**Comment** I would very clearly like to register my support for "no action" or alternative 3. I am an OHV user and so are my family and friends. As you must know, the land available for OHV use, specifically motorcycle riding and motorcycle racing, is and has been diminishing at a rapid rate over the past few decades. This trend is not fading away. If anything, it is accelerating. The Southern California high desert, specifically Johnson Valley, provides an opportunity for a very large population center (Southern California, Los Angeles, High Desert, etc) to come together and ride and recreate together. Beyond that, off-road racing is a great American tradition and with permitting, insurance, and general restrictions, racing will soon become extinct. This would be a blow to thousands of enthusiasts and their families. Closing Johnson Valley would eliminate one of the last areas where people can come together, enrich their lives, share stories, grow up, challenge themselves and learn skills that transfer into life in general. Please DO NOT ACQUIRE JOHNSON VALLEY THEREBY ELIMINATING OHV USE.

**Date Comment Received** 4/22/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

**Comment** I feel Johnson Valley is one of the last places in Souther California where all sorts of outdoor admirers' of all sort can go to. From offroaders, camping, wild live spectators, even star gazers. Using the land will onle take away from public land and also destroy the Johnson Valley. That's why I vote for alternative # 3.

**Date Comment Received** 4/22/2011

**Comment** Option 1 and option 6 are both unacceptable options. They both effectively take away the Johnson Valley OHV with is vital to the offroad community and the surrounding communities financially. Limiting this area and reducing its space will cripple the entire OHV system in place. Areas left open within the Johnson Valley OHV and other OHV areas will become more overcrowded than they already are. This will lead to over use of the trails and also numerous additinal accidents leading to injury and possible fatalities just from the overcrowded conditionse Option 3 is the best of options but if you need more land for training look to the options that would involve taking land from the east or north of the 29 palms base. Thank You, Jeff Benjamin

alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Although I understand the need for additional training ground, I would request that the military not push into the existing Johnson Valley OHV land. There are other alternatives available that don't reduce the available land for OHV enthusiasts, many of which are families that use Johnson Valley. With the shrinking land made available for OHV, we do not want

to lose one of the best areas we have today, especially when there are viable alternatives available for your purposes. Thank you for your consideration in this matter.

**Comment** My family owns 2 homes and land in the beautiful Johnson Valley for the past 35 years. We are out there every month, it is our home away from home. We've always dreamt of raising many generations in those homes. My grandparents, parents, myself & one day my children and my brother & sisters children. Johnson Valley brings families, friends and even complete strangers close together. You are out in the beautiful desert, no Starbucks, No fast food, No freeways... Just the beautiful open skies, open land and the unique creatures the desert presents. The love that the off road community has for Johnson Valley is undecipherable. My father for example, when he is out on a ride he stops to pick up any left over cans that someone threw out, he picks up garbage, cans, anything that doesn't belong there. When we were little we use to ask him why he was picking up trash. He always responded "Because this is your future, and when you grow up, you'll understand and thank me. God has created this desert for us, this is a hidden treasure, and made to be enjoyed and filled with memories, not filled with garbage." I think that statement alone truly sums up why we love, honor and cherish Johnson Valley so much. It is our home away from home, and we pray that no one takes that away from us. Thank you for your time. <3

**Comment** First the greenies want to close our desert for environmental reasons like (turtles, flowers, brush). Now the marines want to close us out to (bomb, run tanks through, and shoot everything). This makes no sense. Why don't you go practice in Iraq, Afghanistan, or Libya? There is plenty of desert over there. The marines have gone this long without it why now? We use the desert for family outings and to enjoy hobbies with our kids... Move to a desert where we cant ride.

**Comment ID** 1373

**Last Name** Ardito

**First Name** Richard

**Comment** The Johnson Valley is the largest public recreational area in California and is used by hundreds of thousands of recreationalists every year. Not only will this affect recreational OHV users, it will affect off road races, the District 37 races, King of the Hammers, and the community. Taking over this area will put a lot of people out of business, and a lot of people without jobs.

**Date Comment Received** 4/22/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** Please leave what little OHV area we have left alone. Off roading has kept my family together since the 1960's and has quickly dwindled in size to almost nothing. As a retired US Marine I do know the value of training, especially now. However, there are many more options than to take what little area we have left. Our liberties are rapidly dwindling and it is shameful that our government continues to see fit to choose what is best for us. I was not a Marine and haven't worked my whole life in public service to just roll over and watch more of my freedoms wrenched from me. Good luck on your endeavor, but please leave this family oriented area alone. SEMPER FI

**Comment** I have been recreating with my family in Johnson Valley for over 40 years. Johnson Valley is the last of a long line of large racing areas in the west. It would be a real shame to lose an entire form of recreation for hundreds of thousands of future users of this area. Most people's lives are in need of some excitement, some communing with nature, something other than sitting in a cube all week and in front of the TV all weekend. Please don't take away the last large race area in the west. You will be condemning more people to golf. Real people need this area to make their lives whole. Sharing the area is silly, it will never work but you know that already. Please leave us alone.

**Date Comment Received** 4/22/2011

**Response** Thank you for your comment. **Comment** You do not need to acquire more land for training. China Lake has plenty of airspace to share with all branches of the military and has Cutty Back range which is only minutes away by air from Twenty-nine Palms. Your expansion will negatively affect business and recreation in the Johnson Valley.

**Date Comment Received** 4/23/2011

**Response** Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008.

Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** I live in the area a little east of the proposed "south" expansion section in Wonder Valley. CURRENTLY the late night and early am practice bombings are disturbing sleep and causing property damage and it will only get worse if they move any closer. I have a cracked window and interior cracking - directly due to practice bombings. Do they plan on fixing the damage that occurs to people's homes? I'm disabled and can't afford to fix the damages caused by the bombings! There also should be some kind of curfew placed on how early and how late these bombings can take place - A noise ordinance like citizens have to abide by so they don't disturb the peace of people LIVING in the area. It's appalling that they don't take this into consideration! The noise from the helicopters is another problem when they fly too close or directly over homes. This is also very disturbing and shakes and rattles everything. I fear my home and others will be further damaged or destroyed if the plans for the South expansion area goes forward. Wonder Valley used to be a nice, peaceful place to live and now it feels like we're in the middle of a war zone already. Please consider there are PEOPLE living here!!! WE ARE AMERICANS and we should have the right to live here in our homes in peace and without fear of further damage to our homes and health! I appreciate what the military does, but it shouldn't be at the expense of their own citizens suffering. Thank you

**Date Comment Received** 4/23/2011

**Response** Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

**Comment** United States Marine Corps, As a Marine (92-97) I know first hand that it is a big priority to ensure civilian life here in the United States is preserved at all cost from foreign or domestic enemies. I also know first hand that the US armed forces in general take great strides to ensure indigenous civilian life in other countries is preserved. I ask the USMC to stop this senseless land grab knowing full well it adversely effects the civilian population of the United States by removing open freedoms that I and many others have fought hard for! Levae Johnson Valley OHV alone and open for the people of the United States. If the USMC needs additional room to train take it from usn-used land.

**Date Comment Received** 4/23/2011

**Comment** As a Vietnam veteran, the question to expand the training range at the Marine Corps Air Ground Combat Center at Twentynine Palm, California to accommodate training exercises for all elements of a Marine Expeditionary Brigade should illicit an affirmative response. We want the base to expand for modern and future requirements if needed. After all, we are patriotic Americans who love all our people in military service and we want the Marine Expeditionary Brigade to be the best trained in the world. In fact, so well trained that we could achieve the ultimate dream of them being deployed and returning home safely without casualties. The Johnson Valley OHV Area is the nearest OHV area for Morongo Basin residents (generally identified as the towns of Morongo Valley, Yucca Valley, Joshua Tree and Twentynine Palm). Morongo Basin residents spend between two to three hours traveling to and from the Johnson Valley OHV Area for off road recreation. Other OHV areas are an additional one to two hours away. The Department of the Navy's DEIS (Draft Environmental Impact Statement) Alternative 6 is not clear about the impact on the Johnson Valley OHV Area and continued public access to these lands. Johnson Valley OHV Area contains 140,000 acres of land. The DEIS does not address how many acres will be consumed by Alternative 6. They just throw the public a bone in making the statement: "The Alternative [6] would allow for reopening to public recreation use approximately 40,000 acres of the acquisition area for 10 months a year." Does this mean that you are taking the entire 140,000 acres, but allowing public access to only 40,000 acres? This will result in the loss of 100,000 acres of OHV area that we will never get back. If this is true, then this is a poor Alternative for the public and OHV users. I would opine that Alternative 3 is far superior in that it does not involve the removal of significant acreage from our nearest OHV area. It would appear that you could take desert lands to the east all the way to the Arizona boarder without affecting an OHV area.

**Date Comment Received** 4/23/2011

**Response** Thank you for your comment. Please see Table 2-3 of the EIS for summary information on action alternatives. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Three generations of the Lewis family have grown up using Johnson Valley. As is, too little riding area is open for competition use, and the currently increasing amount of desert closures is killing the sport of off-road racing. We all take care of our desert like it is our home and protect the wildlife with as much care as we can. It is even in our instructions that if we come across a desert tortoise that we get off of our bikes and safely move the tortoise in the direction it was going, off the trail. Military use in this area would greatly reduce the numbers of an already dwindling population of tortoise. I support and love my country, and look up to our men and women in uniform. They keep my current and future family safe, but all of the land that is currently used for the public should not be handed over for military use. Thousands of people each year use the area that you currently wish to take, and it would be a complete blow to our morale if the most beautiful place we know is taken from us. If this area is given over to the military, the sport will likely die. The smaller amount of useable riding areas would cause the trails to become too beat up and no one will wish to go out to the desert anymore. Please take into consideration all of the other people that use this area before the process of taking it over is pushed further.

**Date Comment Received** 4/23/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

**Comment** I support the "NO ACTION ALTERNATIVE"! The Federal and State Governments have already taken away enough public lands from it's citizens to use for recreation and cultural activity. With the wars winding down in Iraq and Afganistan, the need for additional lands at 29-Palms is diminished. If the Marine Corps truly needs additional land for training, take it from the Mojave Desert Preserve, that will affect fewer people and cost the taxpayers less in land acquisitions, relocations, etc.

**Date Comment Received** 4/24/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation

distances for operation of the three battalions required for MEB-sized training. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment** If I must consider an alternative, it would be #3 any and all environmental effects would be further from more populated areas.. Noise, water and public lands pollution would have a lesser impact on the populated areas. As it is stated in your Geological statement the marine base would be required to stay on well defined roads unless training scenarios require otherwise.. Basically saying when they must they will destroy the land even more so that a group enjoying the secluded lands for hiking and riding instead of bombing everything..

**Comment** I have been visiting the johnson valley OHV area for the last 10 years driving thru the various terrain and enjoying the beautiful diverse landscape. I also attend the yearly SAR ride. My children have found this to be a great area offering hiking / climbing and OHV activities. I live by camp pendleton which is probably about 120,000 acres. is it really necessary to take over an additional 141,000 acres that is johnson valley OHV? i would welcome the discussion.

**Date Comment Received** 4/25/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** The tree huggers, government and BLM have taken away all public lands for off road use and forced the off road community into designated off road areas. Now the designated off road areas are being threatened of closure. If the acquisition occurs, we will not get the small allocation of land returned. As an alternative, maybe another significant area of public land can be designated as an off road area in place of the Johnson Valley area.

**Date Comment Received** 4/25/2011

**Response** The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** Hello I am writing in regards to the possible closure of our Lucerne Valley/ Bartsow areas and the affect it will have. There are several ways it will affect the off road community all of which are negative. I hope you will take all options into serious consideration as many people, families and companies will be deeply affected by the loss of this land. I have used the land myself for many years and had many great family memories from this area and I would hate to see it gone as so many other places have. I have enjoyed this land for camping, dirt biking, enjoying nature, family outings, racing, offroading and everytime I go there I have spent money with the local gas stations, food establishments and other stores. These stores depend

on OHV people out there and without them they may not make it. Please do not take the land as I believe the value is far more exceeded for OHV, Racing and offroad communities than it would be for training purposes.

**Date Comment Received** 4/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** To whom it may concern, Regarding the expansion of the 29 palms facility. Myself and my family are wholeheartedly in opposition to this expansion effort. I am currently an active duty service member and want to see my brothers in Arms be able to effectively train but not at the cost of my ever dwindling outdoor use areas. The Johnson Valley has a diverse audience that use this area that includes OHV use, OHV competition, rock climbing, prospecting, and wildlife observation. This expansion will adversely affect all of us including many marines and other service members who regularly use the Johnson Valley area as a recreation destination. If this expansion goes through it will directly impact our soldier's and sailor's moral and even incite questioning how our military feels about the public. We should be protecting the shrinking areas we are allowed to use. The only acceptable option is to find an expansion area that will not impact our OHV areas. I find concern in the dual use option which on the surface the Proposal that allows 189,470 usable acreage\_100% 10 months of the year appears to a valid compromise. Yet I see the public access to this acreage being severely curtailed by lengthy and laborious permitting that will become so unachievable that we will not be able to use our land. I strongly urge you to

find ways to ensure that the OHV community will be fully supported and not "tricked" into compromising under the pre tense of this is the only way our Marines can train. We as service mebers and public servants have an obligation to protect from all enemies both forgiem and domestic. Sincerely, Jeremy Creveling

**Date Comment Received** 4/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The specific details on management of the RPAA in regards to permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Hello, My name is Yancy Watson. I am a registered voter and I pay my taxes. I am a member of the AMA (\*Americian Motorcycle Association), District 37 organization and secretary for my Huntington Beach Motorcycle Club. I have been coming out to the desert and associated with the race scene for more than forty years. My family has done this since I was in diapers and now it's my turn to share this experience with my children and they are currently off-road enthusiast. I have paid into the 'Green-Sticker' program since the first I've purchased a motorcycle and had the Green Sticker Fund raided by by government representatives right before our eyes. Now the military wants to 'steal' a huge chunk of Johnson Valley OHV for training. I am a huge supporter of our troops, but I refuse to stand by and

just allow the military throw off-roaders off public land! In Yuma AZ, the military already owns 2.8 BILLION ACRES of open land that can be used for training... in what world is that not enough open area to perform military maneuvers? Please consider leaving the desert open to ALL off-road enthusiast... rock climbers, hikers, campers, 4x4ers, side-x-side, horse/cowboys, motorcycle racers, truck and buggy racers. If the government continues to close the desert, it will be a huge mistake and affect millions of everyday people and the company's that we support. Please reconsider the military California land grab and go where the military ALREADY HAS BILLIONS OF ACRES! Thank you for your time. If you have any questions or comments, please do not hesitate to contact me. Sincerely, Yancy Watson

**Date Comment Received** 4/25/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** How much desert do you need. I am a professional pilot and am quite knowledgeable about your operations and the airspace you guys already own. Basically you guys own the airspace around MCAS Yuma, 29 Palms, all the way north halfway up the Owens Valley towards Bishop. I have an idea! Since you guys are in the business of keeping our nation safe and sovereign, Why not have your excercises along our Southern Border. That way the Mexican drug cartels from San Diego all the way to the Gulf of Mexico might think twice about how they conduct thier operations. If they shoot at us, you can shoot back, you can then train your medics and MP's by arresting and giving medical aid to the illegal immigrants that we apprehend. There is also acre upon acre that you can use to play tanks and artillery. I'm sure that there are farmers down there that would appreciate the Marines invading thier lands as opposed to Thugs from the drug cartels that are killing farmers, local law enforcement, border patrol, and ICE agents. That way you can be trained up for such missions as patrolling the border lands along the Afghanistan-Pakistan Border. The BLM lands that you want to play tanks and airplanes on, are used by hard working civilians that help pay your salaries and buy your tools of the trade. If you understood all the time and effort that these people put into thier off road vehicles, you would also gain some benefits from thier efforts. Here is an example: Where does your light off road vehicle technology come from? Guys like these. You are always looking for good Marines aren't you? Building and working on these vehicles keep young people off the streets and out of trouble. Guess what, these young people are your future, since they can design, build, and repair the hardware you so depend on. I know that there was an accident that killed 8 people out there one night. Unfortunatly is was a case of ignorance turning into stupidity. We at M.O.R.E do evewrything we can to insure that everyone has fun and goes home safely. We are not the organization that had the accident. Now the BLM, along with both of our US Senators, seem to want to punish us for the inactions, and unwillingness of some other organization to follow BLM rules. Just remember, the military is around to kill people and break things.

These Senators want you guys to be thier "Meals on Wheels" program, and spread political correctness across this planet. God Bless the Marine Corp. For all you do to keep us safe.

**Comment** I am an avid offroad and outdoor enthusiast. My family has been enjoying the Johnson Valley Offroad area for generations. This area is a way of life for me and my family. We have spent every holiday and spare moment from work there camping and and enjoying our public use land area for years. Loss of this would be absolutley devastating to my family and friends which use this area regualrly. With no legal riding area anywhere else close by in the california area this would cause substantial impact on the entire offroad community and our right to use our public lands. I also belong to a a ministerey group in my church which has used this area in our outreach to touch many lives through comon ground and love for our sport and our god. The loss of this god given land and righ to use this public area and allow us to bond as with our fellow offroaders would be irreplaceable for our community and our freedom. Offroading and camping in Johnson Valley has given me somthing to ook forward to and strive to do my entire life. Keeping me from getting in trouble as a kid and keeping me active in racing helped give me the drive, and skill to be succesful in life. I use these same values to help keep my children and family doing the right thing and participating in offroad racing, camping, recreational riding to keep every one involved, happy, and on the right path. I am very happy and proud to be

part of this great country where we have the freedom to enjoy the outdoors and do the things we do in Johnson Valley. And I am thankful for the Military for fighting to help keep these freedoms. I do feel that the 29 Palms base is already the largest base in our area and there is no need to take the OHV area that brings so much joy and much needed freedom to so many people away. If the training space is needed for the benefit of the military and there success there are plenty of other areas that are not used the public and will not impact so many thousands of families and off road enthusiasts.

**Date Comment Received** 4/26/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** Please expand to the north or east. When our vacation home in Homestead Valley (near Landers) was built around 1960 there were no booms from the base. Now we often are subjected to building-shaking booms. Any expansion to the west will increase the nuisance, and decrease the nearby area we use for outdoor recreation.

**Date Comment Received** 4/26/2011

**Response** The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the

proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

**Comment** I strongly favor Alternative 3 of the Draft EIR. I take Alternative 6 as a second choice, because it offers at least some access to the southern portion of the West Study Area. I would be most impacted by access closure and military activity in the southern tip of the West Study Area. I say this as a

landowner in Homestead Valley (west of Spy Mt.) who runs, hikes, climbs, drives and photographs for recreation in the southern west study area, north to a line roughly through the old Los Padres Mine. We have been increasingly affected by ordnance noise from the base, which shakes the house. Expansion to the west will increase the impact, particularly activity in the southern part of the west study area. It will also limit or prevent use of an area I can reach on foot, which is part of the enjoyment of the location of my vacation home.

**Date Comment Received** 4/26/2011

**Comment** The taking over of Johnson Valley SRVA by the U.S. Marines is a horrible idea. The areas that are disappearing for families to enjoy and utilize are now few and far between in the Southern CA area. If the self righteous environmental groups knew what exactly the military is and will do on these lands, they would put a stop to that as well. Let's put it to a vote instead of skirting the democratic way. DO NOT BE FOOLED BY THE GOVERNMENT.

**Date Comment Received** 4/26/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I support the United States military services. I understand they need space to train. However, I do not think taking over the Johnson Valley recreation area is the best decision, especially when the base could expand to the east instead. Because this is the largest area in California for the use of off road vehicles, the Johnson Valley races draw a very large crowd of people to attend. Many of these people depend on the surrounding communities for supplies such as fuel, food, RV storage, and many other products. The communities in this area are small and the businesses depend on the traffic provided by the events held in the Johnson Valley. Taking away this land would not only take away one of the last remaining off road riding areas, but it would potentially devastate economically many of the surrounding communities - communities who are already struggling to stay afloat in an economic crisis. I must oppose the expansion.

**Date Comment Received** 4/26/2011

**Comment** That land in Lucern Valley is the United States Citizens. The military has enough of the land already. If they don't have enough land in California use the land in Arizona that is about 500,000 acres. That land we the tax payers have already paid for. Let us keep that land in Lucern for our kids and their kids to ride. We have paid for that land with our taxes and green/red sticker funds.

**Comment** The military has enough of our land in California already and 29 Palms has enough land. Talk to Marines that have been on the training grounds they have now and they have not seen the boundary line at 29 Palms. I have spoke to a few and they have been on one week training missions and have not seen it all. The Military has what 500,000 acres in Arizona for training isn't that enough of the taxer payers money at work. Wow the government wants to take over Lucern Valley some tough times in the United States. How much would us the tax payers have to pay just to put the fence around it. Lucern Valley is paid for by GREEN and RED sticker funds.

**Comment** Lucern Valley is paid for by GREEN and RED sticker funds. The United States government is in debt already just think how much a fence would cost to put up around all that new area. I would love to bid on that contract. Lucern Valley is a great land use area for people all over the U.S. to come and enjoy. The Military has some 1,000,000 acres in Arizona for this

training already so keep using that area. I have spoken to some 29 Palms Marine vets that have been on week long missions in 29 Palms training area and they have not seen all the land out their so why do they need more land to destroy and kill animals , fossils, plants and other things.

**Comment** My family & friends have been going to Johnson Valley & Couger Butes for Years (60+). Numerous races & other events take place there - every year - scheduled or not. I strongly suggest you go EAST - nobody goes out that way. It would solve numerous problems with hundreds of thousands of weekenders that frequent the west area. New thought - How about you take all the money & solders that practice killing. Stay in the USA & keep our borders safe for the citizens of this wonderful country. Take the extra money & help the homeless & raise the poverty level here - then worry about the rest of the world. HELP OURSELVES FIRST - THEN ANYONE ELSE WE CAN SECOND - IF ANYTHING IS LEFT. Maybe we could work towards peace instead of practicing death.

**Comment** Johnson Valley is a one of a kind OHV recreation area that should be kept the way it is. If there are other alternatives that can provide the same outcome for the military I would urge that they go that route. Things to think about if this area is made off limits to the OHV recreation community are, economy, and the potential for illegal OHV use in this area.

**Date Comment Received** 4/27/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current

recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

<b>Comment</b>	As a lifelong (45+ years) offroad riding/racing enthusiast, I feel that I am qualified in voicing an educated opinion on the impact that taking more public lands will have on my sport. On the other hand, I really have no idea if we are being told the truth, that the public land in question is really needed for expansion or just a land grab by a huge government agency. I am hopeful that the Marine Corps can see how important this particular area is to many people and keep things as they are, or if necessary to reach some type of amicable compromise.
<b>Date Comment Received</b>	4/28/2011
<b>Response</b>	Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Because I live in Wonder Valley, I am very concerned about the Base Expansion plans. I personally know neighbors who live on Poleline Rd, who would be directly across the road from the MCB if the South Study Area were to be acquired for the expansion. Because of this, and because our own property value (on 3 properties) will drop even farther than it already has, I do not want the South Study Area to be acquired. As for the East Study Area, there will be many, many problems, mainly involving Amboy Road, if that Study Area is acquired. Believe me, it is MUCH more well-traveled than you are stating. We need Amboy Road to remain open at all times; therefore, I do not want the East Area to be acquired. Also, a little note about the Cleghorn Lakes Wilderness Area ..... this is a wonderful pristine desert area that is enjoyed by so many. It is the perfect getaway in which to hike and/or relax and really connect with nature. Please do not take it under any circumstances. I notice it is not in either Study Area, but I believe that is because it would be acquired later. Please leave it here for all of us, and for the generations in the future. And, as for the West Study Area, I truly hate to see the OHV enthusiasts lose any of this wonderful area for riding & events, but I have to say that I don't believe there are any residents in the OHV area, and any tortoises have long ago been killed or buried. Still, because of the intense use of this area by OHV riders, I do not want the West Area to be acquired. So, in summation, I really don't want to give up any land, but I also understand that you need it to accomplish training that helps keep our nation free, so the only logical solution is compromise. My suggestion involves everyone giving something (except

for Cleghorn Lakes!). In the South Study Area, I think you should take up to the 1st section line north of Poleline Rd. In the East Study Area, I think you should take up to the 1st section line west of Amboy Road (it would zig-zag as the road curves). And in the West Study Area, I think you should take up to the 6th section line east of The Rock Pile in the JV OHV Area. (If you are still TRULY short of the needed square miles, move the boundary west by 1 or 2 section lines.) In this manner, I think you could obtain the square miles that you need without devastating any single area. Thank you for considering my comments and suggestions. Sincerely, Karen L Meyers

**Comment** My family have lived in California for 80 years, All I have see is the removal of public lands and closure of off road desert areas. Also I have seen enormous bases close and just sit there with the land not being used. Why dont you expand in an area that is NOT used by the hard working tax payers of ths country. We work and pay taxes and then our monies are used to take our preciuos lands from us. Come on, when is enough enough? The desert is huge, find someplace else.

**Date Comment Received** 4/28/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by

members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study(including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** As a man that has enjoyed the Desert and specifically the Johnson Valley all of my live it is a huge disservice to remove it from the public's access. There are fewer and fewer area in the Southern California area that provide the unique opportunities found in this area of the Mojave. While I hold the training of our Marines as a high priority I find it difficult to understand why now the need to annex such a unique area of the Southern California desert. Marines have been training for years without access to this area which is located so close to the 10 million residents of the greater Southern California area. I might suggest the Marines look at an area in Nevada, since the US Government already "owns" most all of the State. Limiting the Johnson Valley Area to the MARines is an insurmountable removal of Public lands that provide for the needs of literally millions of Californians. I am against changing the status of the Johnson Valley. I do not support the Marine Corps land acquisition and airspace establishment expansion in the Johnson Valley.

**Date Comment Received** 4/28/2011

**Response** The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for

live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. **Comment** As a frequent user of the Johnson Valley OHV area I am concerned about the level of use the Marine Corps is requesting as part of the proposed Base expansion. I think a compromise can be worked out that allows greater access that envisioned in option 6. I suggest a new option that allows the marines exclusive use of the area in November and December and full public access at other times. There is no reason why the marines should be leaving ordinance after their training sessions that would preclude continued public use. This is a multiple use area that includes military use) and it should stay that way. There is room for the marines and the public to both use the entire area and this option needs further exploration as a separate option. Thank you for considering my comment

**Comment** Hello, I am against the DOD acquiring the area known as Johnson Valley Off Road Area. It is one of the Few ORV areas of it's kind if not the ONLY area of it's kind open to off road vehicles in North America. Please reconsider and perhaps choose a different location to train our military. I do appreciate our military and the fact that they need to train, but please don't take an area that means so much to so many. There are other areas for the military to train. I travel to the area from Washington State at least twice a year to recreate with my family. Losing Johnson Valley would be truly saddening. Thank you for your time. Karl VanPetten Sultan, Washington

**Comment** I was recently contacted by a good number of friends from the southern California area regarding the expansion of the marine training area in Johnson Valley. Granted, geographically I am far removed from the subject area, but I know all too well the distress this proposition has brought to the many people who have come to endear the area. As such, I would like to briefly offer my insight on the matter on their behalf. Legal, recreational land across the country is being seized for new commercial venues, private sector expansions and, yes, government and military staging and training areas at a progressively increasing rate. I hardly oppose these actions. They are all a fundamental part of our free, capitalist way of life in America. I also very strongly support the acquisition of new and appropriate training facilities for our troops and their subsidiaries. However, I do ask that such actions be thoroughly and deliberately planned and researched before being carried out. I hate to see such beautiful and unique landscape taken away from the public and the many events hosted there when suitable lands rest in just a short distance in another direction. I know the solution is never quiet that simple, but I urge the parties involved to explore any and all suitable and appropriate alternatives.

**Date Comment Received** 4/28/2011

**Comment** As a Marine Veteran, I am the first to support our Corps and the freedom they allow us in this great country. It is the Marines and the rest of the

armed forces that allow me to enjoy my four-wheeling hobby; that being said, I join the others in the request for the Marine Corps to reconsider basing their training in Johnson Valley, home to one of our nation's best OHV areas. I live in Virginia Beach, but still enjoy watching The King Of The Hammers off-road and desert race competition in Johnson Valley and hope to compete in it someday The closure of Johnson Valley would be a detrimental loss to the recreationalist and four-wheel drive communities. I thank the Marine Corps for their service to our great country, and I pray that they might consider the desert areas surrounding Johnson Valley for the future location of their training facilities. Thank you for your time and consideration, Terry C. Underwood 3/2 Kilo Co, Wpns Plt, Assault Section 95-99|4/29/2011

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Why should this landmark of off-roading territory be held out of public access? As an off-roader myself, I have often dreamed of going to Johnson Valley and enjoying the majesty that is currently available to the public. It is one of my goals to see that this dream is fulfilled but this will only be possible if it remains open to the public. Please seek out other venues to fulfill the needs of the Marines. I am extremely grateful and in debt to the people that serve in the Marines but surely there are other locations available for training exercises.

**Comment** As an entire offroad community, we are losing more and more areas for us to enjoy our hobby. Say you were obsessed with football and had to play everyday. Now say somebody doesnt like fields, or grass for that matter, and begins destroying any and all football fields, parks, or just any open area where you could play a game of football if you wanted to. Or say you are very religious and always go to church, but somebody decided to start demolishing churches one by one; gaining more power and momentum with each one and caring less and less for the people it affects.

**Comment** Discussions within our club (Borrego 4 Wheelers) consistantly confirm to us that alternative 3 holds the best answer for the people of California. The OHV area is of great inportance to all in the off road community. Everyone from manufacturers of off road products, local business, and the family and friends who flock to this area will suffer if a closure is enacted. Johnson Valley is also home to the famous King of the Hammers race, which thousands of people consider the " World Series " of off road events. Borrego 4 Wheelers urges you to look elsewhere for the Marine Corps expansion. Steve Hart, President, Borrego 4 Wheelers

**Comment** I am opposed to any change or restritions to land use that will lower the value and enjoyment of my land in the affected area I have not seen any reports on how this will afect the local residents and famlies due to the proposed restrictions to blm land and polices. There should be a vote for the residents and busness that will be affected prior to any changes to create a

report on how this will affect the public land users and land owners all of us should be contacted the provided info from the base & county is hard to gather and understand there needs to be a contact at the county for use

**Date Comment Received** 4/29/2011

**Response** The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action. However, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I am a patriotic American who served time with the U.S. Army and I am an off- road vehicle enthusiast. I support the need for America's fighting men and women to have realistic training areas. However, I DO NOT support the acquisition of the Johnson Valley OHV area for our Marines to train. Multiple- use recreation has been constantly attacked by environmental groups, and we have been forced into ever smaller and smaller areas. Johnson Valley OHV area is THE premier OHV area in the entire country. Its closure to off-road use is unacceptable. The military has the ability to take nearly any area necessary for training'please select another area. I travel to the Johnson Valley OHV area regularly, and spend thousands of dollars in the area. When several tens of thousands of people visit the area each year for rockcrawling, mining, desert racing, motorcycle racing, and camping in the desert with their families, the impact of our use is beneficial to every community along the way when we stop to stock up on food, fuel, snacks, parts, etc. The economic impact of this closure to the nearby California communities Yucca Valley, Landers, Lucerne, Apple Valley, Hesperia, Victorville, and Barstow will be terrible. Finally, just as has happened when environmentalists have closed our trails, responsible off-

road enthusiasts are forced onto ever smaller areas, and even though we go to great lengths to Tread Lightly and minimize our impact on the environment, our impact is cumulative. The vast majority of us are patriotic supporters of our armed forces please do not take so much from some of your biggest advocates. I am in full support of a realistic training area for the Marines. I am in full opposition of using THIS area to train Marines.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

**Comment** I don't understand why this Marine Corps base needs to take the land that we use. Is there not enough desert somewhere else that they can use? We have been racing and riding for fun in this area for a long, long time now and now the Marines think that it would be ok just to take it from us. Offroad racing and riding originated right in this area that you guys are

purposing to take away from the sport. The offroad motorcycles that are made today are because of the California Desert right in this area. Japanese companies would come all the way to this area just to test their bikes on this terrain. The countless families that come to this area for family vacations will now not be able to come and do so. Tell the Marine Corps that they can do live fire tests in the parts of the desert that no one uses. Plenty of people use the are that is being taken from us.

**Comment** Its ridiculous that THEY are willing to close down a huge area of land that I grew up riding and having fun with family members for over 35 years. The impact on local stores,fast food and gas stations in that area will be huge. So lets see...close the area so the military can just come in and destroy it with tanks and mortor shells. Ther are thousands of acres of dessert on the other side of the base that is not being used..go there and leave our designated OHV area alone.

**Date Comment Received** 4/29/2011

**Comment** I believe Alternative #3 to be in the best interest of the people. Closing areas of the people's land to the people is un-American. It goes against the principals we are fighting for overseas. Too much American land has been removed from the public's use and enjoyment already. Choose alternative #3 because; The area has already been used for training by the military in the past, No impact to OHV, camping hiking and such opportunities in Johnson Valley, Less impact to local business owners Less impact to recreational opportunities Less populated Economy will be less affected Thanks,

**Comment** I SUPPORT THE MARINES PROPOSED ALT 6 EXPANSION TO FACILITATE BRIGADE LEVEL COMBINED FIRE TRAINING. I live 2 miles from the south boundary of the 29 Palms base and am familiar with Marines training. The proposed Alt 6 seems like a well thought out plan that seeks to preserve limited public use while providing an extremely important training ability. The small reduction in occasional recreational use of the area, is a very small price to pay for insuring that Marines are as well prepared as possible when they put their life in harms way to protect all of us. There should be no higher purpose for use of this land.

**Date Comment Received** 5/2/2011

**Response** The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Reviewing the air spaces around the base would really hurt the air traffic in our area. I am a glider pilot and a Private pilot. I am also a member of the 29 Soaring Club which operates at the Twentynine palms airport. With the MOA around the airport it would become very difficult to fly at the airport. For the power side of flying it will make it difficult to transition the aera to such places as Big Bear, Apple Valley, Parker, AZ, Gene, NV. just to name a few. The military aircraft won't monitor the common Frequency in the area, we as civilians sure cannot monitor their frequency, so there is mid air collision waiting to happen. As the Club flies the gliders at altitudes from the ground all the way up to 10,000 ft. This MOA is a bad idea and will make the air space more dangerous and crowded then it is already.

**Date Comment Received** 5/2/2011

**Response** Thank you for your comment. The Marine Corps is sensitive to the potential effects the airspace proposals could have on commercial, business, and general aviation activities and will seek means to accommodate those interests to the greatest extent possible while also striving to meet their flight training requirements. The airspace proposals will be examined in depth by the FAA and any measures required to mitigate impacts will be discussed with the Marine Corps, airport operators, and other aviation interests, as appropriate. The FAA outlines procedures for public use

airports within boundaries of restricted airspace, these procedures will be followed for all airspace proposals. Marine Corps representatives will continue to maintain outreach programs to the civil aviation community to discuss their aviation requirements and those options that will best serve all interest in sharing use of the Combat Center airspace. The location of your particular airstrip will be taken into consideration for boundary revisions throughout the NEPA and FAA process.

**Comment** There is no reason to expand into Johnson Valley area. The marine base already has plenty of land for training use. I believe this only to be a land/power grab and unnecessary for military training purposes. LEAVE JOHNSON VALLEY ALONE!!!!

**Date Comment Received** 5/3/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** I realize the Marines may need more space to do maneuvers, but why take the land that is being used for recreation away to the west of 29 Palms. What is wrong with the land to the east and to the north of state highway 40. There is plenty of open land out there. Besides coming west you will interfere with the economy of the town of Lucerne Valley and Apple Valley, the market, gas stations, and restaurants will all suffer from this take-over of already useful land. Do the politicians realize this or do they want to look good, and care about what is good for citizens?

**Date Comment Received** 5/3/2011

**Comment** For the past 12 years I have gone the Johnson Valley OHV area around Soggy Dry Lake many times a year to ride motorcycles, Jeep, and landsail on the dry lakes. It should be noted the sheer volume of people that recreate in the area, and thus spend money in the surrounding communities. In fact just the other day I went out with a group of friends for a short day of Jeeping, and each of us spent roughly one hundred dollars on snacks in the morning, fuel, and dinner. If the tourism to the Johnson Valley goes away, so will the economic value to the local businesses.

**Date Comment Received** 5/4/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment ID** 1491

**Last Name** Name Withheld by Request

**Comment** For over a decade I have traveled to the Johnson Valley OHV area to recreate in the beautiful terrain. Environmentalists often complain Jeeps, motorcycles, and racers destroy the land. But the Marines will be the ones who destroy the land. Tanks, guns, bombs, and tractors are what destroy the land. Just two weeks ago I was in Johnson Valley OHV and saw a tortoise. A tank would have just squished nearly every bush, flower, and tortoise in

sight. The Marines do not need as much additional training grounds as they seek.

**Date Comment Received** 5/4/2011

**Response** Thank you for your comment. The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

**Comment ID** 1492

**Last Name** Name Withheld by Request

**First Name**

**Comment** All my life I have grown up around the offroad community, I am now 19 years old and have seen and been around many offroad areas, from Johnson Valley OHV, Ivanpha Dry Lake, Glamis, Pismo, and Superior Dry Lake, and virtually every place myself, my family, or friends have run across some form of military paraphernalia in areas deemed for public use. We have seen everything from military plane wrecks, to unexploded ordinance all in public offroad areas. The Marines do not need more land, and the 10 months of open public use for the Johnson Valley will not work. Accidents happen and bombs get dropped in the wrong places. Thus the marines should not take the southern portion of Johnson Valley including the lands just north of the Hammers to the Rock Pile. This land should remain open year round as part of the Johnson Valley OHV area. This will minimize the chances of additional military paraphernalia becoming lost in public offroad areas.

**Date Comment Received** 5/4/2011

**Response** Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS). If acquired lands were transferred back to public domain, the Marine Corps would be required to comply with range closure procedures (USEPA 40 CFR Part 300),

Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Base Realignment and Closure Policies (BRAC), Reporting Hazardous Substance Activity When Selling or Transferring Federal Real Property (40 CFR Part 373), and Defense Environmental Restoration Program (DERP) (10 USC 2701).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** The vast majority of land that people recreate in is in the southern portion of Johnson Valley OHV area. Of course the Hammers are a hot spot. But so are Soggy Dry Lake and the Rock Pile. I have grown up riding motorcycles from Soggy Dry Lake. Soggy Dry Lake is in my opinion, and the opinion of many others, the last place for families to offroad and recreate in California. It is one of the few places where the region is conducive to children, with little drinking and partying occurring. Since the area is quieter than say Glamis, many children learn to ride in the Soggy Dry Lake Area. It is the perfect quiet place to teach children how to land sail, fly remote control air planes, make and launch small toy rockets, and see tortoises, which we saw just a couple weeks ago. Keep the southern portion of Johnson Valley OHV open from the Hammers to the Rock Pile for the families. Please see the attached map.

**Date Comment Received** 5/4/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding.

The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** The offroad community respects the Marines and all armed forces. But with that said, the Marines want to take far too much land. We understand you want more land to train on, but you are already the finest military in the world. So we encourage you to only take the northern portion of Johnson Valley OHV. Leave the southern portion open permanently year round with no permits. This land to the south is to remain part of the Johnson Valley OHV area. Thus the Hammers, Melville and Soggy Dry Lakes, and the Rock Pile will be open solely for recreation year round. In other words the areas with the highest levels of visitors are to remain open for use. Please see the attached map of the desired boundary myself and others feel leaves both the Marines and recreation community satisfied.

**Comment** To whom it may concern, I am submitting this email againstst the land acquistion in twenty nine palms.I grew up in this desert and continue to use this area for family vacations. As a tax paying citizen and a proud american I beleive this militay need is excessive and will have a larger impact on the surrounding cities and citizens than what the military will gain from this new training area. Thank you, Greg Saugstad

**Date Comment Received** 5/4/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** I have been around the military air space and a pilot who has navigated around the space in the 29 palms area. To date I have never seen this air space congested and in fact I have never enocountered a military aircraft near the borders of the air space. I do not understand how the aquisition of land near residential communities could be necessary. To take recreational land from a specific group of people amounts to a discrimination. It is a sad day to think this area is now so important with a administration who is bent on less military. I'm sure there are alternatives less intrusive to a specific communiuty that will definately cause financial harm to associated bussinesses. Sincerely, Randy

**Date Comment Received** 5/4/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to

establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

<b>Comment</b>	With the documents being so large, the public comment period is not long enough for many of us to take the time to go over all of the information

provided. Please extend the current public comment period by at least another 30 days. 90 days would even be better. Thank you Kurt Schneider

**Date Comment Received** 5/5/2011

**Response** Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

**Date Comment Received** 5/5/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** I am writing in regard to the US Marine Corps wanting to take land away from families like myself who enjoy the great outdoors. I have been going to the Johnson Valley area since I was a child and now take my children out to the same area. I am afraid that if the Marines take the land to play war games and the like we will no longer be able to frequent that area. Many people go to Johnson Valley because it is not quite as crowded as other locales that are of equal distance. It is truly a "family" area where parents can teach their children to ride in a safe area where people look out for one another. There are so many things to see and do at Johnson Valley that it would all be missed should that land be acquired by the Marines. I urge you to take No Action at all, or at the very least, use Option #6, but guarantee that the public will be able to use the land all year-round. Thank you in advance for your attention to my personal concern.

**Date Comment Received** 5/5/2011

**Comment** Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiler, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability As a former E-5 Sgt in the US Army, I understand the importance of training, but feel this expansion proposal oversteps reasonable bounds and is not practical in this current time of budget constraints.

**Date Comment Received** 5/5/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

I am not in support of the Marines taking anymore land for their training exercises in the Johnson Valley Region. This is everyone's land, and once it is used for military use, it will never go back to the public. That means my family and my heirs will never have access to the area to recreate. Please do not take Johnson Valley away.

**Date Comment Received** 5/5/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** Further limiting off-road areas to public access does not make sense in this current financial and troublesome environment. My family all enjoy OHV areas, but the areas are becoming lost as further and further expansion and restrictions encroach on our futures. Many of the reasons for encroachment seem dubious at best, and political at worst. It is time to consider the views of OHV enthusiasts and defer to their desires to continue use of those proposed areas. It is certainly important to me and my family.

**Date Comment Received** 5/5/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-

sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** Dear Sirs, I am writing today to again to oppose the expansion of 29 Palms Training Land/Airspace Acquisition Project into the West Section and into Johnson Valley OHV Area. I respectfully request that you only choose Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiler, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability Osama Bin Ladin is now dead. You do not need to fight in these hellhole countries anymore. I have a home in Landers just a few miles from the current western boundary of the Marine Base and I also recreate with my family and friends in the BLM Johnson Valley OHV Open Area (JVOA). The proposed expansion into this area is not at all a good idea for taxpayers. Thousands of Californians live in the Landers and Johnson Valley area and

thousands more come to relax and play, to enjoy the clean and quiet Mojave Desert. It is absolutely NOT appropriate to move your activities so close to the general public. I am especially disturbed with the potential loss of real estate value that the expansion will have on my property and that of my neighbors, not to mention the loss of the investment of millions of dollars in California Green Sticker funds to develop and maintain the Johnson Valley Open Area (JVOA). Each year, dozens of off-road events for motorcycles, ATV's, dune buggies and Jeeps are held in the JVOA and enjoyed by thousands of people who work hard all week long for a weekend of play here. This immense social benefit would be lost with the Marine's expansion into this area. Leave Johnson Valley alone.

**Date Comment Received** 5/5/2011

**Response**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action. However, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** As a patriot and an off-road enthusiast, I must urge the fine servicemen and public employees to not expand land use at Twentynine Palms base at the expense of OHV. Although I recognize the needs of the USMC, the land in question is part of a quickly depleting resource in California for OHV use. Our public lands have been rapidly removed from our use and we must protect whatever land we have left for the enjoyment of our families. Please do not expand at the expense of OHV. Thank you.  
**Date Comment Received** 5/5/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

**Comment** Keep Johnson Valley OHV area open!!!. THERE IS PLENTY OF OTHER LANDTO USE. Johnson Valley OHV area has been a tradition to many family generations of OHV destanation and everyday local getaway. PLEASE LEAVE IT ALONE

**Date Comment Received** 5/5/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008.

Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** Gentlemen, I submit these comments concerning the proposed land acquisition for the MCAGCC or MAGTF-TC. My main concern is for the Johnson Valley Off Highway Vehicle (OHV) recreation area, alternative six. As a retired Marine Infantryman (MOS 0311, 0313, 0369), with combat experience, I fully understand the value of live fire training. Fire and movement and fire and maneuver are the essence of the Corps and its successful mission accomplishment across the Globe. My family and friends use Johnson Valley OHV at least ten times throughout the year. It is the only riding area within an hour's drive of Twentynine Palms and Yucca Valley. My three children, wife and I all have ATVs that we enjoy riding in the beautiful desert of Johnson Valley. If the OHV area were to be closed, and eventually it would be closed, we would have to travel a lot further in order to go riding. With the price of fuel as high as it is that probably wouldn't happen. This will lead to the sale of all ATV's thus impacting the local economy, I would no longer have them serviced and repaired by the local shops nor would I purchase additional ridding products. Additionally, Johnson Valley is home to ΓÇ£The King of the HammersΓÇ¥ race. This event attracts teams for across the world bringing in a large volume of income during that time. I ask you to put more thought into alternative 3. Yes it will be more difficult for maneuver elements but show me a difficulty the Marine Corps can't overcome. Please consider the economic impact in these difficult times. Alternative three is my personal recommendation. Semper Fidelis Kilpatrick, Pat P. SSgt USMC (Retired)

**Comment** Thursday, May 5, 2011 Z107.7 Local News (Yucca Valley Radio Station) YUCCA VALLEY TOWN COUNCIL AGAINST MARINE BASE EXPANSION INTO JOHNSON VALLEY The Yucca Valley Town Council came out loud and strong in opposition to the Twentynine Palms Marine Corps base's plan to expand into the Johnson Valley OHV area.

Reporter Tami Roleff has the second in her two-part report... The Yucca Valley Town Council heard a report at its regular meeting Tuesday about the Marine Corps' proposed base expansion into the Johnson Valley Off-Road Vehicle area. If the expansion goes through as proposed, the Marine Corps would take more than 108,000 acres of the ORV area's 189,470 acres for its exclusive use. Only 43,000 acres or so would be available for the public to use year-round; the remaining area would be available only 10 months of the year. The popular off-road event, King of the Hammers, would be affected by the base expansion. The Council was informed that the economic impact of the base taking over the ORV land would range from \$1.5 to \$5 million, depending on whose figures you believe the Federal government's, or the Town's. In addition, if the expansion goes through, the Marine Corps would place restrictions on airspace, requiring planes to stay below 1500 feet elevation. Town Manager Mark Nuaimi and the Council agreed that the Town needs support from the entire community to fight the base expansion. "Full frontal assault... Outreach to the Chamber of Commerce, I heard legislators, business community, put it on our website, Full court press, will do." All members of the Council agreed unanimously that while they're big supporters of the military and the Marine base, they strongly object to the Marine Corps' proposed expansion into Johnson Valley.

**Comment** Please do not close our beloved arena. The terrain there is so amazing that people have heard of it world wide. Johnson valley is not only an amazing family area without the mass dangers of glamis, it is home to the king of the hammers a world wide event. I got into rock crawling so my family can all be together without a coroner or two always circling like glamis. Take it all into consideration. There is so much land around the other side. Please go there and leave our small area alone.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. **Comment** What is the purpose of the Marine Corps taking more public land? There is plenty that has already been consumed, 100,000 acres, between Fort Irwin and China Lake. I have no idea how many acres 29 palms has already consumed but there is no way they need more land our forces have already proved they are very effective in all regions worldwide, with this in mind there isn't a true need for additional lands.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** I believe that any expansion of Military land use should occur on the Mexican border. Perhaps the presence of our tanks & troops on the border would discourage the "Foreign Invasion" from illegal aliens. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. Johnson valley belongs to the people ,go find your own sand-box to play in !

**Comment** Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The great respect for our fighting men and women notwithstanding, a review of the DEIS indicates that the base expansion is based on the assumption that there is a need for three Marine Expeditionary Brigades to train simultaneously. Upon review, it appears the DOD has developed a proposal based on an outdated segregated training model. Also, questions regarding the cost of the base expansion; given budget constraints, the current fiscal crisis and ballooning national deficit; have been raised. Off-highway vehicle recreation is a very popular family activity, especially in Southern California. According to the California State Off-Highway Motor Vehicle Recreation Division (OHMVR), between 1980 and 2007 the number of registered OHVs has increased 370%.

Unfortunately, since 1980 the amount of desert lands available for this type of recreation has fallen dramatically. Due to its proximity to southern California metropolitan areas, Johnson Valley is one of the most important areas to serve this growing demand for both in-state and out- of-state visitors.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Response**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** To whom it may concern, I want to start by saying that even though I personally believe that the armed services of this country are an important asset, I also want to state that with out opportunity to enjoy this country there services are completely lost. I was at an OHV commission meeting in Hollister a few weeks ago trying to stop the closure of clear creek when We were told to recreate at on of the other parks when the crowd erupted "WHAT OTHER PARKS".. This statement is not a joke. there are very few possibly 10 parks left in California with recreational benefits like Johnson valley and every single one is facing closure for one reason or another. I also don't want to see Johnson valley turned into something like what we have here in Monterrey, a used up base falling apart and unusable by the people due to live ammo rounds left behind in the soils. Thousands of acres at fort Ord have been abandoned and are now useless. I'm tired of losing land and don't think that it is appropriate that Johnson valley be stolen without an land exchange of some sort that is equal or greater than what is being taken.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2

of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

<b>Comment</b>	My Grandpa used to work for the San Bernardino sherrifs department and was stationed here in the 1960s and my familys been here ever since. I was born here and grew up playing in Johnson Valley. Now I take my kids out in the desert to play and I want to be able to continue to do so. Hundreds of people drive by my hous to play in JV evory week and on big weekends thousands. You cant take all thous people and put them in one small area it unsafe. Way to many people play here go fast cars, rock crawlers, motercycles, and little kids on quads all need room to be safe. If you crame them all togather in one small spot people will die.

**Date Comment Received** 5/6/2011

**Response**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps also understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Dear Sir: As much as I support our military I do not support your plan to expand the 29 Palms Marine Base that will close off Johnson Valley to the public. Families need this wonderful "playground" to enjoy time together an to get out of the house an show their kids there is more to life then video games. If you want these kids to be strong an have the abilities you require of them when they decide to join the military they need a place to develop these skills. Or are you looking for a bunch of weak kneed whusie's to put on the ground in the next battle ground?!

**Date Comment Received** 5/6/2011

**Response**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson

Valley would have on increased usage in other areas and potential overcrowding.

The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** please do not take land in the direction of johnson valley. This is one of the most popular places for faily camping and recreation ans the Marines owe that to the local community to find land in another direction. Please leave Johnson Valley for future generations to share just as it is.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding.

The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** This is one more example of governmental control pretending to provide additional security. China Lake, Fort Irwin, and Twentynine Palms already control/restrict an enormous part of Southern California deserts. The bases absolutely should not take more; please reference a map of Southern California. If you can control information, money, and natural resources you can control people. "Those who trade liberty for security have neither".  
~John Adams

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** As a resident of Wonder Valley for over 30 years, I have seen a large change in the traffic on Amboy road. If the expansion took in Amboy Road, it would cause a problem for the people in Wonder Valley. Plus the fact that a lot of land in the east end of Wonder Valley (Sheephole Pass) is wilderness areas. This would be a major disruption on Amboy Road if the expansion were to come this way. Property values in Wonder Valley would drop, plus our water table could be affected. I personally have a well and I'm concerned. Also, the animal life in the Sheephole Pass area and all the wilderness areas would be affected. In my opinion, I believe Johnson Valley would be the ideal base expansion area because it would not bother home owners or the environment because it is already an off-road area. That area would give you more land to expand. I feel the people in Yucca Valley, especially the city Council, are against expansion in Johnson Valley because of the money end of it, not the personal hardships it would cause in the expansion to the east. I believe the Marines do need the expansion. The land in Johnson Valley would be a perfect solution and wouldn't affect the people in Wonder Valley. I believe the Yucca Valley City Council is wrong in their belief. They're strictly looking at the money angle, not the hardships.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. Please see Section 4.6 of the EIS for information on expected impacts to Transportation and Circulation. Under Alternative 3, significant impacts to transportation would be expected as North Amboy Road would require closure for two days per year. Under all other alternatives, impacts to Transportation and Circulation and expected to be less than significant. The Marine Corps appreciates your comment and involvement in the NEPA process.

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** I am opposed to this expansion of MCB 29 Palms. I do not think it is necessary. The U.S. military already controls vast areas of the desert south west, and although I appreciate the need for training and readiness, there currently exists sufficient controlled area to accomplish that training.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. As described in Section of 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. **Comment** The economic impact to the residents and businesses surrounding Johnson Valley will be severely impacted by the loss of OHV use by the reduction of Johnson Valley OHV area. The study in which the DEIS concludes that "the loss of revenue will be compensated by the increase in personnel during maneuvers" sic. is based on flawed and incomplete data. The EIS must correct and prove that these businesses will not be adversely affected by the withdrawal of this land from OHV use.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for

OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. My family recreates in the Johnson Valley OHV area 30+ times a year. Our favorite places to visit in Johnson Valley are Cougar Buttes and Means Dry Lake, where we engage in such activities as Camping and Motorcycle riding. When preparing for a trip, we spend \$ 100 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$ 150-200 in the Johnson Valley/Lucerne Valley/Victorville area while we are recreating. If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature.

This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter.

**Date Comment Received** 5/6/2011

**Comment** The recreating public has enjoyed the open expanses of the Johnson Valley for at least the past 50 years. This 189,000 acre open area is the largest remaining area of public land in the Western United States, and current estimates are that 800,000 to 1,000,000 visitors recreate throughout the area annually. I personally enjoy family camping and Off-Highway Vehicle (OHV) recreating, 4x4 competitions, rock hounding, hiking and wildlife viewing. Johnson Valley presents an unparalleled landscape for me, an OHV enthusiast as well as hiker, camper and event watcher in that location. Since 1980, the amount of desert lands available for off-road recreation has fallen dramatically. In fact, recent Forest Service and Bureau of Land Management (BLM) user surveys show an ever-increasing demand for these types of motorized recreational activities and areas. Johnson Valley is one of the most important areas left for serving this growing demand for both in state and out of state visitors. My family and I visit this area 6-8 or sometimes more times a year and we spend a lot of money during each trip at local restaurants, gas stations and when buying supplies. Each trip probably costs us \$300-500 dollars. Another concern of mine is that the loss of using the Johnson Valley area would cause too many OHV enthusiasts to be displaced to other areas that are smaller and overcrowding and damage could occur in those areas leading to possible future closures in those areas. I am very much concerned about our fighting forces and their training but I also believe that the training is less necessary as we should be pulling out of places like Afghanistan and Iraq and/or training in other locations. Regards, John Mathys

**Comment** Gentleman I believe that in the very near future any acquisition of said lands "Johnson Valley" will be a costly error. The bill proposed by Senator Dianne Feinstein will fail in 2011 as it did in 2010. You the Department of the Navy/United States Government surely have dominance over the lust of one Senator's grandiose plans to dominate public land. In my opinion She intends to create the Worlds most costly loss to public recreation. Reclaiming this land from the military is not necessary. I am a private pilot, and aircraft owner. I know of the airspace that is needed for your maneuvers. Flying over public land is of little objection, however do not agree that the land itself is need for ground maneuvers. This area is far more important as open recreation area that will only be realized once it is Closed to public use. If more land is needed I suggest you look in directions away from Johnson Valley. Thank You Michael McCain

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** Do not close Johnson valley from my families use  
**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** While my son and daughter were growing we frequented Johnson Valley and Stoddard Wells for camping. Now grown, when Scott returns from Australia yearly he wants to ride with dad and I usually tell him that the California desert is no longer as open as when he last visited and we may have to travel out of state or find something other than the wide open spaces to enjoy. Last year I finally went to Pismo Beach with him but that's quite a drive and not as enjoyable as our Calif deserts used to be. Please consider this land as increasingly valuable for family recreation and not closed to those who need the freedom to spend with families and friends enjoying the relaxation in this increasingly busy State

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** My family and I have an objection to the Twenty-nine Palms Training Land Acquisition Project, and to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. My family recreates in the Johnson Valley OHV area 10 times a year. Our favorite places to visit in Johnson Valley are Boone road and Giant rock , where we engage in such activities as camping with friends and family, off roading. When preparing for a trip, we spend \$ 600 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$ 500 in the

Johnson Valley/Lucerne Valley/Victorville area while we are recreating. Over the years, we have patronized the following businesses fuel station and c store in barstow, restaurant at the intersection coming down the hill into lucerne from barstow, food for less in barstow, denny's too(), among others, in the Johnson Valley/Lucerne Valley/Victorville Area: If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter. Dave Martin 702 682 5991

**Date Comment Received** 5/6/2011

**Response**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** please re-consider taking our land...its all we have left. we have been pushed out and out and out....now we stand to loose that to.

**Date Comment Received** 5/6/2011

**Response** Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** For the below reasons and many others, this land must be maintained as public access land: The recreating public has enjoyed the open expanses of the Johnson Valley for at least the past 50 years. Located in San Bernardino County, California, this 189,000 acre open area is the largest remaining area of public land in the Western United States, and current estimates are that 800,000-1,000,000 visitors recreate throughout the area annually. Activities currently enjoyed include traditional family camping and Off-Highway Vehicle (OHV) recreating, motorcycle and 4x4 competitions, rock hounding, hiking and wildlife viewing. In addition, the open landscape has made the area popular with the film industry. Johnson Valley presents an unparalleled landscape for the OHV enthusiast. It is punctuated by steep red mountains, rolling hills, open valleys, dry lakebeds and sandy washes. Elevations range from 2,300 feet at Melville Dry Lake to 4,600 feet at Hartwell Hills. The eastern boundary is shared with the Twenty-nine Palms Marine Air-Ground Combat Center. It is used for everything from competitive racing events to casual family OHV recreation, gem and mineral collecting, rocketry, land sailing and dispersed camping. No other designated "open" area in the California desert, or indeed the entire United States, provides such a variety of recreational opportunities to the general public.

**Comment** There is no reason to close of more of the California desert and designate it for other use. We already have a limited area that is protected for no good reason. The military, any branch has ample territory for training. It has been sufficient since General Patton was using the already military area of California desert and it is sufficient now. Stop the removal of our individual freedoms!!

**Date Comment Received** 5/7/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** Cooperation is the key to successful relationships. The goal should be to find common ground where each user can attain their desired goals. Many examples of military and civilian cooperation exist. One in particular here in Arizona is the Barry Goldwater Range which is open to outdoor recreation as well with some regulations and restrictions. It doesn't have to be a one-sided decision, opportunities for cooperation exist.

**Comment** My neighbors and I live in VERY close proximity to the proposed expansion. We are retired and do not have the luxury of being able to move. Expanding the Marine base into our "backyard" will ruin our quality of life and destroy what property value we have left. I have not received any mail about the proposed expansion, so I assume my neighbors haven't either. If they had, I'm sure you would be hearing from them as well. Two of my neighbors are Veterans, I know one is decorated (Silver Star), they will also be directly effected if the expansion proceeds. My wife recently passed away, my home is all I have left. I have 3 dogs that are deathly afraid of loud noises. Retirement to the peaceful quiet desert is now in extreme jeopardy. Please reconsider this expansion for the sake of us most effected. I've been told that some of the expansion plans would not effect home owners, why not select one of those alternatives? Thank you, Paul McDuell

**Date Comment Received** 5/7/2011

**Response** Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

**Comment** To Whom It May Concern: I think your idea to expand into the Johnson Valley, CA is a poor one. I am not a hardcore off-roader, but was dating one last year and had the privilege to participate in some of the major races and activities sponsored down in that area. And the people eagerly welcomed me into their community. I have seen the community the off-roading sport has cultivated, and the Johnson Valley is like the mecca of the land available to them, and there's not much land left for their use. This community offers a safe, clean, respectful environment for youth to get involved, as well as men and women of all ages, and I think they are owed our support and respect in return. We should enable, not hinder, this type of community to continue to grow and flourish.

**Comment** Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. Noise study only includes existing conditions, needs to be redone under some purposed possible scenarios and boundaries, much more work needs to be done. You have presented no real explanation of how you will keep any "dud producing" explosive ordinance out of the restricted public use area (alt 5 & 6), a new fail safe system needs to be developed to prevent miss-loading and improper release of explosive ordinance in the wrong areas. The No action alternative was not on display at the last three public meetings, those three meetings need to be held over again with the no action alternative clearly on display. Finally, given the immense size of the DEIS presented and the complexity of the issues, the public needs an extension of the public comment period in order to prepare a proper response to the impact the expansion of the base will have on the surrounding areas, especially the local economy and environment.

**Date Comment Received** 5/7/2011

**Response** Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of

the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS). If acquired lands were transferred back to public domain, the Marine Corps would be required to comply with range closure procedures (USEPA 40 CFR Part 300), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Base Realignment and Closure Policies (BRAC), Reporting Hazardous Substance Activity When Selling or Transferring Federal Real Property (40 CFR Part 373), and Defense Environmental Restoration Program (DERP) (10 USC 2701). . The No Action alternative is discussed and analyzed in relation to each subject area (please see Chapter 4 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Please see other sections of chapter 4 for information on other environmental impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered.

From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities.

My family recreates in the Johnson Valley OHV area 5-6 times a year. Our favorite places to visit in Johnson Valley are means dry lake, where we engage in such activities as ohv riding and hiking.

When preparing for a trip, we spend \$ 250-350 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$ 150 in the Johnson Valley/Lucerne Valley/Victorville area while we are recreating. Over the years, we have patronized the following businesses 241 café, local mini marts and gas stations, among others, in the Johnson Valley/Lucerne Valley/Victorville Area:

If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site.

As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative.

Thank you for taking the time to consider my comments on this important matter.

James Hicks

**Response to Comment 1591 (Page 1 of 1):**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I do not wish for the US Government to expand it's solely exclusive use of land in the Mojave Desert. The US Government owns 85% of the entire state of Nevada. That's enough for one quadrant of the country. As an avid motorcyclist and outdoorsman, I frequent the land involved in this decision and I thoroughly reject the premise that the US Military needs to expand its grip on publicly used land in the Southwest US. The single ideology that I would be supportive of involving the removal of the public from ANY more land in the Southwest US would be for the generation of energy from alternative resources (ie: solar, wind, geothermal). Other than that, the US Military has too large a stranglehold on the Southwest US as it is!!

**Comment** Please consider the economic and social impact of allowing the closure of the Johnson Valley off road area for military training. Personally I have been riding and racing in Johnson Valley since 1968. My family and I currently ride in Johnson Valley at least once a month or more. I have in the past spent two to three weeks per month riding and racing there. The continuous closing of off road areas for recreational riding has severely impacted family lifestyle we have enjoyed for over 40 years. The very least the military should do if they are intent on removing this land from public use is to trade an equal amount of land from current military holdings. NOt a good solution but makes the loss of Johnson Valley a more palatable option. Thanks for listening, Paul Crawford

As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The Draft EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiller, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability. Thank you, Joe Schuster

**Date Comment Received** 5/7/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and

sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** It was just a few years ago the environmentalist were telling us that our race area needed managing due to the tortoise and other critters. Now your telling us that 80 ton tanks are just fine, exploding ammunition is ok and that this is all in the interest of our freedoms. What good is freedom when the government takes away your fun time areas, what good is freedom when the government can just walk in and do as it pleases under the camouflage of liberty, what good is freedom when the government left hand does not know what the right hand is doing. How can dirt bikers be this environmental evil on one day, then the next day, with the environmentally correct military in the following day with its arsenal, please who B.S. who. 1. Where is the offer for other areas to be open up to the OHV racing? 2. Is going to be one for one, acre for acre? Is going to be pieced up into small area here and there? 3. You have taken Rainbow basin, now you're taking Johnson valley, why not take some of the wilderness lands? Fair is fair. This is simply not fair, it only benefits the military establishment and the people who make money off of them. Eisenhower warned us that this would happen, his words are over 60 years old and he understood that absolute power corrupts absolutely. In short, do not take Johnson valley.

This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Additionally, the amount of OHV recreation area continues to decline throughout the west while the OHV population increases. This pushes more people into smaller areas. This density creates safety concerns, more traffic on the same patch of land, and a very unpleasant family adventure/camping experience. The number of people that visit Johnson Valley is staggering. Your proposal would force these families to other already overcrowded OHV areas. Thank you for taking the time to consider my comments on this important matter.

