To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Joshua Dvornak

Response to Comment N-11557:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Adam Mansouri

Response to Comment N-11561:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Also this will over crowd our other public/ OHV areas causing more accidents. Please do not let the military take J/V and litter it with unexploded bombs. We got Bin Laden and our desert wars should be winding down in the next couple of years.

I'm a Proud American who does not think we should lose any more access to our land!!

Sincerely,

Daniel Martin

Response to Comment N-11570:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Comment ID: N-11571

Comment ID: N-11572

Response to Comment N-11572:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Access to public lands for OHV use are being stripped from the american public at an alarming rate. OHV land users are rising but the land available to them is disappearing. I beg of you as an OHV enthusiast to rethink your move or at the very least rethink the direction of your move. We on the east coast are still licking our wounds from our most recent property stripped from us (Tellico OHV). Johnson Valley OHV area is host to one of the most prolific events in off-roading every year and your move into it would end that, denying millions the enjoyment gained from it yearly. Not to mention access to it for recreational use. I absolutely beg of you to find an alternative to Johnson Valley.

Sincerely,

Robbie McIntosh

Response to Comment N-11588:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

My family and I currently recreate in what remains of the Sierra Nevadas for our off road activities, and had hoped to expand our usage down into Johnson Valley. We are responsible OHV users and enjoy camping as a family in what remains of "public" land that is actually open to the public. I feel that closing down access to this area is another step in the wrong direction where land that is owned by citizens, is made inaccessible for use at all. The OHV community is a large family, which continues to grow every single day. We are also a large portion of conservatives of the public lands, with the difference being that we want to have shared access to public lands. We work exceptionally hard to keep lands open and accessible to the public.

I hope this letter finds it's way to the right hands where ultimately these lands are saved for use by my generation and many more in the future as our community continues to grow!

Sincerely,
Troy Terry

To Whom It May Concern:

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Despite the massive increase of OHV enthusiasts in the United States, the public lands that are open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley - a premier location - will further add to the cumulative loss to OHV users without a suitable replacement. An in-depth study on the effects of the closure to the OHV community needs to be done.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

Sincerely,

Jacent Pillow

Response to Comment N-11616:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability. In these trying economic times the DOD should be out in front of the expected defense budget cuts. DOD should not be starting new projects of unjustified utility when newer projects will be the easiest thing for Congress to cut. If this happens, Johnson Valley could end up in legal limbo with no one able to use it.

Sincerely,

David Muench

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Sincerely,

Adam Mansouri

Response to Comment N-11633:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

To Whom It May Concern:

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Sincerely,

Chris Dunkin

Response to Comment N-11655:

To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Crystal Provence

Response to Comment N-11656:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: N-11672

Response to Comment N-11672:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, that Wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OffV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Crystal Providence

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, that Wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OHV area. Another area to look at for the Marines would be the Chocolate Mountains near El Centro, that have been in use for years. Public Land is just that public land and is owned by all who use it. Not for sale or given away to whom feels the rights to it. I would share my public land, but never given it up. Please consider other location before using one of our few ohv areas.

Thank you,
The Baker Family

Sincerely,

Michael Baker

Response to Comment N-11678:

Response to Comment N-11679:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, that Wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Darren Sinkov

While this would take a re-designation of Wilderness areas, that Wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms. I completely understand the need for training. The Marine Corps needs to train in harsh conditions to be able to fight in those environments but at what cost. I do not see the need to sacrifice land that is already used by the public, which also generates money for the local economy. Especially if there is, another location that will satisfy the needs of the Marine Corps and still leave the public land open to the public. I enjoy the opportunity to be able to use public land and believe it should be available to future generations. I appreciate and thank all those that are listening to our voices.

Sincerely,
Anthony Bouniady

Response to Comment N-11690:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-11692

Response to Comment N-11692:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-11693

Response to Comment N-11693:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Comment ID: N-11694

Response to Comment N-11694:

Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-11704

Response to Comment N-11704:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, that Wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,
Joshua Dvornak

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,

Crystal Provence

Response to Comment N-11727:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use." Also the JV area is much closer to residential areas increasing the chances that stray round may land in civilian areas

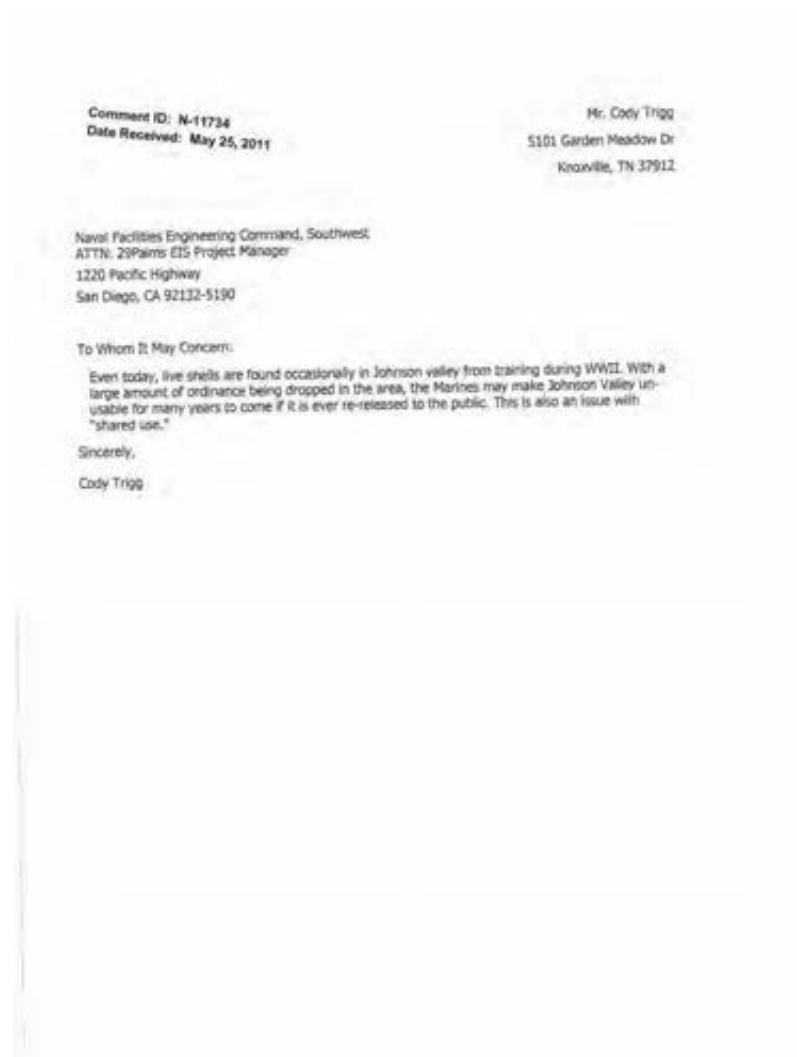

Sincerely,
Joshua Taylor

Response to Comment N-11733:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased.

Sincerely,

Crystal Provience

Response to Comment N-11744:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

While I fully support the USMC, is this expansion really currently necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Crystal Provence

Response to Comment N-11758:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

San Diego, CA 92132-5190

To Whom It May Concern:

While I fully support the USMC, is this expansion really currently necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Nicholas Navoni II

Response to Comment N-11759:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

While I fully support the USMC, is this expansion really currently necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Having been in the operations field for over 17 years in our Corps I understand the need to train as we fight. As the current operations draw to a close the Corps will see a return to conventional warfare training but I think the units involved could accomplish the training within the current training space with little additional friction. I believe the Combat Center could improve by opening up Sunshine Peak TA as the MEB objective as it was before it was turned into a dumping area for air craft. Under this scenario the MEB could advance south to north through several of the old CAJ corridors and consolidate on Sunshine Peak as we used to for large scale exercises. Another area that see's little use because of it's accessibility is American Mine. If the Corps enacted it's "right of way" access through Cleghorn Lakes Wilderness it would make the area more accessible to units needing training area.

Sincerely,
Michael Lamar

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Adam Mansouri

Response to Comment N-11776:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

Response to Comment N-11782:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Jacent Pillow

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.

The proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions has been on my radar since it became an issue.

Johnson Valley is known throughout the world as a prime off-highway area – home to the famed King of the Hammers race.

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor as part of the training exercises. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. I have not seen it addressed in the EIS whether the Marines will do likewise or not.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

Response to Comment N-11787:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Mr. DON VALDEZ
7418 MONIQUE PL.
ROHNERT PARK, CA 94928

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.

Sincerely,

DON VALDEZ

Response to Comment N-11808:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Comment ID: N-11826

Response to Comment N-11826:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Response to Comment N-11834:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,
Don Arter

Response to Comment N-11839:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc.

All of these groups need to be made aware of the proposed changes and given the chance to add their input on the base expansion. To the best of my knowledge, 29 Palms has not made the effort to reach out to the full diversity of user groups who access Johnson Valley.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Tyler DeSpain

Response to Comment N-11841:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups. Please consider all those that will be affected. Thank you.

Sincerely,

Derek Gammage

Response to Comment N-11855:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-road riding that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture". With that being said, I am from Utah and have not yet visited the JV Rec area, I dream of visiting someday soon. It would be a real stab through the heart to loose this beautiful place before we even had a chance to enjoy it. Thanks for listening.

Sincerely,

Kyle Wells

Response to Comment N-11861:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Hello,

I recently learned of the proposed base expansion into the Johnson Valley Recreation. Please, Please, Please don't do this.

This area is NOT just a spot for us to go wheeling. Johnson Valley is the Mecca of off-roading and we travel all the way from Colorado once a year to experience it. The USMC does not realize the importance of this area to our Off-road vehicle community.

I visited this area for the first time 2 years ago. I now look forward to our annual trip. We love the area, and have so much fun out there. The area offers great variety for several different types of OHV use. This is especially important to our family, as we participate in several different activities out there from hiking to dune buggy riding.

Please prevent the base expansion. Please allow my family, and thousands of other families, to continue to enjoy using this area in the future.

Thank you-

Greg Butler
family man,
and Johnson Valley OHV area user

Sincerely,

Greg Butler

To Whom It May Concern:

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture". As a member of a 4x4 club (Black Sheep) in Redding, Ca., I was able to save some money, and visit Johnson Valley for the first time with 3 other members in February for the 2011 "King of the Hammers" competition. It was the most amazing place I've ever seen for our sport, and I could not wait to return to Redding and spread the word about what I'd seen. Now we have even more people invested in the same event next year and we all look forward to traveling to Johnson Valley, bringing some tourism, spending some money, and experiencing the magnificence of this majestic place. PLEASE DO NOT TAKE THIS AWAY FROM US!!!!

Sincerely,

Tom Wehrle

Response to Comment N-11887:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

San Diego, CA 92132-5190

To Whom It May Concern:

I have not had the pleasure of visiting Johnson Valley for many years. I did go there as a kid with my Dad and brother and we had great times. I hope to some day share the same great times with my children. I am very concerned to hear that this great off road area may be closed. There are other options to closing this area for expansion of the Marine facility.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture".

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Thank you for your consideration. Responsible off road drivers continue to lose off road areas needlessly. What we need are more areas to enjoy our sport and the outdoors. Please look to other alternatives for expansion.

Sincerely,
Jeff Zeber

Response to Comment N-11894:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

San Diego, CA 92132-5190

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Jerry Hoggard

Response to Comment N-11916:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like myself, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Zack Johnston

It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected. Also it provides great venues for offroad events that generate money and support for land use and keep our public trails open. I am a retired veteran and do understand the need for training ground, when I was stationed in El Paso we had shared land that we could close off when using for training, and was open to the public when training was not being conducted. We are already losing a lot of our trails and offroad areas; this would greatly impact hundreds of offroaders, families, and the economy by losing more land.

Thank you,
Robert Hines U.S. Army Ret.

Sincerely,

Robert Hines

It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

I have been using local deserts since I was 6 years old with my family and through the years I have seen more and more of our local deserts cut off to OHV use. I started riding motorcycles and camping in Ocotilla Wells which was closed off to OHV use. Now I'm sadden to see that a large portion of the desert that I recreate with my family and friends is now being considered for closure. The limited space that is currently set aside for OHV use is already becoming more confined for all of the people that enjoy riding their OHV's, which will lead to great safety issues.

Please consider this when you vote. We in the off-road community are voters and taxpayers and will stop at nothing to maintain our rights to keep our lands open to all.

Sincerely,

Robert Driscoll

Response to Comment N-11939:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Comment ID: N-11940

Response to Comment N-11940:

For many like-minded OHV enthusiasts like myself, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. OHV users such as myself come from across the US to take advantage of Johnson valley. Just this winter a group of my friends and family drove 14 hours to go enjoy Johnson valley's vast OHV Ares. The trip was a great family bonding experience and we have plans to try to make it an annual trip because of how much we fell in love with Johnson valley. Thousands of OHV users enjoy this area every year and losing this would be a huge blow to the OHV community. This seriously needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Thomas Evans

To Whom It May Concern:

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like myself, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Jeff Carpenter

Response to Comment N-11944:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, that Wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,
Mathew Davis

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Response to Comment N-11970:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Before the Desert Protection act of 1994 I remember LAV's and other maneuver units using the Sheephole Valley for additional maneuver space. We also rode recreational vehicles in the area. In the study of wilderness areas for the Act, Sheephole Valley was not recommended by the BLM for wilderness as it had already had significant impacts from human use. The Desert Training Center, California-Arizona Maneuver Area (DTC-CAMA) was created in 1942 and encompassed MCAGCC and much of the "wilderness" areas between I10 and Las Vegas, Nevada. Twenty separate divisions consisting of more than one million men trained here. The repeal of Sheephole Valley as a wilderness would only be a return to what it already was, training area!

Sincerely,

Michael Lamar

Response to Comment N-11986:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Not only during the KOH race, but throughout the year, off-highway recreation brings thousands of users to the area - stimulating the local economy. If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

One of the biggest reasons to not acquire land from Johnson Valley is simply financial. If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

The offroad community that engages in so many visits to Johnson Valley on a regular basis throughout the year, provide an economic boost to the surrounding communities. My family alone makes approximately 15 trips to Johnson Valley each year, and each time, we spend money on gas and food in the local towns.

If you expand into Johnson Valley, you hurt families and communities, throughout Southern California, forever.

Sincerely,

Jared Knowles

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,
Colin Gibbons

Response to Comment N-12011:

Thank you for your comment. The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Johnson Valley OHV Area is the number one contributor to area's local economy. If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Additionally, companies such as the one that employs me would be hurt because we manufacture parts for OHVs, right here in America, not outsourced to China. Without areas like Johnson Valley that allow OHV recreation, there will be no demand for the products we make.

Locals and out-of-town OHV recreationists fully support, admire, and appreciate the U.S.N.C., but none of us support the Marines' plan to take this land and prosperity from us.

Rather than taking over one of America's most-cherished OHV areas, I would like to urge that the base's expansion go Eastward. Working WITH the public rather than AGAINST the public will have many more long-term benefits for everyone involved.

Sincerely,

Geoffrey Beasley

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. There is very little commerce in the village of Johnson Valley and not many residents living there. Highway 247 isn't a major thoroughfare, so it doesn't bring much traffic to town. Their economy relies on OHV enthusiasts coming to town, refueling and eating at the couple cafes in town. The annual King of the Hammers race brings tens of thousands of people to town each year. There are more people camped on the dry lake bed for the week than live in the nearest town, plus double that many spectators for the UTV and main races. Every weekend, people go out there to play. Whenever I go out, I top off my tank at the last gas station, I buy water, Gatorade, and soda while I'm there to keep in the cooler, I pick up snacks, I usually end up spending \$20-30; and I'm not the only one. Even the surrounding towns of Yucca Valley, Joshua Tree, Morongo Valley, and Twentynine Palms benefit from the increased traffic. Hotels in Yucca Valley receive more guests during the many events held out in Johnson Valley OHVRA, the Search and Rescue group for Joshua Tree National Park holds a large fundraiser every year so they can continue to save people's lives in the park.

Sincerely,

Justin Nevins

If the Marines were to expand 25 Palms West into Johnson Valley, it would completely crush the local economy. Have you done any research on the number of visitors that this area gets? I know that CalHwy did survey count of visitors during the King Of The Hammers event, and the numbers were large. The off road community spends a lot of money recreating. Closing the area would put many mom and pop businesses out of business. We can't afford to have more people without jobs. Please take this in consideration. Thank you.

Sincerely,
carol horbach

Response to Comment N-12020:

Thank you for your comment. The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Please consider moving to the east.
If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. We plan several trips to this area for off road vacations. We stay at the hotels in town go to the restaurants, buy our supply for the day on the trails, gas.. lots of gas.. We easily spend six to seven hundred in the area everytime we visit sometime more, along with two other families that spend equally the same. I know it's not alot, but to the families that benefit from our visits I sure it means alot more. Again, please consider expanding east.
Thank You,
MB

Sincerely,
Michael Baker

Mr. Steven Calvert
116 Van Horn Rd
Russellville, AR 72802

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. Johnson Valley Recreation Area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV Culture. An in-depth study of the effects on the OHV community needs to be done.

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy and the OHV industry itself would take a huge hit. Currently many companies test products there in events such as the King of the Hammers.

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East instead of West. While this would take a re-designation of wilderness areas, that wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,
Steven Calvert

Response to Comment N-12042:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

San Diego, CA 92132-5190

To Whom It May Concern:

If the Marines were to expand 25 Palms West into Johnson Valley, it would completely crush the local economy.

Sincerely,

andy couch

Response to Comment N-12046:

Thank you for your comment. The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

Sincerely,

Joshua Taylor

Response to Comment N-12047:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,
Cody Trigg

Response to Comment N-12061:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

San Diego, CA 92132-5190

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

Jake Roberts

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Adam Mansouri

Response to Comment N-12083:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I'm 18, and the eldest boy of my household. I work day and night on my rigs just to take my younger 13 year old brother and my younger sisters for rides on the trails. That is our quality family time. We all have different interests, but the one thing I've found we all have in common is we love the outdoors and hitting the trails. Treading lightly of course, as they just love the scenery. I've already bought my little brother a 63 Chevy that were currently building together for when he is old enough to come with me on the harder trails. If you guys take this away, I'll lose my chance to connect with my family. Please don't take that away from me.

Sincerely,
Cody Loftis

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

David Muench

Response to Comment N-12096:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Erin Lachman

Response to Comment N-12100:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. Although proposed training activities would increase noise levels in adjacent land areas, noise levels would not exceed the threshold criteria outside of the proposed acquisition boundaries. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, the base will be even closer to these residential areas and sound will be an even greater issue. By expanding to the east, this would not be a concern.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Thomas Bank

Response to Comment N-12101:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drottinger

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue. Many people work there whole life just to have something they call home. By generating an extreme amount of noise these people fill like there home has been taken away and in these economical times many will not have the ability to make a home else where. The people who will have to listen to the noise will probably start to have resentment towards their very own people, the people who protect our great country. This is something that does not need to happen.

Sincerely,

Zachary Smith

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,
Melissa Crosby

Response to Comment N-12116:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

San Diego, CA 92132-5190

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,
Mike MacKenzie

Response to Comment N-12118:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Johnson Valley is home to the largest OHV competition in the US. It brings significant income into the area. I have friends who have traveled to compete and spectate and they spent a great deal of money with local business while there. Many competitors and spectators are Marines who hold this area to be very dear.

Please move East. This will allow the necessary expansion while still leaving one of the best OHV areas in the country available to all.

Regards,

David Gill

Sincerely,

David Gill

While this would take a re-designation of Wilderness area; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

To Whom It May Concern:

I would like to encourage 25 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 25 Palms. As stated earlier, the West side includes public use, in which families use and enjoy, such as ours. Our family has created memories for our children in this area, which I hope my children will share with theirs. It would be a shame to lose generations of multiple families a place to enjoy and keep our kids busy and entertained to help keep our kids and others from doing such as drugs.

Sincerely,

Martin Liska

Response to Comment N-12127:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

A line needs to be drawn between protection of an ecosystem and the protection of Citizens' rights. The ecosystem can adapt easily enough to a change in environment...human cultural environments are much more fragile. Stripping rights from American Citizens and removing their access to previously popular public lands would have a much longer lasting impact of a much broader scope.

Sincerely,
Joseph Fanslau

Response to Comment N-12131:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Furthermore, it would give the Marines more room to expand 29 Palms.

