world. Between renting an RV from a local rental company and all of the supplies and fuel that we needed for the week, we helped spur the local economy around Southern California where we may never have travelled if it weren't for the KOH race and amazing terrain in the JVDHv area. I hope that Johnson Valley will remain open as a destination to travel to again in the future.
Thank You

Sincerely,
Eric Amato

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Johnson Valley is basically out in nowhere land for a huge portion of the user base. For many of those that recreated in Johnson Valley, it is a large commitment in time and money to do so. That makes it tough due to the current poor condition of the economy. People just don't have the expendable income that they once enjoyed. Fuel and grocery prices are continuing to climb.

But here is the key point:

Those people that are drawn to Johnson Valley because of what it has to offer the OHV community, despite economic conditions, etc....

STILL GO TO JOHNSON VALLEY

They spend their money getting to the area and spend additional money once there, which bolsters the economy. I'm sure there are a number of letters that will address the money spent that supports the local economy. But what stands out to me is despite the economic hardships this country is facing, The OHV users of Johnson valley still go there.

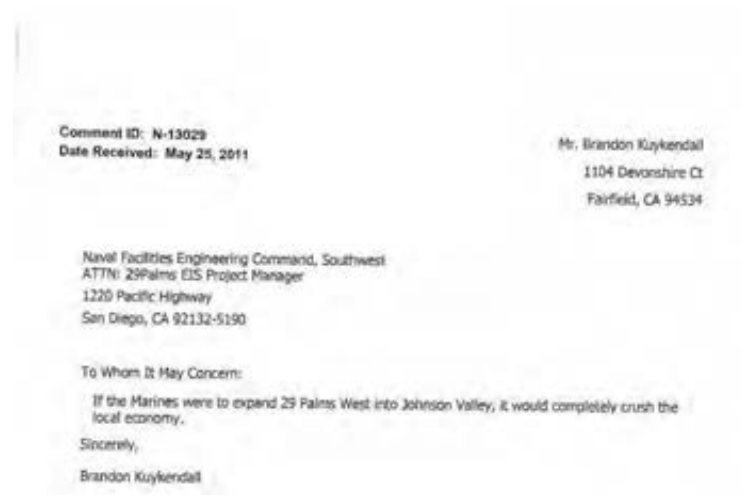

Sincerely,

Robert Lightfoot

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Jared Dongail

Response to Comment N-13038:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

THANKS!!
MIKE M.

Sincerely,
Mike MacKenzie

I live out East and have had many of my favorite public lands taken away from me and many others. I grew up having the ability to explore the outdoors with my family and had always hoped to be able to do the same with mine; but as time goes on I am not left with much public land that I can actually still access; so now all I am left with are stories and pictures to show my daughter.

Thanks,
Zac

Sincerely,
Zachary Smith

Offroading is a way of life for many many people and family's. I have had many public lands shut down which has lead to people having to purchase their own land to use for the sole purpose to use offroad vehicles on. Johnson Valley is the peoples land. Leave it as that.

Sincerely,

Zachary Smith

And the way the economy is, the USA does not need to spend money that is not needed. The Marines need to look else where for property. It is strange that they are focused on that property. I have looked at the surrounding area. And I think that this property has nothing to do with the Marines, it has to do with alternative energy, like solar panels. Just look North over the mountain there are massive amounts of them.
If the Government acquires enough property they can install Solar Panels in that area. It has large flat areas to do just that.
Using the Marines as a way to get the property is just a less invasive way of getting it. And trying to fool the people. Not good.
That is why they don't have answers to the people's questions. In the surrounding area there are various permits for Solar and wind energy.
Bottom line is leave Johnson Valley area alone and let the people have somewhere to ride. Doesn't the Government own enough?

Sincerely,

John Capozza

To Whom It May Concern:

Please consider expanding Twenty Nine Palms Marine base to the east!

The off highway vehicle enthusiasts of California and the United States will be devastated if such a massive area is removed from the cumulative total of land available for recreating off road.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

It's barely conscionable to not properly consider leaving Johnson Valley open to the public and expanding the Marines available training area to the east, rather than into Johnson Valley.

Thank you.

Sincerely,

David Simons

The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. The marines need to train. Their training helps us keep our freedom. But we the people do still have a right to our land. Go east marines, go east.

Sincerely,

DENNIS SCHMIT

Response to Comment N-13059:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

If the military takes over this OHV park that will just be another loss for those people that enjoy the great outdoors and a good time. I don't see the military trying to us the grand canyon or any other recreational place.

Sincerely,
Tyler Petrin

Response to Comment N-13065:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Most in the OHV community are extremely responsible users of the land, leaving no waste behind, and often cleaning up and taking the trash of others out with them.
More and more land gets put off limits for recreation OHV use each year, it must stop. The attitude of "its only a little bit" slowly nibbles in until there is nothing left.

Sincerely,

Justin Kennedy

The desert is HUGE and there is not reason to take over JV in part or full when the OHV community already called dibs on this site many years ago. The OHV community IS playing the We Were Here First card and it is a valid one. Let's not get into the Government Overreach/Public Land/Government Land etc argument. Just go bomb some other part of the desert.

Sincerely,

Camren Beattie

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. Many of those enthusiasts are not only current Marines stationed at 29 Palms, or Camp Pendleton, but former Marines that live in that area as well.

I myself was introduced to OHV recreation when I was stationed in the area as a Marine, and I've been hooked ever since.

I sincerely hope you can see the impact that this will have on our community, both present and future.

Thanks for your time.

Sincerely,

Jeff Karr

The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East.

Sincerely,
Philip Hall

Response to Comment N-13073:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

I find it difficult to comprehend the thought process that removes access to public lands from certain portions of the public.

Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate; due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV.

Do off-roaders not pay the same taxes, if not more, than hikers, bicyclists, fisherman, etc? Why, then, are we precluded from using the public lands for our recreational activities? What makes any one person's idea of rest, relaxation, and recreation any more valuable than ours (the OHV'ers)?

Don't take Johnson Valley from us.

An in-depth study on the effects of the OHV community needs to be done.

Thank you,

Sincerely,

Ed King

Response to Comment N-13081:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Wilson Turner

The loss of Johnson Valley would be very detrimental to the OHV community. It is one of the biggest and best known OHV areas in the country and the loss of it would have a huge negative effect.

Sincerely,

Peter Anacabe

Response to Comment N-13083:

The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Thousands of OHV users are continually displaced and banned from accessing public land which is resulting in excessive use at the remaining locations. This increased use at the remaining available areas is causing more disturbance to the land due to the larger number of users using it. This in turn gets used as ammo against OHV users and is often used as a reason to ban OHV use even further. With more and more OHV users the government needs to increase, rather than decrease, the amount of land available to us.

Sincerely,

Darin Floyd

The closing of all the public lands is causing more and more people to "illegally wheel" and destroy wilderness. All that could be avoided if the land we already have access to would stay open.

Sincerely,

Randolph Charpentier

Response to Comment N-13086:

The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Please consider the fact that in the United States the amount of land open for ORV use is very little compared to what is set aside for wilderness. We need to keep the areas that we have open. Closing Johnson Valley will not only impact ORV users but many business as well. In an economy that is not doing very well we dont need to add to that.

Sincerely,

Peter Angelos

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. Being completely honest, I am sure there are hidden issues. I suspect expansion to be the "quick fix" rather than a well thought out compromise.

Sincerely,

Darren Frazier

Response to Comment N-13090:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps appreciates your comment and involvement in the NEPA process.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

I would strongly encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, the area east of the base is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms than the area to the west.

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Sincerely,

Randolph Charpentier

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drölinger

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5100

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Sincerely,

Nikolai Gromicko

Response to Comment N-13103:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Please take the time to look at other sites. There is not a lot of ohv area's left for the public to use.

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Sincerely,

Mike Nixon

Response to Comment N-13112:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

James McClammy

Response to Comment N-13119:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public. This can be seen at many other installations. Many areas of Vandenberg AFB are closed due to UXO's left over from years past. The same thing can be found around the country. Theory and reality on this subject are very different. Again, just the pretense of this "False" justification by the Marines shows a complete lack of respect for anyone or anything not Marines.

Sincerely,
Darren Frazier

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

Response to Comment N-13125:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.
This statement could not be more true. Some unknowing John Q public WILL be in harms way.

Sincerely,

Thor Schaefer

Response to Comment N-13126:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public. The idea of "shared use" sounds great but it is not practical. The more than likely scenario is that the area will be closed to the current users of the area forever. Marketing as a "shared use" area is not ethical when the means and likelihood of it actually being shared use are not there.

Sincerely,
Darin Floyd

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East. PLEASE SAVE THIS AREA FOR FUTURE GENERATIONS!