**Comment** Your statement to explain the justification for the land grab as the need to be able to have 3 battalions conduct 72 hour training. I live in Oceanside and

today (5/7/11) you just completed the type of training exercise you describe in as impossible to do anywhere in the United States at Camp Pendleton, only 70 miles from MCAGCC. Despite the fact that MCAGCC has nearly 1000 sq. miles of land and is in a remote area the Marine Corps conducted the exercise on Pendleton a base with less than 200 sq. miles. Pendleton has a great amount of infrastructure so the training areas are proportionally much smaller than MCAGCC. It is in the middle of hundreds of thousands of people. Marines fired more than 1300 high explosive artillery rounds and over 30 rockets less than 4 miles from homes. The EPA Toxic Release Inventory proves that for every 6 rounds of artillery fired by the Marines at Pendleton and MCAGCC, 5 are fired at Camp Pendleton. Marines do not utilize the base now. Training for deployment is done at Pendleton so Marines can go home at night. Weeks will go by with no training at MCAGCC while Marines train at Camp Pendleton about 340 days a year. The noise advisory from Camp Pendleton proves this. I will be happy to provide prove of this. MCAGCC is already the largest base in the united States. The Army conducts their training of this type on a smaller base just north of MCAGCC. The fact that Marines want to take land enjoyed by millions of people to sit idle is atrocious. Local area residents will lose the use of an area that has become an important recreational area. This is akin to removing the ski area from residents of Aspen. The land also provides an important source of income for local area residents. Vehicle repair, food sales, and accommodation rentals are important sources of income for local residents. Does the Marines plan to compensate area residents? After the horrible experience perpetrated by the Marines Corps on residents in my area I can attest to the fact that the intense noise and vibration causes acute stress disorder. It is a most disruptive and invasive experience. I would not wish it on anyone. The exercise over the last three day had the Marine Corps fire over 1300 high explosive artillery rounds. We experiences 3 days of weapon discharges 24 hours a day. I have had no sleep in 3 days. This conduct is an extreme health hazard as well as a humiliation to have the sanctity of your home breached in such an awful manner. My small dog has not eaten in 3 days and shakes constantly. I invite you over to see this first hand. In conclusion there is no reason to grant the Marine Corp access to this land. The sectary of defense has stated the Marine Corp will experience a reduction and become more ship bound. "we do not need two armies", he said. "The Marines do not need this land" I say John Hack

**Date Comment Received** 5/8/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and

maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

<b>Comment</b>	To whom it may concern, Johnson Vally is one of our greatest recreational areas due to its size and variety of terrain in California. My family and I have enjoyed riding motor cycles there for over 45 years. It's wonderful to go out for a weekend and see all the people camped out and enjoying the area in their own ways. Personally I love to explore and there is a lot of that there to do. It,s too bad you couldn't make a corr adore to Fort Irwin and train with them. Sincerely Wayne Jones

**Response** Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. I am a former United States Marine and am fully sympathetic with the desire to have adequate training facilities to ensure our Marines are combat ready. However, I have been to Marine Corps facilities with vast amounts of land that sit idle and the public (you, me, and all US citizens) is denied access to. It is time for a reduction in the size and expense of our government, this includes the acquisition and continued funding of MORE (everything). Act responsibly and take the lead on reducing the crippling deficit and the mantra of "more, more, more". My family recreates in the Johnson Valley OHV area at least twice per year. Our favorite places to visit in Johnson Valley and we typically stay in Apple Valley and/or Victorville. We are motorcyclists and have been since the 1960s. When preparing for a trip, we spend hundreds of dollars on fuel, groceries, and

other supplies in our local area. Then, we spend an additional few hundred in the Johnson Valley/Lucerne Valley/Victorville area while we are recreating. Over the years, we have patronized many businesses in the Johnson Valley/Lucerne Valley/Victorville Area. If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter. Semper fi, Evan T DeWan, former Sergeant of Marines

**Response**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis.

Public comments on the Draft EIS are an important part of the decision-making process. **Comment** Please leave our desert alone. We know the military services have areas all over this country that can be used for training purposes and they do not need more. How about area 51? They claim to not have anything there. How about we get out of the middle east. Then mind our own business. lets stop trying to police the whole world. Do what needs to be done and then go home. Beside that, we are bankrupt already.

**Comment** Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiller, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability

**Date Comment Received** 5/8/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** Johnson Valley is the most awesome panoramic desert opportunity to visit and recreate. What a gain for the military if you consume all of it. What a lose for the public. I object to the land acquisition and the negative economic impact it will have on the surrounding communities. I support the 'no action' alternative. My family and I recreate 5 to 6 times per year in Johnson valley. I go there with my OHV buds 20 times per year. We camp at cougar buttes at camp rock road, the rock pile and anderson dry lake at bessimer mine road and sometime travel by ohv to boone road. We love to ride atvs and motorcycles. Over the years we usually stop off at Letty's for late lunch on the way back home to simi valley.If Johnson Valley is closed to the public then where do we ride or drive our ohv?Why expand into an area thats already useful to thousands of people per year. As written, the DEIS provides an inadequate and incomplete analysis of the projects potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent visitor to J.V. To suggest that the proposed project, including the preferred alternative, would result in anything other than significant disruptions of the local economy is misleading. This part of the DEIS must be completely revised and until such action is taken I can only support the no action alternative. How can the base be expanded when other bases are being closed due lack of monies. Thank you, Tony Nardi simi valley, ca.

**Comment** At the "open house" held at Ontario High School, the claim was repeatedly made that this site is essential to properly train our troops for fighting in Afghanistan. When asked if this means the marines are planning on staying and fighting in Afghanistan for many years if this is the main justification, a representative response was that "situations around the world are always changing, just look at the sudden events in Japan." In other words, the representatives were trying to justify the public land grab by citing any crisis in the world, regardless whether it has any relevance to the climate, type of land, etc. The argument of similarities in climate and land, particularly when they are put forth as this is the only possible site, are clearly an attempt to make up justifications for the removal of public land from the public domain.

**Comment** At the open house, one report claimed to look at effect on public use. This report detailed the exact acreage involved in each plan. This is not an acceptable report on the effect of public use. There was no data quantifying looking at questions such as what the number of people who use the land yearly?, What is the number of families?, What is the total number of people-hours?, What is the predicted effect on the user when involving the removal of a major family recreation area?, How does a successful recreation area such as this help keep kids off of drugs, out of gangs, away from urban street gangs, etc. And also there are the economic effects, both for the area and for the various industries throughout southern California. An environmental impact study should look at the public effects, the economic effects, and the psychological and sociological effects of the action, not just a bunch of land maps with acres listed.

**Date Comment Received** 5/8/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding.

The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. **Comment** My family and I use this area for offroading and family gathering several times a year. Unless this area is replaced square foot for square foot with equal riding area it will be a great loss to the community.

**Date Comment Received** 5/8/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** My Father introduced us to Johnson valley when I was a kid, Now me, friends and family take our families there atleast ten times a year. Its the only place were the kids can ride without being run down by others due to overcrowding. If johnson valley is taken from us, everybody will have to cram into smaller areas like stoddard wells, el mirage and gorman. Lucerne Valley, Hesperia will definately feel the impact, im sure there economy will suffer greatly. I believe there livelyhoods out weigh 6000 troops running around the desert. Thank You

**Date Comment Received** 5/8/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** Don't take any more of California's public land. We already have very few areas open to off-road recreation, and the Johnson Valley OHV area is one of the most popular. The people of California have already relinquished so much of our land to the Feds and the state for "protection." While not completely opposed to protecting areas as wilderness, how much is enough? The same goes for our military bases. How much is enough? People who enjoy off-road recreation are citizens, too. The land belongs to us, too! We need to share it and the Johnson Valley OHV area is a perfect compromise. The military base needs to head east. I truly hope our comments are being considered in this matter!

**Date Comment Received** 5/8/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. **Comment** The negative economic impact of closing the Johnson Valley OHV area and surrounding towns will be substantial. In a time of declining revenue, these communities cannot withstand this kind of hit. Having the base expansion head east will be a better alternative, if the expansion is needed at all. The homeowners in Johnson Valley also deserve consideration regarding this land acquisition. What about their rights! The Marine base needs to stay out of Johnson Valley!

**Date Comment Received** 5/8/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small

businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. **Comment** I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. I grew up riding motorcycles in the Lucene Valley area. It was an opportunity for our family to do something together we all loved. My Father has passed on but my Mother still lives in the area, and my brother owns property in the area. We were just speaking of how much off road riding has been taken away from us. My brothers son, just one short generation behind me, does not have the same opportunities we had as children. This is unacceptable. If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. I have recently began riding dirt bikes again and was so looking forward to taking my husband and son out to ride where I grew up and learned to ride myself. This would include spending money in the local community as many others do who currently recreate here. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others,

must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter. Marles Talli

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** Please do not close down Johnson Valley. I can not support the DEIS report as it is inaccurate and puts in jeopardy the well-being of local businesses and offroad enthusiasts state wide. I have been enjoying Johnson Valley for over twenty years with family and friends. We spend on average around \$500 dollars every trip we make there. We spend on average, six 4 day trips throughout the year. We visit a variety of local businesses for food, supplies, parts and recreational enjoyment. We ride a variety of offroad vehicles and shoot biodegradable clays for sport. The time spent at Johnson Valley OHV has been by far one of the most important activities that has bonded my family and provided for a strong moral upbringing for all those involved. If the land is removed from public access it will not only be bad for the local economy but also it will fracture the hearts and souls of the majority of us that visit and have a profound love for this recreational area. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative,"

would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter. Chris S. Holmes

**Comment** Please do not take the OHV land that I've been vacationing on all my life. OHV areas have become so limited since I was a child myself. I want my grandchildren to enjoy motorsports as I did. Johnson Valley is so close to the basin where I live that it is relatively inexpensive for us to vacation there and can be used for just a weekend trip, this means a lot since my husband's pay was cut last year. I just want my kids and grandkids to have easy vacation opportunities as we do. Gas prices just don't allow us to go further out anymore.

**Comment** I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. I visit the Johnson Valley OHV area between 16-20 times a year. Our favorite place to visit in Johnson Valley is the OHV area, where we engage in such activities as shooting and riding dirt bikes. With gas as expensive as it is, it is already difficult to find close areas to ride! Having to drive 2-3 hours from Orange County is bad enough. I hate the track. I like

to enjoy the outdoors and the quiet and peace that the desert brings you get to escape all the people and traffic and unwind. One of my favorite things about this area is that you can camp next to rock formations that provide both wind protection and beautiful surroundings. You cannot get that at Stoddard Wells or Four Corners. If you are going to take land, please take land that people don't already enjoy!!! There is plenty of it why restrict land that is being used responsibly for family recreation and also boosts the CA economy? When preparing for a trip, we spend \$ 200 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$ 100 in the Johnson Valley/Lucerne Valley/Victorville area at local gas stations and food establishments in the Johnson Valley/Lucerne Valley/Victorville Area. If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. I would probably travel south to Ocotillo Wells, which is already a heavily used area or start spending my weekends in Mexico where I am not saddled with regulations and fees like I am in CA. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is incorrect. **Comment** Please stay off our land you still have plenty of land to bomb. We need some where to play. What you are proposing is not good for the enviroment and will do way more damage than the motorcycles and atv's that ride the area

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

<b>Comment</b>	<p>I would respectfully ask the EIS to consider the "No Action" alternative to expanding the base. More and more OHV users are being squeezed in to a smaller and smaller space and this causes more wear and tear to the available land. I travel to Johnson Valley to ride off road about 6 times a year. Some times friends and family camp out there and we have a great time. Some times we stay at hotels in Apple Valley. I am sure that if this area were to be shut down or access reduced, there would be a significant negative effect to the local economy. Please choose the NO ACTION alternative. Respectfully Carlos Johnston</p>
<b>Date Comment Received</b>	5/9/2011
<b>Response</b>	<p>Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.</p> <p>The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.</p> <p>Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.</p>

**Comment** I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. My family has owned 5 acres in Johnson Valley since 1970 & we recreate in the Johnson Valley OHV area throughout the year. The third generation of family & friends are now enjoying many trips to our property for great family fun & camping which is now in jeopardy with this proposal. Many of our favorite places to visit in Johnson Valley have already been closed and designated as "Wilderness Areas" like the jeep trails into the mountains leading to "Willie Boys" gravesite which is a historic spot in the area's history. We now have been restricted into riding in the OHV open area which is getting more & more crowded due to the closing of other riding areas. When preparing for a trip, we spend \$ 500-\$1000 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$ 200-\$300 in the Johnson Valley/Lucerne Valley/Victorville area on a normal weekend trip. Over the years, we have patronized the following businesses in Pioneer Town, Landers gas stations & mini-marts, Johnson Valley Association, Yucca Valley hardware, Victorville area gas station/auto parts stores/restaurants -too many to name, among others, in the Johnson Valley/Lucerne Valley/Victorville Area. If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be little reason for my family to travel to this part of the desert and our property value would be desimated. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I

can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter.

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. In addition, the Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives and has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. Also, the arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public.

**Date Comment Received** 5/9/2011

**Response** As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the

proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

**Comment** I have used this area for the past 40 years. I have used it for camping offroading and racing. I have taken my family out and would like to see it still available for my grand children to use and enjoy. If this is taken away from us it will have a very negitive impact economicly on several companies that make thier living on motorcycle and jeep accesories. As if we need any more unemployment. I realy like to see that this area to stay open for future generations.

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** i have been riding and racing Johnson Valley since the late 70's. since the land was established as an ohv area I assumed it would be there for future generations of offroaders.Now that the recreational lands are getting squeezed into ever smaller areas it almost looks like the possible end to a sport that my family and I have loved doing for years.It would be nice if other areas not designated for ohv were considered.

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment** I have been off road motorcycling in Johnson Valley since 1985. I fully support the need to train our Marines but also believe that the Johnson Valley Off Road Vehicle riding area is essential to Southern California. As I am sure you are aware the areas in Southern California for people to recreate with off road vehicles has been shrinking year after year since I started riding in California. Many of the areas that are left have already been reduced in size. Most of the areas have become too small to be able to hold off road riding events for large groups of people. Such as races and organized charity rides. I am a member of Ventura County Motorcycle Club where we have participated in putting on many events in Johnson Valley over the years. Taking Johnson Valley Off Road Vehicle riding area is just not acceptable for any reason. There is no replacement land in Southern California and the answer being provided is tough luck. This is a large community of law abiding recreationist trying to use what little land we

have left for our events. But for the marines there are alternatives. Since they seem to be looking for areas to do this practice for just a couple of months a year I would think there are federal lands they could use that are just as suitable as Johnson Valley. I just look north to the neighboring state of Nevada where there is the Nevada Test Site and the Nevada Testing and Training Range. I believe that the Marines could carve out time at these sites to do this kind of training and have enough land to do it in. I would have to believe the air rights for restricted flight has already been arranged with the FAA. I also believe that this area also offers almost identical terrain to the Johnson Valley area. It also offers similar temperate elevations, and humidity. From owning vacation homes in Henderson NV I know the Air Force also hold major training events a couple of times a year out there. It does seem that the two forces could coordinate training schedules so they can both independently conduct large scale training exercises on this land in Nevada. This is just one out of the box solution and I am sure there are many more. It seems that the Marines want their own very large testing area that they only use part time for major training. And yet the Air Force has it's own very large testing area it also only uses part time for major training. Sharing makes the most sense all away around and the only way it does not make sense is if the Maries feel slighted because they have to use an Air Force Base to conduct their training. One way to solve that is make the Nevada Test Range a joint Air force and Marine test facility not only in use but also in running the facility.

**Comment** Given the Alternatives presented, I strongly support the "No Action" alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that

is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public.. There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiller, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability.

**Date Comment Received** 5/9/2011

**Response**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of

the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. As discussed in Section 2.7 of the

EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** I've got two concerns dealing with the land acquisition the Marine Corps has proposed. My first concern deals with the off road community. I'm sure those who will make the final decision have heard this, but it truly is a concern of mine. When the government passed the Desert Protection Act, they closed off a very large area of the California Mojave to the off road community. The largest area to ride off road is Johnson Valley. The land acquisition will basically cut this area in half. In doing this, the remaining land will become even more saturated resulting in an overuse of the remaining trails. Our current elected officials have said there will not be any other land opened to off roaders. At this point, I feel the off road community has done nothing but give (or have taken away), with nothing returned. My second concern comes as a land owner. My family owns twenty acres within two miles of Johnson Valley OHV. We've had enough problems with the local unique characters (trespassing, break ins, property stolen, even squatters) of Lucerne Valley. I have a very real concern for what would become of our property if (when) the land acquisition occurs. With Johnson Valley being so large, the only real traffic we see from off roaders are those riding towards Stoddard Valley. With more traffic, I'm concerned with those who may see our property and see what we have. There are those in every community (not just off-road) who will break in and take what they want. We've had this problem when squatters neighboring on neighboring properties would have friends over, and I'm afraid it will be even worse with more traffic near our property.

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The

EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

**Comment** As a recreationalist I have spent many years visiting Johnson Valley. It was used by the military for training many years ago and subsequently managed as BLM land. The areas in question are instrumental in the development of skills and memories for our children and thier children to come. The area has a diversity of terrain that is used by off highway and motorcycle users as well as campers and hikers. Please keep this area as it cureently is. Allow the public to continue using this are as we are continously losing our public lands to a diversity of interests. Respectfully, David Chick

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact

to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** The DEIS for 29 Palms is severely flawed for reasons below that violate the NEPA process, It should be retracted, redone, and resubmitted. The only alternative I could support at this time would be "No Action". 1) By law NEPA requires a reasonable range of alternatives which the Corps has purposely NOT provided. 2) There is no creditable justification for the requiring simultaneous training of 3 MEBs given the present and anticipated world-wide need for combat capability of this type at this level. 3) It is very damaging and counterproductive not to use the nearby Army facility at Ft. Irwin. One of your officers has been publicly quoted that the Corps prides itself in NOT cooperating with the other services. As a retired Army officer (COL), I find this very offensive, and as an American taxpayer UNacceptable.

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the

range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

**Comment** As a resident of the High Desert, I am concerned about the consequences that will directly result as a cause of selling off desert land to the Marines or other military branches. I enjoy hiking on the weekends to Lucerne Valley, Johnson Valley, Yucca Valley, and Joshua Tree National Park freely with my hounds. This land is rich in not only ancient Indian petroglyphs but also in geographical sites and minerals. By turning this land over for private use for the military, residents are risking losing their rights to their own backyard. The High Desert makes a lot of it's income thanks to tourist who come to find peace and refuge from everyday city life as well as seek fun on their motorbikes. If we give up this land mass, we are risking economic trauma. Also the debris caused by military set off is not something too suitable for desert wildlife. The desert tortoise is at risk of extinction and if the citizens don't protect them who will? The military won't- that's for certain. This land is my land as well as it is my neighbors and fellow wildlife. Don't destroy the natural beauty and serenity of our desert ecosystem by exploiting it with missiles and gunfire.

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and

direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. **Comment** I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. My family recreates in the Johnson Valley OHV area 2 times a year, where we engage in Or-road motorcycling. When preparing for a trip, we spend \$400 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$250 in the Johnson Valley/Lucerne Valley/Victorville area while we are recreating. Over the years, we have patronized the following businesses (names of business), among others, in the Johnson Valley/Lucerne Valley/Victorville Area: If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter. Respectfully, Scott Dinslage

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for

OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis.

Public comments on the Draft EIS are an important part of the decision-making process. **Comment** It will be very sad day if the land that grew up on riding with my father family and friends. My grandfather first took my dad there when he was young now he takes me. Why this part of the desert, when desert land is so vast across California, Arizona, New Mexico ect. What about the local economies of Lucerne Valley, Apple Valley Victorville and Hesperia. Our riding season starts in September through May and we normally make at least 10 trips to Johnson Valley and every time we buy groceries at the Stater Bros. IN HESPERIA. We also stop to eat, get gas, buy supplies and

other various stuff in town, on the way to Johnson Valley, just like thousands of others. I just dont understand why so much land is needed, how much training can there possibly be in the desert and what the enviroment so much for saving turtles.

**Date Comment Received** 5/9/2011

**Response**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I DO NOT SUPPORT taking any area from the Johnson Valley OHV area for expanding the Marine base or any other reason. I do support the Marines and if they need more land then we should open current wilderness areas or wilderness study areas for the marines use. Off-highway vehicle users have been "crammed" into the Johnson Valley area after decades of Wilderness designation, administrative closures, and lawsuits that closed millions of acres of the California desert. ALL this area needs to remain open open to OHV use, all the time. More public land needs to be open to the public and ohv use, not less.

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Please don't take over Johnson Valley. We have so little already out there. Perhaps the base can go to a different area? Thank you for fighting for our country and making it possible to enjoy our sport!!!

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did

not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I would not like to see any of the Johnson Valley area closed to public use permanently. We go there with our jeep and it is great fun to explore. If closed we would not be able to do that. We also enjoy the area known as the Hammers in the Courgar Buttes area. There are many other trails too. We also go motorcycle riding out off Bessemer Mine Rd. We have gone to many off road & motorcycle races which bring out many people. I feel that these activities are good family fun and help the economy in the High Desert area. Lucerne Valley and several areas benefit from riders and off road enthusiasts stopping to purchase goods or eat at local businesses. There are too many areas being closed to public use. I would like to see the Marines go a different direction and leave Johnson Valley open 100% 12 months a year. East would be a good direction. I understand it is a wilderness area but you can use it for your 2 months and 10 months it can be wilderness again. I also believe that it would be possible to share the Johnson Valley area if 100% is available 10 months out of the year while exercises are not being done. I don't think it is fair to close the area as Alternative 6 suggests. That takes away too much! Thank you.

**Date Comment Received** 5/9/2011

**Comment** Did I mention that I really do appreciate the Marines and all the military who are keeping us safe. We do. But I do not think that closing off most of Johnson Valley is wise. I think that too many people enjoy that area for off roading activities and plain family fun. It brings money to the high desert communities. If they have to go elsewhere we lose those dollars. Or people just won't go and no one gets the dollars that would otherwise be spent. Keeping Johnson Valley open 100% 12 months a year would be great. Or at least 100% for 10 months of the year. Thank you.

**Date Comment Received** 5/9/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** Please don't shrink our favorite recreation areas anymore so future generations can recreate there. Also there is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiler, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services."

**Date Comment Received** 5/10/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current

recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air- Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB- sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Dear US Military Representative, Although I am an extremely supportive of the United States Military, I am concerned about this loss of land for outdoor recreation. I do believe "we" should increase our military training operations, and thus require additional lands to do so, we need to make sure and offset this reduction in public access properties with new venues. Outdoor recreation, motorized and non-motorized, is a critical family activity throughout the United States. We truly are required to maintain these areas of public access, and should keep this a #1 priority. Please have due diligence in providing additional public outdoor recreation lands, if these lands are reallocated for military use, even if it is necessary to acquiring them in surrounding areas. Outdoor recreation is an important mainstay of the US people. Thank you for your review of my letter.

**Date Comment Received** 5/10/2011

**Response** Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Date Comment Received** 5/10/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** The American Motorcyclist Association (AMA) is encouraging riders to submit their comments regarding the Marine Corps Air Ground Combat Center proposed base expansion. This proposed enlargement of the facility could restrict your ability to access the Johnson Valley Off-Highway Vehicle Recreation Area. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. Thank You MIKE :-)

**Date Comment Received** 5/10/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. **Comment** My friends and family have been enjoying the area for 50+ years. As the available lands for off road decrease, there is detrimental effects on family life, the local economy and the overall economy. While I am not familiar with the exact needs of the military, I believe that most of the land will be closed to public use with only a small portion actually used by the military. Is there not enough acreage available now for the exercises? And, my other concern is the cost to the taxpayer if the area is to be maintained by the govt for very little ueage.

**Date Comment Received** 5/10/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under

alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

Public comments on the Draft EIS are an important part of the decision-making process. **Comment** To whom it may concern, I have ridden and raced in the Johnson Valley for over the past 20 to 30 years. I have family that go there at least 2 to 3 times a year and friends that attend all the different motorcycle races put on there every year. To lose this OHV area would be detrimental to the many people who recreate in this area on a weekly and yearly basis. Plus the money that is spent can be in the thousands per month to do what they love. With all the land that is locked up every year there will come a point that there is not going to be enough land to support all the people that enjoy recreating this way. This will cause a heavier burden on adjacent states and areas that are off limits to OHV users. If you have 800,000 to 1,000,000 people using this area currently, Where are they going to go if this area is closed down? I have lived in Nevada my whole life and with all the closures that have occurred in California over the last 10 years have caused a heavy influx of OHV users to the areas I have ridden in my whole life. This would be the case for sure on all adjacent States if this area is closed down. Pretty soon the other States will not be able to handle this influx. I am very supportive of our Marines and having them trained sufficiently to protect us at all times, so we can have our freedom! But how much land do they need, There are many training facilities in the U.S. that can accommodate all our service personnel and adding this land to there already existing acreage is unnecessary. We need Johnson Valley for the outdoor enthusiast so please take into consideration my comments. Thank You for your time and letting me voice my opinion on this matter. Kevin A. Brown

**Date Comment Received** 5/10/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land

would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

<b>Comment</b>	Dont close Johnson valley, me and my family have been going there since I was 2 years old, we are running out of places to ride. It kept me out of troulbe as a kid letting out my frustration out on my bike. It releases all my stress and lets me spend time with the family out in the quiet desert. I teach my kids to take back what you brought out and to pick up any other trash if we see it. My kids keep up their grades or else they dont ride, it is very motivational tool it worked for me and also works for my kids.

**Comment** The State of California and the Federal Govt. have enough land that they cannot maintain right now. The Johnson Valley is another in a long list of unneeded and misused PUBLIC LAND. It is a joke that they would want to take over control of another 200,000 acres when they can't afford to clean the toilets in State and Federal parks right now. As a taxpayer as well as an outdoor recreationalist who enjoys taking my family to areas that have Dry Camp camping and not just little spaces (Cookie cutter) type sites. With the economy in the condition of near bankruptcy we need areas such as these to bring much needed dollars for the economy. Please consider removing this site from the govt. lists of already failed acquisitions. We the people don't need the Govt. taking more of our public land for their misuse and abuse.

**Comment** Gentlemen, I submit these comments concerning the proposed land acquisition for the MCAGCC or MAGTF-TC. My main concern is for the Johnson Valley Off Highway Vehicle (OHV) recreation area, alternative six. As a retired Marine Infantryman (MOS 0311, 0313, 0369), with combat experience, I fully understand the value of live fire training. Fire and movement and fire and maneuver are the essence of the Corps and its successful mission accomplishment across the Globe. My family and friends use Johnson Valley OHV at least ten times throughout the year. It is the only riding area within an hour's drive of Twentynine Palms and Yucca Valley. My three children, wife and I all have ATVs that we enjoy riding in the beautiful desert of Johnson Valley. If the OHV area were to be closed, and eventually it would be closed, we would have to travel a lot further in order to go riding. With the price of fuel as high as it is that probably wouldn't happen. This will lead to the sale of all ATV's thus impacting the local economy, I would no longer have them serviced and repaired by the local shops nor would I purchase additional ridding products. Additionally, Johnson Valley is home to "The King of the Hammers" race. This event attracts teams for across the world bringing in a large volume of income during that time. I ask you to put more thought into alternative 3. Yes it will be more difficult for maneuver elements but show me a

difficulty the Marine Corps can't overcome. Please consider the economic impact in these difficult times. Alternative three is my personal recommendation. Semper Fidelis Kilpatrick, Pat P. SSgt USMC (Retired)

**Date Comment Received** 5/11/2011

**Response**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects

of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** Johnson Valley represents an increasingly rare resource- a place for people to enjoy our public lands. There are many opportunities for non-motorized recreation throughout California and the West, but an ever dwindling number of places for responsible recreation.

**Date Comment Received** 5/11/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

**Comment** If we need to expand the military base and take away what little riding area we have left for us, we should be granted back one of our other riding areas that were previously removed from our access. People mention our trails cause environmental damage and deep ruts, the 20 years I've been riding, the trails I ride on are at the same level as the ground next to them. I don't see how we're destroying the ground we're riding on. The biggest issue is that we should keep the trails open and free for firefighters to fight forest fire.

**Date Comment Received** 5/11/2011

**Response** Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** To Whom it may concern, Please do not take Johnson Valley from the public. It is an area used by thousands to recreate and vacation with their families, as well as an attraction to maintain and finance the local communities in the surrounding area. I spend as many as 20 weekends a year in Johnson Valley and I can't imagine a place on earth that could replace it. The loss of Johnson Valley means that I would have to drive almost 100 more miles on the weekend to participate in my hobby. I can't afford to do that. Thank you, Mike Vinson

**Date Comment Received** 5/11/2011

**Comment** I have been using the Johnson Valley area for Off Road motorcycle riding since 1974. The attempt to take this land away from the people is nothing but wrong. Given the Alternatives presented by the military, I strongly support the "No Action" alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiller, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not

really very well with the other services." Once again I urge the selection of "No Action" and preserving this land for the OHV area.

**Date Comment Received** 5/11/2011

**Comment** To whom it may concern. Johnson valley is a unique area that would be a great loss to the OHV community if closed to public use. I suggest a compromise where training would be done on public land (johnson valley) and leave the live fire training to existing military only land. The area is large enough to be shared, it could be a good oportunity for good P.R. and recruiting. Additionally land use is already a huge battle for responsible OHV users. Land encroachment from development, actual and supposed enviromental issues and the fact that "closures" are the only thing that are happening for us. There are no new local OHV areas and I fear there will not be any. This is a non expendable resource. It helps supports the locally economy and all the companies that sell to ohv users. I hope My compromise is considered. I feel it may give all parties affected what they need with giving up very little. Thank you for your time, Sebastian Draeger

**Date Comment Received** 5/11/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. My family recreates in the Johnson Valley OHV area ter 15 times a year. Our favorite places to visit in Johnson Valley are Anderson Dry Lake, Means Dry Lake and Soggy Dry Lake, where we engage in such activities as Desert and Enduro Motorcycle racing. When preparing for a trip, we spend \$300 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$300 in the Johnson Valley/Lucerne Valley/Victorville area while we are recreating. Over the years, we have

patronized the following businesses Lucerne Valley Market, Burger Depot, and the Y Cafe, among others, in the Johnson Valley/Lucerne Valley/Victorville Area: If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long- standing visitor (over 34 years) to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter. Peter Postel

**Date Comment Received** 5/11/2011

**Response**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public. The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability. The DOD proposal would significantly disrupt OHV use in the popular

Johnson Valley OHV Area. Many off-highway enthusiasts feel conflicted on this issue; on one hand they support the US Military and understand the economic importance of the Twentynine Palms base to adjacent communities. On the other hand, off-highway vehicle users have, over the years, been "crammed" into the Johnson Valley area after decades of Wilderness designation, administrative closures, and lawsuits that closed millions of acres of the California desert. The great respect for our fighting men and women notwithstanding, a review of the DEIS indicates that the base expansion is based on the assumption that there is a need for three Marine Expeditionary Brigades to train simultaneously. Upon review, it appears the DOD has developed a proposal based on an outdated segregated training model. Also, questions regarding the cost of the base expansion; given budget constraints, the current fiscal crisis and ballooning national deficit; have been raised. Off-highway vehicle recreation is a very popular family activity, especially in Southern California. According to the California State Off-Highway Motor Vehicle Recreation Division (OHMVR), between 1980 and 2007 the number of registered OHVs has increased 370%. Unfortunately, since 1980 the amount of desert lands available for this type of recreation has fallen dramatically. Due to its proximity to southern California metropolitan areas, Johnson Valley is one of the most important areas to serve this growing demand for both in-state and out-of-state visitors.

**Date Comment Received** 5/12/2011

**Response**

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the

proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live- fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

<b>Comment</b>	The annexation of Johnson Valley would be of tremendous impact to the OHV community and lifestyle, not to mention the economic impact of the industry....many of whom are based and test products in the valley. Recreation areas being closed or limited will force more people into less areas, causing more negative impact from an environmental aspect...not to mention impact. There are alternatives to this expansion and taking land that is responsibly used and enjoyed is irresponsible...both fiscally and environmentally. Don't take what is rightfully used by the people...for the people....
<b>Date Comment Received</b>	5/12/2011
<b>Response</b>	Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and

direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

<b>Response</b>	Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** I'm 58 yrs old and ride my quad in JV OHV with friends from work. Usually our numbers are from 4 or 5 of us to 18-20. We are respectful of our land and we don't trash it. JV OHV is a family-oriented area that has been used by generations of off-roaders. I am looking forward to the day my 3 year old twin grandkids can start riding there. The area is very diverse with something for all off-roaders. To say that 2/3rds of it needs to be taken over by the Army due to the Afghanistan war is not justified, since we will be eventually pulling out of there. The army has enough of OUR land to train. Our off-roading supports thousands of jobs in both mechanical repair, parts, and clothing. It also supports the local economies of the areas we visit

via gasoline and food. We are getting squeezed out more and more from open areas. I support our military, but enough is enough!

**Date Comment Received** 5/14/2011

**Response**

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** I would like to see the expansion, if any at all, of the Marine Base if any go towards the east of the existing base. My family and friends visit the Johnson Valley area for recreational purposes numerous times a year. My boy has learned many skills while camping/riding in this area. To lose this area of open desert for use by the public would be devastating economically for the local businesses. Much of their local economy counts on the business brought in by the people visiting for the local recreational opportunities.

**Date Comment Received** 5/15/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on

limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Given the Alternatives presented, I strongly support the "No Action" alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiller, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability

**Date Comment Received** 5/15/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air- Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB- sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment** I respectfully submit that the Johnson Valley OHV area remain open to public access indefinitely, without limitation. Johnson Valley OHV is a jewel of the OHV community and has been enjoyed for generations and should be accessible for generations to come. I believe the offroad community has less of an environmental impact than any military operation conducted in the area. I also believe that our community should not agree to share the area with the U.S. Marine Corp because I believe the Marine Corp will determine that more training time will be needed to conduct exercises

in Johnson Valley OHV and our right to access the land will be gone. Therefore, I petition to opt for No Action- ( No New Land). I respect the U.S. Armed Forces and all service members for their sacrifice to uphold our freedom at home. We have the most powerful military force in the world. Surely our forces can maintain this strength without encroaching onto Johnson Valley OHV. Sincerely submitted,

**Date Comment Received** 5/15/2011

**Response** Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

**Comment** I purchased my home in Landers Ca. in 1999 to have access to the large open BLM offroading area. My family uses this vast and diverse desert riding park every week. We support many local businesses including the local government via state and local taxes. The offroading community in this area keeps in touch and supports each other. In light of the governments spending cutbacks to reduce the deficit, and the scaling back of some of our military presence maybe it would be wise to use the existing base lands and combine it with the Fort Irwin Area. Thanks Steve Kuljis

**Date Comment Received** 5/15/2011

**Response** Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** It has never made sense to me why we need to have additional training grounds, when we fought too many wars using the grounds we have now. Defense Secretary Robert Gates has even commented it would not be wise to send in massive troops to the Middle East. Massive troops will never work yet we keep practicing old war maneuvers. We now have unmanned drones that will take out tanks and other larger weaponry. Therefore, why take Johnson Valley from the people who truly enjoy and need this area as a place to escape from every day pressures. I feel it would be a great shame on our County to take this land away from the people who need it the most our ordinary citizens.

**Comment** I am strongly against the military taking the public-use land west of USMCB, 29 Palms, California. In this day where the government has several inactive and under-utilized bases, and is constantly threatening closing more, I don't agree that it is appropriate or even reasonable to take public-use land that serves so many purposes for the surrounding area. The public use of this area not only gives a wide region of tax-paying citizens a place to go for safe, affordable recreation; but their activities there and in route provide much-needed financial support to the surrounding area. In

many cases, the indirect income generated from the users of this area is the only support of an otherwise poor area; and in other cases, the related revenue is what makes the difference between keeping a regional business alive, and causing it to close. This is not an affluent area, and sometimes even a little income is just enough to keep things going. I have read statements saying that some of the area will only be "closed sometimes"; but I don't believe that temporary closures will really be temporary in the long-term. History has proven that once land, such as this, is taken from public use, the guidelines for its use change to where it is more easily taken on a permanent basis. I am also concerned about the other effects of having military maneuvers so close to Lucerne Valley. These concerns include issues related to noise, percussion, stray arms fire, unexploded munitions, just to name a few. While this area is a common playground for off-roaders, it is far more. It is a place for affordable camping, hiking, other out-door recreation; it is a broad area for Amateur Radio antenna and propagation experimentation; it is a sanctuary for various forms of wild-life; and it is a site for many historical mines. These days, there are so few off-road areas; and their numbers and sizes are being reduced all the time. Please don't take yet another one from the tax-paying citizens.

**Comment** The ever dwindling public spaces are troubling, so is the state of warfare. It doesn't look like war is solving any problems at all. It actually seems like the U.S. presence globally is creating more enemies. So you want us to give up the very freedoms that define us as Americans? The Iconic American west is a National Heritage, a birthright. But just like our civil rights under the patriot act, the Govt. wants to take away something that was assured to us as Americans with some pretext of it being for our own protection? Sounds like BS to me. I fully oppose the las. Sounds like B.S. to me

**Date Comment Received** 5/17/2011

**Comment** According to the DEIS, on page 1-5 in Chapter one, purpose and need, it clearly states that one main task is to identify MEB training requirements, and that "The findings of this effort were published in a January 2004 report entitled MEB Training Exercise Study: Identifying MEB Training Requirements (Center for Naval Analyses 2004b)." In examining the January 2004 report, I have found this: "We used MEB 2015 [1] to shape our analysis. Key MEB 2015 characteristics include three battalion task forces, (two of which move via surface lift and one by vertical lift), three Joint Strike Fighter (JSF) squadrons, and a brigade service support group. Total manning for this MEB is about 17,000 to 20,000 Marines." Basically the DEIS says that the reason for 29 Palms expanding is to be able to train three battalion task forces. However, on April 15th, 2011, General James F. Amos, Commandant of the Marine Corps spoke at the Fletcher Luncheon. His remarks in full can be seen here: <http://www.marines.mil/unit/hqmc/cmc/Documents/110415%20--%20Fletcher%20Conference%20Corrected.pdf> In speaking about future military actions and where the Marines are going to operate once we come out of Afghanistan, he explained the "arc of instability." It is within this arc of instability that the Marines will most likely be engaging the enemy. These areas will be our future battlefields over the next two decades. In speaking about this arc of instability, General Amos says: "But we see that's probably what the world is going to look like for the next two decades. A lot more information there, but we think that's going to be our backyard because this is primarily the littorals, because these are kind of the nasty missions and things that, quite honestly, don't require 20,000 Marines on the ground." If the future operations of the Marine Corps, according to the Commandant of the Marine Corps himself, are NOT going to require 20,000 Marines on the ground, then why are we expanding 29 Palms to train a MEB from about 17,00 to 20,000 Marines? We have been told that 29 Palms must "Train as we fight." If this is true, then expanding 29 Palms will not be training as you fight in that future campaigns will be much smaller and not to the scale of campaigns like Afghanistan.

**Date Comment Received** 5/17/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task

forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I am hoping that there is no expansion of the 20 Palms BAse into the Jonson Valley area. My family has become fond of the area and purchased real estate in the area. We use it as ORV play and family get-togethers. We used to go to Anza Borrego, but increased motor vehicle laws have forced us out-everyone doesn't have street legal vehicles. And Ocotillo Wells is just too crazy. We have come to love the area near Giant Rock/Emerson Dry Lake all the way to Lucerne and up to Big Bear too. We can get to most of these areas on our OHV. Don't take this land away from us. Thank you, Martin.

**Date Comment Received** 5/17/2011

**Comment** The following quote is from General Amos' Opening Statement before the Senate Armed Services Committee on Tuesday, March 8th 2011 "Lastly, you have my promise that in these challenging times ahead, the Marine Corps will only ask for what it needs, not what it might want. We will make the hard decisions before coming to Congress and we will redouble our efforts toward our traditional ~culture of frugality" In a previous comment that I have submitted on the DEIS, I outlined how General Amos also stated that the Marine corps will be down sizing, and that also MEB's manning 17,000 to 20,000 troops will not be needed in the future, smaller campaigns in the "Arc of Stability" once we are out of Afganistan. If the Marine Corps will only be asking for what it NEEDS, then there is no reason for the Marine Corps to exapand 29 Palms in order to train 3 MEB's at once. Therefore: the entire DEIS needs to be thrown out as it is based on the proposed "needs" of the Marine Corps from six years ago.

**Date Comment Received** 5/17/2011

<b>Comment</b>	29 Palms has plenty of land for training! I am a former Marine and motorcycle rider who rides west and north of the base. I have friends who own property in Johnson Valley solely for the purpose of off-roading. We are there several times a month and have spent thousands of dollars in the Yucca/Johnson Valley area. Our contribution to the local economy would

stop if the base expands and I doubt that our national security would suffer if the base did not expand!

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** I would like to keep Johnson Valley OHV area open to the public to enjoy. Having these OHV areas available keep people from riding illegally on private lands. The land now open to public use is shrinking and this would be a huge loss for the families who enjoy and use this land responsibly. I support our armed forces but hope they choose an area east of the base.

**Date Comment Received** 5/17/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by

members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I am just one of many people who live in landers and own a home. It is not a rich or fancy and big house, but we love living in our area. We hear and see many times the bombing, explosion and fire bombs go off from the base and shake up our little house and wonder every time if it will destroy our house. We love living in the quiet desert and enjoy the beautiful scenery, but do not enjoy the damage that is happening to our house because the Marine base is always bombing our little desert we live in.

**Date Comment Received** 5/17/2011

**Response** Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

**Comment** For many years my children and grandchildren have enjoyed riding motorcycles, jeeping, and land sailing around the Soggy Dry Lake area. From Soggy Dry Lake they ride out to the areas further away such as the

northern petroglyphs, and the Rock Pile. Please keep all of the land from Emmerson Dry Lake to the Rock Pile open year round for families like ours to recreate in. If you still need more land go north or east of the current base, but leave the southern land to the public. Recreation in Johnson Valley has a huge impact on Southern California businesses, keep the Johnson Valley area open for recreation, otherwise local businesses will need to close their doors. Johnson Valley is a place to recreate in, not to bomb and kill everything from spring flowers to the many tortioses in the region. You may feel you need more land, but you are seeking far too much!

**Date Comment Received** 5/17/2011

**Response**

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** I own a home in Johnson Valley and have used the Johnson Valley area for Recreation for over 30 years. With all the development activities and environmentalists grabbing open area, Johnson Valley is one of the few remaining places to enjoy outdoor recreation. It is hard to imagine that the size of the base is inadequate. It is a vast area already. The Military is managing now with the current base size, and our Military is spread out about as thin as they could possibly be all around the world. Please let the thousands of people who enjoy the Recreation that Johnson Valley has to offer continue to do so. Thank you.

**Date Comment Received** 5/17/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while

also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** My family and I use the Johnson Valley OHV area extensively since it is a short 30 drive from our home. We hike, explore the mining areas, ride our motorcycles, drive 4X4's, and go wildflower watching in this area. I know adequate training area must be of utmost importance in the preparation of US Marines but I would ask that if there is a possibility of expanding eastward instead of westward then that would be an ideal alternative instead. I apologize that I do not know of the issues that the US Marine Corp would face by expanding eastward but that would save the Johnson Valley area for the continued enjoyment of my family and friends. Thank you for taking the time to consider this request.

**Date Comment Received** 5/17/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. **Comment** As much as I am a huge supporter of our military, I am also a huge supporter of PUBLIC LANDS and their access. The Feds. and the State have been taking our OHV land away for years and it's time that it stops now. The option would be that we trade you Johnson Valley for an equal amount of recreational land in the back country at Pendleton or the Marines just expand eastward.

**Date Comment Received** 5/18/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. **Comment** As a land owner, tax payer and public land user, I am against the expansion of the Twenty Nine Palms Marine Base. The military is in contraction and the Federal Government is deep financial crisis. It is an unnecessary federal expenditure which will have dire fiscal repercussions for the Johnson Valley Area. Not only will it impact the number of dollars brought into the area by the users of the public land, it will lower my property value (lower property taxes). I would rather see my tax dollars that are used for the military spent on supplying our troops with better weapons and more pay. I use the land in the expansion area. The expansion will also impact my enjoyment of my public land (I pay both local property tax and federal income tax). I implore you to reject the plan to allow the Marine base to expand

**Date Comment Received** 5/18/2011

**Response** Thank you for your comment. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** I think it would be huge mistake for the U.S. Marine Corps to take away the the land at Johnson Valley from the public. Their are thousands of us in the OHV community that use Johnson Valley and since it is one of the MAIN areas to go it would be a tragedy to lose it. We in the OHV community have been slowly losing our riding areas and the more places that get closed down the more unsafe it becomes for us because there are aolt more of us, including small children that are out there with their families, in smaller and smaller areas. My family & friends have been going to Johnson Valley for many years and it would be a shame to see it go.

**Date Comment Received** 5/18/2011

**Comment** I love my off road activities in Johnson Valley. I also have major support the Military, more than our government at times. However to take away a major area of public land and ignore the consciences is just dumb. The DEIS is simply incomplete and wrong in assuming local communities will survive without the thousands of offroaders spending money in those communities. My family visits Johnson Valley at least 10 times a year, if not more, for the last 30 years. Soggy dry lake and Means Dry Lake are our favorite places to camp. Riding to the dunes around Means or the technical trails northeast of Soggy is what we like best. In fact, I just had my bachelor party at Soggy. I hope The Marines refrain from closing a great recreation area to the public. I could only support NO ACTION alternative to continue public recreation in Johnson Valley and to avoid economic impacts in the surrounding communities.

**Last Name** NIBLACK

**First Name** PHILLIP

**Comment** My name is Phillip Niblack and I am a business owner in the Inland Empire region and also an avid off road enthusiast. My family and I have been

using the Johnson Valley OHV area for many years now and for my son and daughter to not be able to enjoy this area in the future is unimaginable to me. My wife and I have basically raised our children on family weekend trips as well as celebrating holidays such as Thanksgiving and New years eve out in the Johnson Valley area. I fully support our military and consider myself a patriot of this great country but taking even more of our own land from us is unacceptable. The offroad community has had its areas shrunk down to a bare minimum already and this massive land acquisition would create far reaching problems. The surrounding communities of Johnson Valley have already suffered tremendous economic hardships with the recent economic turndown and this proposal would surely not help the situation to say the least. I drive through these communities half a dozen times per year on my way to desert recreation areas as well as the Colorado River area and it has changed drastically in the last couple of years. These people just will not be able to sustain a massive blow such as this. The offroad industry (motorcycle dealerships, race car fabricators, aftermarket accessory manufacturers, rv dealerships) will all be heavily affected by this land acquisition. Just the last couple years of a bad economy has already closed the doors of many of these businesses. We need to keep public lands open so that our future generations have a place to explore, relax, and enjoy mother nature without all of the crowds and stresses that we all must live in these days. Again I fully support our military and our troops but there has to be an alternative to taking even more land from us. Sincerely Phillip Niblack

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact, even under alternatives involving restricted public access to acquired areas.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. As discussed in Section 2.7 of the EIS, the Marine Corps considered

alternatives for the proposed action. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** How many millions of people live in SoCa ? There is already no place to ride in riverside county glamis has heavy restrictions because of the military. And now you want to take more legal riding area away ? Unfair ! The section of the desert the military has now is the size of a small country why do they need more? If they need it that bad then give us equal to what they take in return somewhere close to the riding public. Sounds to me like a land grab to keep more secrets like there are enough out there already!

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** I adamantly oppose the closure of a large portion of Johnson Valley OHV Area due to the expansion of the 29 Palms Marine Corps Base. I have been riding motorcycles and camping in that area since the early 1960's. The area provides one of the few "open" riding areas left in California and has some very unique features. Closure of this area will further burden the already overcrowded diminishing areas to camp and ride. Obviously, it will also have a negative financial impact on Lucerne Valley businesses. It appears that an alternative expansion could be made toward the east without necessitating closure of Johnson Valley.

**Date Comment Received** 5/18/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** Hello ! Myself and my family and friends have been riding out in Johnson Valley for many years.. most areas west of Johnson valley have been closed down over the years either by the BLM or private land owners. As much as I feel the need for military training. I feel that there are other areas where this can be done. Hopefully the off road riding area will be left as is now. Thank you Steve

**Comment** Given the Alternatives presented, I strongly support only the No-Action Alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. If the No-Action alternative cannot work, then I would like to encourage 29 Palms to expand East instead of West. This would give the Marines the extra area they need to train without closing one of the most popular OHV recreation areas in the world. If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy, remove one of the last paces in Southern Ca. where off-road racing is allowed to take place and would severely damage the OHV industry in California

<b>Comment</b>	Off road motorcycle racing areas are becoming non existent due to radical environmental concern now the military may be taking a big chunk of what little we have left, maybe the military can go in a different direction and avoid this last area to race in or maybe there is a bigger piece to trade for. Please help us to keep our recreation and race area's available so that future generation's of our children have a place to go enjoy the wide open desert that their Great Grandparents on down have enjoyed for centuries . Thank You for your concern over all of us.

**Response**

**Comment ID: 1777 (Page 1 of 3)**

Dear Sir:

The DEIS states:

Potential impacts from six action alternatives and the No-Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

**3.11 Cultural Resources.** The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:

Less than Significant Impacts (LSI):

- Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
- Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):

No impact anticipated from airspace establishment.

Similar judgements are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.

It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:

- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
  - Devaluation of surrounding private property.
  - Increased costs to federal, state and local jurisdictions for increased law enforcement.
- All would occur outside the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our

**Response to Comment 1777 (Page 1 of 3):**

Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. In addition, the EIS acknowledges potential impacts to property values due to increased noise and proximity to military operating areas (see Section 4.3 of the EIS). The EIS concludes that any reduction in property value would likely be marginal and less than significant.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: 1777 (Page 2 of 3)

Response to Comment 1777 (Page 2 of 3):

desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

-These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflowed by helicopters at any hour of the day or night, particularly when they want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.

"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision."

—Desert Magazine 1944

**Comment ID: 1777 (Page 3 of 3)**

**Response to Comment 1777 (Page 3 of 3):**

The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves.  
<http://www.coutant.org/mminternet/saga/index.html>

The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant. It shows the homesteads and how close they are to the proposed westward expansion area.

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

Thank you,  
Paul McDuell

**Comment** I fully support our military and their need for training, however I would respectfully request that you take No Action on this issue. Johnson Valley is one of the only areas left in Southern California that is open to off-road activities and racing. The off-road community has zero other alternatives. If you must have additional land for training please expand to the east. Closing Johnson Valley would be economically damaging to the surrounding communities and to the off-road industry. I grew up riding in Johnson Valley with my parents and now I ride there with my children. Our national security is vital, but please find a way that doesn't destroy a sport that is a big part of so many lives. Thank you.

**Comment** There is nothing like Johnson Valley for Jeep trails anywhere else in the US; it is truly unique. Closing the area to OHV recreation will not only hurt the many people who use it every year, it will also harm the local communities, which depend on the offroad enthusiasts as a steady source of revenue. The off road community is completely supportive of the US

military and especially our Marine Corps. We understand that training must come first, and we fully support their mission. But we're hoping there is space outside of and adjoining the Johnson Valley recreational area for the Marines to conduct their training in. There are certain areas within the Johnson Valley recreational area that simply cannot be replaced. I can't imagine the Marine Corps would knowingly close this area to those of who use it so often, and believe this must have been an oversight. Now that you do have such an understanding, I'd hope and request that you give the most possible consideration to expanding your training areas to adjoining desert terrain that does not take our Johnson Valley away from us.

**Date Comment Received** 5/18/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I am writing for two purposes: (1) to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and (2) to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, impacts for which no meaningful

mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. My family recreates in the Johnson Valley OHV area 3 to 4 times a year. Our favorite places to visit in Johnson Valley are Soggy Dry Lake, where we engage in such activities as camping and dirt bike riding. When preparing for a trip, we spend \$ 200 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$ 200 in the Johnson Valley/Lucerne Valley/Victorville area while we are recreating. If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter.

**Date Comment Received** 5/18/2011

**Response**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis.

**Comment** If you must expand - then expand to the east. Johnson Valley is one of the last places in the state still available to the Off-road Community. We have been under fire and forced from land we paid for with out taxes and fees for the past 30 years. We have no where left to go. The Government and Military have unmatched power to take what they want. But realize we have the power of the vote and pay the taxes that allow both to exist. There is a real movement in California to stop paying the freight for both the Government and the Military. The people of California are fed up with the lack of respect and treatment we receive from our elected leaders and those that oppress us. We have continued to have our freedoms eroded with the words like Environment, Safety and Terrorism. The end is now for me. I will choose to live elsewhere if my rights as an American Citizen are trampled by those in power. Think hard before you do this as soon you won't have anyone to protect, as we will be gone to somewhere that we can be free from excess government intrusion on our right to pursue happiness.

**Comment** I am truly hopeful that the additional lands sought for military training that would impact the Johnson Valley OHV area will not occur. This is an area that my family and friends have enjoyed for more than a decade with a large group going out there to enjoy the recreating there four to five times a year. The Johnson Valley OHV offers unique opportunities that are not otherwise found in the local region. With the rising cost of travel it would severely impact our ability to have family outings as there is no other suitable replacement. In addition, we support the local businesses that exist in the area and spend several hundreds of dollars each time we go. Please reconsider and revise your plans of allowing the expansion into the Johnson Valley OHV Park. Thank You.

**Date Comment Received** 5/19/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact

to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** As an outdoor recreationalist and avid motorcyclist who makes a living in the motorsports industry, I am very concerned about more land being closed in the desert. I support the military and their needs, but if more land needs to be set aside for military activity, please do not do so at the expense of outdoor recreation. Perhaps a compromise could be achieved where if an amount of land is set aside for additional military exercises, that same amount of land could be set aside for outdoor recreation. There are many negative consequences to land closures, including economic impacts on local communities and safety, environmental and overuse issues when more users are concentrated in a smaller area. Public access to areas open for recreation is one of our most cherished public resources. Please do not close any more of this land down. If you must do so, consider moving the base farther east instead of west. And most importantly, set aside an equal or greater amount of land for the public as you intend to close to try and compensate the outdoor loving community in exchange for your planned military expansion.

**Date Comment Received** 5/19/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over

time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I wish to thank the USMC for improving the quality of life for all citizens of the United States, and for their continued concern for the welfare of the citizens they serve in this great country. I urge you to reconsider the need for expansion of the 29 Palms Training. Consider alternates to expanding the training not the established Public Recreation area west of the current base. The USMC has ample land and opportunity to train and exercise in cooperation with other Joint Services, the California Public does not have any similar opportunity or recreation partners to enjoy cooperative OHV Recreation. The California Public shares the use of Johnson Valley with many recreation enthusiasts, it is not only used by the OHV enthusiast community. The increase in popularity of Johnson Valley as a recreation resource cannot be overlooked. OHV recreation and the activities that complement it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. The growing participation of OHV enthusiasts in California must be recognized. Public lands open to this form of recreation are closing at an alarming rate. Closing the established OHV recreation opportunity at Johnson Valley will be a loss of a public resource equal in value as any Designated Wilderness Area. The government cannot allow the loss of Johnson Valley as an OHV recreation resource. Even a partial loss of the OHV recreation opportunity is unacceptable. Any full or partial closure

of OHV opportunity at Johnson Valley must be offset with opening of equal or greater OHV opportunity elsewhere in the Region. Designation of unqualified Wilderness Study Areas as a State Vehicle Recreation Area is an option that cannot be overlooked, as State OHV Trust Fund dollars are available for this effort. These State OHV Trust funds could also be used to assist the Marine Corps. in relocating their proposed use for the Johnson Valley expansion to a different area that will not have the detrimental impact to OHV recreation. Please consider approval of Alternative A with no impact to OHV recreation in Johnson Valley, or consider incorporating offsetting measures to establish equal OHV recreation opportunity within the region in the preferred Alternative

**Date Comment Received** 5/19/2011

**Response**

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** In the DEIS, the entire purpose and need for 29 Palms to expand is based on the 2004 MEB Training Exercise Study: <http://www.marines.mil/unit/29palms/las/documents/cna/CNA%20MEB%20Training%20Exercise%20Final%20Report%20D0010872%20A2%20Dec04.pdf> Not only is this document 7 years old, it is also important to note that this document was written in the same year as the Battle of Fallujah in Iraq. At this point in time, the Marine Corps were involved in both Operation

Vigilant Resolve (April 2004) and Operation Phantom Fury (November 2004) Operation Phantom Fury is considered the highest point of conflict in Fallujah, and the US Military called it some of the heaviest urban combat that the Marines had seen since the Battle of Hue City in 1968. It is evident that the 2004 MEB Training Exercise Study was written during a period of time when the Marines were fighting in major battles. It is important to understand the context that the document was written in. It was written during a high point of our involvement in the Middle East. Therefore it reflected the training requirements of that time, which was for large-scale MAGTF. Furthermore, in the draft (Identifying Training Requirements) of this document, there are 47 articles referenced in the document that are listed in the bibliography and references section of the MED training Exercise Study. Of those 47 documents, 24 are from the years 2001-2003, directly after 9/11 and during the beginning of Operation Enduring Freedom. The average year of the all the articles referenced in the document is 1997. In the final draft, there are only 4 references, all from 2003 and 2004. Bottom line: The DEIS is invalid because it is based on outdated information with how the Marines will fight, it does NOT consider a post Operation Enduring Freedom world. On March 14th, 2011, the Marine Corps listed the Force Structure Review. The structure of the Marine Corps and they way they operate with be significantly different after these changes.

**Date Comment Received** 5/19/2011

**Response**

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one

of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment ID** 1795

**Comment** I would like to direct your attention to the Final Report of the MEB Training Exercise Study done in 2004. This document is the basis of the Marine Corps expanding 29 Palms. <http://www.marines.mil/unit/29palms/las/documents/cna/CNA%20MEB%20Training%20Exercise%20Fina%20Report%20D0010872%20A2%20Dec04.pdf> In that document, it says that 29 Palms has limited, long-exercise duration multi-Bn maneuver area at 29 Palms. It also clearly states to solve that problem, "Extend base boundary west to support additional Bn corridor" The key word in the document is "west." In 2004, how did the preparers of the report decide that extending west would be the best possible plan without research and backing? Could not the base expand east or in another direction? Did the report suggest West and then the DEIS was custom tailored to come to that conclusion? In the NEPA process, there must not be a pre-determined action. A DEIS must have several alternatives to solve the problem. In that the final report clearly says "expand base west" and not just "expand base," it is evident that expanding west is a pre-determined outcome. This violates the NEPA process. The entire DEIS needs to be thrown out.

**Date Comment Received** 5/19/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task

forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered a number of alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center, which was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

<b>Comment</b>	<p>I am a off-road enthusiast and have riden motorcycles in Johnson Valley for over 20 years. The proposed expansion of the 29 Palms training area will negatively impact one of the few remaining OHV areas in southern california. I am an ardent supporter of the US military and especially our Marines. However, as a dirt bike rider in a state (California) that has seen fit to close many areas to off-road vehicle use, I have to object to the expansion of the 29 palms training area as it will result in one less area for me, my family, and friends to legally ride motorcycles. If the US Marines would lobby the state of California to create OHV "offset" property, similar to what is done by developers who develop over sensitive habits who then need to buy and create similar habit elsewhere, and obtain legal permission for OHV areas in or around the Lucerne Valley, I would remove all of my objections to this proposal. Thank you. Please don't close Johnson Valley to OHV use. -Dave Darrow Temecula, CA</p>

I am opposed to the land acquisition/airspace establishment being proposed by the United States Marine Corps, which will usurp any of the existing land/airspace currently designated as part of the Johnson Valley ORV area. As a California State and United States taxpayer who contributes to the funds that keep the Johnson Valley ORV operating, I am of the belief that acquisition of the area by the USMC would be tantamount to robbery of the funds that I and other off-highway vehicle users have paid for years and continue to pay to keep Johnson Valley open. As an attendee of some of the earliest public comment meetings held on this matter, I am not convinced that the USMC needs this area for such training, nor do I believe that there would be any way for the USMC and OHV users to share this area because of the live-fire requirements of the USMC training, which could raise the potential for injury or death by unspent ordnance left behind by the USMC. Furthermore, it has been proposed that possible mitigation--giving land for the land being acquired--could be a part of the possible resolution. I am opposed to this because the unique topography of the Johnson Valley OHV area makes it unlike any other OHV in the State of California, and in fact, the entire United States. Simply put, most OHV users who have visited Johnson Valley quickly come to recognize it among the most prime designated OHV area in the country. The USMC has the ability to deploy anywhere in the world, whereas California OHV users do not. Johnson Valley is a designated OHV park, and it should remain only that, not be turned into another training ground for a department of the largest, best-equipped, best-trained and most active military in the world. Scott Rousseau Costa Mesa, CA

**Comment** In arguing against the expansion of 29 Palms, I would like to share a story told by General James F. Amos, Commandant of the Marine Corps at the Defense Writers group breakfast on February 18th, 2011. "We found that we were buying a new water bull. Now, for everybody here, a water bull is not an animal. It's a big " it's a water tank that holds, I'm guessing, I don't know, four (hundred) or 500 gallons of water. "We call them"water bull," but that's like a water buffalo. And you tow it behind a Humvee or a seven-ton truck or that kind of thing. Now, that's where Marines get fresh water. You pump fresh water in it. You go up there, and Marines are up there shaving, and all that stuff. And we've got a good one. We've had that one since I was a lieutenant, and it works just fine. Nothing wrong with it; (served us as Marines ?). Well, we found out that " and I'm not sure who, but we said, well, we need a bigger water bull. We need one that's about three or four times as big. And we said, well " then we see this picture of this thing, and it's huge. It not only takes up more cube, it's heavier. Well, why do we need it? Well, because we've got a seven-ton truck now that can tow it. Because we can. We said, let's buy it. We canceled that program. So there's an example. There's others that are out there. But being frugal just means going back and paying very close attention, close scrutiny on everything we're buying, making sure that we can€ that it's something we need." In a post OEF world, The Marines are getting back to their frugal roots and only asking for what they NEED, not for what they want. Currently, with the state of the world and planning for smaller actions in littoral areas, the Marines do not need to train 3 Battalions for a large scale campaign. According to General Amos, the Marines were used in OEF as a"two for", as a second land army. Now their role is changing back to their original purpose. The entire DEIS needs to be thrown out since the purpose and need of the base expansion is no longer valid in a post OEF world.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Naval Facilities Engineering Command, Southwest  
Attn: 29 Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

Subject: County of San Bernardino Department of Airports Comments on Draft EIS for the Twentynine Palms U.S. Marine Corps Air Ground Combat Center (MCAGCC) Training Land Acquisition/Airspace Establishment

Attn: 29 Palms EIS Project Manager:

The Department of Airports appreciates the opportunity to comment on the Draft Environmental Impact Statement (EIS) for the Twentynine Palms U.S. Marine Corps Air Ground Combat Center (MCAGCC) Training Land Acquisition/Airspace Establishment project. The Department of Airports operates six (6) general aviation airports for the County of San Bernardino. The County-operated airports are: Twentynine Palms, Barstow/Daggett, Apple Valley, Baker, Chino and Needles. Each airport supports general aviation, and countywide over 273,000 operations per year utilize the County's airports. Certain of the airports support military operations as well, most notably the Barstow/Daggett Airport, where approximately half of its 36,500 operations are military. The Department of Airports is committed to support the aviation needs of the U.S. military, while retaining the greatest possible opportunities for general aviation users.

The Marine Corps has been studying alternatives for proposed training-land acquisition and accompanying Special Use Airspace for three battalions (approx. 15,000 Marines) to simultaneously maneuver in close coordination using combined-arms (e.g., air/ground) live fire for a 48-72 hour training period. Land surrounding the MCAGCC was considered and 6 alternatives were developed and studied in the Draft EIS. The Draft EIS was published for a public review and comment period of February 25, 2011 to May 26, 2011.

The Draft EIS identifies Alternative No. 6 as the "preferred" alternative that will be carried forward for approval. This alternative includes 146,667 acres to the west of the MCAGCC, and 21,304 acres to the south. It allows public use of the Johnson Valley Off-Highway Vehicle recreational areas during periods when there are no training maneuvers, so that for approximately 10 months of the year, the recreational areas will be available.

DREGORY C. DEVEREAUX Chief Executive Officer		BRAD MITZELFELT JENNIFER RUTHERFORD		Board of Supervisors First District Second District JOBIE GONZALES		NEIL O'BERRY GAILLY C. CIVITT Third District Fourth District

Response to Comment 1799 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Comment ID: 1799 (Page 2 of 2)

Response to Comment 1799 (Page 2 of 2):

Page Two  
Comments on Draft EIS for Twentynine Palms MCAGCC Training Land Acquisition/Airspace Establishment  
May 20, 2011

In terms of airspace and potential effects on County airports, expanded Special Use Airspace (SUA) corridors are proposed. In particular, the "CAX Corridor" would be near the County-operated Twentynine Palms Airport, and would begin at 1,500 feet above ground level (AGL) and go up to 40,000 AGL. Due to the nature of activities taking place within the SUA, varying restrictions are placed on non-military aircraft. MCAGCC Range Control will manage the SUA corridors, and altitudes above the SUA corridors are managed by the Los Angeles Air Traffic Control Center.

Impacts to airspace are not fully detailed in the Draft EIS, and will require further coordination with the FAA. The Draft EIS notes that final determinations will be made by the Federal Aviation Administration (FAA) working with the USMC after the Final EIS is published.

Please keep us on the mailing list for the Final EIS. We look forward to working with the USMC to support your mission, while retaining the greatest possible opportunities for general aviation users.

Sincerely,

Carrie Hyke, AICP  
Airports Planner  
County of San Bernardino

**Comment** I am strongly opposed to the closing of OHV areas and public land access in Johnson Valley. The economic and recreational losses would be too much for an already financial depressed region.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Several years ago, the Army's Ft Irwin also expanded in size. Since then, because of lack of funding to complete additional studies and to expand infrastructure, only one section of the area to Ft. Irwin that was added is currently in use by the Army. Areas that they considered "critical" for their training, especially to the South are NOT in use. It is also important to note, that this lack of funding for the Army at Ft. Irwin is during OEF when the military is receiving a lot of funding. In a post OEF world, the Marine Corps, with even less funding than it has had in the past will run into the same issues with 29 Palms. The DEIS does not address this issue. If the land is annexed by the Marines, much of it will be able to be put into use because of lack of funding. The DEIS needs to either be completely thrown out, or this issue needs to be added into the DEIS and addressed.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment** The Desert tortoise section in the DEIS does not address cumulative impacts and mitigation requirements. There needs to be an in-depth study on the effects on the desert tortoise and its environment and also a study done on how much funding this will take.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. Cumulative impacts on biological resources (including the desert tortoise) are evaluated in Section 5.4 of the EIS. Cumulative impacts are summarized and potential mitigation measures are discussed in Chapter 6 of the EIS. The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. The EIS has been revised accordingly. Analysis of noise impacts to wildlife in the Draft EIS were based on the best available information.