As an avid SXS rider in the Johnson Valley OHV area, more than 35 of our family members and friends have enjoyed this area for more than 20 years. It makes no sense to deprive OHVers of this facility while thousands of acres are available land exists to the east. The loss of the facility will cause crowding at other OHV areas and potential safety concerns. Others will simply operate in non designated areas.

Sincerely,

William Sheehan

Response to Comment N-12132:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Response to Comment N-12138:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, that Wilderness is not currently used by the public, and it would be easier to patrol in order to keep people out than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms, please consider all options.

Sincerely,
neal cockrell

To Whom It May Concern:

Hello,

I would like to express my concern in regards to the Johnson Valley Marines base expansion proposed project. I would like to continue to visit Johnson Valley for OHV use and hope a new area will be chosen for Marines Training.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Derek Holmes

To Whom It May Concern:

Land use is an issue that I don't normally pay much attention to, but in this case I feel compelled to voice my concern. Even though members of the OHV community are some of the most responsible users of public lands, there are always those who give a community a bad name. It is because of these bad apples that I am writing today.

I would like to encourage 29 Palms to expand East instead of West. While I understand this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area (it would give the Marines more room to expand 29 Palms).

Finally, it will keep an OHV area open and contain the impact of the OHV on the surrounding environment. Responsible land use is a compromise, and the OHV community has had to compromise enough already due to the actions of a few. Please keep Johnson Valley the way it is, as the areas that are available to us are dwindling.

Thank you,

Blaine Stolpestad

Sincerely,

Blaine Stolpestad

Response to Comment N-12145:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I would like to encourage 29 Palms to expand East instead of West. King of the Hammers is an annual event that literally millions of dollars are spent in the vehicles that compete and all the vendors that advertise there. It is quite literally the Superbowl of off-roading. Expanding west will totally mess that up. Not only King of the Hammers will be effected either. Thousands of people use the area recreationally to enjoy the wonderful trails located in Johnson Valley. Thanks for reading this and thank you for your service.

Sincerely,

Jake McGarry

Response to Comment N-12154:

Thank you for your comment. To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms. I do recognize and appreciate the importance of adequate training areas for the Marines- however, Johnson Valley is one of the few remaining areas of its kind in Southern California, and the local economy is entirely dependent upon its visitors. If there are other, viable options, the Marines should explore them.

Sincerely,
Andrew Hulise

Response to Comment N-12156:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Furthermore, it would give the Marines more room to expand 29 Palms.

The offroad community is losing ground every year. When this happens it not only effects where to go, but the economy as well. When land is taken from the offroad community, that is less money being spent to enhance the vehicles. Less money spent on gas, food, hotels, etc. So why spend the money if we have no place to go.

Thank you for time, James Weaver.

Sincerely,
James Weaver

Response to Comment N-12157:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, it is not currently used by the public and it would be easier to patrol than the current Johnson Valley Offr area. Furthermore, it would give the Marines more room to expand 29 Palms. Expanding to the West will burden the current users of the land and the military with the increase in security that would be necessary to patrol and secure it.

Sincerely,
Darin Floyd

Response to Comment N-12159:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Furthermore, it would give the Marines more room to expand 29 Palms.

Having family stationed at 29 Palms, I can appreciate the need for expansion. But East is the best alternative. It is not being used and allows the people of this great country to still use it's resources productively while allowing the Military the room it needs to keep on the cutting edge of warfare.

GO EAST PLEASE!

Sincerely,

Chad Cannon

To Whom It May Concern:

Please consider our request to look at other options or wait until the 2012 Federal Budget is completed by Congress. There is a high likelihood that this project may be taken off the block before inception, tying up our OHV land in an ongoing political battle for funding. Consider us, your Marines are part of our group and I am a part of yours; VNFA 112 2003-2009.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Re-designating a wilderness area is essentially a matter of paperwork, whereas expanding west into the current JV ohv area has a huge impact on the local economy as well as all of the OHV users who currently enjoy JV.

I live in Connecticut but I have traveled 6000 miles round trip the last three years to participate in the week long event, The King of the Hammers. If the Marines expand into this area and we lose JV, I will no longer have a reason to travel to California and the several thousand dollars that myself and all of the other teams spend each race will go elsewhere.

I am all for the Marine's having a place to train, heck I'd like to have all the Military abroad back home where they belong :) but they can just as easily train east of 29 Palms as they can west. It's all land owned by us the taxpayers anyway. Shouldn't we have a say in how its used?

Sincerely,

David Smiley

Response to Comment N-12166:

Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use. Deserts are such delicate, fragile ecosystems. Most OHV's stay on the rocks in Johnson valley and on designated trails, and are much less damaging to the soils than an extremely heavy, tracked military vehicle. I feel that the desert will just be destroyed if this is allowed to happen.

Sincerely,

Nikolai Gromicko

Response to Comment N-12182:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

To Whom It May Concern:

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

Sincerely,

Ryan Kinsella

To Whom It May Concern:

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use. For years OHV users have been practicing "Tread Lightly", a technique used to reduce or eliminate damage to native soil and surroundings. Use of large military equipment will not be able to implement these same techniques and will cause more damage to the desert wildlife.

Sincerely,
Darin Floyd

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

To Whom It May Concern:

have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Not only during the KOH race, but throughout the year, off-highway and other recreational uses brings thousands of users to the area. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Randolph Charpentier

Comment ID: N-12205

Response to Comment N-12205:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Comment ID: N-12206

Response to Comment N-12207:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12208

Response to Comment N-12208:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive. This is of course compared to CHV's, many of which use small, lightweight gas engines. I myself use a dirtbike which gets around 50 mpg, and a small buggy that runs on propane, which is classified as a zero emissions vehicle where I'm from. Military vehicles, most of which are very large with big smoky diesel engines not subject to emissions regulations, will create an unhealthy air situation.

Sincerely,

Nikolai Gromicko

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the slope of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley. I've been there for the King of the Hammers race many years in a row now, and even from just a few small off road vehicles running around, the dust can get so thick that it is literally impossible to see more than 30 feet at a time. I could see this being a HUGE problem with Military vehicles, which are much larger and heavier, and have the potential to completely shroud the area in dust and haze.

Sincerely,

Nikolai Gromicko

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

With massive amounts of military vehicles, many of them tracked vehicles, the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley. Locals should not have to live in a dust storm. Further more training in a watered down desert does not accurately resemble real world conditions for the soldiers to be training in.

Sincerely,
Darin Floyd

Response to Comment N-12231:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Please consider our request to look at other options or wait until the 2012 Federal Budget is completed by Congress. There is a high likelihood that this project may be taken off the block before inception, tying up our OHV land in an ongoing political battle for funding. Consider us, your Marines are part of our group and I am a part of yours, VMFA 112 2003-2009.

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

Sincerely,

Kyle Irvin

Response to Comment N-12232:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12233

Response to Comment N-12233:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

To Whom It May Concern:

With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drottinger

Response to Comment N-12234:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12246

Response to Comment N-12246:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Comment ID: N-12258

Response to Comment N-12258:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use." If there base expansion to 29 Palms were to GO EAST, there would be little to no risk to the public of exploded or unexploded ordnance. Craters from exploded ordnance within the PUBLIC area of Johnson Valley have taken already taken lives, which is unacceptable. Please GO EAST MARINES!

Sincerely,

Christopher Hauser

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use." The expansion into an OHV shared use area will create dangers of the area not being fully cleared and the added costs and time required to clear the area after a training exercise would create an issue. The shared use plan would be contingent on the area being made safe before OHV and other users could return to using it and this does not seem practical. The likely solution would be the military stating the area is not safe and then it becomes no longer "shared use".

Sincerely,
Darin Floyd

To Whom It May Concern:

The OHV Industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training, I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers. Aside from the OHV industry, many trying to make a living depend on the users of Johnson Valley to supply that income. The local economy would take a huge hit as well as the OHV industry.

The OHV industry depends hugely on proving its supplies and the best way to do that is for them to use them in the harshest environments possible. Many do this by competing with them in events, some of the biggest of which take place in Jonson Valley every year. Additionally they market and sell their products by being out recreating in the same areas as their potential customers. Johnson Valley attracts so many OHV users it is the perfect place to both test OHV products and market them.

Sincerely,
Darin Floyd

Michael Cox

Response to Comment N-12284:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged and if shared use is to be considered this issue must be resolved. This problem has not been addressed in the EIS.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Thomas Bank

Response to Comment N-12285:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just waisted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions mainly because Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

While I fully support the USMC, is this expansion really necessary with the current political situation? With the current conflicts in Afghanistan, Pakistan, and Iraq the fighting is against small bands of insurgents. Do we still need to train Marines to fight on such a large scale?

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Thomas Bank

Response to Comment N-12300:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

This area is perfect for the public to enjoy off-roading. There isn't another piece of property or direction this expansion can't go for?
I haven't been fortunate to have even been at Johnson Valley yet. I hope the opportunity to try my skills on arguably the best trails in America is still there when I can afford to go.

I imagine you have received thousands of letters and can understand the passion pouring from people who love this area and want it to remain open.

Please for the sake of Americas shrinking public lands, pick another piece of desert to train our troops or whatever you guys HAD planned for Johnson Valley.

Sincerely,
Thor Schaefer

Response to Comment N-12303:

Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

While I fully support the USMC, is this expansion really necessary with the current political situation? In the past 10 years nothing has really been accomplished through our wars. don't get me wrong I'm in the firearms industry and am not apposed to fighting for your freedom. I just feel that our current government likes to throw away money that we don't have. Both you and I know that our government has more than enough resources to train our troops within the current facilities. After working with many of our veterans for years I've learned how much money and time our country waste's on nothing. Why do you feel it's important to take over what little public land we have to enjoy our hobbies just so you can waste more of our hard earned tax dollars on land that you don't deserve or truly need. Maybe you should worry more about paying back the trillions of dollars to china...

Sincerely,

Kevin Graham

Response to Comment N-12304:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps appreciates your comment and involvement in the NEPA process.

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Perhaps there is another area that would be useful for training that is not an off-road recreation area?

Please consider alternative expansion areas.
Thank you for your time.

Sincerely,

Thomas Heath

To Whom It May Concern:

Please consider our request to look at other options or wait until the 2012 Federal Budget is completed by Congress. There is a high likelihood that this project may be taken off the block before inception, tying up our OHV land in an ongoing political battle for funding. Consider us, your Marines are part of our group and I am a part of yours, VMFA 112 2003-2009.

While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Kyle Irvin

The OeV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addresses in the EIS if the marines will do this or not. While I fully support the USMC. Is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just waisted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays bags under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not. I carry a spill kit every where I go in my OHV. The environment is very important to me and having a place to enjoy it is critical.

Sincerely,

Kevin Glatzel

Response to Comment N-12326:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

The Marine Corps appreciates your comment and involvement in the NEPA process.

The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.

My guess is the current SOP for the Marines does not address the concern and find it doubtful that future SOP will change to reflect that concern.

Personally I don't think that the above "bio-hazards" are that big of an issue for the area in question, but some individuals have managed to impose their beliefs on the remainder of the public. Because of this, the OHV community, myself included, have complied in order to preserve the OHV areas that we currently enjoy. The USMC stance should reflect the same.

Sincerely,

Robert Lightfoot

As an avid OHV user and racer I, and the others I participate with, take great care in preserving the environment and the areas we recreate on. When repairing, refueling or servicing a vehicle in the field we always use tarps and the necessary absorbent materials to prevent soil contamination and in the rare case of an accidental spill we always properly clean and dispose of the contaminated soil. For years we have been protecting our access to sensitive environments by employing such practices.

My concern is that the EIS does not address this situation and I believe it is a major concern. I have worked diligently over the years to protect this land and I hope to be able to do so in the future.

Sincerely,

Darin Floyd

To Whom It May Concern:

The Corps failed to justify need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-road riding that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Jared Dongail

Response to Comment N-12368:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I have been taking my Family in our Jeep's for 33 years to many places in the desert.

PLEASE find another place to expand the base.

THANKS!!!
M. MacKenzie

Sincerely,

Mike MacKenzie

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture." I myself have been going there annually for years, and can count off the top of my head about 40 others who I personally know that make the trip as well. I've been there and have seen the tens of thousands of people who travel there for recreation, the King of the Hammers race, and other events. It truly has a special place in my heart and I'd be devastated if it was closed, and I wouldn't be able to experience it with my kids some day. Please reconsider this decision and have the Marines move East instead of into JV.

Sincerely,

Nikolai Gornicko

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture". While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the slope of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

I have travel to many of the great off road area in the country. Tellico and Moab are among the two other great areas I have visited. But nothing compares with the two weeks I spent at Johnson Valley in 2010. If this area is closed off to off-roading, our country will lose an irreplaceable public resource.

Sincerely,

James Lambert

I can not stress enough how important this area of offroading is to me and my family. We have spent many weekends enjoying this great area and can honestly say it has helped my family stay together and very close over the years. We often celebrate holidays with family and friends at Johnson Valley. Taking this area away from current offroaders and future offroaders would be devastating to our community and family.

All of us offroaders support the USMC and all that they do for us. Please consider keeping this area open to the public so my children can enjoy it in the near future just as I enjoyed it growing up as a kid.

Sincerely,
Nathan Krone

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV Culture.

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Please consider the alternative option of expanding 29 Palms to the east if the expansion is necessary.

Sincerely,
Kyle Schubert

Response to Comment N-12398:

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

First, thank you to the US Marine Corp - for your service and your dedication. Our country is awesome because of you! However, I understand that the Johnson Valley OHV area is under attack for the expansion of USMC needs and that is very upsetting to me. Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a family orientated area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games. Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture". Areas for such recreation are few and far between...and NONE are better the JV OHV. There are not other opportunities for mitigation (alternate land acquisition for Public Use). The Marines have acknowledged that Alternative 3 does meet their training needs and will have minimal impact on Public Recreation. Also, it is completely possible to move the MCB Objective five miles east and still retain full training ability while significantly reducing the permanent land loss and eliminating the need for a shared use agreement. Shared Use alternatives are both minimal in land mass and extremely concerning with regards to long term viability. The Marines will hold the keys to our 'shared use' which is an unfair predicament. We beg for your understanding in our quest to maintain the land as OHV land. It is important to so many families out there, in a time when our families need this fun, get away from it all area to reconnect and be together!! I appreciate you taking the time....

Sincerely,
Trisha Hammer

There are fewer and fewer places for OHV recreation in our country every year. Currently, Johnson Valley is one of the few and one of the best. While I understand the need for a strong military, we must work together to ensure both the public and military are happy. Expanding into Johnson Valley is unreasonable. For years and years the OHV community has established Johnson Valley as one of the famous OHV places in the United States. Many people come from around the country to enjoy what Johnson Valley has to offer to the public. This demonstrates how crucial and significant Johnson Valley is to the public.

Please do not expand into Johnson Valley.
Thank You

Sincerely,
Brian Ford

The USMC does not realize the importance of this area to our community and OHV "Culture". Johnson Valley represents and embodies one of the freedoms the brave men and women of the United States Marine Corps fight for. This is just another step in the direction that is taking away the things many Americans hold dear, and if it continues to happen, what is the point of fighting for freedom? There won't be any freedoms left to fight for.

Sincerely,

Erik Forberg

Johnson Valley, as a an OHV area, has convinced me over the last several years to spend thousands of dollars with California vendors to build my vehicle to tackle the unique obstacles and trails the area presents. The need to build a vehicle that can both go fast and crawl large boulders to enjoy the area I travel eight or more hours each way presents a constant challenge that will keep me busy and involved for many years to come. That is of course, if the Marine Corp doesn't absorb the area to perform exercises.

Sincerely,

Kyle Crowley

As it is I love 9 hrs to get to this OHV spot and spend a ton of money once there for my supplies and fuel locally. This is not just a place to go offroad its the best place out there. There is so much land out there and believe me I respect the need for the military but sometimes they need to make do with what they have. The offroad community has little to no area currently. Its like these areas are going extinct. I have been to Fort Irwin they have more space to train then they know what to do with. My family and friends all love this place and my club Trailbusters 4x4 club has 50+ families using this place. I also paid and went to not just "King of the Hammers" but also Victor Valley 4x4 club hosts a CalWheel event as well. We have nowhere to go this is cruel. United States has so much land that is unused by anyone please train elsewhere.

Sincerely,

Brandon Kuykendall

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. PLEASE SAVE THIS AREA FOR FUTURE GENERATIONS!

Sincerely,

James McClammy

Response to Comment N-12414:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Please take to heart the public outpouring on this issue. This must not happen. There are more reasons to keep this area open for the public than keeping it strictly for the Military. I wholeheartedly support our troops and Americas Military-but I do not agree with this expansion.

Sincerely,

Thor Schaefer

To Whom It May Concern:

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Showing preference to one culture over the other goes against the very founding principles of the United States of America. Every citizen of this great nation should be given equal voice and equal access to public lands given their impact is minimized as necessary to not disenfranchise other user groups.

Sincerely,
Joseph Farnlau

Response to Comment N-12434:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

My primary OHV use is dirt biking however, percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling/dirt biking/ATV use is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Thomas Hutchinson

Response to Comment N-12438:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected. Closing off land for public recreational use is a tough pill to swallow, especially since OHV land is at a premium. There are very few places to go four wheeling and as a whole the military has benefited from the engineering of off road enthusiasts. Do not take Johnson Valley or any other four wheel landmarks away, our country needs them especially when its down.

Sincerely,
chris apelt

It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just waisted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Mike Munding

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games. As a father it really saddens me to see all of the area's where I have had the privileged of going taken away. My daughter is at the age now where she is really wanting to get into the outdoors which as a father makes me very excited but as time goes on we have less and less places to actually go. In this day and time children spend way to much time on video games, not getting outside with friends and family which in my honest opinion has lead to a generation's who will be an over weight generation who could have had the chance to get outdoors and have some fun, learn responsibilities in life that might not be learned thus leading to a future drain on society.

Sincerely,

Zachary Smith

Johnson Valley has been a recreational area since it opened in the early 80's. Generations of families have come to Johnson Valley to spend time together doing the things that they love - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be ended by the expansion of 29 Palms to the West. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Comment ID: N-12488
Date Received: May 25, 2011

I love all aspects of being outdoors whether hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hqs.doe.gov/nepa/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies sell products there in events such as the King of the Hammers.

Sincerely,

Tyler Gowans

Response to Comment N-12488:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.doe.gov/NEPA/regs/nepa/nepaen.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

It'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMI/12pres/MCON_book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12491 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12491 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark brain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers.

Sincerely,

Kyle Irvin

Response to Comment N-12491 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

To Whom It May Concern:

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Jason Yanna

Response to Comment N-12492:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The importance of Johnson Valley to the OHV industry is incalculable.

There has been more rockcrawling equipment created for, developed at, and tested and marketed in Johnson Valley than at any other singular location in the world.

A great many desert racing parts manufacturers test their new equipment at Johnson Valley.

The UTV industry has discovered Johnson Valley as a testbed for their new vehicles.

Not only will the closure of Johnson Valley have an economic impact on nearby local small businesses, it will have an economic impact to an entire nationwide industry.

Sincerely,

Jonathon Stan

Response to Comment N-12500:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). Apparently this expansion plan has been in place for several years, but somehow I'm just hearing about it, and I actually use this area on a regular basis. How can that be? From what I can see the Marines have not worked very hard to get the word out to the people, and the comment period has been as short as possible. This is a huge and complicated process that most people don't know about much less understand. The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period so that the people you fight for can actually have a chance to have their voices heard.

Sincerely,

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

The amount of time provided for the public comment period is too short for the public to thoroughly go over the documents effectively. Please extend the current public comment period.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Darrell Drummer

Response to Comment N-12512:

The following is an excerpt from the EPA's Citizen's Guide to the NEPA process:

"The environmental review process under NEPA provides an opportunity for you to be involved in the Federal agency decisionmaking process. It will help you understand what the Federal agency is proposing, to offer your thoughts on alternative ways for the agency to accomplish what it is proposing, and to offer your comments on the agency's analysis of the environmental effects of the proposed action and possible mitigation of potential harmful effects of such actions. NEPA requires Federal agencies to consider environmental effects that include, among others, impacts on social, cultural, and economic resources, as well as natural resources. Citizens often have valuable information about places and resources that they value and the potential environmental, social, and economic effects that proposed federal actions may have on those places and resources. NEPA's requirements provide you the means to work with the agencies so they can take your information into account."