Sincerely,

James McClammy

Response to Comment N-13145:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-13146

Response to Comment N-13146:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Bill Bowles

Response to Comment N-13147:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hss.doe.gov/nepa/ce/cepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Tyler Gowans

Response to Comment N-13149:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

Response to Comment N-13151 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice". 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Response to Comment N-13151 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

I support the US military and the United States Marine Corps. With the changes that have happened or are coming in the Middle East is this expansion still necessary? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Bobby Johnson

Response to Comment N-13159:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Response to Comment N-13166:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

To Whom It May Concern:

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Brandon Lowry

ATTN: 29 Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.doe.gov/nepa/regs/nepa/nepaenq.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-13175 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-13175 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Kyle Irvin

Response to Comment N-13175 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Sincerely,

Fred Domain

Response to Comment N-13182:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

Ventura, CA 93001-1215

Naval Facilities Engineering Command, Southwest
ATTN: 2SPalms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Sincerely,

Bill Bowles

Response to Comment N-13183:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceo.hhs.doe.gov/nepa/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Sincerely,

Tyler Gowans

Response to Comment N-13189:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Protection Act of 1969 as amended can be found at <http://ceq.hes.doe.gov/nepa/regs/nepa/nepaeca.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCOM_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-13192 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-13192 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Sincerely,

Kyle Irvin

Response to Comment N-13192 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

To Whom It May Concern:

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

The US Government (BLM) has determined that fireworks are illegal at the Johnson Valley OHV area due to the risk of wildfire.

How does the US Government (USMC) propose to mitigate the risk of wildfire at Johnson valley with the use of live fire rounds?

There seems to be a huge contradiction in the laws that the US Government wants to impose upon its citizens and the regulations it allows for itself.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Robbie McIntosh

Response to Comment N-13194:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. Please don't let this one of a kind area become unusable for this and future generations.

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordinance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

Bobby Johnson

Response to Comment N-13197:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

San Diego, CA 92132-5190

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

Shane Domain

Response to Comment N-13201:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Brian Smith

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hss.doe.gov/nepa/ceopa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1506.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of this base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordinance being dropped in the area, the Marines may make Johnson Valley un-usable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

Tyler Gowans

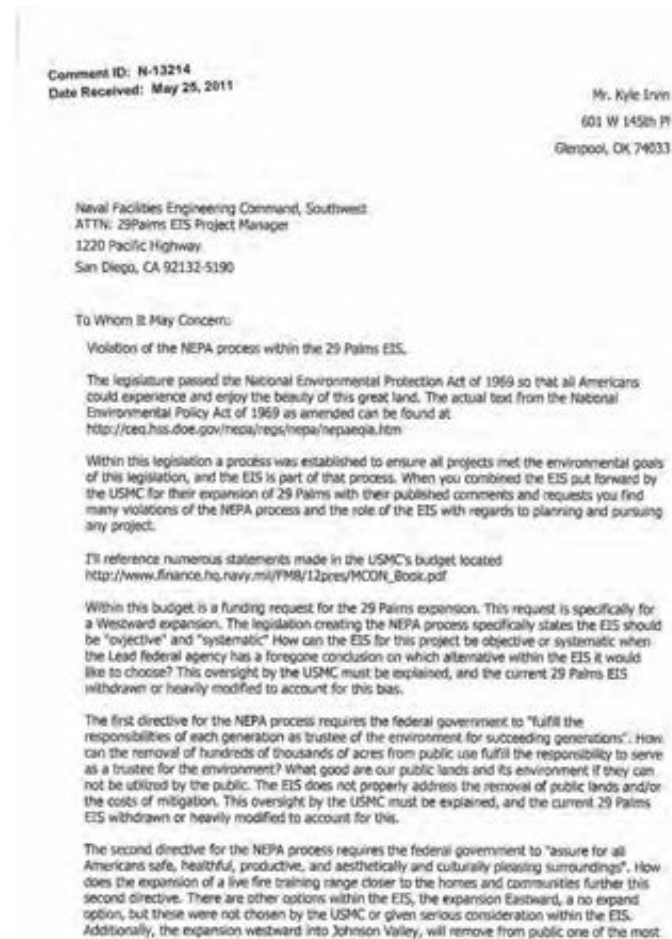

Response to Comment N-13213:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Comment ID: N-13214 (Page 1 of 2)

Response to Comment N-13214 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-13214 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

Response to Comment N-13214 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers.

Sincerely,

Fred Domain

Response to Comment N-13222:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

At King of the Hammers event you will find people from all over the country, even a few from other countries. This event drives many changes in the industry. If the USMC takes over this area there will be a large impact for the off road industry.

Sincerely,

Bobby Johnson

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

John Foll

Response to Comment N-13231:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Hello,

Even today, live shells are found occasionally in Johnson valley from training that was done during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley un-usable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public and expose them to an increased potential danger from ordnance.

Sincerely,

Derek Holmes

Response to Comment N-13247:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

As a former Marine please take the time to consider all of your options before expanding into Johnson Valley. It should be your last choice only if NONE of the other alternatives are possible. If there is a cost savings in expanding West, consider the loss of income and negative economic impact and realize that there is no real savings in going West. Any additional cost or effort to expand other than West would be in the best interest of everyone involved. I want to believe that the administration would encourage alternatives that would retain the popular support of my Corps by the public!

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Please, as an ex member of the military I understand the importance of unimpeded training before a fight, but as a citizen I am growing weary of losing everything that we find enjoyable to the government. This country is quickly turning into the very thing our ancestors fought and died to be free of. Stop taking away from us, or sooner or later we will stop giving to you.

Sincerely,
Lawrence G

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Ryan Sternal

Response to Comment N-13255:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Curtis Bowles

Response to Comment N-13266:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

I am very thankful for our armed forces and the job they do to ensure we citizens retain the freedoms our country was founded on. That said, I do not support the Marines' proposed expansion into JV OHV area.
While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?
The modern battlefield is becoming less about large operations and more about surgical strikes. This should take less land for training.
Please look at other alternatives that won't take away our prized JV OHV area.

Sincerely,
Brad Butler

Response to Comment N-13268:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Ben Cook

Response to Comment N-13269:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

To Whom It May Concern:

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period. There are still many people that do not know about this.
Thanks JB

Sincerely,
John Benz

Response to Comment N-13271:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? I feel that we should keep our armed forces here and have them train in more effective ways to help America itself with our own issues. Training to fight a war on foreign soil when such efforts could be put to better use is just foolish.

Sincerely,

Timothy Olive

San Diego, CA 92132-5190

To Whom It May Concern:

As a former Marine please take the time to consider all of your options before expanding into Johnson Valley. It should be your last choice only if NONE of the other alternatives are possible. If there is a cost savings in expanding West, consider the loss of income and negative economic impact and realize that there is no real savings in going West. Any additional cost or effort to expand other than West would be in the best interest of everyone involved. I want to believe that the administration would encourage alternatives that would retain the popular support of my Corps by the public!

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Kyle Irvin

Response to Comment N-13278:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addresses in the EIS if the marines will do this or not.

Sincerely,
Michael Kimmel

Response to Comment N-13279:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

At the 2011 King of the Hammers desert race, special care was taken to make sure that any spilled fluids were immediately collected in order to minimize the amount of damage on the environment. Any soil that was impacted by a fluid spill was also collected and disposed of properly to make sure it didn't contaminate any plants or animals in the area. Special care has been taken for many years by those that use the Johnson Valley ORV area to make sure that they don't pollute ground water sources or contaminate the soils. Will the expansion of the Marine base take into account the same considerations?

Sincerely,
Alex Riedo

San Diego, CA 92132-5190

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.

Sincerely,

Jeff Carpenter

Response to Comment N-13292:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

To Whom It May Concern:

The last few years I have had the opportunity to participate at Moab Easter Jeep Safari and can say without a doubt this generation of outdoors enthusiasts are the most environmentally conscious people there are. Basically anyone leaking fluids got the pressure of everyone and anyone in sight on their case about it and some got kicked out and sent packing. This wasn't enforced by any big regulatory groups or tree huggers, but by responsible enthusiasts. The peer pressure in this community is profound. They are the nicest people with extremely high values and anyone messing them off usually pisses off all of them.

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the Marines will do this or not.

This community organizes their own trail cleanups and improvements. How often do you hear of the military personnel VOLUNTEERING their off time to better an outdoors recreation site?

Sincerely,

Charles Mickelsen

To Whom It May Concern:

As a former Marine please take the time to consider all of your options before expanding into Johnson Valley. It should be your last choice only if NONE of the other alternatives are possible. If there is a cost savings in expanding West, consider the loss of income and negative economic impact and realize that there is no real savings in going West. Any additional cost or effort to expand other than West would be in the best interest of everyone involved. I want to believe that the administration would encourage alternatives that would retain the popular support of my Corps by the public!

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addresses in the EIS if the marines will do this or not.