Noise modeling conducted for the proposed project was focused on impacts to humans. The noise contours developed through the noise modeling effort were considered in the analysis of impacts to biological resources, and the noise metrics from those contours were considered important even though they are weighted toward frequencies important to humans. However, because peak sound levels (and the frequency of occurrence of those sound levels) are of greater concern in analysis of impacts to wildlife than the averaged metrics used in analysis of noise impacts to humans, the biological resources analysis focused more on the locations of ordnance explosion (represented by WDZs and SDZs) and paths of task force travel. Discussion is included throughout the EIS noting the proximity of known populations to these WDZs, SDZs, and task force routes. In addition to this discussion throughout the text, potential noise effects are discussed for the desert tortoise and other wildlife species (see Section 4.10). While the relative importance of various factors in the decline of the desert tortoise are still uncertain and the EIS states this, the published literature that is available indicates that OHVs do adversely affect tortoises via habitat degradation and direct impacts (one such review is Ouren et al. 2007). Analysis of existing disturbance in the west study area from OHVs indicated a significant correlation between areas of high OHV disturbance and lower desert tortoise densities (refer to Appendix I of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

<b>Comment</b>	As I stated in my comments during the scoping period, it is my firm belief that this project is not necessary - especially when compared to the loss of lands critical to wildlife (east portion of the proposed expansion), and critical to recreation (west portion of the proposed expansion). On the east, lands surrounding Amboy crater, Clegghorn Lake, the Sheephole Wilderness, are an important area for the endangered desert tortoise as well as home to bighorn sheep. These lands also act as a corridor to the Joshua Tree National Park. Also, Amboy Road goes through this area and would be a serious loss for those who travel between the Morongo Basin or Coachella Valley (Palm Springs, etc.) and the Las Vegas area of Nevada or

the Mojave National Reserve. On the west, the Johnson Valley Off-Highway Vehicle (OHV) Recreation Area has been a huge part of that area's economic wellbeing. It has been set aside for OHV recreation with a primary purpose of relieving other more sensitive areas from OHV damage. If the Marine base takes this area, the environmental review should include the subsequent damage that will be caused in other areas due to the lack of adequate space for OHV recreation. In closing, it is difficult to see the need for a larger 29 Palms Marine Base. The expansion idea leaves the perception that more is better, but this seems to be too easy an excuse to destroy and/or take lands that are already being used for its proper purpose. Please do not expand the base.

**Date Comment Received** 5/20/2011

**Response**

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for

recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Response**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many

areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Comment** I implore you to adopt a no action on usurping Johnson Valley for the Marine expansion. As a part of the OHV recreating public, I've watched as millions of acres of land lost to military, urbanization, industry, and wilderness. As the recreational areas shrink, we face added pressure from massive energy proposals, more military expansion, and more wilderness. It will soon appear that the public has no more available access to public land. I think with better planning the Marines could better use the areas they

already have. Johnson Valley is one of the largest and most varied OHV areas in a steadily shrinking recreational opportunity. As more and more population look to recreation from without the cities nearby, this area will become more and more important.

**Comment** Closing of Johnson Valley will result in illegal riding, loss of revenue to local retailers, and overuse of lands for recreation. Of course we want our Armed Forces to be able to train, but using this particular area will devastate OHV use. OHVs have very little land to use. Taking what's left will open a huge mess for all.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over

time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Comment** I'm an off-highway enthusiast and I'm writing to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. There are better alternatives to the east of the current base. The Sheephole and Cleghorn Valley wilderness areas should be re-opened and used for the training as they were once training areas and are actually unsuitable for wilderness designation. Just so you know, my father served with the Marines throughout the South Pacific Campaign during WWII and retired as a major. We have always been a family that has supported the USMC. However, an action like closing most of Johnson Valley would permanently damage that relationship. I can't see where taking this land for training a few weeks per year is really necessary. I just can't see the USMC losing an actual battle because they didn't have Johnson Valley to train. If you must use it, train with us there. We can share it; just use electronic simulation weapons while in the open riding area. It will be more realistic to train with innocent civilians around as you would encounter in a real life situation! Johnson Valley is a place where I take my family for both relaxing outings and organized competition. This is what we do for our recreation and this is one of the closest places we can travel to from Orange County to enjoy our sport. You have to realize that for the OHV community closing Johnson Valley is like closing all the golf courses, or little league fields, or high school football stadiums, etc., etc. in Southern California. Radical environmental groups are always trying to push the off-road community out and close off the land. We lose more land every year and add more people to the sport at the same time. Johnson Valley is the crown Jewel of off-road areas and it is a crime to take this land from the public. The impact of this closure (or partial closure) will have huge ramifications for recreation in this area. Yes, there will be a few OHV areas left open, but none are as large and diverse, and the increased use of these

other areas (due to the overflow form no longer having Johnson Valley available) will undoubtedly cause many more problems. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public

involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** PLEASE DO NOT CLOSE OR ALTER THE JOHNSON VALLEY OHV AREA. YOU WOULD BE DOING A HUGE DISSERVICE TO THE AREA AND SURROUNDINGS COMMUNITIES. As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Comment** NOBODY wanted to use this area, so we offroaders used it. Now with ohv areas being closed, limiting our right to recreate, another use is proposed for johnson valley. i understand that the marines have a vital mission to fulfill, but there must be another alternative to this, other than eliminating responsible motorized access. Please withdraw the DEIS and develop a new DEIS allowing for continued responsible use of off highway vehicles(ohvs), and recognize the negative economic impact eliminating motorized access would cause to this area. Please do not punish responsible offroaders.

<b>Comment</b>	<p>In writing about the purpose and need of the DEIS: I would like to reference <a href="http://www.marines.mil/unit/29palms/las/documents/cna/CNA%20MEB%20Training%20Exercise%20Study%20Identifying%20MEB%20Training%20Requirements%20D0009618%20A1%20Jan04.pdf">http://www.marines.mil/unit/29palms/las/documents/cna/CNA%20MEB%20Training%20Exercise%20Study%20Identifying%20MEB%20Training%20Requirements%20D0009618%20A1%20Jan04.pdf</a> this document: The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements On page three of that document it states: "The brigade-sized air- ground force first operated in Korea in the early 1950s. MEBs were formally indoctrinated into the Marine Corps along with the MEU and the MEF in 1962 [3]. Throughout most of the latter half of the 20th century, MEBs activated, deployed, and deactivated as needed. Standing MEBs were the exception rather than the rule. The Marine Corps experimented with permanent MEB headquarters (HQs) from 1985 to 1992. When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF). Instead, fighting was discussed in MEF slices, and the lead echelon of the MEF became the MEF Forward (FWD)..". The key sentence I would like to point out is: "When downsizing and budget reductions required force restructuring, the Marine Corps eliminated the standing MEB HQs and discontinued use of the MEB as a distinct Marine Air-Ground Task Force (MAGTF)" Currently, according to General Amos, Commandant of the Marine Corps, the Marines are currently DOWNSIZING, about to go under BUDGET RESTRICTIONS, and are currently undergoing FORCE RESTRUCTURING. If the MEB was discontinued last time this happened, it may be discontinued again. Therefore: expansion of 29 Palms is not necessary. If this DEIS is not thrown out or rewritten to take the current actions of the Marine Corps into consideration, at the very least it must be put off until the entire force structure is completed. Currently, the Marine do not know if the MEB will be continued as a distinct MAGTF.</p>
<b>Date Comment Received</b>	5/20/2011
<b>Response</b>	<p>Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area</p>

is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Being an Ex-Air Force AGE Tech. I fully understand the military's need for training space. But, as I and many of our military, Active & Ex-Military need our place to unwind, relax, & enjoy ourselves in order to maintain some kind of sanity from the stresses of the many stressful duties in our day to day duties in order to do our jobs correctly & properly to defend our & other countries. Hector R. G.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential

overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** Once again, I would like to reference this document: <http://www.marines.mil/unit/29palms/las/documents/cna/CNA%20MEB%20Training%20Exercise%20Study%20Identifying%20MEB%20Training%20Requirements%20D0009618%20A1%20Jan04.pdf> The document is entitled: MEB Training Exercise Study: Identifying MEB Training Requirements On page 10, the document states: "We used historical MEB deployments and current operating plans or scenarios, in conjunction with future doctrinal concepts and statements, to help define the MEB" At the time this document was written (January 2004), there were no plans for removing Marines from Afghanistan and the Marines had not yet fought in Fallujah. (Which is considered the heaviest urban combat the Marines have been involved in since the Battle of Hue City in 1968.) Therefore, the definition of the MEB according to this document, (which is the pre-cursor to the final document that the reasoning for expanding 29 Palms is based on) is based on what the Marines were doing in the Middle East at that time, and for future possibilities for massive actions like the Battle of Fallujah. With the current state of world affairs, the definition of an MEB should, and most likely will change. The definition of an MEB from this document in January of 2004 is no longer valid. General Amos, Commandant of the Marine Corps also recently stated that he does not see much possibility of the Marines putting 20,000 troops on the ground at any time in the near future. Since this document, on which the purpose and need of the DEIS is based on, is no longer valid, especially with the definition of the MEB, The DEIS needs to be discarded until another current MEB training Exercise Study is completed.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a

Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** When preparing the website and public documents for the 29Palms Marine Base proposed expansion, the Marines neglected to give the correct mailing address for public comments on the home page of the website, and it is missing from all the public documents including: 1. The Project Briefing Paper 2. The Project Overview 3. The Public Info Brief 4. The Trifold Brochure 5. The Frequently Asked Questions (FAQ) 6. The Contact 7. The Public Comment Link on the home page Instead, the contact info is given only for the project office on the 29Palms Marine Base. The Project Manager, Mr. Chris Proudfoot, has been made aware of this problem, and has not responded to requests for an extension, and an investigation to find out how many public comments have been sent to the wrong address, what has been done with those comments, and what can be done to rectify a mistake that has existed since the release of the Draft Environmental Impact Statement. NEPA requires and encourages public comment, and the Marines have not given the public the information needed to send in their comments. We need at least a 60 day extension of the comment period during which time they are to conduct an investigation and good faith effort to find out how many comments were submitted to the wrong address. This is a major NEPA violation, and they must rectify this mistake.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

**Comment** As an 10 Year U.S. Navy Veteran and also as an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. This is a very important area to me and my family and one of the few remaining areas close to Orange and Riverside Counties where it is legal for us to ride off highway vehicles. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area. There are so few areas remaining in Southern California and many of the larger areas are already too impacted. The most popular areas like Glamis I don't feel is safe for a family with children to teach them to ride after they have their basic training and safety certificates. Johnson Valley is the closest legal place where we have room and enough space to let the kids ride around on trails and across lake beds without worrying about speeding sand rails and trucks. Please consider other areas and leave Johnson Valley and its borders as it currently is. Reducing the area and imposing more restrictions will be a harsh recreational and financial impact on my family and the community in general. As a former instructor in the Navy I recognize the need for representative and realistic training but I am sure there other areas that will not impact a designated recreational area as bad as these options affect Johnson Valley. Sincerely Jim Blair

**Comment** My wife and I are avid off road riders. We love the peacefulness and tranquility of the desert. We have been riding and camping in Johnson Valley for 16 years. My question is, what will happen to the areas that are now protected? The cave drawings, creosote rings, desert tortoise, kangaroo rat, and desert fox. Many of these are protected, and will be destroyed. Let alone the loss to all of the land users. I'm not against training, but I believe there are alot of other open desert areas that can be used for this purpose. I'm a veter TG2T9 purpose.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. The EIS has been revised accordingly. Analysis of noise impacts to wildlife in the Draft EIS were based on the best available information. Noise modeling conducted for the proposed project was focused on impacts to humans. The noise contours developed through the noise modeling effort were considered in the analysis of impacts to biological resources, and the noise metrics from those contours were considered important even though they are weighted toward frequencies important to humans. However, because peak sound levels (and the frequency of occurrence of those sound levels) are of greater concern in analysis of impacts to wildlife than the averaged metrics used in analysis of noise impacts to humans, the biological resources analysis focused more on the locations of ordnance explosion (represented by WDZs and SDZs) and paths of task force travel. Discussion is included throughout the EIS noting the proximity of known populations to these WDZs, SDZs, and task force routes. In addition to this discussion throughout the text, potential noise effects are discussed for the desert tortoise and other wildlife species (see Section 4.10). While the relative importance of various factors in the decline of the desert tortoise are still

uncertain and the EIS states this, the published literature that is available indicates that OHVs do adversely affect tortoises via habitat degradation and direct impacts (one such review is Ouren et al. 2007). Analysis of existing disturbance in the west study area from OHVs indicated a significant correlation between areas of high OHV disturbance and lower desert tortoise densities (refer to Appendix I of the EIS).

Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. Less than significant impacts on Cultural Resources are expected as a result of the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

<b>Response</b>	Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-

sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** The Johnson valley recreation area is a valuable area reserved for just that. Important family recreation. Move this military training to any other site and let our children grow up with a place to go. Useless over protected desert lands nearby fill the need for the Marine training as well or better and these lands have already been stolen from the vast majority of the public by the so called "environmentalist" movements of the past few decades and have proven no positive results in doing so.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. **Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred

alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** PLEASE DON'T TAKE OVER JOHNSON VALLEY. I SPENT MANY DAY'S WITH MY FAMILY RECREATING IN JOHNSON VALLEY AND I WANT MY KIDS,FRIENDS AND FAMILY TO CONTINUE TO ENJOY THE AREA. I HAVE SPENT ALOT OF MONEY ON GAS,FOOD,AND MANY OTHER PRODUCTS ON THE WAY TO JOHNSON VALLEY. WHAT IS THE FINACIAL IMPACT OF MY SELF AND THOUSANDS OF OTHER PEOPLE WHO WILL NOT BE ABLE TO ENJOY JOHNSON VALLEY GOING TO DO TO THE BUSINESSES IN THAT AREA? WHY CAN'T THE MARINES TRAIN AT FORT IRWIN IN BARSTOW? PLEASE DON'T TAKE JOHNSON VALLEY AWAY FROM ALL THE PEOPLE WHO ENJOY THE AREA. REMEMBER THE LAND OF THE FREE.

**Date Comment Received** 5/20/2011

**Response**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/20/2011

**Comment** Please don't take away the one place we can camp and enjoy nature with the family. We have been taking our kids there for years, we still enjoy camping and having a fire, just sitting around and talking. No TV, no video game, just good family fun. Its close to me and all of our friends, a cheap place to get away, Come on pick a different site, thats not so close to the towns that depend on us when we camp. Thank You for listening.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** The closure of this area to ohv use will cause a profound economic impact on our community and will cause overcrowding of the few remaining areas open to ohv use. This will lead to the closure of those area's and more of our rights as the public to use our lands for recreation. Please consider these points when reviewing the plans to close our public lands. Ed.

**Date Comment Received** 5/20/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process.

Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I worked at the TwentyNine Palms Marine Base for little more than a year. The Marines do not use all of the land that have already. From what I witnessed all of the training that they conduct can be accomplished within the boundary of the base that marines already occupy. There is no need for expansion and more waste of federal money to secure johnson valley for training.

**Date Comment Received** 5/21/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** it is truly disappointing that we even have to go through this. There are so many other desert areas throughout the Western United States that the military could use for training that it is discouraging they would pick an area that is so popular and currently gets so much use by people from literally all over the world. Additionally, it is my understanding that the original address to send comments to was incorrect. I wonder how many more thousands of people wrote in that you have not received or considered. In the end, I doubt this will do any good and I believe all of our efforts will be wasted because while it was designed to be a government of the people by the people and for the people, it has truly become a dictating monarchy. As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large- Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under

alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area. Sincerely, Nora Lee

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment** Dear sirs or Madams, I urge a No Action alternative regarding the proposed Marine Training facility at Johnson Valley. Responsible recreationists have been losing access to long-used and well established recreation areas, without being offered viable alternatives in their stead. Please recognize the many family-friendly recreation opportunities which will be lost should the Johnson Valley be taken away and put under the control of the Military and the Federal Government. I realize the Marine Corps has a vital mission, but it should not be carried out at the expense of even more vital family recreation opportunities. Thank you for your consideration. Sincerely, Eric Olson Santa Cruz, CA

**Comment** To whom it may concern, Please do not close the Johnston Valley recreation site as the out door enthusiasts are loosing areas to ride. I believe that we need these areas for our enjoyment. There doesn't seem to be any new places for us to ride. The Marinies can expand to other places is the desert without affecting any other groups. thanks Paul Sezzi

**Date Comment Received** 5/21/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact, even under alternatives involving restricted public access to acquired areas.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I am a frequent user of Johnson Valley OHV, I participate in off roading and rock crawling activities. I am apposed to the Marines taking this land as there is nothing of equal value to be replaced, that we can use. The local area economy's will suffer if this area is annexed. Thank You.

**Date Comment Received** 5/21/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact, even under alternatives involving restricted public access to acquired areas.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** We the people Lucerne Valley CA & Southern CA agreed to closing the surrounding public lands to off road vehicles & in return,we the people would have our public land area of Johnston Valley OHV area for camping & off road vehicle use.The closing of the proposed public lands will be economically crippling to all business in our area.Our property value will

drop significantly causing monetary harm to all land owners in the surrounding area of the proposed 29 Palms Land Acquisition Area. The noise & destruction of our way of life in the desert would be irreparable. There are hundreds of thousands of acres of open land East of 29 Palms Marine Corps Base that if used by our Military would cause little or no harm to the people of our State. Thank you.

**Date Comment Received** 5/21/2011

**Response**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action. However, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** My family has been using the Johnson Valley OHV area for over 10 years now and we enjoy the opportunity it grants us to expose our daughter to enjoyment of the outdoors. It provides the escape from the confines of the concrete landscape that has become southern California. The town of Lucerne Valley I feel will have the most to lose with the expansion due to the fact that the off-road community brings a good amount to their economy. This will also affect the nearby town of Apple Valley, and the 29 Palms/Landers area. The idea of sharing a area in my opinion will not work, with the main concern being safety. The Marines have said that they will not have live fire in the shared area and will only use non-dud producing ordinance, but as has been known this relies on humans and humans are fallible, so I don't see how they can guarantee the public's safety. Therefore my only action I feel should be one of no action. Thank you

**Date Comment Received** 5/21/2011

**Response** Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

As an off-highway vehicle enthusiast for over forty years I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert, especially in CA, for decades. While I understand that the Marines have a vital mission that I support and am grateful for the freedom that give their lives for me, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g.,

Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists.

**Date Comment Received** 5/21/2011

**Response** Thank you for your comment . The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts

that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** After attending the Joshua Tree public hearing I wonder why other alternatives have not been look at. Alternatives 2-5 seamed to be of no concern and only Alternative 1 and 6 seamed to be considered. It feels as though Alternative 1, the overall preferred alternative, will be the route taken in the end. This is a mistake and I feel the persons in charge are not taking enough of the consequences into account. Loss of the Johnson Valley recreation area will decimate the surrounding economies, all very much dependent on travelers. I plead that you consider Alternative 3 or design a new alternative that leaves more of Johnson Valley OHV open year round. The temporary closures will reek havoc on all parties.

**Date Comment Received** 5/21/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** In regards to the Temporary Closures and Dual Use Areas; there is still no full understanding on how long cleanups will take nor how to conduct a Dual Use of the property. There has been no full scale cleanup exercise to judge how long cleanup of the Dual Use Area will take. It is said the closures will be twice a year for one month at a time but this does not include cleanup which could take up to three additional weeks. The rules regarding use of the Dual Use Areas; education, permits, fees... etc. need to be addressed! Not simply brought up for discussion and later decided, after the decision to take Alternative 6 is made. This is a major part of any Alternative. It must be decided before any path is chosen!

**Date Comment Received** 5/21/2011

**Response** Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

**Comment** After speaking in length with 29 Palm Staff at the Joshua Tree Public Hearing there is still little understanding as to why Alternative 3 has not been taken into more consideration. The answer I received over and over was "it's not preferred". This is obvious when talking with any of the "experts" present at the hearing. There is little effort being taken to look into other Alternatives. Alternative 1 has been and will always be the "preferred" alternative by the Marines but as everyone has seen, this is not the preferred alternative of everyone else. Alternative 3 does not impact nearly as many individuals. I ask that you look into better joint "preferred" alternatives.

ANYMORE LAND, IT'S TIME WE THE PEOPLE ENJOY THE LAND THAT WAS MEANT FOR US TO ENJOY. GOD BLESS YOU ALL!

**Date Comment Received** 5/21/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training

**I don't believe the military needs to take the Johnson Valley Off-Highway area for its training. They have stated that it is possible to move eastward for their training and that appears to be the easiest and best answer to this land problem.**

I have come across several articles and quotes from various persons of importance that agree with my opinion or offer additional arguments.

See below:

***The Press-Enterprise, September 18, 2008***

The land includes most of the Johnson Valley Off-Highway Vehicle Area, a 189,000-acre Mecca for motorcyclists and other off-road enthusiasts. It also contains habitat for threatened desert tortoises, bighorn sheep and other wildlife. The area encompasses an array of geological features, such as Bristol Dry Lake, known for its salt mining; Amboy Crater and the surrounding lava fields; and the Sheephole Mountains and Cadiz Valley. It also borders several wilderness areas.

By David Danelski

Officials with the **Center for Biological Diversity**, an environmental group with offices in Los Angeles, said the study area includes habitat needed by desert tortoises and bighorn sheep.

Wildlife and sensitive habitats need to be protected, said Ilene Anderson, a biologist with the group. Land just north of the Johnson Valley OHV area contains habitat for threatened desert tortoises, she said. The reptiles already lost habitat to the 150,000-acre expansion of the Army's National Training Center at Fort Irwin, near Barstow. Land in the Marines' eastern expansion area is an important corridor between wilderness areas for desert bighorn sheep, Anderson said. The animal is not listed as threatened or endangered but its numbers are declining," she said.

**So do we wait till they are gone or do we stop destroying their habitat now?**

**Marine spokeswoman Capt. Amy Malugani said  
"the military would work to minimize its impact on the environment and nearby communities."**

Now how would that occur? Are they going to divert the normal Johnson Valley users to another location near buy besides the Big Bear Valley? How are they going to stop the damage done to the Big Bear Valley due to its overuse by people who would normally be using the Johnson Valley? We have areas in the Big Bear Valley and close surrounding areas that contain endangered plants and animals. How will these areas be kept safe? Is there to be more forestry employees hired to monitor the large quantity of people who will be coming up to Big Bear and are not familiar with the restricted areas? I don't mean one or two additional employees either I am estimating we will need dozens of forestry personnel to keep our restricted areas protected. And will the military be paying these additional salaries seeing as they are the reason they are needed. We don't need any increased taxes for their wants and desires.

**Response to Comment 1937 (Page 1 of 2):**

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: 1937 (Page 2 of 2)

Response to Comment 1937 (Page 2 of 2):

**Sierra Club Conservation Policies**  
**Military Use of Civilian Airspace and Public Lands**

**Military Training and Testing on Public Lands**

Where military training and testing is authorized on public lands, it should avoid impacting civilian recreational activity. To protect public health and safety, it should occur in areas segregated in space and time from those used by civilians (though, cooperative projects may occasionally be appropriate for such activities as clean up, ecosystem mapping and management, and restoration of damaged areas). Following use of such lands, the military should restore their condition (where possible) and return them to civilian use. Toxics and ordnance should be removed and debris, such as chaff and litter, cleaned up in ways that minimize disturbing natural features.

The public, as well as Congress, should have an opportunity to review and comment on any proposal to authorize military use of public lands. Such use should be authorized only when no viable alternative exists. Such use should only be authorized on a case-by- case basis for a limited period.

The Armed Services and the Defense Department should protect biodiversity and wilderness values on lands affected by their uses. They should be good neighbors and safeguard adjacent lands owned by others from contamination and adverse effects.

**4. Public Participation and Citizen Involvement**

The Defense Department should establish various advisory committees which it should consult prior to making decisions and taking actions related to acquiring land, withdrawals, exchanges, disposals, reservation of airspace, and on policy governing over flights, training exercises on public lands, restoring degraded areas, and managing waste.

Moreover, the public should have opportunities to be involved on such matters through notice and comment procedures, open forums, steering groups, appeal procedures, and other mechanisms provided under NEPA and other laws and regulations applying generally to other federal agencies. Under NEPA, analysis of impacts and alternatives needs to occur before decisions are made and options are foreclosed. *Adopted by the Board of Directors, May 18-19, 1996*

Please extent the time for public comment! Also option #3 is the only acceptable option as we have so little to claim as our own and many have given their lives to protect our rights and freedoms! So going east and south would give the needed room and open up desert for a good cause! A cause far greater than some reptiles and bugs! The area is close to the conditions found in the middle east and IS NOT BEING USED FOR ANYTHING NOW! Please do not take away a family activity and the money it bring into the area! There is so much useless desert sitting idle because of radicals who put "Mother Earth" over all else! Man is the master of his environment and can be a good steward without shutting out the citizens who own it!

**Comment** My family and I ride OHV and would like to see Johnson Valley stay open to public use. I know the armed forces are important and training is important, there must be an alternative where OHV use is still allowed and the Marine Corp gets there training sites. Thanks You

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred

alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I understand that the Marines need a place to train, however if they take the Johnson Valley area what are they fighting for ? FREEDOM !!!!! THE BLM HAS ALREADY TAKEN MILLIONS OF ACRES. We as Americans have the right to roam this country as we please and more and more I arrive at a locked gate. The desert is the only place where I can go in California for peace and quiet. My family has been going out there for generations and I would like this tradition to continue. It is unfair to take this OHV area from the people who use it for recreation. It will also impact a billion dollar off road industry in CA which creates jobs and tax money

for the state and the troops. I am against this proposition. Please consider my opinion and look at other areas for our Marines to train at.

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment . The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** We have been an off-roading family for 35 years. We have sadly watched as more and more areas are closed of to exploring with the grandkids. Kids who are exposed to the joys of desert exploration and family togetherness grow up to be great parents themselves. Families are more and more important in this decaying society. Please reconsider closing Johnson Valley.

**Comment** I am absolutely opposed to this expansion by the USMC into the Johnson Valley Recreational Area. 29 Palms is a huge complex already, and this

expansion is absolutely unnecessary. Johnson Valley is one of few remaining unspoiled areas of its size, and we cannot afford to lose it to "questionable" uses by the Military or private interests. This area is used by outdoors enthusiasts, offroaders and has a very diverse eco-system. This area financially benefits the surrounding communities. Off-roaders benefit California's economy and this State cannot afford the economic loss which closure of this area would bring. I am an off-roader and moved to California in 1997 specifically for the off-roading and natural unspoiled areas remaining available to the Public. This invasion by the USMC is simply WRONG! This action will definately cause further erosion of support for our Armed Forces at a time when several actions overseas are in-question. I do not wish to add my name to the list of those who will certainly loathe the US Military as a result... I'm already too close to feeling that way now. Do we truly want yet another Military expansion when we've already seen so many other bases CLOSE across the USA and Territories? The contradictions of this expansion make no sense whatsoever. I pray that common sense will prevail and stop this unnecessary expansion in its tracks. GOD please protect the few unspoiled areas we have remaining in the USA that are actually accessible to so many surrounding residents. The prospect of long drives to access areas far-away is sickening and financially impossible for several residents already struggling in our economy.

**Comment** To whom it may concern, I would like to voice my opinion about the proposed Marine expansion into the Johnson Valley OHV area. I am proud of our military and support them fully but taking the lands in Johnson Valley would be a terrible idea for OHV and the offroad community. The OHV community in general is highly supportive of its nations Armed Forces who fight to keep this country free. Area's including Johnson Valley are just the kind of places our Armed Forces fight to keep open for the country and are enjoyed by thousands of OHV users per year and pumps millions of dollars into the local economy around Yucca Valley and 29

Palms. I would venture to guess the area is also enjoyed by many of the Marines stationed at 29 Palms as well. There is a lot of lands in this area of California that could probably also be used for military training missions that would not be nearly as impactful on the OHV community as well as the local economy. I am from Arizona and after visiting the area with many of the guys in my club for the King of the Hammers offroad race here recently we will be returning again for the race as well as other times just to enjoy the OHV area and use the awesome offroading trails it has to offer. This year for the KOH offroad race our small AZ offroad club had 20-25 members attend with 12-15 offroad vehicles, and all the necessary trucks, trailers, and RV's to get our members and offroad rigs to the lakebed. There were also hundreds if not thousands of other AZ OHV users that made the trip to Johnson Valley for the week long KOH event. To lose this area and this event would be a step in the wrong direction for the USA as well as all the OHV users who frequent the area. Thank You H.S.

**Date Comment Received** 5/22/2011

**Response**

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be

evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under

alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** PLEASE DO NOT CLOSE OR ALTER THE JOHNSON VALLEY OHV AREA. YOU WOULD BE DOING A HUGE DISSERVICE TO THE AREA AND SURROUNDINGS COMMUNITIES. As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/22/2011

**Comment** God bless our troops and thank you all for your service. The safety and training of our troops is paramount, however if there is a way to accomplish this without encroachment on the Johnson Valley area my family and I would be very happy. We love off-roading and the freedom of exploring that can only be obtained by vehicle. We hike and mountain bike and enjoy the out doors in many ways. Off- roading is a very unique way to see and enjoy the outdoors that we can't do by any other means. If there is a way Johnson Valley can remain open, please choose that option. Thank you.

**Date Comment Received** 5/22/2011

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** The expansion of the training area will force OHV users into the only other area available in the location - the El Mirage Dry Lakes. The increase in traffic will adversely affect the local wild and plant life, as well as making what is currently a serene environment, an extremely busy and potentially hazardous one. Considering the expanse of desert available, is it possible for the Marine base to consider a less critical (in terms of location and proximity to local populations) place in which to practice?

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

**Comment** The expansion of the 29 Palms Marine training area would force the current OHV users into the remaining OHV are in the vicinity of the El Mirage Dry Lake. This would adversely affect the native wild and plant life, as well as multiply the number of people using an increasingly limited amount of space available for public recreation. I would strongly urge the Department of the Navy to consider other options that are not as close to centers of population and critical to the careful management of natural resources and public recreation.

**Date Comment Received** 5/22/2011

**Comment** Please give us an extension on the comment time as you published the wrong address...you didn't get many of our comments by having the incorrect address. This is not our fault, please do the right thing. I was out at church in Johnson Valley a few months ago and the noise coming from the base was amazing. Our church is way up on a hill about 4 miles above Old Woman Springs, in the area of Laraha, the windows rattled it frightened the children, the noise was the worse I have heard in a long, long time. I live what is called the Mesa, one side of the street is considered Joshua Tree the other Yucca Mesa, my windows rattle and shake, it feels like we are having an earthquake and it is quite frightening. Pls give us an extension on the expansion issue of the base!

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

**Comment** we know how important the base is and appreciate what they are doing for all of us, but please don't take all the land out in the Johnson Valley area. People come from all over the country to have fun, enjoy with their families this open country. Can't we work together on a solution for the expansion, can't you go the other direction?? There are so many people that have retired out in the Johnson Valley area and love the scenic views and quietness that it offers. If you take the land you will ruin these peoples enjoyment and retirement years. You need to go out to that area and walk, or sit, or just listen to the noise that is heard when you are bombing out that way....it is terrible. Please consider our needs. We love the Marines we need you for what you do but please try to feel our concerns and needs as well. Thank you

**Date Comment Received** 5/22/2011

**Response** Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will

**Comment** PLease don't close Johnson Valley OHV area. Of the alternatives, only #3 appears reasonable. The impact on recreation and the economy would be huge if any other selection is made. We want you to be able to train and stay safe, but I think expanding eastward and possibly taking over the Cleghorn and Sheephole Valley Wilderness would be best. It would have little effect on anyone other than having congress do the right thing. Your base expansion would be complete. Also we received notice from C.O.R.V.A. that your previous memo to submit comments gave the wrong address. Please issue a 60 day extention for the comment period. Thanks

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. **Comment** As long as the EIS is done by the laws and rules, it is welcome. In the end after all the facts are given, I am hopeful the aquisition will not take place, as it is unnecessary.

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes

part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

Re: Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment at Marine Corps Air Ground Combat Center Twentynine Palms, CA

Dear Sir or Madam,

The Aircraft Owners and Pilots Association (AOPA), representing more than 400,000 members nationwide, submits the following comments in response to U.S. Navy's Draft Environmental Impact Statement (DEIS) for Land Acquisition and Airspace Establishment at Marine Corps Air Ground Combat Center Twentynine Palms, CA. Based on the expected annual usage, a Temporary Military Operations Area (MOA) would largely meet the military's requirements while mitigating many of the concerns of general aviation. The proposed action is located in a corridor of high air traffic volume making even a modest expansion problematic. Any expansion westward will compress civilian air traffic operating between southern California and points east. However, several opportunities exist to improve the planned airspace action in Alternative 2 that would further mitigate the impact on general aviation.

**Temporary MOA could accomplish goals**

The Executive Summary states that the purpose of the proposed action is to permit Marine Expeditionary Brigade exercises which will take place twice a year for 24 days per event. For a training activity that occurs so infrequently, a Temporary MOA would address the military's need for training airspace while substantially reducing the impact on general aviation. Because real-time special use airspace status updates are not currently available, pilots must rely on charted times of use. According to a recent survey by AOPA, 67% of pilots circumnavigate special use airspace regardless of its activation status due to the lack of timely and reliable information. It seems that the full time establishment of special use airspace (SUA) is extreme considering the MOA would be inactive 87% of the year.

AIR-1

**Insufficient altitude for transiting traffic**

The Twentynine Palms Special Use Airspace (SUA) complex is uniquely located in a major air traffic corridor. Pilots attempting to fly between southern California and points east will likely attempt to fly under the CAX MOA east of R-2501. The proposed CAX MOA floor of 1,500 feet does not provide sufficient room for bi-directional traffic and offers questionable margins for a safe maneuvering altitude in mountainous terrain. AOPA requests that the floor of the proposed CAX MOA be raised to a minimum of 4,000 feet to address these issues. If such an increase is not possible, AOPA requests that the CAX MOA be subdivided into a low and high sector so that only those areas essential to a specific training event be activated at any given time.

AIR-2

Given the configuration of the Sundance, CAX, and Turtle MOAs, AOPA requests that the boundaries be amended to permit through traffic to utilize the increased floor height of the CAX MOA corridor. Specifically, by relocating the eastern boundary of the Sundance MOA further west, civilian traffic would have access to the corridor under the CAX MOA.

AIRCRAFT OWNERS AND PILOTS ASSOCIATION

Response to Comment 1986 (Page 1 of 2):

AIR-1, AIR-2, AIR-3, AIR-4:

Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Comment ID: 1986 (Page 2 of 2)

Response to Comment 1986 (Page 2 of 2):

Naval Facilities Engineering Command Southwest  
Page 2  
May 20, 2011

**Soaring Operations over Blackhawk Mountain and Twentynine Palms Airport**

In addition to transient traffic operating between southern California and points east, the eastern portion of Blackhawk Mountain is a popular soaring location and serves as both a launch point and a way point for soaring flights heading east. Any expansion of the Twentynine Palms SUA Complex westward will encroach on this active soaring area. Alternative 2 offers the smallest westward expansion and with the use of a Temporary MOA would mitigate the soaring community concerns to a large extent.

AIR-3

**Summary**

AOPA recognizes and supports the U.S. Marine's need to train as they fight. The Twentynine Palms SUA complex, with some modifications, represents a unique training asset for the U.S. Marines that could result in meeting the Marine's training needs while mitigating the impact on general aviation flight operations. The use of a temporary MOA in place of charted special use airspace will substantially improve efficiency and access for general aviation while providing the needed training airspace for U.S. Marines. Increasing the floor of the CAX MOA to 4,000 feet will mitigate the impact on transient traffic between southern California and points east.

AIR-4

We appreciate the opportunity to submit comments on the Twentynine Palms DEIS.

Sincerely,

Tom Kramer  
Manager, Air Traffic Services

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The

Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** “The expansion of the 29 Palms Marine training area would force the current OHV users into the remaining OHV are in the vicinity” the El Mirage Dry Lake. This would adversely affect the native wild and plant life, as well as multiply the number of people using an increasingly limited amount of space available for public recreation. I would strongly urge the Department of the Navy to consider other options that are not as close to centers of population and critical to the careful management of natural resources and public recreation.”

**Date Comment Received** 5/22/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

<b>Comment</b>	<p>All DEIS Alternatives Would Restrict Access As you have no doubt heard by now, the United States Marines are seeking to establish a large-scale training range facility at the Marine Corps Air Ground Combat Center at Twentynine Palms, California. To this end a Draft Environmental Impact Statement (DEIS) has been released. Comments will be accepted until Thursday, May 26th. The DEIS analyzes 6 alternatives for potential impacts to land use, recreation, public health and safety, air quality, noise, biological resources, cultural resources, geological resources, water resources and other resources. The preferred alternative is alternative 6. The DEIS can be viewed here. Unfortunately, any of the proposed alternatives, including the Marines' preferred alternative, will ultimately result in the loss of OHV access and possibly a complete closure of the Johnson Valley OHV area. Please review the DEIS and submit comments by filling in the attached webform found here. You can cut-and-paste the following or insert your own comments. Either way it is imperative that you weigh in before the comment period closes on May 26! Suggested Comments: As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. **Comment** Any expansion of the MCAGCC will have a negative impact on desert wildlife, regardless of the measures the Marines take to mitigate the damage, and any expansion of the training airspace will have a negative impact on the desert's solitude, regardless of the measures the Marines take to mitigate the damage. However, that damage has already been done in another nearby location--Fort Irwin. It's astounding how closely the Marines' request for base expansion now echoes the Army's request of a few years ago. Here are a few quotes from that Army request. "To meet the training needs of the Army today and in the foreseeable future, the NTC needs to expand to accommodate new tactics and doctrines, and to allow our soldiers to train in the most realistic environment possible. The land expansion will provide an expanded battle-space (land and airspace) environment for training Army brigade-sized ground and air units according

to the Army's training and combat operations doctrines. The training doctrine calls for training to be conducted in as realistic a battle-space environment as possible." And: "The operational experience from Operation Desert Storm and Operation Iraqi Freedom has also confirmed the need to train heavy mechanized units in larger, brigade-sized assemblages, spread out over large land areas. The current available maneuver area at the NTC is not adequate to realistically support the increased distance and pace of today's tactical operations or today's brigade-sized units." The Marines have stated that they have examined Fort Irwin and found it unsuitable, but it was expanded according to the Marines' requirement (though they did not know that at the time, of course.) With a few compromises here and there, the Marines could use a base capable of hosting brigade-sized maneuvers. That base already exists, and it has the same landlord--the Department of Defense--as MCAGCC. Using a facility that already meets most of the Marines' requirements, is nearby, and has already recently expanded is a win-win situation for everyone, especially the quiet, wildlife-filled area surrounding the combat center. PS: I attended the public meeting in Ontario, and I was impressed with the courteous, professional, and well-educated responses to all my requests for information. Thank you.

**Date Comment Received** 5/22/2011

**Response**

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

**Comment** I respectfully request "no action" be taken as the land expansion alternative. With the preferred method, the Marine Base will be taking some of the best Southern California off-road areas away from the public. These areas have been used for decades by thousands of individuals for recreation. We, as a family, have enjoyed going to the Johnson Valley off-road area to camp and 4-wheel for years. It has unified us as a family in a way that is irreplaceable and priceless. It will be a sad day if this area is taken away.

**Date Comment Received** 5/22/2011

**Comment** Johnson Valley is the only place of it's kind for off road recreation and racing. Taking this area away for any reason will impact thousands of users and businesses. Leave Johnson Valley as it is. In the event this is not possible, acre for acre mitigation would the only acceptable alternative. As a patriotic American, I understand the need to continually improve our armed forces. It seems that other options are open to the Marines. Johnson Valley is my Yellowstone, Grand Canyon, Niagra Falls...

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined

that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement – Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for

recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** We come to California every winter to enjoy the OHV opportunities Johnson Valley offers. We race in the D-37 races and really do not want to see this area closed. It would be okay if there were an alternative, but since there is no alternative, NO WAY! I spent lots of time in the military in that general area and it seems that there is already enough space dedicated to training.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** As a former US Army soldier who served in Desert Shield/Storm I realize the need for expanded training areas. However I do not understand why NAVFAC SW wants to take this area away from the general public. Is it because it is the path of least resistance? I have been utilizing this recreational are for 18 years with my family and friends. Due to the fact this state already has limited areas such as this available to the public I do not see the justification in NAVFAC looking to take it. I hope that another alternative can be found. It will be a sad day for the offroad community if this area is taken away. I beleive that maby of the general public that use this land feel this way. I hope that the lack of other areas such as this one for public use is taken into consideration in this matter. Thank for for receiving my comment, Donald Van Dyke

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment . The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would

be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Every Christmas we go riding and shooting rockets off at Soggy Dry Lake. This is one of the only places in Ca where both activities are possible. Currently most riding spaces are already gone due to home development. The military already has two large bases in this area. It would be a shame to close off another area.

**Comment** There continues to be a reduction in open space that is available to the public. As the population grows, open space becomes more and more valuable. The closure of open space results in overcrowding of the remaining off road areas, causing an increase in accidents. When riding options are limited, it is only human nature to look for something new and interesting. This will increase the number of riders who travel off of developed trails or ride in areas that are closed to OHV use. As an Eagle Scout, an OHV enthusiast, a 20 year member of the Sierra Club, and father of two children, I oppose the expansion of the Marine Base at Twenty Nine Palms. Please keep the land available to public access for future generations to enjoy.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2

of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

**Comment** I am writing this comment as a concerned OHV enthusiast. Recreation opportunity in California is vanishing at an alarming rate. Johnson valley is an important riding area to me. I want to make sure that the no action taken alternative is picked. California's loss of recreation areas is hurting the economy in many ways. Sales of OHV's Sales of accessories, Truck and RV sales. Fuel and supplies sales,(I spend about \$1000.00 dollars in the local area every time I go). We need to preserve these places so we can take our children and grandchildren. OHV use is a family event that helps build bonds and brings people together. I don't want this area to become like fort Ord in monterey. Due to live explosives being left behind most of that place is now un fit and un safe to use. My family will never be able to use those lands like they once could. Please, I urge you to take no action in johnson valley and leave things the way they are.

**Comment** First & foremost, I thoroughly support the mission of the USMC and our other Armed Forces. Training is essential. I have been responsibly enjoying the Johnson Valley OHV since I was a child in the early 1970's. Now, my children are also enjoying this wonderful area. My 7 year old son just learned to ride a motorcycle during our latest excursion to Johnson Valley OHV on the weekend of 4/2/2011. This is an experience he and I will never forget. As a member of a OHV Riding Club, I consider us true environmentalists. We take care of the land because we want to continue to enjoy it. There must be an alternative to that the USMC can choose over removing this wonderful land from public use. Thank you very much.

Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

Naval Facilities Engineering Command,  
Southwest  
ATTN: 29 Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

Gentlemen:

I am submitting these comments on the Draft EIS for the Marine Base Expansion in 29 Palms.

I am a property owner in Johnson Valley. I have a renovated Homestead Cabin which I use on weekends and also rent out to desert vacationers.

I have reviewed the document and have the following comments:

**CEQA:**

I question why there is no explanation in the document as to why there is no Environmental Impact Review under CEQA for the project. There is mention in the document of acquisition of private and state lands. There is mention of the need to build new roads and install gates at existing roads into the OHV areas. There is mention that the construction of the Communications Towers may require that "authorities acquire easements, lease, permit or...to construct the communications tower". The OHV lands that will be confiscated for the expansion are currently under the supervision of the California Department of Parks and Recreation/Off Highway Motor Vehicle Recreation Division. There must be agreements between State Parks and BLM regarding the use and oversight of these lands. If surrender of these lands involves alteration or suspension of these agreements, that might constitute an action on the part of a State Agency that triggers CEQA.

If any of these required actions are on the part of State or County agencies, then that means that a CEQA review of the project would be necessary.

Why then is there no mention of CEQA in the EIS document? This needs to be addressed.

**NOISE:**

The noise sections are most misleading and gravely flawed. The models used evaluate and predict averaged noise projections for the aircraft and ordnance explosions. The Community Noise Equivalent Level (CNEL) metrics used in

NEPA-1

NOI-1

Response to Comment 2018 (Page 1 of 5):

**NEPA-1:**

Thank you for your comment. The Marine Corps has met with the State of California to discuss CEQA requirements for state actions that could be undertaken following the project decision. State agencies are encouraged to use NEPA documents when such documents comply with CEQA. To the extent practicable, the EIS has incorporated CEQA requirements to allow state agencies to utilize the EIS analysis to support any future project-specific analyses that may be required by CEQA.

**NOI-1:**

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

**BIO-1:**

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

Comment ID: 2018 (Page 2 of 5)

the document are "daily noise metrics". That means that the individual aircraft flyovers, bombings and ordnance and gunfire noise have been averaged over a 24 hour period. People will hear these explosions gunfire and aircraft bombings as individual events not a 24 hour average!

This noise data therefore needs to be expressed in "Lmax" decibel amounts for the residents living in proximity of the combat training sites. Otherwise the noise impacts will be significantly underestimated. "Lmax" is the metric used to measure individual noise events. Bombs and ordnance explosions should be measured as individual noise events. None of this data is provided in the DEIS.

Use of the CCNEL is misleading. You can use this metric when measuring noise from a highway which tends to be steady and perceived as a constant drone. This is not the case with bombs and explosions. You cannot average the noise coming from bombs exploding or helicopters flying over your house. Because that is an individual noise event! We want to know what the individual bomb decibel readings are going to be.

Furthermore, the EIS indicates that the plan is to explode more than a million rounds of munitions ground to ground and more than 1.5 million rounds air to ground during the various exercises each year. These explosions are to be squeezed into two one month training exercises each year. The EIS projects that 22% of that will be detonated from 7:00 pm until 10:00 pm and 16% will be detonated from 10:00 pm until 7:00 am. Night-time noise has a more significant impact than daytime because of the quieter night time noise conditions. Typically night time noise ordinances require reduction of noise because of the increased sensitivity of resident to noise during the evening hours. There is no analysis of this increased noise impact during the evening hours presented in the EIS document.

Again this is entirely misleading to the public. The bombings and explosion of ordnance and gunfire accompanied by airplanes and helicopters will destroy the lives of residents in the vicinity of the base expansion denying us the peaceful enjoyment of our property.

The EIS needs to provide the "Lmax " noise levels from the sites of the combat exercises. The EIS also needs to determine how far away the combat exercises need to be to so that the "Lmax" noise levels are diminished to the CCNEL levels of 62 decibels which are presented in the DEIS as the acceptable noise level under the CCNEL.

This might restrict the combat exercises to a distance of twenty miles from the sensitive receptors. This might disallow evening combat exercises. If so, so be it!

NOI-1

Response to Comment 2018 (Page 2 of 5):

CR-1:

Sections 3.12 and 4.12 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act.

SOC-1:

As outlined in Section 4.3.1.2 of the EIS, three criteria are used to assess the significance of impacts to minority and low-income communities in the context of environmental justice (EO 12898, *Federal Actions to Address Environmental Justice in Minority and Low-Income Populations*): 1) there must be one or more such populations within the project area; 2) there must be adverse (or significant) impacts from the action; and 3) the environmental justice populations within the project area must bear a disproportionate burden of these adverse impacts. If any of these criteria are not met, then impacts with respect to environmental justice would not be significant. All environmental impacts that are attributable to the proposed action would apply equally to any affected persons, regardless of minority or income status; therefore no impacts would occur with respect to environmental justice.

Comment ID: 2018 (Page 3 of 5)

**VIBRATIONS:**

The draft EIS makes no mention of vibration impacts!

Ground born vibrations will be generated by the combat activities of bombs, ordnance explosions and gunfire. Currently, I can feel the vibrations from combat training activities at the existing marine base which is more than 20 miles away. The EIS needs to present what the vibration levels will be coming from the planned base expansion combat training activities.

The vibration impacts are likely to be significant and extremely annoying. They will feel like earthquake tremors and may pose risk to residential structures. Also a significant portion of the vibration impacts will be experienced in the evening combat exercises. The EIS needs to address this issue with a detailed analysis and modeled projections of vibration impacts on the community.

**BIOLOGICAL IMPACTS:**

The EIS clearly states that it will significantly impact Desert Tortoise. Tortoises will be bombed, and run over and their habitat destroyed. The EIS does not address the trauma that the tortoises will experience from the noise and vibrations resulting from the bombing of ordnance and gunfire during the combat training exercises. This needs to be addressed. The trauma might prevent the tortoise from mating or nesting and have a further deleterious impact on their dwindling population. This should not be allowed.

Why are the regulations written to protect endangered species being over-ridden by the Marines expansion objectives? How is this justified?

**SECTION 106:**

There is no discussion of the Homestead Valley Communities in the EIS. Johnson Valley and the other Homestead Communities were founded under the Jack Rabbit Homestead Act or Small Homestead Act of 1939. As such they can be considered eligible for historic status under Section 106 of the National Historic Preservation Act since their creation is associated with an Act of Congress. There should be a discussion of this. Note that these communities do not need to be determined to be Historic in order for the reviews to be required under Section 106. Mere eligibility qualifies them for consideration under Section 106.

There should be discussion and analysis of the impacts of highway and traffic development, light, noise, vibrations and air quality degradation that will impact these communities. All these impacts to the Homestead Communities might be significant and need to be addressed. Keep in mind that the noise section of the DEIS is flawed and cannot be applied as presented to a Section 106 analysis.

NOI-1

BIO-1

CR-1

Response to Comment 2018 (Page 3 of 5):

**REC-1:**

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**REC-2:**

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Comment ID: 2018 (Page 4 of 5)

Response to Comment 2018 (Page 4 of 5):

Once the noise section is properly corrected to reflect "LMax" noise levels from the bombs and exploding ordnance then the direct impacts of noise and vibration could be assessed regarding its impacts on these historic homestead communities.

CR-1

**ENVIRONMENTAL JUSTICE:**

The environmental justice provisions of NEPA require that the proposed project not disproportionately impact disadvantaged or minority communities. Right now the EIS is flawed because it understates the environmental impacts from the project in categories such as noise and vibrations, air quality, traffic, local economics.

Johnson Valley residents are mostly elderly and of below average income. They qualify as disadvantaged. The EIS needs to complete a thorough analysis of the impacts of the project on this community under the NEPA provisions of environmental justice.

SOC-1

Because the EIS analyses are flawed in areas such as noise and vibration impacts, the elderly and those of lower income are more likely to be significantly impacted because they are more sedentary and less likely or able to avoid, or move away from the area of significant impacts such as noise and vibrations.

This needs further analysis.

**RECREATIONAL IMPACTS:**

The proposed project is going to take away from the public domain the majority of the Johnson Valley OHV lands ( over 56%) dedicated for recreational use. These lands are heavily used and the adjacent communities derive significant percentages of their income from the OHV folks. These lands cannot be replaced or mitigated with other desert lands farther away. Johnson Valley is a convenient weekend escape for OHV recreation. OHV areas farther away are too distant for a weekend trip and would cost significantly more to reach with increasingly expensive fuel costs we are currently experiencing. Therefore the proposed base expansion into the Johnson Valley OHV lands will significantly reduce the opportunity for families to escape the megalopolis for a weekend of recreation.

REC-1

No mitigation is proposed. The EIS does not present a legitimate explanation as to why these recreational lands need to be confiscated from the public.

REC-2

Thank you for your attention to these matters of significance that must be addressed in the EIS.

**Comment** I would like to comment on the public meeting, I believe the Marines and the off road community can work together, and I look forward to it. I believe using the only option, option 4 will be the best to work together in the future. I believe if the sport promoters and the Marines get together before any new racing year, the schedule and maps can be pre-done to help everyone. I would like to be a part of this program and would like to be a voice for the outdoor community. Please take everyone's choice into consideration. Thank you

**Date Comment Received** 5/23/2011

**Response** The Marine Corps appreciates your comment and involvement in the NEPA process. Public comments on the Draft EIS are an important part of the decision- making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. Once a decision has been made, the Marine Corps would implement communication and notification procedures as outlined in the EIS, to maintain a steady and persistent engagement with local communities, stakeholders, and agencies during future management planning.

**Comment** Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and

the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public. There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiller, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability.

**Date Comment Received** 5/23/2011

**Response**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on

limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I submitted comments during the first scoping period and attended one of this years meetings. I own airport FAA designator 7CA1 (Abraham Airport) in Johnson Valley. In response I see that the proposed land acquisition area was moved northward and eastward from my airport and the neighboring airports 2CAS (B&E) and 51CA (Kelly). I then studied the proposed airspace proposal for choice 6. It places my airport underneath the restricted

airspace. I did observe the proposal to have a 1500 AGL shelf over my airport. I am familiar with the ridges of land to the north and south of my airport. I have studied the proposed exercise area and it is beyond those ridges I believe. I am not aware of any restricted airspace that has a shelf underneath it. I further do not know how the FAA would chart this shelf airspace since it is described in the study to be defined as underneath the restricted area but outside the proposed land acquisition area which has a very jagged boundary. I also do not know how pilots could navigate this shelf and how GPS manufacturers would display it. I therefore would suggest that the land acquisition boundary and restricted airspace be located three miles from any airport.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need;

However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings

before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified. Please see Section 4.10 of the EIS for information on expected impacts to Biological Resources.

**Comment** It is unconscionable that the federal government is still considering taking more of our public lands for thier own use, especially on the heels of the death of the man that created our militaristic expansion. I understand the reason for needing to expand the Twentynine Palms training facility was to

more closely mimic the distances our forces would be required to traverse during battle in the middle east. It appears the need for this type of training is no longer necessary since our presence in Iraq and Afganistan is lessening. The average citizen is continually asked to make sacrifices while the decicion makers continue to run the country into the ground. I am a regular user of the Johnson Valley Recreation Area; Please allow me and future generations the freedom to continue to enjoy one of California's great open spaces by not expanding the Twentynine Palms Training facility. Thank You.

**Date Comment Received** 5/23/2011

**Response**

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** I think the Johnson Valley off road area should be left alone. The Marines could find land somewhere else. I enjoy taking my family to the Johnson Valley area to ride and have done so for many years, and I would like to continue that. There is plenty of desert out there that they can take, why does it have to be an area that already has a designated use? If they take that area, it will only make other areas more crowded and dangerous. This just isn't right. Being an offroader, we already have worry about the environmentalist, now we have to worry about the Marines wanting us to give up our riding areas. Please leave Johnson Valley alone.....PLEASE.  
Mike Acosta

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at

other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I feel the military has no real need to take more public land. In these touch economic times you will be the cause of local business to fail and hinder any economic recover that area has made. I have been a recreational user of the California desert for over forty years and have seen our public lands shrink for mainly political reasons. The areas left have such concentrated use that we do not even try to go out and enjoy them on holiday weekends due to the crowds. Please DO NOT consider this proposal so that the future generations can have this special place to enjoy.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

<b>Comment</b>	I oppose the proposed enlargement of the current operation area. My opposition is based on dwindling land use opportunities for the tax paying Americans that use our national lands. The very thought of increasing the land size while the actual size of the new generation of weapons being deployed is shrinking is ridiculous.

**Comment** I come from a military family and honor the work that has taken place to give me my freedom. I am against alternative 6 the expansion of Twentynine Palms west towards Johanson Valley. I support expanding towards the east where the impact will be felt less. Families have enjoyed riding Johanson Valley and the spectacular scenery provides a environment for them to bond. There are homes in the area where the occupants have choicen a reclusive lifestyle. Please do not take this area away from those who enjoy it. Patrice Carlisle

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I am very upset that you guys are taking land away from the landers Jhonson valley area. That land is sacred to the off road community they're very little places to offroad and race in southern California. We have four generations of family that have been going every Thanksgiving, new years, and easter for the last ten years. The economic impact for small business will be huge, My business will take a huge down turn is this area is taken. So please take everybody opinion seriously because once you take this land away we will not get any in return, and this land will be taken away for ever.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The 29 Palms Marine Base is the largest Marine Base in the WORLD (in square miles) and now they want to take over a federally designated OHV area that serves as an area for families, events and is a huge money maker for the businesses nearby. King of the Hammers would be shut down. This will be a disaster!! PLEASE DO NOT CLOSE OR ALTER THE JOHNSON VALLEY OHV AREA. YOU WOULD BE DOING A HUGE DISSERVICE TO THE AREA AND SURROUNDINGS COMMUNITIES. As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. **Comment** Off road riding/driving is a recreation enjoyed by thousands of people mostly from the southern California area. Restriction or closure of the Johnson Valley off road area would have a serious effect on people's ability to enjoy the outdoors with their families. The knock on effect would cause a ripple through the entire off road industry, from RV dealers to motorcycle dealers, to tire suppliers etc. This is a very popular off road area, please keep it open as is with no modification for anything other than off road recreation. Our military already has plenty of land to practice on.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and

direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** Given the Alternatives presented, I strongly support the "No Action" alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives. The Corps has failed to consider a reasonable range of alternatives analyzed during a NEPA process. The Corps EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard. The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. The arbitrary screening criteria eliminated a number of viable proposals and alternatives brought forward by the public There is Corps Bias Against Integration - On March 26, 2011 Corps spokesman, Captain Nick Mannweiller, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB- sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and

sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**Comment** The expansion of the 29 Palms Marine training area would force the current OHV users into the remaining OHV are in the vicinity of the El Mirage Dry Lake. This would adversely affect the native wild and plant life, as well as multiply the number of people using an increasingly limited amount of space available for public recreation. I strongly urge the Department of the Navy to consider other options that are not as close to centers of population and critical to the careful management of natural resources and public recreation. Thank you for your support.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I would like to comment that the Johnson valley open ohv area should not be absorbed by the twentynine palms marine base. The military should

learn to work together as a team by having the marines train at fort irwin army base, edwards afb, china lake naval air station and in the nellis range in Nevada. Most of the California desert has been made off limits to motorized recreation due to wilderness designations, wilderness study zones, national parks, national monuments, tortoise preserves, solar farms and military installations. Destroying Johnson valley open area with another military installation will destroy the environment and the local economies that rely on the ohv area for tourism revenues. It will also severely impact the remaining ohv areas through overcrowding and overuse.

**Date Comment Received** 5/23/2011

**Response**

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. **Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/23/2011

**Response**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Response**

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson

Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Re: Comments on 29Palms Training Land Acquisition/Airspace Establishment DEIS

Dear Project Manager:

Thank you for the opportunity to comment on the 29Palms land withdrawal DEIS. These comments are being submitted by me as an individual. However I am a member of several OHV organizations, a frequent visitor to Johnson Valley OHV area and have been for over 30 years. My family and I enjoy camping, rock crawling, motorcycle riding and spectating racing events in Johnson Valley. Most of our activities take place in the eastern portion that will be greatly affected by all the proposed alternatives except alternative #3 and the no action alternative.

The DEIS as submitted is flawed, contains inaccuracies and is incomplete. The DEIS:

- Is misleading when it states that a portion of the west study area will be open 10 months a year.
- Underestimates the cumulative impacts of Alternative 6.
- The marines failed to justify the need for simultaneous training of 3 MEBs.
- Inadequately evaluates the cost of an expansion of this magnitude.

**Issue One-** The marines are misleading the OHV community when they state that the RPAA land in Alternative 6 will be open for 10 months a year. In the DEIS there is no quantitative analysis on how much recreation will actually be able to be had in the RPAA. For example the DEIS states that the busiest months are March, April and May and the least are July and August. This data needs to be quantitative with its respect to

**Response to Comment 2072 (Page 1 of 3):**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment ID: 2072 (Page 2 of 3)**

actual visitor days that recreation and events will be affected. One can assume that the Marines will not want to use the hottest months of the year for their training. The Marines must state exactly when they plan on training in the RPAA and then formulate quantitatively how they will restrict visitor days in the area.

**Issue Two-**The DEIS has incomplete data on the economic effects of any of the alternatives that expand into Johnson Valley. The DEIS says OHV sales will not be affected. This is misleading. The DEIS does not take into account the multi million dollar aftermarket parts industry. A large part of the OHV aftermarket parts industry relies on the part of Johnson Valley that will be affected by the proposed expansion. These cumulative effects have not been adequately studied or have any mitigation measures been proposed for these effects. The DEIS must address these.

OHV use is increasing yearly and available land drastically diminishing. A closure of this magnitude will adversely affect OHV recreation not only now but in the future. The DEIS does not adequately evaluate the cumulative effects to OHV use that the removal of over 146,000 acres of currently open land will cause. The absent and inadequate mitigation that the Marines propose can not effectively minimize those effects. The Marines have not evaluated how they will mitigate the overcrowding that will occur at nearby OHV areas. Simply stating that these issues are "unmitigatable" is not sufficient or true. With 90% of the displaced users going to other nearby areas there must be adequate mitigation measures.

Part of the stated purpose of NEPA is to "stimulate the health and welfare of man". With that being said, recreation is an important part of overall human health and welfare. The DEIS states that SB 2921 and CDPA 2010 would minimize and potentially offset recreation cumulative effects. These are not guaranteed legislation bills and at this time are not enforceable. They should not have even been presented as a type of mitigation since there is no guarantee that they will pass. Without substantial recreation mitigation, (an increase of OHV and dispersed camping area with similar size and topography and within a reasonable distance from Johnson Valley) this NEPA process will not meet its "stimulate the health and welfare of man" purpose.

**Issue Three** - The DEIS claims that the Marines need to train 3 MEB units simultaneously and need to expand to do so. However this is contradicted by the 14 March 2011 "Report of the 2010 Marine Corps Force Structure Review Group" document that states "The dual demands of sustained forward presence and sufficient lift for the assault echelons of **TWO** Marine Expeditionary Brigades (MEB) result..." This contradiction is evidence that the Marines have failed to Justify Need for Simultaneous Training of 3 MEBs. According to the above report the Marines plan to reduce infantry battalions, artillery battalions and flying squadrons ( a 13% reduction in ground combat forces). All of which demonstrate that the Marines may not even need an expansion at all. Their own report states the need for only 2 MEBs at a time.

**Response to Comment 2072 (Page 2 of 3):**

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: 2072 (Page 3 of 3)

Response to Comment 2072 (Page 3 of 3):

**Issue Four** - The Marines expect to see a "mini Quadrennial Defense Review" (QDR) in the upcoming months. This upcoming review is seen as far more consequential than an actual QDR because it may conclude that the nation cannot afford to have the military keep doing everything that it does today. This illustrates that the Marines may simply want to expand in order to justify their current funding or even perhaps to justify asking congress for an increase in funding. None of this is addressed in the DEIS.

At this time our country is facing the biggest deficit ever. The Marines should find a way to meet their training goals without adding to the trillion dollar deficit. Cost numbers stated in the DEIS are vague at best. The Marines must try to be fiscally responsible in these tough economic times. The Marines must rethink the need to expand the 29Palms base and/or reconsider working with the Army at Fort Irwin or use one of their other bases on the Mid-Atlantic coast or the Gulf of Mexico coast that will not require expensive land and airspace expansion.

In summary, I want to again state my strong opposition to any Marine expansion into Johnson Valley and to the entire project as it is presented in the DEIS. I would like to encourage the Marines to reevaluate the need and fiscal impact of any such expansion. I also encourage the Marines to realistically consider working with the Army at Fort Irwin for their training needs. Captain Nick Mannweiler's remarks at the DAC meeting demonstrate the Marines' unwillingness to do so. This needs to change.

I appreciate the opportunity to comment and look forward to working with the Marines in the future so they can train effectively while still preserving recreation in Johnson Valley.

Sincerely,

Vincent Barbárino

**Comment** I have been camping and riding in the Johnson Valley Off-Highway Vehicle Area for over 36 years. The quality family time that can be shared is unique and coveted by those who have had the opportunity to experience it. Although some families enjoy city parks and organized recreation it is nice to be allowed to experience freedom and open wide spaces with unlimited chances to explore. This is all made possible due to the proximity and accessibility to local civilization. The military has the ability to utilize the vast desert space available yet wants the convenience of locality at the expense of the families that only ask for a small acreage nearest to their homes. I ask them to reconsider the need to have their training facility so close to thier base, yet between them and civilization when they have almost endless space to train in the other direction. Please consider letting the public enjoy the relatively small acreage nearby rather than make them travel through the military training ground to find recreation elsewhere.

**Date Comment Received** 5/23/2011

**Response** Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** While both my wife and I served this nation and fully support the Armed Forces of this great country of ours, if this travesty is allowed to proceed, I can gaurantee that none of my children will ever join the Armed Forces. My children have come to understand that we have to fight many environmental organizations for our right to enjoy our OHV's. But they asked me why we now have to fight the U.S. Armed Forces as well. I cannot give them an answer as to why the military forces of this country are so ready and willing to destroy an area enjoyed by so many. If this plan is allowed to proceed, I have no doubt that it will severly affect the ability of our military to meet recruitment objectives. PLease find another option for the base expansion and leave what little OHV areas our children have left.

**Response** Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings

before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

**Comment** I think removing motorcycle lands will be devastating to an already shrinking off road available land. More and more lands are being devoured and motorcycle enthusiasts are the ones who suffer. Generations of folks who like to enjoy the wilderness are not going to be able due to these acquisitions. Please help and either provide more available property or disallow the army's request. Thank you

**Date Comment Received** 5/24/2011

**Response**

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates geological impacts under each of the action alternatives (refer to Section 4.12 of the EIS). As noted in the EIS, there would be less

than significant impacts to soils from military vehicle operations, ordnance delivery, and infantry training.