The EIS, as a part of the NEPA process, requires federal agencies to consider the impacts on social, cultural, and economic resources, as well as natural resources. I'm sure you'll get thousands of letters from the public talking about their love for Johnson Valley. Johnson Valley is a public use area adjacent to the existing 29 Palms. The current EIS recommends expansion and closure of the majority of Johnson Valley. It does so while ignoring the option of expanding east into an area not open to all public users.

The importance of Johnson Valley from a cultural and social destination can not be overstated. It is the mecca for an entire industry dedicated to the 40 million OHV users. An industry responsible for hundreds of millions of dollars in products, research, and environmental support and clean up. While Johnson valley will be filled each and every weekend of the year with OHV users, it is not just the OHV users that would loose Johnson Valley should the base expand West. Hikers, bird watchers, rock hounds, explorers, students and teachers, photographers, event promoters, families, active duty marines, and veterans, are just a few of the groups that will loose the ability to enjoy the premier location in the south west United States.

The period for public comments is still open, and I appreciate the USMC taking into consideration the comments of the public. I have no doubt you'll find Johnson Valley to be a vital social and cultural area. When compiling the public comments please put the same weight on these comments as your citizen's guide suggest you will.

Do not expand 29 Palms west into Johnson Valley.

Sincerely,
Ryan Brown

Response to Comment N-12516:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps appreciates your comment and participation in the NEPA process.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.tsoi.doe.gov/nepa/regs/nepa/nepaedit.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12521 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12521 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

Sincerely,

Kyle Irvin

Response to Comment N-12521 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Response to Comment N-12527:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

I have not seen evidence that the Corps has adequately analyzed the DOD Budget and National Deficit Impact on the Project Viability of taking over the Johnson Valley area.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Brian Smith

I love the opportunity to see the weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hss.doe.gov/nepa/ceqepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.

Sincerely,

Tyler Gowans

Response to Comment N-12543:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.gov/nea/regs/nea/neaqa.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12/preg/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12548 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12548 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability.

Sincerely,

Kyle Irvin

Response to Comment N-12548 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability. The need for added security around the Johnson valley area has been completely ignored. JV is a well known off highway recreation area. The general public will not know the area has been closed so added security will be required for years to come. The cost of educating the public that the area is now closed has also been left out of the budget considerations.

Sincerely,

Lindsay Wubben

Response to Comment N-12549:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

I have not seen evidence that the Corps has adequately analyzed the DOD Budget and National Deficit Impact on the Project Viability of taking over the Johnson Valley area.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Jason Yanna

Response to Comment N-12551:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.

Sincerely,

Joshua Taylor

Response to Comment N-12554:

Thank you for your comment. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

To Whom It May Concern:

One of the biggest concerns I have with the Marines taking over Johnson Valley is the damage it may cause to the land. With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not. When something breaks during recreation we have the time to properly clean up after ourselves. I question whether or not this will be true during a training exercise that simulates battle, where there is not time to worry about such things. Johnson Valley is a beautiful place that many people love and cherish as their own, it would pain me to see it spoiled because you were in too much of a hurry to keep it clean.

Sincerely,

Sanjaya Vatsik

Comment ID: N-12566

Comment ID: N-12566
Date Received: May 25, 2011

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hss.doe.gov/nepa/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources. But the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the marines will do this or not.

Sincerely,

Tyler Gowan

Response to Comment N-12566:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.gov/nepa/regs/nepa/nepaqa.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/L2pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12568 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12568 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addresses in the EIS if the marines will do this or not.

Sincerely,

Response to Comment N-12568 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

To Whom It May Concern:

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as a prime off-highway area – home to the famed King of the Hammers race. With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. Additionally, myself and many others actively participate in land clean-up events throughout the year to preserve the area. It is not addressed in the EIS if the marines will do this or not. As off road enthusiasts, we take a lot of pride in minimizing our environmental footprint in the areas that we use. I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great environmental impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Jason Yanna

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.doe.gov/nepa/regs/nepa/nepaedia.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12587 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12587 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.

Sincerely,

Kyle Irvin

Response to Comment N-12587 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

To Whom It May Concern:

The beauty of Johnson Valley is one reason thousands people flock to the area every year - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, and others choose to use the area for camping, exploring, rock hounding, shooting, as well as other uses. Military operations, including the dropping of shells and the like, will destroy the natural beauty of the area.

Sincerely,

Luke McCain

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Sincerely,

Fred Domain

Response to Comment N-12592:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.doe.gov/nepa/regs/nepa/nepaeca.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/L2pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12607 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12607 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Sincerely,

Kyle Irvin

Response to Comment N-12607 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Comment ID: N-12608

Many, many, many responsible OHV enthusiasts will be displaced if the Johnson Valley OHV area is overrun by 29 Palms.

Many of us will find other legal places to go.

A small percentage (but a large number of people) will inevitably choose to ride illegally and keep riding and enjoying Johnson Valley.

Please do not displace honest, hard-working, taxpaying recreating Americans. Please do not force the good apples to go somewhere else. We'd just as soon ride legally alongside the "bad apples" at Johnson Valley and share our love of the trails and our ethics with them.

Sincerely,

Jonathon Stan

Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Comment ID: N-12613

Response to Comment N-12613:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Comment ID: N-12614

Response to Comment N-12614:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

Comment ID: N-12615

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

OHV vehicles are generally on rubber tires and stay to specific trails. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Brian Smith

Date Received: May 25, 2011

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hhs.gov/nepa/ccnepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR -- 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

Sincerely,

Tyler Gowers

Response to Comment N-12624:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Protection Act of 1969 as amended can be found at <http://ceq.hss.doe.gov/nepa/regs/nepa/nepaqa.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "insure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12627 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12627 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice". 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

OHV vehicles are generally on rubber tires. Many times these tires are aired down and do little to no damage to the desert floor. With the military using tracked vehicles, the desert floor will be torn up much more than from OHV use.

Sincerely,

Kyle Irvin

Response to Comment N-12627 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

To Whom It May Concern:

The proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions has been on my radar since it became an issue.

Johnson Valley is known throughout the world as a prime off-highway area - home to the famed King of the Hammers race.

I would suggest that the repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all stakeholders involved in Johnson Valley if 29 Palms were to expand East.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

Response to Comment N-12633:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12634

Response to Comment N-12634:

Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

Comment ID: N-12635

Response to Comment N-12635:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. Although proposed training activities would increase noise levels in adjacent land areas, noise levels would not exceed the threshold criteria outside of the proposed acquisition boundaries. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

To Whom It May Concern:

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Adam Wiegmann

Response to Comment N-12638:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. Although proposed training activities would increase noise levels in adjacent land areas, noise levels would not exceed the threshold criteria outside of the proposed acquisition boundaries. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hqs.doe.gov/nepa/reg/nepa/nepaedit.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MOON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic." How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12642 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12642 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

There are many houses on Old Woman Springs Road. From those homes currently you can clearly hear Marines training at 29 Palms. By expanding west, sound will be an even greater issue.

Sincerely,

Kyle Irvin

Response to Comment N-12642 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. Although proposed training activities would increase noise levels in adjacent land areas, noise levels would not exceed the threshold criteria outside of the proposed acquisition boundaries. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Many OHV areas in the US have been closed due to noise complaints.

If the Federal Government has determined that this is a legitimate problem, then the noise of live fire exercises in the proposed 29 Palms expansion should be enough to halt this proposed action.

If, on the other hand, noise is not a legitimate problem, and the 29 Palms Marine Base expands into the Johnson Valley OHV Area, then the US Government must re-open OHV recreation areas in the US that were previously closed due to noise complaints.

Sincerely,

Robbie McIntosh

Response to Comment N-12644:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. To Whom It May Concern:

The EIS does not state the impact of an expanded 29 Palms to the residents on Old Woman Springs Road.

The current 29 Palms west boundary is over 10 miles away, and exploding ordnance can already be heard. With a westward expansion into Johnson Valley, the noise impact to Old Woman Springs Road residents will be terrible.

Johnson Valley OHV area makes a great buffer between the current Base and nearby residential areas.

Sincerely,

Jonathon Sian

Response to Comment N-12646:

To Whom It May Concern:

Johnson Valley is not the only open usable land around 29 Palms, there is land to the east as well. It is currently designated as Wilderness, which means that the public is already not using it. Expanding 29 Palms to the East makes much more sense than west into JV for many reasons. Recreation drives the local economy, and it also drives a huge industry that keeps many people employed. Taking JV takes away from a lot of people. Taking empty wilderness land effects almost nobody. The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms where to expand East.

Sincerely,

Sanjaya Vatsuk

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Carson Fisher

Response to Comment N-12657:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I would like to encourage 29 Palms to expand East instead of West. The information that is basing the choice to expand west is old and no good anymore. I beg of you to re-evaluate the decision to head west and look at other ways, like east. If the move west happens, you will shut down the local income and put a lot of people unemployed and without food for their families. This is the greatest place for OHVs in the world and would kill the dreams of thousands of people to be able to come visit the lake bed. Please go east!

Sincerely,

Ben Piepenbring

Comment ID: N-12675
Date Received: May 25, 2011

I love all aspects of being outdoors weather hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hss.doe.gov/nepa/comepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas, it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Tyler Gowans

Response to Comment N-12675:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-12679 (Page 1 of 2)

Response to Comment N-12679 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12679 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Response to Comment N-12679 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Response to Comment N-12684:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

I have been aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

Not only during the KOH race, but throughout the year, off-highway and other recreational uses brings thousands of users to the area. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Darrell Drummer

I love all aspects of being outdoors whether hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hqs.doe.gov/nepa/ce/cepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR -- 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the Marines resources; but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Tyler Gowans

Response to Comment N-12699:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hss.doe.gov/nepa/regs/nepa/nepaenq.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12700 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12700 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Kyle Irvin

Response to Comment N-12700 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

People wander in the desert. It is fun to explore. People currently wander onto the existing 29 Palms base.

Many more people would wander onto an expanded 29 Palms if the base expands into an area that the public has been long accustomed to using.

The public does not much use the area East of 29 Palms. This area would be ideal from a safety standpoint for a base expansion.

Sincerely,

Steven Rector

To Whom It May Concern:

Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public.

Sincerely,

Daniel McQueen

Response to Comment N-12707:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Comment ID: N-12708

Response to Comment N-12708:

Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

To Whom It May Concern:

With massive amounts of military vehicles, many of which are diesel, traveling through Johnson Valley the carbon footprint of military training will be massive.

Sincerely,

Fred Domain

Response to Comment N-12709:

Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

To Whom It May Concern:

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Brandon Lowry

Response to Comment N-12717:

Thank you for your comment. To Whom It May Concern:

The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East.

Sincerely,

James Fuller

Response to Comment N-12718:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-12721

Response to Comment N-12721:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

San Diego, CA 92132-5190

To Whom It May Concern:

The closure of Johnson Valley OHV area in favor of a 29 Palms expansion will be a MASSIVE loss to Multiple Use.

Rockhounds, hikers, birdwatchers, explorers, hobbyist miners, amateur geologists all drive their vehicles at Johnson Valley OHV area—OFF THE HIGHWAY!! This will be a loss to more than just OHV recreation for OHV recreation's sake.

The EIS has not considered this vast cumulative impact, particularly to the non-desert racing, non-rockcrawling taxpaying Americans who love to play with their families at Johnson Valley.

29 Palms has not made the effort to reach out to all these different user groups.

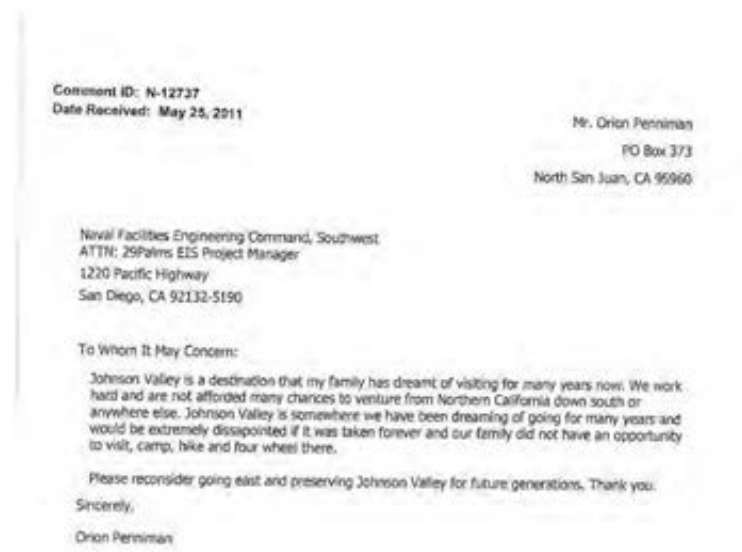

Sincerely,

Jonathon Sian

Response to Comment N-12736:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Comment ID: N-12737

Response to Comment N-12737:

San Diego, CA 92132-5190

To Whom It May Concern:

Removal of mineral rights from public use.

The EIS for the 29 Palms expansion is not only fatally flawed, but the information published by the USMC in its budget request for next year contradicts the very nature of the NEPA process that the EIS is supposed to follow.

Below is the actual text from the National Environmental Policy act of 1969 as amended. This text is located <http://ceq.hss.doe.gov/nepa/regs/nepa/nepaacta.htm>

Sec. 101 [42 USC § 4331].

(a) The Congress, recognizing the profound impact of man's activity on the interrelations of all components of the natural environment, particularly the profound influences of population growth, high-density urbanization, industrial expansion, resource exploitation, and new and expanding technological advances and recognizing further the critical importance of restoring and maintaining environmental quality to the overall welfare and development of man, declares that it is the continuing policy of the Federal Government, in cooperation with State and local governments, and other concerned public and private organizations, to use all practicable means and measures, including financial and technical assistance, in a manner calculated to foster and promote the general welfare, to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans.

(b) In order to carry out the policy set forth in this Act, it is the continuing responsibility of the Federal Government to use all practicable means, consistent with other essential considerations of national policy, to improve and coordinate Federal plans, functions, programs, and resources to the end that the Nation may --

1. fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;
2. assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings;
3. attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;

Response to Comment N-12738 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12738 (Page 2 of 2)

4. preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice;

5. achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities; and

6. enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

Statements about the USMC's request of almost \$9,000,000 for this next fiscal (obtained here http://www.finance.hq.navy.mil/PMS/12pres/MCDN_Book.pdf) list a number of violations of the NEPA directive.

The USMC proposes the \$9 million be used to "Acquires land including withdrawal of land from all public uses, including mineral and water rights, private and state land owned in fee title as well as private mineral interests on public lands.....cultural and biological mitigation and monitoring, asbestos shingle and chip removal and the removal and recycling of vehicle tires"

How does the acquisition of "mineral and water rights" achieve a balance between population and resource use to permit high standards of living. The EIS fails to identify if these water and mineral resources will be available for future exploration. In a time where our nation is looking at all means to be energy independent, is it wise to remove mineral resources of any type from the possibility of production? The EIS does not address how these resources will be replaced or mitigated. The EIS must follow the NEPA process and identify all costs associated with or plans for the utilization of the mineral rights within its boundaries.

Sincerely,

Ryan Brown

Response to Comment N-12738 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action, or other lands as compensation for lost mineral or water rights. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance. The EIS also concluded that impacts to water resources and mineral resources would be less than significant.

Access to mining and other land holding will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information).

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

This 29 Palms DEIS analysis is fatally flawed in that it does not address the larger story of historic decreases in recreational access since the 1930s, and how this proposed base expansion is one more recreation reduction on top of many different layers.

Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Recreation vehicle users (i.e., both people who drive dirt roads to get somewhere as well as motorcycle, ATV, and dune buggy riders who enjoy family fun and competitive racing in desert "open areas" like the Johnson Valley Open Area and the Imperial Sand Dunes) have seen an erosion of space and roads for their interests in the Desert since the 1930s. This is why they are so concerned with the proposed expansion of the Marine Corps Air Ground Combat Training Center into the Johnson Valley Open Area. In fact, vehicle use is at the very heart of a fight among competing interests and land uses on public lands that BLM has been dealing with for 40 years. Below is a chronological overview of milestone events that have affected Desert vehicle access and the situation at hand:

1. Until the 1930s one could take a vehicle just about anywhere a vehicle could go
 2. 1930s: 2 national monuments are designated, Death Valley and Joshua Tree
 3. 1940s: withdrawal of several large tracts of public lands for WWII and post-war military training, research and development, and testing
- By 1945 approximately 25% of the Desert is off limit or severely restricted to recreation vehicles. The effect of recreation vehicle use is light at this point.

By the end of the 1960s there was considerable public concern over the growing use and effects of unmanaged vehicle use and it resulted in the 1975 Congressional designation of the 25 million acre California Desert Conservation Area (CDCA) and a mandate for BLM to address these conservation issues and develop, with considerable public and stakeholders involvement, a comprehensive land use plan for the area by 1980. The completed CDCA Plan in of itself did not close vast areas of the Desert to recreation vehicle use but did define the end for unbridled proliferation of vehicle roads and trails and did set a blue print for further planning and management for all Desert resources and uses. An array of multiple use management designations and commitments were set in place for a host of resources and uses: route designations (open or closed), areas open and closed to vehicle use, areas of critical environmental concern, grazing, wild horses and burros, mining, utility corridors, species and habitats conservation, and cultural resources protection. It also proposed a set of areas for wilderness designation by Congress.

Response to Comment N-12739 (Page 1 of 3):

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Comment ID: N-12739 (Page 2 of 3)

Response to Comment N-12739 (Page 2 of 3):

The fight over land uses did not go away with the completion of the CDCA Plan. Species were increasingly being listed as threatened or endangered under the Federal Endangered Species Act (ESA), due to disease and human encroachment; and, not satisfied with the outcome of the CDCA Plan, environmental groups agitated for more wilderness than was recommended and expansion/creation of federal parklands. Vehicle users, mining companies, and ranchers were becoming increasingly worried...and some military units began to see the need for more land as technology and warfare changed.

4. In 1994 Congress addressed the wilderness and parkland proposals by BLM and environmental groups with the California Desert Protection Act (CDPA). While the 1980 CDCA Plan recommended 2.1 million acres for wilderness designation, Congress designated 3.8 million and transferred an additional 3.5 million of public (BLM) land to the National Park Service, most of which was designated wilderness, too.

The CDPA hit vehicle use and mining hard: the amount of Desert off limit or severely restricted to vehicle use jumped from 25% to 50%. Affected were many favorite roads and camping areas, 50% of the favorite rock hounding areas, the availability of 40 out of 49 kinds of minerals, and many options for expansion of utility corridors and military reservations. The impact of this number increases with 2 perspectives:

a. Half of the other 50% of the Desert is private land: off-limit to public use.

b. most of the designated wilderness is high elevation – mountainous – and above the range of critical habitat for most species listed under the ESA (so the CDPA ignored resolution of serious species and habitats issues). Consequently, about half of the remaining 25% of the Desert that is not military, not wilderness, not parkland, and not private – i.e., not off limit for vehicle use – is affected by species and habitat issues and subject to further vehicle restrictions when those species are addressed (below).

5. In 1990 the desert tortoise was listed as a threatened species under the ESA. This listing, geographically having the most widespread effect in the Desert, and other listings (e.g., Pierson's milkvetch in the Imperial Sand Dunes and bighorn sheep in the Peninsular Range west of Palm Springs-La Quinta) required BLM to consult with the U.S. Fish & Wildlife Service (FWS) to address the adequacy of the CDCA Plan to resolve the species issues. (Other federal agencies with affected habitat had to revisit their land use plans, too.) It was decided that the CDCA Plan did need to be amended. In doing this BLM embarked upon six geographically separate plan amendments in the early 1990s. But in 2000, while the amendments were still in preparation, three environmental groups sued the BLM in federal district court in San Francisco to (in my mind) swing the decisions of the amendments to a more preservationist conclusion – i.e., to force more restrictions on vehicle use than might otherwise come out of the plan amendment processes. (Other uses, mainly sheep and cattle grazing, were targeted as well. The six plan amendments would now have to satisfy both the species recovery requirements of the ESA and resolve the lawsuit.

While the six plan amendments have since been completed to the satisfaction of the agencies involved – primarily the BLM and FWS, the 2000 lawsuit still rages: three environmental groups on one hand and the combined science and wisdom of a host of federal, state, and local agencies and a considerable array of stakeholders on the other. Through the combined six plan amendments, popular vehicle open areas remain open, but 3,671 miles (20%) of 17, 588 miles of inventoried roads in the Desert were closed (not counting the miles of roads closed with the passage of the CDPA in 1994).