Sincerely,
Kyle Irvin

Response to Comment N-13308:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Regarding the expansion of 29 Palms Marine Base, please consider the following facts:
1. The Marines basic "mission" has changed since the plans for expansion were made a VERY long time ago.
2. Our economy continues to struggle and even the experts say it could be another decade before we see true recovery.
3. The recreation lands of Johnson Valley generate revenue and taxes in a big way.
4. An expansion of 29 Palms Military Base will not replace the lost revenue and taxes if Johnson Valley recreation is cut even a little bit.
5. The Corps Failed to Analyze National Deficit Impact on Project Viability.
6. The Corps Failed to Analyze DOD Budget on this expansion.
This entire idea of expansion, especially into Johnson Valley, make zero sense financially and is irresponsible, and quite possibly bordering on illegal. I am against this expansion.

Sincerely,

Starr Penniman

Response to Comment N-13309:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

It's seems Ft. Irwin, which is the Army's National training Center went through an expansion similar to 29 Palms.

Ft. Irwin was 642,000 acres in size. An additional 150,510 acres was added for a grand total 792,510 acres.

29 Palms is currently 596,480 acres, and wants to expand by 422,000 acres for a grand total of 1,018,480 acres.

If a second Land Army is not desired, then why does the USMC need a 25% BIGGER training area than our actual Land Army? The EIS fails to provide any justification.

Sincerely,

Chris Schoolcraft

Response to Comment N-13310:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?
General James F. Amos, Commandant of the Marine Corps, spoke at the Fletcher Luncheon on April 15th, 2011.

General Fletcher spoke about future military actions and where the Marines are going to operate once we come out of Afghanistan, and he explained the "arc of instability." It is within this arc of instability that the Marines will most likely be engaging the enemy. These areas will be our future battlefields over the next two decades.

In speaking about this arc of instability, General Amos says:
"But we see that's probably what the world is going to look like for the next two decades. A lot more information there, but we think that's going to be our backyard because this is primarily the littorals, because these are kind of the nasty missions and things that, quite honestly, don't require 20,000 Marines on the ground."

If the Marines must train as they fight, then 29Palms does not need the capacity to simultaneously train 20,000 Marines.

Please keep Johnson Valley OHV area open to the public—including those Marines—who can come recreate at the OHV area when they are on leave from training, or redeployed home after fighting in that very arc of instability.

Sincerely,

Chris Schoolcraft

Response to Comment N-13311:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Johnson Valley OHV area is a big part of the high quality of life in Southern California. Desert racing and rockcrawling are a huge part of the local culture. These activities are so well-established and the terrain so unique and desirable that many of us travel from outside California--from across the country--simply to enjoy Johnson Valley.

My friends have been engaged there.

My friends have been married there.

My friends have taught their children to ride dirtbikes there.

I ran my first rock trail there.

I love the sand, the granite rocks, the scrub brush, the sunrises, the sunsets, the clear desert air and the night stars.

An expansion of 29 Palms will be deleterious to our quality of life.

Sincerely,

Chris Schoolcraft

To Whom It May Concern:

Regarding the expansion of the 29 Palms Marine Base, if it expands west into the Johnson Valley recreation area, the economy of the towns directly around Johnson Valley will be greatly affected. Personally, my family spends multiple thousands of dollars per year in the local economy.

We recreate in the Johnson Valley area more than 15 weekends per year, going so far as to spend 14 days straight there during the time of the King of the Hammers Off Road Race, plus another couple of one week stretches throughout the year for race practice and/or family recreation time with my wife and two school-age sons.

Each time we arrive, we do so with no groceries and empty fuel tanks. We fill over 100 gallons at local gas stations EVERY VISIT WE MAKE...on longer visits, we fill over 200 gallons, with most of it being premium fuel. Then, we head to the local market to buy groceries. Also, if we need spare parts, we purchase them locally, plus we attend weekend fundraiser barbecues and pancake breakfasts, plus get camping gear and other supplies locally on a regular basis. Add it all up and the dollars taken away from the local economy from recreationalists like me is a HUGE sum of money. Big money in small towns that rely on our tourism dollars.

Don't take money out of the local community by moving west into the Johnson Valley Recreation Area.

Sincerely,

Nick McMurray

Response to Comment N-13313:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

As a former marine I understand the need for training ground, but there are hazards. Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley un-usable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

Timothy Slade

Response to Comment N-13314:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

If our Marines are to take over the Johnson Valley, the economic effect on Lucerne Valley will be to lose the one and only source of income a lot of those businesses have. I personally always choose to fill up my gas tank in Lucerne, as well as shopping at the one and only market in town. The spike in business on any race weekend can be measured and is the difference between staying profitable or closing the doors. Please consider the economic health of that town and it's citizens. Please consider expanding East instead.

Sincerely,
tom willis

I would like to encourage 29 Palms to expand north, specifically nevada state. Its large, its like afganistan, and other than silver mines that need protection there really isn't much else there. Its a win-win all the way around!

Thanks,
Kevin Burk
Sincerely,
Kevin Burk

Response to Comment N-13318:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

To Whom It May Concern:

Supreme Court's ruling on the public's involvement in the NEPA process:

This is another excerpt from the EPA's Citizen's Guide on the NEPA process:

Citizens who want to raise issues with the agency should do so at the earliest possible stage in the process. Agencies are much more likely to evaluate a new alternative or address a concern if it is raised in a timely manner. And the Supreme Court has held in two NEPA cases that if a person or organization expects courts to address an issue, such as evaluating a particular alternative, the issue must have been raised to the agency at a point in the administrative process when it can be meaningfully considered unless the issue involves a flaw in the agency's analysis that is so obvious that there is no need for a commentator to point it out specifically.

The NEPA process makes it clear that the legislative branch and executive branch of the government want the public to be involved in any decisions made by the federal government. The excerpt above proves that the Supreme Court also values the public's opinion on these matters.

It is my opinion that the EIS for the 29 Palms expansion is flawed. However, I am pleased to see the courts take such a stand on the public's input. In previous letters I've written about errors in publication of the EIS, as well as the failure to address significant cultural, social, and economic consequences of the 29 Palms expansion into Johnson Valley. I've also written of my support for the Marines. I fear that without properly addressing each and every concern about the expansion into Johnson Valley that the training of Marines may suffer. The Supreme Court believes these comments are important, and where else should the public be involved than in the public comment period of the EIS. Please address all the SPECIFIC AND INDIVIDUAL concerns raised about the 29 Palms expansion into Johnson Valley.

Sincerely,

Ryan Brown

Response to Comment N-13319:

To Whom It May Concern:

Even as the numbers of OHV enthusiasts grows here in the USA, public lands continue to be closed to our use. It is appalling that route designations and Wilderness areas are quickly eroding the areas available for our sport to enjoy. The loss of Johnson Valley will do nothing but add to this growing loss to our sport and community. It is imperative that an in-depth study of the effects on the OHV community needs to be done prior to the final decision on Johnson Valley.

Sincerely,
Sheila Wilson

Response to Comment N-13320:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

The planned expansion of 29 Palms calls for an undue sacrifice by the many wounded veterans that have served our country in the marines and all branches of the military.

Expansion of 29 Palms westward into Johnson Valley and its removal from public use will affect millions of users across the US, but it will most directly impact the wounded active duty and veterans looking to enjoy the great outdoors. There are other public lands around 29 Palms and Johnson Valley that allow hiking, mountain biking, and other forms of non motorized use, but only Johnson Valley allows the use of motorized vehicles across the entirety of its boundaries. The EIS does not address this sacrifice.

Why would the USMC decide to expand West into Johnson Valley instead of East into an area not open to all users groups. Why would the USMC decide to expand West into the only area where injured veterans and active duty marines can utilize motorized vehicles to explore the country they've all ready sacrificed so much for.

The EIS must address the unfair nature of this sacrifice. The EIS must answer how and where the wounded veterans and active duty military personnel will be allowed to utilize motorized vehicles to enjoy the great outdoors. There are two options within the EIS that will not demand this additional sacrifice on our wounded vets and active military. These options are no expansion of 29 Palms, or expanding East instead of West. You must consider both of these actions to avoid asking those injured defending our country to sacrifice again.

Sincerely,

Ryan Brown

To Whom It May Concern:

The EIS needs to address the impact that expansion into Johnson Valley will have on our sport and very way of life. I can attest to the fact, that there are many more OHV users that many of the other minority groups here in the USA. As a member of a family that has 4 generations that enjoy this sport together, it angers and worries me that this pristine area for our sport is threatened.

Our family is a prime example of how our sport allows families the opportunity to enjoy nature and the great outdoors on our own terms. With the pressures of everyday life tearing at today's families, it is nice to be able to get away from cell phones, TV's and such and get out as a family and enjoy our sport.

Sincerely,

Sheila Wilson

Please don't take more public land from the public. Every year, more and more land is taken away from Americans who share this land for recreation. This culture is important to preserve as it teaches us to not only enjoy what Mother Nature has to offer, but to also and more importantly, respect the land so that it remains unchanged for everyone else, including our own children and grandchildren. This is a part of the American spirit that must be preserved. Sitting on the couch watching TV and playing video games is not how I want my children and grandchildren to be raised. Do you?