This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while

also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I am one citizen of this once great nation that is opposed to the continued taking of lands by the government. This taking has reached epidemic proportions and needs to stop now. I have watched this growing trend toward restricting access to our lands citing every reason under the sun and it scares me. At this rate the American public will very soon be limited in their free travels, they ( the government controllers) will allow the free American people to travel to work and back home with complete freedom, but anything other than that will be strictly controlled, taxed and limited to a bare minimum. I am one free American who is ready to see a movement to take our country back from these communists. We all need to stand up for freedom and say NO to all of the takings and stifling regulations that are destroying the American Dream of freedom !

**Comment** This expansion to the west is absolutly wrong. It is incredible to think that the marine corp. would consider jeopardising a multi million dollar industry so some federal entity can sew on another star.The federal government is already on probation with the american people. Yeah,do you guys remember them.You better rethink this nonsense.

**Comment** I fully back the Military and am very Proud of our country, I am an avid off road enthusiast and feel it would be a shame to close even more riding areas, would it not be possible to find another area where some echo-whaco is trying to protect a lizzard or a tree? We need our recreation as much as our Military needs to train, take control of our own country and find another place PLEASE... Thanks for your consideration and GOD BLESS THE UNITED STATES OF AMERICA!!!!!!!!!!!!!!!!!!!!!!

**Date Comment Received** 5/24/2011

**Response** Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

I am writing for two purposes: (1)to register my objection to the Twenty-nine Palms Training Land Acquisition Project, and(2)to notify you that the DEIS for the project is defective with respect to its analysis of project-related impacts on the local economy, and(3)surrounding property impacts for which no meaningful mitigation has been offered. From my perspective, the only alternative I can support is the "No Action" alternative. Only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels and also avoid economic impacts and disruptions to the surrounding communities. My family owns property and a cabin in Johnson Valley (since 1970) for the purpose of recreating in the Johnson Valley OHV area up to 12 times a year. Our favorite places to visit in Johnson Valley are Means Dry Lake, Soggy Dry Lake, Sand Dunes, and surrounding areas for miles where we engage in motorcycle riding, racing, and Jeep exploration. When preparing for a trip, we spend \$100 on fuel, groceries, and other supplies in our local area. Then, we spend an additional \$200 in the Johnson Valley/Lucerne Valley/Victorville area while we are recreating. Over the years, we have patronized the following businesses Cafe 247, Coyote Loco, Ace Hardware, Gas Stations, Burger Depot, Home Depot, In-N-Out, among many others, in the Johnson Valley/Lucerne Valley/Victorville Area. If Johnson Valley, or any part of it, were to be closed due to the expansion of the Twenty-nine Palms Marine Corps Air-Ground Combat Center, there would be no reason for my family to travel to this part of the desert. Our property would go into disrepair or have to be sold at a lower market value. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site. Our property is located on the south side of HWY 247 in the BLM "Limited Use" designation which limits travel to existing routes. The area will see much more off road vehicle use (in unapproved areas) as recreationists are pushed off the "JV Open Area" from Base Expansion. These impacts and proposed mitigation are not addressed in the DEIS adequately at all. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative. Thank you for taking the time to consider my comments on this important matter.

**Date Comment Received** 5/24/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. **Comment** As much as I would like to stand up and scream about what the military is trying to do, I'll try not to. There has to be another place on this earth that you can TAKE OVER other than one of the largest and last places for off roading in So Cal. Granted southern California's economy is doing so well and there's such a vast amount of space for those of us that enjoy this type of sport we can just move on to another area, NOT. I think the military would use the term Soft Target in the acquiring of this public land. An easy target, the masses have no concept of what goes on there and there ignorance is your hole card. GO East, we won't care and neither will the masses!

**Date Comment Received** 5/24/2011

**Response** Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not

satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** our family and friends love to vacation in the desert. We come down for a full week and four days on our other vacation often bringing our kids friends too. We love riding our motorcycles through all this open land and exploring at each of our stops. Our trips are often 6 to 7 hours away from camp and our motorhomes. We always keep the desert clean pick up after ourselves and many times pick up other trash. My son says when he grows up and has a family he will bring them down there too. Please don't fence us in. So much land has been gobbled up or closed to save a certain weed or animal. While we still try to keep camping at our regular areas the rules and the loss of land is crushing our family trips. We are losing so much and yearn for wide open spaces. So please use what you have and leave our desert alone. Don't take any more we already are sharing.

**Comment** I have been following the progress of the Marine expansion into Johnson Valley for some time and feel I need to comment. Given the Alternatives presented, I strongly support the "No Action" alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. My family and I have been visiting the dessert (not just Johnson Valley but many parts of the Mojave and Death Valley regions) for many years. My means of travel is by Jeep. A day trip from camp would involve traveling 50 or more miles one way, spending the day exploring the backcountry and returning to camp that night. We usually

hike a few miles at the end of a trail to see what is out there. Here is my concern: Many of the trails that I have driven have been closed. Areas have been nearly cut off to exploration and camping. Much of the dessert is difficult to travel: little or no water, extreme climates, and vast tracts of rugged land. Travel by vehicle is a near necessity. We have lost so much area that I can not stand to loose another. I consider myself to be a Steward of the land, I leave where I go cleaner than when I found it, I help my fellow travelers when in need, I pass on the idea of travel lightly and respect the land so that others may enjoy it as well.

**Comment** I wish to object to the takeover of land in the Johnson Valley and adjacent OHV area. This area is of vital importance to the economy of our area and also provides one of the only places to legally ride off-road. Many utilize this area for family recreation. This area provides families with wholesome entertainment in our great outdoors. These families also spend a significant amount of money at our local grocery stores, gas stations and sporting goods stores. In addition, without such designated areas many local homeowners will have their property overrun by illegal off-roaders. I request the decision to take this property be rescinded and another solution be considered.

**Date Comment Received** 5/24/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

PLEASE DO NOT CLOSE OR ALTER THE JOHNSON VALLEY OHV AREA. YOU WOULD BE DOING A HUGE DISSERVICE TO THE AREA AND SURROUNDINGS COMMUNITIES. As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

To whom it may concern-

I believe I am not alone in saying I will do whatever it takes to fight for the preservation of OUR desert. There are many reasons why these privileges should not be revoked from us. Please give me, as well as the many other off-road enthusiasts in this region, the opportunity to speak our peace and prove that keeping this land for public use is for a higher cause.

There are a select few individuals out there who give off-roaders as a community a bad name. This is unfortunate, but I believe that every group, sect and community has these types of people. I personally know many highly educated, upstanding members of society who are avid off-roaders. We pay our taxes, we vote and participate in our communities. We know the importance of respecting this land to keep it open. Clean-Dezert is a low budget outfit, yet it was able to accomplish so much. I firmly believe that the community as a whole should not be punished or held liable for the actions of only a select few.

Another huge point to take into consideration is the vast economic damage that would come from the demise of the off-road industry. Off-roading, whether it be racing or leisure, is an expensive hobby. There are many men and women who feed their families and put roofs over their heads from the fruits of the off-road industry. With the current economic standing of not only this area but the entire country, we cannot afford to lose any more jobs.

The opportunity; privilege even, to have the desert at my disposal has given me many great memories. The desert will always be a part of me. Whether it be the many lessons I have learned from it, or the life-long friends I have gained from it; the good things the desert has provided me completely outweigh any of the bad. Desert racing teaches teamwork and responsibility, your crew is your family. The desert has had such a monumental influence on who I am today, and I am sure I am not the first nor will I be the last person to say that. These are things that I want my son to be a part of as he grows up. It would be truly devastating to have these opportunities snatched away.

Please take my points into consideration, any help, even the smallest bit - will be greatly appreciated. Insignificant as we may be individually, we can make a difference as a whole. I promise we will not stand idle while our land is taken away. Thank you kindly for reading.

Sincerely,

Alissa Andersen

alissaoffroad@gmail.com

**Response to Comment 2106:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** This is in regards to 29Palms Training Land Acquisition. Our family have been using this land for 3 generations for recreational and educational. We have very few off road areas left for recreational and camping use. DO NOT TAKE THIS LAND AWAY FROM US! We also spend a fair amount of money for equipment we use for this purpose alone that does benefit Southern California bussiness struggling in the economy. Please consider this request. regards tax payer Cindy Pellanda

**Date Comment Received** 5/24/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Submitted via comment portal: [https://extranet.tecinc.com/29Palms\\_DEIS](https://extranet.tecinc.com/29Palms_DEIS)

To the Department of the Navy:

The Maryland Ornithological Society (MOS) appreciates the opportunity to submit these comments about the draft environmental impact statement for the U.S. Marine Corps' (USMC) proposal to expand the Air Ground Combat Center at Twentynine Palms, California, by annexing up to 366,000 acres of Bureau of Land Management public lands. Our concern is with the impacts on wildlife populations and wildlife habitat. We take no position for or against the expansion, but we have several concerns.

MOS is a statewide nonprofit organization established in 1945 and devoted to the study and conservation of birds. Currently we have 15 chapters and approximately 1,500 members. Some are scientists and naturalists, but our membership includes people of all ages and all walks of life, from physicists to firefighters, legislators to landscapers. Birding is one of the fastest-growing outdoor recreational activities. MOS members travel to federal lands on birding and nature-watching vacations throughout the United States. We spend money on food, lodging, guide services, books, and souvenirs to support the local economy wherever we go.

We compliment the Department of the Navy on the draft environmental impact statement. We believe the six action alternatives analyzed in the EIS represent a reasonable range of alternatives.

The authors of the EIS were wise to consider wildlife values when they adopted screening criteria for the alternatives. Criterion No. 5 is: "Avoid congressionally-designated wilderness areas, parks, wildlife refuges, designated critical habitat for threatened or endangered species, cities/towns, and interstate highways." (DEIS page 2-12) This criterion reflects congressional mandates under the Wilderness Act and the Endangered Species Act.

We emphatically oppose the suggestion by some off-road vehicle (ORV) riders to repeal wilderness protection for some 150,000 acres of the Sheephole Valley, Cleghorn Lakes and Cadiz Dunes Wilderness Areas. All three have important wildlife values including Roadrunner, desert bighorn sheep, desert tortoise, kangaroo rat, and other species of desert wildlife. The alternatives in the EIS respect the boundaries of the wilderness areas. All were designated by Congress in the California Desert Protection Act of 1994 after 18 years of consideration through the BLM wilderness program. Repealing that protection is not a reasonable alternative.

The EIS has responded to the concerns of ORV riders by recommending a preferred alternative, Alternative 6, that provides for shared use of Johnson Valley by the USMC and the public. Military training activities would be scheduled to harmonize them with visitor uses, including ORV activities as well as wildlife-watching and other outdoor recreation activities.

The EIS does not adequately deal with illegal ORV activities within the project area. We ask the USMC to seek the recommendations of California birding and wildlife groups for mitigation measures to protect wildlife habitat and wildlife populations from the impacts of illegal ORV activities. It would be a mistake

Response to Comment 2108 (Page 1 of 2):

NEPA-1:

Thank you for your comment.

NEPA-2:

Comment noted.

REC-1:

Comment noted.

REC-2:

Thank you for your comment. The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a supplemental Recreation Study to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS.

**Comment ID: 2108 (Page 2 of 2)**

**Response to Comment 2108 (Page 2 of 2):**

to assume that only legal ORV use will occur in the area. Past experience on BLM public lands and in national forests has shown that illegal ORV traffic can impose severe impacts on wildlife habitat. All federal agencies need to reckon with such illegal activity when making land use decisions. ] REC-2

Thank you for considering our comments.

Sincerely,

Kurt R. Schwarz  
MOS Conservation Chair

**Comment** Given the Alternatives presented, I strongly support only the No-Action Alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. Please note that while in full support of our Marines and their need for training, the Marines already have 596,000 acres for training at 29 Palms, the largest military training area in the nation and the largest US base in the world. Their need to expand even more is in serious question.

**Date Comment Received** 5/24/2011

**Comment** I'm a HUGE fan of our military and especially of the brave men and women that make it the finest in the world. I would stand shoulder to shoulder with any of them if need be. However, please don't attempt to take more land away from those who choose to recreate off-road / off-highway as these areas are already too limited, and too few. I know for a fact that many military folks also enjoy using off-road products. At a time when it has become increasingly difficult to find adequate places to recreate, this is bad for all involved.

**Date Comment Received** 5/24/2011

**Comment** The Government/Marines have enough empty bases that I don't believe that they need to take over more land at 29 Palms/Johnson Valley. This has political motives written all over it..Diane Feinstein wanting more land to trade for more Wildernesses "This is OUR PUBLIC LANDS" I keep seeing articles about Diane Feinstein trading land so her husband Richard C Blum can profit from it (Solar Business) along with that Mr. Blum is the board for the Wilderness Society. I could go on & on, but I think you get the jest of what I'm talking about, something smells real fishy about this whole acquisition.

**Comment** Please, please, please stop taking away our land. Every year more and more land gets removed from recreation activities, using our own funds to support these types of proceedings. More and more people enjoy motorized recreation activities on public land, and every year we keep getting squeezed into smaller and smaller quarters. Ask yourself how many rats can you squeeze into one cage before trouble breaks out, and you will get the same answer on public lands. So again, I beg you not to take another chunk of public land. Sincerely, Bill

**Comment** I am an outdoor motorsports enthusiast and have built a business catering to other outdoor motorsports enthusiasts. It is very important to me and my customer base that the Johnson Valley area remain open as it is now. There is no other place like it, literally in the world. There is no more ground being set aside for motorsports or even just vehicular exploration so keeping this open is very important for us. In the fourwheeling world, Johnson Valley is a mecca, a bucket list destination that ranks in importance with other places like the Rubicon and the Moab area. Even in this list Johnson Valley is unique in it's size and layout. When places like this are closed to public use, my business declines because there are fewer places

for people to use our equipment and less motivation to pursue the hobby I have built a business and lifestyle around. We have 11 employees here and numerous vendors that depend on this industry and depend on people using and even dreaming of using recreation areas. JV is the greatest of all. Even being from Colorado, we make a couple of trips each year ourselves. Closing this area is going to affect a lot more people than will actually use it. We have east coast customers that dream of a trip to "the hammers" and will scrape, save, build and test a vehicle to prepare for what may be a once in a lifetime experience. Our sport and even our lifestyle are built on these dreams. With all due respect (and they are due a lot of respect), please send the Marines east. Thank you Stephen Watson President Offroad Design Inc.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine

Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/24/2011

**Comment** We off roaders are losing more and more land all the time. Hey Military, how much more land is needed. Give the people who visit the area and live in the area a break. What is next? Take over Apple Valley for more training land. I support our Military but now this is going way too far when more land is being grabbed up for training. What happened to the land now being used for training purpose? Is it all destroyed from usage and now needs to be replaced? come on. Back off

**Date Comment Received** 5/24/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Date Comment Received**

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be

legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** 29 Palms Marine Corps should as a good show of faith to the american people, include within the scope of this evolution pursue a request through the pentagon to congress. Requesting mitigation (acre for acre) of lands removed from public OHV acces by the 29 Palms expansion. Request congress to redesignate the restricted govt. land West of what will be left of the Johnson Valley open area to connect the Stoddard wells OHV area and what is left of the Johnson Valley OHV area.

**Date Comment Received** 5/24/2011

**Response** Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Community ORV Watch [www.orvwatch.com](http://www.orvwatch.com) PO Box 1722 29 Palms, California 92277 Dear Sir/Madam: The purpose of this letter is to offer our comments on the 29 Palms Training Land Acquisition/Airspace Establishment Draft EIS. We are a non-profit community-based organization dedicated to defending our private and public lands from off-road vehicle (ORV) abuse. Our members reside in the Morongo Basin including Johnson Valley and Wonder Valley. We suffer from widespread and consistent ORV trespass on our private property, public lands off-limits to ORVs, designated wilderness areas, roads, berms, and flood control infrastructure. ORVs are a source of extreme dust, noise and nuisance and are a major problem for law enforcement and code enforcement. We oppose any decision that will place our communities in harm's way regarding illegal ORV activity. We are EXTREMELY CONCERNED that the base expansion into the Johnson Valley ORV recreational area will lead to an increase in illegal ORV incursions into our neighborhoods. The loss of a significant portion of the Johnson Valley OHV area will result in adverse impacts including: increased trespass and damage to private and public lands increased destruction of vegetation and wildlife habitat increased harassment, intimidation, and retaliation against private property owners who report illegal activity increased conflicts between riders and residents increased damage to roads, berms and other flood control infrastructure, and the increased costs of repair of these features for local taxpayers ?????? increased demand for emergency, law enforcement, code enforcement, and other public services and increased costs associated with these services increased dust, noise, and nuisance in our rural communities from displaced ORV activities Contrary to statements in the draft EIS that displaced ORV riders will use nearby designated open areas, many riders (as they have threatened at public meetings, in their scoping comments, and on their web sites) who are displaced from Johnson Valley will invade surrounding rural communities. Since local law enforcement and the BLM are currently incapable of sufficiently dealing with existing illegal ORV activity, we anticipate a dramatic increase in property destruction and conflicts with local residents. In addition, with ineffective fines and the lack of visible identification of ORVs, illegal activity continues with impunity. Despite receiving numerous comments from residents from Wonder Valley, Landers, and other surrounding communities, the draft EIS does not sufficiently address the anticipated impacts of illegal ORV activity for these areas. Executive Order 11644 mandates that the federal government control ORV activity in order to protect r

**Date Comment Received** 5/24/2011

**Response**

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including

potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a supplemental Recreation Study to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the EIS.

**Comment** I am an off road enthusiast and I enjoy the area in question very much. I know that a happy resolution to this mess is unlikely but I would hope that consideration would be rendered to the thousands of people who use this area. It is true that more and more lands are being restricted from OHV use in the name of whatever is the flavor of the day. We have problems finding ways to keep young people off the streets and out of gangs and off roading has been a very positive way to do that. I hope there is a better opportunity for the military than these 160,000 Acres

**Date Comment Received** 5/24/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process.

Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I am 19 years old, the past 10 years I have spent land sailing at Soggy Dry Lake, and Jeeping and motorcycling over practically every trail in the Johnson Valley area many times a year. In doing so my family has spent thousands of dollars a year both in the local communities, as well as part stores all across the western US. I have read an extensive part of your EIS, and feel it vastly underestimates the amount of recreation that occurs in Johnson Valley. The environmental issues are also understated; the government thinks Jeep tires destroy the land, but a tank is far worse. When my family recreates and sees wildlife, we often stop and view it from a distance, but I have a hard time believing a flying bomb, or a soldier in a tank will not kill everything from flowers to tortoises. The Marines are seeking far more land than they need. Please only take the land above Emmerson Dry Lake to the Rock Pile up to the Power Lines, as seen in my attached map. If you still need additional land go East, and South, or even North. But keep the Hammers to the Rock Pile open year round as part of the Johnson Valley OHV area.

**Comment** Noooo! To the DEIS. It's a no win for off roaders for sure. As an off-highway vehicle enthusiast I write to urge you to support the "no action"

alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation.

**Date Comment Received** 5/25/2011

**Comment** I believe that the expansion of restricted airspace over MCAGCC 29 Palms CA, would greatly impact General Aviation around the area and subsequently many other air carriers. As things are now, I know that training can be done sufficiently with the current amount of Airspace the R2501 provides, along with the Bristol and Sundance MOA's. If the expansion were to occur, I do not see how it would be effective just by making the expanded area a MOA, it would have to be a restricted airspace to carry out such operations that are planned. I think this would greatly impact air travel in the local area around Palm Springs and aircraft flying north through what is currently the CAX corridor. The R2501 is already in a high volume area for "civilian" aviation with very little military aviation actually taking place as compared to some other restricted airspace areas. My interest are keeping airspace open to GA and not see it along with the land be taken away when sufficient airspace and land already exist.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

**Comment** If the Marine Corp. Base expands West: -the airstrip I am a partial owner of: 7CA1 (Abraham's) will become unuseable. -the value of our property will be greatly diminished. -the loss of Off Road Vehicle acreage will be immense and uncalled for. - the economy of the entire Johnson Valley, Landers and Lucerne Valley area will suffer greatly. Possible Solutions: 1. Change nothing, NO expansion. 2. Move restricted airspace 3 miles to the NE from 7CA1 airstrip. 3. Place a "key-hole" large enough for access to 7CA1 airstrip.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. **Comment** With regard to Option 6A, the EIS addresses some of the issues regarding the 30 day closures, but it does not go into much detail. For instance, what sort of access controls will be used for both the restricted area, and for the

limited use area during the closures? It seems like fencing/gates could be too restrictive during other times of the year. The current signage around the base perimeter is vastly inadequate (it reeks of entrapment, by misleading the public and then citing them when they venture onto the base without realizing it). I would hope that a real investment would be made to provide better signage and notification along the perimeter. Also, how long in advance will the 30 day closures be scheduled? We own property that is adjacent to this limited use area, and would like to be able to plan our visits more than just a month or two in advance. It seems that it would not be hard to have these scheduled and posted up to a year in advance.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

**Comment ID** 2138

**Last Name** Name Withheld by Request

**Comment** Under proposed Option 6A, the southerly portion of the current OHV area would be accessible for roughly 10 months out of the year. What sort of guarantees are the Marines willing to put forward that the 10 months will slowly be whittled away one month at a time until 10 years from now, the entire area is full restricted?

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with

the NEPA process to assess potential impacts of some other course of action.

**Comment ID** 2139

**Last Name** Name Withheld by Request

**First Name**

**Comment** The information provided in the draft environmental impact statement regarding de-designation of wilderness areas to the east and south is vastly insufficient. The options that involved this measure were seemingly tossed aside without much depth of thought. Yes, there are legislative hurdles that would need to be passed in order for this expansion to be a viable option. However, there are plenty of facts available to support the relative low quality of these wilderness areas. The only reason that the OHV area is a higher preference is the relative ease of grabbing the land from the public. The truth is, there would be far less impact to far fewer real people by following this path. I implore you to either take no action, or at least give eastward/southern expansion more consideration.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment** Under proposed Option 6A, the southerly portion of the current OHV area would be accessible for roughly 10 months out of the year. The draft EIS states that an estimated 70 percent of the current 337,000 visitor-days per year would still occur, despite the fact that the new accessible area would be just over 40 percent of its current size (this for only 10 months of the

year). This still leaves nearly 236,000 visitor-days annually, in a much smaller area. Due to the smaller area, access patterns will inevitably shift around the modified boundary. Many of the alternative access roads to the southerly portion that would remain open for 10 months of each year are small dirt roads that travel through homesteaded properties where people live (unlike Boone Road, which currently serves as the main entry/exit point for people visiting the OHV area). The draft EIS fails to address the impact of this shift in traffic patterns that would occur under option 6A. This would, without a doubt, damage the property values of the residents in these communities. The California state constitution guarantees that "just compensation" be provided to a property owner when their property has been "taken or damaged" by a public agency. How will these people be compensated for their loss of property value?

**Date Comment Received** 5/25/2011

**Response** The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action. Furthermore, the Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** For 50 years, my family has owned property in the area north of Landers that is adjacent to both Twentynine Palms and the Johnson Valley OHV Area. Over the years since the OHV area was designated, off-road recreation has become one of the primary draws to the area not only for our family, but for hundreds of thousands of other people. Because of the proximity to the OHV area, the value of our land has become inextricably tied to the existence of the OHV area. It would, in fact, be worth much more to someone who participates in OHV recreation than to someone who does not. The California state constitution guarantees that "just compensation" be provided to a property owner when their property has been "taken or damaged" by a public agency. While our property would not be taken under the current proposals, it will most certainly be damaged by the limited access to recreational opportunities. The draft EIS fails to address this issue. Should one of the proposals for westward expansion be

accepted, what action are the Marines prepared to take to compensate us for our loss of property value?

**Date Comment Received** 5/25/2011

**Response** The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action. Furthermore, the Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy

during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** To the 29Palms EIS Project Manager, The Twenty-Nine Palms Marine Base expansion to the Southwest of Landers into Johnson Valley is a serious concern to our family as we use this area more often than any other off road area for our recreational use. This is what we do as a family. It keeps us connected to one another. We also have family that live in Johnson Valley and this would seriously impact their home and the peace and quiet of their home and property. We have gone out and used this area now called Johnson Valley OHV for the last forty plus years and want to continue to enjoy using it and going out there. We feel that the expansion of the Marine Base into Johnson Valley would seriously affect our enjoyment of this area along with the thousands of other OHV enthusiasts who use this area as well. Expanding the base would seriously impact the businesses that rely on the off roaders who also use this area. We have seen first-hand how the area has changed since the closure of other off road areas which has caused the off roaders to be crammed into smaller areas impacting how the desert is used. This could only cause more issues that would make the existing areas even more crowded which would make a relatively safe family sport, a dangerous one. Also, with the economic crisis that we here in California are experiencing, can we really afford to do this kind of project at all. The use of the area creates income for businesses from these off roaders who buy gas and groceries in the area before heading to the

Johnson Valley OHV Area. So in closing, PLEASE DO NOT EXPAND the Twenty-Nine Palms Marine Base into Johnson Valley as it would severely impact not only the Off-roaders who use this OHV area, but also the community who prospers from their usage and the people who live in Johnson Valley. Johnson Valley has a much larger population than is widely known. Hundreds of families would be impacted by this expansion. With Sincere Regards, Jeff and Karin Sizelove 714-671-0980 ksizelove@pacbell.net 912 S. Lantana Avenue Brea, California 92821

**Date Comment Received** 5/25/2011

**Response**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Thank you for the opportunity to comment on the 29 Palms Marine Base Expansion Draft EIS. My name is Brendan Hughes and I live in Joshua Tree. I believe the plan to expand the Marine Base is unnecessary and could disrupt the social and environmental structure of this part of the Desert. All of the alternatives, with the exception of the No Action Alternative, will require a substantial amount of take and harm to the desert tortoise. The take of hundreds of tortoises is an unacceptable risk to the survival of the species. Additionally, this expansion is unnecessary for several reasons.

First, the Marines have fought several wars using the existing training capacity of the MCAGCC. Also, the conflicts in which the Marines are currently active are nothing like the Marine Expeditionary Battalion training that this expansion proposes to accommodate. The current conflicts in Iraq and Afghanistan consist of guerrilla warfare between small groups of forces. Expanding the MCAGCC by 200,000 acres will not prepare Marines for this type of fighting. The "train as we fight" motto of this expansion does not apply. Moreover, the disruption to the Johnson Valley OHV Area will send hordes of off-roaders to sensitive areas of the desert. Johnson Valley needs to stay open or public and private lands will be severely affected by these displaced recreationists. The impact of the Marine base would be felt far beyond its borders. I encourage BLM and the Marines to choose the No Action Alternative. If, however, this expansion does move forward, the managing agencies should choose Alternative 5. This option would allow for shared use of Johnson Valley OHV Area, and would have less impact on biological resources like the desert tortoise. The Marines could fulfill their erroneous "train as we fight" goal and off-roaders would be kept within the existing sacrifice area of Johnson Valley most of the time. The Marines should not stress the local community and should respect our right to enjoy our public lands. Thank you for your consideration.

**Comment** As a sailor with 18 years of active duty and 10 years on Amphibious sea duty, I understand the need for quality training. I'm also an off-road enthusiast and understand the impact of frivolous decision making on our sport. Furthermore, I've seen the rotting remains of bases we, as a military, have left behind once we BRAC'd them and walked away. To my point/comment...make the resources we already have access to work for what we need or repurpose them properly before frivolously acquiring new land to use on occasion. The same people that will lose prime sporting land

are largely supporters of the military, and as we continue to look for public support/approval, this decision should not be taken lightly. My .02...

**Comment** Dear United States Marine Corps, Back in 2004 while working as a freelancer, I reported on the MDR Lucerne 400 desert race for Off-Road Magazine. I called the story "Desert Soldiers," drawing a parallel between the intrepid desert racers themselves and the men and women of the armed forces who protect our freedom in the deserts of Iraq and Afghanistan. The request of the Marine Corps to withdraw land from the Johnson Valley OHV area leaves me in a quandary. I remain grateful for national defense. At the same time, the off-road community has lost millions of acres over the years either to urban development or to aggressive moves by anti-access groups. In California, there are about 14 million acres set aside as Wilderness. Contrast this with just a few hundred thousand acres left for designated OHV areas. Johnson Valley is one of these. We don't have much land left, so the proposed expansion of the 29 Palms Marine Corps base amounts to a huge blow to the off-road community. What alternatives would I personally support? Those would be the No Action Alternative, Alternative Three, Alternative Four, and Alternative Five. Obviously, the No Action alternative is the best one for the OHV community, and Alternative Three is almost as good because the 29 Palms Marine Base would then expand to the east and south. Alternatives Four and Five seem like a good way to let the Marines train in Johnson Valley for two months of the year while the OHV community is allowed access the other ten. What does Johnson Valley mean to me? I've visited there many, many times over the years for both recreational off-roading and for work as an off-road journalist. In the Johnson Valley OHV area, I've covered competition events, shot vehicle features, attended organized trail rides, and tested off-road products. Access to Johnson Valley helps me make my living. As an off-road enthusiast and as a professional off-road journalist, I request that you avoid Alternative Six and instead choose from the No Action

Alternative, Alternative Three, Alternative Four, and Alternative Five.  
Sincerely, Kevin Blumer

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Dear Friends, You have done a good job of complying with NEPA. I commend you for the hard work, diligence, and perseverance that you have invested in this project. Marines need the best possible training that can be given to them. At the same time, you will have your hands full dealing with and answering all the substantive comments from the public. They have brought up many good points, and I hereby incorporate all substantive comments by reference. I encourage you to work closely with others, both internally and externally, in ways that emphasize communication, collaboration, kindness, courtesy, consideration, compassion, empathy, positive reinforcement, and conservation. I am also writing to formally request that you keep my name/address on your mailing list and that you send me hard copies (via snailmail) of the following items once published: 1) Final EIS 2) Record of Decision Thanks Very Much, and Bravo Zulu!

**Comment** Naval Facilities Engineering Command Southwest ATTN: 29 Palms EIS Project Manager 1220 Pacific Highway San Diego, CA 92132-5190 Dear Project Manager, I am writing in regard to the proposed expansion of the twenty-nine palms USMC base. After reviewing the six proposals along with the no option alternative I believe that the best option for the Marines to meet their training requirements is option three. I believe that option three is the best option because it represents the best long term training solution by keeping in place Johnson valley OHV area as a buffer zone between the Marine base and the growing population of the high desert. In reading all of the proposals set forth by the Marines I don't feel that adequate consideration was given to the effect that long term population growth of the high desert will have on the training area at twenty nine palms. I feel that as the population increase and more people live closer to the boundaries of the base, the Marines are going to run into an increasing amount of negative public opinion due to noise. Especially considering that the base expansion is meant to accommodate maneuvers that are going to be so large they cannot take place at any other Marine base in the United States. Thus, taking into account the potential continued expansion of the high desert community over the next 10-20 years, I feel that the logical choice is to expand the training area east away from the populated areas of the desert and leave in place Johnson valley as a buffer zone between the training area and the general population. Sincerely, Jeff Erickson 16751 Marie Ln. Huntington Beach CA. 92647

**Comment** I HAVE BEEN TO THE JOHNSON VALLEY/MEANS DRY LAKE AREA ONE TIME, WHAT AN AMAZING PLACE. IN MY PERSONAL OPINION IT WOULD BE A CRIME TO CLOSE THIS AREA TO PUBLIC ACCESS.PEOPLE LIVE HERE OR COME TO THIS AREA JUST TO EXPERIENCE WHAT CAN ONLY BE FOUND HERE.IS IT RIGHT TO CONTINUE TO LOCK THE PUBLIC OUT OF LAND THAT IS RIGHTFULLY THIER OWN AS CITIZENS OF THE UNITED STATES? I BELIEVE THE ANSWER IS NO, AND ANOTHER OPTION IN THIS CASE IS AVAILABLE AND SHOULD BE CHOSEN.I PLAN TO RETURN TO THIS AREA SEVERAL MORE TIMES.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** My dad is retired Military and I agree we need places for them to train and protect us. but I am also an off roader and have watched are land asset disappear as our fee go up. I don't want to see it unless they open up other areas closed like across from glames and other area's up in that location. Thank you Ken carlin

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** To Whom It May Concern, I am writing in regard to the 29 Palms Land Acquisition in Johnson Valley. I have been going to Johnson Valley for recreation for 35 years! I started going there when I was nine years old with a friend and her family and once I met my husband, several years later, we both discovered that we had been travelling to Johnson Valley for several years simultaneously. With that said, I believe it is rather apparent that both my husband and I love the Johnson Valley area and have raised our two sons going out there as well. I learned to drive out there. I learned to ride a motorcycle out there. Our sons have learned to ride out there. And of recent, we have been to Johnson Valley and had the pleasure to take our Jeep on several of the "Hammers" trails. We hosted a run with our local Jeep club out to the petroglyphs, and plan on attending the High Desert Round-Up this Memorial weekend. If the Johnson Valley OHV area were to be taken over by the Marines, these activities that my family and friends

and myself enjoy, will no longer be available for our enjoyment. I am urging that you do not expand the 29 Palms base west. If you must expand, then please, do so to the east and use some of that "wilderness" land that no one ever gets to see or enjoy. Signed, Laura Hoover

**Date Comment Received** 5/25/2011

**Comment** "Save The Hammers" is the battle cry from all of us who enjoy recreating in the Johnson Valley OHV Area. But more than just the "Hammers" is at stake. The whole of the Johnson Valley Recreation area will be lost by the 29 Palms Military Base Expansion. Recreation will be gutted. The remaining fringe areas left by the expansion will be narrow parcels between the pavement and the military boundary fence. This expansion plan will cause off road enthusiasts to go else where. But where? All of the adjacent land is "Wilderness" or private, State or National Park, Forrest or Monument. There is very little left out there due to the continuing zeal of the eco-minded legislatures who create "Wilderness" areas at a whim. Gone are the days when you could visit open desert areas to camp and explore without restrictions of your travel. More and more the people like me are squeezed. Access to "Public Land" is restricted. How many more Millions of acres of desert land do the military need? Look at a map and tell me, of the bases at Fort Irwin and 29 Palms, the Bombing ranges in Imperial County, How many more acres do they need? And this at a time when Military Fighting in the Mid East is on the decline. We look forward to

troop withdrawals in the next year. So why the base expansion??? Please, Please, Please!!! Do NOT Allow the expansion. It would be a criminal blow to People who enjoy the Johnson Valley area as it is and has always been. Sincerely, Aaron Stephens 65940 Buena Vista Ave. Desert Hot Springs, CA 92240

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Dear Sir: The DEIS states: Potential impacts from six action alternatives and the No-Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative

effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed. 3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative. The Table on Page 29 states under Alternative 1, Cultural Resources: DLess than Significant Impacts (LSI): • Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction. Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources. No Impacts (NI): No impact anticipated from airspace establishment. Similar judgements are made in this Table and elsewhere for the other Alternatives. However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents. It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include: • Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries • Devaluation of surrounding private property. • Increased costs to federal, state and local jurisdictions for increased law enforcement. All would occur outside the acquisition study boundaries. Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this. The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas. They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands. The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events. Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources. Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution

and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher. -The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not. -These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources. -Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflowed by helicopters at any hour of the day or night, particularly when they want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival. The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage. “Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn’t a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision.” –Desert Magazine 1944 The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves. The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant. <http://www.coutant.org/mminternet/saga/index.html> The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act.

**Comment** Re: Draft Environmental Impact Statement on 29Palms Base expansion The Environmental Protection Agency’s Toxic Release Inventory (TRI) is attached. It totals toxic releases during the years 2007-2009, the latest report available. A “TRI release” is defined as the amount of on-site toxic chemical releases to air, water, underground injection, landfills and other land disposal, and the amount transferred off-site for disposal. The top ten facilities with the most chemical releases in California included Marine Camp Pendleton at #10. PBT Chemical releases are releases of Persistent, Bioaccumulative and Toxic Chemicals. Merriam-Webster defines “persistent” as “existing for along or longer than usual time or continuously.” DIt defines “bioaccumulation” as “the accumulation of a substance (such as a pesticide) in a living organism.” It defines “toxic” as “poisonous.” In other words, it means poisons that last a long time, and collect in the bodies of plants and animals and the animals that eat them. Of the top 10 California release sites, numbers 6-10 were military, one Army and four Marine, all in Southern California. The Marine Corps Air Ground Combat Center 29Palms is #7, with a little under half the PBT chemical releases that were measured at Camp Pendleton. Though the trend shown in the Inventory is generally downward for the state, if live fire combat training increases in intensity and duration on the scale the DEIS describes, MCAGCC will obviously rise on the list. Starting on Page 293, the Draft Environmental Impact Statement describes in detail the procedures used to comply with recording and reporting releases of TRI Chemicals. It addresses the Marines’ methods for dealing with hazardous material spill abatement and cleanups, and contaminated soils. “Munitions Constituents” (MC) from unexploded ordnance and other munitions, and their breakdown elements, are described and mapped for current and historical ranges. Potential migration into humans and animals is addressed with somewhat limited studies. Perchlorate is described as an indicator munitions constituent as it is an good example of PBT (see definitions above). Perchlorate recently came to public notice again as a constituent of the drinking water in Barstow, CA. Databases on hazardous wastes from many

sources and contaminated sites are described as not revealing any relevant sites. Formerly used defense sites are discussed. All are declared not relevant. On Page 293, one paragraph describes a total of 50 accidental releases, in 2002, of toxic substances and what was done about them. Deliberate releases and munitions constituents are not itemized. The discussion of toxic wastes ends on Page 301 of the DEIS. Nowhere is the Environmental Protection Agency's Toxic Release Inventory mentioned, with its specific amounts, and the relative standing of military sites in general and MCAGCC in particular. Therefore the DEIS must be amended to show not only the methodology for reporting toxic contaminants but also the kinds and quantities. It must also clearly state estimates for any increases in toxic releases for each Alternative course of action. It must also state this information was missing in the draft document. On Page 295 is a map of munitions constituents loading areas on the existing Base. Maps must be added to the DEIS to show where planned MC loading areas would be in each Alternative course of action. On Page 796 it is stated that use of munitions under Alternative One would be similar to existing use, and therefore potential impacts from the use of munitions would be minimal. Since ordnance use is planned to be more intensive and of longer duration, the DEIS must be corrected to reflect that fact and state the draft document was in error. This must also be done for all the other Alternatives. Thank you Mike Hawkins 57873 Ivanhoe Drive Yucca Valley California 92284 Mphcdh2@wmconnect.com

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Munitions constituents and toxic chemical release reporting requirements are described in Section 3.4 and 4.4 of the EIS. As described in the EIS the Combat Center complies with the Emergency Planning and Community Right-to-Know Act (EPCRA) Toxic Release Inventory (TRI) program, and all other federal, state, and local requirements regarding hazardous materials and wastes, and would continue to do so under the proposed action.

**Comment** Re: Draft Environmental Impact Statement on 29Palms Base expansion  
Dear Sir: The communities of Landers and Johnson Valley are in Postal Zip Code 92285. Landers borders the existing Marine Air Ground Combat Center 29Palms; Johnson Valley is directly southwest of it, and due south of the proposed westward expansion area. Environmental Justice provisions

are addressed in the DEIS because Federal Projects are not supposed to have disproportionate impacts against any ethnic, demographic or socio-economic group. IN POSTAL CODE 92285, CENSUS 2010 HAS STATED: • The population is 2,181. • The median age of the population is 49.5. 24.7% are 65 years and over. This is almost twice the percentage of people 65 and older in the US population (12.4%). These are very much senior citizen communities. • Many residents are retired and on fixed incomes. 39% of our population 16 and over is in the labor force, as compared to 69% in the US. • Families below poverty level: 20.8% In the US: 12.4% • Individuals below poverty level: 24.9% In the US: 12.4% • Disability status (population 5 years and over): 34.8% In the US: 19.3% And for good measure: • Civilian veterans (civilian population 18 years and over): 25.1% In the US 12.7% (and we know many are proud Marines) [http://factfinder.census.gov/servlet/SAFFacts?\\_event=Search&geo\\_id=&\\_geoContext=&\\_street=&\\_county=92285&\\_cityTown=92285&\\_state=&\\_zip=92285&\\_lang=en&\\_sse=on&pctxt=fph&pgsl=010&show\\_2003\\_tab=&redirect=Y](http://factfinder.census.gov/servlet/SAFFacts?_event=Search&geo_id=&_geoContext=&_street=&_county=92285&_cityTown=92285&_state=&_zip=92285&_lang=en&_sse=on&pctxt=fph&pgsl=010&show_2003_tab=&redirect=Y) The factors listed above indicate the project does raise issues of Environmental Justice for the residents of Landers and Johnson Valley. The DEIS states that EO 12898 criteria for Environmental Justice say there must be one or more such affected populations within the DEIS area (Page 533). However, very few live WITHIN the EIS area, and it is therefore a contradiction to imply that residents outside the EIS area will not be impacted. The scoping issues (Item 4.3.1.3) listed on the same page include: • Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries • Devaluation of surrounding private property. • Increased costs to federal, state and local jurisdictions for increased law enforcement. The contradiction is the DEIS states that the primary economic impacts would be from displacement of certain activities within the DEIS area causing financial and other hardships to surrounding areas. Therefore the DEIS must be revised to state the criteria for judging Environmental Justice are too narrow, and must state that these criteria also apply to populations outside the DEIS area. Anything less would be easily misunderstood by a less-than-careful reader. Landers and Johnson Valley are within the impact area of the DEIS because of activities that are associated with current activities emanating from the Marine Base, and proposed activities due to the expansion, are above, around and adjacent to Landers and Johnson Valley. To assert otherwise is disingenuous and misleading. The statement on Page 537 that increase of jobs on the Base would offset jobs lost in the area is self-serving and must be modified, as it does not address the fact that our employed and employable population are outside the 30-minute commute time discussed. Their ability to handle the costs of a longer must be included in the DEIS. The 30-minute commute time is impossible to determine, given traffic and road conditions vary widely throughout the area. The Marines' establishment of the 30-minute commute time is arbitrary. Landers and Johnson Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or

light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher. The noise modeling discussed on Page 540 and elsewhere is completely misleading. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not. The fact that Landers and other communities have co-existed with the Base for decades is not germane to the discussion. Modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact. In my personal judgement, most of the residents near the Base and expansion areas are patriots, who support the Marines' dedication to excellent training of the forces who are willing to be sent out to fight where we no longer can or maybe never could. But the nature of Environmental Justice is a direct outgrowth of the life, liberty and pursuit of happiness that they fight to uphold. The DEIS must take a second look at the Base neighbors and their dilemma. The DEIS judgement is based on estimates and assumptions, therefore I may be allowed to assume that other neighboring communities will be impacted the same as Landers and Johnson Valley. Therefore, the DEIS conclusion under Item 4.3.2.5 and others must be changed and it must be stated for every Alternative action in the document: Certain socio-economic groups, including, but not limited to, seniors, retirees on fixed incomes, families and individuals below the poverty level, the disabled, and veterans residing in neighboring communities in percentages far greater than in the nation at large, will bear a disproportionate burden if the planned training and area expansions are put into place. THROUGHOUT THE DOCUMENT, The EO 12898 criteria for Environmental Justice must be added to and expanded to include populations outside the DEIS area, and that citing EO 12898 alone caused a potentially misleading contradiction in the draft document. It also must state, for each Alternative, that significant impacts will occur with respect to Environmental Justice. The DEIS must state what steps have been taken in previous actions at other Bases to insure equity and fairness in regards to Environmental Justice. The repeated assertion in this DEIS that mitigation is not possible means nothing can be done to insure equity and fairness, and the DEIS must state that fact prominently, and state the draft document had omitted it. Thank you Mike Hawkins 57873 Ivanhoe Drive Yucca Valley California 92284 Mphcdh2@wmconnect.com

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. As outlined in Section 4.3.1.2 of the EIS, three criteria are used to assess the significance of impacts to minority and

low- income communities in the context of environmental justice (EO 12898, Federal Actions to Address Environmental Justice in Minority and Low-Income Populations): 1) there must be one or more such populations within the project area; 2) there must be adverse (or significant) impacts from the action; and 3) the environmental justice populations within the project area must bear a disproportionate burden of these adverse impacts. If any of these criteria are not met, then impacts with respect to environmental justice would not be significant. All environmental impacts that are attributable to the proposed action would apply equally to any affected persons, regardless of minority or income status; therefore no impacts would occur with respect to environmental justice.

**Comment** As a land owner in the area, I have ridden in the OHV area for 35yrs and have complied with all rules, kept up and cleaned up[ the land like it was my own. We have to sound control (96db.s)/spark arresters. My kids have grown up riding the OHV area and now my grandkids. I know riding and camping in the OHV has kept us close. Making the OHV area smaller is cause for more accidents plus land damage.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

**Comment** The Johnson Valley OHV area is a place where I grew up and now bring my own children to ride and enjoy family time. It's the only place I can interact with my parents, for they do not do any other activities that bring us together as a family. If this land is taken from us to enjoy family time, I foresee a distance coming between our family time. I grew up enjoying the time in Johnson Valley riding and camping and I want the same for my own children. It's something that they will remember and hopefully be able to do with their children someday.

**Date Comment Received** 5/25/2011

**Comment** While I dont have a particular argument over training viabliliy I do feel the expansion should go east instead of west. Just because the land classification is wilderness to the east does not mean that one classification is more important than another. The intended usage area affects all facets of humanity while and eastward expansion would not.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment** Please do not take away our off road ability in the Johnson Valley. My family and friends go there at least 10 times per year as it is one of the only places large enough for my off road car. In addition the area has some of the best trails in all of california. Please the military can use other places, Camp Pendelton or someplace that is not used regularly by the public.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I'm concerned that comments submitted about the 29 Palms Marine Base expansion, by myself and others, have not been received because of an error in the address on documentation,that has been released by you. I urge you to allow a extension beyond the May 26, 2011 deadline . Thank you.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

**Comment** While I fully support our Armed Forces and agree that our military can only perform as well as they train, I can only support the military encroachment on public lands if there is a fair trade for civilian use. I live near Camp Pendleton and rarely see any activity near the northern end of the base. Most other military installations, I'm sure, are similar. Personally, my family and I are avid OHV riders. My three teenage sons (the third generation of Johnson Valley riders from my family), my wife and myself are regular users of Johnson Valley. It is one of our favorite places to ride. I'm also a patriot and American proud of our military and agree that Johnson Valley is a viable location for large scale training ops. However, with large amounts of public lands being designated for special use, they are quickly changing from "public" use to "a few special groups" use. Practically any OHV use area is open to almost any use, licensed on-road vehicle use, horseback riding, hiking, bicycling, shooting, camping, etc. The problem is, not many OHV approved areas are left. "Public use" of lands is only useable by the public if your activities fit the designated use of the area. OHV land users need more areas opened for OHV use if existing OHV areas are going to be shut down. I think most OHV area users would agree with me. As the existing areas continue to shrink, the remaining areas continue to grow more overcrowded, making them a much more dangerous place to ride. Offer a fair trade and most of your opposition will support your efforts.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. **Comment** I am a Johnson Valley land and home owner. I want it to be known that I consider the expansion of the Twentynine Palms Marine Corp Air Station completely unnecessary. Please do not expand for the simple reason that the air station acreage is, without a doubt, ample. For the sake of what is right with this country, please do not infringe on my taxpaying right to have an area of land for me and my family to continue to go outside of the big city for rest, recreation and relaxation. The family that plays together, stays together. Sincerely, Richard Greer Johnson Valley

**Date Comment Received** 5/25/2011

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate

training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. **Comment** Dear Sir or Madam: The National Parks Conservation Association (NPCA) is a nonprofit dedicated to "Protecting and enhancing America's national parks for present and future generations." On behalf of our 342,000 members nationwide, NPCA would like to thank you for the opportunity to comment on the draft Environmental Impact Statement for the Twenty-nine Palms Air Ground Combat Center Base expansion. Our members care deeply for America's shared natural and cultural heritage that is preserved by units of the National Park System. NPCA recognizes both the need for military preparedness and the importance of maintaining existing legal

routes and areas for off-road vehicle recreation. Therefore, it is not our intent in this letter to advocate for or oppose any of the proposed alternatives, but rather to raise awareness of how a significant reduction of designated off road vehicle acreage may affect Joshua Tree National Park, the Mojave National Preserve and other sensitive lands, including designated wilderness, national monuments and Areas of Critical Environmental Concern (ACEC). The preferred alternative, alternative six, would allow the Marine Expeditionary Brigade to train, but would accommodate continued public access to 40,000 acres of what is now the Johnson Valley Off Road Vehicle Recreation Area during the ten months of the year the Marines would not use the area for exercises. This alternative, while ensuring our troops are combat ready, significantly reduces the total acreage of Johnson Valley Off Road Vehicle Recreation Area available for off-road vehicle use. A lack of law enforcement rangers, signs and monitoring of wilderness and designated routes could result in increased illegal incursions into ecologically sensitive Bureau of Land Management areas, Joshua Tree National Park and the Mojave National Preserve, and areas being conserved to protect sensitive animals, plants, and cultural resources. The need for signs, law enforcement rangers and monitoring programs becomes more critical under this scenario. Currently, the California Desert Bureau of Land Management has one full time law enforcement ranger for every 1.2 million acres. NPCA asks that these cumulative impacts to federally protected lands be considered in this analysis. NPCA requests that, if appropriate, mitigation funds for a potential base expansion be invested in programs to sign and monitor designated off road vehicle routes, to protect wilderness, national park boundaries, and sensitive conservation lands, and to provide support for Bureau of Land Management and National Park Service law enforcement rangers. We must be thoughtful about not over-burdening those responsible for providing safety and who protect our shared natural and cultural resources inside and surrounding our national parks and other protected lands and species. Sincerely, Seth Shteir, National Parks Conservation Association

**Date Comment Received** 5/25/2011

**Response**

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

**Comment** We here in Lucerne Valley, Ca are in an area of lots of space for each other .We enjoy the freedom of peace and quiet except when the Marine Corps are doing their war exercises If the expansion goes through it will negatively affect our lives by bring guns and other weapons to close to our children and families If your plans go to the west, it will interfere with our recreational and fun areas That we enjoy right now .Also our land values will go down,our small community will find our community to stay alive . You would be taking away our right to the pursuit of happiness. Go east not west!

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action. However, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** As an owner of more than one property in Johnson Valley,I worry about the air quality for myself and family when they visit. The wind can be extreme in the area, and with large military vehicles, the dust and wind combination

will create air quality issues for those of us living or staying there. The DEIS study did not address this important health issue. Thank you.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

**Comment** Johnson Valley and the OHV areas are enjoyed by thousands of tourists, off- road enthusiasts, and families every year. Closure of this land would be a travesty to those who love, respect, and enjoy our beautiful high deserts. The recreational lands in and around Johnson Valley also bring in an irreplaceable revenue to the communities - The loss of this revenue would make hardships even worse, especially in these tough economic times. We are certain that the lands surrounding 29 Palms Marine Base can be enjoyed by all while still maintaining the exceptional training the base provides the Marines we are all so proud of. Both the Marine Base and the open recreational lands have enjoyed a peaceful and safe existence for as long as the base has been in 29 Palms. We can see no reason would this should change if the land is left open for recreation. Please, for the sake of thousands, reconsider the closures and work with the communities and groups to finding an alternative solution to the closures.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). **Comment** The closing of the majority of the Johnson Valley Off road area will likely result in increased trespass and damage to both public and private lands with its resulting destruction of wildlife habitat. Those of us who live in rural areas will be subjected to increased noise, and disruption in our everyday lives as off roaders seek adjacent areas to recreate in. This will result in more confrontations between riders and residents. These issues will have to be addressed should the proposed expansion take place. Funding for local law and code enforcement and emergency services should be provided as well as the equipment necessary to perform these duties. Permanent well placed information kiosks with easy to read maps and statements of the law should be included throughout the surrounding areas. Information dispensed should include radio, television and print media with an emphasis on schools and OHV riders groups. An especially strong effort in this area should be made during long holiday weekends. There should be at least yearly reviews of the effectiveness of these mitigation measures held with stakeholders in the effected areas and adjustments made as warranted. Being close to the proposed new Poleline Road boundary in the expansion south into the Wonder Valley will also poise a problem with increased aircraft and vehicular noise during maneuvers for residents of this area. Air quality is also a major concern.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts.

Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Please see Section 4.8 of the EIS for information on expected impact on Air Quality.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

<b>Response</b>	Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. **Comment** I have spent much time in this beautiful place and to close it down to the public so that the government can only have access would be a tragedy. There are thousands of families that spend quality time in Johnson valley along with hundreds of business that that use this area for testing, filming, racing, and saftey demonstrations. The closure of this area will have a massive negative financial impact on the local community and businesses across the country. A possible ghost town effect also. I am begging you to leave this land open to the public! Thank you for your time. -Jake Wreesman

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and

direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** the offroad community has to small an area set aside now. taking away a large portion of the Johnson Valley recreation area will squeeze way to many offroaders into to small an area for safe use, the area will soon become over used. When the marines are fighting a war there are civilians in the area. so they should share this area with the civilians that are there and learn to not harm civilians when at war..

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The Executive Summary on Page 4 explains why the USMC is proposing the establishment of a large-scale training facility at MCAGCC 29Palms. It says the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade (MEB)-sized Air Ground Task Force, and the existing facilities are inadequate.

The underlying strategy was designed over a decade ago. Times and technology have changed. It appears the very foundation for this strategy is changing.

**Gates Orders Marine Corps Force Structure Review** by Jim Garamone of American Forces Press Service. An excerpt follows:

Defense Secretary Robert M. Gates has ordered a thorough force structure review of the Marine Corps to determine what an expeditionary force in readiness should look like in the 21st century. There are questions about the mission of the Marine Corps, Gates said. Before World War II, the Marines very successfully conducted "small wars" in the western hemisphere. The service also developed the rationale and logistics needed to conduct amphibious warfare. During World War II, the Corps was wholly dedicated to landing on the beaches in the South and Central Pacific. America's first offensive of World War II was when Marines landed on the beaches of Guadalcanal and began the campaign against Japan in August 1942. Tarawa, Saipan, Peleliu, Iwo Jima and Okinawa are just a few of the landings Marines made. Since then, Marines have fought on the beaches, mountains and trenches of Korea, the highlands and rice paddies of Vietnam, and the deserts of Kuwait, Iraq and Afghanistan. Although many of these operations saw Marines initially projected from the sea, "they soon turned into long, grinding, ground engagements," Gates said.

Page 1 of 10  
Comment

**Response to Comment 2189 (Page 1 of 10):**

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment ID: 2189 (Page 2 of 10)**

**Response to Comment 2189 (Page 2 of 10):**

The nation does not need a second land army, Gates said, but rather forces that can deploy quickly and sustain themselves for a short period of time.

Also see **Gates: Time has Come to Re-examine Future of Marine Corps** by Kevin Baron of Stars and Stripes and **Defense Chief Gates Orders Review of Marines' Role** by David S. Cloud of The Los Angeles Times.

A **more recent article** dated Mar. 2, 2011, says that Lt. Gen. George J. Flynn, commanding general of Marine Corps Combat Development Command, spoke to news media about the 2010 Force Structure Review (formed to develop the organization, posture and capabilities of the Marine Corps and its role within the joint force in a fiscally-restrained post-Afghanistan environment; and I quote).

Two of the recommendations from the Review are:

-A reduction in force structure from 202,000 to 186,800 when conditions in Afghanistan warrant, and  
-Reduction in ground combat forces, to include a reduction in infantry (regimental headquarters from eight to seven; infantry battalions from 27-24); a reduction in cannon artillery battalions (nine to seven; but a reorganization of batteries to support distributed operations), and a reduction in armor (10 companies to 8).

See more at <http://www.marines.mil/unit/hqmc/Pages/RestoringbalanceinMarineCorps.aspx>

The Force Structure Review of 2010 itself is included here, Pages 4-10. Its objectives do not jibe with the objectives stated for the MCAGCC expansion.

The very foundation for this Draft Environmental Impact Study is outdated.

Page 4 says that the training requirement is drawn from an earlier Marine Strategy 21 for 2000.

Page 77: Land Use Requirements Study was completed in July of 2005 and based on the earlier training requirements.

On Page 78 it is stated:

1. that MEB-size training is declared (in 2008) by the Marine Corps to be an enduring requirement
2. therefore existing land and air space is insufficient,
3. therefore land acquisition is necessary

Any study of military history shows the last thing any fighting force needs is an enduring requirement. Otherwise, we would still have muzzleloaders, horse-drawn caissons or Sherman tanks.

Therefore the judgement that MEB-sized training is required is flawed.

Therefore the judgment that existing land and air space is insufficient is called into question.

Therefore the judgement that land acquisition is necessary is flawed.

**Comment ID: 2189 (Page 3 of 10)**

**Response to Comment 2189 (Page 3 of 10):**

Because the Marines state they must train as they fight, it does not mean they are not already doing so, or that they cannot make quick judgements based on today's conditions for training requirements for tomorrow. Because so much time has been put into this outdated plan does not mean it must roll downhill without taking another look.

The document must be reviewed and anywhere outdated requirements are defined for MEB-sized training, and the existing facilities are declared inadequate, they must be justified to today's needs. Everywhere ideal range requirements are mentioned they must be justified to today's needs. Everywhere airspace requirements are defined they must be justified to today's needs.

The statement on Page 192 that the No-Action Alternative would not meet the needs for the proposed action must be reconsidered in this light also.

Otherwise the entire document must be discarded as it is based on outdated decisions and information.

Thank you for your attention,

Betty Munson

DEPARTMENT OF THE NAVY  
Headquarters, United States Marine Corps  
Washington, DC 20350-3000

14 March 2011

**Foreword**

In the fall of 2010 the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force in Readiness in a post-OEF security environment. The FSR was conducted by senior field grade officers and civilian Marines under the direct cognizance of an executive steering group comprised of the Deputy Commandants, the Commanders of Marine Corps Forces Command and Marine Corps Forces Pacific, and the Commanding Generals of our Marine Expeditionary Forces. The participants of the FSR brought extensive operational experience across the range of military operations, along with a deep breadth of knowledge regarding capabilities, force organization, training and education, equipment, deployment, employment and sustainment to inform the process. Additionally, numerous subject matter experts from within and outside the Marine Corps contributed their knowledge and insights to the FSR. The work was routinely reviewed and guided by me and the Assistant Commandant of the Marine Corps.

This report is promulgated to promote understanding and to start implementation of FSR recommendations. Additional analysis through established capability development constructs will determine the how and timeline of the execution and implementation of FSR decisions.

  
JAMES F. AMOS  
General, U.S. Marine Corps  
Commandant of the Marine Corps

Comment ID: 2189 (Page 6 of 10)

Response to Comment 2189 (Page 6 of 10):

Reshaping America's  
Expeditionary Force in Readiness  
Report of the 2010 Marine Corps  
Force Structure Review Group

*"The Marine Corps is America's Expeditionary Force in Readiness—a balanced air-ground-logistics team. We are forward-deployed and forward-engaged: shaping, training, deterring, and responding to all manner of crises and contingencies. We create options and decision space for our Nation's leaders. Alert and ready, we respond to today's crisis, with today's force ... TODAY. Responsive and scalable, we team with other services, allies and interagency partners. We enable and participate in joint and combined operations of any magnitude. A middleweight force, we are light enough to get there quickly, but heavy enough to carry the day upon arrival, and capable of operating independent of local infrastructure. We operate throughout the spectrum of threats—irregular, hybrid, conventional—or the shady areas where they overlap, Marines are ready to respond whenever the Nation calls ... wherever the President may direct."*

—General James F. Amos, Commandant of the Marine Corps

Purpose

The 2010 Marine Corps Force Structure Review convened to develop the organization, posture and capabilities of America's Expeditionary Force in Readiness and affirm its role within the joint force in a complex and uncertain post-OPERATION ENDURING FREEDOM-Afghanistan security environment that is going to be further challenged by fiscal constraints.

Geostrategic Challenge

The geostrategic environment has changed dramatically in the last two decades, shifting from a competition between superpowers to a world of increasing instability and conflict, characterized by poverty, competition for resources, urbanization, overpopulation and extremism. Failed states or those that cannot adequately govern their territory can become safe havens for terrorist, insurgent and criminal groups that threaten the U.S. and our allies. Characterized by inherently unpredictable hybrid threats that combine irregular and conventional capabilities in a highly lethal manner, this environment demands a flexible, adaptable, and versatile military force that is ready and capable of being forward-deployed and forward-engaged, building partnerships, and immediately responding to crises or contingencies. Responding to a wide range of crises in a timely manner will require regionally-focused headquarters and forces that are both forward-postured and immediately deployable with a minimum of strategic lift. Sea-based forces, in particular, will be invaluable for discrete engagement activities, rapid crisis response, and sustainable power projection.

Page 6 of 10  
Comment

Comment ID: 2189 (Page 7 of 10)

Response to Comment 2189 (Page 7 of 10):

The 21<sup>st</sup> Century Marine Corps

Addressing these challenges, the 21<sup>st</sup> century Marine Corps builds on our historic role as the Nation's crisis response force and provides "best value" in terms of capability, cost, and readiness relative to the operational requirements of our Geographic Combatant Commanders (GCC). The Marine Corps' force structure must provide a strategically mobile, *middleweight force* optimized for rapid crisis response and forward-presence. It must be light enough to leverage the flexibility and capacity of amphibious shipping, yet heavy enough to accomplish the mission. Larger than special operations forces, but lighter and more expeditionary than conventional Army units, we must be able to engage and respond quickly – often from the sea – with enough force to carry the day upon arrival.

The dual demands of sustained forward presence and sufficient lift for the assault echelons of two Marine Expeditionary Brigades (MEB) result in a requirement for 38 amphibious ships. Given fiscal constraints, however, the Navy and Marine Corps have agreed to accept risk with 33 ships, increasing the imperative to design a lean and effective force structure. We will also explore options for employing Marines from a wider variety of Navy ships, seeking innovative naval solutions to GCC requirements.

Furthermore, our force structure must be able to exploit the carrying capacity of maritime prepositioning ships and the speed of strategic airlift. As necessary, we must be able to aggregate Marine Corps capabilities, often provided by our reserve component, as well as integrate with capabilities provided by Joint Force, Coalition or interagency partners for sustained operations ashore. The ability of Marines to rapidly aggregate from widely dispersed locations to form cohesive Marine Air-Ground Task Forces (MAGTFs) is the foundation of our organization. MAGTFs enable coordinated action throughout the range of military operations.

Re-Shaping Marine Corps Capabilities and Capacities

The imperative for the Marine Corps is to preserve capabilities developed since 9/11, expand our engagement efforts, respond to crisis, and still be able to project power for the most dangerous threat scenarios. To that end we will accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore, relying on an

**Comment ID: 2189 (Page 8 of 10)**

**Response to Comment 2189 (Page 8 of 10):**

“operationalized” reserve component to mitigate that risk. Of necessity, our force structure represents many judiciously considered factors and makes pragmatic trade-offs in capabilities and capacities to achieve a posture that creates opportunity and provides an operational stance that enables flexibility and rapid response. The resulting force structure described in this report:

- reduces the end strength of the active component of the Marine Corps from 202,000 to approximately 186,800 following the completion of Marine Corps operations in Afghanistan;
- provides a force optimized for forward-presence, which facilitates both ongoing engagement activities and rapid crisis response;
- provides readiness for immediate deployment and employment;
- re-shapes organizations, capabilities, and capacities to increase aggregate utility and flexibility across the range of military operations;
- properly balances critical capabilities and enablers;
- creates an operationalized reserve component without any reductions in reserve force structure; and
- creates opportunity for more closely integrated operations with our Navy, Special Operations, and inter-agency partners.

This plan positions the Marine Corps to respond to the most likely missions while preserving the capability to project punishing combat power when required. The cornerstone of the future Marine Corps rests on the quality and flexibility of our Marines, which allow us to support the joint force commanders’ diverse requirements. This is enabled by:

- revising our manpower assignment policies and training tracks to increase the skills and maturity of our junior leaders, particularly within our infantry squads and fire support teams;
- increasing unit readiness within the operating forces by ensuring 99 percent manning of enlisted billets and 95 percent manning of officer billets; and
- resourcing five regionally-focused MEB command elements, with habitually aligned subordinate elements, to improve effectiveness and speed of response.

Other key actions include:

- tailoring Marine divisions, aircraft wings, and logistics groups to ensure sufficient type, quantity of force and resiliency to meet GCC presence, engagement and response requirements;

**Comment ID: 2189 (Page 9 of 10)**

**Response to Comment 2189 (Page 9 of 10):**

- maintaining the capacity and capabilities to conduct amphibious operations across the range of military operations;
- increasing the depth, availability and responsiveness of our combat service support capabilities by reorganizing Marine logistics groups to establish standing combat logistics battalions habitually aligned to specific Marine expeditionary units and infantry regiments;
- capitalizing on the ISR, C2 and future strike capabilities of unmanned aircraft systems via a 25% increase in capacity;
- reorganizing our intelligence collection and exploitation capabilities to enhance readiness by directly linking deployed forces, garrison support and the intelligence community;
- increasing capacity for cyber network defense, exploitation and attack operations by augmenting our communication and radio battalions, and by increasing the structure of Marine Corps Forces Cyberspace Command;
- enhancing capabilities to conduct and manage battlefield biometric, forensic, and law enforcement operations by creating a law enforcement support battalion within each Marine Expeditionary Force (MEF);
- retaining and better integrating the training, advising, and assistance organizations designed to enable and enhance irregular warfare capabilities, partner-nation engagement, and cultural understanding;
- strengthening the capabilities of Marine Special Operations Command through a 44% increase in critical combat support and combat service support Marines;
- increasing support to U.S. Army and partner-nation forces by adding another air and naval gunfire liaison company; and
- reducing overhead in the supporting establishment where parallel or duplicative functions could be efficiently combined or eliminated, including conversion of certain military billets to civilian positions while achieving an overall reduction in civilian personnel.