The beat goes on. Not one but two military base expansions onto public lands are under consideration today: Ft Irwin, north of Barstow, and the Marine Corps Air Ground Combat Training Center, north of Twenty-nine Palms. As with anywhere, there is only a finite amount of land. Vehicle users feel they are being painted into a corner and the corner continues to shrink. The

Comment ID: N-12739 (Page 3 of 3)

Response to Comment N-12739 (Page 3 of 3):

public should now better understand why they are upset. This is not the only Desert resource management story, but it is one that hits home for vehicle users and should be an environmental consideration under "cumulative effects" in an environmental impact statement.

The DEIS is a fatally flawed document and should be retracted and done over with more complete research and documentation.

Sincerely,

Geoffrey Beasley

Loss of Public Land.

The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 (<http://ceq.hss.doe.gov/nepa/ceq/eca/sec1.pdf>) begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR – 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public.

Sincerely,

Ryan Brown

Response to Comment N-12740:

Thank you for your comment. Cumulative impacts for each resource area are discussed in Chapter 5 of the EIS.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hss.doe.gov/nepa/regs/nepa/nepaecia.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic". How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the

Response to Comment N-12741 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12741 (Page 2 of 2)

most culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark Twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Sincerely,

Ryan Brown

Response to Comment N-12741 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

To Whom It May Concern:

I may be young, but I have many ambitions in my life. Johnson Valley is a destination that my family has dreamt of visiting for many years now. We work hard and are not afforded many chances to venture from Northern California down south or anywhere else. Johnson Valley is somewhere we have been dreaming of going for many years and would be extremely disappointed if it was taken forever and our family did not have an opportunity to visit, camp, hike and four wheel there. My sister's boyfriend has spent countless hours building and four wheeling his Toyota 4runner. He always talks about taking us to Johnson Valley to wheel some of the United State's hardest offroad trails.

He is very passionate about keeping public land open to the public and I am writing this letter to show some support for him and all of us who wish to enjoy Johnson Valley in all its beauty and greatness before it is taken from us forever. Please reconsider going east and preserving Johnson Valley for future generations. Thank you for taking the time to read my letter.

Sincerely,

Tracie Penniman

Response to Comment N-12742:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Please do not propose to share Johnson Valley simply as a means to gain the support of the OHV recreating public.

Johnson Valley is our favorite place in the nation. We take the threat of a risk of closure or partial closure VERY seriously.

If there is any other place in the nation, please pursue that, not Johnson Valley.

We have "shared" enough. We support the mission of the United States Marine Corps, but we do not want to share Johnson Valley—unless you're in the rig with us enjoying a trail on your days off, and then we'll share a beer or two back at camp and I'll thank you for your service and my freedom.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley OHV-Highway Vehicle Area.

Sincerely,

Jason Yanna

Response to Comment N-12744:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

San Diego, CA 92132-5190

To Whom It May Concern:

Many OHV areas in the US have been closed due to noise complaints.

If the Federal Government has determined that this is a legitimate problem, then the noise of live fire exercises in the proposed 29 Palms expansion should be enough to halt this proposed action.

If, on the other hand, noise is not a legitimate problem, and the 29 Palms Marine Base expands into the Johnson Valley OHV Area, then the US Government must re-open OHV recreation areas in the US that were previously closed due to noise complaints.

Sincerely,
Brian Smith

Response to Comment N-12745:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. Although proposed training activities would increase noise levels in adjacent land areas, noise levels would not exceed the threshold criteria outside of the proposed acquisition boundaries. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Johnson Valley OHV area is more than just a legal place to ride.

Johnson Valley OHV area is THE place to ride.

I travel 1,300 miles ONE-WAY every year just to meet my friends and play at Johnson Valley. This is 48 hours of round-trip driving. Yes, two full days off just to get there and back.

The EIS fails to note the environmental impact of displacing people from our favorite place to recreate.

Sincerely,

Jonathon Stan

Response to Comment N-12746 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire elements of the Exercise

Comment ID: N-12746 (Page 2 of 2)

Response to Comment N-12746 (Page 2 of 2):

environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

29 Palms has not made any effort to reach out to the community that will suffer as a result of their intrusion into such free space. Johnson valley has for decades been the premier location for Off-Road recreation. It allows space for people to develop bonds with people that they never would have met otherwise. My time in the outdoors is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. Taking the land away will have serious repercussions.

Sincerely,

Gareth Webster

Response to Comment N-12747:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Alright, so lets get down to it. I've sent literally a couple hundred of these letters here over the last few days. Some were forwarded copies of letters or notes found on the internet, some were hand written, some were random thoughts and some were just because. Bottom line is I along with many others have taken the time to send TONS of letters in to the Marines to be heard regarding this expansion at 29 Palms. Now, don't get me wrong-I FULLY support the Marines and our armed forces. I am VERY grateful for what they did and have done for me, my family, my country. I broke my back years ago before I turned 18 and there went all my plans-I had originally wanted to be a bad-ass Marine myself years ago, but health got in the way and a broken back didn't get me too far with the recruiters. Anyway, I fully support our armed forces and back them up 100%. That is-up until this issue with the expansion at 29 Palms.

I have never been to Johnson Valley myself but have been dreaming of going for years now. I have some dear friends who live down there and wheel there frequently-on a daily basis in fact. I've been invited to come many times over the last few years but have not yet been able to make the journey. My horrendous work schedule, health, life, etc. has all gotten in the way. My dream is still to head to Johnson Valley at some point in my life to wheel this wondrous land for myself, along side my good friends.

I have read MANY things on the web lately regarding this expansion. Some about the economy in the area suffering, some about the failure of the Army's expansion, others about land use, ecological disasters, possible training, lack of training, even the lack of the needed expansion in the first place. I don't know what is "true" anymore with everything I've read but what I do know is this-there are literally THOUSANDS of Americans all across the US and THOUSANDS more all across other countries who have joined together to fight this fight-against our own US Marines. This is where it gets difficult for me as I fully support the Marines. BUT with everything I've read, I question this-is it REALLY necessary in today's world to expand? If so, is it REALLY ABSOLUTELY necessary to expand to Johnson Valley? I can't help but think not.

It is at this time that I ask again, as I've done in hundreds of past letters, notes, remarks, etc., that I urge you to re-consider this expansion, it's honest needs for the protection of America as we know it today, and also the request to move EAST instead. Johnson Valley is FAR more than just some "land" out in the desert. It is home to thousands of wheelers, OHV users, recreationists of all all walks of life from all backgrounds across the US. Together, we are all asking the same. I hope there is strength in numbers and even if some of the 20,000+ letters you receive seem silly, I hope the sheer volume of said letters is enough to sway your decision in this expansion. I truly hope you do move EAST instead if the expansion really is necessary.

Thank you for your time, and

GO MARINES!

Mike

Sincerely,

Mike Hunding

Response to Comment N-12748:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007
<http://ceq.hqs.doe.gov/nepa/cenepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR – 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public.

Response to Comment N-12749:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Dear Marine Corps,

GO EAST!!!

Please do not expand into Johnson Valley. I hope to someday take my jeep to this off highway vehicle mecca of boulders, extreme climbs, and difficult challenges.

This is something I would imagine Marines could relate to as they clear the beach for their sister services and stand ready for any and all comers who would threaten America and her freedoms.

Besides my rock crawler jeep, I own a 1962 Mighty Mite, a very rare jeep built for the Marines only and meant to serve a specialized role to help the "boots on the ground" at the front lines. I maintain this jeep so that I can take it to car shows and memorial services where untold numbers of "former" Leathernecks walk up out of the blue and say, "Holy crap, I didn't know any of these still existed!"

And then we talk about old times. I get to hear about their experiences in the far away jungles and red clay roads of Viet-Nam. I honor these men and maintain this vehicle for them. I always offer them the chance to climb inside while they beam into the wife's camera from behind the wheel, remembering past glories, missing comrades, and thinner waists.

I would like to believe that the Marine Corps I believe in, the Corps that I was raised to love by a father who put himself through medical school with nine years of service in the Corps, and the warrior descendants of Chesty Puller would not make this honor a hollow one by taking such a huge piece of public land away from people who recreate off road in the descendants of the Mighty Mite, the WWII Willys MB, and the Korean War era M38 and M38A1.

A military necessity sparked the invention of the jeep. Please don't make the jeep superfluous through a "military necessity". What would the dogfaced Marines of Khe Sanh or Bougainville say if they were to find out that the jeep has been relegated to merely a museum piece, a relic reminding Americans of a faded glory?

Please don't take away the very reason that I own these jeeps. Please don't take Johnson Valley away from off roaders.

Please expand to the east.

Comment ID: N-12751

Comment ID: N-12751
Date Received: May 25, 2011

I was recently put on medical leave due to a lung condition that stemmed from the last 14 years of breathing crap at work in the air from fryer smoke, ammonia, etc. I find myself sitting here today as I have for the last few days sitting on a breathing machine inhaling all kinds of steroids and other medicine to TRY and bring my lungs back to better condition to at least allow me to function in a regular manner again. As I do so, I am yet again sitting here at the keyboard making a plea to the Marines at 29 Palms to re-evaluate the need for the expansion as well as consider moving EAST instead of taking over Johnson Valley.

I have never been to JV but have wanted to go for years now. I have several friends down there who live in the area and wheel JV practically every day. The pictures I've seen, articles I've read, broadcasts I've seen of events like King of the Hammers, and many others, are among the best in the world. Rock crawling and OHV use is prime here and unlike anything else in the world. This is the "Mecca" of off-roading and a destination site for many Americans all around the US as well as many folks over seas in foreign countries.

The use of Johnson Valley and the surrounding area brings lots of cash in to the local economy as folks need to eat, sleep, get fuel, shop when needed, etc. Lots of dollars are generated here for the purpose of off-roading and OHV use in general due to its ONE location at Johnson Valley. Wheelers who come here are responsible for the most part, care about the area and fight to protect it. While we have a few extremes of what would be considered "environmentalists", wheelers typically fall right in the middle. We're not out like some crazy eco-nazi's fighting to shut land down. Instead, we fight to keep public lands open to the public. We do this through many ways and many avenues in areas all over the US. Johnson Valley is no different. We do things like specific dedicated trail "clean-up" runs where we'll go gather all the garbage and trash along the way that we can find, haul it out and dispose of it in a landfill properly. For things like oil and spill cleanup, we carry special oil-spill kits and other assorted tools to help clean the rock, dirt, ground, etc. from any oil that may be spilled during a roll. We pick up after ourselves and urge that other responsible wheelers do the same. Granted there are the "renegade" groups who just don't give a shit and give a bad name to the rest of us, but as a whole, off-roaders and OHV enthusiasts are generally a "good" group who respect and take care of the environment. I wouldn't call us "tree huggers" by any means, more of a general environmentalist or conservationist if you will. We fight for what is right and do what we can to protect the land on many levels.

Johnson Valley is prime example of this. There is no where else in the world that is as special and as widely used on so many levels. Folks come to four wheel, bike ride, horse back ride, rock bound, camp, hike, etc. There are so many reasons folks visit JV that words cannot describe.

It has recently come up that the Marines at 29 Palms may need to expand and that they may take over this land. I sit here on my breathing machine asking you to reconsider. Please leave this land open to the public as it has so much value, so much meaning and so much behind it. It's not just another "location in the desert" to train, but is far more than that. If the Marines really do need to train, move them EAST instead. That land is not used anywhere like the land at JV. Please reconsider and move EAST instead.

Thank you for your time and thought on this matter.

Go MARINES!

Mike

Sincerely,

Response to Comment N-12751:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Comment ID: N-12752 (Page 2 of 2)

Response to Comment N-12752 (Page 2 of 2):

'Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.'

Utilizing the text above as a precursor I will write a few of my thoughts, hopes and concerns on the matter. I would first like to say that unlike many people fighting to keep Johnson Valley in public hands, I do not have a family. I am part of the new generation of Americans who enjoy the outdoors, and everything that comes with it. For me personally, that enjoyment derived from the outdoors comes from camping, fishing, hiking, mountain biking and last but certainly not least; four wheeling. Although I do not yet have a family of my own, the "gears" if you will, are in motion. I'm engaged and planned to be married in very early 2012, with the reception held in Colorado. I emphasize the location of the reception because as you have noticed, my (fiance's too) address puts me in the center of Missouri.

I was born in Colorado, in a small town called Greeley, I spent twenty-one of my twenty-two years in Colorado, I moved out to Missouri last August to be with her, to get engaged and do the whole "live-together" thing while she was in school. Now that's she finished with school and we're engaged, I told her it was time that we move back to Colorado. Fortunately for us, she found one just last week. My job allows me to transfer to virtually anywhere where civilization exists, but that doesn't matter. What does matter is that just a week ago, before her announcement the new job, I was at work, walking outside thinking to myself "If we get back to Colorado, I'm never taking the great, scenic outdoors for granted, ever again".

Now that we're moving, I've already begun to make plans, where we're going to fish, where we're going to hike, and where we're going to go four wheeling once we're back in my home state. With in the next couple years, those plans will include a son or daughter of ours. Our child will get to grow up enjoying the rocky mountain scenery, respecting the land and understanding how lucky we are to be able to enjoy this gift. My fiancee is from Northern California and respects the importance of National Parks, one of her favorite spots to frequent was Yosemite and Redwood National Forest. We both agreed that we wouldn't deprive our son or daughter of the scenery that this great nation has to offer. And that was something we could easily agree upon when I told her to look for jobs in CO. (No offense to Missouri)

After we get settled in CO, I have always wanted to travel west and four-wheel some of the trails and trail systems of legend, most notably Moab, the Rubicon as well as Johnson Valley. I don't want to turn out as Clark Griswold and end up taking my family across the country only to find out that our destination is closed. Although Johnson Valley may not have any roller coasters, I know taking a Jeep up those rocks would thrill just about anyone, especially our kid. I'm not going to end this letter "begging", I'd rather have it finished as a simple proposition:

Please, don't take away that which we're already losing so much of throughout the country, these public lands are important, not only for recreational value, but for me to tell my kid "see, it's stuff like this that makes America the Beautiful actually very beautiful". I don't want him to see pictures of places and have to tell him "those are closed, we can't go there any more". I just want us to be outside, to allow him to touch the rocks, to play in the dirt, to smell the desert air, because as a great man once said, there's one thing God's not making anymore of, it's land. Beautiful land at that...

Sincerely,

To Whom It May Concern:

The OHV community may be small when compared to the economy as a whole, but it is an important part. Most members of the OHV community who visit Johnson Valley do so in vehicles built in their own garages and work shops. The equipment and materials needed to build an Off Highway Vehicle are very expensive, and most domestically manufactured. Well over half of the tools and equipment used are made domestically. The same goes for the materials and parts used. The off-road community is growing every year, or at least it was until the closing of some very popular OHV parks. Most the the money spent by the members of this community remain in our country and economy.

There are also many members of the is community who own and operate companies geared specifically toward this sport. These companies have created jobs that were not there 10, or even 5 years ago. Due to the demand of the parts and equipment these small companies make, they are still creating jobs. Along with individual builders, these small companies add additional demand to the steel plate and tube manufacturers in the United States. If Johnson Valley were to be closed, these demands for parts, equipment, tools, and steel will decrease. Jobs will also be lost, raising the unemployment rates of both California and the United States as a whole.

Sincerely,

Tim Raley

To Whom It May Concern:

I love Johnson Valley OHV area. I look forward to the day I can take my daughters on the cross-country road trip to play there and share my favorite wheelin' area with them.

I am envious of the families who live closer and can play there together nearly every weekend.

It is important to every one of us to maintain that connection with our children, and family-oriented places like Johnson Valley help make that happen.

Sincerely,

Steven Rector

To Whom It May Concern:

While researching the expansion of 29 Palms, I found a copy of the USMC budget for the following year.

http://www.finance.hq.navy.mil/FYMB/12pres/MCON_Book.pdf

On pages 147-149 within the Projects section, there is a request for \$8,665,000 for a base expansion. "This land expansion initiative proposes to acquire land bordering MCAGCC along the western boundary and enhanced access to fixed ranges and maneuver areas in the southern region of the installation."

Later in the same report this budget request appears to "Acquires land including withdrawal of land from all public uses, including mineral and water rights, private and state land owned in fee title as well as private mineral interests on public lands.....cultural and biological mitigation and monitoring, asbestos shingle and chip removal and the removal and recycling of vehicle tires."

How can the EIS be considered unbiased when dollars are being requested for one of the specific options being considered within the study?

How can the USMC have a dollar figure for the "cultural and biological mitigation" when it is still in the process of completing an EIS for the 29 Palms expansion? The time for public comment on the project is still open, and public comments are vital in determining the cultural significance of any area. It is impossible to truly understand the nature of the "cultural mitigation" until the study is complete and all public comments are read.

How can the EIS list "shared use" as one of the options when the budgetary planning is all ready in motion for "withdrawal of land from all public uses"?

The EIS for the expansion of 29 Palms must be rejected. The time for comment was too short, the proper address for public comment was not published within the document, and now the study itself seems to be directed by an agenda to expand West before having any real data on the implications of that expansion. Do not accept the EIS for the expansion of 29 Palms.

Sincerely,

John Footitt

Response to Comment N-12755:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

General James F. Amos, Commandant of the Marine Corps at the Defense Writers shared a story on February 18th, 2011 at the Defense Writers Group breakfast.

Just because you CAN, does not mean that you SHOULD....

"We found that we were buying a new water bull. Now, for everybody here, a water bull is not an animal. It's a big -- it's a water tank that holds, I'm guessing, I don't know, four (hundred) or 500 gallons of water.

"We call them "water bull," but that's like a water buffalo. And you tow it behind a Humvee or a seven-ton truck or that kind of thing. Now, that's where Marines get fresh water. You pump fresh water in it. You go up there, and Marines are up there shaving, and all that stuff. And we've got a good one. We've had that one since I was a lieutenant, and it works just fine. Nothing wrong with it (served us as Marines 7). Well, we found out that -- and I'm not sure who, but we said, well, we need a bigger water bull. We need one that's about three or four times as big.

And we said, well -- then we see this picture of this thing, and it's huge. It not only takes up more cube, it's heavier. Well, why do we need it? Well, because we've got a seven-ton truck now that can tow it. Because we can. We said, let's buy it.

We canceled that program. So there's an example. There's others that are out there. But being frugal just means going back and paying very close attention, close scrutiny on everything we're buying, making sure that we can -- that it's something we need."

In a post OEF world, the Marines do not need to train 3 battalions for a large scale campaign. According to General Amos, the Marines were used in OEF as a "two for", as a second land army. Now their role is changing back to their original purpose.

The entire DEIS needs to be thrown out since the purpose and need of the base expansion is no longer valid in a post OEF world.

Sincerely,

Michael Maskalans

Response to Comment N-12756:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Expansion of 29 Palms into the Johnson Valley area will effectively destroy the entire area for the use of the OHV community. The EIS does not address or even contemplate the mitigation of this loss. The importance of the Johnson Valley area to the OHV community is one I'm sure you've received a large number of letters on and it is an huge oversight within the EIS.

Mitigation of any loss must be done in a like for like, kind for kind manner. The mitigation also must be done in a geographically similar area. There simply is no way to replace the Johnson Valley OHV area in a like for like, kind for kind manner. When appropriate mitigation is not available or the cost of that mitigation is prohibitive there is no other option but to remove the option requiring that mitigation from the study.

The EIS does not address the mitigation of the loss of Johnson Valley. The EIS does not identify any alternatives to the Johnson Valley OHV, nor does it address the cost for replacing the Johnson Valley OHV area as a form of mitigation. The westward expansion of 29 Palms should not and can not go forward without a realistic plan to mitigate these losses. If expansion is necessary, then you must go Eastward.

Sincerely,

Michael Maskalans

Response to Comment N-12757:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. To Whom It May Concern:

While researching the expansion of 29 Palms, I found a copy of the USMC budget for the following year.

http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf

On pages 147-149 within the Projects section, there is a request for \$8,665,000 for a base expansion. "This land expansion initiative proposes to acquire land bordering MCAGCC along the western boundary and enhanced access to fixed ranges and maneuver areas in the southern region of the installation."

Later in the same report this budget request appears to "Acquires land including withdrawal of land from all public uses, including mineral and water rights, private and state land owned in fee title as well as private mineral interests on public lands.....cultural and biological mitigation and monitoring, asbestos shingle and chip removal and the removal and recycling of vehicle tires."

How can the EIS be considered unbiased when dollars are being requested for one of the specific options being considered within the study?