Expand East where it will not have such a negative impact on American culture, the very culture you fight for every day.

Thank you.

Sincerely,

Chris Fred

The different activities seen in the Johnson Valley Recreation Area are not just some pop-fad or single event taking place, never to be seen again, but instead are truly "lifestyles", dedicated to participation in a certain activity. Whether it be the rocketeer, the wind-sailer, the rock hound, the off-roader, or any other of the large number of activities taking place in the area, the individual participants invest tens of thousands of dollars, if not hundreds of thousands or even millions of dollars in order to participate. With that much invested, it proves that these activities go far beyond an "intermittent hobby" and are actually in a classification comparable to an entire culture of their own...very large cultures at that.

Sincerely,

Billy Nickel

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

To Whom It May Concern:

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers. Think of RV sales, aftermarket parts sales, truck sales, motorcycle sales, etc.

Sincerely,

Jerry Zaiden

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,
Dj Cortez

Response to Comment N-13350:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordnance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

doug segrove

Response to Comment N-13358:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

West End, NC 27376

Naval Facilities Engineering Command, Southwest
ATTN: 25Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

Chris Horton

San Diego, CA 92132-5190

To Whom It May Concern:

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Sincerely,

April Itow

Response to Comment N-13370:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Nicholas Nelson

Response to Comment N-13386:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

Response to Comment N-13396:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

Comment ID: N-13399

Response to Comment N-13399:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

I just sold my toyota truck and bought a dirt bike and i love to be out doors off road on either and johnson valley is one of the best places to go so please dont take this away from us. While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,
Dan McClain

To Whom It May Concern:

I have some questions and issues regarding the base expansion that I need addressed. Is this expansion based on the REAL needs of the Marine Corps in the near and distant future OR is it based on the by-gone needs of yesterday? The way the political, social, cultural, and financial status of the world has appeared recently, it looks as though EVERYTHING is different than it was just a few years ago. Listening to the expansion presentation given by the Marine Corps at a couple of different locations, most all of the planning for this expansion was decided on a VERY long time ago. The world is a different place and continuing with this expansion without ensuring it is what the Corps truly needs is a mistake that will not benefit the Corps and will hurt a large number of Americans along the way.

DO NOT expand the 29 Palms Military base without re-visiting ALL aspects of what Marines TRULY need for the near and distant future.

Sincerely,
Billy Nickel

Comment ID: N-13419

Response to Comment N-13419:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.

Sincerely,
doug segrove

San Diego, CA 92132-5190

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addresses in the EIS if the marines will do this or not.

Sincerely,

David Roden

Response to Comment N-13431:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

Comment ID: N-13465

Response to Comment N-13465:

Thank you for your comment. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability.

I can hope that the Corps has taken this into consideration.

As a responsible OHV enthusiast I know I don't spend money needlessly or without careful consideration the best use of that money.

I feel confident the Corps will see it the better alternative to Go East.

Sincerely,

Thomas Hutchinson

Response to Comment N-13469:

Thank you for your comment. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-13477:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

The time allotted for public comments is insufficient, and to ignore something as great as a culture, many cultures in fact, combined with the fact that Johnson Valley happens to be the "Mecca" of many of those cultures (especially in the off-road world), again shows that the EIS was NOT completed correctly and that the choice to expand into Johnson Valley would be a travesty against a large number of Americans, who are supposed to be protected by the EIS. There are reasons the EIS is a legal process...the way the EIS for the 29 Palms Marine Base expansion has been handled has NOT followed the reasoning for doing an EIS in the first place.

Please expand to the east.

Sincerely,

Billy Nickel

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Nicholas Nelson

Response to Comment N-13496:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,
Joshua Cauthen

Response to Comment N-13500:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

If the Johnson Valley OHV area is taken over by 25 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

I KNOW this will happen, its up to you to not let it.

Sincerely,

Johnathan Fernandez

Response to Comment N-13512:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

We need legal places to offroad. Too many things that have been normal through our lives and passed on from our Grandparents is now illegal. Please do not listen to any greenies who have no interest in this area tell you we should not be there. They do not want to go, they just do not want us to go there, especially in motor vehicles. This is our American right we learned from our elders. We are no small group. Mostly regular people having fun.

Sincerely, Mark Eggenberger

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Many, many, many responsible OHV enthusiasts will be displaced if the Johnson Valley OHV area is overrun by 29 Palms.

Many of us will find other legal places to go.

A small percentage (but a large number of people) will inevitably choose to ride illegally and keep riding and enjoying Johnson Valley.

Please do not displace honest, hard-working, taxpaying recreating Americans. Please do not force the good apples to go somewhere else. We'd just as soon ride legally alongside the "bad apples" at Johnson Valley and share our love of the trails and our ethics with them.

Sincerely,

Chris Schoolcraft

Response to Comment N-13524:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. Please don't take away one of the few OHV use areas in SoCal.

Sincerely,

Daniel Hayes

Response to Comment N-13525:

Thank you for your comment. The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Responsible OHV people are aware of the issues regarding Shared Land Use, and in my opinion, actually take care of the grounds afforded to them better than any other group.

Having said that, I do know that if there are no legal alternatives to recreate such as Johnson Valley, some people will find an alternative to express their right to recreate.

Expanding into Johnson Valley doesn't need to happen for the sake of preserving "off limit" areas, almost guaranteed to be used by those wishing to exercise their right to recreate as they deem necessary.

Sincerely,

Thomas Hutchinson

Comment ID: N-13533

Response to Comment N-13533:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,
SHELLY VAVRA

Response to Comment N-13548:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-13566

Response to Comment N-13566:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-13567

Response to Comment N-13567:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-13568

Response to Comment N-13568:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

I love to of road and also get out and see nature. It is places like JV that give me that oportunity and make me proud to be an American. Please step up and move the base to the east and save JV. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Dan McClure

Response to Comment N-13570:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I love to off road and also get out and see nature. It is places like JV that give me that opportunity and make me proud to be an American. Please step up and move the base to the east and save JV. Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Dan McClune

Response to Comment N-13572:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

I love to of road and also get out and see nature. It is places like JV that give me that oportunity and make me proud to be an American. Please step up and move the base to the east and save JV. With massive amounts of military vehicles, many of them tracked vehicles, the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Dan McClure

Response to Comment N-13573:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

I just sold my toyota truck and bought a dirt bike and I love to be out doors off road on either and johnson valley is one of the best places to go so please dont take this away from us. I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Dan McClain

Response to Comment N-13574:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As a expecting mother, who enjoys getting out of the house, exploring the countryside and enjoying time with my family, the expanding west into the Johnson Valley absolutely RUINS that for further generations to come. There are better options than this, GO EAST!

Sincerely,

Natalie Singleton

Response to Comment N-13593:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Jayson Mitchell

Furthermore, it would give the Marines more room to expand 29 Palms.

The Johnson Valley OHV area is used by many, from those with 4 wheel drives to those with two legs. The entire area is driven, wheeled, rode around, or even hiked in an effort to get back out to nature and avoid the urban sprawl. Too much of our lives are rushed through from rushing around to get to work to rushing to get kids in bed at a decent hour to rushing to have the house work done before the end of the day. Johnson Valley allows a time of relaxation for many. A time to kick back and be with friends and family enjoying nature at its finest. I support our military with all my heart, but I would hate to see the area of Johnson Valley be lost to artillery shells, tanks and troops when there is a much better option to the East. I hope this letter does not fall on deaf ears and that the Marines at 29 Palms will take into consideration to expand East instead of West and allow families and friends to still enjoy the wonderful Johnson Valley OHV area.

Sincerely,
Greg Swann

Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Dear Sirs,

As a long-time user of the Johnson Valley OHV area, I would like to encourage 25 Palms to expand East instead of West. There is ample room there for the present and future needs of our Marines. My father and older brother both served in the Marines and both spent time on that base. My mother served as a WAVE in the Navy back in the 50's, (but we don't hold that against her!). My entire family uses these areas as often as we can, and cannot afford to lose them. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Please take the time to study what would be lost if the Johnson Valley area is declared off-limits to the generations of military veterans like my family, who deserve more than anyone else to be able to recreate in the Johnson Valley OHV area. Thank you for your consideration.

Tom Willis
Sincerely,
tom willis

To Whom It May Concern:

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

Sincerely,

Frank Tomaszewski

Response to Comment N-13607:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use. Please consider the ecological damage that will occur and that may irreparably ruin this beautifully desolate area so many of us cherish.

Sincerely,

Chris Schoolcraft

Response to Comment N-13617:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Responsible OHV users know that airing down our tires gives us better flotation in soft sand, and better grip on rocks.

We also find that our aired-down tires do little damage to the desert floor.