Risk Mitigation

Reshaping the Marine Corps from a wartime footing of 202,000 Marines to a force of approximately 186,800 imposes some risk. All proposed force structure changes were wargamed against approved Department of Defense scenarios and selected operation plans. The resulting force will be capable of operating across the range of military operations but will assume some risk in the capacity to conduct simultaneous major combat operations and campaigns. This risk is created by combining a MARFOR with a MEF headquarters, preserving the core warfighting

**Comment ID: 2189 (Page 10 of 10)**

**Response to Comment 2189 (Page 10 of 10):**

capabilities of this MEF while expanding the responsibilities of its leadership and staff. Additionally, select air and ground units will be eliminated from the active component. To mitigate this reduced capacity in the active component, we will more completely operationalize our reserve forces. We will work with our civilian leadership and elected representatives to revise public law to allow more responsive access to reserve forces.

Efficiency for Operational Effectiveness

Tomorrow's Marine Corps, though smaller than the force conducting current overseas contingency operations, is not simply a reduced version of today's Marine Corps nor is it a reversion to the pre-9/11 posture. We believe these force structure changes are significant and compelling. The most significant force structure changes include:

- the consolidation of a MARFOR with a MEF headquarters to eliminate higher headquarters overhead;
- a 13% reduction in ground combat forces, to include an 11% reduction in infantry, a 20% reduction in cannon artillery, and a 20% reduction in armor;
- a 16% reduction in fixed-wing tactical aviation squadrons;
- a 9% reduction in logistics, with a significant organizational restructuring to enhance responsiveness;
- a 7% reduction in Marines assigned to non-operational billets;
- a 13% reduction in the civilian work force; and
- placing the reserve division, wing and logistics group headquarters in cadre status and eliminating the Mobilization Command headquarters by assimilating associated functions into Marine Forces Reserve headquarters.

**Comment** I just wanted to let you guys know that you guys aren't making a good decision wanting to take over Johnson Valley for your use. This is a public area, one of the most amazing, and largest areas we have in the United States. I have been going here with my family my whole life, for fun on weekends, to spend the holidays, and also to watch the off-road races. I know A LOT of other families are the same way. This is one of my most treasured and favorite places to go and I know I'm not the only one who feels this way. It's a very loved area of a lot of people. The Marines have other options available, so why don't you leave our land alone? We hardly have any land left to ride on as it is! Plus, Johnson Valley brings in a lot of out-of-town people that bring money to the town of Lucerne. Without that, Lucerne is going to turn into a ghost town. You can head EAST and take up that land that nobody cares for anyways. I know some of it is "protected" wilderness areas.. but are the Marines really that afraid of those environmentalists that they have to come after us? I do support the Marines and what they do, but not this. This is designated public land, and taking this from us is unfair and pretty shitty on the Marines part. We will be left without a place to ride, which will only cause more illegal off-roading. Please do not take our beloved Johnson Valley, without it, mine and thousands of other peoples lives are going to change, and that's not for the better. Sincerely, Sarah Eisele

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

Since the size of the Draft Environmental Impact Statement means it requires a lot of time to study and assimilate; and since there are still stakeholders who are only now hearing of the expansion plans; and since there is confusion as to lack of correct information where to address public comments, calling into question the Marines' good-faith efforts to elicit those comments, **it is requested that the public comment period for the Draft EIS be extended at least another 60 days.**

The Environmental Protection Agency's Toxic Release Inventory (TRI) totals toxic releases during the years 2007-2009, the latest report available.

A "TRI release" is defined as the amount of on-site toxic chemical releases to air, water, underground injection, landfills and other land disposal, and the amount transferred off-site for disposal. The top ten facilities with the most chemical releases in California included Marine Camp Pendleton at #10.

PBT Chemical releases are releases of Persistent, Bioaccumulative and Toxic Chemicals. Merriam-Webster defines "persistent" as "existing for a long or longer than usual time or continuously." It defines "bioaccumulation" as "the accumulation of a substance (such as a pesticide) in a living organism." It defines "toxic" as "poisonous." In other words, it means poisons that last a long time, and collect in the bodies of plants and animals and the animals that eat them.

Of the top 10 California sites, numbers 6-10 were military, one Army and four Marine, all in Southern California. The Marine Corps Air Ground Combat Center 29Palms is #7, with a little under half the PBT chemical releases that were measured at Camp Pendleton.

Page 1 of 2  
Comment

**Response to Comment 2194 (Page 1 of 2):**

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Munitions constituents and toxic chemical release reporting requirements are described in Section 3.4 and 4.4 of the EIS. As described in the EIS the Combat Center complies with the Emergency Planning and Community Right-to-Know Act (EPCRA) Toxic Release Inventory (TRI) program, and all other federal, state, and local requirements regarding hazardous materials and wastes, and would continue to do so under the proposed action.

**Comment ID: 2194 (Page 2 of 2)**

**Response to Comment 2194 (Page 2 of 2):**

Though the trend shown in the Inventory is generally downward for the state, if live fire combat training increases in intensity and duration on the scale the DEIS describes, MCAGCC will obviously rise on the list.

Starting on Page 293, the Draft Environmental Impact Statement goes into detail the procedures used to comply with recording and reporting releases of TRI Chemicals. It addresses the Marines' methods for dealing with hazardous material spill abatement and cleanups, and contaminated soils.

"Munitions Constituents (MC) from unexploded ordnance and other munitions, and their breakdown elements are described and mapped for current and historical ranges. Potential migration into humans and animals is addressed with somewhat limited studies. Perchlorate is considered an indicator munitions constituent as it is an good example of PBT (see definitions above). It recently came to public notice again as it appeared in the drinking water of Barstow, CA.

Databases on hazardous wastes from many sources and contaminated sites are described as not revealing any relevant sites. Formerly used defense sites are discussed. All are declared not relevant.

On Page 293, one paragraph describes a total of 50 accidental releases, in 2002, of toxic substances and what was done about them. Deliberate releases and munitions constituents are not itemized. The discussion of toxic wastes ends on Page 301 of the DEIS. Nowhere is the Environmental Protection Agency's Toxic Release Inventory mentioned, with its specific amounts, and the relative standing of military sites in general and MCAGCC in particular.

Therefore the DEIS must be corrected to show not only the methodology for reporting toxic contaminants but also the kinds and quantities. It must also clearly state estimates for any increases in toxic releases for each Alternative course of action.

On Page 796 it is stated that use of munitions under Alternative One would be similar to existing use, and therefore potential impacts from the use of munitions would be minimal. Since ordnance use is planned to be more intensive and of longer duration, the DEIS must be corrected to reflect that fact and state the draft document was in error. This must also be done for all the other Alternatives.

On Page 295 is a map of munitions constituents loading areas on the existing base. Maps must be added to the DEIS to show where planned MC loading areas would be in each Alternative course of action.

Thank you,

Betty Munson

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The communities of Landers and Johnson Valley are in Postal Zip Code 92285.

Landers borders the existing Marine Air Ground Combat Center 29Palms; Johnson Valley is directly southwest of it, and due south of the proposed westward expansion area.

**Environmental Justice** provisions are addressed in the DEIS because Federal Projects are not supposed to have disproportionate impacts against any ethnic, demographic or socio-economic group.

IN POSTAL CODE 92285, CENSUS 2010 HAS STATED:

- The population is 2,181.
  - The median age of the population is 49.5. 24.7% are 65 years and over. This is almost twice the percentage of people 65 and older in the US population (12.4%). These are very much senior citizen communities.
  - Many residents are retired and on fixed incomes. 39% of our population 16 and over is in the labor force, as compared to 69% in the US.
  - Families below poverty level: 20.8% In the US: 12.4%
  - Individuals below poverty level: 24.9% In the US: 12.4%
  - Disability status (population 5 years and over): 34.8% In the US: 19.3%
- And for good measure:
- Civilian veterans (civilian population 18 years and over): 25.1% In the US 12.7% (and we know many are proud Marines)

Page 1 of 3  
Comment

**Response to Comment 2195 (Page 1 of 3):**

Thank you for your comment. As outlined in Section 4.3.1.2 of the EIS, three criteria are used to assess the significance of impacts to minority and low-income communities in the context of environmental justice (EO 12898, Federal Actions to Address Environmental Justice in Minority and Low-Income Populations): 1) there must be one or more such populations within the project area; 2) there must be adverse (or significant) impacts from the action; and 3) the environmental justice populations within the project area must bear a disproportionate burden of these adverse impacts. If any of these criteria are not met, then impacts with respect to environmental justice would not be significant. All environmental impacts that are attributable to the proposed action would apply equally to any affected persons, regardless of minority or income status; therefore no impacts would occur with respect to environmental justice.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: 2195 (Page 2 of 3)

Response to Comment 2195 (Page 2 of 3):

The factors listed above indicate the project does raise issues of Environmental Justice for the residents of Landers and Johnson Valley.

The DEIS states that EO 12898 criteria for Environmental Justice say there must be one or more such affected populations within the DEIS area (Page 533). However, very few live WITHIN the EIS area, and it is therefore a contradiction to imply that residents outside the EIS area will not be impacted. The scoping issues (Item 4.3.1.3) listed on the same page include:

- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
- Devaluation of surrounding private property.
- Increased costs to federal, state and local jurisdictions for increased law enforcement.

The contradiction is, the DEIS states that the primary economic impacts would be from displacement of certain activities *within* the DEIS area causing financial and other hardships to surrounding areas. Therefore the DEIS must be revised to state the criteria for judging Environmental Justice are too narrow, and must state that these criteria also apply to populations *outside* the DEIS area. Anything less would be easily misunderstood by a less-than-careful reader. Landers and Johnson Valley are within the impact area of the DEIS because of activities that are associated with current activities emanating from the Marine Base, and proposed activities due to the expansion, are above, around and adjacent to Landers and Johnson Valley. To assert otherwise is disingenuous and misleading.

The statement on Page 537 that increase of jobs on the Base would offset jobs lost in the area is self-serving and must be modified, as it does not address the fact that our employed and employable population are outside the 30-minute commute time discussed. Their ability to handle the costs of a longer must be included in the DEIS. The 30-minute commute time is impossible to determine, given traffic and road conditions vary widely throughout the area. The Marines' establishment of the 30-minute commute time is arbitrary.

Landers and Johnson Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

The noise modeling discussed on Page 540 and elsewhere is completely misleading. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it states or implies it does not.

The fact that Landers and other communities have co-existed with the Base for decades is not germane to the discussion. Modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact.

**Comment ID: 2195 (Page 3 of 3)**

**Response to Comment 2195 (Page 3 of 3):**

In my personal judgement, most of the residents near the Base and expansion areas are patriots, who support the Marines' dedication to excellent training of the forces who are willing to be sent out to fight where we no longer can or maybe never could. But the nature of Environmental Justice is a direct outgrowth of the life, liberty and pursuit of happiness that they fight to uphold. The preparers of this draft must take a second look at the Base neighbors and their dilemma.

The DEIS judgement is based on estimates and assumptions, therefore I may be allowed to assume that other neighboring communities will be impacted the same as Landers and Johnson Valley.

Therefore, the DEIS conclusion under Item 4.3.2.5 and others must be changed, and it must be stated for every Alternative action in the document:  
Certain socio-economic groups, including, but not limited to, seniors, retirees on fixed incomes, families and individuals below the poverty level, the disabled, and veterans residing in neighboring communities in percentages far greater than in the nation at large, will bear a disproportionate burden if the planned training and area expansions are put into place.

THROUGHOUT THE DOCUMENT, The EO 12898 criteria for Environmental Justice must be added to and expanded to include populations *outside* the DEIS area, and that citing EO 12898 alone caused a potentially misleading contradiction in the draft document. It also must state, for each Alternative, that significant impacts will occur with respect to Environmental Justice.

The DEIS must state what steps have been taken in previous actions at other Bases to insure equity and fairness in regards to Environmental Justice. The repeated assertion in this DEIS that mitigation is not possible means nothing can be done to insure equity and fairness, and the DEIS must state that fact prominently, and state the draft document had omitted it.

Thank you,

Betty Munson

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area. We are becoming an endangered species and I know that many of your best marines are off road enthusiasts. Our sport is compatible with the military and produces some of your best men. Don't needlessly kill our sport by taking away one of the few areas that we still have in Southern California. I go to Johnson Valley whenever I am in the area. I am sure there are other areas that you can use for training. Please spare our treasured riding area.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while

also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The DEIS states:  
Potential impacts from six action alternatives and the No-Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomic and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

**3.11 Cultural Resources.** The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:

Less than Significant Impacts (LSI):

- Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
- Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):

No impact anticipated from airspace establishment.

Similar judgements are made in this Table and elsewhere for the other Alternatives.

Page 1 of 4  
Comment

**Response to Comment 2198 (Page 1 of 4):**

Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. In addition, the EIS acknowledges potential impacts to property values due to increased noise and proximity to military operating areas (see Section 4.3 of the EIS). The EIS concludes that any reduction in property value would likely be marginal and less than significant.

Comment ID: 2198 (Page 2 of 4)

Response to Comment 2198 (Page 2 of 4):

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.

It is therefore a contradiction to imply that residents and Cultural Resources *outside* the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:

- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
  - Devaluation of surrounding private property.
  - Increased costs to federal, state and local jurisdictions for increased law enforcement.
- All would occur *outside* the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

Comment ID: 2198 (Page 3 of 4)

Response to Comment 2198 (Page 3 of 4):

-These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflowed by helicopters at any hour of the day or night, particularly when they want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.

*"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision."*

—Desert Magazine 1944

The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves. The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant.  
<http://www.coutant.org/mminternet/saga/index.html>

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

Thank you for your attention,

Betty Munson

Comment ID: 2198 (Page 4 of 4)

**Comment** In regards to the Land Acquisition and Airspace Establishment AKA 29 Palms Expansion. Alternatives 1-6 are unacceptable. Expansion of this training facility needs to be done in another area so that Johnson Valley remains open to the Public. Reactivation of WWII era facilities adjacent to or near the current facility would better serve the needs of the Public & the Department of Defense. Some WWII sites including those under BLM, and USDA oversight have been overlooked or inappropriately designated. These areas might better suit DOD & Public Land use needs. At a time when users are increasing & acreage for OHV use on Public lands is decreasing a more thorough review of all former training facilities must be done before proceeding with any of the current alternatives.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment ID** 2200

**Last Name** Name Withheld by Request

**First Name**

**Comment** Our family has enjoyed Johnson Valley for many years, for camping, offroading, and family get-togethers. All we see is our public land closing at a huge rate. There is never a replacement or optional area to go to after a land closer. We are asking to keep our public land open so we may still have a legal offroading area to use in the future. Thank you.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

**Comment** Do not expand 29 palms marine base into the Johnson Valley o.h.v. area. There is plenty of room in the desert to go the other direction away from the communities of Lucerne, Johnson Valley, Landers, Flamingo heights and Yucca Valley. It makes no sense bringing live fire exercises closer to residents in these communities. It makes no sense to affect in any way the operation of the o.h.v. area. Thank you, John Ames

**Date Comment Received** 5/25/2011

**Response** Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**First Name** D.

**Comment** Please choose another area for your proposed expansion. Johnson Valley OHV area is one last large open areas we have left for family oriented off-road use. To take this area away will devastate the off-road community in

terms of accessibility and force more people into smaller confined open riding areas. With out the open use OHV areas we will see more illegal riding in many areas near local cities and towns. There is so much desert land that is closed to the OHV community please consider using that land which sits unused for your training ground. Thank You.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** By handing this area over to the United States Marine Corps, you are depriving the tax payers their due access to this public land area. The land area in question has had a tremendous impact on the national economy as the off-road market has continued to grow rapidly. The growth has been so extreme in the off-highway vehicle segment, that Ford even built their Raptor pickup truck to cater to this market. The tax revenue loss that would result from handing this area over to the USMC, would be enormous. This has been a key area in fostering interest in the extreme off-highway vehicle market segment and continues to be. One has to look no further than the rapidly increasing attendance of the annual King of the Hammers event. There are plenty of other desert areas that aren't presently being used, in either fashion, that the Marine Corps can use instead. Keep Johnson Valley OPEN TO THE PUBLIC!

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

**Comment** I am writing to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Mr. Proudfoot: The purpose of this letter is to make a formal request for and extension of time to provide comments to the aforementioned document. The rationale for this request is several-fold: 1. The DEIS and its appendix are a complex and lengthy document. Given the USMC has had nearly two years to compile this document and has only given the public 90 days to provide comment, it is our belief that it would be in the public interest to allow for additional time to provide such comment. 2. Only recently, we discovered that the Federal Register Notice of Availability of this Statement provides that the public comment period ended April 11, 2011. The said Notice is in conflict with Press-Release No: PR-110224NM1 as it provides

for the comment period ending May 26, 2011. Since indeed the Federal Register Notice is the only legal Notice of the USMC's intent of this document, the public is now confused and may have not submitted comments after this April due date. 3. The issue cited in number two, above, is now compounded by fact that the USMC has submitted to the Federal Register the following Notice: EIS No. 20110051, Draft EIS, USN, CA, Marine Corps Air Ground Combat Center Project, Land Acquisition and Airspace Establishment to Support Large-Scale MAGTF Live-Fire and Maneuver Training Facility, San Bernardino County, CA, Comment Period Ends: 05/26/2011, Contact: Chris Proudfoot 760-830-3764. Revision of FR Notice Published 02/24/2011: Extending Comment Period from 04/11/2011 to 05/26/2011. Of particular concern to the undersigned is the provision of "Extending Comment Period". It is our assertion that the USMC has published this later Notice as a correction rather than an extension. Moreover, as of the writing of this letter, the USMC web site for the expansion does not include the Revision Notice, nor a press release, of the revised Notice published in the Federal Register on Friday, May 13, 2011. In light of the issues cited above, the undersigned request an extension of sixty (60) calendar days for the public to submit its comments to this document. Again, we believe this is in the public interest considering the gravity of the issues cited above and the implications of the project on public lands and related access to the same. Respectfully submitted: Harry Baker "Chairman: Partnership for Johnson Valley Jerry Grabow" President: District 37 American Motorcyclist Association Jim Woods "President: California Off-Road Vehicle Association ("CORVA") Mark Cave "President: California Association of Four Wheel Drive Clubs Ed Waldheim - President: California Trail Users Coalition Partnership for Johnson Valley <http://www.pfjv.org> A Division of California Trail Users Coalition <http://www.trailusers.org> 3550 Foothill Blvd. Glendale, CA. 91214

**Comment** Date: APRIL 25, 2011 Re: 29Palms Base expansion Draft Environmental Impact Statement Dear Sir: On Page 772 potential seismic hazards are listed among the issues raised in the public scoping comments. In the 900+ page document the only mentions we could find of anything seismic are: -The DEIS states there are two seismic detection stations in the west study area (Johnson Valley). -On Page 446 there is a mention of seismic processes in the formation of the topographic relief of an area. There is also a discussion of earthquake- related regulations as to buildings near fault zones and landslide areas. -On Page 448 3.12.3 the document discusses existing conditions on the Base. It states on Page 449 that the Mojave Desert is highly active seismically, and reports 50 named and unnamed faults within the current boundaries. It specifies,"in 1999, the magnitude 7.1 Hector Mine earthquake on the Lavic Lake Fault was centered in the northwest portion of the Combat Center. This earthquake caused a 24-mile long surface rupture with a maximum offset of 12 to 15 feet." -On Page 453 it says the Lenwood, Galway Lake, Lockhart, Johnson Valley, and Camp Rock-Emerson Faults cross the west study area (Johnson Valley) and in 1992, the magnitude 7.3 Landers earthquake centered on the Camp Rock-Emerson Fault caused ground rupture and surface displacement. -There is a map showing major fault lines in the west study area, Figure 3.12-1, Page 450. It depicts a thick cluster of parallel faults which include the Camp Rock-Emerson Fault, trending northeast to southwest across the entire western study area (Johnson Valley) through which there are plans to conduct live-fire air-ground training exercises of high intensity and extended duration. On Page 771 in a discussion of the eastern study area the DEIS states,"The effects of ordnance delivery would be limited to surficial and near-surface soils so the proposed action would not be expected to have an impact on topography or seismic conditions or hazards within the ROI or in the Twentynine Palms region." It is possible the"seismic conditions" in this paragraph means potential triggering of earthquake activity. But since the other references are to geology, building codes and landslide conditions, this is doubtful. But even if it does relate ordnance to earthquake, this seem to be the only instance in the entire DEIS that does. A color brochure distributed at the public meetings about the DEIS is titled"Facts about Noise from MCAGCC." Under 10 commonly asked questions about training noise is the question,"Can training noise cause earthquakes?" The answers,"No, seismic activity is unrelated to ordnance used in training." Period. No substantiation of the"fact" is supplied. But at least the brochure actually mentions training noise and earthquakes in the same sentence. The DEIS

**Comment** Re: 29Palms Base expansion Draft Environmental Impact Statement Since the size of the Draft Environmental Impact Statement means it requires a lot of time to study and assimilate; and since there are still stakeholders who are only now hearing of the expansion plans; and since there is confusion as to lack of correct information where to address public comments, calling into question the Marines' good-faith efforts to elicit those comments, it is requested that the public comment period for the Draft EIS be extended at least another 60 days. This comment concerns the Desert Tortoise The DEIS goes into great detail about special conservation measures now taken to help mitigate the loss of Desert Tortoises due to training and other activities on the Marine Air Ground Combat Center as it is today. The Bureau of Land Management website states:"The desert tortoise is listed by the U.S. Fish and Wildlife Service as a threatened species. Under the provisions of the Endangered Species Act (ESA), anyone who takes (the term "take" means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct) a tortoise is subject to civil and/or criminal penalties of up to a \$50,000 fine and one year in jail, or both. BLM assists the U.S. Fish and Wildlife Service in the enforcement of the Act. The desert tortoise is also considered by California to be a threatened species with associated penalties." The DEIS says the training of Marine and other personnel regarding the legal status of the tortoise would include the definition of"take" and associated penalties. However, the DEIS does not detail what penalties, if any, the Marine Corps have been paying. A mine operator in Johnson Valley told us if he caused the death of a tortoise, he was subject to penalties of \$100,000. Each. The DEIS indicates that plans are to explode more than a million rounds of munitions ground-to-ground and more than 1.5 million rounds air-to-ground during the various exercises each year. As it also clearly states that this will significantly impact the Desert Tortoise, it must also make clear what

penalties will be paid, and who is to assess them. The BLM assists the U.S. Fish and Wildlife Service in the enforcement of the Endangered Species Act. The desert tortoise is also considered by California to be a threatened species with associated penalties. The DEIS must make clear if these will still apply in the military expansion areas. The DEIS states that biologists authorized by the US Fish and Wildlife Service survey for tortoises before training and construction activities, and move the tortoises and eggs out of harm's way. The DEIS does not, however, state the survival rate of the tortoises who are relocated out of their established territories, whose burrows are dug up and whose eggs are moved, It also does not state the success rate of the current efforts by the Marines to protect the young tortoises unt

**Date Comment Received** 5/25/2011

**Response** The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

**Comment** Re: 29Palms Base DEIS Dear Sir: Since the size of the Draft Environmental Impact Statement means it requires a lot of time to study and assimilate; and since there are still stakeholders who are only now hearing of the expansion plans; and since there is confusion as to lack of correct information where to address public comments, calling into question the Marines' good-faith efforts to elicit those comments, it is requested that the public comment period for the Draft EIS be extended at least another 60 days. Concerning the DEIS description of shared use of proposed expansion areas: -Marine Expeditionary Brigade Exercises: 2 per year for 24 days each. Only non-dud producing ordnance in southern portion of west study area. -Restricted public access to southern portion of west study area (except for two 984 x 984-foot [300 x 300- meter] Company Objective areas) permitted approximately 10 months/year. Three of the alternatives for expansion described in the DEIS include a Restricted Public Access Area (RPAA) to allow civilian recreational use to at least a remnant of the Johnson Valley Open Riding Area when military training activities are not being conducted. The document states that"elements of many public comments (e.g., restricted public access when MEB Exercises are not occurring) have been incorporated into some alternatives carried forward

for EIS analysis. Public comments influenced the development of the new Alternative 6. Similar to the Marine Corps' intent with Alternatives 4 and 5 (formulated before scoping), the development of Alternative 6 is consistent with the public's suggestion to: Allow for controlled periodic access for occasional public access and activities." It is difficult to believe that any member of the public who is used to free and open access to all of Johnson Valley actually used the words "controlled," or "restricted." "Periodic" might have been used to describe part-time access. "Restricted" also would have been understood to mean part-time access. A RPAA is defined in the draft document as an area in which certain public uses may be permitted, subject to restrictions, institutional controls, and mitigating methods designed to provide for public safety. Already restrictions are multiplying far beyond the assumptions of the public, whose righteous indignation at being shut out of a recreational area set aside by the BLM in 1980, might have been reduced with the idea of shared use. Being shut out of the area twice a year might seem reasonable, but: "Access to and use of the area by the general public would only be authorized when the land is not being utilized for training, and has been designated by the Commanding General as suitable for restricted activities to resume." "It is anticipated that the RPAA would be closed to the public twice yearly, for approximately 30 days each time. This would allow for required range preparation, execution of training, and range

**Date Comment Received** 5/25/2011

**Response**

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Re: DEIS on 29Palms Base expansion Dear Sir: The DEIS states: Potential impacts from six action alternatives and the No-Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomic and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed. 3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative. The Table on Page 29 states under Alternative 1, Cultural Resources: Less than Significant Impacts (LSI): Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction. Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources. No Impacts (NI): No impact anticipated from airspace establishment. Similar judgements are made in this Table and elsewhere for the other Alternatives. However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents. It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include: Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries Devaluation of surrounding private property. Increased costs to federal, state and local jurisdictions for

increased law enforcement. All would occur outside the acquisition study boundaries. Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this. The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas. They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. In addition, the EIS acknowledges potential impacts to property values due to increased noise and proximity to military operating areas (see Section 4.3 of the EIS). The EIS concludes that any reduction in property value would likely be marginal and less than significant.

**Comment** Re: DEIS on 29Palms Base expansion The Environmental Protection Agency's Toxic Release Inventory (TRI) is attached. It totals toxic releases during the years 2007-2009, the latest report available. A"TRI release" is defined as the amount of on-site toxic chemical releases to air, water,

underground injection, landfills and other land disposal, and the amount transferred off-site for disposal. The top ten facilities with the most chemical releases in California included Marine Camp Pendleton at #10. . PBT Chemical releases are releases of Persistent, Bioaccumulative and Toxic Chemicals. Merriam-Webster defines "persistent" as "existing for a long or longer than usual time or continuously." It defines "bioaccumulation" as "the accumulation of a substance (such as a pesticide) in a living organism." It defines "toxic" as "poisonous." In other words, it means poisons that last a long time, and collect in the bodies of plants and animals and the animals that eat them. Of the top 10 California release sites, numbers 6-10 were military, one Army and four Marine, all in Southern California. The Marine Corps Air Ground Combat Center 29 Palms is #7, with a little under half the PBT chemical releases that were measured at Camp Pendleton. Though the trend shown in the Inventory is generally downward for the state, if live fire combat training increases in intensity and duration on the scale the DEIS describes, MCAGCC will obviously rise on the list. Starting on Page 293, the Draft Environmental Impact Statement describes in detail the procedures used to comply with recording and reporting releases of TRI Chemicals. It addresses the Marines' methods for dealing with hazardous material spill abatement and cleanups, and contaminated soils. "Munitions Constituents" (MC) from unexploded ordnance and other munitions, and their breakdown elements, are described and mapped for current and historical ranges. Potential migration into humans and animals is addressed with somewhat limited studies. Perchlorate is described as an indicator munitions constituent as it is a good example of PBT (see definitions above). Perchlorate recently came to public notice again as a constituent of the drinking water in Barstow, CA. Databases on hazardous wastes from many sources and contaminated sites are described as not revealing any relevant sites. Formerly used defense sites are discussed. All are declared not relevant. On Page 293, one paragraph describes a total of 50 accidental releases, in 2002, of toxic substances and what was done about them. Deliberate releases and munitions constituents are not itemized. The discussion of toxic wastes ends on Page 301 of the DEIS. Nowhere is the Environmental Protection Agency's Toxic Release Inventory mentioned, with its specific amounts, and the relative standing of military sites in general and MCAGCC in particular. Therefore the DEIS must be amended to show not only the methodology for reporting

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. Munitions constituents and toxic chemical release reporting requirements are described in Section 3.4 and 4.4 of the EIS. As described in the EIS the Combat Center complies with the Emergency Planning and Community Right-to-Know Act (EPCRA) Toxic Release Inventory (TRI) program, and all other federal, state, and local

requirements regarding hazardous materials and wastes, and would continue to do so under the proposed action.

**Comment** Re: DEIS on 29Palms Base expansion Dear Sir: The communities of Landers and Johnson Valley are in Postal Zip Code 92285. Landers borders the existing Marine Air Ground Combat Center 29Palms; Johnson Valley is directly southwest of it, and due south of the proposed westward expansion area. Environmental Justice provisions are addressed in the DEIS because Federal Projects are not supposed to have disproportionate impacts against any ethnic, demographic or socio-economic group. IN POSTAL CODE 92285, CENSUS 2010 HAS STATED: The population is 2,181. The median age of the population is 49.5. 24.7% are 65 years and over. This is almost twice the percentage of people 65 and older in the US population (12.4%). These are very much senior citizen communities. Many residents are retired and on fixed incomes. 39% of our population 16 and over is in the labor force, as compared to 69% in the US. Families below poverty level: 20.8% In the US: 12.4% Individuals below poverty level: 24.9% In the US: 12.4% Disability status (population 5 years and over): 34.8% In the US: 19.3% And for good measure: Civilian veterans (civilian population 18 years and over): 25.1% In the US 12.7% (and we know many are proud Marines) [http://factfinder.census.gov/servlet/SAFFFacts?\\_event=Search&geo\\_id=&\\_geoContext=&\\_street=&\\_county=92285&\\_cityTown=92285&\\_state=&\\_zip=92285&\\_lang=en&\\_sse=on&pctxt=fph&pgsl=010&show\\_2003\\_tab=&redirect=Y](http://factfinder.census.gov/servlet/SAFFFacts?_event=Search&geo_id=&_geoContext=&_street=&_county=92285&_cityTown=92285&_state=&_zip=92285&_lang=en&_sse=on&pctxt=fph&pgsl=010&show_2003_tab=&redirect=Y) The factors listed above indicate the project does raise issues of Environmental Justice for the residents of Landers and Johnson Valley. The DEIS states that EO 12898 criteria for Environmental Justice say there must be one or more such affected populations within the DEIS area (Page 533). However, very few live WITHIN the EIS area, and it is therefore a contradiction to imply that residents outside the EIS area will not be impacted. The scoping issues (Item 4.3.1.3) listed on the same page include: Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries Devaluation of surrounding private property. Increased costs to federal, state and local jurisdictions for increased law enforcement. The contradiction is the DEIS states that the primary economic impacts would be from displacement of certain activities within the DEIS area causing financial and other hardships to surrounding areas. Therefore the DEIS must be revised to state the criteria for judging Environmental Justice are too narrow, and must state that these criteria also apply to populations outside the DEIS area. Anything less would be easily

misunderstood by a less-than-careful reader. Landers and Johnson Valley are within the impact area of the DEIS because of activities that are associated with current activities emanating from the Marine Base, and proposed activities due to the expansion, are above, around and adjacent to Landers and Johnson Valley. To assert otherwise is

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. As outlined in Section 4.3.1.2 of the EIS, three criteria are used to assess the significance of impacts to minority and low- income communities in the context of environmental justice (EO 12898, Federal Actions to Address Environmental Justice in Minority and Low-Income Populations): 1) there must be one or more such populations within the project area; 2) there must be adverse (or significant) impacts from the action; and 3) the environmental justice populations within the project area must bear a disproportionate burden of these adverse impacts. If any of these criteria are not met, then impacts with respect to environmental justice would not be significant. All environmental impacts that are attributable to the proposed action would apply equally to any affected persons, regardless of minority or income status; therefore no impacts would occur with respect to environmental justice. As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. In addition, the EIS acknowledges potential impacts to property values due to increased noise and proximity to military operating areas (see Section 4.3 of the EIS). The EIS concludes that any reduction in property value would likely be marginal and less than significant.

**Comment** Re: DEIS on 29Palms Base expansion Dear Sir: The Executive Summary on Page 4 explains why the USMC is proposing the establishment of a large-scale training facility at MCAGCC 29Palms. It says the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade (MEB)-sized Air Ground Task Force, and the existing facilities are inadequate. The underlying strategy was designed over a decade ago. Times and technology have changed. It appears the very foundation for this strategy is changing. <http://smallwarsjournal.com/blog/2010/08/gates-time-has-come-to/> Posted by SWJ Editors on August 13, 2010 4:01 AM Gates Orders Marine Corps

Force Structure Review by Jim Garamone of American Forces Press Service. An excerpt follows: Defense Secretary Robert M. Gates has ordered a thorough force structure review of the Marine Corps to determine what an expeditionary force in readiness should look like in the 21st century. There are questions about the mission of the Marine Corps, Gates said. Before World War II, the Marines very successfully conducted "small wars" in the western hemisphere. The service also developed the rationale and logistics needed to conduct amphibious warfare. During World War II, the Corps was wholly dedicated to landing on the beaches in the South and Central Pacific. America's first offensive of World War II was when Marines landed on the beaches of Guadalcanal and began the campaign against Japan in August 1942. Tarawa, Saipan, Peleliu, Iwo Jima and Okinawa are just a few of the landings Marines made. Since then, Marines have fought on the beaches, mountains and trenches of Korea, the highlands and rice paddies of Vietnam, and the deserts of Kuwait, Iraq and Afghanistan. Although many of these operations saw Marines initially projected from the sea,"they soon turned into long, grinding, ground engagements," Gates said. The nation does not need a second land army, Gates said, but rather forces that can deploy quickly and sustain themselves for a short period of time. Also see Gates: Time has Come to Re-examine Future of Marine Corps by Kevin Baron of Stars and Stripes and Defense Chief Gates Orders Review of Marines' Role by David S. Cloud of The Los Angeles Times. A more recent article dated Mar. 2, 2011, says that Lt. Gen. George J. Flynn, commanding general of Marine Corps Combat Development Command, spoke to news media about the 2010 Force Structure Review (formed to develop the organization, posture and capabilities of the Marine Corps and its role within the joint force in a fiscally-restrained post-Afghanistan environment; and I quote). Two of the recommendations from the Review are: A reduction in force structure from 202,000 to 186,800 when conditions in Afghanistan warrant, and Reduction in ground combat forces, to include a reduction in infantry (regimental headquarters from eight to seven; infantry bat

**Response**

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

<b>Comment</b>	I would like to comment on the acquisition that the marines want to take over the open desert east of Lucerne Valley. I know there are other alternatives to access land further east of their 29 Palms Base and also open land north and south. Why do you want to take the land that has been dedicated to off-road activities? It seems to me the usage of this land is far more destructive with tanks and warfare vehicles than the off-road vehicles could ever destroy. Besides the closeness to the town of Lucerne Valley and surrounding area of homes and developed land, and the noise and shakeing of the land would keep animals uneasy. This is a bad mistake on the governments ideas of exbanding the marine base. Please consider this letter of protest. Thank you for letting me express my opinion.
<b>Date Comment Received</b>	5/25/2011

**Response** Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Please consider my PROTEST to the proposal of the expansion of the marine base to the west into off-road territory. This land has been in use for that purpose for several years. The off-road vehicles could not destroy the land as bad as the tanks and vehicles used for war games could do. Please this PROTEST.

**Date Comment Received** 5/25/2011

**Comment** Dear Sirs, The land at Johnson Valley has been used by our family and friends for many years now. It would be a real shame to lose this area for four wheeling activities. No other area in Southern California is as good. We have been to many clean up runs there and the area looks better than it has in years. It would be a shame to destroy the work of what so many people accomplished. In this era of budget deficits why do we need to spend large sums of money on expansion of a military base? Is there any country in the world that we can't defeat right now? Thank You, Mike Sullivan

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment** I would like to let you know of my opinion of the expansion of the marine base to the west. Please consider going to the east, north and south for this expansion. I'm not opposed to you needing to have more space to do your maneuvers, but there is plenty of open land to the north of State Hwy 40, that could be used and not come within the vicinity of any town. PLEASE CONSIDER THIS PROTEST. THANK YOU.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at

other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** The DEIS does not satisfactorily addressed how the dangerous problem of trespass will be handled and it does not explain why a fence between a live fire military range and a public recreation area will not be installed That was a real concern registered in numerous comments and the DEIS must be re-written to explain why there should be no fence.

**Date Comment Received** 5/25/2011

**Response** Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's

management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

**Comment** In mid December a group of family friends were out with two SUVs and a couple Quads on a well established dirt road near their cabin in Landers. The section of road they were on runs north and south in the south/east portion of Johnson Valley's open recreation area near the Marine Base. Just south of Emerson Dry Lake they were stopped by a "Conservation Officer" and everyone over 16 years old was cited. All six tickets were for trespassing onto the Base. They were on an unmarked (at the time) portion of the route that wanders slightly onto the edge of the Base for a short distance in order to skirt the foot of a mountain (see 34 degrees, 25 minutes, 30 seconds North and 116 degrees, 24 minutes west). Trespass on federal land is a class "B" misdemeanor with the first offence punishable by a fine of no more than \$5,000.00, six months in jail and 5 years probation. A class "B" misdemeanor is a petty crime for which it is mandatory to appear. The Defendant is entitled to a Lawyer if he so wishes and upon request will be tried by Judge rather than a Magistrate. But he is not entitled to be tried by a Jury of his Peers. And, it is a crime for which a conviction will become a matter of record. That's an especially important consideration for the young person thinking of pleading guilty. He/she will be dogged with a "Federal Offence" on their record the rest of their life when perhaps their great sin was simply riding down the road with Dad and Mom! Not exactly the sort of explanation most prospective employers would likely embrace. You know, many of us have long assumed that because the entire Border on that side of the Base is so poorly marked that there must be a bit of a buffer that allows for situations like this. This route has been used for 55 years that I know of, without the slightest indication that passing through there was a problem. But the law is the law and apparently there is no "LEGAL" requirement for the Marines to identify there border in any way at all. Still, the public is "LEGALLY" obliged to stay off the Base unless they have express permission to do otherwise. So if we're near the Base, it is fully our responsibility to know where we are with respect the boundary, no matter how illusive it might be. And, we should accept that! It's the law and it's the responsible thing to do! Even so, the Base could be more considerate on this matter. It's ironic that if you or I wish the public not traverse OUR land we must indicate where it is and what we want while the Base, which only exists because the public foot's the bill, won't pick up one of those \$80.00

hammers we bought them and install a sign before dishing out tickets of such a serious nature. If one considers how much time and money is spent on their public relations campaigns trying to tell everybody what good neighbors they are you'd think they'd realize that just a small sign in the right place could be a big help to that effort!

**Date Comment Received** 5/25/2011

**Response** The Marine Corps appreciates your comment and involvement in the NEPA process. Public comments on the Draft EIS are an important part of the decision- making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. Once a decision has been made, the Marine Corps would implement communication and notification procedures as outlined in the EIS, to maintain a steady and persistent engagement with local communities, stakeholders, and agencies during future management planning.

**Comment** To the 29Palms EIS Project Manager, The Twenty-Nine Palms Marine Base expansion to the Southwest of Landers into Johnson Valley is a serious concern to our family as we use this area more often than any other off road area for our recreational use. This is what we do as a family. It keeps us connected to one another. We also have family that live in Johnson Valley and this would seriously impact their home and the peace and quiet of their home and property. We have gone out and used this area now called Johnson Valley OHV for the last forty plus years and want to continue to enjoy using it and going out there. We feel that the expansion of the Marine Base into Johnson Valley would seriously affect our enjoyment of this area along with the thousands of other OHV enthusiasts who use this area as well. Expanding the base would seriously impact the businesses that rely on the off roaders who also use this area. We have seen first-hand how the area has changed since the closure of other off road areas which has caused the off roaders to be crammed into smaller areas impacting how the desert is used. This could only cause more issues that would make the existing areas even more crowded which would make a relatively safe family sport, a dangerous one. Also, with the economic crisis that we here in California are experiencing, can we really afford to do this kind of project at all. The use of the area creates income for businesses from these off roaders who buy

gas and groceries in the area before heading to the Johnson Valley OHV Area. So in closing, PLEASE DO NOT EXPAND the Twenty-Nine Palms Marine Base into Johnson Valley as it would severely impact not only the Off-roaders who use this OHV area, but also the community who prospers from their usage and the people who live in Johnson Valley. Johnson Valley has a much larger population than is widely known. Hundreds of families would be impacted by this expansion. **Response to Comment 2230:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To the 29Palms EIS Project Manager,

The Twenty-Nine Palms Marine Base expansion to the Southwest of Landers into Johnson Valley is a serious concern to our family as we use this area more often than any other off road area for our recreational use.

This is what we do as a family. It keeps us connected to one another.

We also have family that live in Johnson Valley and this would seriously impact their home and the peace and quiet of their home and property.

We have gone out and used this area now called Johnson Valley OHV for the last forty plus years and want to continue to enjoy using it and going out there. We feel that the expansion of the Marine Base into Johnson Valley would seriously affect our enjoyment of this area along with the thousands of other OHV enthusiasts who use this area as well.

Expanding the base would seriously impact the businesses that rely on the off roaders who also use this area. We have seen first-hand how the area has changed since the closure of other off road areas which has caused the off roaders to be crammed into smaller areas impacting how the desert is used. This could only cause more issues that would make the existing areas even more crowded which would make a relatively safe family sport, a dangerous one.

Also, with the economic crisis that we here in California are experiencing, can we really afford to do this kind of project at all. The use of the area creates income for businesses from these off roaders who buy gas and groceries in the area before heading to the Johnson Valley OHV Area.

So in closing, PLEASE DO NOT EXPAND the Twenty-Nine Palms Marine Base into Johnson Valley as it would severely impact not only the Off-roaders who use this OHV area, but also the community who prospers from their usage and the people who live in Johnson Valley. Johnson Valley has a much larger population than is widely known. Hundreds of families would be impacted by this expansion.

With Sincere Regards,

Terry Sizelove

**Response to Comment 2231:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. **Comment** Johnson Valley recreation area is one of the best local riding areas. I visit it often with my family and friends. I think it is wrong to extend the marine base into this area when there is little area to recreate as it is. Why not expand in a different direction? Is it because the environmentalists would be too hard to fight?

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment and suggestions for a project alternative. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** The DEIS did not show the environmental impact of civilian aircraft having to negotiate additional restricted areas, the DEIS needs to be updated with information about how the additional travel time will effect the environment.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. Please see Section 4.7 of the EIS for information on expected impacts to Airspace Management; Jet Routes are discussed in this section. Section 4.7 describes expected significant impacts on Jet Routes transitting within the proposed restricted area. The Marine Corps is working with the FAA to minimize these impacts through advanced planning and coordination efforts. The Marine Corps is sensitive to the potential effects the airspace proposals could have on all commercial and civil aviation activities. The airspace proposals will be reviewed by the FAA in an Aeronautical Study which will examine potential impacts on all airspace uses and those measures to be discussed with the Marine Corps, airport operators, and other aviation interests, to minimize any impacts. The Marine Corps will also continue its outreach to the civil aviation community to discuss those issues and concerns affecting their operations within the Combat Center airspace environment and those measures that can be taken to best accommodate all aviation interests.

**Comment** To Whom it May Concern: I am Sean Dunn with DunnTech Motorsports in Redlands CA. I build and maintain off-road race cars of all sorts. The off-road races are my main source of advertising for my business. The business is my livelihood and the way I support my family. Off road racing is also my family's hobby and the way we spend all of our time. As race permits get denied and as public land is taken away, my business and family will be dramatically affected. It also forces all the racers into a very small area which has more impact on the land. All off-road racers are willing to do whatever it takes to keep our public lands open. I hope that the denial of permits and the land closure proposals will be seriously reconsidered. Sean Dunn

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

**Comment** I ask you to please choose an option that does not take the Johnson Valley Multi- Use area. With the inception of the San Bernardino County OHV Ordinance we off-road recreationalists have been told to ride in the JV Multi-Use area. The JVMUA has already seen a dramatic increase in use by locals that used to ride in other areas of the county, I have seen this increase first hand. My family has owned property in Landers for 37 years and bought it for the purpose of off- roading and did so in the surrounding area until the ordinance, I love the desert and exploring it on motorcycles and wanted to share that experience with my three sons and have all but lost the ability to so with my two youngest ones 11 and 6 with the exception of the vastness of the JVMUA. I am in full support of our great military, my 20 year old son is serving in the Navy on CVN65, his best friend is right now training at Camp Pendleton. I have two close friends in the Marines one of which served aboard MCAGCC 29 Palms for a time and is now back at Camp Pendleton, both have served in Iraq and Afghanistan. I understand the need for training but do please ask that another option besides taking JVMUA be found, I also am leery of the shared use plan as it seems problems could eventually cause that to be permanently taken. Thank You for your consideration

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment ID** 2242

**Comment** The DEIS did not show the impact of heavier class over 8,800 pounds GVW tow vehicles, towing large three axle trailers to attend racing events in Nevada or other areas. The DEIS needs to include the impact of towing race trucks because all alternatives other than NO action, or alternative 3 will end Off Road truck racing at Johnson Valley.

**Date Comment Received** 5/26/2011

**Response** Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment ID** 2243

**Last Name** Tammone

**First Name** Thomas

**Comment** Noise studies only show the noise levels at existing boundaries, the DEIS needs to also include the noise levels at proposed boundaries including F 18 Hornets performing low level afterburner turns. Such as to escape and evade anti aircraft fire after weapons release.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment ID** 2244

**Comment** Comment period needs to be extended because of the complexity of the issues at hand, and the wrong address listed on the Federal Registry a long standing Official point of contact for these type of process, the 60 day extension requested by most organizations is more than reasonable.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively

reached out to interested stakeholders to ensure that their concerns were identified.

**Comment** I strongly ask that the Marine base take "no action" in their expansion or expand to the East of 29 Palms instead of taking portions of the Johnson Valley ORV area. The Johnson Valley ORV area has been used for decades by families and off-road enthusiasts as a wonderful recreational area. There are very few areas left in California for folks to do this --it would be an incredible loss for this to be taken over by the Base. Also, local businesses that support the ORV traffic will also be permanently affected. Please reconsider.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a

vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** California has a long history of having a difficult time meeting the air quality targets set by the EPA each year, because of this there is a very high probability any proposed alternative other than NO ACTION, will cause the State of California to fail and meet this mandate. Therefore the DEIS needs to include all the environmental damage including erosion, loss of the State of California's share of Federal Highway funds will cause due to lack of maintenance.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The proposed training exercises would increase emissions of GHGs, as presented in Section 5.4.8 of the EIS. However, the efforts by the Marine Corps and DoN to implement broad-based programs to reduce energy consumption and use renewable and alternative fuels would somewhat offset these emission increases.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** To Whom it May Concern: I am Laura Dunn with DunnTech Motorsports in Redlands CA, my husband's business. We build and maintain off-road race cars of all sorts. The off-road races are our main source of advertising for the business. The business is our livelihood and the way we support our family. Off road racing is also our family's hobby and the way we spend all of our time. As race permits get denied and as public land is taken away, our business and family will be dramatically affected. It also forces all the racers into a very small area which has more impact on the land. All off-road racers are willing to do whatever it takes to keep our public lands open. I hope that the denial of permits and the land closure proposals will be seriously reconsidered.  
Laura Dunn

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed

action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

**Comment** The DEIS dose not show substitutive need, lacks any real reason why the goals can not be meet within existing boundaries, just saying safety of the participants at the same time compromising the non participating publics safety is not acceptable. In-listed people assume a risk when they in-list, just like pilots assume a risk when they fly light aircraft, the pilots creed is you don't crash land on an occupied smooth field because the empty one was rocky. As an Aviator I always respected in-listed people and thought they shared the same train of thought.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**Comment** As a mechanic my challenge has been to build a machine to fit the environment, all proposed alternatives other than alternative 3 or NO ACTION, will now force us to ask surrounding land managers to rebuild their environments to suite displaced vehicles. The DEIS needs to include the damage to the environment, displaced vehicles will cause as their use in

surrounding environments such as the San Bernardino National Forest, as this environment changes to suit displaced rock buggies from Johnson Valley.

**Date Comment Received** 5/26/2011

**Comment** If in fact the base expansion is approved, what is the time line for cutting of the off-road usage of the area? Will the off-roaders going to be compensated by expanding into other areas so as not to concentrate the off-roading to smaller, and more dangerous, proximity to others? What are the chances of a shared area to allow the base expansions buffer zone to still be used in an off-road capacity?

**Date Comment Received** 5/26/2011

**Response** Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance. A timeline for the proposed action has yet to be determined. Ultimately, Congress will make the final decision about proceeding with the proposed action. Once a decision has been made, the Marine Corps would implement communication and notification procedures as outlined in the EIS, to maintain a steady and persistent engagement with local communities, stakeholders, and agencies during future management planning.

**Comment** I oppose the closure of the Johnson Valley OHV area as well as the expansion of the 29 Palms Marine Base. The base expansion as proposed in the DEIS should be withdrawn. The Johnson Valley OHV area is a vital and critical component of off-road usage and recreation. The South Western states of the USA derive significant economic benefit from off-road usage, both enthusiast and racing. Many industries rely partially or

exclusively on the recreational and professional use of lands in the Johnson Valley OHV area. The Johnson Valley OHV area is also a vital recreational center for a great number of families. It allows parents and children to spend time together in the outdoors. This is public land and should always remain public land. The Marine Corps have failed to justify their need for simultaneous training of 3 Marine Expeditionary Brigades.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. Project Manager  
Proposed 29 Palms Training Land Acquisition/Airspace Establishment Project  
MAGTFTC, MCAGCC  
Bldg. 1554, Box 788104  
Twentynine Palms, CA 92278-8104

To Whom It May Concern,

As representatives of national motorized recreation organizations we write to support the "no action" alternative in the *Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training*. We recognize that the Draft Environmental Impact Statement (DEIS) notes that no action "...is not a viable alternative since it does not meet the purpose and need..." However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation.

Each of the undersigned organizations works closely with local partners including affiliates, clubs, associations and individual riders. Our local partners, the people who live, work and recreate in the area, are concerned that any of the proposed alternatives, other than the no-action alternative, will lead to substantially reduced or eliminated access and opportunities.

We also join our local partners in being concerned that the proposed expansion will have a negative economic impact on the areas surrounding the lost riding opportunities. As noted in table 3.3-7 in the DEIS, a 2007 Case Study of California's Mojave Desert found that "Tourism generates an estimated income of around \$8 million per year in Twentynine Palms (2/3 of which is related to recreation and does not include equipment purchases). Recreationist trip expenditures and OHV equipment-related expenditures throughout the Mojave Desert region in 2003 totaled \$338.8 million in 'earnings'." Clearly recreation, and off-highway vehicle (OHV) recreation in particular, is playing an important role in the local economy. We believe that this source of revenue generation will be lost, and will not be replaced, by the implementation of any of the alternatives other than "no-action."

Lastly, we share concerns with many that the DEIS is inadequate to meet National Environmental Policy Act (NEPA) standards and simply does not examine an adequate range of alternatives, including some that would allow for appropriate OHV recreation to continue in the area. As a result, we encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of OHVs, and that recognize the vital economic impact that motorized recreation has in the area.

**Comment** JV is one of the fewest place left for the offroad community. Southern California depends on JV to be kept open as an OHV area. JV is the Mecca for offroaders especially for us Rock Crawlers. I would like my kids to be able to use this land and hope that when they grow up to be adults and parents, they too will have the oppurtunity to use the land of JV for OHV use.

**Date Comment Received** 5/26/2011

**Response**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current

recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Any westward expansion would negatively impact the Johnson Valley OHV area as well as the local economy as many small businesses rely upon the income brought in by the recreational use of Johnson valley. In addition, the local economy shows their largest profits on weekends that have off-road races in the Johnson Valley OHV area. Races such as the MORE 500 and King of the Hammers bring thousands of competitors, spectators and vendors to this area. We respectfully ask that the Marines expand the base to the East per option 3. I honor the courage and sacrifice made by the US military to protect the freedoms our country enjoys and hope the Marines and off-road community can come to a mutually beneficial outcome. Thank you

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** I am very disappointed that the draft still includes shutting down some of the best four-wheeling in the country. I fully support the need of our fighting men and women to have amply room to train, however shift the area over to leave out these premier trails. This unfortunate situation smacks of the environmental land closure attitude that has been spreading across the US for the past 8 years. Please prove us wrong by moving the boundries and making all parties happy.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I currently support alternative A. The Marine Corps has not adequately assessed its ability to use existing military resources, such as Fort Irwin, to conduct its training exercises. Additionally, the Marine Corps' recommended alternative does not address the acquisition/opening of new OHV areas to mitigate the loss of land in Johnson Valley.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008.

Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment** I have enjoyed the openness of Johnson Valley and the ability to get away and ride in a open area, one of the few still left in California. If this land is taken by the Marine's it will be lost forever even if the politics of the world change, because of the use of active explosives the land will never be open to the public again due to these dangers. The military already has huge amounts of the California desert China Lake, Ft Irwin, 29 Palms, Edwards they should be able to work with the land they have and leave the only open area to the people of Southern California. Thank you, Dave McCafferty

**Date Comment Received** 5/26/2011

**Comment** Removing the Johnson Valley OHV area from public access will turn many Southern California outdoor enthusiasts like me from pro military supporters into neutral to anti military voters. I email my congresswoman Mary Bono every year on issues I care about and monitor her voting record on those issues. I use that area numerous times per year for hiking, riding motorcycles, and hunting. The loss of that area from public domain WILL make me an opponent of the 29 Palms Marine Base.

**Date Comment Received** 5/26/2011

Subject: Comments on Land Acquisition and Airspace Establishment draft environmental impact statement (DEIS).

Please consider the following comments in formulating final impact assessments for the Land Acquisition and Airspace Establishment environmental impact statement.

Specific Comment

Page 3.1-15, first para. The statement: BLM has assigned a Known Sodium Leasing Area (43 Code of Federal Regulations [CFR] 2400) land classification to lands in the east study area in the vicinity of these two mines. This classification indicates that the area is chiefly valuable for sodium. This designation is different from a land classification such as "chiefly valuable". Chiefly valuable has two connotations at Bristol, a comparative value between comingled minerals pursuant to the Saline Placer Act of 1901 and comparative values between leasable mineral lands and agricultural lands under the Leasing Act of 1920. The area was not classified as "chiefly valuable" under either authority. Re-write: *BLM has designated a portion of Bristol Dry Lake as a Known Sodium Leasing Area (KLA). A KLA is an area known to contain valuable deposits of leasable minerals (43 CFR 3500). It is that area in which there is direct geologic evidence that the deposit is known or believed to exist in sufficient quantity and of such quality to establish that the deposit is workable and that prospecting is not required to determine these factors.*

LU-1

Comment ID: 2277 (Page 2 of 4)

Page 2

Chapter 4 General (All alternatives)

While not required of Engle Act withdrawals, the intent of the Congress with respect to Federal Land Policy and Management Act public land withdrawals is clear: "A report prepared by a qualified mining engineer, engineering geologist, or geologist which shall include but not be limited to information on: general geology, known mineral deposits, past and present mineral production, mining claims, mineral leases, **evaluation of future mineral potential, present and potential market demands**". While a report is not required for this action, I don't believe the Congress intended mineral resources to be considered in any lesser degree than their stated intent in other Organic Act directives. The NEPA requires a hard look at the "potential for occurrence and accumulation" of mineral resources in the EIS analysis to fully disclose the impacts resulting from a loss of access to and development of these resources from the proposed action and alternatives. The BLM has spent considerable time and money developing a Geology-Energy-Minerals assessment of the California Desert to be used in significant decision making processes such as this action. For example, the statement on page 4.12-6 of the DEIS: "Potential loss of access to inactive mines and unworked mining claims would not represent a substantial reduction in the overall availability or supply of iron, gold, and copper, so there would be no indirect impacts to mineral resources due to purchase of claims that are unworked or are associated with inactive mines" is emblematic of the approach of assessing impacts associated with a lack of interest in a property. The initiative of a property owner may be a consideration in the impact analysis; however, and overall, the assessment weighs resource values lost as a result of an action. Perhaps you should avail yourselves of BLM's assessment information in your analyses. To simply assess impacts by analyzing a lack of interest or activity is inconsistent with National Environmental Policy act assessments and considerations of resource values (see enclosed map).

GEO-1

The DEIS discounts the local and regional importance of mining commodities other than mineral materials. For example, calcium chloride production in California only represents 10 to 12 percent of all United States production; the operations at Bristol dry lake together with Cadiz dry lake do represent all of natural western US production. From a regional perspective, this is important both to the local and regional socio-economic infrastructures (i.e., "The world's continental sources of sodium chloride are almost limitless"; page 4.12-12). Local mining and associated industries still produce local jobs, taxes, and purchases. There is the same consideration with iron ore. Iron ore resources in California are not significant in comparison with worldwide or US resources; however, access to and availability of these local deposits are important to local cement producers.

SOC-1

Response to Comment 2277 (Page 2 of 4):

GEO-1 & SOC-1:

Section 4.12, *Geological Resources* and Section 4.3, *Socioeconomics and Environmental Justice* have been updated to further evaluate local and regional impacts with respect to mining claims, mineral resources, and other commodities.

**Comment ID: 2277 (Page 3 of 4)**

The EIS should develop as alternatives definitive decisions on acquisition of mineral property. The "case-by-case" assumptions of the DEIS do not allow for any assessment of access to or development of mineral resources as a part of the scope of the proposed action or alternatives. I recommend at least a statement that all mineral properties in Marine Expeditionary Brigade (MEB) training locations be acquired. Not knowing whether a property having mineral resource potential will be acquired creates an unnecessary economic burden on the owners through the uncertainty as to whether their investments will be "allowed" or not.

NEPA-1

Thanks for the consideration.

**First Name**

**Comment** Unless you provide substantially similar Off Highway Vehicle opportunity in the approximate same area at the time of closure, the OHV users will be invading the more limited OHV areas of the San Bernardino National Forest nearby. THERE HAS BEEN NO ENVIRONMENTAL IMPACT STUDY DONE ON THE EFFECTS OF IMPACT TO THE San Bernardino National Forest of the Johnson Valley OHV park closure. Any knowledgeable person on this subject would likely agree this should be done. The results would show certain already stressed OHV routes in the SBNF would be greatly impacted by the many thousands of Johnson Valley OHV users flooding into parts of the SBNF. The study would likely conclude that due to the high impact on the SBNF the Johnson Valley OHV park must remain open; at least until a similar OHV facility in the area is open. To not do so will undoubtedly cause a extremely adverse environmental impact on the limited existing OHV routes in the SBNF.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would

fully reduce the impacts to below a level of significance. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

**Last Name** Name Withheld by Request

**First Name**

**Comment** I am pro military. But this is outrageous. Taking our land for something than can be accomplished in other areas with much less impact to people, jobs, livelihoods, businesses. This is truly an environmental injustice.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** Naval Facilities Engineering Command, Southwest ATTN: 29 Palms EIS Project Manager Alternative #7 In speaking with a colleague recently I realized that all entities wishing to use public land in Johnson Valley requires a special use permit from the BLM such as the King of the Hammers event, Mojave Desert Racing program or the Sheriff Search and Rescue fundraiser etc. I propose alternative #7 as an option for 29 palms training land/airspace project to achieve the necessary training a Marine Expeditionary Brigade. The Base liaison has stated that a two month period per year is what is necessary to achieve the required training. Determine which two months are preferable, apply and receive special use permit from the BLM for that period and close the entire Johnson Valley Open area of public land for that time frame. Enough notification to the public would eliminate the need to fence any area of base which will be necessary in the event of a permanent expansion into Johnson Valley. Create the needed MOA restrictions over the area as needed for close air support operations for that time frame. I believe this alternative would meet most of the public concerns regarding the use of the public land. It will be necessary to identify the method in which ordinance clean-up will ensure public use after a MEB exercise. Certainly not all, but I offer this for your consideration and eagerly await your response.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM’s management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Draft Environmental Impact Statement for the Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training

To Whom It May Concern:

The Local Agency Formation Commission for San Bernardino County (LAFCO) received the abovementioned notice and would like to provide comments regarding the Draft Environmental Impact Statement (DEIS) prepared for the proposed expansion for the Marine Corps Air Ground Combat Center (MCAGCC).

In San Bernardino County, there are a number of agencies that provide a variety of services within the areas identified in the alternative study areas. The proposed base expansion will affect some of these agencies/districts and their ability to serve within these areas identified in the study. Although, most of these agencies/districts were identified in the DEIS, some were not (i.e. Mojave Desert Resource Conservation District, County Service Area 29, etc.). Depending on the alternative pursued by the Marine Corps, some of these agencies/districts may or may not be affected by this proposal.

The following are the agencies/districts that may be affected by the proposed expansion including the services they currently provide (or are authorized to provide):

Response to Comment 2284 (Page 1 of 9):

Thank you for your comment. The information provided has been reviewed and added to the EIS as appropriate.

The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

As indicated in Section 2.8 of the EIS, the Combat Center would complete and implement the Installation Energy and Sustainability Strategy (IESS) that balances water demands (including those associated with the proposed action) with water supplies by increasing water conservation, using more recycled water, importing water, treating lower quality groundwater, and/or other methods deemed appropriate. The strategy would address sustainable water usage within the Combat Center, as well as regional water management, particularly if the strategy included groundwater extraction from other than the Surprise Spring aquifer.

**Comment ID: 2284 (Page 2 of 9)**

Draft EIS  
Proposed Expansion for the MCAGCC  
Page 2 of 5

- Mojave Desert Resource Conservation District (MDRCD) - see Attachment #1 map  

The MDRCD is a district that provides resources conservation within its jurisdiction. It currently provides services such as runoff control, soil erosion prevention, improvement of land capabilities, and habitat preservation. The district collaborates with a number of State and Federal agencies in their conservation programs. It should be noted that the MDRCD overlays the entirety of the base as it currently exists.
- San Bernardino County Fire Protection District (SBCFPD) - see Attachment #2 map  

The SBCFPD, which encompasses the area of San Bernardino County that is not within an independent fire provider's jurisdiction, is authorized to provide the following services related to fire protection: structural, watershed, prevention, inspection, suppression, weed abatement, hazardous materials services, rescue, first aid, paramedic, ambulance transportation, emergency response, and disaster preparedness planning. Both the SBCFPD South Desert and the SBCFPD North Desert Service Zones may be affected by this proposal, including the SBCFPD Service Zone FP-4 (Wonder Valley – east of the City of Twentynine Palms), which is a special taxing entity within the South Desert Service Zone. It should also be noted that the SBCFPD South Desert Service Zone overlays the entirety of the base as it currently exists.
- Mojave Water Agency (MWA) – see Attachment #3 map  

The MWA is a special act water agency that provides wholesale water within its boundaries (water from the State Water Project). In cooperation with other water entities, MWA is also responsible for managing the water resources within its boundaries to ensure a sustainable supply of water for the benefit of its constituents. In addition, MWA is also the court-appointed Watermaster for the Mojave River Basin adjudication. It should also be noted that the lower portion of the West Study Area is within MWA's Improvement District M, which was formed to fund the pipeline to recharge the basins located in the Yucca Valley region.
- County Service Area 29 (CSA 29) – see Attachment #4 map  

CSA 29 is a county service area that provide cemetery, TV translator, park and recreation, street lighting and water services within its boundaries, which is generally identified as the Lucerne Valley area. The district is also authorized to provide sewer service and has the ability to provide such service in the future, if needed.
- Bighorn Desert View Water Agency (BDVWA) - see also Attachment #4 map  

BDVWA provides domestic and retail water service within the communities of Johnson Valley, Flamingo Heights, and Landers. The district is developing plans in conjunction with MWA for recharge of water to the groundwater basin.

**Response to Comment 2284 (Page 2 of 9):**

Section 5.4.13.3 of the EIS states that “while acquisition of the Cadiz Inc. land may be beneficial for the water supply on the Combat Center, it would have a regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project.”

The EIS has been updated to reflect the change from Yucca Valley Fire Protection District to the San Bernardino County Fire Protection District. The Final EIS has been modified as appropriate.

Comment ID: 2284 (Page 3 of 9)

Response to Comment 2284 (Page 3 of 9):

Draft EIS  
Proposed Expansion for the MCAGCC  
Page 3 of 5

- County Service Area 70 Improvement Zone M (Wonder Valley) see also Attachment #4 map

CSA 70 M is a county service area zone that provides park and recreation services within its current boundaries through imposition of special taxes.

Below is a table that identifies the different areas (East, South, and West Study Areas) and a range of reasonable alternatives that were evaluated in the DEIS. Depending on the alternative use, the matrix below identifies the agencies/districts that may potentially be affected.

	East Study Area	South Study Area	West Study Area
Alternative 1	None	<ul style="list-style-type: none"> <li>MDRCD</li> <li>SBCFPD South Desert Service Zone</li> <li>SBCFPD Service Zone FP-4 (Wonder Valley)</li> <li>CSA 70 M (Wonder Valley)</li> </ul>	<ul style="list-style-type: none"> <li>MDRCD</li> <li>SBCFPD South Desert Service Zone</li> <li>SBCFPD North Desert Service Zone</li> <li>MWA and its Imp. Chapter 4 of the DEIS identifies a potential effect on the instrument approaches for the Big Bear Airport. The airport is operated by the Big Bear Airport District. Mitigation or measures to counter the potential effect are not identified in the DEIS. Mitigation should be identified in the document.