How can the USMC have a dollar figure for the "cultural and biological mitigation" when it is still in the process of completing an EIS for the 29 Palms expansion? The time for public comment on the project is still open, and public comments are vital in determining the cultural significance of any area. It is impossible to truly understand the nature of the "cultural mitigation" until the study is complete and all public comments are read.

How can the EIS list "shared use" as one of the options when the budgetary planning is all ready in motion for "withdrawal of land from all public uses"?

The EIS for the expansion of 29 Palms must be rejected. The time for comment was too short, the proper address for public comment was not published within the document, and now the study itself seems to be directed by an agenda to expand West before having any real data on the implications of that expansion. Do not accept the EIS for the expansion of 29 Palms.

Sincerely,

Michael Maskulians

Response to Comment N-12758:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

From this referenced document:

<http://www.marines.mil/unit/29palms/...A1%20Jan04.pdf>

I find that on page three it states a key sentence pursuant to the discussion of the base expansion at 29 Palms:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)"

I would question why the base at 29 Palms is being considered for expansion at a time when MEBs are being downsized? At the very least, this DEIS must be put off until the entire force structure is completed.

I see no reason to expand a Base with all of the negative impacts and taxpayer dollars if it is possibly not going to be used/needed in the immediate future.

Sincerely,

Thomas Bank

Response to Comment N-12759:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

To Whom It May Concern:

As I have been following the proposed Base expansion at 29 Palms, I have recently learned that the Marines neglected to give the correct mailing address for public comments on the home page of the website and the public documents for the 29Palms Marine Base proposed expansion.

This information is also missing from all the public documents including the Project Briefing Paper, the Project Overview, the Public Info Brief, the Trifold brochure, the Frequently Asked Questions (FAQ), the Contact and the Public Comment Link on the home page. In place of the necessary information, the contact info is given only for the project office on the 29Palms Marine Base.

I am aware that NEPA requires and encourages public comment and with this oversight of proper contact information the Marines have not given the public the information needed route their comments to the proper authorities. This is a major NEPA violation and I require both an extension of the comment period as well as an investigation of how this oversight came to be!

Sincerely,

Thomas Bank

Response to Comment N-12760:

To Whom It May Concern:

I am aware of the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Given the Alternatives presented, I strongly support only "No Action" alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,
Brandon Lowry

Please do not propose to share Johnson Valley simply as a means to gain the support of the OHV recreating public.

Johnson Valley is our favorite place in the nation. We take the threat of a risk of closure or partial closure VERY seriously.

If there is any other place in the nation, please pursue that, not Johnson Valley.

We have "shared" enough. We support the mission of the United States Marine Corps, but we do not want to share Johnson Valley--unless you're in the rig with us enjoying a trail on your days off, and then we'll share a beer or two back at camp and I'll thank you for your service and my freedom.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Brandon Lowry

Response to Comment N-12762:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The US Government (RUM) has determined that fireworks are illegal at the Johnson Valley OHV area due to the risk of wildfire.

How does the US Government (USMC) propose to mitigate the risk of wildfire at Johnson valley with the use of live fire rounds?

There seems to be a huge contradiction in the laws that the US Government wants to impose upon its citizens and the regulations it allows for itself.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Brandon Lowry

Response to Comment N-12763:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

ATTN: 29 Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. This 29 Palms DEIS analysis is fatally flawed in that it does not address the larger story of historic decreases in recreational access since the 1930s, and how this proposed base expansion is one more recreation reduction on top of many different layers.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Recreation vehicle users (i.e., both people who drive dirt roads to get somewhere as well as motorcycle, ATV, and dune buggy riders who enjoy family fun and competitive racing in desert "open areas" like the Johnson Valley Open Area and the Imperial Sand Dunes) have seen an erosion of space and roads for their interests in the Desert since the 1930s. This is why they are so concerned with the proposed expansion of the Marine Corps Air Ground Combat Training Center into the Johnson Valley Open Area. In fact, vehicle use is at the very heart of a fight among competing interests and land uses on public lands that BLM has been dealing with for 40 years. Below is a chronological overview of milestone events that have affected Desert vehicle access and the situation at hand:

1. Until the 1930s one could take a vehicle just about anywhere a vehicle could go
 2. 1930s: 2 national monuments are designated, Death Valley and Joshua Tree
 3. 1940s: withdrawal of several large tracts of public lands for WWII and post-war military training, research and development, and testing
- By 1945 approximately 25% of the Desert is off limit or severely restricted to recreation vehicles. The effect of recreation vehicle use is light at this point.

By the end of the 1960s there was considerable public concern over the growing use and effects of unmanaged vehicle use and it resulted in the 1976 Congressional designation of the 25 million acre California Desert Conservation Area (CDCA) and a mandate for BLM to address these conservation issues and develop, with considerable public and stakeholders involvement, a comprehensive land use plan for the area by 1980. The completed CDCA Plan in of itself did not close vast areas of the Desert to recreation vehicle use but did define the end for unbridled proliferation of vehicle roads and trails and did set a blue print for further planning and management for all Desert resources and uses. An array of multiple use management designations and commitments were set in place for a host of resources and uses: route designations (open or closed), areas open and closed to vehicle use, areas of critical environmental concern, grazing, wild horses and burros, mining, utility corridors, species and habitats conservation, and cultural

Response to Comment N-12764 (Page 1 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Comment ID: N-12764 (Page 2 of 3)

Response to Comment N-12764 (Page 2 of 3):

resources protection. It also proposed a set of areas for wilderness designation by Congress.

The fight over land uses did not go away with the completion of the CDCA Plan. Species were increasingly being listed as threatened or endangered under the Federal Endangered Species Act (ESA), due to disease and human encroachment; and, not satisfied with the outcome of the CDCA Plan, environmental groups agitated for more wilderness than was recommended and expansion/creation of federal parklands. Vehicle users, mining companies, and ranchers were becoming increasingly worried...and some military units began to see the need for more land as technology and warfare changed.

4. In 1994 Congress addressed the wilderness and parkland proposals by BLM and environmental groups with the California Desert Protection Act (CDPA). While the 1980 CDCA Plan recommended 2.1 million acres for wilderness designation, Congress designated 3.9 million and transferred an additional 3.5 million of public (BLM) land to the National Park Service, most of which was designated wilderness, too.

The CDPA hit vehicle use and mining hard: the amount of Desert off limit or severely restricted to vehicle use jumped from 25% to 50%. Affected were many favorite roads and camping areas, 50% of the favorite rock hounding areas, the availability of 40 out of 49 kinds of minerals, and many options for expansion of utility corridors and military reservations. The impact of this number increases with 2 perspectives:

a. half of the other 50% of the Desert is private land: off-limit to public use.

b. most of the designated wilderness is high elevation – mountainous – and above the range of critical habitat for most species listed under the ESA (so the CDPA ignored resolution of serious species and habitats issues). Consequently, about half of the remaining 25% of the Desert that is not military, not wilderness, not parkland, and not private – i.e., not off limit for vehicle use – is affected by species and habitat issues and subject to further vehicle restrictions when those species are addressed (below).

5. In 1990 the desert tortoise was listed as a threatened species under the ESA. This listing, geographically having the most widespread effect in the Desert, and other listings (e.g., Pierson's milkvetch in the Imperial Sand Dunes and bighorn sheep in the Peninsular Range west of Palm Springs-La Quinta) required BLM to consult with the U.S. Fish & Wildlife Service (FWS) to address the adequacy of the CDCA Plan to resolve the species issues. (Other federal agencies with affected habitats had to revisit their land use plans, too.) It was decided that the CDCA Plan did need to be amended. In doing this BLM embarked upon six geographically separate plan amendments in the early 1990s. But in 2000, while the amendments were still in preparation, three environmental groups sued the BLM in federal district court in San Francisco to (in my mind) swing the decisions of the amendments to a more preservationist conclusion – i.e., to force more restrictions on vehicle use than might otherwise come out of the plan amendment processes. (Other uses, mainly sheep and cattle grazing, were targeted as well. The six plan amendments would now have to satisfy both the species recovery requirements of the ESA and resolve the lawsuit.

While the six plan amendments have since been completed to the satisfaction of the agencies involved – primarily the BLM and FWS, the 2000 lawsuit still rages: three environmental groups on one hand and the combined science and wisdom of a host of federal, state, and local agencies and a considerable array of stakeholders on the other. Through the combined six plan amendments, popular vehicle open areas remain open, but 3,671 miles (20%) of 17, 588 miles of inventoried roads in the Desert were closed (not counting the miles of roads closed with the passage of the CDPA in 1994).

The beat goes on. Not one but two military base expansions onto public lands are under consideration today: Ft Irwin, north of Barstow, and the Marine Corps Air Ground Combat Training Center, north of Twenty-Nine Palms. As with anywhere, there is only a finite amount of land.

Comment ID: N-12764 (Page 3 of 3)

Response to Comment N-12764 (Page 3 of 3):

Vehicle users feel they are being painted into a corner and the corner continues to shrink. The public should now better understand why they are upset. This is not the only Desert resource management story, but it is one that hits home for vehicle users and should be an environmental consideration under "cumulative effects" in an environmental impact statement.

The DEIS is a fatally flawed document and should be retracted and done over with more complete research and documentation.

Sincerely,

Geoffrey Beasley

Comment ID: N-12765 (Page 1 of 2)

Comment ID: N-12765

Date Received: May 25, 2011

Mr. Richard Crowe noted in his article "A Perspective on Desert Vehicle Recreation and the Proposed Expansion of the Marine Corps Air Ground Combat Training Center" that this current proposal is the crux of a very controversial, complicated, and long-time building situation.

"Recreation vehicle users (i.e., both people who drive dirt roads to get somewhere as well as motorcycle, ATV, and dune buggy riders who enjoy family fun and competitive racing in desert "open areas" like the Johnson Valley Open Area and the Imperial Sand Dunes) have seen an erosion of space and roads for their interests in the Desert since the 1930s. This is why they are so concerned with the proposed expansion of the Marine Corps Air Ground Combat Training Center into the Johnson Valley Open Area. In fact, vehicle use is at the very heart of a fight among competing interests and land uses on public lands that BLM has been dealing with for 40 years."

1. Until the 1930s one could take a vehicle just about anywhere a vehicle could go

2. 1930s: 2 national monuments are designated, Death Valley and Joshua Tree

3. 1940s saw the withdrawal of several large tracts of public lands for WWII and post-war military training, research and development, and testing. By 1945 approximately 25% of the Desert is off limit or severely restricted to recreation vehicles.

4. 1976 Congressional designation of the 25 million acre California Desert Conservation Area (CDCA).

5. In 1994 Congress designated 3.8 million as Wilderness and transferred an additional 3.5 million of public (BLM) land to the National Park Service, most of which was designated wilderness, too. The amount of Desert off limit or severely restricted to vehicle use jumped from 25% to 50%.

At the same time, half of the other 50% of the Desert is private land: off-limit to public use. AND, about half of the remaining 25% of the Desert that is not military, not wilderness, not parkland, and not private – i.e., not off limit for vehicle use – is affected by species and habitat issues and subject to further vehicle restrictions.

6. Six plan amendments due to threatened species have reduced the amount of open roads by 3,671 miles.

The cumulative effect on off-highway vehicle use is massive. The closure of another 422,000 miles will be catastrophic to our way of life. This is another 659 square miles of PREMIER OHV area. The closure of Johnson Valley OHV area is unacceptable. The Plan must be either withdrawn or revised to shift the Base Expansion east due to the massive cumulative effect it has on OHV use.

I love my freedom, and I respect the mission of the US Marine Corps, but enough is enough. I support the Marines, just not in Johnson Valley.

Sincerely,

Jonathon Sian

Response to Comment N-12765 (Page 1 of 2):

To Whom It May Concern:

I would like to reference this document:

<http://www.marines.mil/unit/29palms/...A1%20Jan04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page three of that document it states:

"The brigade-sized air- ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)."

The key sentence I would like to point out is:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)"

Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING.

If the MEB was discontinued last time this happened, it may be discontinued again. Therefore: expansion of 29 Palms is not necessary.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF.

Sincerely,

Response to Comment N-12767:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12768

Comment ID: N-12768

Date Received: May 25, 2011

In the JOINTMIL DOCUMENT, entitled MEB Training Exercise Study: Identifying MEB Training Requirements, the past and future of Marine MEBs is discussed.
<http://www.marines.mil/unit/29palms/aw/documents/cna/ICNA%20MEB%20Training%20Exercise%20Study%20Identifying%20MEB%20Training%20Requirements%2000009618%20A1%203and%20.pdf>

On page three of that document, it states:

"The brigade-sized air-ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)."

The key sentence of focus here is the following:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)."

This document states that, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING. The Marines are preparing to go under BUDGET RESTRICTIONS. As part of this budget restructuring the forces are experiencing force restructuring. During past force restructuring MEBs were removed from service. The above document shows that this is a highly likely probability that the MEBs will be removed from service again.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF. Thus the Marines do not need to expand the 29 Palms base at all.

Adam Wiegmann

Response to Comment N-12768:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

I would like to reference this document:
<http://www.marines.mil/unit/29palms/...A1%20an04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page three of that document it states:

"The brigade-sized air- ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)."

The key sentence I would like to point out is:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)"

Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING.

If the MEB was discontinued last time this happened, it may be discontinued again. Therefore: expansion of 29 Palms is not necessary.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF.

Sincerely,

To Whom It May Concern:

Regarding the expansion of 29 Palms Marine Base, please consider the following facts:

1. The Marines basic "mission" has changed since the plans for expansion were made a VERY long time ago.
 2. Our economy continues to struggle and even the experts say it could be another decade before we see true recovery.
 3. The recreation lands of Johnson Valley generate revenue and taxes in a big way.
 4. An expansion of 29 Palms Military Base will not replace the lost revenue and taxes if Johnson Valley recreation is cut even a little bit.
 5. The Corps Failed to Analyze National Deficit Impact on Project Viability.
 6. The Corps Failed to Analyze DOD Budget on this expansion.
- This entire idea of expansion, especially into Johnson Valley, make zero sense financially and is irresponsible, and quite possibly bordering on illegal. I am against this expansion.

Sincerely,

Darrell Drummer

Response to Comment N-12771:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

To Whom It May Concern:

This 29 Palms DEIS analysis is fatally flawed in that it does not address the larger story of historic decreases in recreational access since the 1930s, and how this proposed base expansion is one more recreation reduction on top of many different layers.

Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Recreation vehicle users (i.e., both people who drive dirt roads to get somewhere as well as motorcycle, ATV, and dune buggy riders who enjoy family fun and competitive racing in desert "open areas" like the Johnson Valley Open Area and the Imperial Sand Dunes) have seen an erosion of space and roads for their interests in the Desert since the 1930s. This is why they are so concerned with the proposed expansion of the Marine Corps Air Ground Combat Training Center into the Johnson Valley Open Area. In fact, vehicle use is at the very heart of a fight among competing interests and land uses on public lands that BLM has been dealing with for 40 years. Below is a chronological overview of milestone events that have affected Desert vehicle access and the situation at hand:

1. Until the 1930s one could take a vehicle just about anywhere a vehicle could go
 2. 1930s: 2 national monuments are designated, Death Valley and Joshua Tree
 3. 1940s: withdrawal of several large tracts of public lands for WWII and post-war military training, research and development, and testing
- By 1945 approximately 25% of the Desert is off limit or severely restricted to recreation vehicles. The effect of recreation vehicle use is light at this point.

By the end of the 1960s there was considerable public concern over the growing use and effects of unmanaged vehicle use and it resulted in the 1976 Congressional designation of the 25 million acre California Desert Conservation Area (CDCA) and a mandate for BLM to address these conservation issues and develop, with considerable public and stakeholders involvement, a comprehensive land use plan for the area by 1980. The completed CDCA Plan in of itself did not close vast areas of the Desert to recreation vehicle use but did define the end for unbridled proliferation of vehicle roads and trails and did set a blue print for further planning and management for all Desert resources and uses. An array of multiple use management designations and commitments were set in place for a host of resources and uses: route designations (open or closed), areas open and closed to vehicle use, areas of critical environmental concern, grazing, wild horses and burros, mining, utility corridors, species and habitats conservation, and cultural resources protection. It also proposed a set of areas for wilderness designation by Congress.

Response to Comment N-12772 (Page 1 of 3):

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12772 (Page 2 of 3)

Response to Comment N-12772 (Page 2 of 3):

The fight over land uses did not go away with the completion of the CDCA Plan. Species were increasingly being listed as threatened or endangered under the Federal Endangered Species Act (ESA), due to disease and human encroachment; and, not satisfied with the outcome of the CDCA Plan, environmental groups agitated for more wilderness than was recommended and expansion/creation of federal parklands. Vehicle users, mining companies, and ranchers were becoming increasingly worried...and some military units began to see the need for more land as technology and warfare changed.

4. In 1994 Congress addressed the wilderness and parkland proposals by BLM and environmental groups with the California Desert Protection Act (CDPA). While the 1980 CDCA Plan recommended 2.1 million acres for wilderness designation, Congress designated 3.8 million and transferred an additional 3.5 million of public (BLM) land to the National Park Service, most of which was designated wilderness, too.

The CDPA hit vehicle use and mining hard: the amount of Desert off limit or severely restricted to vehicle use jumped from 25% to 50%. Affected were many favorite roads and camping areas, 50% of the favorite rock hounding areas, the availability of 40 out of 49 kinds of minerals, and many options for expansion of utility corridors and military reservations. The impact of this number increases with 2 perspectives:

a. half of the other 50% of the Desert is private land: off-limit to public use.

b. most of the designated wilderness is high elevation – mountainous – and above the range of critical habitat for most species listed under the ESA (so the CDPA ignored resolution of serious species and habitats issues). Consequently, about half of the remaining 25% of the Desert that is not military, not wilderness, not parkland, and not private – i.e., not off limit for vehicle use - is affected by species and habitat issues and subject to further vehicle restrictions when those species are addressed (below).

5. In 1990 the desert tortoise was listed as a threatened species under the ESA. This listing, geographically having the most widespread effect in the Desert, and other listings (e.g., Pierson's millivetch in the Imperial Sand Dunes and bighorn sheep in the Peninsular Range west of Palm Springs-La Quinta) required BLM to consult with the U.S. Fish & Wildlife Service (FWS) to address the adequacy of the CDCA Plan to resolve the species issues. (Other federal agencies with affected habitat had to revisit their land use plans, too.) It was decided that the CDCA Plan did need to be amended. In doing this BLM embarked upon six geographically separate plan amendments in the early 1990s. But in 2000, while the amendments were still in preparation, three environmental groups sued the BLM in federal district court in San Francisco to (in my mind) swing the decisions of the amendments to a more preservationist conclusion – i.e., to force more restrictions on vehicle use than might otherwise come out of the plan amendment processes. (Other uses, mainly sheep and cattle grazing, were targeted as well. The six plan amendments would now have to satisfy both the species recovery requirements of the ESA and resolve the lawsuit.

While the six plan amendments have since been completed to the satisfaction of the agencies involved – primarily the BLM and FWS, the 2000 lawsuit still rages: three environmental groups on one hand and the combined science and wisdom of a host of federal, state, and local agencies and a considerable array of stakeholders on the other. Through the combined six plan amendments, popular vehicle open areas remain open, but 3,671 miles (20%) of 17, 588 miles of inventoried roads in the Desert were closed (not counting the miles of roads closed with the passage of the CDPA in 1994).

The beat goes on. Not one but two military base expansions onto public lands are under consideration today: Ft Irwin, north of Barstow, and the Marine Corps Air Ground Combat Training Center, north of Twenty-Nine Palms. As with anywhere, there is only a finite amount of land. Vehicle users feel they are being painted into a corner and the corner continues to shrink. The

Comment ID: N-12772 (Page 3 of 3)

Response to Comment N-12772 (Page 3 of 3):

public should now better understand why they are upset. This is not the only Desert resource management story, but it is one that hits home for vehicle users and should be an environmental consideration under "cumulative effects" in an environmental impact statement.

The DEIS is a fatally flawed document and should be retracted and done over with more complete research and documentation.

Sincerely,

Geoffrey Beasley

To Whom It May Concern:

The EIS for the 29 Palms expansion is not only fatally flawed, but the information published by the USMC in its budget request for next year contradicts the very nature of the NEPA process that the EIS is supposed to follow.

Below is the actual text from the National Environmental Policy Act of 1969 as amended. This text is located <http://ceq.hhs.gov/nepa/regs/nepa/nepaqa.htm>

Sec. 101 [42 USC § 4331].