The EIS fails to note whether wheeled military vehicles will be similarly aired-down for less impact to the desert floor, and fails to note that using tracked vehicles will absolutely have a greater impact on the desert floor.

Sincerely,

Chris Schoolcraft

Response to Comment N-13618:

To Whom It May Concern:

Some groups may argue the OHV vehicles do damage to the desert when actually OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use. Every day we get the word out to our fellow OHV enthusiasts to tread lightly. We now are actually taking care of many OHV parks and trails without the aid of the government.

Thank you,
Sam Schmidt

Sincerely,

Sam Schmidt

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Unexploded ordnance next to a public access area is also a major risk factor for the Marines. The Marines would be responsible for making the area safe for the public to use, especially if the "shared use" plan is used.

Sincerely,

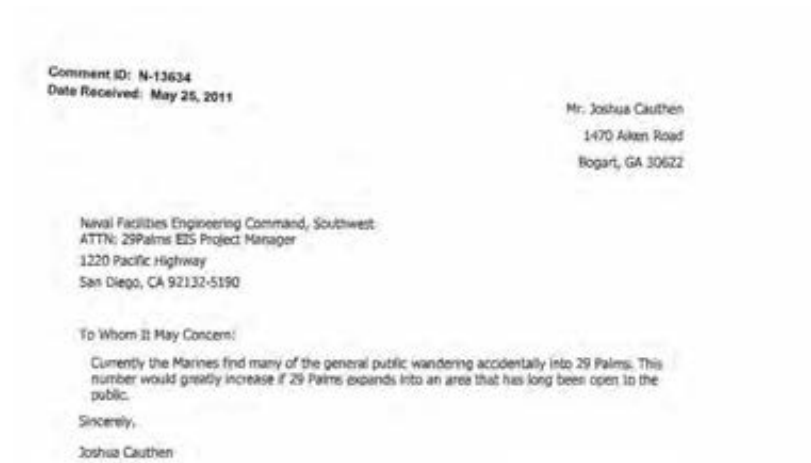

Darryl Herrin

Response to Comment N-13633:

Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Comment ID: N-13634

To Whom It May Concern:

People wander in the desert. It is fun to explore. People currently wander onto the existing 29 Palms base.

Many more people would wander onto an expanded 29 Palms if the base expands into an area that the public has been long accustomed to using.

The public does not much use the area East of 29 Palms. This area would be ideal from a safety standpoint for a base expansion.

Sincerely,

Chris Schoolcraft

Response to Comment N-13643:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Dan McClain

Response to Comment N-13644:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

This is of great concern to me as I was witness to the 1972 Roseville train yard explosions and 20+ years later they found unexploded ordinance in that area.

The uninformed public may unintentionally find their way into an active fire-zone, or stumble upon unsecured ordinance.

Sincerely,

Thomas Hutchinson

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

April Itow

Response to Comment N-13653:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Response to Comment N-13658:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

John V. Casale

Sincerely,

John Casale

Response to Comment N-13662:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-13663

I think we can all agree that minimal dust suppression will take place on an expanded base. This to me is posturing for the argument to expand.

Johnson Valley will suffer environmentally as a result of a base expansion greater than keeping it a public OHV area.

Sincerely,

Thomas Hutchinson

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Andrea Russell

Response to Comment N-13674:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive.

Sincerely,

Andrea Russell

Response to Comment N-13675:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

San Diego, CA 92132-5190

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Johnson valley is one of the most important areas in the OHV community, the loss of it would be devastating.

Sincerely,

Taylor Philabaum

Response to Comment N-13679:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

I would like to see my son who is 6 now be able to wheel in Johnson Valley. There are already some OHV areas that have been closed here in the midwest and its making it harder to enjoy the sport we love.

Please do an unbiased study on the OHV land use.

Sincerely,

Randy Ball

Response to Comment N-13681:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Other areas would see a huge increase in use and could cause resource damage. If all the users are forced to recreate in a small area then it will cause problems for those small areas. There are alternatives such as the Marines to expand 29 palms to the east, instead of west towards Johnson Valley. Please consider this as an alternative to the current options.

Sincerely,

Darryl Merrin

Response to Comment N-13695:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

James Fuller

Response to Comment N-13701:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture".

In the financial times this country has found itself in, the last thing that should be done is to further impact business. The OHV industry in itself, would take a huge hit if Johnson Valley were to be lost to the off-roading community. Many companies, both local and out of state test their products there. Off-roading is an expensive sport, and with out areas for product testing, and places for the enthusiasts to take their vehicles and family's the economic impact would be felt by many. The off-roaders not only buy the parts for their rigs, but visit local business for food, lodging, and many other necessities.

Cris Mateski

Sincerely,

Cris Mateski

Response to Comment N-13706:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,
Mike Yager

Response to Comment N-13717:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

Sincerely,

David Summitt

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

Joshua Cautlen

Response to Comment N-13723:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

I love to off road in my jeep and see nature. If the base is expanded west that will hurt many living human beings and there welfare where as going east has no ill effects on humans and remember that humans vote. The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Sincerely,

Logan Jaybush

Response to Comment N-13739:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Sincerely,

Chris Dolezal

Response to Comment N-13743:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

Instead of expanding 29 Palms Marine Base, it makes far more sense to train using the un-used time and locations already available at Fort Irwin. That base was expanded years ago and has not been used nearly to its potential. Do not ignore the fact that the funding saved by taking the Ft Irwin option is the RIGHT THING TO DO. Do not make false assumptions that Ft Irwin could not be used to properly gain the extra training the current missions of the US Marine Corps needs. Marines can get what they need at Fort Irwin, doing so at a far smaller cost, far smaller infrastructure commitment, and utilize lands that are fully under-used, versus taking away lands used for recreation and tourism in the area surrounding Johnson Valley. Please, do not expand the 29 Palms Marine Base into Johnson Valley!

Sincerely,

Brenna McMurray

Off road enthusiasts are not the only people that love and regularly use Johnson Valley. OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Jessica Downing

Response to Comment N-13754:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

David Surmann

Sheridan, WY 82801

Naval Facilities Engineering Command, Southwest
ATTN: 29 Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Jayson Mitchell

Response to Comment N-13764:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Something else to be considered is OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

People recreate to get away from there problems for a while. OHV folks need the space and the legal land in which to do that. If no more land designated for OHV use was afforded, I could be ok with that however, to take away what few places we have left is not in the best interest of all parties involved.

Sincerely,

Thomas Hutchinson

Response to Comment N-13766:

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc., will all be affected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. Generations have been raised enjoying this land and what it has to offer. Please consider expanding to the east so that this culture can thrive and more land is not taken from the public as they have already lost too much.

Sincerely,

Chris Fred

Response to Comment N-13767:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. Please don't close Johnson Valley as it will not only affect how the public feels about the military/government but this will also affect the economy in many, many ways - loss of income due to fuel purchases, food, camping vehicles, off road industry, local economies.

Sincerely,
Jennifer Castillo

Response to Comment N-13769:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Delaine Acosta

San Diego, CA 92132-5190

To Whom It May Concern:

To whom it may concern,
It seems like we are losing every place to get out and play in on our public land. Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected. It seems moving the facility to the east would satisfy both parties desires, we keep our OHV area and the Marines add more acreage for training.
Thank you,
Sam Schmidt

Sincerely,

Sam Schmidt

Response to Comment N-13788:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Please do not just arbitrarily close Johnson Valley to the General public. I have researched and it sure seems like the repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would definitely be better overall if 29 Palms were to expand East and not just take the easy way out and snag the land away from the American people. Many people DO care and love this area. So I ask you again, please don't take it away.

Sincerely,

Tom Naylor

Response to Comment N-13797:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Winter Park, FL 32792

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Sincerely,

James Fuller

Response to Comment N-13813:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

The local economy will suffer greatly, and a place to partake in a great family activity, OHV use, will be gone. Please consider expanding east so that we may continue to enjoy our family sport and enable us to get out and see beautiful Johnson Valley!

Sincerely,

Janelle Becher

Response to Comment N-13814:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Richard Clark

Response to Comment N-13841:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Response to Comment N-13844:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

San Diego, CA 92132-5190

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

The local economies are stimulated by large events held at Johnson Valley along with the weekend users of the area. If 29 Palms is expanded to the west many of the local businesses would suffer. Please consider expanding 29 Palms to the east to save the local economies and communities.

Sincerely,

Darryl Merrin

San Diego, CA 92132-5190

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

As a father who camps with my 2 small children I am concerned about the idea of unused military ordnance and dunnage in the Johnson Valley OHV area.
A mixed use alternative seems risky and I wonder if mixed use is even a viable alternative.

Sincerely,

Donnie Buhrmaster

Response to Comment N-13848:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

"Shared use" would be a good compromise if the Marines could guarantee that the area would be safe for the public to use. However, it is close to impossible for the Marines to 100% guarantee the public's safety if there are live unexploded ordnance used in the area. Please consider expanding 29 Palms to the east of the base and leave Johnson Valley open to the public.