Comment ID: 2284 (Page 5 of 9)

Response to Comment 2284 (Page 5 of 9):

Draft EIS  
Proposed Expansion for the MCAGCC  
Page 5 of 5

Chapter 5 of the DEIS identifies that for Alternative 1 the cumulative impact of the Twentynine Palms Water District groundwater pumping increase in the Twentynine Palms Valley Basin, combined with an increase in Combat Center production from Alternative 1 in the same groundwater basin, could result in declines in hydraulic head that would eventually decrease the amount of natural groundwater discharge from the basin. The DEIS goes on to state that this would be potentially significant in the absence of a long-term plan for managing the potable water supply to the region. Information as to plans for a long-term plan for potable water supply needs to be included in the DEIS.

Chapter 5 of the DEIS also identifies that Alternative 3 would eliminate or curtail the agricultural operation of Cadiz Inc. and the Cadiz Inc. access to portion of its existing water supply system. The DEIS further states that Alternative 3 would interfere with or preclude the Cadiz Water Conservation and Storage Project, a potential water supply for southern California, because the alternative would overlap with the proposed footprint of the Cadiz Water Conservation and Storage Project. Alternative 3 would have an impact to the region and the DEIS should identify that Alternative 3 could significantly curtail water storage for the region.

It should be noted that through the County Fire reorganization, the Yucca Valley Fire Protection District, which was identified several times in the DEIS, was reorganized and is now known as the San Bernardino County Fire Protection District and its South Desert Service Zone. This change needs to be identified in the DEIS and the emergency response information related to the Yucca Valley Fire Protection District must be modified to address the South Desert Service Zone.

If you have any questions concerning the information outlined above or need additional information regarding the LAFCO process, please do not hesitate to contact me at (909) 383-9900. Please maintain LAFCO on your distribution list to receive further information related to this process.

Sincerely,

KATHLEEN ROLLINGS-McDONALD  
Executive Officer

Comment ID: 2284 (Page 7 of 9)

Response to Comment 2284 (Page 7 of 9):

**Comment ID** 2285

**Last Name** Name Withheld by Request

**First Name**

**Comment** Let me start of by saying this....My father is a Marine, my grand father is a Marine and my cousin is a Marine. I to did my duty and server my country, but not as a Marine. I definately believe in service and country. That being said, the loss of the Johnson Valley OHV and adjacent lands would be devistating to California. There are tens of thousands of residents that pack-up the truck, trailer, camper, RV, family and "toys", heading to Johnson Valley. This generates millions in revinue both near Johnson Valley and the local markets where these families come from. This area is special to myself and 4x4 club that I go "wheeling" with. Please find a solution that does not close or restrict usage of Johnson Valley for the use of the public.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment ID** 2286

**Last Name** Scott

**First Name** Michael

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is

not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area. Mike Scott

**Date Comment Received** 5/26/2011

**Response**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

May 26<sup>th</sup>, 2011

**RE: 29 Palms US MCAGCC Land Acquisition/Airspace Establishment Study; Scoping Comments for the draft EIS; delivered via electronic public comment form**

The California Desert Coalition (CDC) is pleased to provide scoping comments on the proposed Land Acquisition/Airspace Establishment Study.

The CDC is a citizens' advocacy group formed in 2007 to oppose the Los Angeles Department of Water and Power's (LADWP's) preferred alignment for its Green Path North transmission line project. Although the LADWP withdrew their application for the project from the Bureau of Land Management (BLM) in March 2010, CDC, on behalf of the public continues to participate in the monitoring of projects and issues that affect the unique and treasured quality of life in the California Desert.

We are a non-partisan, non-profit issue advocacy group that was organized to provide new and refreshing viewpoints toward our environment, our place in it, and our responsibility to it. Therefore, we feel it necessary to provide comments on the proposed expansion study.

**Scoping Comments:**

The Department of Defense has proposed a major expansion of the Twenty-nine Palms Marine Base into the Johnson Valley OHV recreation area. It is understood that the Marine Corps Air Ground and Combat Center (MCAGCC) is the only military base location that will provide sufficient land and airspace potential to meet the training requirements for a large scale Marine Air Ground Task Force (MAGTF). The preferred alternative (#6) states 44% of the recreational lands in Johnson Valley will be available 10 months out the year.

We strongly urge a "no action" alternative; despite its lack of presence as a legitimate alternative in the current draft EIS. The environmental impacts that will result from loss of open space within Johnson Valley OHV area will be significant should the preferred alternative be chosen.

We also request that the suggested permit procedure that was mentioned in public meetings be available for public examination.

REC-1  
NEPA-1

Response to Comment 2287 (Page 1 of 6):

**REC-1:**

Thank you for your comment. Comment noted.

**NEPA-1:**

The specific details on management of the RPAA in regards to permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies.

**AQ-1:**

Regarding the potential for the proposed expansion of the Combat Center into the Johnson Valley OHV recreational area to lead to an increase in illegal ORV incursions onto private property and the associated fugitive dust impacts from these activities: It is difficult to predict how and where OHVs would be displaced as a result of the project alternatives that would expand into Johnson Valley. These vehicles could increase fugitive dust emissions on private lands compared to existing conditions. However, these vehicles would operate intermittently and at a level much lower in any one location than the scenario of equipment usage evaluated in the DEIS for ambient PM10 impacts. The DEIS analysis determined that maximum PM10 impacts on public lands would produce less than significant air quality impacts. Therefore, it is expected that impacts of fugitive dust from illegal ORV incursions onto private property also would produce less than significant PM10 impacts.

Comment ID: 2287 (Page 2 of 6)

Comments to specific resource categories:

1. Air Quality

The preferred alternative will inevitably create increased dust in the surrounding rural communities from the displaced OHV activity. It will also create a chemical pollution in the airspace over wilderness and conservation areas, that is not present currently. Moreover, the desert has been observed as a 'hot spot' or first indicator of the effects of climate change. These air quality reductions need further study to determine whether this change in land use will create unintended consequences such as more severe weather conditions.

AQ-1

2. Airspace, air traffic

Airspace will overlay onto conservation areas in the San Bernardino Mountains. For instance, the airspace mapping presented at the workshops was woefully inadequate to the point of misinformation. The airspace was drawn over a topographical map that included no human activities (no roads, communities, conservation areas, federal lands). In light of the military's excellent mapping capabilities, it leads one to believe the military did not want to inform stakeholders. NEPA requires that the lead agency share information with stakeholders to insure they make informed decisions: this has not been the case thus far in the public scoping process.

AIR-1

3. Biological resources

The Johnson Valley area is home to the oldest living creature (14,000+ years) in the world: the Creosote (i.e. the King Clone grove), as well as prime, desert tortoise habitat. There will be increased damage and impact to the biological resources (vegetation and wildlife) that will inevitably occur since riders will be forced to recreate on lands outside the OHV area. There are high conservation values outside the recreation area that will be lost if the military chooses their preferred alternative for this land acquisition study.

BIO-1

4. Land use

The land has been set-aside for multi-use and incorporates mining, off road use, vital wildlife connectivity, among others. Change in this land use will permanently obviate those needs and uses.

LU-1

5. Public lands withdrawal

The withdrawal of public lands that were set aside for off road use (BLM Johnson Valley OHV recreation/open area) will greatly disrupt the conservation lands and surrounding communities. This area is widely used by folks from outside areas (i.e. cities, foreign countries, and local communities). These people will be forced to trespass and ride onto adjacent private and protected lands. Those affected will not have the resources to fight off this mass trespass.

REC-2

In addition, the County of San Bernardino and communities like Lucerne Valley, Victorville, Johnson Valley, Landers, Yucca Valley, Morongo Valley and Joshua Tree will suffer economically. The County receives no property tax revenue from these lands but at least it attracts recreation dollars. Small communities like Lucerne Valley depend on income from this recreation and event hot spot and they will suffer needlessly if that income is eliminated by this permanent withdrawal.

SOC-1

Response to Comment 2287 (Page 2 of 6):

**AIR-1:**

The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

**BIO-1:**

Comment noted. The biological resources within the portion of Johnson Valley that fall within the land acquisition area are described in the Draft EIS. The creosote grove known as “King Clone” does not fall within the acquisition area, but as noted in your comment, it and other biological resources could be affected by intensified OHV usage in the remaining Johnson Valley OHV Area for Alternatives 1, 2, 4, 5, and 6. This potential intensification of usage is described in Section 4.2 Recreation, and based on ESA Section 7 consultation with USFWS additional text regarding the potential effects of this intensification has been added to Section 4.10.2 and elsewhere in Section 4.10.

**LU-1:**

Section 4.1 of the EIS identifies Significant Impacts to Land Use Plans and Policies under each action alternative. Please see EIS

Comment ID: 2287 (Page 3 of 6)

6. Noise

Considerable noise pollution will result as a consequence of displaced OHV activity in the surrounding communities. The new airspace expansion will intrude into conserved natural areas that were created to protect wilderness qualities like quietude.

NOI-1

7. Recreation

This recreation area was set aside through a promise from the federal government to the American people and is the largest designated off-road vehicle area in the nation, used internationally. No recognition of or allowance has been made to offset this significant loss.

REC-3

8. Socioeconomics

Surrounding communities such as Lucerne Valley, depend on the income that is generated from people that come to recreate at Johnson Valley OHV area and from its annual events. The area that is proposed to be closed to recreational activity (even if temporarily) holds large annual events such as the King of the Hammers, that create much needed tourism dollars for the community of Lucerne Valley, and without it, the loss of income will be stinging and irreplaceable. Along with this revenue loss, expenses to the community will go up. Furthermore, there is the issue of law enforcement. With population in California dramatically higher now than before the creation of Johnson Valley OHV area, additional law enforcement will be needed to offset the resulting significance of displaced OHV activity and to maintain the status quo of personal security. Private property rights will once again, go forgotten. Trespasses onto adjacent and private lands that will result from the reality of the proposed alternative will ultimately go unaddressed due to the current lack of law enforcement in the Bureau of Land Management. It will be necessary to increase law enforcement personnel to compensate for this shift of the workload. If the focus shifts to these new trespasses, the current law enforcement will certainly relinquish other issues of crime and illegal activity.

SOC-2

PHS-1

It also needs to be recognized that Johnson Valley and its OHV area draws in the filming community. People come from all over the world to film the unique landscapes the desert has to offer. This is prevalent in Johnson Valley because no permits are required to partake in this activity. This issue has not been examined or given any consideration in regards to mitigation thus far in the draft EIS.

SOC-3

Other Alternatives:

Nearby Fort Irwin has available lands, and as the different branches of the military frequently interact together in real world scenarios, the benefits of conducting joint operations between the two bases as an alternative to the taking of public lands is strongly recommended.

NEPA-2

Thank you for the opportunity to comment on the draft EIS of the proposed land acquisition and expansion/airspace establishment study. We urge you to consider a 'no action' alternative based on these substantial environmental impacts the preferred alternative generates. Displacing OHV activity onto adjacent public, private, and conserved lands will only devastate the unique and treasured quality of living in the California Desert and subvert all the efforts of agencies, regional governments and citizens to accommodate, enjoy, and contain this public sector.

GEN-1

Response to Comment 2287 (Page 3 of 6):

Table 4.1.3 for information on why particular alternatives would be significant impacts to Land Use Plans and Policies.

**REC-2:**

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

**SOC-1:**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

**NOI-1:**

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-

**Comment ID: 2287 (Page 4 of 6)**

Sincerely,

April Sall, Chair

Ruth Rieman, Vice Chair

**Response to Comment 2287 (Page 4 of 6):**

event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

**REC-3:**

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**SOC-2:**

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending.

**PHS-1:**

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

**Comment ID: 2287 (Page 5 of 6)**

**Response to Comment 2287 (Page 5 of 6):**

**SOC-3:**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related film industry spending.

**NEPA-2:**

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better

**Comment ID: 2287 (Page 6 of 6)**

**Response to Comment 2287 (page 6 of 6):**

accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

**GEN-1:**

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The

Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Dear interested parties, Thank you for this opportunity to comment on the expansion of the 29 Palms Marine base. I have spent many summer camps with the National Guard driving tanks in Ft. Erwin not far from your facility. I fully support our country's armed forces but am against the expansion of 29 Palms Marine Base west into Johnson Valley! I cannot support any of the proposed alternatives. I have recreated in the California Desert since the early 60's when most of the public desert land was accessible. As population pressure along with environmentalism grew, the OHV community was restricted to public land designated for that use with the expectation that that use would continue in perpetuity. The expansion into Johnson Valley would have dire environmental affects on the remaining OHV opportunity. My understanding is that there are 120,000 to 150,000 visitors to Johnson Valley by actual count and many more that are casual users that can't be counted. Where are all these people going to go? The DEIS has not provided for mitigation for the impacts to other legal OHV opportunity as well as increased OHV activities on lands that have OHV restrictions. Please consider these comments with the utmost seriousness, Thank you, Paul Slavik Commissioner, California State Parks, OHMVR Division

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources. Furthermore, as discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to

reduce these potentially significant impacts. Additional information regarding impacts from displaced OHV useage and the potential for illegal OHV use has been added to Section 4.2.

**Response** Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson

Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area. Richard Russell Avid offroad family and long time users of the Johnson Valley OHV.

**First Name**

**Comment** Any westward expansion would negatively impact the Johnson Valley OHV area as well as the local economy as many small businesses rely upon the income brought in by the recreational use of Johnson valley. In addition, the local economy shows their largest profits on weekends that have off-road races in the Johnson Valley OHV area. Races such as the MORE 500 and King of the Hammers bring thousands of competitors, spectators and vendors to this area. We ask that the Marines expand the base to the East per option 3.

**Comment** It is clear from General James F. Amos's 2011 report to Congress on the Posture of the Marine Corps that there is no need to train 3 MEB's. I have included quotes from General James F. Amos. Ken Clarke CURRENT

quotes from General James F. Amos, Commandant of the Marine Corps: "But we see that's probably what the world is going to look like for the next two decades. A lot more information there, but we think that's going to be our backyard because this is primarily the littorals, because these are kind of the nasty missions and things that, quite honestly, don't require 20,000 Marines on the ground. They may only require a Marine rifle company; they may require a training team to go in and help train border police of some of the nations that we want to help gird up and secure their borders." "We know we're a second land army; we've got to get back to our amphibious roots, we've got to € and then all of a sudden people started using that language. And then they became critical of us: Well, we don't need another second land army." "And we're making efforts. We already cancelled some programs that we not only didn't need but were way too big and way too heavy." "We are going to lighten the Marine Corps. We're an air-ground task force. Now, it's going to take " it'll go past " it'll go to the 36th and probably the 37th commandant, but we are going to do it. And we're in the process of doing it right now." "I refer to our Marine Corps today as a "middleweight force." I liken it to boxing: If you're a middleweight boxer, you can box up into the heavyweight division, or you can box down into a lightweight division by simply changing your weight and your training regimen. The same is true for the Marine Corps. We fill the void in our nation's defense for an agile force that is comfortable operating at the high and the low ends of the threat spectrum, or the ambiguous areas in between. Larger than special operations forces but lighter and more expeditionary than conventional Army units, we engage and respond quickly, often from the sea with enough force to carry the day upon arrival."

**Date Comment Received** 5/26/2011

**Response**

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific

portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**First Name**

**Comment** I strongly oppose the expansion into Johnson Valley for the following reasons... 1. The land mass of Johnson Valley totals nearly 200,000 acres. It is the largest designated OHV area in the country. The impact of it's closure would adversely affect the already limited resources available to off-road enthusiast in the region. 2. The closure would negatively impact remaining OHV areas both concerning the environment as well as personal safety as a result of increased and heavily concentrated use. Injury and even death will likely increase from over population of other BLM and Forest Service managed lands in the future should the base extend into Johnson Valley. 3. Increased use of Federal, State, and Local public lands will put additional pressure on land managers resulting in greater restriction to motorized recreation. The result of concentrated use will create increased environmental concerns likely leading to further closures in the future, thus compounding the problem. 4. In the San Bernardino County portion of the Mojave desert the military currently uses areas of Federal land for China Lake Naval Weapons Center, Fort Irwin National Training Center, Twenty Nine Palms Marine Corp Air Ground Combat Center, and a portion of Edwards Air Force Base. This along with countless Wilderness designated areas already severely restricts public motorized access on public lands. Other western States with similar topography should be studied. 5. The USMC should study cooperative use of existing military bases, including all

branches of the U.S. Military, to accommodate their training goals. The USMC has indicated in their scoping meetings that training exercises would be held only once or twice each year. China Lake, Fort Irwin and other nearby military bases may provide the needed land area for live fire training, while also allowing the opportunity to train for mobilization. This may not only meet the Marine Corps training objectives, but also provide a more effective and efficient use of Federal lands. 6. Expansion to the east would only require de-designation of a small portion of the Sheephole Valley Wilderness. Although political leaders have shown resistance to the idea, military training is a benefit to the entire Nation and the responsibility should be shared equitably among all Americans, not just off-road enthusiasts. The number of designated wilderness areas far outnumber designated OHV areas in the Mojave desert. 7. Once used for live military fire, Johnson Valley would become an area restricted and off-limits to future generations in perpetuity, regardless if the needs of the USMC change and diminish in the future. Respectfully, Ed Hills

**Date Comment Received** 5/26/2011

**Response**

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was

carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** To Whom it may concern: I understand the importance of having a proper training environment for our Military and Johnson Valley may be very appealing, but this area is one of the last open areas left for off-road enthusiasts to enjoy. There used to be so many options for off-roaders to enjoy but over the past three decades many areas have been closed down leaving very few choices that are still close to Los Angeles. Please consider another locations besides an existing off-road recreation area. There must be some BLM land that would be viable a military training location. Sincerely, Donny Sandusky 310 334 9736

**Date Comment Received** 5/26/2011

Re: Proposed Expansion of the Twentynine Palms Marine Base

May 24, 2011

To Whom It May Concern —

First, I would like to commend the MCAGCC and the authors of the thorough and highly-detailed Draft Environmental Impact Statement (DEIS) that they have presented for public review. The report is very comprehensive, and the effort in creating it and candor it represents is very much appreciated.

Having reviewed the document, I would like to register some concerns regarding the proposed expansion plans.

Arguably one of the most significant and immediate effects of training at the Base upon the surrounding area is the explosive vibration propagated throughout the Morongo Basin during live fire exercises. The larger ordnances (presumably artillery) can routinely make the ground shake *twenty to thirty miles away*—far beyond the confines of the Base proper. This is one of the most significant overall impacts on day-to-day living for residents of the region, as many such “hits” are subjectively reminiscent of a modest earthquake, and much more frequent.

The DEIS has attempted to account for these undesired externalities in Table 4.1-2, “Projected Ordnance Noise.”

Notably, though, those estimates utilize *C-Weighted* measurements. Indeed, at relatively close distances to the ordnance (i.e., on-base), the resulting noise is more broad-spectrum; hence, this makes for a perfectly adequate measurement in that case.

*However*, at longer distances (i.e., in the numerous residential areas of the Basin), most of the vibration transmitted is very low frequency (much of it below 20 Hertz). At those frequencies, the “rolloff” utilized in the C-weighting curve dramatically underestimates the intensity of those shocks — by anywhere from approximately 10 to 25 decibels.

This is not your typical residential noise.

Further, because ordnance fire creates *impact* vibration (which is intermittent), rather than typical *ambient* noise, simply averaging the measurements over a 24-hour period (as per CNEL) further underestimates its net effect.

Indeed, these measurement biases are inevitably reflected in Table 4.1-2, as well as the report’s conclusions, which are correspondingly minimizing in this regard.

Given the unique nature of the phenomenon being measured, the numbers as presented are actually quite deceiving; and thus, in this key regard, the DEIS falls short of conveying accurate ramifications to the surrounding population of the expansion of the MCAGCC.

~~~~~

Recommendations:

In order to mitigate the environmental impact, a key and common-sense goal of the expansion might be to shift heavy artillery fire further away from the more-populated western portion of the Morongo Basin, and for as much of the year as possible.

**Response to Comment 2301 (Page 1 of 2):**

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: 2301 (Page 2 of 2)

Response to Comment 2301 (Page 2 of 2):

This could still be accomplished in the context of expanding the Base, and meeting its expanded operational needs.

For example, a land acquisition such as Alternative 6 might better meet all of these requirements if it incorporated modifications such as these:

- *West-to-East* direction of maneuver, similar to that in Alternative 4. This presumably shifts more of the heavy live fire toward an MEB Objective in the eastern (and less populated) end of the Basin.

- MEB Building Block training within *existing* Combat Center boundaries (also a la Alternative 4), as opposed to in the west study area. This is particularly important in view of the necessity of such training “up to 40 weeks/year” [see Table 2.3].

~~~~~

More than many other concerns addressed in the report, the effects of ordnance noise can arguably be felt (quite literally) far outside the confines of the Base. Thus, the changes proposed in the report could easily have a detrimental impact on the surrounding community, if not planned for carefully.

Given the conscientious tone of the Draft Environmental Impact Statement, and keeping the above considerations in mind, it should be possible to better balance the imperative for expansion of the Base with these externalities, and thus help preserve the quality of life for the majority of residents of the Morongo Basin, now and into the future.

~~~~~

Thank you for the opportunity to comment on the DEIS and the proposed expansion. I hope that this feedback proves of value to the planning process and the final report.

If you need any clarification to any of the foregoing, kindly do not hesitate to contact me.

Respectfully Yours,

R. Diamond

**Comment** I am writing to oppose the Twenty-nine Palms Training Land Acquisition Project. The DEIS for the project is defective, and its analysis of related impacts is inadequate. The only alternative I can support is the "No Action" alternative. Any other alternative would pose unacceptable economic and recreational losses to the people of South-Western United States. My family and I have been using this land for decades. We relax on it, we race on it, we drive on it, we spend time together as a family. The public deserts such as the Johnson Valley OHV area and BLM land in general is a critical and integral part of our family life. It allows us and our children to experience nature, get exercise and enjoy ourselves. We visit these deserts many times a year, we plan our homes and our lives and our purchases around it. To support our hobby we buy motorcycles, cars, safety gear, camping equipment, food, lights, tires, and countless other products, resources and services. Each loss of public land impacts the towns and cities that service people like us in the off-road community. Every time we use or visit the desert we spend money in these towns, before, during and after our trip. Places like Barstow, Victorville, 29 Palms, all would unfortunately receive less money from my family and I as a result of reduced recreational and off-road sporting opportunities. Additionally, closing public lands reduces public safety. When public land is lost, the desert users are forced into less and less space. This inevitably increases the chances of accidents and thereby reduces our safety. The existing DEIS is inadequate and it's findings in regards to local impact are in contradiction with my own life-long experiences. The "Preferred Alternative" in the DEIS must be rejected on the basis that it is immoral to take the limited public land away from the public on such poorly demonstrated grounds as expressed in the DEIS. I can only support the "No Action" alternative.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed

action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** As an avid off road motorcycle rider and racer, my family and friends have for many years cherished our use of the Johnson Valley area for recreation, healthy competition and camaraderie. There are fewer and fewer legal alternative areas to participate in the truly unique experience of off-road riding, not only for current enthusiasts, but for generations to come. Closure of the Johnson Valley ORV area denies the public an opportunity to introduce young people to an intensely physical challenge in a spectacular natural environment, to teach them toughness and sportsmanship, and to appreciate that there is a refuge from the day-to-day stress beyond the city limits. Not all terrain is the same; I do not know if military training requires the specific terrain that Johnson Valley has to offer, but it is a unique place for off-road riders that cannot be substituted or replaced. So the effect of a closure will truly be felt by many people that really care about this. I can only hope it is possible for decision makers to make an effort approach this issue with an open mind, and keep in mind that families such as theirs are being significantly impacted by their decisions. Our government was founded on the principals of "for the people, by the people", and the people are trying to send a message that the closure of Johnson Valley is an unacceptable outcome.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would

be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

**Re: *Comments on Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment for the proposed Expansion of the 29 Palms USMC Base***

Dear Project Manager:

I am writing to comment on the Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment for the proposed Expansion of the 29 Palms USMC Base ("Draft EIS"). I recreate frequently in Johnson Valley and participate in American Motorcyclist Association District 37 motorcycle racing events held in Johnson Valley. The public Off Highway Vehicle ("OHV") land in Johnson Valley is to Southern California, as Central Park is to New Yorkers. The proposed expansion would eliminate the largest and most important single piece of OHV land in the United States.

The detrimental effect of taking this large contiguous piece of land is multiplied by Johnson Valley's proximity to the densely populated Southern California population. In other words, no other piece of land is more important to a greater number of recreational users. The primary flaw in the Draft EIS is its failure to recognize the nexus of (1) Johnson Valley's large contiguous OHV space; and (2) its close proximity to dense population centers of Southern California, which are filled with millions of persons who use the public lands for recreating. The Draft EIS does not include an adequate analysis of the value associated with this nexus. The Draft EIS fails to address the heightened effect/harm caused by taking the most important piece of land closest to the greatest number of users in the country. The failure to evaluate all of the recreational impacts of eliminating this OHV land is reason alone for stopping the proposed expansion into Johnson Valley or, at a minimum, requiring a supplemental environmental impact analysis and allowing for further public comments. The Draft EIS suffers from other flaws and does not conform to the requirements of National Environmental Policy Act ("NEPA") as more specifically stated below.

1

Response to Comment 2304 (Page 1 of 5):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Please see Appendix M of the Final EIS for information on alternate OHV areas and some associated environmental impacts.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to

**Comment ID: 2304 (Page 2 of 5)**

For the reasons state herein, I object to Draft EIS and the proposed expansion of the 29 Palms base into Johnson Valley, demand further analysis and preparation of a revised draft EIS that is corrected and allows for further public comment. Without waiving any rights and without conceding the adequacy or accuracy of the Draft EIS in anyway, I request that the no action alternative be selected. I further object to any alternative that takes public land in Johnson Valley. Without a supplemental analysis in the form of a revised draft EIS, the Draft EIS underlying this proposed 29 Palms expansion will remain incomplete and inaccurate and any taking/withdrawal of land based on the Draft EIS would be inconsistent with NEPA and the requirements for completing an EIS.

**I. The Draft EIS Does Not Sufficiently Identify a Need for Action**

The scoping and contemplated expansion of the 29 Palms base was initiated years ago under the Bush administration. The United States budget deficit and changing military needs do not currently warrant any expansion, and in particular the expansion of the base into Johnson Valley. Military activities in Iraq and Afghanistan have been scaled down since the initial scoping period. A supplemental Draft EIS should be prepared which appropriately states the need for the expansion under current budget and military conditions.

The need for taking Johnson Valley land has not been articulated and the reasons for selecting 29 Palms for expansion over other base alternatives, such as South Carolina, was not adequately addressed in the Draft EIS. Although the expansion into Johnson Valley may be convenient for the Marines, it is not necessary. The military claims that no other base in the U.S. is more appropriate than 29 Palms for expansion. The Marine's contend 29 Palms is already so large that a further expansion at 29 Palms into Johnson Valley would be the most appropriate place to fulfill their training objections—in essence 29 Palms is “too big to fail.” The contention does not constitute a valid statement of a purpose or need for the expansion into Johnson Valley under NEPA.

Although expanding 29 Palms may be convenient for the military, when that convenience is balanced against the full impact of the proposed expansion into Johnson Valley, the scale tips decidedly in favor of no action, or no expansion into Johnson Valley. In fact, when I attended an Open House Public Meeting presented by the military in Victorville, California on April 14, 2011, I met with Lt. Col. Bruce Nyholm and Lt. Col. Brent Nyquist who explained that the Marines would only be actively using live ordinance in the proposed Johnson Valley portion of the 29 Palm base expansion for three (3) days per year, per live exercise (to be held twice a year). Removing public land from Johnson Valley for such a minimal amount of time cannot be justified when the cost and impacts of the proposed expansion are considered.

Given the failure to articulate a need for the expansion under current conditions, the current budget crises, the significant impact on the Southern California economy and OHV recreational opportunities, the need for an accurate and complete Draft EIS is all the more important.

**Response to Comment 2304 (Page 2 of 5):**

the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

The Marine Corps understands the public’s concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM’s

**Comment ID: 2304 (Page 3 of 5)**

**2. All Environmental Consequences Have Not Been Adequately Evaluated**

The Draft EIS does not consider all of the environmental impacts of the proposed expansion into Johnson Valley. If Johnson Valley were taken, current users would very likely need to travel longer distances to reach open OHV land. The effect on OHV users travelling longer distances to alternative OHV sites has not been considered. The Draft EIS could have, but did not, identify the location of alternative OHV recreational areas to which the millions of persons who currently use Johnson Valley will have to drive in order to recreate, nor the environmental impact of that change or relocation including, without limitation, the effect on air quality and carbon emissions. The air quality and carbon footprint of travelling those distances has not been adequately considered. The Draft EIS is insufficient without such an analysis.

**3. The Analysis of the Impact on Recreation is Inadequate**

Johnson Valley is a unique open land used by millions of people for various OHV purposes. People from Southern California, Northern California, Nevada, Idaho and other areas around the country regularly use Johnson Valley for national motorcycle competitions. The Draft EIS fails to consider the national consequences of eliminating this open OHV space used by persons across the nation and the effect of eliminating this national resource. Further, as mentioned above, the Draft EIS fails to evaluate the nexus between the OHV land in Johnson Valley and the densely populated Southern California area. Supplemental analysis should be conducted to evaluate the adverse recreational impact on all users including, without limitation, residents of Los Angeles County, Orange County, San Diego County Ventura County, Riverside County, Southern Nevada, and Idaho.

A supplemental draft EIS should identify and include the cost of providing the public with substantially similar substitute lands on which they might recreate.

**4. The Analysis of the Socio-Economic and Environmental Justice Impacts is Inadequate**

The report is woefully inadequate in its evaluation of economic impacts. The scope of the socio-economic and environmental justice impacts is too narrow and the analysis contains unfounded assumptions. If Johnson Valley is taken most, if not all, of the recreational activity occurring therein will be lost along with the sales revenue, jobs, and tax revenue associated with that recreation. The Draft EIS does not consider the effect of lost sales throughout the nation let alone Southern California, lost sales taxes, lost state and federal income taxes, lost employment, and lost property taxes. For example, in direct connection with my use of Johnson Valley I spend on average approximately \$150 on motorcycle parts per month, another approximate \$150 on fuel travelling to and returning home from Johnson Valley each trip. I also buy groceries and supplies for camping in Johnson Valley and I buy food at restaurants in connection with my trips to and from Johnson Valley; the money spent on these food and supply items ranges from approximately \$50 to \$300 for a group of persons, per trip. Depending on the circumstances, I buy these items in Johnson Valley, in the surrounding communities, and/or near my home in Orange County, California. The Draft EIS fails to adequately evaluate the economic impact of my spending outside the small town of Johnson Valley the effect of that lost spending activity if

**Response to Comment 2304 (Page 3 of 5):**

management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The EIS evaluates impacts to cultural resources under each of the action alternatives (see Section 4.11). As noted in the EIS, impacts to cultural resources would be significant under any action alternative.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: 2304 (Page 4 of 5)

Response to Comment 2304 (Page 4 of 5):

Johnson Valley is taken. As a result, the Draft EIS economic analysis is inadequate and should be supplemented.

As to the Draft EIS's consideration of the impact of my spending in Johnson Valley, the report makes assumptions and under-estimates the amount of money spent by users of Johnson Valley. The Draft EIS should be revised to more accurately identify the number of people and the amounts spent by those people travelling to and from Johnson Valley and how those figures will change if Johnson Valley is taken in whole or in part.

**5. The Analysis of the Public Health and Safety Impacts is Inadequate**

The Draft EIS fails to consider the expansion's potential for increasing illegal off-road use and related adverse effects on the public's health and safety. Although not appropriate, the reality is that the taking of the single most valuable piece of contiguous OHV land in California without sufficient mitigation measure of providing substantially similar substitute land would very likely lead to illegal OHV because many persons would no longer have accessible public land on which to recreate. The Draft EIS does not address the consequences and costs of this activity including, without limitation, additional lawful enforcement activity.

The Draft EIS and the military's entire plan for massive live fire drills, including the use of major jet fighter and other aircraft, so close to major population centers is alarming. The Draft EIS does not adequately address the potential adverse public health and safety impact of: (1) potential errant munitions harming the public, animals, or natural resources surrounding the 29 Palms base; and (2) the potential for unexploded ordinance at or near the proposed expansion borders to cause harm to the public, animals or nature resources surrounding the base. No matter how small the chance of such harm, the consequences would be severe. Supplemental analysis should address the risk and impact of these potential harms.

**6. The Analysis of the Adverse Impact on Cultural Resources Inadequate**

The Draft EIS fails to adequately evaluate the adverse effect on cultural resources. The decision to expand the 29 Palms base in a manner that takes any or all of Johnson Valley goes against American principles of freedom and family. Johnson Valley contains open lands with varied views of vistas, geologic formations and contiguous open spaces that are uniquely suitable for motorcycle and other desert racing. Families use Johnson Valley for camping and competing in off-road motorcycle racing events and enjoy the freedom provided by large expanses of open OHV space. Children and adults compete, exercise, and learn to solve problems and operate independently in challenging desert racing events. This desert racing culture has been enjoyed by multiple generations of families. The OHV land in Johnson Valley cannot be replaced—no other similar open OHV land exists in California. The Draft EIS fails to evaluate the harmful human effect of eliminating this culture and this cultural experience of recreating in this manner in the remote environment offered only in Johnson Valley.

To allow a taking of this valuable land without conforming to the requirements of NEPA and based on a flawed EIS would undercut the very principles of freedom that Marines fight to protect in the first place.

Comment ID: 2304 (Page 5 of 5)

Response to Comment 2304 (Page 5 of 5):

**7. Conclusion**

The Draft EIS is incomplete under NEPA and inaccurate as written. In order to properly evaluate the full costs and impacts of the proposed 29 Palms expansion, supplemental analysis and/or a supplemental draft EIS and corrections to the existing Draft EIS are required. I object to any expansion of the base into the OHV areas of Johnson Valley and request that a supplemental Draft EIS report be completed with opportunity for further public comments for the reasons stated herein.

Sincerely,

John P. Cleveland

Re: Proposed Expansion of the Twentynine Palms Marine Base

May 24, 2011

To Whom It May Concern —

First, I would like to commend the MCAGCC and the authors of the thorough and highly-detailed Draft Environmental Impact Statement (DEIS) that they have presented for public review. The report is very comprehensive, and the effort in creating it and candor it represents is very much appreciated.

Having reviewed the document, I would like to register some concerns regarding the proposed expansion plans.

Arguably one of the most significant and immediate effects of training at the Base upon the surrounding area is the explosive vibration propagated throughout the Morongo Basin during live fire exercises. The larger ordnances (presumably artillery) can routinely make the ground shake *twenty to thirty miles away* — far beyond the confines of the Base proper. This is one of the most significant overall impacts on day-to-day living for residents of the region, as many such “hits” are subjectively reminiscent of a modest earthquake, and much more frequent.

The DEIS has attempted to account for these undesired externalities in Table 4.1-2, “Projected Ordnance Noise.”

Notably, though, those estimates utilize *C-Weighted* measurements. Indeed, at relatively close distances to the ordnance (i.e., on-base), the resulting noise is more broad-spectrum; hence, this makes for a perfectly adequate measurement in that case.

*However*, at longer distances (i.e., in the numerous residential areas of the Basin), most of the vibration transmitted is very low frequency (much of it below 20 Hertz). At those frequencies, the “rolloff” utilized in the C-weighting curve dramatically underestimates the intensity of those shocks — by anywhere from approximately 10 to 25 decibels.

This is not your typical residential noise.

Further, because ordnance fire creates *impact* vibration (which is intermittent), rather than typical *ambient* noise, simply averaging the measurements over a 24-hour period (as per CNEL) further underestimates its net effect.

Indeed, these measurement biases are inevitably reflected in Table 4.1-2, as well as the report’s conclusions, which are correspondingly minimizing in this regard.

Given the unique nature of the phenomenon being measured, the numbers as presented are actually quite deceiving; and thus, in this key regard, the DEIS falls short of conveying accurate ramifications to the surrounding population of the expansion of the MCAGCC.

Recommendations:

In order to mitigate the environmental impact, a key and common-sense goal of the expansion might be to shift heavy artillery fire further away from the more-populated western portion of the Morongo Basin, and for as much of the year as possible.

Response to Comment 2305 (Page 1 of 2):

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: 2305 (Page 2 of 2)

Response to Comment 2305 (Page 2 of 2):

This could still be accomplished in the context of expanding the Base, and meeting its expanded operational needs.

For example, a land acquisition such as Alternative 6 might better meet all of these requirements if it incorporated modifications such as these:

- *West-to-East* direction of maneuver, similar to that in Alternative 4. This presumably shifts more of the heavy live fire toward an MEB Objective in the eastern (and less populated) end of the Basin.

- MEB Building Block training within *existing* Combat Center boundaries (also a la Alternative 4), as opposed to in the west study area. This is particularly important in view of the necessity of such training “up to 40 weeks/year” [see Table 2.3].

~~~~~

More than many other concerns addressed in the report, the effects of ordnance noise can arguably be felt (quite literally) far outside the confines of the Base. Thus, the changes proposed in the report could easily have a detrimental impact on the surrounding community, if not planned for carefully.