(a) The Congress, recognizing the profound impact of man's activity on the interrelations of all components of the natural environment, particularly the profound influences of population growth, high-density urbanization, industrial expansion, resource exploitation, and new and expanding technological advances and recognizing further the critical importance of restoring and maintaining environmental quality to the overall welfare and development of man, declares that it is the continuing policy of the Federal Government, in cooperation with State and local governments, and other concerned public and private organizations, to use all practicable means and measures, including financial and technical assistance, in a manner calculated to foster and promote the general welfare, to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans.

(b) In order to carry out the policy set forth in this Act, it is the continuing responsibility of the Federal Government to use all practicable means, consistent with other essential considerations of national policy, to improve and coordinate Federal plans, functions, programs, and resources to the end that the Nation may --

1. fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;
2. assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings;
3. attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;
4. preserve important historic, cultural, and natural aspects of our national heritage, and maintain,

Response to Comment N-12773 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12773 (Page 2 of 2)

wherever possible, an environment which supports diversity, and variety of individual choice;

5. achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities; and

6. enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

Statements about the USMC's request of almost \$9,000,000 for this next fiscal (obtained here http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf) list a number of violations of the NEPA directive:

The USMC proposes the \$9 million be used to "Acquires land including withdrawal of land from all public uses, including mineral and water rights, private and state land owned in fee title as well as private mineral interests on public lands.....cultural and biological mitigation and monitoring, asbestos shingle and chip removal and the removal and recycling of vehicle tires"

How does the acquisition of "mineral and water rights" achieve a balance between population and resource use to permit high standards of living. The EIS fails to identify if these water and mineral resources will be available for future exploration. In a time where our nation is looking at all means to be energy independent, is it wise to remove mineral resources of any type from the possibility of production? The EIS does not address how these resources will be replaced or mitigated. The EIS must follow the NEPA process and identify all costs associated with or plans for the utilization of the mineral rights within its boundaries.

Sincerely,

Joe Aplet

Response to Comment N-12773 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Access to mining and other land holding will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information).

Comment ID: N-12774

Comment ID: N-12774

Mr. Joe apiet
9526 laughlin way
Redwood Valley, CA 95470

Naval Facilities Engineering Command, Southwest
ATTN: 29 Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hhs.doe.gov/epa/ceq/sect1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR 15.006.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public.

Response to Comment N-12774:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12775 (Page 1 of 5)

Response to Comment N-12775 (Page 1 of 5):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Comment ID: N-12775 (Page 2 of 5)

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. The repeal of Wilderness areas to the East needs to be studied in depth as a viable alternative. It would be much more beneficial to all involved if 29 Palms were to expand East. With many military vehicles traveling in Johnson Valley, many different fluids such as motor oil, ATF, Gear fluid, etc. may be spilled on the desert floor. The OHV community uses spill kits and lays tarps under vehicles in order to decrease the amount of fluids spilled. It is not addressed in the EIS if the Marines will do this or not. Despite the massive increase of OHV enthusiasts in the United States, the public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done. Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area. Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture". The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area. Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected. I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms. While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? Even today, live shells are found occasionally in Johnson Valley from training during WWII. With a large amount of ordinance being dropped in the area, the Marines may make Johnson Valley un-sable for many years to come if it is ever re-released to the public. This is also an issue with "shared use." The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers. The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordinance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public. Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS. Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

Sincerely,

Response to Comment N-12775 (Page 2 of 5):

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a

Comment ID: N-12775 (Page 3 of 5)

Aaron Campbell

Response to Comment N-12775 (Page 3 of 5):

unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Comment ID: N-12775 (Page 4 of 5)

Response to Comment N-12775 (Page 4 of 5):

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Comment ID: N-12775 (Page 5 of 5)

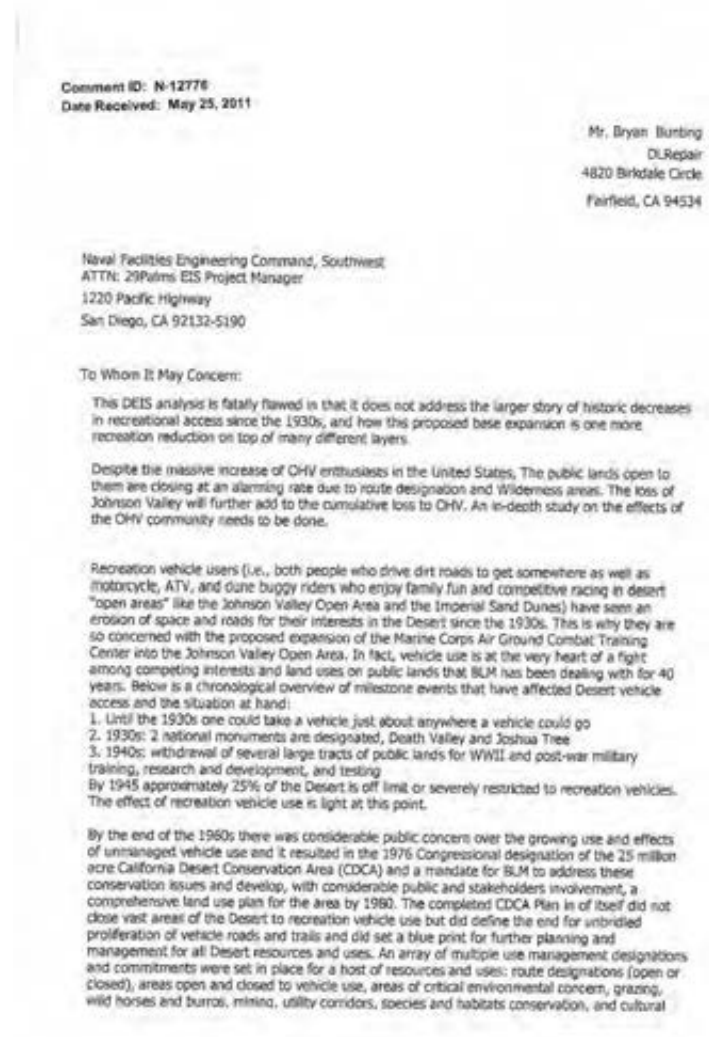

Response to Comment N-12775 (Page 5 of 5):

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12776 (Page 1 of 2)

Response to Comment N-12776 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12776 (Page 2 of 2)

Response to Comment N-12776 (Page 2 of 2):

resources protection. It also proposed a set of areas for wilderness designation by Congress:

The fight over land uses did not go away with the completion of the CDCA Plan. Species were increasingly being listed as threatened or endangered under the Federal Endangered Species Act (ESA), due to disease and human encroachment; and, not satisfied with the outcome of the CDCA Plan, environmental groups agitated for more wilderness than was recommended and expansion/creation of federal parklands. Vehicle users, mining companies, and ranchers were becoming increasingly worried...and some military units began to see the need for more land as technology and warfare changed.

4. In 1994 Congress addressed the wilderness and parkland proposals by BLM and environmental groups with the California Desert Protection Act (CDPA). While the 1980 CDCA Plan recommended 2.1 million acres for wilderness designation, Congress designated 3.8 million and transferred an additional 3.5 million of public (BLM) land to the National Park Service, most of which was designated wilderness, too.

The CDPA hit vehicle use and mining hard: the amount of Desert off limit or severely restricted to vehicle use jumped from 25% to 50%. Affected were many favorite roads and camping areas, 50% of the favorite rock hounding areas, the availability of 40 out of 49 kinds of minerals, and many options for expansion of utility corridors and military reservations. The impact of this number increases with 2 perspectives:

a. half of the other 50% of the Desert is private land: off-limit to public use.
b. most of the designated wilderness is high elevation – mountainous – and above the range of critical habitat for most species listed under the ESA (so the CDPA ignored resolution of serious species and habitats issues). Consequently, about half of the remaining 25% of the Desert that is not military, not wilderness, not parkland, and not private – i.e., not off limit for vehicle use – is affected by species and habitat issues and subject to further vehicle restrictions when those species are addressed (below).

5. In 1990 the desert tortoise was listed as a threatened species under the ESA. This listing, geographically having the most widespread effect in the Desert, and other listings (e.g., Pierson's milkvetch in the Imperial Sand Dunes and bighorn sheep in the Peninsular Range west of Palm Springs-La Quinta) required BLM to consult with the U.S. Fish & Wildlife Service (FWS) to address the adequacy of the CDCA Plan to resolve the species issues. (Other federal agencies with affected habitat had to revisit their land use plans, too.) It was decided that the CDCA Plan did need to be amended. In doing this BLM embarked upon six geographically separate plan amendments in the early 1990s. But in 2000, while the amendments were still in preparation, three environmental groups sued the BLM in federal district court in San Francisco to (in my mind) swing the decisions of the amendments to a more preservationist conclusion – i.e., to force more restrictions on vehicle use than might otherwise come out of the plan amendment processes. (Other uses, mainly sheep and cattle grazing, were targeted as well. The six plan amendments would now have to satisfy both the species recovery requirements of the ESA and resolve the lawsuit.

You have no choice but to stop the madness!!

Sincerely,

Bryan Bunting

To Whom It May Concern:

I am writing in regards to the proposed expansion of the 29 Palms USMC base into Johnson Valley OHV area, CA.

A Marine Expeditionary Brigade (MEB) is a formation of the United States Marine Corps, a Marine Air-Ground Task Force of approximately 14,500 Marines and Sailors constructed around a reinforced Infantry regiment, a composite Marine aircraft group, a logistics group and a command element.

The Commandant of the Marine Corps stated just months ago that the USMC's mission would be changing and that the Marines are not a second Army, and in past years have not been used like they should be used, so he is getting the Marines back to their roots.

Their roots do not consist of three simultaneous MEB's.

The US Army has just expanded Ft. Irwin for simultaneous battalion-level training. Leave the land army to the Army!

General James F. Amos promised the Armed Services committee promising that the Marines will only ask for what they NEED, not for what they WANT. I sincerely hope that Johnson Valley is on the "WANT" list and will be peacefully removed from that list!

Defense Secretary Robert M. Gates is quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

The Marine Corps identified this area as a potential expansion over 10 years ago.

The Marine Corps has been formally working on this expansion proposal since 2007.

The Public needs additional time to thoroughly review the EIS.

Please extend the current public comment period.

Thank you for reading and considering my thoughts on this matter.

Sincerely,

Response to Comment N-12777 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12777 (Page 2 of 2)

Response to Comment N-12777 (Page 2 of 2):

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Comment ID: N-12778

Comment ID: N-12778
Date Received: May 25, 2011

Thank you for taking the time to read my letter. I am writing to express my concern about the proposed expansion of the 29 Palms USMC base west into the Johnson Valley OHV area. As an avid outdoorsman of all types, Johnson Valley is a destination I have wanted to visit since I was a teenager. Myself as well as my family have been planning to make a family trip out there for many years. We are finally closing in and were hoping to go within the next two years. We would all be devastated if Johnson Valley was no longer available for us to visit to four wheel, hike, and camp at.

Not to mention the importance of Johnson Valley to the OHV industry is incalculable. There has been more rockcrawling equipment created for, developed at, and tested and marketed in Johnson Valley than at any other singular location in the world. A great many desert racing parts manufacturers test their new equipment at Johnson Valley. The UTV industry has discovered Johnson Valley as a testbed for their new vehicles. Not only will the closure of Johnson Valley have an economic impact on nearby local small businesses, it will have an economic impact to an entire nationwide industry.

Third, no alternative has clearly made any substantive, detailed description of how a Shared Use area might work. I believe this is a diversionary tactic in the EIS process. Due to liability concerns and the risk of the public coming in contact with unexploded ordnance, shared use is unlikely. Due to budget constraints and the time required to clear the area regularly and prior to the public's turn to use the area, shared use is unlikely. Due to safety and security concerns with the public having access to a military installation, shared use is unlikely. Please remove the Shared Use Alternative, as it is not a genuine possibility.

Given the Alternatives presented, I strongly support only a no-action Alternative. The Marines have stated a desire to expand based on a 2004 goal and 1990's-era training, yet the Commandant of the Marines has noted that the Marines will be a more mobile expeditionary force and not an entrenched land army. The Marines of 2011 do not need an expanded 29 Palms. The EIS has failed to detail realistic Environmental Impacts to the desert environment. The EIS has failed miserably to detail the impact to the recreating public who have traditionally used Johnson Valley. The National economy is in crisis. Not only would a 29 Palms cause a reduction in income to local small businesses provided by the OHV public, it would also cost American taxpayers hundreds of millions, if not billions, to implement.

For these reasons--fatal flaws in the analysis--the proposed 29 Palms base expansion must be withdrawn.

Sincerely,

Nick McMurray

Response to Comment N-12778:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Remedies Available to the Public:

The EPA's Citizen's Guide to the NEPA process has this to say about alternatives that are available to the public within the NEPA process:

Remedies Available
Finally, of course, there are both administrative and judicial remedies available. A few Federal agencies, such as the Bureau of Land Management and the Forest Service, have an administrative appeals process. Each process is specific to that agency. If an appeal is available, you may find it beneficial to invoke it to try to resolve your concerns with the agency's decisions without the need for a legal challenge. Moreover, a statute or agency regulation may require you to exhaust such an appeal procedure before seeking judicial review. Citizens who believe that a Federal agency's actions violate NEPA may seek judicial review (after any required administrative appeals) in Federal court under the Administration Procedures Act.

I do not believe the EIS addresses the possibility of both a BLM administrative appeal and/or a judicial appeal should the USMC fail to properly address the numerous issues raised in their planned expansion into 29 Palms. The EIS itself was flawed, but the primary issue is the lack value to the cultural and social significance of Johnson Valley. Removal of this area for any portion of time from public use will irrevocably harm the area and the culture of the user groups that enjoy Johnson Valley.

Expansion East, or no expansion at all will have neither of these ramifications. I ask you to address the potential delay to 29 Palms expansion if the thousands of users who enjoy Johnson Valley choose to pursue both a BLM administrative appeal and if necessary a judicial appeal. Both of these are timely and costly processes. Neither the time or the cost for such an appeal is addressed within the EIS.

An option is to expand East instead of West. This will reduce the loss of socially, culturally, or economically valuable land.

Sincerely,

Response to Comment N-12779:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps appreciates your comment and participation in the NEPA process.

To Whom It May Concern:

The EPA's Citizen's Guide to the NEPA process has this to say about the importance and timeliness of comments:

Comments may be the most important contribution from citizens. Accordingly, comments should be clear, concise, and relevant to the analysis of the proposed action. Take the time to organize thoughts and edit the document submitted.⁵⁶ As a general rule, the tone of the comments should be polite and respectful. Those reviewing comments are public servants tasked with a job, and they deserve the same respect and professional treatment that you and other citizens expect in return. Comments that are solution oriented and provide specific examples will be more effective than those that simply oppose the proposed project. Comments that contribute to developing alternatives that address the purpose and need for the action are also effective. They are particularly helpful early in the NEPA process and should be made, if at all possible, during scoping, to ensure that reasonable alternatives can be analyzed and considered early in the process.

This advice is very sound, but requires the public to have the ability to submit comments to the lead agency. To do so the public must have the proper address and that address must be published in the appropriate places. The EIS for 29 Palms did not publish the correct address. This oversight made it very difficult for the public to get involved in the process before the preliminary EIS was finally published. This oversight caused the USMC to loose out of valuable time to properly gauge the value of Johnson Valley and remove it as an alternative from the EIS all together.

If the USMC had followed the proper guidelines, they would have seen the significant cultural, social, economic, family, and historical value of this area being open to all forms of public use. Other options that were not included within the EIS could have been included and investigated once expansion into Johnson Valley was removed as a possibility.

This EIS is flawed and the NEPA process compromised. Please respond with specifics on how the USMC expects to rectify this situation, or withdraw the EIS completely.

Sincerely,

Response to Comment N-12780:

To Whom It May Concern:

I would like to reference this document:

<http://www.marines.mil/unit/29palms/...A1%20Jan04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page three of that document it states:

"The brigade-sized air-ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)."

The key sentence I would like to point out is:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)."

Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING.

If the MEB was discontinued last time this happened, it may be discontinued again. Therefore, expansion of 29 Palms is not necessary.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF.

Response to Comment N-12783:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Loss of Public Land.

The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hhs.doe.gov/nepa/ceenepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "The impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR -- 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public.

Response to Comment N-12784 (Page 1 of 2):

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Response to Comment N-12784 (Page 2 of 2):

The Marine Corps appreciates your comment and participation in the NEPA process.

The following is an excerpt from the EPA's Citizen's Guide to the NEPA process:

"The environmental review process under NEPA provides an opportunity for you to be involved in the Federal agency decisionmaking process. It will help you understand what the Federal agency is proposing, to offer your thoughts on alternative ways for the agency to accomplish what it is proposing, and to offer your comments on the agency's analysis of the environmental effects of the proposed action and possible mitigation of potential harmful effects of such actions. NEPA requires Federal agencies to consider environmental effects that include, among others, impacts on social, cultural, and economic resources, as well as natural resources. Citizens often have valuable information about places and resources that they value and the potential environmental, social, and economic effects that proposed federal actions may have on those places and resources. NEPA's requirements provide you the means to work with the agencies so they can take your information into account."

The EIS, as a part of the NEPA process, requires federal agencies to consider the impacts on social, cultural, and economic resources, as well as natural resources. I'm sure you'll get thousands of letters from the public talking about their love for Johnson Valley. Johnson Valley is a public use area adjacent to the existing 29 Palms. The current EIS recommends expansion and closure of the majority of Johnson Valley. It does so while ignoring the option of expanding east into an area not open to all public users.

The importance of Johnson Valley from a cultural and social destination can not be overstated. It is the mecca for an entire industry dedicated to the 40 million OHV users. An industry responsible for hundreds of millions of dollars in products, research, and environmental support and clean up. While Johnson valley will be filled each and every weekend of the year with OHV users, it is not just the OHV users that would loose Johnson Valley should the base expand West. Hikers, bird watchers, rock hounds, explorers, students and teachers, photographers, event promoters, families, active duty marines, and veterans, are just a few of the groups that will loose the ability to enjoy the premier location in the south west United States.

The period for public comments is still open, and I appreciate the USMC taking into consideration the comments of the public. I have no doubt you'll find Johnson Valley to be a vital social and cultural area. When compiling the public comments please put the same weight on these comments as your citizen's guide suggest you will.

Do not expand 29 Palms west into Johnson Valley.

Sincerely,

Steve Rhoades

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://oia.hqs.doe.gov/nepa/regs/nepa/nepaenq.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FMB/12pres/MOON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic". How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12785 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12785 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice". 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors

Sincerely,

Steve Rhoades

Response to Comment N-12785 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

To Whom It May Concern:

The EIS for the 29 Palms expansion is not only fatally flawed, but the information published by the USMC in its budget request for next year contradicts the very nature of the NEPA process that the EIS is supposed to follow.

Below is the actual text from the National Environmental Policy act of 1969 as amended. This text is located <http://ceq.hss.doe.gov/nepa/regs/nepa/nepaegia.htm>

Sec. 101 [42 USC § 4331].

(a) The Congress, recognizing the profound impact of man's activity on the interrelations of all components of the natural environment, particularly the profound influences of population growth, high-density urbanization, industrial expansion, resource exploitation, and new and expanding technological advances and recognizing further the critical importance of restoring and maintaining environmental quality to the overall welfare and development of man, declares that it is the continuing policy of the Federal Government, in cooperation with State and local governments, and other concerned public and private organizations, to use all practicable means and measures, including financial and technical assistance, in a manner calculated to foster and promote the general welfare, to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans.

(b) In order to carry out the policy set forth in this Act, it is the continuing responsibility of the Federal Government to use all practicable means, consistent with other essential considerations of national policy, to improve and coordinate Federal plans, functions, programs, and resources to the end that the Nation may --

1. fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;
2. assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings;
3. attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;
4. preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity and variety of individual choice;

Response to Comment N-12789 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12789 (Page 2 of 2)

5. achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities; and

6. enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

Statements about the USMC's request of almost \$9,000,000 for this next fiscal (obtained here: http://www.finance.hq.navy.mil/FMB/12pres/MCON_Book.pdf) list a number of violations of the NEPA directive.