Sincerely,

Darryl Merrin

I know this from clearing the training are for the USARNG in Guernsey Wyoming. We spent a week out there and maybe collected or destroyed 20 % of unexploded ordnance.

Sincerely,

Jayson Mitchell

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture".

go to fort Irwin

please

Chris

Sincerely,

Chris Frost

Response to Comment N-13866:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

The USMC does not realize the importance of this area to our community and OHV "Culture". They also don't realize the economic impact it will have on the surrounding towns, please expand elsewhere, I know Johnson valley is the easiest place for you to expand to. But it just isn't the right thing to do.

Sincerely,

Jacob Foreman

Response to Comment N-13877:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Johnson Valley OHV area is more than just a legal place to ride.

Johnson Valley OHV area is THE place to ride.

I travel 1,300 miles ONE-WAY every year just to meet my friends and play at Johnson Valley. This is 48 hours of round-trip driving. Yes, two full days off just to get there and back.

The EIS fails to note the environmental impact of displacing people from our favorite place to recreate.

Johnson Valley Recreation area is NOT just a spot for people to go wheeled. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture".

Sincerely,

Chris Schoolcraft

Response to Comment N-13884:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Johnson Valley is a very unique area for the public to recreate in a way on public land that is not aloud in most public areas. Four wheel drives have advance to the point where it is difficult to find legal terrain to recreate on that provides the challenge that Johnson Valley does. This area must remain open to the public.

Sincerely,
Darryl Merrin

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Andrea Russell

Response to Comment N-13893:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

The expansion plans for 29 Palms Marine Base pushing into, and taking over, most of Johnson Valley's multiple-use recreation area appears to be ignorant of the process in doing a proper EIS. There are numerous areas that were left out of the EIS studies, including the impacts on an entire culture of recreationalists...multiple cultures actually.

The activities seen in the Johnson Valley Recreation Area are not just some pop-fad or single event taking place, never to be seen again, but instead are truly "lifestyles", dedicated to participation in a certain activity. Whether it be the rocketeer, the wind-sailer, the rock hound, the off-roader, or any other of the large number of activities taking place in the area, the individual participants invest tens of thousands of dollars, if not hundreds of thousands or even millions of dollars in order to participate. With that much invested, it proves that these activities go far beyond an "intermittent hobby" and are actually in a classification comparable to an entire culture of their own...very large cultures at that.

To ignore something as great as a culture, many cultures in fact, combined with the fact that Johnson Valley happens to be the "Mecca" of many of those cultures (especially in the off-road world), again shows that the EIS was NOT completed correctly and that the choice to expand into Johnson Valley would be a travesty against a large number of Americans, who are supposed to be protected by the EIS. There are reasons the EIS is a legal process...the way the EIS for the 29 Palms Marine Base expansion has been handled has NOT followed the reasoning for doing an EIS in the first place.

The cultures driven by the unique recreation activities possible in Johnson Valley would be GREATLY impacted by the 29 Palms Base expansion. Do the EIS right, or DO NOT expand the base.

Sincerely,

Nick McMurray

San Diego, CA 92132-5190

To Whom It May Concern:

The proposed base expansion into Johnson Valley would have a very negative impact on the local economy because there is a huge concentration of OHV enthusiasts in the southern California area. Their "Mecca" for off-roading happens to be Johnson Valley. As so many off road areas have been closed in the past few decades, those enthusiasts have so few choices for their activities that the encroachment of the 29 Palms Marine Base into the area will not only devastate their culture, but will end up encouraging a sizable number of them to off-road on closed or protected lands. I would not be surprised if a decent number of them end up on the expanded portion of the base. The simple mention of SHARING of these lands by Marines and OHV is a complete joke...this will not be feasible financially, time-wise, or safety-wise due to unexploded ordnance and a number of other factors. The simple truth is, the loss of recreation lands in this case is unacceptable and will create numerous bad situations that will affect the OHV community, the residential and business communities around Johnson Valley, and ultimately create less-than-safe situations on and around the base itself.

DO NOT expand the 29 Palms Marine Base into Johnson Valley!

Sincerely,

Billy Nickel

Response to Comment N-13898:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

There is plenty of unused desert to the east of 29 Palms. Much of it is designated as wilderness area and is not widely used by the public. If the base is expanded to the east then the OHV community will be happy, and the Marines will be happy.

Sincerely,

Darryl Merrin

To Whom It May Concern:

The Corps failed to justify need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. The Commandant of the Marine Corps stated just months ago that the USMC's mission would be changing and that the Marines are not a second Army, and in past years have not been used like they should be used, so he is getting the Marines back to their roots.

Their roots do not consist of three simultaneous MEB's.

The US Army has just expanded Ft. Irwin for simultaneous battalion-level training. Leave the land army to the Army!

General James F. Amos promised the Armed Services committee promising that the Marines will only ask for what they NEED, not for what they WANT. I sincerely hope that Johnson Valley is on the "WANT" list and will be peacefully removed from that list!

Defense Secretary Robert M. Gates is quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

Sincerely,

Chris Schoolcraft

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Greg Hussey

Response to Comment N-13940:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Response to Comment N-13945:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Kevin Padilla

I love Johnson Valley OHV area. I look forward to the day I can take my daughters on the cross-country road trip to play there and share my favorite wheelin' area with them.

I am envious of the families who live closer and can play there together nearly every weekend.

It is important to every one of us to maintain that connection with our children, and family-oriented places like Johnson Valley help make that happen.

Sincerely,

Chris Schoolcraft

Comment ID: N-13970

Response to Comment N-13970:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

The beauty of Johnson Valley is one reason thousands people flock to the area every year - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, and others choose to use the area for camping, exploring, rock hounding, shooting, as well as other uses. Military operations, including the dropping of shells and the like, will destroy the natural beauty of the area.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Thomas Bank

Response to Comment N-13971:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.
The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway.
It is a place where family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-13983:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Comment ID: N-13986

Response to Comment N-13986:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

Comment ID: N-13987

Response to Comment N-13990:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

To Whom It May Concern:

I am against any expansion that would harm the lifestyle for Marines and their families at 29 Palms. There is already little to do there, do not take away one of the few remaining off-base activities in the area.

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Kyle Irvin

Response to Comment N-14007:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS. The loss of an area such as Johnson Valley would make a huge impact on the offroad industry, not to mention thousands of family's that use the area as a recreational getaway. It is a place where family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-14014:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Response to Comment N-14024:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

CALEB MITCHELL

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,
scott miller

Response to Comment N-14028:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public, particularly with the use of newer Depleted Uranium munitions—which are also a concern to nearby residents in Lucerne Valley.

This is also an issue with "shared use."

Sincerely,

Shawn Baker

There is no requirement to use depleted uranium rounds in training. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

To Whom It May Concern:

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers. In the greatest recession since the depression should the government willingly be killing an entire industry. The effects will be far reaching from tire sales, suspension research/design, drive train components, small business owners in fabrication, off road supply and installation shops.

With all of these areas being affected, these individuals will have less spending power and the effect will snowball. Killing an industry that is largely domestic is exactly the wrong thing to do for the nations economy. Off roaders do not send their off road vehicles to China to have work done to them. Most off roaders will pay more for a product that is made in the USA and if they can not install an item, it will be installed buy a local professional.

Sincerely,

Philip Weaver

To Whom It May Concern:

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers. I can understand the need for additional training area, but I must ask that you consider the impact that the expansion will have on the community. Families and others have used the Johnson Valley area for decades. Holidays, birthdays, organized events and races are held there year round. An expansion into this area would negatively impact the surrounding community and economy. Each year, the King of the Hammers race is held there. This single event alone brings in millions of dollars of revenue to the surrounding area. Restaurants, hotels, and vendors will suffer if the area is closed to public use.

Sincerely,

Frederick Bunkley

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Sincerely,

nolan skopliak

Response to Comment N-14054:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

To Whom It May Concern:

Johnson Valley is a very important, accessible proving ground for many companies products and services. These companies, such as mine, are the "small business" backbone to our national economy, as well as the off road industry. Eliminating our access to Johnson Valley significantly increases our costs of research and development. This will affect our cost of goods, as well as our ability to continue to grow and employ our staff.

I urge the Marines to take this into consideration. We want our armed services to be the best trained in the world. We just need a livelihood left for them to protect.

Respectfully,

Ron Stobaugh

Sincerely,

Ron Stobaugh

Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor.

The OHV community uses spill kits in case of an accidental spill and lays tarps under vehicles during fueling in order to decrease the amount of fluids spilled.

It is not addresses in the EIS if the Marines will take similar responsible precautions or not.