Given the conscientious tone of the Draft Environmental Impact Statement, and keeping the above considerations in mind, it should be possible to better balance the imperative for expansion of the Base with these externalities, and thus help preserve the quality of life for the majority of residents of the Morongo Basin, now and into the future.

~~~~~

Thank you for the opportunity to comment on the DEIS and the proposed expansion. I hope that this feedback proves of value to the planning process and the final report.

If you need any clarification to any of the foregoing, kindly do not hesitate to contact me.

Respectfully Yours,

R. Diamond

**Comment** please do not close johnson valley, its the last open riding area in so cal. more people will get hurt when you close riding areas because it makes the remaining open ones that much more crowded. and you guys are marines, you won ww2 in the pacific. why do you need this land now? osama is dead. my father was a marine during vietnam and he still rides with us and he's 60!

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation

**Subject: Notice of Availability of the Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study Contiguous to the Marine Corps Air Ground Combat Center, San Bernardino County**

Dear Sir or Madam:

The California State Lands Commission (CSLC) staff has reviewed the subject EIS for 29 Palms Training Land Acquisition/Airspace Establishment Study (Project), which is being prepared by the Department of the Navy (DON) as the lead agency under the National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.). The CSLC has prepared these comments because of its jurisdiction over portions of the Project located on state school lands as well as its trust responsibility for any and all projects that could directly or indirectly affect state owned "sovereign" land and/or school lands, and their resources or uses (pursuant to CEQA Guidelines<sup>1</sup> §§ 15381, 15386, subd. (b)).

The EIS is being prepared to evaluate the potential environmental impacts associated with the proposed establishment of a large-scale training range facility at the Marine Corps Air Ground Combat Center at Twentynine Palms, California (the "Combat Center") to accommodate Marine Expeditionary Brigade (MEB) training. To implement the proposed action, the Marine Corps would acquire additional land adjacent to the Combat Center, establish and modify military Special Use Airspace (SUA) above the proposed MEB-sized training range, and conduct specified MEB training.

**CSLC Jurisdiction**

In 1853, the United States Congress granted to California hundreds of thousands of acres of land for the specific purpose of supporting public schools. In 1984, the State Legislature passed the School Land Bank Act (Act), which established the School Land Bank Fund (SLBF) and appointed the CSLC as its trustee (Pub. Resources Code § 8700 et seq.). The Act directed the CSLC to develop school lands into a permanent

<sup>1</sup> The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Response to Comment 2308 (Page 1 of 3):

Thank you for your comment. The Marine Corps has met with the State of California to discuss CEQA requirements for state actions that could be undertaken following the project decision. State agencies are encouraged to use NEPA documents when such documents comply with CEQA. To the extent practicable, the EIS has incorporated CEQA requirements to allow state agencies to utilize the EIS analysis to support any future project-specific analyses that may be required by CEQA.

and productive resource base for revenue generating purposes. The CSLC manages approximately 469,000 acres of school lands held in fee ownership by the State and the reserved mineral interests on an additional 790,000± acres where the surfaces estates have been sold. Revenue from school lands is deposited in the State Treasury for the benefit of the Teachers' Retirement Fund (Pub. Resources Code § 6217.5).

On January 27, 2009, CSLC staff submitted comments in response to the Notice of Intent to prepare an EIS. In order to determine the State's interest in the Project, CSLC staff requested a more detailed map showing exactly where the proposed Project would be located. Based on information contained on the maps provided to the CSLC by Project representatives, staff has identified more than 8,000 acres of fee-owned school lands within the areas analyzed in the EIS (including all alternatives), and an additional, 15,000± acres of lands with reserved mineral interests. This conclusion is without prejudice to any future assertion of State ownership or public rights, should circumstances change, or should additional information become available. This letter is not intended, nor should it be construed as, a waiver or limitation of any right, title, or interest of the State of California in any lands under its jurisdiction.

Because the Project would involve the use of school lands, the DON would need to purchase the identified school lands from the CSLC at fair-market value. The sale of these lands would require approval by the CSLC at a properly noticed public meeting, and as a discretionary action, would also require the CSLC to comply with the California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.). The CEQA Guidelines provide a mechanism by which an EIS can be used by an approving agency if specified conditions are met (see generally §§ 15220-15225). In early 2009, CSLC staff and Project representatives discussed the CSLC's obligations under CEQA. As part of these discussions, Project representatives indicated that the EIS would meet CEQA requirements. CSLC staff has reviewed the EIS for compliance with the conditions set forth in CEQA and the CEQA Guidelines and offers the following comments.

Circulation of Documents:

Pursuant to section 15225 of the CEQA Guidelines, the CSLC may only use the EIS in place of an Environmental Impact Report if the federal lead agency circulated the EIS in accordance with CEQA and gave notice of the document's availability as specified in section 15087 of the CEQA Guidelines. Because the CSLC is a state agency, when it acts as a lead agency under CEQA, it is required to circulate environmental documents through the State Clearinghouse at the Governor's Office of Planning and Research. For the Project EIS, CSLC staff has been unable to verify that the DON gave such notice; therefore, prior to the DON's approval of the Project and before the CSLC can use the EIS to consider approval of the sale of school lands for the Project, the EIS will need to be noticed and circulated in accordance with CEQA requirements. Please contact the CSLC staff identified below for further assistance in meeting this requirement.

**Comment** Naval Facilities Engineering Command, Southwest ATTN: 29Palms EIS Project Manager 1220 Pacific Highway San Diego, CA 92132-5190 Re: Draft Environmental Impact Statement on 29Palms Base expansion Dear Sir: The DEIS states: Potential impacts from six action alternatives and the No- Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed. 3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative. The Table on Page 29 states under Alternative 1, Cultural Resources: Less than Significant Impacts (LSI): Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction. Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources. No Impacts (NI): No impact anticipated from airspace establishment. Similar judgements are made in this Table and elsewhere for the other Alternatives. However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents. It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include: Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries Devaluation of surrounding private property. Increased costs to federal, state and local jurisdictions for increased law enforcement. All would occur outside the acquisition study boundaries. Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act.

The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. In addition, the EIS acknowledges potential impacts to property values due to increased noise and proximity to military operating areas (see Section 4.3 of the EIS). The EIS concludes that any reduction in property value would likely be marginal and less than significant.

Mr. Chris Proudfoot  
Proposed 29Palms Training Land/Airspace Establishment Project  
MAGTFTC, MCAGCC  
Bldg. 1554, Box 788104  
Twentynine Palms, CA 92278-8104

Re: Comments to Proposed Twentynine Palms Land Acquisition/Airspace  
Establishment Project Draft EIS

Dear Mr. Proudfoot:

On behalf of TETRA Technologies, Inc. ("Tetra"), we are submitting this letter to comment on the Draft Environmental Impact Statement ("EIS") for the proposed land acquisition to expand the Marine Corps facility. As you know, Tetra is a company that specializes in certain chemical production and oil and gas services. Tetra owns and operates two calcium chloride/sodium chloride production facilities that are located in the eastern study area of the proposed land acquisition, considered in Alternative 3 of the EIS, where it produces calcium chloride and sodium chloride by solar evaporation of naturally occurring brines beneath the operations. These two operations, the "Amboy Operation" and the "Lee Operation," are generally located to the east of the existing Twentynine Palms Marine Corps Base, in southeastern San Bernardino County, primarily in T5N R12E, T4N R12E, T3N R15E, and T2N R15E, San Bernardino Meridian.

As we stated in our letter to Mr. Joseph Ross, dated January 29, 2009, we believe that our operations will be significantly impaired or potentially terminated if the eastern study area is selected for inclusion in the land acquisition. As such, we appreciate the Department of the Navy taking our concerns into consideration and agree with the Department's determination that Alternative 6, encompassing the western and southern study areas, is the preferred alternative and best way to achieve the three fundamental components of the proposed project.

I. Acquisition of Land and Operational Feasibility.

The Draft EIS discusses threshold requirements for an alternative to be considered feasible. Action alternatives must be capable of providing land and associated airspace necessary to meet the minimum criteria. In addition, the alternatives were considered based on objective requirements for evaluating the desirability of an alternative. The stated objective requirements included the following: (i) Independent, offensive maneuver of three battalion task forces abreast and associated air combat element operations, with the three battalion task forces converging on a single MEB objective; (ii) 48-72 hours of continuous offensive operations by the three battalion task forces as they converge on a single MEB objective; and (iii) Integrated air and ground maneuver live-fire with optimized freedom of action to the greatest extent practicable considering operational range capabilities and munitions safety requirements. (DEIS at 2-83-84)

Alternative 3, comprising the east study area, although allowing for three battalion task forces to converge on a single MEB objective, has terrain features that limit the ability to fire and maneuver in the study area. Specifically, dry lake beds and Amboy Road would impose limitations that would not occur in the western study area. The two battalion task forces would be funneled between the dry lake bed and the Sheephole Wilderness area. In addition to this restriction on operations, these battalion task forces would have to administratively cross Amboy Road at hardened crossings, which does not provide the best operational simulation of terrain conditions. Further, live-fire would have to be restricted in the east study area in order to safeguard civilian traffic on Amboy Road. (DEIS at 2-84)

The Preferred Alternative, as well as other study alternatives utilizing the west study area, however, are more desirable from an operational standpoint. Alternative 1, meets all of the optimal requirements and would not impose any training restrictions. The Preferred Alternative mitigates some of the environmental impacts of Alternative 1, and still provides a more desirable training area from an operational standpoint. The Preferred Alternative also allows for all three battalion task forces to converge on a single MEB objective. It does not have terrain restrictions such as dry lake beds or Amboy Road. Live-fire is also not restricted in order to protect civilian safety. The one training restriction Alternative 6 imposes—the limited use of dud-producing ordnance due to the restricted public access designation of a portion of the west study area—still meets the optimal requirements for MEB training. (*Id.*) As such, we agree that the Preferred Alternative is the best way to accomplish the Marine Corps training objectives as it not only takes the public into consideration, but also allows for a more optimal training scenario from an operational standpoint.

NEPA-1

Response to Comment 2311 (Page 2 of 6):

NEPA-1:

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: 2311 (Page 3 of 6)

Mr. Chris Proudfoot  
May 26, 2011  
Page 3

II. Impact on Transportation and Safety.

The east study area is the only area which considers the closure of a major road. Amboy Road is the principal route between Twentynine Palms, California and the Interstate 40 corridor to the north of the Combat Center. (Draft EIS at 2-85) Implementation of Alternative 3 would involve the closure of Amboy Road for two days out of the year. While signs could be put in place to advise the public of the closure of Amboy Road in advance, the complete road closure would be significant, as the general public could not access a route to Interstate 40 for more than 30 miles beyond Amboy Road. (Draft EIS at 4.6-6) In addition, tanks would cross Amboy Road as part of the training exercise. This would involve the installation of four concrete tank crossings over North Amboy Road which would be required to minimize the impacts to the roadway from the military vehicles. (Draft EIS at 4.4-14)

The Preferred Alternative would not restrict public access to any paved roads or traffic thoroughfares. (Draft EIS at 4.6-8) As the Preferred Alternative would not involve use of public roads, potential transportation impacts would primarily occur due to trespasser interference. (See Draft EIS at 4.4-7) Because these impacts can be mitigated, the potential impacts to safety based on transportation are greatly reduced as compared to Alternative 3.

In addition to impacts on Amboy Road and vehicular transportation, the east study area also contains railroad line crossings, increasing the risk of injuries or impacts related to ground transportation in the east study area. Railroad line crossings have the potential to occur during ground training activities, and these crossings may disrupt rail traffic or result in accidents between military vehicles and train cars. There is also the potential that ordnance may strike rail cars in transit during training activities. The Combat Center does not currently have a protocol to deal with these types of impacts, and would have to develop some standards if the east study area were acquired for the expansion of the Center. (Draft EIS at 4.4-14) Railroad lines are not present in the west study area, eliminating these potential transportation and safety related impacts from the Preferred Alternative.

III. Impact on Socioeconomics.

As we stated in our January 29, 2009 letter, Tetra's operations are an important part of the local economy. Tetra directly employs 22 people at its operations within the eastern study area, paying a total of \$775,000 in salary each year. Tetra also spends \$2,100,000 per year to ship and transfer its products, and spends \$3,800,000 per year in California to produce its products. Alternative 3 could require the closure of Tetra's operations, as well as the operations of other mines and agricultural lands in the area. (Draft EIS at 4.1-11)

TRN-1

SOC-1

Response to Comment 2311 (Page 3 of 6):

TRN-1:

Thank you for your comment. As discussed in Section 4.6.4, transportation impacts under Alternative 3 would be significant, even with implementation of the potential mitigation measure listed. The EIS identified no significant impacts to transportation under all other action alternatives.

SOC-1:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, access to mining and other land holding will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information). Loss of future mining potential as it relates to implementation of Alternative 3, is addressed in Section 4.3.4.1 of the EIS.

Comment ID: 2311 (Page 4 of 6)

Mr. Chris Proudfoot  
May 26, 2011  
Page 4

The closure of mining operations in the east study area would be significant and inconsistent with the California Desert Conservation Area ("CDCA") Plan's multiple use objectives, which include provisions for mining access and approved permits allowing for the operation of Tetra's and National Chloride's mines in the east study area. Further, the BLM has assigned a Known Sodium Leasing Area (43 Code of Federal Regulations 2400) land classification to lands in the vicinity of the mines, indicating its intent to retain access to mineral resources without interference from other users. (Draft EIS at 4.1-11)

SOC-1

As such, adoption of Alternative 3 would create economic impacts due to the loss of mining production and the associated income that is the result of the production, transportation, and use of the sodium chloride product. Relocating these mines may be costly and potentially infeasible. Furthermore, preclusion of access to these mineral resources would result in adverse impacts on mining in the future. (Draft EIS at 4.1-12) In addition to the economic impacts, acquisition of the east study area would conflict with BLM policy, which recognizes the need to continue mining in the area without interference. Alternative 6 would avoid all of these impacts, as no active mines are present. (Draft EIS at 4.1-17)

Alternative 3 also creates fewer Combat Center jobs than the other considered alternatives. Due to the configuration of the land and training capabilities, Alternative 3 would create approximately 59 new jobs at the Combat Center. Alternative 3 would result in the loss of approximately 135 jobs as a result of displaced businesses. As such, Alternative 3 would result in a net loss in regional sales, income and employment. (Draft EIS at 4.3-17-18) Although this was found to be less than significant, the Preferred Alternative offers a combined increase in income due to the creation of additional Combat Center jobs. Specifically, the Preferred Alternative would create approximately 110 jobs and would realize a beneficial combined impact from a net gain in regional sales, income and employment. This personnel increase would offset any impacts due to the loss of recreational or film industry spending. Further, the area has the capacity to support any additional demand for housing or services. (Draft EIS at 4.3-27)

SOC-2

Alternative 3 has the potential to result in the loss of 135 jobs, while only creating 59 Combat Center jobs. Further, Alternative 3 could result in the loss of mining operations and associated revenues and property taxes. The impacts of Alternative 6 primarily concern recreation and film industry impacts. While the loss of a portion of the Johnson Valley OHV Area would result in some detrimental impacts on those industries, the Combat Center would realize an increase in 135 jobs. This increase in personnel and their families would increase spending in the area and overall, the impacts would be beneficial. Further, existing businesses in the east study area would

T226-001 -- 07/20/11

Response to Comment 2311 (Page 4 of 6):

SOC-2:

Comment noted.

Comment ID: 2311 (Page 5 of 6)

Mr. Chris Proudfoot  
May 26, 2011  
Page 5

be retained, further preserving revenue in the area. Because Alternative 6 would realize a net socioeconomic benefit, we concur in the determination that it is the Preferred Alternative.

SOC-2

IV. Impact on Air Quality.

Impacts to air quality can occur due to both construction activities as well as operations. Generally, all of the proposed alternatives would have similar air quality impacts, although Alternative 3 produces additional significant impacts to National Ambient Air Quality Standards (“NAAQS”). Because of these additional impacts, the Preferred Alternative and acquisition of the west study area is preferable to Alternative 3 from an Air Quality standpoint.

AQ-1

Construction activities under all alternatives would produce similar impacts. Operationally, however, Alternative 3 would generate more combusive and fugitive dust emissions from tactical vehicles and tactical support equipment due to vehicles needing to travel greater distances based on the location of the proposed assembly areas. (Draft EIS at 4.8-10) Implementation of Alternative 3 would result in greater PM<sub>10</sub> emissions, exceeding the NAAQS standard. Alternative 3 is the only alternative that would result in significant air quality impacts. Accordingly, we agree that Alternative 6 is preferable as both an operational alternative, and an environmental alternative.

V. Impact on Recreation.

There have been arguments that acquisition of the east study area should be the preferred alternative due to impacts on recreation should the Johnson Valley OHV Area be acquired, and there is concern that the Preferred Alternative would result in greater socioeconomic impacts due to the impact on OHV use and loss of income from businesses supporting OHV use and recreation. We agree with the findings in the Draft EIS that Alternative 6 mitigates these concerns by retaining public access to a large portion of the Johnson Valley OHV Area, namely, 82,802 usable acres, or approximately 44 percent of the Johnson Valley OHV Area, would be available for public recreation 10 months per year. (Draft EIS at 4.1-16)

REC-1

The Preferred Alternative maintains the Cougar Buttes, Anderson Dry Lake, and Soggy Dry Lack OHV staging and camping areas, as well as several popular OHV trails including Bullfrog, Cakewalk, Chicken Rock, and Hammerdown Trails for public use year round, and keeps the area available for other public activities such as hiking, picnicking, photography, geocaching, and wildlife and wildflower viewing. The restricted public access area also permits OHV use on 38,137 acres for ten months out of the year, and includes a major staging area, Means Dry Lake, as well as several

Mr. Chris Proudfoot  
May 26, 2011  
Page 6

popular trails, including the "Hammer" trails. (Draft EIS at 4.2-19)

Thus, although Alternative 6, the Preferred Alternative, will result in the loss of a portion of the Johnson Valley OHV Area, some of the most popular and unique trails and staging and camping areas are preserved either year round or within the restricted public access area. By preserving these areas, as well as maintaining public and private land used for mining and agriculture within the east study area, the Marine Corps is able to obtain an operationally feasible expansion area, preserve recreational opportunities, and reduce socioeconomic impacts due to loss of mining and recreational lands.

We agree with the Department of Navy's determination that Alternative 6 is the Preferred Alternative for the reasons stated above and appreciate the Department's consideration of our concerns expressed in our letter dated January 29, 2009. Please contact me should you have any questions or comments.

Very truly yours,

**Last Name** Name Withheld by Request

**First Name**

**Comment** Please do not take the Johnson Valley OHV area. The OHV areas around the greater Los Angeles area have a hard enough time supporting the many outdoor enthusiasts in this area. Thank you.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Re: 29Palms Base expansion Draft Environmental Impact Statement

Dear Sir:

The Homestead Valley Community Council (HVCC) is an organization made up of representatives from the community associations in Landers, Johnson Valley, Yucca Mesa and Flamingo Heights. These unincorporated communities are located along Hwy 247 in an area mapped in the San Bernardino County General Plan as the Homestead Valley.

The HVCC brings issues we have in common to local, county, state and federal officials. We undertake projects of benefit to citizens of the communities, and to the Marine Corps.

Our monthly meetings are regularly attended by representatives of the Fire Department, County Code Enforcement, and the Third Supervisorial District, as well as residents who bring us issues that need to be reported to any of these officials. The HVCC made a comment opposing the 29Palms Base expansion during the public scoping period.

See [www.hvccsite.org](http://www.hvccsite.org) for more information about the Council and the historic communities.

We know a lot of time and effort has been put into the DEIS, but we are highly disturbed by deficiencies in the document relating to studies of the effects of the proposed expansion of the 29Palms Base and the increase in training activities, and the lack of any mention of the Homestead Valley communities and their historic roots.

The DEIS states that potential impacts from six action alternatives and the No-Action Alternative have been analyzed, including the impacts on cultural resources.

The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer ...would be amended to include any lands acquired as a consequence of the proposed action alternative.

On Page 29 there is a Table showing Alternative 1, Cultural Resources, which states that less than significant impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.

CR-1

Response to Comment 2314 (Page 1 of 6):

CR-1, CR-2

Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

NOI-1

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

SOC – 1

The EIS acknowledges potential impacts to property values due to increased noise and proximity to military operating areas (see Section 4.3 of the EIS). The EIS concludes that any reduction in property value would likely be marginal and less than significant.

Comment ID: 2314 (Page 2 of 6)

It also states that Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources, and that there are no impacts anticipated from airspace establishment.

Similar judgements are made in this Table and further on in the document for the other Alternatives.

However, this analysis is stated to be made WITHIN the areas being studied for acquisition, where there are few if any residents.

This contradicts the public scoping issues (4.3.1.3) listed on page 532, which include:  
-Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries

-Devaluation of surrounding private property.  
-Increased costs to federal, state and local jurisdictions for increased law enforcement.

All of these impacts would occur OUTSIDE the proposed expansion areas, and have major consequences to the Homestead Valley communities.

This contradiction in the DEIS must be corrected. The Homestead Valley communities are close neighbors to the Base and to the westward expansion area, and therefore must be included by name in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

These communities were founded under the Small Homestead Act of 1939, an Act of Congress in which the Federal Government, to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. This plan to stimulate recreational use and settlement of the vast desert lands directly led to the settlement of the Homestead Valley.

The National Historic Preservation Act, Section 106, establishes historic eligibility under various criteria including: Association with Historic Events. The Homestead Valley fulfills that criterion.

Because of the history of the four homestead communities, linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

"The stories of these intrepid homesteaders, their isolated cabins, their adjustments to the wild land and its wildlife, are preserved today in old newspapers, journals and tall and short tales.

"Wild as the life was, they still determined that a few 20th century amenities were necessary. These four communities grew,

and raised the funds, broke the grounds and established their community centers. They worked with the county to install road signs; they brought in water, electric, telephone and postal service.

"Today they work together under the banner of the HVCC to insure that county, state and federal officials are aware of their rural needs in the sprawling clamor of 21st century California  
-from the HVCC Brochure, "4 high desert settlements on a historic trail..."

The westward expansion area includes Means Dry Lake, site of the historic Means Well. This well was dug by workers from the Heart Bar Ranch which was active from the early 1900's till after World War II. Heart Bar grazed cattle herds all along Old Woman Springs Rd, a route now followed by Hwy 247. They also dug Ames Well and others now inside the Base boundaries.

CR-1

CR-2

Response to Comment 2314 (Page 2 of 6):

NEPA – 1

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

NEPA – 2

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance. Section 4.3 of the EIS explains that the Marine Corps considered potential socioeconomic mitigation measures but determined that none were feasible and that each alternative would result in less than significant unmitigable impacts.

CR-3

Comment noted.

Comment ID: 2314 (Page 3 of 6)

Their history is part of the history of the Homestead Valley, and all relics of it should be recognized in the DEIS.

-These historic homestead communities have existed as long as the Base has existed. However, noise and shock effects have increased in recent times. The DEIS says training exercises under each Alternative are planned to increase both in intensity and duration. The DEIS must be changed to state that the escalation of noise and vibration is recognized outside the study area. It must be reported as having significant socio-economic and environmental justice impacts on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will feel the effects of hours of live fire air-ground combat. The DEIS must recognize that even the announcement of the proposed expansion has impacted property sales, and if approved will adversely impact property values.

-Rural inconveniences are outweighed by open spaces and rural quiet to those who choose to live in these historic places. The DEIS must state that expansion will make properties in the Homestead Valley less desirable, causing financial hardship, and possible desolation.

The DEIS must be changed to address all impacts on the Homestead Valley as historic cultural resources, survivals of pioneer days in California.

Under all Alternatives the document must state there will be significant impacts to these communities, and that the DEIS overlooked this. The preparers of the document were made aware during the scoping period that a large percentage of the property owners within the Homestead Valley use and love the Johnson Valley OHV area, not just as riders or racers, but as users of OHVs to get where they want to go to camp, rockhound, trail ride or simply experience the open desert.

The DEIS does not make it plain to the average reader the inadequacy of mitigation lands to replace OHV recreational areas removed from public access. There are not enough public lands in the California Desert Conservation Area to mitigate the proposed Base expansion. There certainly are no lands available in the vicinity of the Johnson Valley OHV area, contiguous to or accessible from the existing area.

Therefore there is no mitigation for the economic losses to the Homestead Valley (see below). There are no potential mitigation measures stated for Socio-economics, Cultural Resources and Environmental Justice in the Homestead Valley.

Therefore, because there is no discussion of how the issue of mitigation lands can be addressed, the document cannot meet NEPA requirements.

On Page 33, Table ES-3 states: Mitigation measures will be developed in consultation with SHPO, the Tribes and interested parties. In addition, the ICRMP would be modified and developed in consultation with SHPO and the Native American Tribes that have an interest in lands under the jurisdiction of the Marine Corps.

(To the reader feeling battered by an assault of initials, the fine print below the Table explains: SHPO=State Historic Preservation Officer ICRMP=Integrated Cultural Resource Plan) However, as the DEIS area does NOT include the Homestead Valley communities per se, it is not clear what mitigation measures, if any, will be considered for them. Stating mitigation measures will be developed in the future leaves no basis for judgement as to whether any mitigation measures are possible at all.

CR-2

NOI-1

SOC-1

NEPA-1

NEPA-2

CR-3

Response to Comment 2314 (Page 3 of 6):

**SOC-2**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Regional economic impact analysis includes analysis of county-wide impacts, to include Flamingo Heights.

**SOC-3**

The EIS evaluates socioeconomic impacts (see Section 4.3). As noted in the EIS, there is expected to be lost tax revenue related to reduced recreational and film industry spending. Section 4.3 clearly identifies the expected decline in county and local sales tax revenue, for each action alternative.

**SOC-4**

The EIS evaluates socioeconomic impacts under each action alternative. As noted in the EIS, Alternative 3 would be expected to lead to potential net job losses while Alternatives 1,2,4,5 and 6 would be expected to lead to potential net job increases. Estimates of changes in Net jobs are calculated on a county-wide basis.

**NEPA-3**

Comment noted.

**SOC-5**

Comment noted. The Marine Corps has not made a decision on what two months of the year that the RPAA would be closed to public use.

Comment ID: 2314 (Page 4 of 6)

Therefore, the DEIS must be changed to clarify and enumerate any mitigation measures, or state in words of one syllable, if you live next to us, you will be hurt.

CR-3

Minimization continues throughout the Socio-economic section of the document. The DEIS estimates revenue lost due to reduction in OHV visits in the Lucerne Valley area, an historic agricultural settlement that is a close neighbor of the Homestead Valley; it also mentions the Town of Yucca Valley. They are described as "the nearest communities with any appreciable retail and traveler services presence (though limited) that can support the purchasing needs of people visiting Johnson Valley." It is true that both have markets, fuel, restaurants and other services within a half-hour drive of the OHV area. But the DEIS is completely dismissing the presence of the commercial zone on Hwy 247 in Flamingo Heights that also enjoys a huge increase in business on the big weekends, and are even closer to the OHV area. These merchants and restaurants are very important to residents in the Homestead Valley. However, there is not enough local population to keep them in business. They rely heavily on travelers on Hwy 247.

SOC-2

What the DEIS does not report is that most grocery stores operate on a profit of 3 to 5 percent. Loss of 7 plus percent, as is stated for the Lucerne Valley Market and Hardware, almost guarantees closure of the business. The smaller businesses in the Homestead Valley also would be severely impacted. The document must be corrected to give the true picture of what the base expansion will do to these neighbors.

Johnson Valley, Landers, Flamingo Heights and Yucca Mesa are already significantly impacted by noise, vibration, air pollution and/or light pollution all around and above their heads. The proposed expansion of training exercises and Combat Center area will increase these very significant impacts. There is a large percentage of residents who are too old, and in financial circumstances too restricted, to move away from the stress of noise and vibration. They face the possibility of an extra burden of traveling further for food and fuel if the businesses along Hwy 247 fail due to loss of revenues from decreasing numbers of new residents and visitors.

-The DEIS compares loss of property tax from acquired lands to total county dollars received from taxes, rather than make the comparison with other rural desert communities' tax dollars. Therefore the reader is completely misled as to the true magnitude of the loss. Not only should the comparison be between rural desert communities, the preparers do not address what those lost dollars have been supporting, and how that loss will impact these communities (i.e. waste management, library, park, county services, etc.) The seemingly small number of tax dollars may just mean the difference between a facility remaining open or closed, or services being provided or not. The county of San Bernardino is already undergoing severe budget cuts, due to economic conditions that did not exist when these expansion plans were initiated. Therefore the DEIS fails to accurately portray and evaluate impacts, and must be corrected to reflect real-time conditions, which are not forecast to change very soon.

SOC-3

-The DEIS estimates creation of 90 new jobs, of which about 77 will be on base and 13 off base. The DEIS states lost merchant jobs and dollars from reduced recreational opportunities are not significant and will likely be made up by the new jobs created and more Marines moving in and out of 29 Palms.

As most of the new jobs, if not all, are likely to be located in the city of 29 Palms (the base headquarters) the preparers of this DEIS have cruelly marginalized the impact of lost dollars on more distant communities in the Homestead Valley and beyond. The death or near death of small but historic desert communities near the Johnson Valley OHV Area has not been given due consideration. The redistribution of jobs and incomes from one part of the desert to another part of the desert has not been adequately portrayed or addressed. Neither has the redistribution of sales tax revenue.

SOC-4

Response to Comment 2314 (Page 4 of 6):

GEN-1

Comment noted.

GEN-2

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Comment ID: 2314 (Page 5 of 6)

Response to Comment 2314 (Page 5 of 6):

Also the Force Structure Review of 2010 includes in its significant force structure changes a 13% reduction in civilian employees. Where this reduction will occur, and how many employees at MCAGCC will be affected is not clear. The document must address this reduction and spell out the difference it makes between the Draft estimates and the Final estimates of new jobs.

SOC-4

At any rate, the DEIS fails to give a true picture of the very significant impacts on the job market in the Homestead Valley, and it must be corrected.

The DEIS does say that under the Marines' preferred Alternative 6, access to and use of approximately 56% of the Johnson Valley OHV Area would be lost, representing a significant impact. It does acknowledge that the resource is unique to the region, given its combination of vast open space, large variety of desert views and scenic vistas, and unique geologic formations. It does not emphasize the region is considered unique to the entire country, and draws visitors from all over the world. 44% of the Johnson Valley OHV Area would be available for public recreation for an unspecified and possibly variable 10 months per year (for the portion acquired as Restricted Public Access area), or all of the year (for the area not acquired, which is the farthest west). It does acknowledge that the displacement of recreational users to the remaining portion of the Johnson Valley OHV Area would result in significant impacts to recreational resources in the west study area.

This brings us to the impact on the community next to the westward expansion area, less than five miles outside the study area.

NEPA-3

The unincorporated community of Johnson Valley lies directly south of what became the Johnson Valley OHV Area over 30 years ago. The Johnson Valley Improvement Association (JVIA) was founded 53 years ago for the benefit of the early homesteaders.

JVIA volunteers built, maintain and operate the Johnson Valley Community Center, which is the hub of social and educational activities in this isolated and widely scattered settlement. It also served as an emergency center after the 1992 earthquake. Three meals a day for over two weeks were served to all comers, and those who needed shelter found it there.

The DEIS does not specifically address impacts on the Johnson Valley community, although researchers for the document and other Marine representatives repeatedly visited during the scoping period. Several focus group meetings were held in the Johnson Valley Community Center building, overlooking the valley the Marines wish to close to public access. When the expansion plans were originally formed, the planners may not have known that citizens lived in Johnson Valley. But USMC representatives did come and meet them. They listened closely to the citizens' comments, and took copious notes. But as was feared, the overwhelming impact of the proposed actions on Johnson Valley is not reflected in the DEIS. To a reader in another part of the US who may know nothing about the California high desert and its history, the impacts are rated as less than significant, and therefore the document is misleading and must be corrected.

The HVCC strongly supports JVIA (a member association) in its efforts to make the Marines understand what this Base expansion would do. Of major concern, the Johnson Valley Community Center is largely supported in all its activities by the breakfast it serves each Saturday (cooked and served by volunteers) to the "weekenders" who own property in Johnson Valley, and the OHV visitors from across the highway.

SOC-5

Page 557, Table 4.3-13 shows the estimated loss of 24.6% in direct expenditures in the area if the preferred Alternative 6 is chosen. This will be even greater for the Community Center during the two or

Comment ID: 2314 (Page 6 of 6)

Response to Comment 2314 (Page 6 of 6):

more months the public would not be allowed access during training exercises. Those two months will be during Spring and Fall, avoiding the extremes of heat and cold the desert climate is noted for. These are also the months of largest attendance at the Saturday Breakfast. It is not unusual to serve 120+ guests on long weekends when the weather is good. It is not unusual to see that number dwindle to 40 in the high summertime.

SOC-5

Therefore the denial of public access to the remnant "shared use" area will inevitably reduce the numbers of guests at the Saturday Breakfast, as well as the number of potential property owners attracted to Johnson Valley. The loss of Saturday Breakfast revenues will inevitably jeopardize the future of the JVIA and of the Community Center.

Therefore, the DEIS must be corrected to make it very clear to even the most cursory of readers that the economy, and very existence of Johnson Valley, and indeed the viability of all the historic Homestead Valley communities, are threatened under all Alternatives except #3, due to the closure or partial denial of public access to the Johnson Valley OHV area. The noise and other effects of increased and intensified training exercises under Alternative #3 also threaten these communities. It must also state that these impacts were not properly presented in the draft document.

GEN-1

The HVCC also strongly urges an extension of the May 26 public comment period, as there are many citizens who are only now learning about the proposed Base expansion, and need more time to go into this enormous document in detail. There was also confusion as to the correct address to send comments. In order to preserve their good relations with their neighbors, the Marines should grant this extension.

GEN-2

Sincerely,

James Harvey,  
President HVCC

**Appendix N – Response to Public Comments on the Draft EIS**

1220 Pacific Highway  
San Diego, CA 92132-519

**RE: DRAFT ENVIRONMENTAL IMPACT STATEMENT  
LAND ACQUISITION/AIRSPACE EASEMENT ACQUISITION**

Project Manager:

The Town of Yucca Valley recognizes the importance and mission of the 29 Palms Marine Corp Air Ground Combat Center and appreciates the opportunity to comment on the above referenced project.

The Town of Yucca Valley has identified a number of issues and concerns that would result from the implementation of Alternative 6 as identified in the Draft Environmental Impact Statement for the Land Acquisition and Airspace Establishment.

**JOHNSON VALLEY OFF HIGHWAY VEHICLE (OHV) AREA:**  
The Town of Yucca Valley is opposed to the proposed Combat Center expansion into the Johnson Valley OHV Area and finds that the Draft EIS does not adequately address the local economic impacts of any of the alternatives contained within the Draft EIS.

Implementation of the Alternative #6 would permanently remove 108,530 acres from public recreation use from the Johnson Valley OHV Area. An additional 38,137 acres would be removed from public recreation use for approximately 60 days annually. These 38,137 acres would allow public recreation access under the Combat Center's direction the remaining 10 months of the year. Further, the acreage impacted in Alternative #6 affects some of the more popular of the OHV destinations, including the Hammers Trails and the King of the Hammers event, and would likely impact attendance to a greater extent than the model estimates.

The Johnson Valley OHV Area plays a critical role in providing outdoor recreational opportunities for the residents of Yucca Valley and the Morongo Basin. The Johnson Valley OHV Area also serves the southern California region and is crucial recreation infrastructure for outdoor enthusiasts.

SOC-1

Response to Comment 2315 (Page 1 of 4):

SOC-1:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

Comment ID: 2315 (Page 2 of 4)

Response to Comment 2315 (Page 2 of 4):

As identified in the Draft EIS, California had, on average, the highest number of OHV participants in the country, with 4.99 million OHV users accounting for 11.6% of the U.S. Total (3.2-13, 1999-2007). From 1980 to 2000, California OHV registrations increased 108%, with attendance at California's State Vehicular Recreation Areas increased 52% between 1985 and 2000 (3.2-12). But between 1980 and 2000, the number of acres available for OHV use in California deserts has decreased by 48%, from 13.5 million acres to 7 million acres.

The Johnson Valley OHV Area serves an estimated number of visitors ranging from 350,000 (estimate used in EIS analysis) to as many as 800,000 users annually (estimate from OHV sources). The Draft EIS economic impact analysis relied upon a regional economic model prepared by the US Army, referred to as the Economic Impact Forecast System (EIFS). The results generated by the EIFS model are based upon assumptions without detailed data to support those assumptions. While the EIFS model projects a positive economic impact to the region, the model uses multiplier effects that are not valid in the rural, desert community. As such, the EIFS modeling effort does not adequately evaluate or identify economic impacts to Yucca Valley or the Morongo Basin from the loss of a majority of the Johnson Valley OHV Area.

The following summary is taken from the EIS.

*Very limited data are available to help quantify the severity of the impact to Lucerne Valley businesses. There are no known data to identify the relative proportions of Johnson Valley-related recreational and film industry sales that accrue to Lucerne Valley, Yucca Valley, Apple Valley, or any other communities within the local area. Based on their locations relative to the two main routes used to travel to Johnson Valley, it could be assumed that Lucerne Valley and Yucca Valley together benefit from the majority of the "local" spending from Johnson Valley visits. Yucca Valley is a much larger town with more services and vendors, but Lucerne Valley is well situated relative to visitor traffic from areas like Victorville, Barstow, etc. The U.S. Census Bureau's (USCB's) 2007 economic census reports include data for Yucca Valley, Apple Valley, and other major cities/places in the area, but do not include data for Lucerne Valley. As an indication of the relative impact of reduced sales, the estimated \$3.6 million reduction in local spending due to Alternative 1, if displaced exclusively from Yucca Valley sales, would represent only 1.7% of the town's sales (\$207 million) in the relevant retail trade and accommodation/food services (4.3-8).*

*Impacts to communities in the vicinity of the acquisition study areas would be similar to those described for Alternative 1, except that such impacts would be somewhat reduced in scope and scale under Alternative 6. Businesses that rely on tourism and film industry spending would need to plan ahead for reduced revenues during the two one-month periods of each year that no public use would occur and for some reduction in use compared to current levels during other times of the year. This would likely present some new challenges to*

SOC-1

*individual businesses, but tourism-based businesses are often seasonal in nature, and other sources of tourism revenues in the area (travelers to Big Bear or Joshua Tree National Park for example) would not be affected by the action. Since the impact for Alternative 1 was considered to be less than significant, the smaller Alternative 6 impact to individual communities in the area would also be less than significant.*

As identified in the Draft EIS, the local economy will be significantly negatively impacted by the reduction in acreage available in the Johnson Valley OHV Area. If the number of visitors is underestimated (as many believe), those effects are further amplified.

**AIRSPACE MODIFICATIONS, JOHNSON VALLEY MOA:**

EIS Preferred Alternative #6 proposes to establish the Johnson Valley Military Operational Area (MOA), a defined airspace with flight restrictions, in close proximity to Yucca Valley. This MOA would affect local airspace navigation for pilots utilizing the Yucca Valley Airport when the MOA restrictions are in effect. The recommended flight restriction of the Johnson Valley MOA would establish a maximum flight altitude of 1,500' Above Ground Level (AGL) when the MOA is in effect. Precise maps have not been available in order to determine precise locations of the MOA. Due to terrain and typical flight patterns, the restriction to FL 1,500 AGL creates difficulties for the private pilots, at times, in the Morongo Basin. Any proposed amendments to Military Operational Areas related to expansion of the Combat Center should establish a FL of 3,000 AGL in proximity to the Yucca Valley Airport.

**AIRCRAFT RELATED NOISE**

As identified in the Draft EIS, As described in Section 4.9.7, Noise, the 65 dB CNEL noise contour for airfield-related activities and the 65 dB CNELmr contour for airspace-related activities in current and proposed airspace, would be fully contained within the proposed boundaries of the Combat Center under Alternative 6. Therefore, no individuals outside the installation would be exposed to CNEL or CNELmr greater than or equal to 65 dB from airfield-related or airspace-related noise. However, because the public would be afforded restricted public access within the proposed RPAA, some visitors to the RPAA would potentially be exposed to high single-event noise levels emitted by low flying aircraft. Such over flights would not occur consistently over any one location and would be unlikely to affect the same individuals with sufficient intensity or frequency to represent anything more than a periodic annoyance. Aircraft-related noise associated with implementation of Alternative 6 would have less than significant impacts to public health.

The creation of the Johnson Valley MOA expands flight training airspace to the Yucca Valley area. As such, the potential for exposure of sensitive noise receptors to unacceptable noise levels is very likely with the creation of the Johnson Valley MOA. While planned flight training activities as identified in the

Response to Comment 2315 (Page 3 of 4):

**SOC-2:**

The EIS acknowledges incomplete or unavailable information with respect to visitor usage of the Johnson Valley OHV area, therefore, in accordance with CEQ regulations the Marine Corps conducted interviews with BLM and other key organizations and stakeholders to obtain reliable data and assumptions on annual visitor-days of use. The Marine Corps worked closely with BLM to develop reasonable assumptions for estimated loss of visitor-days of use from Johnson Valley as described under each action alternative. These assumptions were approved by BLM staff knowledgeable about and responsible for recreation management of the Johnson Valley OHV Area.

**AIR-1:**

Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Comment ID: 2315 (Page 4 of 4)

Draft EIS illustrate that acceptable noise levels will not be exceeded, the DRAFT EIS does not take into account unanticipated flight pattern deviations that may be necessary or unavoidable during flight training exercises. The Town of Yucca Valley is concerned that the potential for flight pattern deviations from those training patterns identified in the Draft EIS, as well as future modification and expansion of flight training maneuvers, will expose sensitive noise receptors to unacceptable noise levels.

NOI-1

**SUMMARY:**

The Town of Yucca Valley recognizes the importance and mission of the 29 Palms Marine Corp Air Ground Combat Center, its importance to the community and to the Morongo Basin, and appreciates the opportunity to comment on the above referenced project.

GEN-1

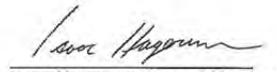

As currently drafted, the Town of Yucca Valley finds that the Draft EIS does not adequately address the economic impacts to the Town, the Morongo Basin, and to the region caused by the significant reduction in acreage and usability of the Johnson Valley OHV Area; negatively impacts private aviation flight patterns within the Morongo Basin; and creates the potential for unacceptable noise impacts to sensitive receptors.

Sincerely,

  
George Huntington, Mayor

Response to Comment 2315 (Page 4 of 4):

**NOI-1:**

It is standard procedure for pilots to avoid flights over towns and other noise sensitive areas that are briefed to pilots and noted in their local flight procedures. Flights over such areas should not occur unless a pilot is required to do so due to an emergency or other such precautionary condition. Please contact the Marine Corps Air Ground Combat Center at Twentynine Palms if you observe any aircraft flights over Yucca Valley that you consider to be a deviation from what is presented in the EIS.

**GEN-1:**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

| <b>Comment ID</b>            | 2316                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Last Name</b>             | MUNSON                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>First Name</b>            | BETTY                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Comment</b>               | <p>5.3.2.9 Senate Bill (SB) 2921: California Desert Protection Act of 2010 Number 1) this bill never got out of committee. Vigorous opposition was expressed to Senator Feinstein both before and after its introduction, by Homestead Valley residents and other neighbors of the Base. The "protection" of the desert by further closures of public lands far outweighed any "protection" of recreation promised by this bill. Five areas designated decades ago as off-highway recreation areas were given "permanent" designation. The largest "equal in space to all the others combined" was Johnson Valley, and only the areas the Marines did not want were to be designated as "permanent." Number 2) a similar bill (S 138) was introduced in 2011. Off-road recreation has the least emphasis and is included to convince off-road enthusiasts that the bill should be supported. It is NOT supported, as Johnson Valley is the premier open recreation area in the country, and westward expansion of the Marine Base will leave only remnants for public access. All mentions of this bill in the DEIS must be deleted, as they are misleading as to the effects of the Marine base expansion westward, on recreation, on Johnson Valley, on the surrounding communities who suffer loss of revenue with loss of OHV visitors, and on other recreational areas in the state which will have increased safety problems brought on by overcrowding. Thank you, Betty Munson</p> |
| <b>Date Comment Received</b> | 5/26/2011                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Response</b>              | <p>Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The discussion of SB 2921 and the California Desert Protection Act of 2010 was discussed in the context of cumulative projects and is not presented as mitigation to the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.</p>                                                                                                                                                                                                                                                                                                                                                                                                   |

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Dear Sirs, My son wrote you earlier in regards to my property. I realize the deadline is today and I am very much concerned with the base expansion being so close to my property. I own two homes. The addresses are 1065 Ranch Road., 29 Palms, CA 92777 and 75150 Larkspur Rd., 29 Palms, CA 92277. They are within 200 feet of each other. As my son, Jack Holloway, wrote you earlier, our family has been visiting and occasionally living here for over 50 years My sister Shirley and Larry Johnston currently live just down the street. We believe the current base boundaries are adequate in our area. Currently the base boundaries are approximately 1 to 2 miles north of our homes. The proposed base boundaries are way too close to our homes. They are approximately 300 feet from our homes. The noise will be deafening and the noise modeling does not address the impacts of modern weaponry used so close to our homes. Again, the current boundaries are adequate. To keep the boundaries where they are currently will only be a minor adjustment in your proposal. My wife and I, and my son's family planned on moving to these homes and enjoying our retirement. We do not feel an adequate study as been completed in regards to the impact. I have forwarded my concerns to other family members and collectively we would like the DEIS to address our concerns. Here is what we would like addressed: The Draft Environmental Impact Statement (DEIS) fails to adequately consider and analyze the socioeconomic and environmental justice impacts to the property owners and residents near the proposed southern boundary expansion area. The DEIS must also fully and adequately consider the short-term and long-term impacts to housing in the area immediately adjacent to and in the vicinity of the proposed southern boundary realignment. To correct for this shortcoming, the DEIS must provide additional analysis to address the circumstance explained above and for other similar situations. In addition, several of our properties were homesteaded and we believe this fact should be included in the DEIS and carefully considered. Are these areas protected?

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action. However, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

In accordance with EO 12898 Criteria 1 and 2 for assessing environmental justice impacts, no impacts would occur with respect to environmental justice (please see section 4.3).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day

public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

**RE: Comments on the Draft Programmatic Environmental Impact Statement for Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training at Marine Corps Air Ground Combat Center Twentynine Palms, CA (76 FR 10584)**

To whom it concerns:

These comments are submitted on behalf of the Center for Biological Diversity's 320,000 staff, members and on-line activists throughout the western states, regarding the Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training at Marine Corps Air Ground Combat Center Twentynine Palms, CA (76 FR 10584), issued by the Marine Corps Air Ground Combat Center, Twentynine Palms, CA.

As proposed, the preferred alternative (Alternative 6) would expand military training into 21,304 acres in the southern expansion area, 146,667 acres in the western expansion of which 38,137 acres would be shared intermittently with off-road vehicle enthusiasts and the remaining 108,530 acres would be used exclusively by the Marine Corps for a total expansion area of 167,971 acres. These Mojave desert lands provide habitat for many species including the threatened desert tortoise. The DEIS for the proposed expansion fails to provide adequate identification and analysis of all of the significant impacts of the proposed project on the desert tortoise, bighorn sheep, golden eagles, and other rare plants, animals and vegetation communities including all Unusual Plant Assemblages (UPAs), and other biological resources. The DEIS also fails to adequately address the significant cumulative impacts of the project; fails to present a clear need for the expansion and lacks consideration of a reasonable range of alternatives.

Of particular concern is the DEIS' failure to include adequate information regarding the impacts to resources and the failure to fully examine the impact of the proposed expansion along with proposed plan amendments to the California Desert Conservation Area (CDCA) Plan from other projects that cumulatively will result in military and industrial areas sprawling across the

Response to Comment 2320 (Page 2 of 20):

California Desert within habitat that should be protected to achieve the goals of bioregional plans and endangered species recovery

In the sections that follow, the Center provides detailed comments on the ways in which the DEIS fails to adequately identify and analyze many of the impacts that could result from the proposed expansion, including but not limited to: impacts to biological resources, direct and indirect impacts, and cumulative impacts.

**I. The DEIS Fails to Comply with NEPA.**

NEPA is the “basic charter for protection of the environment.” 40 C.F.R. § 1500.1(a). In NEPA, Congress declared a national policy of “creat[ing] and maintain[ing] conditions under which man and nature can exist in productive harmony.” *Or. Natural Desert Ass’n v. Bureau of Land Mgmt.*, 531 F.3d 1114, 1120 (9th Cir. 2008) (quoting 42 U.S.C. § 4331(a)). NEPA is intended to “ensure that [federal agencies] ... will have detailed information concerning significant environmental impacts” and “guarantee[] that the relevant information will be made available to the larger [public] audience.” *Blue Mountains Biodiversity Project v. Blackwood*, 161 F.3d 1208, 1212 (9th Cir. 1998).

Under NEPA, before a federal agency takes a “major [federal action] significantly affecting the quality’ of the environment,” the agency must prepare an environmental impact statement (EIS). *Kern v. U.S. Bureau of Land Mgmt.*, 284 F.3d 1062, 1067 (9th Cir. 2002) (quoting 43 U.S.C. § 4332(2)(C)). “An EIS is a thorough analysis of the potential environmental impact that ‘provide[s] full and fair discussion of significant environmental impacts and ... inform[s] decisionmakers and the public of the reasonable alternatives which would avoid or minimize adverse impacts or enhance the quality of the human environment.’” *Klamath-Siskiyou Wildlands Ctr. v. Bureau of Land Mgmt.*, 387 F.3d 989, 993 (9th Cir. 2004) (citing 40 C.F.R. § 1502.1). An EIS is NEPA’s “chief tool” and is “designed as an ‘action-forcing device to [e]nsure that the policies and goals defined in the Act are infused into the ongoing programs and actions of the Federal Government.’” *Or. Natural Desert Ass’n*, 531 F.3d at 1121 (quoting 40 C.F.R. § 1502.1).

An EIS must identify and analyze the direct, indirect, and cumulative effects of the proposed action. This requires more than “general statements about possible effects and some risk” or simply conclusory statements regarding the impacts of a project. *Klamath Siskiyou Wildlands Center v. BLM*, 387 F.3d 989, 995 (9th Cir. 2004) (citation omitted); *Oregon Natural Resources Council v. BLM*, 470 F.3d 818, 822-23 (9th Cir. 2006). Conclusory statements alone “do not equip a decisionmaker to make an informed decision about alternative courses of action or a court to review the Secretary’s reasoning.” *NRDC v. Hodel*, 865 F.2d 288, 298 (D.C. Cir. 1988).

NEPA also requires the DEIS to ensure the scientific integrity and accuracy of the information used in its decision-making. 40 CFR § 1502.24. The regulations specify that the agency “must insure that environmental information is available to public officials and citizens before decisions are made and before actions are taken. The information must be of high quality. Accurate scientific analysis, expert agency comments, and public scrutiny are essential.”

Comment ID: 2320 (Page 3 of 20)

Response to Comment 2320 (Page 3 of 20):

40C.F.R. §1500.1(b). Where there is incomplete information that is relevant to the reasonably foreseeable impacts of a project and essential for a reasoned choice among alternatives, the Marines must obtain that information unless the costs of doing so would be exorbitant or the means of obtaining the information are unknown. 40 C.F.R. § 1502.22. Here the costs are reasonable to obtain information needed to complete the analysis and the DEIS must provide additional information—through a supplement or revised EIS. Even in those instances where complete data is unavailable, the EIS also must contain an analysis of the worst-case scenario resulting from the proposed project. *Friends of Endangered Species v. Jantzen*, 760 F.3d 976, 988 (9th Cir. 1985) (NEPA requires a worst case analysis when information relevant to impacts is essential and not known and the costs of obtaining the information are exorbitant or the means of obtaining it are not known) citing *Save our Ecosystems v. Clark*, 747 F.2d 1240, 1243 (9th Cir. 1984); 40 C.F.R. § 1502.22.

***A. Purpose And Need and Project Description are Too Narrowly Construed and Unlawfully Segment the Analysis***

Agencies cannot narrow the purpose and need statement to fit only the proposed project and then shape their findings to approve that project without a “hard look” at the environmental consequences. To do so would allow an agency to circumvent environmental laws by simply “going-through-the-motions.” It is well established that NEPA review cannot be “used to rationalize or justify decisions already made.” 40 C.F.R. § 1502.5; *Metcalf v. Daley*, 214 F.3d 1135, 1141-42 (9th Cir. 2000) (“the comprehensive ‘hard look’ mandated by Congress and required by the statute must be timely, and it must be taken objectively and in good faith, not as an exercise in form over substance, and not as a subterfuge designed to rationalize a decision already made.”) As Ninth Circuit noted an “agency cannot define its objectives in unreasonably narrow terms.” *City of Carmel-by-the-Sea v. U.S. Dept. of Transportation*, 123 F.3d 1142, 1155 (9th Cir. 1997); *Muckleshoot Indian Tribe v. U.S. Forest Service*, 177 F. 3d 900, 812 (9th Cir. 1999). The statement of purpose and alternatives are closely linked since “the stated goal of a project necessarily dictates the range of ‘reasonable’ alternatives.” *City of Carmel*, 123 F.3d at 1155. The Ninth Circuit recently reaffirmed this point in *National Parks Conservation Assn v. BLM*, 586 F.3d 735, 746-48 (9th Cir. 2009) (holding that “[a]s a result of [an] unreasonably narrow purpose and need statement, the BLM necessarily considered an unreasonably narrow range of alternatives” in violation of NEPA).

The purpose behind the requirement that the purpose and need statement not be unreasonably narrow, and NEPA in general is, in large part, to “guarantee[ ] that the relevant information will be made available to the larger audience that may also play a role in both the decision-making process and the implementation of that decision.” *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 349 (1989). The agency cannot camouflage its analysis or avoid robust public input, because “the very purpose of a draft and the ensuing comment period is to elicit suggestions and criticisms to enhance the proposed project.” *City of Carmel-by-the-Sea*, 123 F.3d at 1156. The agency cannot circumvent relevant public input by narrowing the purpose and need so that no alternatives can be meaningfully explored or by failing to review a reasonable range of alternatives.

Comment ID: 2320 (Page 4 of 20)

Response to Comment 2320 (Page 4 of 20):

The DEIS' purpose and need for the proposed expansion is "to fulfill the Marine Corps' requirement to provide sustained, combined-arms, live-fire, and maneuver field training for MEB-sized MAGTFs... MEBs must be able to conduct maneuver-intensive operations over extended distances, supported by closely coordinated precision fires, aviation-delivered ordnance, and sustained, focused logistical support... The Marine Corps needs the proposed action because existing facilities, ranges, and live-fire ground and air maneuver areas are inadequate to support the requirement for MEB-sized training exercises." (DEIS at 1-4). The DEIS' purpose and need is very narrowly construed to the proposed expansion areas. The purpose and need provided in the DEIS is impermissibly narrow under NEPA for several reasons, most importantly because it forecloses meaningful alternatives review in the DEIS. Because the purpose and need and the alternatives analysis are at the "heart" of NEPA review and affect nearly all other aspects of the EIS, on this basis and others, agency must revise and re-circulate the DEIS.

*B. The DEIS Does Not Adequately Describe Environmental Baseline*

DEIS is required to "describe the environment of the areas to be affected or created by the alternatives under consideration." 40 CFR § 1502.15. The establishment of the baseline conditions of the affected environment is a practical requirement of the NEPA process. In *Half Moon Bay Fisherman's Marketing Ass'n v. Carlucci*, 857 F.2d 505, 510 (9th Cir. 1988), the Ninth Circuit states that "without establishing . . . baseline conditions . . . there is simply no way to determine what effect [an action] will have on the environment, and consequently, no way to comply with NEPA." Similarly, without a clear understanding of the current status of these public lands BLM cannot make a rational decision regarding proposed project. See *Center for Biological Diversity v. U.S. Bureau of Land Management, et al.*, 422 F. Supp. 2d 1115, 1166-68 (N.D. Cal. 2006) (holding that it was arbitrary and capricious for BLM to approve a project based on outdated and inaccurate information regarding biological resources found on public lands).

The DEIS fails to provide adequate baseline information and description of the environmental setting in many areas including in particular the status of rare plants, animals and communities including desert tortoise, golden eagles, rare plants, and sand transport corridors.

The baseline descriptions in the DEIS are inadequate particularly for the areas where surveys were a single season, a day, or not performed at all. As discussed below, because of the deficiencies of the baseline data for the proposed project area, the DEIS fails to adequately describe the environmental baseline. Many of the rare and common but essential species and habitats have incomplete and/or vague on-site descriptions that make determining the proposed project's impacts difficult at best. Some of the rare species/habitats baseline conditions are totally absent and as a result no impact assessment is provided either. A supplemental document is required to fully identify the baseline conditions of the site, and that baseline needs to be used to evaluate the impacts of the proposed project.

Comment ID: 2320 (Page 5 of 20)

Response to Comment 2320 (Page 5 of 20):

*C. Failure to Identify and Analyze Direct and Indirect Impacts to Biological Resources*

The EIS fails to adequately analyze the direct, indirect, and cumulative impacts of the proposed project on the environment. The Ninth Circuit has made clear that NEPA requires agencies to take a “hard look” at the effects of proposed actions; a cursory review of environmental impacts will not stand. *Idaho Sporting Congress v. Thomas*, 137 F.3d 1146, 1150-52, 1154 (9<sup>th</sup> Cir. 1998). Where the DEIS has incomplete or insufficient information, NEPA requires the agency to do the necessary work to obtain it where possible. 40 C.F.R. §1502.22; see *National Parks & Conservation Ass’n v. Babbitt*, 241 F.3d 722, 733 (9<sup>th</sup> Cir. 2001) (“lack of knowledge does not excuse the preparation of an EIS; rather it requires [the agency] to do the necessary work to obtain it.”)

Moreover, the DEIS must look at reasonable mitigation measures to avoid impacts but failed to do so here. Even in those cases where the extent of impacts may be somewhat uncertain due to the complexity of the issues, the DEIS is not relieved of its responsibility under NEPA to discuss mitigation of reasonably likely impacts at the outset. Even if the discussion may of necessity be tentative or contingent, NEPA requires that the DEIS provide some information regarding whether significant impacts could be avoided. *South Fork Band Council of Western Shoshone v. DOI*, 588 F.3d 718, 727 (9<sup>th</sup> Cir. 2009).

The lack of comprehensive surveys is particularly problematic (DEIS at 4.10-2). Failure to conduct sufficient surveys prior to the implementation of the project also effectively eliminates the most important function of surveys - using the information from the surveys to avoid and minimize harm caused by the project and reduce the need for mitigation. Often efforts to mitigate harm are far less effective than avoiding and preventing the harm in the first place. In addition, without understanding the scope of harm before it occurs, it is difficult to quantify an appropriate amount and type of mitigation.

The DEIS fails to provide all of the information necessary for decisionmakers and the public to adequately review the proposed project. Therefore the impacts cannot be fully analyzed or mitigated appropriately or fully. For this reason alone, a supplemental or revised DEIS needs to be provided and additional alternatives are included (including a preferred alternative) that avoids and reduces the impacts to biological resources.

With regards to transplantation and relocation, the ISA state that “In general, moving organisms from one area to another—for example, out of an impact area into a reserve area—is not a successful conservation action and may do more harm than good to conserved populations by spreading diseases, stressing resident animals, increasing mortality, and decreasing reproduction and genetic diversity. Transplantation or translocations should be considered a last recourse for unavoidable impacts, should never be considered full mitigation for the impact, and in all cases must be treated as experiments subject to long-term monitoring and management.” (at pg. Vii – Executive Summary). Clearly the DEIS fails to consider the impacts of moving both plants and animals from the project site onto adjacent areas. As discussed below the DEIS fails to evaluate the impacts of any of the translocated species on resident species and habitat – at

Comment ID: 2320 (Page 6 of 20)

Response to Comment 2320 (Page 6 of 20):

a minimum, carrying capacity (the ability of the habitat to support species) of the landscape where species area proposed to be moved needs to be included

1. *Desert Tortoise*

The desert tortoise has lived in the western deserts for tens of thousands of years. In the 1970's their populations were noted to decline. Subsequently, the species was listed as threatened by the State of California in 1989 and by the U.S. Fish and Wildlife Service in 1990, which then issued a Recovery Plan for the tortoise in 1994. The U.S. Fish and Wildlife Service is in the process of updating the Recovery Plan, and a Draft Updated Recovery Plan was issued in 2008, however it has not been finalized to date. Current data indicate a continued decline across the range of the listed species<sup>1</sup> despite its protected status and recovery actions.

The original and draft Updated Recovery Plans both recognize uniqueness in desert tortoise populations in California. This particular subpopulation of tortoise at the proposed project site is part of the West Mojave Recovery unit<sup>2</sup>. Recent population genetics studies<sup>3</sup> have added to the 1994 Recovery Plan conclusions – not only is the West Mojave Recovery unit unique, within it, there are further genetically unique populations that may indeed require recognition of additional recovery unit subdivisions in the larger West Mojave Recovery Unit. While the proposed project site may have varying desert tortoise densities, this particular recovery unit has also been documented to have a 23% decline in population between 2005 and 2007<sup>4</sup>. The DEIS fails to identify and consider the localized impact from the proposed action to this recovery unit that is already in steep decline.

Currently, up to approximately 3,000 desert tortoises have been estimated to live within the boundaries of the preferred alternative's expansion areas (DEIS at 4.10-47). The DEIS states that the preferred alternative would "result in the take from military training (through death or being moved out of harm's way) of between 154 and 714 adult tortoises over the life of the project (121 to 189 in the acquisition study areas)" (DEIS at 4.10-47). However the assumptions (see below discussion) are so unclear that the proposed estimates appear to be speculative at best. It also fails to take into account "take" for juveniles and eggs, despite the fact that these life stages are essential for preventing further declines in desert tortoise populations. These life stages have been estimated for other proposed projects and should be included in the evaluation of impacts to the desert tortoise, because they most certainly will be affected by the proposed project. Regardless, we agree with the DEIS in the determination that the impact to the federally threatened desert tortoise from the preferred Alternative 6 is significant (DEIS at 4.10-49)

Comment ID: 2320 (Page 7 of 20)

Response to Comment 2320 (Page 7 of 20):

While the DEIS references the Biological Assessment for the desert tortoise that includes the potential adverse effects and provides the web link to it (DEIS at 3.10-2), we could not find the Biological Assessment on the site.

The DEIS inappropriately assigns “take” percentage for desert tortoise based on the intensity of disturbance. For example “take” in the “high intensity areas” is presumed to be 50% (DEIS at 4.10-3). It is unclear what this assumption is based on (documented mortality from on-base research?). Additionally, the interval for the “take” is unclear and consequential – is that 50% per year? Over the life of the project? For each military training event? These basic issues need to be clarified in a supplemental EIS.

The DEIS fails to provide any actual mitigation strategy for impacts to desert tortoise. Because the action will be impacting occupied desert tortoise habitat and “take” will occur of desert tortoise, the agency needs to identify the amount and location of desert tortoise habitat that will be acquired and preserved in perpetuity as mitigation for the impacts that will occur to the desert tortoise within the expansion areas. This strategy has been implemented by other Department of Defense expansions and is requisite for this project. In addition to acquisition, other strategies that benefit the conservation of desert tortoise should also be implemented as identified in the current Desert Tortoise Recovery Plan<sup>5</sup> (1994). The DEIS is woefully inadequate with regards to this aspect of desert tortoise impact and mitigation. The supplemental DEIS must include these important issues.

Mitigation acquisition should include appropriate tortoise habitat (occupied or unoccupied) which is currently existing and providing benefits to the species, to off-set the elimination of the proposed expansion area. However, this strategy is still a *net loss of habitat* to the desert tortoise, as currently they are using or could use both the mitigation site and the proposed expansion area. Therefore, in order to aid in recovery of this declining species, at a minimum a 5:1 mitigation ratio should be required as mitigation for the elimination of occupied desert tortoise habitat in the proposed expansion area.<sup>6</sup>

The DEIS also fails to evaluate the potential off-site impacts to desert tortoise that will result from the proposed expansion displacing off-road vehicle (ORV) from the Johnson Valley open area. It is likely that ORV use will be concentrated in the remaining Johnson Valley ORV area (or other nearby ORV open areas) further impacting the existing desert tortoise populations in those areas. Recognition of the increase in illegal ORV activities must also be considered. The agency could offset some of the impact by providing SIGNIFICANTLY increased law enforcement resources to land management agencies in the region to help enforce land management rules and regulations especially in Desert Wildlife Management Areas (DWMA) and wilderness areas, which are key in recovering desert tortoise populations. This type of “mitigation” has been implemented by the Fort Irwin Expansion, where additional law enforcement was provided to the BLM. In that case however, the expansion was not in an ORV open area. In this case, significantly more law enforcement resources would be necessary to control potential illegal uses in adjacent sensitive areas.

<sup>5</sup> [http://ecos.fws.gov/docs/recovery\\_plans/1994/940628.pdf](http://ecos.fws.gov/docs/recovery_plans/1994/940628.pdf)

<sup>6</sup> Moilanen et al 2009, Norton 2008

Comment ID: 2320 (Page 8 of 20)

Response to Comment 2320 (Page 8 of 20):

The DEIS fails to provide details on relocation of desert tortoise “out of harm’s way”. Typically a translocation and relocation plan is provided for public review, but it is missing from the DEIS. Recently a panel of Independent Science Advisors (ISA) was convened to make recommendations<sup>7</sup> for species conservation as part of the proposed Desert Renewable Energy Conservation Plan. The ISA state that “In general, moving organisms from one area to another—for example, out of an impact area into a reserve area—is not a successful conservation action and may do more harm than good to conserved populations by spreading diseases, stressing resident animals, increasing mortality, and decreasing reproduction and genetic diversity. Transplantation or translocations should be considered a last recourse for unavoidable impacts, should never be considered full mitigation for the impact, and in all cases must be treated as experiments subject to long-term monitoring and management. Additionally the Scientific Advisory Committee (SAC) of the Desert Tortoise Recovery Office (DTRO) of the U.S. Fish and Wildlife Service also recognizes that moving desert tortoise is “fraught with long-term uncertainties”<sup>8</sup>. Recent desert tortoise translocations have resulted in significant short-term mortality of 45% or greater<sup>9</sup> and unknown long-term survivorship. The EIS needs to clarify the definition of translocation and relocation. It needs to clarify how far desert tortoise are planned to be moved, where they will be moved, the condition of the host population, and assure that the site will be conserved in perpetuity to prevent subsequent relocation/translocation of desert tortoise. As per the Desert Tortoise Recovery Plan, relocations/translocations should not occur into DWMAs.

The Center has repeatedly sought stronger protections for desert tortoise and tortoise critical habitat both in the DWMAs and in other areas within the CDCA as a whole and particularly within the western Mojave desert. Despite the fact that desert tortoise populations in the west Mojave DWMAs continue to decline, further degradation is proposed not only by this proposed expansion but by other related activities including displaced ORV activities, which could affect DWMAs, which were established for desert tortoise recovery (not just survival).

*2. Sand Transport System*

The DEIS fails to consider the impacts that the proposed expansion area has on the sand transport system in the region<sup>10</sup>. The site need not have active dunes on it to be an integral part of the sand transport corridor and overall eolian system. The impacts of the proposed project to the sand transport corridor, and the sand dune habitat which supports the Mojave fringe-toed lizard could be significant and that analysis must be done in a revised or supplemental DEIS.

*3. Rare and Special Status Plants and Communities*

The DEIS fails to identify if any rare plant surveys were done within the expansion areas. These types of surveys need to be performed, not only for spring flowering rare plants but also for the suite of rare plant species that are triggered by summer monsoonal rains and bloom in the

<sup>7</sup> <http://www.energy.ca.gov/2010publications/DRECP-1000-2010-008/DRRCP-1000-2010-008-F.PDF>

Response to Comment 2320 (Page 9 of 20):

fall. These incomplete data sets preclude evaluation of the impacts, or more importantly the ability to avoid and minimize impacts. Clearly a supplemental DEIS is required to present these missing data.

The DEIS also fails to recognize that the western expansion area includes a large portion of an Unusual Plant Assemblage (UPA) for creosote rings and yucca rings as mapped in the California Desert Conservation Area (CDCA) Plan<sup>11</sup>

*4. Avifauna*

*Migratory Birds*

The DEIS does not quantify the number of birds (rare, migratory or otherwise) that use/traverse the proposed expansion area nor does it evaluate the impact to birds. The revised or supplemental DEIS needs to analyze likely impacts to birds from the proposed project activities based on the point counts.

The failure to provide the baseline data from which to make any impact assessment violates NEPA. This failure to analyze impacts is not only a NEPA violation, but for migratory birds, may also lead to a violation of the Migratory Bird Treaty Act, 16 U.S.C. §§ 703 -711, because migratory birds may be “taken” by the proposed expansion activities.

Executive Order 13186 states “Each Federal agency taking actions that have, or are likely to have, a measurable negative effect on migratory bird populations is directed to develop and implement, within 2 years, a Memorandum of Understanding (MOU) with the Fish and Wildlife Service (Service) that shall promote the conservation of migratory bird populations.”<sup>12</sup> Furthermore the EO states that goals pursuant to the MOU include “(3) prevent or abate the pollution or detrimental alteration of the Environment for the benefit of migratory birds, as practicable;” and “(6) ensure that environmental analyses of Federal actions required by the NEPA or other established environmental review processes evaluate the effects of actions and agency plans on migratory birds, with emphasis on species of concern”. Clearly, the supplemental DEIR needs to adequately identify the migratory bird issues on site and evaluate the impact to those species in light of the guidance in Executive Order 13186.

*Burrowing Owls*

The DEIS notes that burrowing owls “are present in very low densities in the west study area (Karl 2009a)” (DEIS at 3.10-43). Preliminary results from the 2006-7 statewide census identified that the Mojave desert harbors few Western burrowing owls.<sup>13</sup> Even more worrisome is the documented crash of burrowing owls in their former stronghold in the Imperial Valley. The Imperial Valley has had a recently documented decline of 27% in the past 2 years<sup>14</sup>.

<sup>14</sup> Manning 2009.

Comment ID: 2320 (Page 10 of 20)

Response to Comment 2320 (Page 10 of 20):

resulting in an even more dire state for burrowing owls in California. Because burrowing owls are in decline throughout California, and now their “stronghold” is documented to be declining severely, the burrowing owls in this proposed expansion area become even more important to species conservation efforts. The recirculated or supplemental DEIS needs to evaluate the potential impact of the proposed project on this regional distribution of owls.

While habitat acquisition specifically for burrowing owls needs to be identified in the DEIS. Mean burrowing owl foraging territories are 242 hectares in size, although foraging territories for owl in heavily cultivated areas is only 35 hectares<sup>15</sup>. Regardless, the acquisition of mitigation acreage should include adequate foraging area. Using the average foraging territory size for mitigation calculations may not accurately predict the carrying capacity and may *overestimate* the carrying capacity of the proposed expansion area – it may be that in this area of the Mojave desert 4,000+ acres is necessary to support 4 burrowing owls. Carrying capacity is tied to habitat quality, so language should be included that mitigation lands that are acquired for burrowing owl be native habitats on undisturbed lands, not cultivated lands, which are subject to the whims of land use changes. The long-term persistence of burrowing owls lie in their ability to utilize natural landscapes, not human-created ones.

While “passive relocation” may minimize immediate direct take of burrowing owls, ultimately the burrowing owls’ available habitat is reduced, and “relocated” birds are forced to compete for resources with other resident burrowing owls and may move into less suitable habitat, ultimately resulting in “take”.

Golden Eagle

The DEIS fails to identify if golden eagles occur on the expansion areas. The lack of basic baseline data precludes the ability to identify or analyze potential impacts to golden eagles from the proposed expansion activities. One fact is clear - significant amounts of foraging habitat will decrease carrying capacity because of training activities and could result in a potential loss of habitat needed to support a nesting pair, which would impact reproductive capacity.

Scientific literature on this subject is clear - the presence of humans detected by a raptor in its nesting or hunting habitat can be a significant habitat-altering disturbance even if the human is far from an active nest<sup>16</sup>. Regardless of distance, a straight-line view of disturbance affects raptors, and an effective approach to mitigate impacts of disturbance for golden eagles involves calculation of viewsheds using a three-dimensional GIS tool and development of buffers based on the modeling<sup>17</sup>. Golden eagles have also been documented to avoid industrialized areas that are developed in their territory.<sup>18</sup> Additionally, the DEIS does not actually clearly analyze the impacts to and mitigations for the golden eagle under the Bald Eagle

Response to Comment 2320 (Page 11 of 20):

and Golden Eagle Protection Act, which prohibits, except under certain specified conditions, the take, possession, and commerce of such birds.

*5. Badger*

While badgers were not documented on the site, the proposed expansion area provides good habitat for them. Literature on the highly territorial badger indicates that badger home territories range from 340 to 1,230 hectares<sup>19</sup>. Therefore, the proposed project could displace numerous badger territories. While surveys prior to activities are clearly essential, even passive relocation of badgers into suitable habitat may result “take”. Excluding badger from the site is likely to cause badgers to move into existing badger’s territory. The recirculated or supplemental DEIS needs to include an actual analysis of impacts to badgers from the proposed project.

*6. Desert Kit Foxes*

The DEIS fails to mention the desert kit fox, much less provide data on the presence or absence of the species on site or the locations of natal and other types of dens. Desert kit foxes are “protected furbearing mammals” under California Code of Regulations, Title 14, section 460 and may not be “taken” at any time. As such the DEIS fails to analyze the impacts to this species. The revised or supplemental DEIS should identify the density of kit foxes in the proposed expansion area, including natal and other dens. If passive relocation is identified as an avoidance strategy, the DEIS must evaluate if suitable habitat occurs nearby and is not already occupied by existing kit foxes.

*7. Cryptobiotic soil crusts and Desert Pavement*

The proposed project is located in the Mojave Desert Air Quality Management District area, which is already in non-attainment for PM-10 particulate matter<sup>20</sup>. The construction of the proposed project further increases emissions of these types of particles because of the disruption and elimination of potentially thousands of acres of cryptobiotic soil crusts. Cryptobiotic soil crusts are an essential ecological component in arid lands. They are the “glue” that holds surface soil particles together precluding erosion, provide “safe sites” for seed germination, trap and slowly release soil moisture, and provide CO<sub>2</sub> uptake through photosynthesis<sup>21</sup>.

The DEIS recognizes that on-site cryptobiotic soil crusts exist but defers the quantification and location of them to later. The proposed project will disturb an unidentified portion of these soil crusts and cause them to lose their capacity to stabilize soils and trap soil moisture. The DEIS fails to provide a map of the soil crusts over the project site, and to present any avoidance or minimization measures. It is unclear how many acres of cryptobiotics soils will be affected by the project. The revised or supplemental DEIS must identify the extent of the cryptobiotic soils on site and analyze the potential impacts to these diminutive, but essential desert ecosystem components as a result of this project.

<sup>19</sup> Long 1973, Goodrich and Buskirk 1998

<sup>20</sup> <http://www.indaqmd.ca.gov/index.aspx?page=214>

<sup>21</sup> Belnap 2003, Belnap et al 2003, Belnap 2006, Belnap et al. 2007

Comment ID: 2320 (Page 12 of 20)

Response to Comment 2320 (Page 12 of 20):

The DEIS fails to address if naturally occurring desert pavements occur in the proposed expansion areas. The issues of desert pavement are similar to cryptobiotic soils in their ability to stabilize surface particles in place, precluding erosion and dust, and they are easily damaged by vehicles and form/reform over geological time scales. The supplemental EIS must quantify the acreage of pavement, identify avoidance and minimization measures and analyze the potential impacts to the desert pavement areas including an evaluation of the impacts to air quality from disturbance of desert pavements.

*8. Insects*

The DEIS fails to address insects on the proposed project site. In fact no surveys or evaluation of rare or common insects are included in the DEIS. Sandy habitats are notorious for supporting endemic insects, typically narrow habitat specialists<sup>22</sup>. The revised or supplemental DEIS must include an analysis of rare insects in the proposed expansion area and the potential impacts on their survival from training activities. These issues need to be addressed in a supplemental DEIS.

*9. Nelson's Bighorn Sheep*

Nelson's bighorn sheep are known to inhabit mountain ranges adjacent to the proposed expansion area and the current base. These large mammals require intermountain access in order to maintain herd viability<sup>23</sup> and currently their historic connectivity corridors have been eliminated in parts of their range<sup>24</sup>. Activities in the proposed expansion areas could further restrict connectivity for the bighorn in the area. The DEIS fails to analyze the documented herds in ranges besides the Ship Mountains and the repatriated Bullion- Cleghorn herd. The supplemental DEIS must include an analysis of impact to Nelson's bighorn.

Because the movement corridors for Nelson's bighorn sheep have already been eliminated in key areas, the DEIS should consider participating in the construction of land bridges over Interstate 40 that would re-establish movement of bighorn (and other species) from the mountain ranges north of I-40 to the mountain ranges south of I-40. This feature would significantly increase the ability of herds or rams to re-establish previous movement corridors and increase genetic diversity of the bighorn, provide safe passage for species on the move from climate change, and keep the larger Mojave ecosystem connected.

*10. Habitat Fragmentation*

The habitat fragmentation, loss of connectivity for terrestrial wildlife, and introduction of predators and invasive weed species associated with the proposed expansion and ensuing activities in the proposed locations may run contrary to an effective climate change adaptation strategy. Siting the proposed expansion in the proposed location impacting ecologically

<sup>22</sup> Dunn 2005

<sup>23</sup> Epps et al. 2007, Epps et al 2006

<sup>24</sup> Epps et al. 2005

Comment ID: 2320 (Page 13 of 20)

Response to Comment 2320 (Page 13 of 20):

functioning ecosystems, occupied habitat and important habitat linkage areas, major washes and other fragile desert resources could undermine a meaningful climate change adaptation strategy. Moreover, the expansion activities will emit additional greenhouse gases and the DEIS contains no discussion of ways to avoid, minimize or off-set these emissions although such mitigation is clearly necessary. The way to maintain healthy, vibrant ecosystems is not to fragment them and reduce their biodiversity.

*11. Failure to Identify Appropriate Mitigation*

As stated above, the DEIS not only fails to provide adequate identification and analysis of impacts, inevitably, it also fails to identify adequate mitigation measures for the expansion's environmental impacts. "Implicit in NEPA's demand that an agency prepare a detailed statement on 'any adverse environmental effects which cannot be avoided should the proposal be implemented,' 42 U.S.C. § 4332(C)(ii), is an understanding that an EIS will discuss the extent to which adverse effects can be avoided." *Methow Valley*, 490 U.S. at 351-52. Because the DEIS does not adequately assess the project's direct, indirect, and cumulative impacts, its analysis of mitigation measures for those impacts is necessarily flawed. The DEIS must discuss mitigation in sufficient detail to ensure that environmental consequences have been fairly evaluated." *Methow Valley*, 490 U.S. at 352; *see also Idaho Sporting Congress*, 137 F.3d at 1151 ("[w]ithout analytical detail to support the proposed mitigation measures, we are not persuaded that they amount to anything more than a 'mere listing' of good management practices"). As the Supreme Court clarified in *Robertson*, 490 U.S. at 352, the "requirement that an EIS contain a detailed discussion of possible mitigation measures flows both from the language of [NEPA] and, more expressly, from CEQ's implementing regulations" and the "omission of a reasonably complete discussion of possible mitigation measures would undermine the 'action forcing' function of NEPA."

Although NEPA does not require that the harms identified actually be mitigated, NEPA does require that an EIS discuss mitigation measures, with "sufficient detail to ensure that environmental consequences have been fairly evaluated" and the purpose of the mitigation discussion is to evaluate whether anticipated environmental impacts *can be avoided*. *Methow Valley*, 490 U.S. at 351-52. As the Ninth Circuit recently noted: "[a] mitigation discussion without at least *some* evaluation of effectiveness is useless in making that determination." *South Fork Band Council of Western Shoshone v. DOI*, 588 F.3d 718, 727 (9th Cir. 2009) (emphasis in original).

Here, the DEIS does not provide a full analysis of possible mitigation measures to avoid or lessen the impacts of the proposed project and therefore the DEIS cannot properly assess the likelihood that such measures would actually avoid the impacts of the proposed project.

**D. Impacts to Water Resources— Surface and Groundwater Water Impacts**

As the DEIS notes, the proposed expansion encompasses a large number of washes and ephemeral streams and dry lakes that are not always dry. These areas provide important habitat values that will be compromised by the proposed training activities. Moreover, any loss of natural surface water flows and the re-direction of surface waters will have significant impacts to

Comment ID: 2320 (Page 14 of 20)

Response to Comment 2320 (Page 14 of 20):