The USMC proposes the \$9 million be used to "Acquires land including withdrawal of land from all public uses, including mineral and water rights, private and state land owned in fee title as well as private mineral interests on public lands.....cultural and biological mitigation and monitoring, asbestos shingle and chip removal and the removal and recycling of vehicle tires"

How does the acquisition of "mineral and water rights" achieve a balance between population and resource use to permit high standards of living. The EIS fails to identify if these water and mineral resources will be available for future exploration. In a time where our nation is looking at all means to be energy independent, is it wise to remove mineral resources of any type from the possibility of production? The EIS does not address how these resources will be replaced or mitigated. The EIS must follow the NEPA process and identify all costs associated with or plans for the utilization of the mineral rights within its boundaries.

Sincerely,

Starr Peniman

Response to Comment N-12789 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Access to mining and other land holding will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information).

Comment ID: N-12790
Date Received: May 25, 2011

First I must begin by thanking the Marine Corps for their service to our country.

The executive summary of the DEIS on the Expansion of 29 Palms states that the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade sized Air Ground Task Force, and the existing facilities are inadequate.

However, I have found many current documents from the Marine Corps stating that the role of the Marine Corps is changing. Defense Secretary Robert M. Gates is even quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

In the fall of 2010, the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force in Readiness in a post Operation Enduring Freedom security environment.

In a document dated March 14th, 2010, entitled "Reshaping America's Expeditionary Force in Readiness, Report of the 2010 Marine Corps Force Structure Review Group" it clearly states that the 21st century Marine Corps force structure "must provide a strategically mobile, middleweight force optimized for rapid crisis response and forward presence."

The document further states that the Marine Corps will "Accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore."

The report states that the Marine Corps will be reshaped by reducing the end strength of the active component of the Marine Corps from 202,000 to approximately 186,800 following the completion of Marine Corps operations in Afghanistan.

This works out to:

- A 13% reduction in ground combat forces
- An 11% reduction in Infantry
- A 20% reduction in cannon artillery
- A 20% reduction in Armor
- A 16% reduction in fixed wing tactical aviation squadrons
- A 9% reduction in logistics
- A 7% reduction in Marines assigned to non-operational billets
- And a 13% reduction in the civilian workforce.

Page four of the DEIS clearly states that the training requirement put forward as the reasoning to expand 29 Palms comes from a Marine strategy put forward in the year 2000.

With this new strategy and re-vamping of the Marine Corps from the 2010 Marine Corps Force Structure Review group, the entire document must be discarded as it is based on outdated decisions and information.

In summary: in light of the changes in today's Marine Corps, the expansion of 29 Palms is not necessary.

Sincerely,
Ryan Mohondro

Response to Comment N-12790:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

The Corps failed to justify need for 1990s-era simultaneous training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. I would like to reference this document:

<http://www.marines.mil/unit/29palms/...A1%20Jan04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page three of that document it states:

"The brigade-sized air-ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)."

The key sentence I would like to point out is:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)."

Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING.

If the MEB was discontinued last time this happened, it may be discontinued again. Therefore: expansion of 29 Palms is not necessary.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF.

Response to Comment N-12791:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

<http://www.epa.gov/oeaearth/basics/NEPA.html>

This piece of information on the Public's Role is at the bottom of this page.

"The public has an important role in the NEPA process, particularly during scoping, in providing input on what issues should be addressed in an EIS and in commenting on the findings in an agency's NEPA documents. The public can participate in the NEPA process by attending NEPA-related hearings or public meetings and by submitting comments directly to the lead agency. The lead agency must take into consideration all comments received from the public and other parties on NEPA documents during the comment period."

Notice that the lead agency **MUST** take into consideration **ALL** COMMENTS received from the public.

The actual wording of the NEPA act is listed here (if you're having trouble sleeping give it a read)

<http://ceq.hhs.doe.gov/NEPA/regs/NEPA/NEPAeqa.htm>

On the very first page of that bill the purpose of NEPA is listed as follows:

(b) In order to carry out the policy set forth in this Act, it is the continuing responsibility of the Federal Government to use all practicable means, consistent with other essential considerations of national policy, to improve and coordinate Federal plans, functions, programs, and resources to the end that the Nation may --

1. fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;
2. assure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings;
3. attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;
4. preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice;
5. achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities; and
6. enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

(c) The Congress recognizes that each person should enjoy a healthful environment and that each person has a responsibility to contribute to the preservation and enhancement of the environment.

Sincerely,

joe apfel

To Whom It May Concern:

I'd like to once again reference a document I've pointed to in a previous letter.

<http://www.marines.mil/units/29palms/...A1%20tar04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page 10, the document states:

"We used historical MEB deployments and current operating plans or scenarios, in conjunction with future doctrinal concepts and statements, to help define the MEB"

At the time this document was written (January 2004), there were no plans for removing Marines from Afghanistan and the Marines had not yet fought in Fallujah. (Which is considered the heaviest urban combat the Marines have been involved in since the Battle of Hue City in 1968.)

Therefore, the definition of the MEB according to this document, (which is the pre-cursor to the final document that the reasoning for expanding 29 Palms is based on) is based on what the Marines were doing in the Middle East at that time, and for future possibilities for massive actions like the Battle of Fallujah.

With the current state of world affairs, the definition of an MEB should, and most likely will change. The definition of an MEB from this document in January of 2004 is no longer valid. General Amos, Commandant of the Marine Corps also recently stated that he does not see much possibility of the Marines putting 20,000 troops on the ground at any time in the near future.

Since this document, on which the purpose and need of the DEIS is based on, is no longer valid, especially with the definition of the MEB, The DEIS needs to be discarded until another current MEB training Exercise Study is completed. I understand that starting this process over will be time consuming, but the purpose of the 29 Palms expansion is to train and prepare Marines in the best way possible. It is apparent that the role of the Marines is changing, and the expansion into the Johnson Valley OHV area is not necessary or productive towards that goal. Again, please throw out this EIS and start the process over, so that any expansion, any expenditure will be best utilized towards the proper and effective training of our Marine forces.

Sincerely,

Response to Comment N-12793:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Comment ID: N-12794
Date Received: May 25, 2011

While the time for public response, and the method for public response within this EIS are lacking I have had a chance to do a bit of research on the subject of 29 Palms expansion.

Within that research I've come upon this document:

<http://www.marines.mil/unit/29palms/...A1%20Jan04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page three of that document it states:

"The brigade-sized air-ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)."

The key sentence I would like to point out is:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)."

Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING.

If the MEB was discontinued last time this happened, it may be discontinued again. Therefore: expansion of 29 Palms is not necessary.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF. Given this uncertainty, it is not responsible for 29 Palms to expand. Please choose the no expansion option. The training of the Marines is important and contrary to the findings in this EIS, the expansion of 29 Palms would hinder the job of training Marines, not help it.

Sincerely,

Ryan Brown

I love all aspects of being outdoors: weather, hiking or off roading, the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hhs.gov/nepa/ce/cepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-federal) or person undertakes such other actions (40 CFR ~ 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. While I fully support the USMC, is this expansion really necessary with the current political situation? Do we still need to train Marines to fight on such a large scale?

Sincerely,

Tyler Gowans

Response to Comment N-12795:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Sincerely,
Tyler Gowers

Response to Comment N-12796:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

Sincerely,
Tyler Gowans

Response to Comment N-12797:

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

I love all aspects of being outdoors whether hiking or off roading the beauty amazes me. The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hqs.doe.gov/nepa/cenepa/sec1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions (40 CFR -- 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public. If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Response to Comment N-12798 (Page 1 of 2):

Thank you for your comment. Chapter 4 of the EIS discusses impacts to resource areas under each action alternative. Section 5.4 of the EIS discusses potential cumulative impacts by environmental resource area, including impacts to recreation, socioeconomics, and public health and safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

General James F. Amos, Commandant of the Marine Corps, spoke at the Fletcher Luncheon on April 19th, 2011.

General Fletcher spoke about future military actions and where the Marines are going to operate once we come out of Afghanistan, and he explained the "arc of instability." It is within this arc of instability that the Marines will most likely be engaging the enemy. These areas will be our future battlefields over the next two decades.

In speaking about this arc of instability, General Amos says:
"But we see that's probably what the world is going to look like for the next two decades. A lot more information there, but we think that's going to be our backyard because this is primarily the littoral, because these are kind of the nasty missions and things that, quite honestly, don't require 20,000 Marines on the ground."

If the Marines must train as they fight, then 29Palms does not need the capacity to simultaneously train 20,000 Marines.

Please keep Johnson Valley OHV area open to the public—including those Marines—who can come recreate at the OHV area when they are on leave from training, or redeployed home after fighting in that very arc of instability.

Sincerely,

Jonathon Stan

Response to Comment N-12799:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Violation of the NEPA process within the 29 Palms EIS.

The legislature passed the National Environmental Protection Act of 1969 so that all Americans could experience and enjoy the beauty of this great land. The actual text from the National Environmental Policy Act of 1969 as amended can be found at <http://ceq.hhs.gov/nepa/reg/nepa/nepaact.htm>

Within this legislation a process was established to ensure all projects met the environmental goals of this legislation, and the EIS is part of that process. When you combined the EIS put forward by the USMC for their expansion of 29 Palms with their published comments and requests you find many violations of the NEPA process and the role of the EIS with regards to planning and pursuing any project.

I'll reference numerous statements made in the USMC's budget located http://www.finance.hq.navy.mil/FM01/t2pres/MCON_Book.pdf

Within this budget is a funding request for the 29 Palms expansion. This request is specifically for a Westward expansion. The legislation creating the NEPA process specifically states the EIS should be "objective" and "systematic" How can the EIS for this project be objective or systematic when the Lead federal agency has a foregone conclusion on which alternative within the EIS it would like to choose? This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this bias.

The first directive for the NEPA process requires the federal government to "fulfill the responsibilities of each generation as trustee of the environment for succeeding generations". How can the removal of hundreds of thousands of acres from public use fulfill the responsibility to serve as a trustee for the environment? What good are our public lands and its environment if they can not be utilized by the public. The EIS does not properly address the removal of public lands and/or the costs of mitigation. This oversight by the USMC must be explained, and the current 29 Palms EIS withdrawn or heavily modified to account for this.

The second directive for the NEPA process requires the federal government to "insure for all Americans safe, healthful, productive, and aesthetically and culturally pleasing surroundings". How does the expansion of a live fire training range closer to the homes and communities further this second directive. There are other options within the EIS, the expansion Eastward, a no expand option, but these were not chosen by the USMC or given serious consideration within the EIS. Additionally, the expansion westward into Johnson Valley, will remove from public one of the most

Response to Comment N-12800 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. As described in Section 2.4.7, the No-Action Alternative would not meet the purpose of and need for the proposed action, but is carried forward as a baseline from which to compare the impacts of the proposed action and alternatives.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-12800 (Page 2 of 2)

culturally significant areas to the OHV community. A community numbering 40 million Americans strong. How does this ensure a culturally pleasing surrounding for all generations of Americans? The EIS must be withdrawn or heavily modified in order to address this issue.

The third directive for the NEPA process requires the federal government to "attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences". How does the removal of the Johnson Valley OHV area attain the widest range of beneficial uses of the environment? The EIS does not properly account for the "undesirable and unintended" consequences removing hundreds of thousands of acres from use by the public. There is no alternative for the OHV community to Johnson Valley. The EIS does not address this issue and must be withdrawn or heavily modified.

The fourth directive for the NEPA process requires the federal government to "preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity, and variety of individual choice" 40 Million Americans enjoy OHV use as a way to enjoy our great country. Families bond, friends meet, active duty military and vets explore the country they fought and fight to protect. Removing the Johnson Valley area from use by the public is a direct violation of the fourth directive. There is not other public use area within the United States that allows and individual to choose to experience the type of terrain and activity available within Johnson Valley. The EIS does not properly address this issue and must be withdrawn or heavily modified.

The fifth directive for the NEPA Process requires the federal government to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities". Removing the Johnson Valley area from all public use in the south western United States (the fastest growing area of the country) is in direct conflict to achieving a balance between population and resource use. A great amenity to the entirety of the south western States is the ability to enjoy the great outdoors. Removing a large percentage of the area available to those responsible users will completely destroy a major amenity to all of the citizens and users. The EIS does not address this, and in fact recommends a direction that is in direct conflict with the fifth direct. The EIS must be withdrawn or heavily modified to address this issue.

The sixth directive of the NEPA process requires the federal government to "enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources". Mark twain once said "buy land they aren't making any more of it". These words are never more true than they are today. Public land that is open to the public continues to shrink. The OHV community has seen public land available for legal OHV use shrink by millions of acres since the installation of the NEPA legislation. Land is by its very definition a depletable resource. The EIS put forward by the USMC for the expansion of 29 Palms is in direct violation of the sixth and final directive. The EIS must be withdrawn. There simply is no way to modify or mitigate the loss of the Johnson Valley OHV area.

The EIS for the 29 Palms expansion conflicts with all 6 directives put forward under the NEPA process. This EIS must be withdrawn. It is fatally flawed and no amount of explanation, work, extension, or mitigation can repair those flaws and errors.

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

Sincerely,

Kyle Irvin

Response to Comment N-12800 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Given the Alternatives presented, I strongly support only a no-action Alternative.

The Marines have stated a desire to expand based on a 2004 goal and 1990's-era training, yet the Commandant of the Marines has noted that the Marines will be a more mobile expeditionary force and not an entrenched land army. The Marines of 2011 do not need an expanded 29 Palms.

The EIS has failed to detail realistic Environmental Impacts to the desert environment.

The EIS has failed miserably to detail the Impact to the recreating public who have traditionally used Johnson Valley.

The National economy is in crisis. Not only would a 29 Palms cause a reduction in income to local small businesses provided by the OHV public, it would also cost American taxpayers hundreds of millions, if not billions, to implement.

For these reasons--fatal flaws in the analysis--the proposed 29 Palms base expansion must be withdrawn.

Sincerely,
Steven Rector

Response to Comment N-12801:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Appendix N – Response to Public Comments on the Draft EIS

Comment ID: N-12802

Comment ID: N-12802
Date Received: May 25, 2011

First I must begin by thanking the Marine Corps for their service to our country.

The executive summary of the DEIS on the Expansion of 29 Palms states that the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade sized Air Ground Task Force, and the existing facilities are inadequate.

However, I have found many current documents from the Marine Corps stating that the role of the Marine Corps is changing. Defense Secretary Robert M. Gates is even quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

In the fall of 2010, the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force in Readiness in a post Operation Enduring Freedom security environment.

In a document dated March 14th, 2010, entitled "Reshaping America's Expeditionary Force in Readiness, Report of the 2010 Marine Corps Force Structure Review Group" it clearly states that the 21st century Marine Corps force structure "must provide a strategically mobile, middleweight force optimized for rapid crisis response and forward presence."

The document further states that the Marine Corps will "Accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore."

The report states that the Marine Corps will be reshaped by reducing the end strength of the active component of the Marine Corps from 202,000 to approximately 186,800 following the completion of Marine Corps operations in Afghanistan.

This works out to:

A 13% reduction in ground combat forces
An 11% reduction in Infantry
A 20% reduction in cannon artillery
A 20% reduction in Armor
A 16% reduction in fixed wing tactical aviation squadrons
A 9% reduction in logistics
A 7% reduction in Marines assigned to non-operational billets
And a 13% reduction in the civilian workforce.

Page four of the DEIS clearly states that the training requirement put forward as the reasoning to expand 29 Palms comes from a Marine strategy put forward in the year 2000.

With this new strategy and re-vamping of the Marine Corps from the 2010 Marine Corps Force Structure Review group, the entire document must be discarded as it is based on outdated decisions and information.

In summary: in light of the changes in today's Marine Corps, the expansion of 29 Palms is not necessary.

Sincerely,
Steven Rector

Response to Comment N-12802:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

To Whom It May Concern:

Bias of the EIS.

While researching the expansion of 29 Palms, I found a copy of the USMC budget for the following year.

http://www.finance.hq.navy.mil/FMD/12pres/MCON_Book.pdf

On pages 147-149 within the Projects section, there is a request for \$6,665,000 for a base expansion. "This land expansion initiative proposes to acquire land bordering MCAGCC along the western boundary and enhanced access to fixed ranges and maneuver areas in the southern region of the installation."

Later in the same report this budget request appears to "Acquires land including withdrawal of land from all public uses, including mineral and water rights, private and state land owned in fee title as well as private mineral interests on public lands.....cultural and biological mitigation and monitoring, asbestos shingle and chip removal and the removal and recycling of vehicle tires."

How can the EIS be considered unbiased when dollars are being requested for one of the specific options being considered within the study?

How can the USMC have a dollar figure for the "cultural and biological mitigation" when it is still in the process of completing an EIS for the 29 Palms expansion? The time for public comment on the project is still open, and public comments are vital in determining the cultural significance of any area. It is impossible to truly understand the nature of the "cultural mitigation" until the study is complete and all public comments are read.

How can the EIS list "shared use" as one of the options when the budgetary planning is all ready in motion for "withdrawal of land from all public uses"?

The EIS for the expansion of 29 Palms must be rejected. The time for comment was too short, the proper address for public comment was not published within the document, and now the study itself seems to be directed by an agenda to expand West before having any real data on the implications of that expansion. Do not accept the EIS for the expansion of 29 Palms.

Sincerely,

Response to Comment N-12803:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Sections 2.3.2 and 2.7 discuss eliminated alternatives and screening/selection criteria utilized. Ultimately, Congress will make the final decision about proceeding with the proposed action. No funds have been assigned to the land withdrawal at this time.

To Whom It May Concern:

The US Government (BLM) has determined that fireworks are illegal at the Johnson Valley OHV area due to the risk of wildfire.

How does the US Government (USMC) propose to mitigate the risk of wildfire at Johnson valley with the use of live fire rounds?

There seems to be a huge contradiction in the laws that the US Government wants to impose upon its citizens and the regulations it allows for itself.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Jason Yanna

Response to Comment N-12804:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands. The Marine Corps appreciates your comment and involvement in the NEPA process.

Appendix N – Response to Public Comments on the Draft EIS

Comment ID: N-12805

Response to Comment N-12805:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. Although proposed training activities would increase noise levels in adjacent land areas, noise levels would not exceed the threshold criteria outside of the proposed acquisition boundaries. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Johnson Valley OHV area is a big part of the high quality of life in Southern California. Desert racing and rockcrawling are a huge part of the local culture. These activities are so well-established and the terrain so unique and desirable that many of us travel from outside California--from across the country--simply to enjoy Johnson Valley.

My friends have been engaged there.
My friends have been married there.
My friends have taught their children to ride dirtbikes there.
I ran my first rock trail there.
I love the sand, the granite rocks, the scrub brush, the sunrises, the sunsets, the clear desert air and the night stars.

An expansion of 29 Palms will be deleterious to our quality of life.

Sincerely,

Steven Rector

Response to Comment N-12807:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The US Government (BUM) has determined that fireworks are illegal at the Johnson Valley OHV area due to the risk of wildfire.

How does the US Government (USMC) propose to mitigate the risk of wildfire at Johnson valley with the use of live fire rounds?

There seems to be a huge contradiction in the laws that the US Government wants to impose upon its citizens and the regulations it allows for itself.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

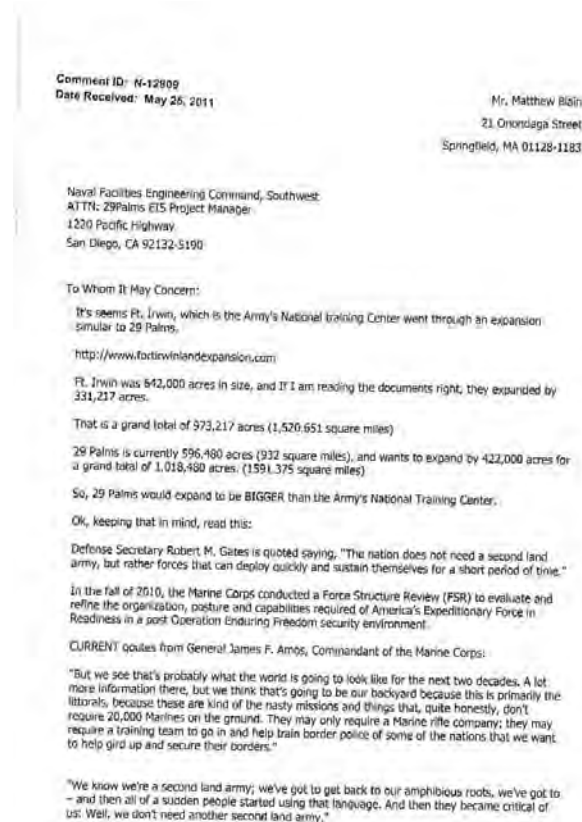

Brian Smith

Response to Comment N-12808:

Thank you for your comment. As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12809 (Page 1 of 2)

Response to Comment N-12809 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-12809 (Page 2 of 2)

Response to Comment N-12809 (Page 2 of 2):

"And we're making efforts. We already cancelled some programs that we not only didn't need but were way too big and way too heavy."