Sincerely,

Shawn Baker

Response to Comment N-14078:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

To Whom It May Concern:

The proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions has been on my radar since it became an issue.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor as part of the training exercises. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. I have not seen it addressed in the EIS whether the Marines will do likewise or not.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Michael Gonos

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

scott miller

Response to Comment N-14091:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

To Whom It May Concern:

The area that you are considering absorbing is important to civilian use as an OHV area. I believe that this area can be used as both a training area and public use. While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? This area has importance to the OHV community and events staged there support and stimulate the local economy.

Sincerely,
Jeff Jorgensen

Response to Comment N-14094:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Lucas Daugherty

Response to Comment N-14101:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

While I fully support the USMC because I was in, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? We are supposed to be pulling out of those countries and the excuse that the terrain is similar to over there and makes for good training really doesn't work anymore. From what I have seen the Marines have done pretty good over there without the extra land that is trying to be snatched away from the public to train on.

Sincerely,
Dennis Powell

The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway.
It is a place were family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Randy Charpentier

Response to Comment N-14109 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even

Comment ID: N-14109 (Page 2 of 2)

Rusty Polena

Response to Comment N-14126:

Thank you for your comment. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Jessica Fuller

Response to Comment N-14132:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. Ify expanding west, sound will be an even greater issue.

Sincerely,

tom Joseph

Response to Comment N-14133:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue. With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley. Also, with all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

All of this will effect the residents on Old Woman Springs Road.

Sincerely,

Simon Saines

Response to Comment N-14135:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue. The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway. It is a place where family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-14138:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use. Tread Lightly is a huge concern for most OHV users. the military will do much more damage than we ever could produce.

Sincerely,

Andrew Marcellano

Response to Comment N-14152:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

Another consideration is that with many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.

Sincerely,

Simon Saines

Response to Comment N-14153:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use. Also the majority of OHV vehicles travel on designated trails to prevent unnecessary damage to the surrounding environment. Will the military vehicles do the same?

Sincerely,
David Frost

Response to Comment N-14157:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

To Whom It May Concern:

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use. The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway. It is a place were family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-14158:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

San Diego, CA 92132-5190

To Whom It May Concern:

OHV vehicles are generally on rubber tires that are generally aired-down for traction, which also has the benefit of being easier on terrain and causing virtually no damage to the desert floor.

Has the military addressed how much the increased use of tracked vehicles will tear up the desert floor?

Keep Johnson Valley's desert intact. Leave it to OHV users.

Sincerely,

Shawn Baker

Response to Comment N-14159:

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

OHV vehicles are generally on rubber tires and stay to specific trails. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Thomas Bank

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period. I can understand the need for additional training area, but I must ask that you consider the impact that the expansion will have on the community. Families and others have used the Johnson Valley area for decades. Holidays, birthdays, organized events and races are held there year round. An expansion into this area would negatively impact the surrounding community and economy. Each year, the King of the Hammers race is held there. This single event alone brings in millions of dollars of revenue to the surrounding area. Restaurants, hotels, and vendors will suffer if the area is closed to public use.

Sincerely,

Frederick Bunkley

To Whom It May Concern:

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

Sincerely,

Dusti Hall

Response to Comment N-14188:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Sincerely,

Christopher Barcena

Response to Comment N-14199:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. This would just make 29 Palms mad. It would be hard to control with such a big area.

Sincerely,

Adam Kunkel

San Diego, CA 92132-5190

To Whom It May Concern:

I have been following the proposed expansion of the 832-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space or other alternatives, it may encourage illegal OHV use in the area and cause greater problems than maintaining the current use of Johnson Valley.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Thomas Bank

Response to Comment N-14219:

Thank you for your comment. To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 25 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. It would also lead to more trespassing and conflicts with the marines and the general public. It would also effect other area's that are closed to OHV and would lead into more illegal off roading.

Thank You

Rusty Folena

Sincerely,

Rusty Folena

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.
The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway.
It is a place where family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-14223:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Robert Rosewitz

Response to Comment N-14225:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. I have visited twice in the last two years and would love to continue to be able to use the area in future years. The USMC does not realize the importance of this area to our community and OHV "Culture". The use of the Johnson Valley area for OHV recreation also promotes business and growth in the off-road industry.

Sincerely,

John Fellows

I have been following the proposed expansion of the 832-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

I would strongly encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, the area east of the base is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms than the area to the west.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Thomas Bank

Response to Comment N-14235:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. This area is one of a kind for Jeep and OHV owners, and in an age where the public has less and less places to go outside of the city, a age where kids spend hours a day staring at a computer, we need these area's to escape, to teach our youth that there is life outside of the internet, and that we can go to reflect on the hectic life we all live. I fully support our troops and their needs, but if you can expand to the east, meeting your needs for additional training area, and the public can keep the Johnson Valley OHV area, then this need to be a direction that is focused on.

Sincerely,

Michael Gonos

Hello,

I understand the Marines plan to expand there current base in Johnson Valley and will be taking over a OHV area myself and many of my local OHV enthusiast friends / club members enjoy and would like to express that by expanding and taking over this section of land it will prevent myself and my OHV club members from enjoying spending out time and money in the area and the locals towns we come down to visit every year.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Thanks you for your time,

Derek H.

I would also like to add that I joined the Marine Corps in 1998 because I love my free country and I wanted to be there when my country needed me to fight for it's freedom. It severely disappoints me to know that we are losing freedoms every day not to some foreign adversary but to the government that is supposed to be taking care of us the people. I ask that you re think your reasons for trying to take away something that means so much to so many of the people you are here to fight for not against.

Semper Par

Furthermore, it would give the Marines more room to expand 29 Palms. If 29 Palms did this they would have to worry about people coming in JV and getting hurt.

Sincerely,

Adam Kunkel

Response to Comment N-14255:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms. Johnson valley is one of the last public off road areas that the off road community is able to explore and use for recreation, if Johnson valley was to be closed many off roaders would have to resort to different destinations and sometimes invade on private land, both ohv areas close to my home have been closed, i would appreciate if one of my last local spots could stay open. I know many marines that love using Johnson valley and i believe the marines wouldnt pull a move like closing down Johnson valley... thats something the army would do.

thank you for taking the time to read my letter.

thank you

Sincerely,

geoff risaliti

Response to Comment N-14256 (Page 1 of 2):

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even

To Whom It May Concern:

It is of the utmost importance that our Marines have the best training possible, of this there is no doubt. 29 Palms serves a vital role in the preparedness of our forces, and its expansion is necessary.

What isn't necessary is the expansion westward instead of eastward. Expanding west into the Johnson Valley OHV area only serves to punish responsible users of our public lands. Expansion east would utilize idle land that is ripe and ready for the training of our Marines.

I have the highest respect for our armed forces, and can begin to express my gratitude towards them for the sacrifices they make for my own freedoms. One of those freedoms is the responsible enjoyment of our public lands. GO EAST MARINES. Expand to the east and utilize land that is not currently being enjoyed by the citizens of this great country. GO EAST MARINES. Expand east and give our men and women the best training possible so they might continue to be the best fighting force in the world. GO EAST MARINES. Expand east, and know you can count on the support of everyone that loves to use and enjoy our public lands.

GO EAST MARINES

Sincerely,

Ryan Brown

Response to Comment N-14257:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Matt Harman

Response to Comment N-14258:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. This area is one of a kind for Jeep and OHV owners, and in an age where the public has less and less places to go outside of the city, a age where kids spend hours a day staring at a computer, we need these area's to escape, to teach our youth that there is life outside of the internet, and that we can go to reflect on the hectic life we all live. I fully support our troops and their needs, but if you can expand to the east, meeting your needs for additional training area, and the public can keep the Johnson Valley OHV area, then this need to be a direction that is focused on. While this would take a re-designation of Wilderness areas; it is not currently used by the public and has minimal value as a "wilderness area".

Sincerely,

Michael Gonos

Furthermore, it would give the Marines more room to expand 29 Palms.

The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway. It is a place were family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-14268:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

The issue of Twenty Nine Palms expansion affects people nationwide. Johnson Valley OHV Area is such a national treasure that, even as a lifelong resident of Texas, I enjoy the annual usage I get from the area. It is unlike anything we have here where most land is privately owned and the option of expanding a military base would only take the land usage away from one family rather than removing access to many thousands of people every year. I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, that Wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

John Cox

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. The public safety is a huge concern. Especially if any accidents occur

Sincerely,

Andrew Marcellano

Response to Comment N-14276:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. With potential for expansion east, rather than into the Johnson Valley area, it seems as though moving away from the valley preserves areas which have been long used for the Off Highway Vehicle community, and enables better security for military use.

Sincerely,
April Klassen

Response to Comment N-14277:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. This area is extremely populated in summer, long weekends and holidays by campers, four-wheelers, etc. If the government takes this area it is also going to crowd the other good camping/four-wheeling areas even more. Which also decreases the safety of civilians.

Sincerely,

Billynda Griffith

Response to Comment N-14279:

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms.