"We are going to lighten the Marine Corps. We're an air-ground task force. Now, it's going to take — it'll go past — it'll go to the 36th and probably the 37th commandant, but we are going to do it. And we're in the process of doing it right now."

"I refer to our Marine Corps today as a "middleweight force." I liken it to boxing: If you're a middleweight boxer, you can box up into the heavyweight division, or you can box down into a lightweight division by simply changing your weight and your training regimen. The same is true for the Marine Corps. We fill the void in our nation's defense for an agile force that is comfortable operating at the high and the low ends of the threat spectrum, or the ambiguous areas in between.

Larger than special operations forces but lighter and more expeditionary than conventional Army units, we engage and respond quickly, often from the sea with enough force to carry the day upon arrival."

(You can read this and more here: <http://www.marines.mil/univhqmz/cmc/Pages/default.aspx>)

So the Marines now have a new direction...actually, "new direction" is not the proper term. They are going back to their roots.

They are not supposed to be a "second" army; they are an expeditional force fighting on land, sea, air and in cyberspace.

They are supposed to be our middleweight, when we have been using them as the heavyweight for years... The ARMY is supposed to be the heavyweight.

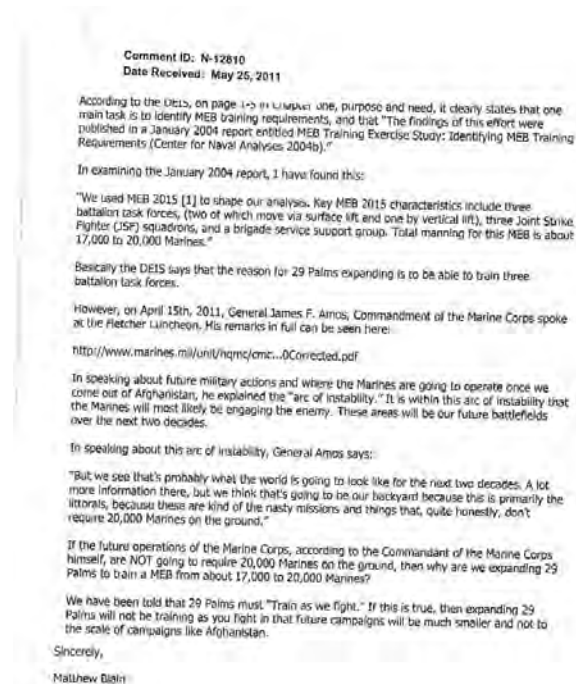

So with that said, why do they need more room to train than the Army does? While the expansion did make sense a decade ago when we were using the Marines as the heavyweight...it shouldn't now with this re-vamping of the Corps.

I am hoping no one reads this and thinks that I am slamming on the Marine Corps. Far from it. I have a high regard for anyone in our services and I am beyond thankful for their service to our country...I am merely stating the new mission statement of the Marine Corps as I have read it from General James F. Amos.

Sincerely,

Matthew Blain

First, I must begin by thanking the Marine Corps for their service to our country.

The executive summary of the DEIS on the Expansion of 29 Palms states that the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade sized Air Ground Task Force, and the existing facilities are inadequate.

However, I have found many current documents from the Marine Corps stating that the role of the Marine Corps is changing. Defense Secretary Robert M. Gates is even quoted saying, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

In the fall of 2010, the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force In Readiness in a post Operation Enduring Freedom security environment.

In a document dated March 14th, 2010, entitled "Reshaping America's Expeditionary Force In Readiness, Report of the 2010 Marine Corps Force Structure Review Group" it clearly states that the 21st century Marine Corps force structure "must provide a strategically mobile, middleweight force optimized for rapid crisis response and forward presence."

The document further states that the Marine Corps will "Accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore."

The report states that the Marine Corps will be reshaped by reducing the end strength of the active component of the Marine Corps from 202,000 to approximately 186,000 following the completion of Marine Corps operations in Afghanistan.

This works out to:

- A 13% reduction in ground combat forces
- An 11% reduction in infantry
- A 20% reduction in cannon artillery
- A 20% reduction in armor
- A 16% reduction in fixed wing tactical aviation squadrons
- A 9% reduction in logistics
- A 7% reduction in Marines assigned to non-operational billets
- And a 12% reduction in the civilian workforce.

Page four of the DEIS clearly states that the training requirement put forward as the reasoning to expand 29 Palms comes from a Marine strategy put forward in the year 2000.

With this new strategy and re-vamping of the Marine Corps from the 2010 Marine Corps Force Structure Review group, the entire document must be discarded as it is based on outdated decisions and information.

In summary: in light of the changes in today's Marine Corps, the expansion of 29 Palms is not necessary.

Sincerely,

Christopher Hauzer

To Whom It May Concern:

I am aware of the proposed expansion of the 933-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions.

Given the Alternatives presented, I strongly support only "No Action" alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Jason Yanna

Appendix N – Response to Public Comments on the Draft EIS

Comment ID: N-12814

Comment ID: N-12814
Date Received: May 25, 2011

Mr. Richens writes that the proposed expansion of the Marine Corps Air Ground Combat Training Center is the crux of a very controversial, complicated, and long-time building situation.

"Recreation vehicle users (i.e., both people who drive dirt roads to get somewhere as well as motorcycle, ATV, and dune buggy riders who enjoy family fun and competitive racing in desert 'open areas' like the Johnson Valley Open Area and the Imperial Sand Dunes) have seen an erosion of space and roads for their interests in the Desert since the 1930s. This is why they are so concerned with the proposed expansion of the Marine Corps Air Ground Combat Training Center into the Johnson Valley Open Area. In fact, vehicle use is at the very heart of a fight among competing interests and land uses on public lands that BLM has been dealing with for 40 years."

1. Until the 1930s one could take a vehicle just about anywhere a vehicle could go.

2. 1930s: 2 national monuments are designated, Death Valley and Joshua Tree.

3. 1940s saw the withdrawal of several large tracts of public lands for WWII and post-war military training, research and development, and testing. By 1945 approximately 25% of the Desert is off limit or severely restricted to recreation vehicles.

4. 1976 Congressional designation of the 25 million acre California Desert Conservation Area (CDCA).

5. In 1994 Congress designated 3.8 million as Wilderness and transferred an additional 3.5 million of public (BLM) land to the National Park Service, most of which was designated wilderness, too. The amount of Desert off limit or severely restricted to vehicle use jumped from 25% to 50%.

At the same time, half of the other 50% of the Desert is private land: off-limit to public use. AND, about half of the remaining 25% of the Desert that is not military, not wilderness, not parkland, and not private – i.e., not off limit for vehicle use – is affected by species and habitat issues and subject to further vehicle restrictions.

6. Six plan amendments due to threatened species have reduced the amount of open roads by 3,671 miles.

The cumulative effect on off-highway vehicle use is massive. The closure of another 422,000 miles will be catastrophic to our way of life. This is another 659 square miles of PREMIER OHV area. The closure of Johnson Valley OHV area is unacceptable. The Plan must be either withdrawn or revised to shift the Base Expansion east due to the massive cumulative effect it has on OHV use.

I love my freedom, and I respect the mission of the US Marine Corps, but enough is enough. I support the Marines, just not in Johnson Valley.

Sincerely,

Nick McMurray

Response to Comment N-12814:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Appendix N – Response to Public Comments on the Draft EIS

Comment ID: N-12816

Response to Comment N-12816:

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

To Whom It May Concern:

General James F. Amos, Commandant of the Marine Corps, spoke at the Fletcher Luncheon on April 15th, 2011.

General Fletcher spoke about future military actions and where the Marines are going to operate once we come out of Afghanistan, and he explained the "arc of instability." It is within this arc of instability that the Marines will most likely be engaging the enemy. These areas will be our future battlefields over the next two decades.

In speaking about this arc of instability, General Amos says:
"But we see that's probably what the world is going to look like for the next two decades. A lot more information there, but we think that's going to be our backyard because this is primarily the littorals, because these are kind of the nasty missions and things that, quite honestly, don't require 20,000 Marines on the ground."

If the Marines must train as they fight, then 29Palms does not need the capacity to simultaneously train 20,000 Marines.

Please keep Johnson Valley OHV area open to the public—including those Marines—who can come recreate at the OHV area when they are on leave from training, or redeployed home after fighting in that very arc of instability.

Sincerely,

Steven Rector

Appendix N – Response to Public Comments on the Draft EIS

Comment ID: N-12822

Response to Comment N-12822:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

To Whom It May Concern:

I would like to reference this document:

<http://www.marines.mil/unit/29palms/fas/documents/cna/CNA%20MEB%20Training%20Exercise%20Study%20Identifying%20MEB%20Training%20Requirements%200009618%20A1%20Jan04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page three of that document it states:

"The brigade-sized air- ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)."

The key sentence I would like to point out is:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)."

Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING.

If the MEB was discontinued last time this happened, it may be discontinued again. Therefore, expansion of 29 Palms is not necessary.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF.

Response to Comment N-12823:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Timeliness of Public Comments.

The EPA's Citizen's Guide to the NEPA process has this to say about the importance and timeliness of comments:

Comments may be the most important contribution from citizens. Accordingly, comments should be clear, concise, and relevant to the analysis of the proposed action. Take the time to organize thoughts and edit the document submitted. As a general rule, the tone of the comments should be polite and respectful. Those reviewing comments are public servants tasked with a job, and they deserve the same respect and professional treatment that you and other citizens expect in return. Comments that are solution oriented and provide specific examples will be more effective than those that simply oppose the proposed project. Comments that contribute to developing alternatives that address the purpose and need for the action are also effective. They are particularly helpful early in the NEPA process and should be made, if at all possible, during scoping, to ensure that reasonable alternatives can be analyzed and considered early in the process.

This advice is very sound, but requires the public to have the ability to submit comments to the lead agency. To do so the public must have the proper address and that address must be published in the appropriate places. The EIS for 29 Palms did not publish the correct address. This oversight made it very difficult for the public to get involved in the process before the preliminary EIS was finally published. This oversight caused the USMC to boot out of valuable time to properly gauge the value of Johnson Valley and remove it as an alternative from the EIS all together.

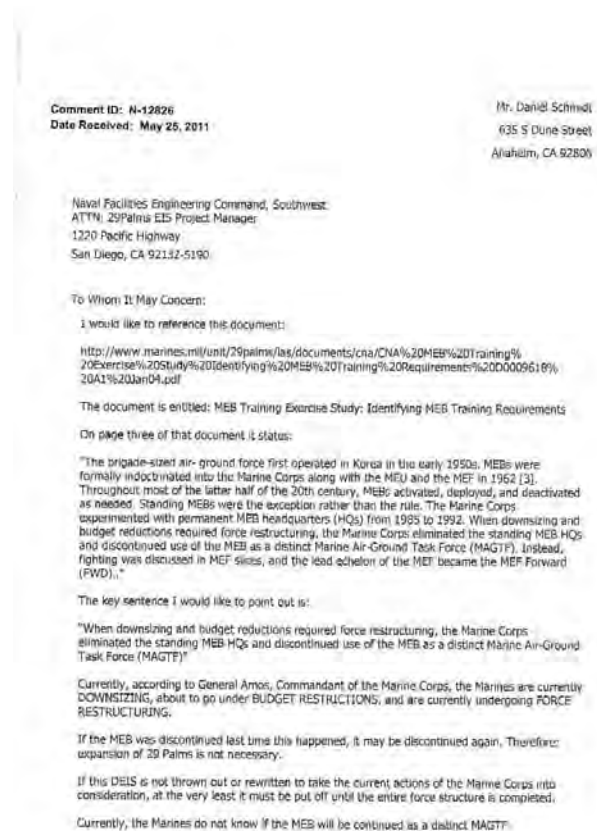

If the USMC had followed the proper guidelines, they would have seen the significant cultural, social, economic, family, and historical value of this area being open to all forms of public use. Other options that were not included within the EIS could have been included and investigated once expansion into Johnson Valley was removed as a possibility.

This EIS is flawed and the NEPA process compromised. Please respond with specifics on how the USMC expects to rectify this situation, or withdraw the EIS completely.

Response to Comment N-12825:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Comment ID: N-12827

Comment ID: N-12827
Date Received: May 25, 2011

The following is an excerpt from the EPA's Citizen's Guide to the NEPA process:

"The environmental review process under NEPA provides an opportunity for you to be involved in the Federal agency decisionmaking process. It will help you understand what the Federal agency is proposing, to offer your thoughts on alternative ways for the agency to accomplish what it is proposing, and to offer your comments on the agency's analysis of the environmental effects of the proposed action and possible mitigation of potential harmful effects of such actions. NEPA requires Federal agencies to consider environmental effects that include, among others, impacts on social, cultural, and economic resources, as well as natural resources. Citizens often have valuable information about places and resources that they value and the potential environmental, social, and economic effects that proposed Federal actions may have on these places and resources. NEPA's requirements provide you the means to work with the agencies so they can take your information into account."

The EIS, as a part of the NEPA process, requires federal agencies to consider the impacts on social, cultural, and economic resources, as well as natural resources. I'm sure you'll get thousands of letters from the public talking about their love for Johnson Valley. Johnson Valley is a public use area adjacent to the existing 29 Palms. The current EIS recommends expansion and closure of the majority of Johnson Valley. It does so while ignoring the option of expanding east into an area not open to all public users.

The importance of Johnson Valley from a cultural and social designation can not be overstated. It is the mecca for an entire industry dedicated to the 40 million OHV users. An industry responsible for hundreds of millions of dollars in products, research, and environmental support and clean up. While Johnson valley will be filled each and every weekend of the year with OHV users, it is not just the OHV users that would lose Johnson Valley should the case expand West. Hikers, bird watchers, rock hounds, explorers, students and teachers, photographers, event promoters, families, active duty marines, and veterans, are just a few of the groups that will lose the ability to enjoy the premier location in the south west United States.

The period for public comments is still open, and I appreciate the USMC taking into consideration the comments of the public. I have no doubt you'll find Johnson Valley to be a vital social and cultural area. When compiling the public comments please put the same weight on these comments as your citizen's guide suggest you will.

Do not expand 29 Palms west into Johnson Valley..

Sincerely,

Brenda Pennington

Response to Comment N-12827:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps appreciates your comment and participation in the NEPA process.

Randlett Payne

Response to Comment N-12832:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

I would like to reference this document:

<http://www.mannes.mil/unit/29palms/las/documents/cna/CNA%20MEB%20Training%20Exercise%20Study%20Identifying%20MEB%20Training%20Requirements%200009618%20A1%20Jan04.pdf>

The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements

On page three of that document it states:

"The brigade-sized air-ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)."

The key sentence I would like to point out is:

"When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)"

Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING.

If the MEB was discontinued last time this happened, it may be discontinued again. Therefore: expansion of 29 Palms is not necessary.

If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed.

Currently, the Marines do not know if the MEB will be continued as a distinct MAGTF.

Response to Comment N-12833 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. To Whom It May Concern:

The National Environmental Protection Agency is increasingly aware of the role of individual minor effects over a period of time have on the environment.

The "Introduction to Cumulative Effects" published by the EPA in 2007 <http://ceq.hhs.doe.gov/neqa/ceqa/sect1.pdf> begins by stating: "Evidence is increasing that the most devastating environmental effects may result not from the direct effects of a particular action, but from the combination of individually minor effects of multiple actions over time."

This same publication goes on to define Cumulative Effects as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or non-federal) or person undertakes such other actions (40 CFR -- 1508.7)."

The EIS for the 29 Palms expansion does not properly address the Cumulative Effect of the base's expansion. The training of Marines is an admirable goal, and if expansion of 29 Palms is necessary to facilitate this goal then expansion must be taken seriously. It is undeniable that the expansion of hundreds of thousands of acres is at a minimum a minor action. Because of this, the cumulative effects of any expansion must be taken into consideration within the EIS. The EIS fails to address this cumulative effect to the United States public.

The expansion west into Johnson Valley would remove hundreds of thousands of acres from public use. There are options within the EIS that would leave the Johnson Valley area open to the public. The point has been made before, and must be made again, that there is no alternative to Johnson Valley from a cultural, diversity, and economic standpoint. When combined with the cumulative effect of countless other closures of public land to the public, this action must be given even greater weight in this particular decision.

Nobody is saying the Marines shouldn't be able to train. Nobody is asking that the Marines not be allowed to expand if after careful review this is the best use of the marines resources, but the expansion west into Johnson Valley is an option that the EIS has completely and totally failed to address from a cultural, economic, mitigation, equity of impact, and cumulative effect standpoint. The expansion west must be rejected now, and the Johnson Valley area permanently protected for use by the public.

Do not expand 29 Palms into Johnson Valley. Leave public lands open to the public.

Sincerely,

To Whom It May Concern:

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area. While I fully support the USMC, is this expansion really necessary? Being a ex-military person myself I understand the need for on going training and proper facilities for such, however giving the world economic situation I believe that using the current facilities to their fullest potential would be a more responsible idea for use of tax payer money. Recent conflicts have showed that full scale warfare should not be the focus of military training. I'm sure the brain trust of the Marine Corp can arrive at an alternative plan instead of the siege of public land for more training area. This area is not just wasted land. It serves many purposes and represents many things. We have turned this land into local economy as well as global gatherings. We have done our part to take care of it so it can be used for generations to come. To have it taken away for no other reason than muscle flexing of the military would be a crime. We have supported our troops every step of the way in the things they do and we appreciate all they do, we just ask that all other options be considered. As the American people, we would like to enjoy the land that so many have given their life's to defend.

Sincerely,

Dustin Drollinger

Response to Comment N-12844:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area. We like the natural terrain, we want to continue to come to and shell free Johnson valley.

Sincerely,
Chris Ajlet

Response to Comment N-12847:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range sweep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Formatted: Font: Times New Roman

Deleted: As outlined in Section 3.4, Combat Center Order P35.004F *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range sweep, and range clearance) that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS). If acquired lands were transferred back to public domain, the Marine Corps would be required to comply with range closure procedures (Combat Center Order 3500.4h).

722 Loflin Rd
Vernon, LA 71295

Naval Facilities Engineering Command, Southwest
ATTN: 296th EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

Sincerely,

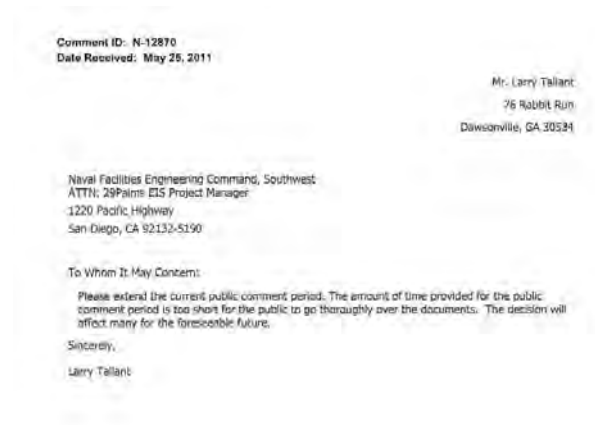

Neal Cockrell

Response to Comment N-12869:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The importance of Johnson Valley for the many families who recreate there is too significant to not give the public ample to defend their right to continue to use one of America's offloading gems.

Please allow the public ample time to respond and do not make any decision in such haste.

Thank you for your consideration,
Michael Foster

Sincerely,
Michael Foster

To Whom It May Concern:

Please consider our request to look at other options or wait until the 2012 Federal Budget is completed by Congress. There is a high likelihood that this project may be taken off the block before inception, tying up our OHV (and in an ongoing political battle for funding. Consider us, your Marines are part of our group and I am a part of yours, VMFA 112 2003-2009.

The amount of time provided for the public comment period is too short for the public to go thoroughly over the documents. Please extend the current public comment period.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability. At a time where the US Govt is at a critical budget shortfall and there are thousands of people unemployed and unable to pay taxes in almost every area of the country how will the govt be able to fund projects like this as well as maintain trust funding in the future? PLEASE SAVE THIS AREA FOR FUTURE GENERATIONS!

Sincerely,
James McClammy