This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

There is no discussion on how the additional area that was previously and very recently open to the public could be controlled to keep the general public from entering the Base. Johnson Valley does not have a single controllable entrance-it's in the middle of the desert with many access roads and trails.

Sincerely,

Shawn Baker

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway. It is a place were family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-14282:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Not only during the KOH race, but throughout the year, off-highway and other recreational uses brings thousands of users to the area. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Thomas Bank

Response to Comment N-14295:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of them tracked vehicles, the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Andrew Marcellano

Response to Comment N-14296:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

With massive amounts of military vehicles, many of which are diesels, traveling through Johnson Valley the carbon footprint of military training will be massive.

Another Consideration is that currently there are many "routes" in Johnson Valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordnance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Simon Saines

San Diego, CA 92132-5100

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive. Has there been any studies as to the side effects this will have on the local environment?

Sincerely,
David Frost

Response to Comment N-14305:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

To Whom It May Concern:

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Frederick Bunkley

Response to Comment N-14306:

Thank you for your comment. The EIS acknowledges that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative (refer to Section 4.8 of the EIS). The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10.

The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive. The hippies and tree huggers will be out there protesting all time. I was in the Army for 11 years and we all know how hippies and the military get along. If you do expand to the west, consider allowing the area to be used for OHV purposes as well. So, what would you rather have? Some guys who like to drive OHVs, or a bunch of radicalist tree huggers protesting. Ever watch that show Whale Wars? Think about what it would be like having to deal with an asshole like that everytime you enter the training area.

Sincerely,

Frederick Bunkley

Response to Comment N-14307:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

OHV's generally only use established trails on the lakebeds because they're quicker and we don't want too many thorns in our tires! Tracked vehicles don't have these concerns, and could turn the entire lakebed into a dust bowl!

Sincerely,

Shawn Baker

San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive.
The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway.
It is a place where family and friends can get together and enjoy a weekend of shering, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-14312:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive. It would even be more massive than those who are currently using this land.

Sincerely,

Spencer Evans

Response to Comment N-14329:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. It would leave the Johnson Valley area unaffected, allowing JV to be enjoyed by military and civilian people.

Thank you for your time

Sincerely,

Shawn Vangasbeck

Response to Comment N-14330:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

San Diego, CA 92132-5190

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway. It is a place where family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,
Randy Charpentier

Response to Comment N-14337:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East.

Wilderness has been continuously expanded over the past two decades at the detriment of responsible Off-Highway vehicle use.

All the lands in the US that were of "wilderness character" were properly categorized and included as Wilderness in the 1964 Wilderness Act. All new "wilderness" is just "faux wilderness". Don't get me wrong, pristine areas are great--but we can have clean, pristine, relatively natural areas without restricting ALL use by the public.

Since the Marines only occasionally train (it's not a 24/7/365 endeavor), opening some of the Wilderness area to the east of 29 Palms for additional Marine training area would be quite fitting.

Sincerely,

Shawn Baker

Response to Comment N-14355:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Response to Comment N-14357:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-14358

Response to Comment N-14358:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

I have nothing against the US military - I 100% respect what the enlisted do for Americans like me, every single day in every corner of the Earth.

I love my freedom and I enjoy being a responsible father and husband and getting into the wilderness in our Jeep.

The problem is, the very freedoms I enjoy most are threatened by my country's own government. I could go to 50 places off road 15 years ago, now I can access about 12.

Having the military take over Johnson Valley would be a huge loss to the off road community. Another huge loss of American freedom and liberty on American land.

Thank you,
Mike White

In a time when more and more public lands are being lost it is very important to keep and protect what we have available. For sure we know that we will never gain any and if it keeps going we will have none left. The Military already has an absorbent amount of land that have been taken from public or BLM lands.

Johnson Valley is an epic OHV area's that draws people from all over the country and should not be allowed to be taken away. Please find another track of land to use that is NOT already in use for the general public.

I ask this as a veteran myself. I fully understand the need for training lands, but also know there are plenty of lands available with out confiscating Johnson Valley OHV area.

Thank you,

Dan Cole

BLM land is public land - not for military use. There is no valid reason for acquiring this land and many other options are available to the military to expand elsewhere. Johnson Valley is the closest OHV property to the large populous of Southern California and should remain open for the people to use - myself included, an avid OHV user.

Thank you for listening to my concerns and hope you find an alternative.

Best Regards,
Mark Danzo

Sincerely,

Mark Danzo

Response to Comment N-14365:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I wish to one day make it to Johnson Valley and worry it will not be there for enjoyment. The OHV community here in Colorado has already seen quite a few popular trails disappear despite the conservation efforts of those who enjoy the public areas we use.

I worry that the closing of Johnson Valley will only be another ill advised closing that results in many people searching for other means to enjoy their hobby.

Please consider the tens of thousands of individuals that enjoy the trails and recreation opportunities afforded by Johnson Valley.

Thank you for your time,

Matt Brenkle

Sincerely,

Matthew Brenkle

Response to Comment N-14366:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS, including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of families that use the area as a recreational getaway.
It is a place where family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Scott Anderson

Response to Comment N-14380:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Cities spend thousands building skate parks for kids that don't generate revenue and create jobs. Events like KOH boost local economy. It's dirt and rocks but if you could see it through our eyes it's much more its bonding time between fathers and sons, friends and whole families for that matter. Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Arlo Cartledge

Response to Comment N-14383:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Despite the massive increase of OHV enthusiasts in the United States, the public lands that are open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley - a premier location - will further add to the cumulative loss to OHV users without a suitable replacement. An in-depth study on the effects of the closure to the OHV community needs to be done.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Michael Gonos

My family and friends go to Johnson valley several times a year and help or race a car in the KDH event every year.

This area is the only large area in the state where it is open range to enjoy our sport and spend time with our friends. My family and friends drive nearly 1000 miles round trip to enjoy this area. PLEASE go east and don't take our open play area!

I fully support our armed forces and openly thank every one of them that I see in uniform!

Please consider going east to expand...

Thank you for your time.

Jerry Sparkman

I personally drive cross country to visit Johnson Valley once a year to spend quality time with my family. We support local businesses and stimulate the local economy. To restrict use of this park could result in traveling and spending somewhere else.

Please take the time to consider these possibilities.

Thanks

Sincerely,
Norman England

The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Hundreds of acres have been closed down in the Glamis, Buttercup areas. To this we add Ocotillo and now Johnson Valley... Pretty soon our next generations will have nowhere to enjoy the outdoors. Currently My family uses the Johnson Valley area for recreation. The kids love the area and we feel safe there. I wonder what will my kids do at a legal driving age for OHV recreation? Go into "public lands" NOT opened to OHV use??? Please help us in not having to do this. That WOULD be bad for the concerned areas.

Thanks for your attention, Oscar Velez

Sincerely,

Oscar Velez

Response to Comment N-14400:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS, including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Response to Comment N-14401:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Closing Johnson Valley will push more and more OHV users into using illegal access to enjoy their hobby

Sincerely,

Robert Tracey

1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Many local businesses depend on the traffic that the Johnson Valley OHV brings in. Everything from small diners, auto parts stores, gas stations, general stores and local fabricators/repair shops depend on off roaders heading to the area on the weekends. In the case of fabricators, they depend on component failure that the hammers trails provide. There are also a few antique shops that the wife's will go to that would lose out on the lack of visitors in the area.

This move west from 29 Palms will most likely kill the surrounding economy.

Sincerely,

Philip Weaver

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.
The loss of an area such as Johnson Valley would make a huge impact on the offroad industry. Not to mention thousands of family's that use the area as a recreational getaway.
It is a place where family and friends can get together and enjoy a weekend of sharing, wheeling, camping and over the last few years a race that is already known almost world wide. Many OHV parks have already been lost and to lose this one would be devastating to our sport. Please reconsider. Thanks for taking the time to read my meager letter. I know there are thousands of people who feel the way I do, and thousands who feel stronger.

Sincerely,

Randy Charpentier

Response to Comment N-14424:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Not only during the KOH race, but throughout the year, off-highway recreation brings thousands of users to the area - stimulating the local economy. If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Michael Gonsos

I ask you to reconsider your plans to expand 29 Palms into the Johnson Valley. If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. The amount of money that comes into the area allows local businesses to survive. In this current economy, the loss of any local jobs is unacceptable.

Sincerely,

Gordon K. Brooks

Response to Comment N-14433:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

San Diego, CA 92132-5190

To Whom It May Concern:

The Johnson Valley OHV area greatly benefits a large portion of the OHV market segment.

Many shops, manufacturers, as well as sponsors depend on the racing activities that take place within this area for their livelihood. It would be a great disservice to the local economy (as well as the shops, etc. mentioned above) if the Johnson Valley OHV was lost.

Thank you for allowing us to voice our concerns.

Sincerely,

Brandon Libby