the dunes ecosystems. The impacts on soils and particularly on sand transport from the proposed project have not been adequately addressed in the DEIS.

Ephemeral and intermittent streams make up over 81% in the arid and semi-arid southwest (Arizona, New Mexico, Nevada, Utah, Colorado and California). These streams provide a variety of ecosystem services including

- landscape hydrologic connections;
- stream energy dissipation during high-water flows to reduce erosion and improve water quality;
- surface and subsurface water storage and exchange;
- ground-water recharge and discharge;
- sediment transport, storage, and deposition to aid in floodplain maintenance and development;
- nutrient storage and cycling;
- wildlife habitat and migration corridors;
- support for vegetation communities to help stabilize stream banks and provide wildlife services;
- and water supply and water-quality filtering<sup>25</sup>.

Yet the DEIS fails to evaluate the impact of the proposed project on the ephemeral and intermittent streams and the ecosystem processes that they provide both on and off of the proposed project site. The revised or supplement DEIS will need to include an analysis of these important issues.

**E. The DEIS Fails to Adequately Identify, Analyze and Off-set Impacts to Air Quality and GHG Emissions.**

Federal courts have squarely held that NEPA requires federal agencies to analyze climate change impacts. *Center for Biological Diversity v. National Highway Traffic Safety Administration*, 508 F.3d 508 (9th Cir. 2007). As most relevant here, NEPA requires consideration of greenhouse gas emissions (“GHG emissions”) associated with all projects and, in order to fulfill this requirement the agencies should look at all aspects of the project which may create greenhouse gas emissions including operations, construction, and life-cycle emissions from materials. Where a proposed activity will have significant GHG emissions, the agency should identify alternatives and/or mitigation measures that will lessen such effects.

As part of the NEPA analysis federal agencies must assess and, wherever possible, quantify or estimate GHG emissions by type and source by analyzing the direct operational impacts of proposed actions. Assessment of direct emissions of GHG from on-site combustion sources is relatively straightforward. For the proposed activities, energy consumption for vehicles, manufacturing, transportation and construction will be the major source of GHGs. The indirect effects of a project may be more far-reaching and will require careful analysis. Within this category, for example, the supplemental EIS should evaluate, GHG and GHG-precursor emissions associated with construction, electricity use, fossil fuel use, water consumption, waste

---

<sup>25</sup> Levick et al. 2008.

Comment ID: 2320 (Page 15 of 20)

Response to Comment 2320 (Page 15 of 20):

disposal, transportation, the manufacture of building materials (lifecycle analysis), and land conversion. Moreover, because many project may undermine or destroy the value of carbon sinks, including desert soils, the activities may have additional indirect effects from reduction in carbon sequestration, therefore both the direct and quantifiable GHG emissions as well as the GHG effects of destruction of carbon sinks should be analyzed.

The DEIS also fails to adequately address other air quality issues including PM10 both during activities which is of particular concern in this area which is a nonattainment area for PM10 and ozone. It is clear that extensive soil disturbing activities will result in significant amounts of bare soils and increased PM10 may be introduced into the air by wind and that the use of the area during training activities and operations will lead to additional PM10 emissions from the site. Although some mitigation measures are suggested they are not specific and enforceable and because the extent of the impact has not been adequately addressed as an initial matter there is no way to show that the mitigation measures proffered will reduce the impacts to less than significance.

The DEIS fails to analyze the GHG emissions in a meaningful way and therefore does not provide for avoidance, minimization, or mitigation. The DEIS has also failed to include the loss of carbon sequestration from soils in its calculations or to provide a lifecycle analysis of GHG emissions that include manufacturing and disposal of equipment. Moreover, it is undisputed that in the near-term GHG emissions will increase emissions during training activities, and in the manufacturing and transportation of the equipment. The DEIS fails to consider any alternatives to the project that would minimize such emissions or to require that these near-term emissions be off set in any way.

**F. The Analysis of Cumulative Impacts in the DEIS Is Inadequate**

A cumulative impact is “the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.” 40 C.F.R. § 1508.7. The Ninth Circuit requires federal agencies to “catalogue” and provide useful analysis of past, present, and future projects. *City of Carmel-By-The-Sea v. U.S. Dept. of Transp.*, 123 F.3d 1142, 1160 (9<sup>th</sup> Cir. 1997); *Muckleshoot Indian Tribe v. U.S. Forest Service*, 177 F.3d 800, 809-810 (9<sup>th</sup> Cir. 1999).

“In determining whether a proposed action will significantly impact the human environment, the agency must consider [w]hether the action is related to other actions with individually insignificant but cumulatively significant impacts. Significance exists if it is reasonable to anticipate a cumulatively significant impact on the environment.” 40 C.F.R. § 1508.27(b)(7).” *Oregon Natural Resources Council v. BLM*, 470 F.3d 818, 822-823 (9<sup>th</sup> Cir. 2006). NEPA requires that cumulative impacts analysis provide “some quantified or detailed information,” because “[w]ithout such information, neither courts nor the public . . . can be assured that the Forest Service provided the hard look that it is required to provide.” *Neighbors of Cuddy Mountain v. United States Forest Service*, 137 F.3d 1372, 1379 (9<sup>th</sup> Cir. 1988), see also *id.* (“very general” cumulative impacts information was not hard look required by NEPA). The

Comment ID: 2320 (Page 16 of 20)

Response to Comment 2320 (Page 16 of 20):

discussion of future foreseeable actions requires more than a list of the number of acres affected, which is a necessary but not sufficient component of a NEPA analysis; the agency must also consider the actual environmental effects that can be expected from the projects on those acres. See *Klamath-Siskiyou Wildlands Ctr. v. BLM*, 387 F.3d 989, 995-96 (9th Cir. 2004) (finding that the environmental review documents “do not sufficiently identify or discuss the incremental impact that can be expected from each [project], or how those individual impacts might combine or synergistically interact with each other to affect the [] environment. As a result, they do not satisfy the requirements of the NEPA.”) Finally, cumulative analysis must be done as early in the environmental review process as possible, it is not appropriate to “defer consideration of cumulative impacts to a future date. “NEPA requires consideration of the potential impacts of an action before the action takes place.”” *Neighbors*, 137 F.3d at 1380 quoting *City of Tenakee Springs v. Clough*, 915 F.2d 1308, 1313 (9th Cir. 1990) (emphasis in original).

The DEIS identifies some of the cumulative projects but does not meaningfully analyze the cumulative impacts to resources in the California desert from the many proposed projects (including renewable energy projects, transmission, and others). Moreover, because the initial identification and analysis of impacts is unfinished, the cumulative impacts analysis cannot be complete. For example, because the identification of potentially occurring rare plants on site is unfinished and incomplete, the cumulative impacts are also therefore inadequate.

The DEIS also fails to consider all reasonably foreseeable impacts in the context of the cumulative impacts analysis. See *Native Ecosystems Council v. Dombek, et al*, 304 F.3d 886 (9th Cir. 2002) (finding future timber sales and related forest road restriction amendments were “reasonably foreseeable cumulative impacts”). The DEIS also fails to provide the needed analysis of how the impacts might combine or synergistically interact to affect the environment in this region. See *Klamath-Siskiyou Wildlands Ctr. v. BLM*, 387 F.3d 989, 995-96 (9th Cir. 2004).

The NEPA regulations also require that indirect effects including changes to land use patterns and induced growth be analyzed. “Indirect effects,” include those that “are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable. Indirect effects may include *growth inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate, and related effects on air and water and other natural systems, including ecosystems.*” 40 C.F.R. s.1508.8(b) (emphasis added). See *TOMAC v. Norton*, 240 F. Supp.2d 45, 50-52 (D.D.C. 2003) (finding NEPA review lacking where the agency failed to address secondary growth as it pertained to impacts to groundwater, prime farmland, floodplains and stormwater run-off, wetlands and wildlife and vegetation); *Friends of the Earth v. United States Army Corps of Eng’rs*, 109 F. Supp.2d 30, 43 (D.D.C. 2000) (finding NEPA required analysis of inevitable secondary development that would result from casinos, and the agency failed to adequately consider the cumulative impact of casino construction in the area); see also *Mullin v. Skimmer*, 756 F. Supp. 904, 925 (E.D.N.C. 1990) (Agency enjoined from proceeding with bridge project which induced growth in island community until it prepared an adequate EIS identifying and discussing in detail the direct, indirect, and cumulative impacts of and alternatives to the proposed Project); *City of Davis v. Coleman*, 521 F.2d 661 (9th Cir. 1975) (requiring agency to prepare an EIS on effects of proposed freeway interchange on a major interstate highway in an agricultural area and to

Comment ID: 2320 (Page 17 of 20)

Response to Comment 2320 (Page 17 of 20):

include a full analysis of both the environmental effects of the exchange itself and of the development potential that it would create).

Among the cumulative impacts to resources that have not been fully analyzed are impacts to desert tortoise, impacts to sand transport systems and Mojave fringe-toed lizard habitat, impacts to golden eagles, and impacts to water resources. The cumulative impacts to the resources of the California deserts has not been fully identified or analyzed, and mitigation measures have not been fully analyzed as well.

**G. The EIS' Alternatives Analysis is Inadequate**

NEPA requires that an EIS contain a discussion of the “alternatives to the proposed action.” 42 U.S.C. §§ 4332(C)(ii),(E). The discussion of alternatives is at “the heart” of the NEPA process, and is intended to provide a “clear basis for choice among options by the decisionmaker and the public.” 40 C.F.R. §1502.14; *Idaho Sporting Congress*, 222 F.3d at 567 (compliance with NEPA’s procedures “is not an end in itself . . . [but] it is through NEPA’s action forcing procedures that the sweeping policy goals announced in § 101 of NEPA are realized.”) (internal citations omitted). NEPA’s regulations and Ninth Circuit case law require the agency to “rigorously explore” and objectively evaluate “all reasonable alternatives.” 40 C.F.R. § 1502.14(a) (emphasis added); *Envtl. Prot. Info. Ctr. v. U.S. Forest Serv.*, 234 Fed. Appx. 440, 442 (9th Cir. 2007). “The purpose of NEPA’s alternatives requirement is to ensure agencies do not undertake projects “without intense consideration of other more ecologically sound courses of action, including shelving the entire project, or of accomplishing the same result by entirely different means.” *Envtl. Defense Fund, Inc. v. U.S. Army Corps of Engrs.*, 492 F.2d 1123, 1135 (5th Cir. 1974). An agency will be found in compliance with NEPA only when “all reasonable alternatives have been considered and an appropriate explanation is provided as to why an alternative was eliminated.” *Native Ecosystems Council v. U.S. Forest Serv.*, 428 F.3d 1233, 1246 (9th Cir. 2005); *Bob Marshall Alliance v. Hodel*, 852 F.2d 1223, 1228-1229 (9th Cir. 1988). The courts, in the Ninth Circuit as elsewhere, have consistently held that an agency’s failure to consider a reasonable alternative is fatal to an agency’s NEPA analysis. *See, e.g., Idaho Conserv. League v. Mumma*, 956 F.2d 1508, 1519-20 (9th Cir. 1992) (“The existence of a viable, but unexamined alternative renders an environmental impact statement inadequate.”).

If the EIS rejects an alternative from consideration, it must explain why a particular option is not feasible and was therefore eliminated from further consideration. 40 C.F.R. § 1502.14(a). The courts will scrutinize this explanation to ensure that the reasons given are adequately supported by the record. *See Muckleshoot Indian Tribe v. U.S. Forest Service*, 177 F.3d 800, 813-15 (9th Cir. 1999); *Idaho Conserv. League*, 956 F.2d at 1522 (while agencies can use criteria to determine which options to fully evaluate, those criteria are subject to judicial review); *Citizens for a Better Henderson*, 768 F.2d at 1057.

Here, the DEIS too narrowly construed the project purpose and need such that the DEIS did not consider an adequate range of alternatives to the proposed project. The alternatives analysis is inadequate even with the inclusion of the alternative site configurations and a reduced acreage alternative. Additional feasible alternatives should be considered which would avoid occupied desert tortoise habitat as well as alternatives that would have used other existing

military bases in the area for cooperative training exercises.

**II. Conclusion**

Thank you for your consideration of these comments. In light of the many omissions in the environmental review to date, we urge MCAGCC to revise and re-circulate the DEIS or prepare a supplemental DEIS before making any decision regarding the proposed expansion areas and activities. In the event MCAGCC chooses not to revise the DEIS and provide adequate analysis, the MCAGCC should reject the expansion proposal. Please feel free to contact me if you have any questions about these comments or the documents provided.

Sincerely,

To:  
Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The DEIS states:  
Potential impacts from six action alternatives and the No-Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

**3.11 Cultural Resources.** The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:  
Less than Significant Impacts (LSI):

- Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
- Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):  
No impact anticipated from airspace establishment.

Similar judgements are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents. It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:  
• Decrease of revenue and employment and associated tax revenue from tourism recreational and film

**Response to Comment 2322 (Page 1 of 4):**

Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. In addition, the EIS acknowledges potential impacts to property values due to increased noise and proximity to military operating areas (see Section 4.3 of the EIS). The EIS concludes that any reduction in property value would likely be marginal and less than significant.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: 2322 (Page 2 of 4)

Response to Comment 2322 (Page 2 of 4):

industries

- Devaluation of surrounding private property.
  - Increased costs to federal, state and local jurisdictions for increased law enforcement.
- All would occur outside the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher. My grandparents have retired here and are now too old to make this move possible. In turn, my parents plan to rebuild on the property and retire here as well, not only to look after my aging grandparents but also to preserve the property which was acquired over 50 years ago. In turn, this land will be inherited by the next generation who holds just as much respect for the area.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

Comment ID: 2322 (Page 3 of 4)

Response to Comment 2322 (Page 3 of 4):

-These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflowed by helicopters at any hour of the day or night, particularly when they want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision."

—Desert Magazine 1944

The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves.

<http://www.coutant.org/mminternet/saga/index.html>

The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant. It shows the homesteads and how close they are to the proposed westward expansion area.

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

My family homesteaded the land on Ranch Road and Moose Ranch Road in Twentynine Palms over 50 years ago. Since then we have acquired a large amount of acreage that is used as a permanent residence for some and an expect place for retirement for several others. We ask that appropriate measures take place so that the proposed expansion of training exercises and Combat Center area will not cause such significant impacts to the population.

Thank you,

**Comment** Sirs, I have been camping, 4-wheeling, and working with the BigHorn sheep in your proposed closure areas for many years. As A member of The Society For the Conservation of BigHorn Sheep, we have been trying to increase their population back to historical levels and keep them off the endangered species list. It is a huge struggle but gradually their population is rising. Your proposed growth happens to be in wonderful sheep habitat, and I can't imagine tanks, bombs, artillery and personnel will be of any possible benefitt to them! Just exactly how much land does the military need? I spent my time in the Air Force, and I am certainly pro military, but this expansion seems crazy. I would like to see an extension of the comment period, and I really wonder how you will keep ordinance out of the public use areas. I have personally seen ordinance on my excursions in the desert and you don't seem to be able to keep your ordinance where it belongs, and then you don't even clean it up. I wonder what your excuse will be when an innocent child or adult is hurt or killed due to your lack of responsibility. It seems as though the military has about 1/4 of the southwest now as military use areas. I did not see any proposals to just leave the land alone. Once you have it, it will never be open to the public again. That's ashame. The desert is a beautiful area for expolring, recreation, camping, photography, etc. Why ruin it forever for the rest of us??????? I understand your need to practice to keep our shores safe, but it seems you are taking away from the public, the very things you are supposed to be protecting! Our land. Sincerely, Robert Bissell

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to wildlife species.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

As discussed in Section 2.4.7 of the EIS, the No-Action Alternative has been carried forward for analysis in the EIS. Ultimately, congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**RE: 29 Palms US MCAGCC Land Acquisition/Airspace Establishment Study; Scoping Comments for the draft EIS; delivered via hard copy and electronic public comment form**

Thank you for the opportunity to provide comments on the Draft Environmental Impact Statement. I would like the following scoping comments to be considered part of the record for this DEIS.

**Scoping Comments:**

The Department of Defense (DOD) has proposed a major expansion of the Twenty-nine Palms Marine Base into the Johnson Valley OHV Area currently owned and managed by the Bureau of Land Management. It has been stated that the Marine Corps Air Ground and Combat Center (MCAGCC) is the only military base location that will provide sufficient land and airspace potential to meet the training requirements for a large scale Marine Air Ground Task Force (MAGTF). There has not been sufficient information or evidence to back up that assumption nor a sensible, articulated case made for the need to expand. Of course every land managing entity would like to expand but that does not mean that it is appropriate. DOD provided any reasonable explanation for why the 29 Palms MCAGCC cannot share lands with the newly expanded Fort Irwin Military Base and train cooperatively for military operations. Furthermore, the argument that the MCAGCC needs the expansion to train for the War in Iraq and Afghanistan has many flaws including but not limited to: there is no landscape in the U.S. large enough to realistically simulate those foreign war landscapes.

The JV OHV Area is the largest, oldest and one of the most well established in the nation and cannot be replaced. It provides multiple recreational opportunities for enthusiasts of all skill levels. It also has the space for long-distance race courses no other CA area offers. JVOHVA has become an "icon" not just for off-roading, but for a myriad of other recreational and resource-related land-uses. The other OHV Areas in the Mojave Desert cannot accommodate JV's current use. Even with the small portion of the open area remaining in the Anderson Dry Lake areas adjacent to Camp rock Rd. - displacement will result in more local, private land trespass and incursion into more environmentally sensitive and protected BLM areas.

**Alternatives:**

The current preferred alternative (#6) states that a large portion of current OHV lands will be taken permanently and 44% of the recreational lands in Johnson Valley will be available 10 months out the year. This will not likely be the end result as once USMCAGCC has completed the withdrawal and taken ownership the next action will be to further reduce and eliminate OHV use for the majority of the year. The alternative has many other design flaws that unnecessarily impact the OHV use. For example in alternative 6 the training battalions and troops would move from east to west with would

**Response to Comment 2324 (Page 1 of 3):**

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available

**Comment ID: 2324 (Page 2 of 3)**

drastically increase the live fire in the OHV area making cleanup infinitely more difficult and dangerous and result in more OHV closures. Also the claim that the acreage needed for alternative 6 would accommodate the desired training conditions is inconsistent since this number changes constantly depending on which commander or Public Relations representative is speaking. For example just in the DOD brochure explaining all of the alternatives published in April of 2011, Alternative 2 utilizes 134,863 total acres while alternative 6 asks for 167,971 acres.

I strongly urge a “no action” alternative; despite its lack of presence as a legitimate alternative in the current draft EIS. I also request that the suggested permit procedure that was mentioned in public meetings be available for public examination.

Furthermore DOD should draft a new DEIS that has a broader range of alternatives including the above, a shared cooperative training alternative with Fort Irwin and lastly a hybrid alternative that modestly and more appropriately expands no more that 4 to 5 square miles in all directions where public land exists to minimize the effects to public conservation and recreation lands and private properties.

**Impacts:**

The environmental impacts that will result from loss of open space and recreation lands within Johnson Valley OHV area will be significant and unmitigatable should the preferred alternative be chosen. Additional impacts should also be considered and proposed mitigation for those impacts defined in the next document.

**Economics:** If the JV OHV Area is shut down or substantially reduced, local communities would suffer a significant loss of revenue from OHV-related traffic - major filming/commercials - mining - general recreation – etc. The revenue generated by travelers headed to JV keeps most of our local businesses open. Most of the businesses in our town are here “because they want to be” - not because it is financially lucrative - in effect subsidizing us with goods and services well beyond what are normally available in other communities with our population and demographics. The profit margin for our businesses is already a “stay-open/break-even” situation. Loss of current weekend business would be the “straw on the camel’s back” that would force them to shut down.

**Renewable Energy Projects:** The desert is currently experiencing a land rush with renewable energy companies, subsidized by the federal government, seeking permits to develop on our public recreation and conservation lands. In its peak in 2008 over 1.2 million acres of the Ca Desert Conservation Area were under application for development. Everyone wants a large piece of the CA desert public lands, including DOD. Furthermore these projects are already revealing enormous, irreversible negative impacts on desert resources and wildlife. The desert tortoise is suffering significant mortality for RE development (i.e. Ivanpah) and the proposed western expansion would result in further tortoise impacts and

**Response to Comment 2324 (Page 2 of 3):**

within specific portions of Johnson Valley and during various portions of the year.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts.

**Comment ID: 2324 (Page 3 of 3)**

loss. Mitigation is not sufficient and translocation results in high risks and mortality as evident in the Fort Irwin expansion and translocation disaster.

Recreation: There is no public landscape in the CDCA that could replace JV. Therefore there is no appropriate mitigation that could be designed to fully replace it and compensate the recreation and entrepreneurial users. OHV users are currently losing thousands of acres a year of recreational lands to other uses and development, with little to no compensation. Furthermore CA requires a Green Sticker fee which has been increasing over the years and yet there are less and less lands to recreate on. Also nearly \$200,000 was robbed from that fund by State Politicians and allocated to budget deficits and again no mitigation or compensation was given.

Private Property: San Bernardino passed an OHV Ordinance a few years back to help protect private property owners from frequent OHV related trespass and vandalism. However that program has been gutted of staff and funds as has the local San Bernardino County Sheriff's departments. BLM is also understaffed and has always had an overwhelming ratio of land per officer (somewhere around 1 million acres per officer is the average the last five-ten years). Private property owners are now left on their own to defend their property and their American dream from lost and frustrated riders that the DOD wishes to displace. DOD has not offered any solutions for this problem, such as paying for multiple law enforcement officers and rangers to patrol and enforce new boundaries for the OHV area to help private property owners, conservation areas, communities and confused out-of-town recreationists. In fact the USMCAGCC representative at recent meetings stated unsympathetically "Well, we will try to help communities with that problem in the future" but offered no assurances or solutions. This is a problem DOD and the USMCAGCC have created and enhanced for local residents and appropriate and helpful solutions need to be paid for by said parties.

Again I urge DOD and the USMCAGCC to go back to the drawing board and analyze if expansion is really appropriate and what war we are trying to plan for. Again, a co-use plan with other desert military bases should be explored and available for public review. If it is still determined and articulated that an expansion is appropriate other alternatives need to be proposed to minimize the effects on Private property, private conservation lands, wilderness and designated OHV Areas.

Thank you for the opportunity to comment.

Sincerely,  
April Sall

**Response to Comment 2324 (Page 3 of 3):**

Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Public comments on the Draft EIS are an important part of the decision-making process. **Comment** I would like to question the necessity of expanding the Marine Corp training area into one of the most popular OHV areas in California. I have been using this area with my family for many years, and hope to continue using it with my children. Thousands of others feel the same way. I urge you to consider the impact of this project and evaluate the necessity of this project as it pertains to the current and future predicted resources of the Marine Corp. Will this land truly be utilized as much as claimed or will it simply be an inefficient use of space? I ask you to compare the goals of this project (which has been planned for many years and possible outdated) to the proposed future of the Marine Corp (as described by General James Amos in his 2011 report to Congress). I fully support the need for a well trained United States military, but request your careful consideration before removing our freedoms to visit our favorite areas in the interest of our "freedom".

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement

the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** To whom it may concern, The Johnson valley OHV area has long been a favorite spot for my family and friends to gather and enjoy OHV and camping activities. The loss of this area will no doubt greatly impact my family's ability to enjoy OHV activities as its closure would no doubt cause larger crowds at other local spots making it potentially unsafe due to increased traffic in the neighboring OHV areas. Please leave this OHV area to the public as available OHV areas like these are very rare and are extremely valuable destinations for good family activities like camping and OHV riding. Best Regards, Tim Welch

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. **Comment** I'm all for the expansion 100%! It will bring more jobs to the 29 Palms area, I'm a retired military business owner. In 29 Palms you either get the opportunity to get a job on the Marine base or work for MUSD. They are the 2 largest employers in this area. Jobs are so scarce, so me & my wife opened up our own place of business.

Comments on the Land Acquisition and Airspace Establishment EIS

Submitted to: <http://www.marines.mil/unit/29palms/LAS/Pages/default.aspx>

The Morongo Basin Conservation Association is a 501(c)(4), community-based, California Non-Profit Corporation. The Directors and members of the MBCA have been educating Morongo Basin residents about issues affecting our economic and environmental health since our incorporation in 1969. MBCA is the oldest collective voice for educating the Morongo Basin's citizens about the unique, natural qualities of which they are stewards, and what is needed to preserve those features.

We have reviewed the Draft EIS for the proposed expansion and community meetings. Six alternatives propose expansion into the Johnson Valley OHV Open Area, which borders the Morongo Basin. Although it has been made clear that the Preferred Alternative is Alternative Six, we wish to go on record for a "No Action" alternative. We would prefer there be no land acquisition that reduces the Johnson Valley OHV Open Area. However, should Alternative Six be chosen, our comments below are intended to clarify our concerns over related Draft EIS issues, and to suggest some offsets/ remedies.

Johnson Valley is the largest riding area in the state with the highest number of visitor use days. Under Alternatives 1, 4, and 5 the Marine Corps would have exclusive use of 91% (180,000 acres). Alternative 6, the preferred alternative, developed in response to public comments, allows for recreational use of approximately 40,000 of the 146,667 acquired acres during the 10 months of the year that the MEB does not require use.

The environmental impacts resulting from the loss of riding areas to the region are evaluated under 4.2 and include an increase in illegal use of OHVs in surrounding public lands and on private property. SCM -1 and -2 mitigate the loss and offset illegal riding with education and signage. SCM-3 offers coordination by the Marine Base with local law enforcement and community groups to reduce illegal OHV use within communities surrounding the acquisition areas. No specific examples are provided on how this coordination might work.

OHV riders and groups have threatened to use the surrounding desert and sparsely developed community areas if Johnson Valley recreational opportunities are impacted. Long experience demonstrates these threats are not trivial and could result in the following:

NEPA-1

REC-1

REC-2

Response to Comment 2328 (Page 1 of 2):

NEPA-1:

The proposed action and alternatives, including the No-Action Alternative are described in Chapter 2 of the EIS. Although the No-Action Alternative does not meet the purpose of and need for the proposed action, it has been carried forward for analysis in the EIS as described in Chapter 4 under each resource area. Ultimately, Congress will make the final decision about proceeding with the proposed action.

REC-1:

Thank you for your comment. The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a supplemental Recreation Study to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS.

Comment ID: 2328 (Page 2 of 2)

- increased trespass and damage to private and public lands
- increased destruction of vegetation and wildlife habitat
- increased dust, noise and nuisance
- increased conflicts between riders and residents
- increased damage to roads, berms and flood control infrastructure
- increased costs of repair of these features for local taxpayers
- increased demand for emergency, law enforcement, code enforcement and other public services and increased costs associated with these services

REC-2

We offer the following specific measures to offset impacts resulting from Johnson Valley Open Area closure even if that closure is not permanent year round.

- Funding for 2 BLM-Barstow law enforcement rangers dedicated to patrolling and protecting the public lands in the Johnson valley 'sphere of influence'
- Coordination with local citizen and conservation groups and funding to increase public education and restoration efforts for private and public lands damaged by illegal OHV activities
- Permanent and highly visible informational kiosks with maps and a statement of the laws in these locations:
  1. Morongo Grade (Highway 62, west end of Yucca Valley)
  2. Highway 62 at the intersection with Highway 247
  3. Along Highway 247 north and south of Johnson Valley
  4. On Highway 62 east and west of the City of 29 Palms
  5. In Landers
  6. In Yucca Mesa
  7. In Flamingo Heights
  8. On Amboy Road in Wonder Valley
  9. Sunfair Dry Lake
  10. Along highway 62 east and west of the Town of Joshua Tree

NEPA-2

We appreciate this opportunity to comment and look forward to cooperating with the Base on public education.

GEN-1

Sincerely,

Laraine D. Turk  
 President, Morongo Basin Conservation Association  
 On Behalf of the Board of Directors

Response to Comment 2328 (Page 2 of 2):

REC-2:

The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources. As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a supplemental Recreation Study to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS.

NEPA-2 and GEN-1:

The Marine Corps appreciated your comment and suggestions. As discussed in Section 2.5 of the EIS, if legislation affecting the proposed acquisition study area is passed by Congress and becomes law, the BLM and DoN would prepare a Recreation Management Plan and amend existing Resource Management Plans (i.e., Natural and Cultural Resource Management Plans) to reflect changes brought about by any such law, and would define how resources in the acquired lands would be managed, including those that would be designated as an Restricted Public Access Area (RPAA). While preparing the Recreation Management Plan (and updating existing management plans), the Marine Corps would solicit input from the public, BLM, local law enforcement, and other agencies and organizations.

**Comment** Submitted by: Harry Baker California Association of 4 Wheel Drive Clubs, Inc. Partnership For Johnson Valley 5004 Enfield Avenue Encino, California 91316 818-705-3930 bakerhab@aol.com During the initial planning process the Marines chose to avoid Congressionally Designated Wilderness areas as prospective expansion opportunities. The screening criteria set forth on page 2-12 of the DEIS, Alternatives Analysis Screening Criteria, predetermines a course of action, which precludes consideration of expansion to the East and Southeast study areas. The Marine Corps must reevaluate all potential sites for expansion without the use of this pre-decisional criteria. All public lands must be considered without prejudice.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Ladies and Gentlemen of the Marines, You need to look for land east of the base. Johnson Valley has been set aside for recreational use. My family and I have been using Johnson Valley to get away from urban life

for 30 years, and my grandsons and granddaughters are just now learning to ride motorcycles there. Trying to pack the huge number of people that use Johnson Valley into a quarter of the land will turn the area into a zoo. I would probably consider some type of dual use, where the Marines could reserve the area at times, as long as you do the same thing we do: Pack it in, pack it out. The land was set aside for recreation use. Leave it that way.  
Steve Hanel

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Please accept the following as official comments on the Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment at Marines Corps Air Ground Combat Center Twentynine Palms, CA to prepare an Environmental Impact Statement (EIS) for a new planning rule, on behalf of the California Off-Road Vehicle Association (CORVA), it's members and members clubs. These comments shall in no way prevent other members or representatives of CORVA from submitting additional comments, that shall also become part of the public record. The California Off-Road Vehicle Association (CORVA) represents thousands off Outdoor Recreation Enthusiasts who enjoy venturing into our public lands to pursue a wide variety of interests. It's critical for the Marine Corps, while proposing to withdraw thousand and thousands of acres from public purview, to recognize that Americans use many types of off-highway vehicles on public lands to access recreational pursuits, hunting, mineral collection, as well as taking time with their children and families to enjoy the beauty our country has to offer. This proposal must be subject to the strictest scrutiny, which should not be misinterpreted as a lack of support for our country's military. CORVA as an organization, along with our

thousands of members, support the Marine Corps in their mission to protect our country and its citizens. But any proposed prohibitions or limitations on recreational access must be evaluated as to the effect on the health and well-being of members of the public at large and our members. We find that this analysis fails to evaluate the human aspect of the environment, or the consequences of the proposed changes to the desert environment. The National Environmental Policy Act encourages public input; it requires agencies to "Make diligent efforts to involve the public in preparing and implementing their NEPA procedures" 1 CORVA contends that the Marine Corps did not follow the letter and intent of the law in the preparation and release of the Draft Environmental Impact Statement (DEIS). The release of the document was not correctly noticed in the Federal Register, the due date was incorrectly stated, and on all the public documents available on the project website, the mailing address was unavailable to the public. Certainly NEPA never intended that the mailing address for submitting public comments should be hidden from the public. According to regulation 40 CFR 1500.2(d); "(d) Encourage and facilitate public involvement in decisions which affect the quality of the human environment." 2. The Marine Corps, in the subsequent actions after the release of this document did not comply with NEPA regulations, did not encourage and facilitate public involvement, therefore this document and the public comment period have been irrevocably tainted by this violation.

**Date Comment Received** 5/26/2011

**Response**

Thank you for your comment. EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS). Please see

Chapter 4 of the EIS for further information on the expected impacts on both the human and desert environment.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

| <b>Comment</b>    | Comment #1: Marine Corps fails to establish Purpose and Need At the May 25th, 2011 meeting of the OHMVR Commission, representatives of the Marine Corps, including Project Manager Chris Proudfoot, stated to the commissioners and members of the public present, that the entire need for the proposed expansion into the Johnson Valley OHV area could be succinctly summed up in one word "Safety". Yet in the DEIS, under the Purpose and Need in the Executive Summary, the word "safety" is not mentioned once. Instead, the Purpose and Need as defined on page ES-1 describes a scenario wherein the Marines must fulfill 'Marine Corps Strategy 21', a strategy paper released on November 3, 2000. In that paper, Marine Expeditionary Brigades (MEB) are described as; "...our premier response force for smaller-scale [emph.ad.] contingencies that are so prevalent in today's security environment" . This document describes both a Marine Corps already trained as one of the finest fighting forces in the world, ready to operate at a moment's notice, and a Service working to "...evolve our warfighting concepts to enhance our ability to participate as partner in joint and allied concept development..." and "...enhance capabilities to operate in urban and austere environments ...". Words |

like "interoperability", "coalition" and "allied forces" are used often to illustrate the need to work together with the other Services to enhance responsiveness to military emergencies. But that course of action, training to the needs of smaller scale contingencies, is not mentioned in the DEIS, because this would be inconsistent with the proposed expansion of the current base. The proposed expansion will not fulfill the need to partner with other Services, and an expansion of training area will not serve to enhance coalitions, amphibious response, or a number of other military strategies as outlined in this report. Marine Corps Strategy 21 also talks about the need to "...capitalize on innovation, experimentation and technology..." as a critical part of future training. These points are all inconsistent with the Purpose and Need as stated in the DEIS, and do not support the expansion into the Johnson Valley OHV Area. This presents a fatal flaw in this document, without a provable Purpose and Need the document fails to establish the reasoning behind the displacement of the large amount of the public who enjoy the Johnson Valley OHV Area, for which there is no other comparable option, and the detriment to the quality of life of the local valley residents. The Marines have chosen certain elements of the aforementioned strategy paper, while ignoring other components of that paper, and have not established a valid Purpose and Need, therefore this project must be withdrawn. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Response**

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Comment ID</b> | 2334                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Last Name</b>  | Granat                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>First Name</b> | Amy                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Comment</b>    | Comment #2: The Marine Corps have failed to consider reasonable alternatives, including the No Action Alternative. It is well known that this project has been considered since 2002, yet the Marines have failed to consider new information that has been released since that time. Per CEQ the DEIS ; "...all reasonable alternatives, which must be rigorously explored and objectively evaluated..." Cooperating with the U. S. Army, and co-use of the area already occupied by Fort Irwin would give the Marines a chance to partner with another arm of the Service, and work on 'joint and allied concept development', )as required by Marine Strategy Paper 21) yet that alternative, which would be consistent with the No Action Alternative (as required by NEPA) was not seriously considered in the DEIS. In fact there is no mention of the No-Action Alternative in the document as far as the analysis, nor has there been any representation of the No- Action Alternative, to the public or at public meetings. The No-Action Alternative as defined by CEQ is;"...involving federal decisions on proposals for |

projects. "No action" in such cases would mean the proposed activity would not take place, and the resulting environmental effects from taking no action would be compared with the effects of permitting the proposed activity or an alternative activity to go forward." 2 There has been no serious consideration that the proposed action is not warranted given new facts that have emerged, and no serious discussion has ever been undertaken with the Marines that have allowed that possibility, as suggested by the public many times, to move forward. CORVA finds this a violation in letter and spirit of the NEPA and the public trust. As written by the CEQ; "...it is difficult to think of a situation where it would not be appropriate to address a "no action" alternative. Accordingly, the regulations require the analysis of the no action alternative even if the agency is under a court order or legislative command to act". There is no excuse for the non-existence and non-consideration of the No-Action Alternative, and as this is a serious flaw in the document, the Marines must re-examine the alternative by issuing a supplemental document. If there is no supplemental document released, the Marines must insert a statement into the Final Environmental Impact Statement confirming the fact that they have been asked to review the project and consider the No Action Alternative, but they have failed to take this alternative into consideration.

**Date Comment Received** 5/26/2011

**Response**

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS. The EIS does consider and analyze the No Action

Alternative, for each subject area. Under the No Action Alternative there would be no land acquisition and conditions as outlined in Chapter 3 of the EIS would, in general, be expected to continue into the future.

**Comment** Comment #3: The Marine Corps have failed to consider current training strategies. Strategies in training have advanced since 2002, the initiation of consideration of the proposed expansion, and the current date. During the presentation at the May 25th OHMVR Commission meeting in Ontario, Project Manager Chris Proudfoot was asked about the fiscal responsibility needed to be considered by the Marines as it pertains to the proposed expansion. Mr Proudfoot answered that he had no need to consider any fiscal measures as concerns the proposed expansion. But the commanding general of the Marine Corps Combat Development Command, Lt. Gen. George J. Flynn, recently spoke to the media about his serious concerns of fiscal difficulties facing the Marines. According to an article on the Marine website; "...Flynn discussed how the re-shaping of the Marine Corps reflects our historic role as the nation's crisis response force and provides unique capabilities to the joint force in terms readiness, adaptability, flexibility and utility at an affordable cost."1 Clearly Lt. Gen. Flynn recognizes the need for fiscal responsibility and is calling for a reduction in ground combat forces including infantry, cannon artillery battalions, and armor. Lt. Gen. Flynn furthermore calls for the 'maritime soul' of the Marine Corps to be preserved. As the Johnson Valley OHV area is in the middle of the desert, and maritime activities would be exceedingly difficult. In reading the other comments by Lt. Gen. Flynn, there has been a recommendation by the Marine Corps Force Structure Review that there is a need for reduction in force structure considering the fiscally constrained, post-Operation Enduring Freedom-Afghanistan environment. While it is clear that Lt. Gen. Flynn understand the conditions existing circa 2002 are not mirrored in 2011 and beyond, there is no evidence in this document that these concerns are noted. The plans to expand the 29Palms Marine base do not take into account current strategies indicated by their own commanders, no do they take into account current fiscal conditions. The proposed expansion counters the statements of Secretary of Defense Robert Gates, when he was quoted as saying that the country does not need another land army, but forces that can deploy quickly and sustain themselves for a short period of time. Nothing in this document takes these new strategies into account, and appears that the very leaders the Marine Corps depend upon for guidance have issued a clear mandate that counters the need for the proposed

expansion into the Johnson Valley OHV Area. Because current wartime strategies clearly illustrate that this expansion is not needed, this document must be withdrawn and this proposed expansion abandoned.

**Response**

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment #4: The Marines Corps failed to analyze all cumulative impacts. Inconsidering cumulative impacts, the Marine Corps failed to consider the impact from displaced off-highway vehicle recreational use on other areas in California as part of the needed analysis. As stated in section 5.3 in the DEIS; "Reasonably foreseeable future actions that may have impacts additive to the effects of the proposed action are also analyzed." It is reasonable to consider that those who already own off-road vehicles, and those that enjoy off-road recreation, will continue to enjoy these activities, but the significant effects to other areas because of the displacement of off-road recreation are not analyzed nor considered. This presents a fatal flaw in the document. As opposed to other analyses, which may be locally based, this analysis must spread out to the other OHV areas around Southern California to determine if those areas can absorb the thousands of additional recreation enthusiasts that will visit after the Johnson Valley OHV Area is substantially closed. The impact on Ocotillo Wells State Vehicular Recreation Area, El Mirage and Jawbone OHV Areas, and San Bernardino National Forest, to name a few areas that will be affected, have not been even identified as having potential impacts due to displaced recreation, yet it would be unreasonable to consider that they would not see a considerable increase in use. The safety and environmental impacts directly caused by the overcrowding that will definitely result from this proposed action are as yet unknown. With the preferred alternative, alternative 6, approximately two-thirds of the existing recreation area will be closed to all access, with arrangements for public access for the other one-third of Johnson Valley to be open on a permitted basis part of the year. The proposed permit process is unreasonable and untenable, it will require all visitors to obtain permits available off-site of the OHV area, prohibiting spontaneous use. Therefore any chance of continued use of the remaining area, when it is available to the public, will be considerably impaired. This DEIS represents an incomplete analysis of both the existing recreational use of Johnson Valley, and the effects of the displacement of recreational use at the Johnson Valley OHV Area. Because this analysis is incomplete, if this project is to continue, a supplemental analysis must be completed to correctly determine the true effects of the proposed action. If this is not undertaken, please state in the Final EIS that the effects of displaced recreation have not been completely analyzed, and may cause considerable difficulty and environmental harm to the remaining OHV areas.

**Response**

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The

analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding impacts from displaced legal OHV use and the potential for illegal OHV use has been added to Section 4.2.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Comment #5: The Marines Corps failed to analyze all cultural heritage. Thousands of recreation enthusiasts currently visit Johnson Valley every year as they have done for over 60 years. Races of various types are a cultural heritage, yet they have not been identified as such in the DEIS. California State Office of Historic Preservation recognizes that historical events that shape the distinctive character of areas are eligible for listing in the California Register of Historical Resources. The longevity and history of California off-road racing is inextricably tied to the Johnson Valley OHV Area, and has significantly contributed to the make-up of the surrounding desert communities. The loss of this cultural treasure has not be analyzed in the DEIS, and the complete destruction of this cultural activity has not been considered. This is a fatal omission from the DEIS, therefore the document must be withdrawn. If the Marines do not reconsider the inappropriateness of the expansion into the Johnson Valley OHV Area, a supplemental DEIS must be prepared that directly analyzes that cultural loss that will result from the proposed action.

**Response** Historic Preservation is covered under Section 106 of the National Historic Preservation Act. Identification and evaluation of Historic Properties covers the first step in the Section 106 process. Historic Property means "any prehistoric or historic district, site, building, structure or object included in or eligible for inclusion in, the National Register of Historic Places" [16 U.S.C.470w(5)]. The five types of properties eligible for the National Register of Historic Places are: 1. Buildings; 2. Structures; 3. Sites (archeological sites, either historic or prehistoric); 4. Districts, and 5. Objects. The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, material workmanship, feeling and association. Races are important to the OHV community, but they do not meet the criteria of being considered historic properties. They are not unique, are not associated with events that have made a significant contribution to the broad patterns of our history; are not associated with the lives of persons significant in our past; do not embody the distinctive characteristics of a type, period or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; nor have they yielded or are likely to yield information important in prehistory or history [36 CFR 60.4].

**Comment** (Part 1 of Comment Letter - Clayton Miller) May 25, 2011 Via Email Naval Facilities Engineering Command, Southwest ATTN: Twentynine Palms EIS Project Manager 1220 Pacific Highway San Diego, California 92132- 5190 Re: Draft Environmental Impact Statement on Proposed Twentynine Palms Marine Base Expansion Dear Project Manager: I appreciate the opportunity to provide comments on the Draft Environmental Impact Statement (DEIS) for the Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training dated February 2011. I recognize the extensive amount of work and effort behind the preparation of the document. However, the DEIS contains a serious flaw that must be addressed and corrected before the analysis can be finalized. Screening Criteria is Flawed The DEIS describes that the Screening Criteria and alternatives used to systematically identify the range of reasonable alternatives carried forward for analysis were ratified by the project's Executive Steering Committee, which was comprised of Marine Corps leadership. The objective and threshold training requirements and generic MEB Exercise training template described in the DEIS directly

influenced the development and application of the screening criteria, which were used to identify and evaluate potential alternatives for the proposed action. To be considered a viable and reasonable alternative according to the screening committee, any land acquisition and airspace modification/establishment scenario must satisfy all of the established conditions (at least to a threshold level where appropriate). There are 8 screening criteria listed, and criteria number 5 specifies that the EIS will "Avoid congressionally-designated wilderness areas, parks, wildlife refuges designated critical habitat for threatened or endangered species, cities/towns, and interstate highways." The DEIS however does not provide an explanation or justification as to why the decision of the Executive Steering Committee (i.e. Marine Corps) to avoid congressionally-designated wilderness areas was established as a planning criteria. It simply states this determination, and this decision significantly influences and serves as the foundation for the development of the alternatives evaluated in the DEIS. At the same time, the screening criteria fails to include a condition to avoid areas in which congressional action will be required to remove from public use large portions of a federally managed Off-highway Vehicle Area (Johnson Valley OHV Area). No explanation or justification is given for this decision either. As a result, Alternatives 1, 2, 4, 5 and 6 were developed and include expansion scenarios into the Johnson Valley OHV Area.

**Comment** (Part 2 of Comment Letter - Clayton Miller) It would appear that screening criteria 5 is based on a political calculation of the Executive Steering Committee that the potential re-designation and withdrawal from public use of one type of land use (wilderness)(endnote 1) is not acceptable while the re-designation and withdrawal of another land use type is (a unique federally managed OHV area)(endnote 2). The withdrawal of federal lands from public use are decisions for Congress to ultimately make, not a federal department. Therefore, to examine a full range of potential alternatives for base expansion, the DEIS needs to be modified to include Screening Criteria for analysis that 1) also considers a withdrawal of a portion of a wilderness area(s) or 2) also removes from consideration any areas upon which future congressional action is required for the withdrawal of a significant portion

of federally managed OHV areas. Either of these approaches would level the playing field and treat each potential withdrawal equally, and thus allow a thorough review of the potential environmental impacts of the proposed project that is not pre-decisional or prejudiced. To do otherwise is neither reasonable nor appropriate. Preferred Alternative 6 states "Access to and use of approximately 56% of the Johnson Valley OHV Area would be lost. This resource is unique to the region."(endnote 3) On the other hand, there are 3,878,113 acres of wilderness in California under BLM jurisdiction. Regionally, there are only 380,753 acres of BLM OHV Areas, representing approximately 62% of total BLM OHV Areas in the state. The loss of public access to Johnson Valley would be significant. Under Alternative 1, the loss of OHV acreage regionally available would be 47%; Alternative 2, 30%; Alternative 3, no loss; Alternative 4, 47%; Alternative 5, 47% and Alternative 6, 29%. Screening Criteria number 5 points the DEIS in a direction that will result in significant and adverse impacts and prevents other possible planning alternatives potentially much less so from moving forward. To correct this, the DEIS must address the flaw in the Screening Criteria described above. The public will benefit from review of additional alternatives as will the region and local communities that would be most affected by a base expansion. Thank you for your attention and consideration. Respectfully, Clayton Miller 1059 Amador Street Claremont, CA 91711 (909) 815-3780

**Comment** The draft EIS does nothing to fundamentally address issues around quality of life, cultural and social needs, air quality, effects on groundwater, native plants, animal species and noise nuisance for the residents of the 'Southern' aspect of the plan (or for anyone else for that matter). Most of the EIS topics stem from a somewhat slanted or misinformed view of what is important and many issues are glossed over as having little or no impact 'cos we say so'; 65 decibels for live fire and low flying aircraft really? Many residents moved to this area for the very qualities that will be lost in most alternative plans. What are the effects on a community (Twenty nine Palms) already suffering from an inability to form a viable and thriving downtown for residents and tourists other than a wasteland of tattoo

establishments, massage parlors and sketchy 'nightclubs'? Why isn't the impact on downtown 29 studied? There's a lot of noise about OHV constituents and their needs what about the needs of the Twenty nine Palms and Wonder Valley inhabitants or aren't they viable stakeholders? Not enough attention has been paid to the impact on environmental tourism, a very real option to ease the fiscal depression of this area. Where in this study is the impact on air quality of various munitions and wind drift? Where in this study are the plans for ongoing monitoring of adverse affects on the aforementioned? Who will enforce limits on noise or out of scheduled maneuvers activity, low flying aircraft, noise levels etc... the marines? Where is an independent voice? all the information is gathered by the military, assessed by the military and supposedly solved by the military, why no independent biological, social and cultural impact assessment? This (unfortunately) is not a convincing EIS this is a poster for a snow job and bureaucratic mumbo jumbo, there are no independent voices here only the soothing voices of the military. This is not a rant against the men and women of the armed forces, this about a sloppy and incredulous study and an affront to intelligent people who are expected to swallow it because supposedly they live in the middle of 'nowhere'.

**Date Comment Received** 5/26/2011

**Response** The Marine Corps appreciates your comment and involvement in the NEPA process. The Marine Corps has proactively reached out to interested stakeholders (including residents of Twentynine Palms and Wonder Valley) to ensure that their concerns were identified. Section 1.5 of the EIS includes an overview of the Environmental Review Process and includes Cooperating Agencies (BLM and FAA) for the preparation of the EIS, and the consultation and Coordination process with other federal and state agencies (U.S. Fish and Wildlife Service, State Historic Preservation Office, California Department of Fish and Game, Mojave Desert Air Quality Management District). The Marine Corps is committed to protection of the public and the environment and would continue to comply with all applicable federal, state, and local laws and regulations.

**Comment** (Part 3 - Comment Letter submitted by Clayton Miller) (endnote 1) The BLM is responsible for 85 wilderness areas in California that total 3,878,113 acres. See [http://www.blm.gov/ca/pa/wilderness/wa/wa\\_list.html](http://www.blm.gov/ca/pa/wilderness/wa/wa_list.html) (endnote 2)

Johnson Valley is the largest BLM managed OHV in California. Table 4.2-2 illustrates this point. Further information about BLM managed OHV Areas in California can also be found here. [http://www.blm.gov/wo/st/en/prog/blm\\_special\\_areas/NLCS/summary\\_tables.html](http://www.blm.gov/wo/st/en/prog/blm_special_areas/NLCS/summary_tables.html) Table 4.2-2. **Comment** I support the "no action" Alternative as the draft eir does not propose to replace the recreation land lost through this land acquisition especially those lands that are designated for off highway vehicle recreation.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**Comment ID** 2343

**Last Name** Name Withheld by Request

**First Name**

**Comment** I am opposed to the expansion of the Marine Corps Air Ground Combat Center.

**Date Comment Received** 5/26/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final

decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Re: Draft ENVIRONMENTAL IMPACT STATEMENT- Land Acquisition  
and Airspace Establishment To Support Large-Scale MAGTF  
Live-Fire and Maneuver Training at the Marine Corps Air  
Ground Combat Center, Twentynine Palms, CA

Product Manager:

**PLEASE TAKE NOTICE:** the Partnership for Johnson Valley  
("PFJV"), a division of the California Trail Users  
Coalition ("CTUC")<sup>1</sup> hereby submit its comments to the above  
referenced Draft Environmental Impact Statement ("DEIS") via  
Notice included on pages 10583-10584 of the **Federal**  
**Register**, Volume 76, Number 38 (Friday, February 25, 2011).

---

<sup>1</sup> The mission statement of the PFJV is *Our Mission is to unite the many people  
who enjoy the diverse activities available in the multiple-access area of  
Johnson Valley.*

*Our charter is to promote responsible recreation and the use of desert  
resources through conservation and education. The goal of the Partnership is  
to ensure public open access to the area in the present, and for the future  
generations who live, work, and recreate in Johnson Valley.*

Comment ID: 2344 (Page 2 of 9)

Response to Comment 2344(Page 2 of 9):

29 Palms EIS Project Manager  
Draft EIS – USMC 29Palms Proposed Expansion  
May 26, 2011

Said Notice was amended on Friday, May 13, 2011 in the *Federal Register*.<sup>2</sup>

The PFVJ comments are authorized under the National Environmental Policy Act, 42 United States Code (“USC”) § 4321-4347 as implemented by the Presidents Council on Environmental Quality at Title 40 of the Code of Federal Regulations (“CFR”) § 1503.1(a)(4)

As provided for by NEPA, we request our comments to be included in the Project File and all comments be addressed in the Final EIS.

I. DEIS Format Errors

The DEIS “cover sheet” does not follow the NEPA Regulations with regard to format. The Abstract is to be one paragraph and contains four paragraphs. See 40 CFR § 1502.11(e)

The cover sheet also fails to provide “the date by which comments must be received.” See 40 CFR § 1502.11 (f)

Further, the DEIS fails to provide an address to where the public can send their comments. Only when one reads the Frequently Asked Questions portion of the USMC 29 Palms web site does the reviewer find a place to send its comments.

Since indeed the DEIS is the only document that the public is entitled to provide comments to, the omission in the DEIS of a place to send comments to is a fatal error.

Such basic defects cause the document to become difficult to follow and deficient from potential legal challenges.

The DEIS should be withdrawn, corrected, and resubmitted to the public for review and comment.

II. Public Notice

We discovered that the *Federal Register* (Friday, February 25, 2011) Notice of Availability of this Statement provides that the public comment period ended April 11, 2011. The said Notice is in conflict with Press-Release No: PR-

NEPA-1

NEPA-2

NEPA-3

**NEPA-1:** Thank you for your comment. The Final EIS will have a cover sheet that follows the CEQ requirements in 40 CFR 1502.11. As for the abstract, a document of this size justifies more than one paragraph.

**NEPA-2:** The Marine Corps notified Federal, state, and local agencies, Tribal representatives, interested organizations, and the public of the availability of the Draft EIS, the public comment period, and the methods by which to submit comments. In accordance with CEQ regulations at 40 CFR 1506.6, the Marine Corps has made diligent effort to notify the public of the Draft EIS and public comment period, including mailings to persons and organizations with a known interest in the proposed action (including the PFJV), news releases, and public meetings. The Marine Corps has accepted public comments through several ways, including through the project web site, mail (at both the NAVFACSW and Combat Center addresses), and at the public meetings. The Marine Corps received 21,583 comments on the Draft EIS.

<sup>2</sup> See page 28029, *Federal Register*, Volume 76, Number 93, (Friday, May 13, 2011)

Comment ID: 2344 (Page 3 of 9)

29 Palms EIS Project Manager  
Draft EIS – USMC 29Palms Proposed Expansion  
May 26, 2011

110224NMI as it provides for the comment period ending May 26, 2011.

The issue cited above, is now compounded by fact that the USMC has submitted to a second Notice published in the **Federal Register**:

*EIS No. 20110051, Draft EIS, USN, CA, Marine Corps Air Ground Combat Center Project, Land Acquisition and Airspace Establishment to Support Large-Scale MAGTF Live-Fire and Maneuver Training Facility, San Bernardino County, CA, Comment Period Ends: 05/26/2011, Contact: Chris Proudfoot 760 830 3764.*

*Revision of FR Notice Published 02/24/2011: Extending Comment Period from 04/11/2011 to 05/26/2011.*

Of particular concern to the Partnership is the provision of "Extending Comment Period". It is our assertion that the USMC has published this later Notice as a correction rather than an extension.

Moreover, as of the writing of these comments, the USMC web site for the expansion does not include the Revision Notice, nor a press release, of the revised Notice published in the Federal Register on Friday, May 13, 2011.

Since indeed the **Federal Register** Notice is the only legal Notice of the USMC's intent of this document, the public is now confused and may have not submitted comments after this April due date.

The Partnership asserts that as a part of the process of NEPA, Marine Corps 29 Palms is in error in that:

- Committed an error regarding providing accurate information as to where the public is to send its comments to the DEIS.
- When preparing its website and public documents for the Twentynine Palms Marine Base proposed expansion, the Marines neglected to give the correct mailing address for public comments on the home page of the website, and it is missing from all the public documents including:
  1. The Project Briefing Paper
  2. The Project Overview

NEPA-3

Response to Comment 2344(Page 3 of 9):

**NEPA-3:** The Marine Corps filed the Draft EIS with the U.S. Environmental Protection Agency (EPA) Office of Federal Activities in accordance with 40 CFR 1506.9, and EPA's EIS filing guidelines. EPA publishes the Notice of Availability in the Federal Register and initially calculated the public comment period based on the minimum 45-day comment period. EPA also filed the subsequent revision to the Federal Register Notice.

The Marine Corps appropriately notified agencies, interested organizations, and the public of the Draft EIS availability, the 90-day public comment period (twice the minimum), date public comments were due, and methods to submit comments. The Marine Corps informed the public through mailings, notices in local newspapers, news releases, and website postings. The Marine Corps also published a notice of the public meetings and public comment period in the Federal Register on March 1, 2011 (see 76 FR 11216).

Comment ID: 2344 (Page 4 of 9)

Response to Comment 2344 (Page 4 of 9):

29 Palms EIS Project Manager  
 Draft EIS – USMC 29Palms Proposed Expansion  
 May 26, 2011

- 3. The Public Info Brief
- 4. The Tri-fold Brochure
- 5. The Frequently Asked Questions (FAQ)
- 6. The Contact
- 7. The Public Comment Link on the homepage
- Instead, the contact information is given only for the project office on the USMC 29Palms Marine Base. The Project Manager, Mr. Chris Proudfoot, has been made aware of this problem, and has not responded to requests for an extension of time to submit comments; and an investigation to find out how many public comments have been sent to the wrong address; what has been done with those comments; and what can be done to rectify a mistake that has existed since the release of the Draft Environmental Impact Statement.
- NEPA requires and encourages public comment, and the Marines have not given the public the information needed to send in their comments.
- Even the Cover Sheet required under NEPA for the DEIS contains the inaccurate address cited above.
- While indeed the USMC amended the first **Federal Register** Notice on May 13, 2011 to provide the correct date comments were due, the Notice did not admit the error. Instead, the USMC provided as rationale for the amended Notice that they were "Extending Comment Period from 04/11/2011 to 05/26/2011". It is clear that there was indeed an error and the USMC is not accurate to the public about the error.

NEPA-3

**NEPA-4:** Table 3.1-1 provides the acreage, use, and constraints on Combat Center ranges. Appendix B provides further background information on the ranges. For example, the Acorn Training Area (17,463 acres), the Sandhill Training Area (16,786 acres), and the West Training Area (10,621 acres) do not support live-fire training.

As discussed in Section 1.4.3, several constraints (not just resource conservation) limit mechanized live fire and maneuver training on almost 60% of the Combat Center. These constraints include steep topography, dry lake beds that become impassable when wet, volcanic rock outcrop areas, groundwater/aquifer recharge zones, sensitive plant communities, special status fauna, ecological sites, cultural resource sites, and other areas designated for controlled access and no live fires due to operational restrictions and safety requirements. These areas are classified as "No-Go" and "Caution" areas in terms of vehicle mobility for training.

**III. Purpose and Need**

(a) The DEIS fails to disclose the existing acreage or square miles of "resource conservation or other reasons" that drive the statement of rationale to not use the property on the present 29 Palms facility for exercises envisioned in this document. See 1.3.2, Page 1-8.

NEPA-4

We have reviewed appendix B for the restrictions cited in 1.4.3 and cannot find any reference to the "biological and cultural resources" in the existing facility that preclude

The Combat Center has a high range utilization where each range is currently fully scheduled.

Comment ID: 2344 (Page 5 of 9)

29 Palms EIS Project Manager  
Draft EIS – USMC 29Palms Proposed Expansion  
May 26, 2011

utilization of these areas for the maneuvers envisioned in the DEIS.

Without this vital information, the reviewer is left with an incomplete picture of existing land use designations. In turn, the reviewer cannot properly assess the need for expansion when they are not made aware of the existing facility use.

The DEIS should be revised to give the reviewer an adequate understanding of the existing management of the facility.

(b) The “background” discussion (pg 1-8 of Section 1.3.2) provides that the Combat Center, even with the proposed expansion, does not meet the MEB training requirements as it does not “... does not provide littoral sea space”.

This admission, in of it self, is telling considering that the USMC finds that this proposed project will not accomplish its own training requirements.

Thus the public is left with a question as to why this project is moving forward.

The DEIS under this section begs to be further explain why the USMC desires to move forward given the circumstances cited above.

(c) The “Current Training Areas and Assets” (pg 1-16 of Section 1.4.3) provides the Combat Center has existing “environmental conservation areas”. The reviewer of the DEIS is directed at page 1-12 to refer to Appendix B for “... a more detailed description” of these areas.

We have reviewed the Appendix cited above for such information and cannot find where and the size of, such conservation areas.

The DEIS fails to disclose to the public this vital information so that the reviewer has an understanding that the Purpose and Need of this DEIS is on solid foundation.

The DEIS should be revised to reflect (without sending the reviewer to another document) this information.

NEPA-4

NEPA-5

NEPA-6

Response to Comment 2344(Page 5 of 9):

**NEPA-5:**

As explained on page 1-8, there is no place in the United States that meets the ideal sea, air, and land range requirements for MEB-size live-fire and maneuver training. An expanded Combat Center comes closest to meeting the ideal air and land range requirements and does meet the threshold MEB training requirements described on page 2-4.

**NEPA-6:** Environmental conservation areas refers to protected sites such as groundwater/aquifer recharge zones, with sensitive plant communities, special status fauna, ecological sites, and cultural resource sites. These areas are discussed in EIS Section 3.10 and in the Combat Center’s 2007 Integrated Natural Resources Management Plan (INRMP). Specifically, conservation areas for the Desert Tortoise are discussed on pages 3.10-22 to 3.10-26. The INRMP details the Combat Center’s natural resources management program which is designed to conserve natural resources and outlines measures needed to comply with environmental laws and regulations. The INRMP helps ensure that natural resources conservation measures and Marine Corps activities on mission land are integrated and consistent with federal stewardship requirements. The INRMP and other pertinent documents are incorporated into the EIS by reference in accordance with 40 CFR 1502.21, and are available electronically on the Internet at [www.marines.mil/unit/logistics/Documents/LFL/LFL-1/NaturalResources/Plans/MCAGCCTwentyninePalms/29Palms\\_INRMP-07.pdf.pdf](http://www.marines.mil/unit/logistics/Documents/LFL/LFL-1/NaturalResources/Plans/MCAGCCTwentyninePalms/29Palms_INRMP-07.pdf.pdf).

Comment ID: 2344 (Page 6 of 9)

Response to Comment 2344(Page 6 of 9):

29 Palms EIS Project Manager  
Draft EIS – USMC 29Palms Proposed Expansion  
May 26, 2011

(d) The "Results of Scoping" section related to the "screening criteria" (pg. 1-36 of Section 1.5.2.4) is flawed in that it limited the range of alternatives proposed by the public (expansion to the east - including lands currently in the National Wilderness Preservation System) by an arbitrary decision by the Executive Steering Committee.

The DEIS is flawed in that it does not disclose when the criteria was developed and violates NEPA for failure to "Rigorously explore and objectively evaluate all reasonable alternatives" See 40 CFR § 1502.14 (a)

Given the above, this EIS is part of a legislative proposal, and such a decision by the Committee to preclude this option appears to be politically driven as opposed to the requirements under NEPA.

We cannot find anywhere in the DEIS a reasonable explanation nor rational of this decision by the Committee. No Congress is bound to any previous Act of another Congress. If this expansion proposal included this option as an alternative, the ultimate decision maker of the preferred alternative may decide to reject it. But to not include this option leave the reviewer lost as to why the Committee would not provide for the option and disclose it's rational for rejection.

NEPA requires the agency to: "include reasonable alternatives not within the jurisdiction of the lead agency." See 40 CFR § 1502.14(c)

Further, the DEIS for this project brings trepidation to the PFUV in that the same rejects a viable alternative. This approach of dismissing a viable alternative in the DEIS once again, appears out of sequence with the commands of NEPA<sup>3</sup>

It is the contention of the PFUV that the DEIS has unlawfully precluded an alternative brought forward by the public and this alternative should have been explored in

NEPA-7

**NEPA-7:** The Marine Corps appropriately evaluated a range of reasonable alternatives along with other alternatives which were eliminated from detailed study. Reasonable alternatives include those that are practical or feasible from the technical and economic standpoint. The Marine Corps does not consider an alternative that involves Congressionally-designated wilderness areas, parks, wildlife refuges, designated critical habitat for threatened or endangered species, cities/towns, and interstate highways to be reasonable from a technical and economic standpoint, and were not studied in detail in the EIS.

<sup>3</sup> Until an agency issues a record of decision as provided in section 1505.2 (except as provided in paragraph (c) of this section, no action concerning the proposal shall be taken which would: (2) Limit the choice of reasonable alternatives. See 40 CFR Part 1506.1(a)

Comment ID: 2344 (Page 7 of 9)

Response to Comment 2344 (Page 7 of 9):

29 Palms EIS Project Manager  
Draft EIS – USMC 29Palms Proposed Expansion  
May 26, 2011

the DEIS. Thus, the DEIS fails under the “Hard Look Doctrine” established by the Court.

As such, the Supplemental DEIS must be developed and circulated to the public for review and comment.

(e) The DEIS additionally has a fatal flaw as it fails to accurately disclose vital information so that the public might be able to comment.

This Draft EIS was prepared in compliance with NEPA of 1969 (42 USC §§ 4321-4370h); and the CEQ Regulations for Implementing the Procedural Provisions of NEPA (40 CFR Parts 1500-1508)...

... Concurrently, a Notice of Availability of the Draft EIS was announced in the *Federal Register*, local newspapers, and on the project website (see Appendix C, *Public Involvement*). This notice indicates locations (e.g., public libraries) where the Draft EIS can be reviewed, the duration of the public review and comment period, the address where comments can be sent, and the time and location of the public meetings. The public meetings provide an opportunity for interested parties to comment on the content of the Draft EIS and form the basis for making subsequent changes in the Final EIS. [Emph. Added]

There can be no dispute as the record is very clear. The Notice of Availability included on pages 10583-10584 of the *Federal Register*, Volume 76, Number 38 (Friday, February 25, 2011) does not “indicate” any of the emphasized provisions of the Notice

Considering such a serious breach of vital information that is inaccurately portrayed in the DEIS, the Partnership finds it in the public interest to withdraw the DEIS and revise it to include information including providing a new Notice of Availability of this DEIS.

**IV. Conclusion**

For rationale cited above, the Partnership procedural errors that are not in keeping with NEPA and public notice requirements related to the same. As such, we require this DEIS to be withdrawn, corrections made, and re-submitted to the public for its comments.

We wish to be provided to the above address, for the Partnership, to be informed of any future documents related to this expansion proposal. This includes, but is not limited to: a supplemental DEIS, any Final DEIS, and any related Record of Decision.

NEPA-7

NEPA-8

GEN-1

**NEPA-8:** The excerpt of the EIS refers to the Federal Register Notice filed by the Marine Corps on March 1, 2011 (see 76 FR 11216). The Marine Corps appropriately notified agencies, interested organizations (including the PFJV), and the public of the Draft EIS availability, the 90-day public comment period, and methods to submit comments through mailings, notices in local newspapers, news releases, and website postings. The Marine Corps received 21,583 comments on the Draft EIS.

**GEN-1:** Thank you for your comments. In accordance with CEQ regulations at 40 CFR 1506.6, the Marine Corps has made diligent effort to notify the public, including mailings to persons and organizations with a known interest in the proposed action, news releases, and public meetings. The Marine Corps has accepted public comments through several ways, including through the project web site, via fax, mail, and at the public meetings. The Partnership is already on the Marine Corps mailing list to receive a copy of project documents.

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

Since the size of the Draft Environmental Impact Statement means it requires a lot of time to study and assimilate; and since there are still stakeholders who are only now hearing of the expansion plans; and since there is confusion as to lack of correct information where to address public comments, calling into question the Marines' good-faith efforts to elicit those comments, **it is requested that the public comment period for the Draft EIS be extended at least another 60 days.**

This comment concerns the Desert Tortoise

The DEIS goes into great detail about special conservation measures now taken to help mitigate the loss of Desert Tortoises due to training and other activities on the Marine Air Ground Combat Center as it is today.

The Bureau of Land Management website states: *"The desert tortoise is listed by the U.S. Fish and Wildlife Service as a threatened species. Under the provisions of the Endangered Species Act (ESA), anyone who takes (the term "take" means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct) a tortoise is subject to civil and/or criminal penalties of up to a \$50,000 fine and one year in jail, or both. BLM assists the U.S. Fish and Wildlife Service in the enforcement of the Act. The desert tortoise is also considered by California to be a threatened species with associated penalties."*

The DEIS says the training of Marine and other personnel regarding the legal status of the tortoise would include the definition of "take" and associated penalties. However, the DEIS does not detail what penalties, if any, the Marine Corps have been paying.

Page 1 of 4  
Comment

Response to Comment 2345 (Page 1 of 4):

The Marine Corps holds an incidental take permit for the desert tortoise that addresses existing training activities on the Combat Center. The Marine Corps consulted with the USFWS and received a Biological Opinion and incidental take permit for the preferred alternative (see Appendix O in the Final EIS). These permits, which include numerous and extensive terms and conditions that the Marine Corps must adhere to, allow the Marine Corps to "take" tortoises up to a certain number per year, without paying additional penalties or fees.

The relocation referred to in the Special Conservation Measures pertains to simple movement of individual tortoises generally a few hundred feet to move them out of immediate harm (e.g., off of a road). However, as part of Endangered Species Act Section 7 consultation with the USFWS, the Marine Corps is developing a translocation plan that will provide more specifics on potential future efforts to relocate tortoises out of harm's way prior to training exercises. The Tortoise Research and Captive Rearing Site (TRACRS) referred to in your comment has had excellent success to date in hatching and rearing juvenile tortoises; however the program is still experimental and the first release of captive-reared tortoises occurred in 2011. It is too soon to evaluate the effectiveness of the program, but it has provided promising results to date.

The costs of implementing the special conservation measures is not relevant for a NEPA analysis. The Marine Corps will provide adequate funding to comply with all terms and conditions resulting from formal consultation with USFWS and other oversight agencies.

The Marine Corps has not identified specific times of year when MEB Exercises would occur, in order to provide maximum flexibility to commanders when designing exercises. The analysis of impacts in the Draft EIS therefore does not presume timing of

**Comment ID: 2345 (Page 2 of 4)**

A mine operator in Johnson Valley told us if he caused the death of a tortoise, he was subject to penalties of \$100,000. Each.

The DEIS indicates that plans are to explode more than a million rounds of munitions ground-to-ground and more than 1.5 million rounds air-to-ground during the various exercises each year. As it also clearly states that this will significantly impact the Desert Tortoise, it must also make clear what penalties will be paid, and who is to assess them. The BLM assists the U.S. Fish and Wildlife Service in the enforcement of the Endangered Species Act. The desert tortoise is also considered by California to be a threatened species with associated penalties. The DEIS must make clear if these will still apply in the military expansion areas.

The DEIS states that biologists authorized by the US Fish and Wildlife Service survey for tortoises before training and construction activities, and move the tortoises and eggs out of harm's way. The DEIS does not, however, state the survival rate of the tortoises who are relocated out of their established territories, whose burrows are dug up and whose eggs are moved. It also does not state the success rate of the current efforts by the Marines to protect the young tortoises until they are old enough to survive on their own. It also does not report on the success rate of similar rescue efforts carried out by other military installations and other organizations. The lack of information concerning relocation success, etc., calls into question the validity of even mentioning the current special conservation measures. It may be assumed they have some value other than lip service to the goal of preserving the Desert Tortoise, but the document must spell out that value, if informed judgements are to be made as to Base expansion plans.

The DEIS does not state the costs to the taxpayer of these special conservation measures, worthy though they may be. It does not state future costs for these special conservation measures if any of the expansion plans are put into place. The omissions must be corrected; and it must be made clear they were not in the draft document.

The BLM website also informs us: *"Like other reptiles, the desert tortoise is cold-blooded. To survive in the desert, the tortoise estivates (remains underground in its burrow) during the hottest times of the day during the summer and hibernates (sleeps underground in its burrow) during the cold of winter. Tortoises come out in the spring to eat grasses and wildflowers and drink water from the spring rains (although they obtain most of their water from the plants they eat). Also in spring, they socialize and look for mates. At other times of the year, they are less active above ground."*

The DEIS mentions the time of year when desert tortoises are active, but no mention can be found of the time of year that the twice-yearly training exercises will be held, or if any effort will be made to avoid the tortoise springtime emergence, during which time they are able to feed on the most nutritious plants in order to survive the desert heat and cold successfully for the rest of the year. The document is therefore incomplete, and must be modified to specify if training exercises will be concurrent with the emergence of the tortoise.

Page 2 of 4  
Comment

**Response to Comment 2345 (Page 2 of 4):**

exercises, and impacts to tortoises could occur at any time including during springtime emergence from brumation.

Uncertainty is inherent in estimates of population density, especially for cryptic species such as the desert tortoise that spend much of their lives underground. The surveys conducted to estimate tortoise density in the proposed acquisition areas represent the current "state of the art", were developed in coordination with the USFWS, and are the best available information on which to base estimates of density and quantitative impacts. Please refer to response to comment N-18713 BIO-2.

Please refer to response to comment N-18713 BIO-1 regarding noise and vibration impacts to the desert tortoise. The limited information that is available regarding responses of tortoises to noise and vibration (Bowles et al. 1999) suggests that they are not particularly sensitive to vibration from aircraft overflight and sonic booms, and return quickly to normal activities after disturbance. It is expected that noise and vibration would have adverse effects on some tortoises and would result in take. The Marine Corps consulted with the USFWS to identify mitigation required to offset the impacts of the proposed action on desert tortoises.

The Draft EIS does not state that cessation of public access under certain alternatives would wholly or even largely offset the impacts of the proposed military training. However, the impacts of OHVs on desert ecosystems has been well documented, and ceasing OHV activity on these lands would be a beneficial effect to biological resources. Please refer to response to comment N-00415 BIO-1 regarding relative impacts of OHV activity versus military training.

Comment ID: 2345 (Page 3 of 4)

Response to Comment 2345 (Page 3 of 4):

The DEIS states in no uncertain terms the harrowing truth, “Wheeled and tracked vehicles could crush tortoises during vehicle convoys, and in staging and assembly areas. Tortoises could also be crushed or buried as a result of temporary construction, excavation and earth-moving activities, temporary bivouacs, helicopter landings, and the movement of Marines on foot.”

What seems to be very uncertain however are the estimates of how many tortoises make their home currently in the various expansion areas under study. Previous biological studies are cited, some of which are contradictory, and estimates of Desert Tortoise “take” are wide ranging. “The wide range reported for potential take of desert tortoises is related to the uncertainty in estimating desert tortoise density.”

It also states, “This discrepancy may be due to actual differences in tortoise abundance between 2002 and 2008, differences in surveyor capability, or techniques employed.” Such maybe’s are not science and have no place in a document meant to guide opinion as to the merits of the Base expansion. If further studies are not undertaken to clarify this confusion, the Marines are remiss in submitting this document, and it cannot be construed as fulfilling NEPA requirements. Therefore the document is flawed.

For example: Table 4.10-2. “Estimated Take of Desert Tortoises from Military Training under the Six Action Alternatives” shows that for the Marines’ preferred Alternative 6, which includes the west study area (Johnson Valley), tortoise take ranges between a low of 154 to a high of 714, estimated over a 50-year project lifetime. The reader wondering what this means (154 per year? 154 per year average?) and how the numbers were arrived at, is referred to Appendix I of this already enormous document for methodology. As a basis for judgement on the military threat to an endangered species, this confusion and uncertainty are not acceptable. The DEIS must clarify, not only the tables, but the methodology without having to refer to an appendix. The preparers of the document must have an up-to-date and credible study to cite. Otherwise this flaw may well lead to the situation reported below concerning another recent EIS:

“**Solar threat**” (Riverside Press-Enterprise, 5/6/11)

Editorial: *“The discovery of far more desert tortoises than expected near a planned solar power plant in the Mojave Desert should prompt federal officials to rethink the project. And the incident should spur federal officials to require independent environmental studies before bulldozers roll on future solar projects. Last week, a U.S. Bureau of Land Management assessment found the \$2.1 billion BrightSource Energy Co. project near Primm, Nev., would disturb up to 3,000 tortoises and kill as many as 700 young ones. That far exceeds an estimate of 32 of the threatened species at the site...”*

For “bulldozers” read “tanks. If a similar underestimation of the tortoise population in the expansion areas has occurred in the studies the Marines are citing, the Marines’ DEIS does not address who will have oversight; whether the US Department of the Interior (DOI), the Bureau of Land Management (BLM), or the California Desert District can issue such a Temporary Suspension of Activities to the Department of the Navy, when and if the Bureau of Land Management no longer is managing the land.

Comment ID: 2345 (Page 4 of 4)

Response to Comment 2345 (Page 4 of 4):

Tortoises will be bombed, run over and their habitat destroyed. This would not be allowed to occur on such a scale anywhere else for any reason. The explosions are planned for two one-month training exercises each year. The DEIS admits, "Although it has not yet been demonstrated through experimentation, increased stress levels in desert tortoises that could result from noise, human presence and activity, or periodic decreased air quality during planned military training exercises, could result in higher susceptibility to diseases, particularly Upper Respiratory Tract Disease. Stress can also result in voiding of the bladder (MAGTF Training Command 2010b). Since desert tortoises store much of their water in their bladders, this can lead to an increase in the potential for dehydration (Jørgensen 1998)."

The DEIS does not mention what trauma the tortoises will experience underground from the noise, vibration or seismic waves created by use of possible deep penetration or other bombing and gunfire during the combat training exercises. The trauma may prevent the tortoise from mating or nesting and have a further deleterious impact on their dwindling population, but no one has studied this, and it would seem cruel to inflict this trauma for study purposes. Studies made after the fact of live-fire training will be counting effects on individuals already injured beyond remediation.

On Page 711 a statement concerning off road activity on the west study area reads in part, "Although closure of most of the Johnson Valley OHV Area under this alternative would provide a substantial positive offset to the new military activity..."

This implies that the impact on wildlife, including the Desert Tortoise, of any motorcycle, quad, four-wheel-drive truck or buggy is comparable to the impact of a 68-ton Abrams tank, which can travel easily over desert terrain at a top speed of 40 mph. Even the impact of great numbers of OHVs over many years has not and will not compare to the Abrams and other heavy military vehicles in Marine Expeditionary Brigade-sized numbers engaged in live-fire air-ground combat maneuvers for 24 days twice a year, as well as other smaller training activities the rest of the year. This implication may not be questioned by the reader who knows little about either OHV or ground army activities. Therefore it is misleading, and must be deleted. Any comparison in the EIS between OHV activities and combat training must be very clear as to the impacts not only of the heavy armored vehicles and trucks, but the literal impacts of bombs and cannon fire.

Thank you for your attention,

Betty Munson

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

Concerning the DEIS description of shared use of proposed expansion areas:

-Marine Expeditionary Brigade Exercises: 2 per year for 24 days each. Only non-dud producing ordnance in southern portion of west study area.  
-Restricted public access to southern portion of west study area (except for two 984 x 984-foot [300 x 300-meter] Company Objective areas) permitted approximately 10 months/year.

Three of the alternatives for expansion described in the DEIS include a Restricted Public Access Area (RPAA) to allow civilian recreational use to at least a remnant of the Johnson Valley Open Riding Area when military training activities are not being conducted.

The document states that “elements of many public comments (e.g., restricted public access when MEB Exercises are not occurring) have been incorporated into some alternatives carried forward for EIS analysis. Public comments influenced the development of the new Alternative 6. Similar to the Marine Corps’ intent with Alternatives 4 and 5 (formulated before scoping), the development of Alternative 6 is consistent with the public’s suggestion to: Allow for controlled periodic access for occasional public access and activities.”

It is difficult to believe that any member of the public who is used to free and open access to all of Johnson Valley actually used the words “controlled,” or “restricted.” “Periodic” might have been used to describe part-time access. “Restricted” also would have been understood to mean part-time access.

A RPAA is defined in the draft document as an area in which certain public uses may be permitted, subject to restrictions, institutional controls, and mitigating methods designed to provide for public safety.

Page 1 of 4  
Comment

**Response to Comment 2346 (Page 1 of 4):**

Thank you for your comment and input. The specific details on management of the RPAA in regards to permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

The Marine Corps understands the public’s concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM’s management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

**Comment ID: 2346 (Page 2 of 4)**

Already restrictions are multiplying far beyond the assumptions of the public, whose righteous indignation at being shut out of a recreational area set aside by the BLM in 1980, might have been reduced with the idea of shared use.

Being shut out of the area twice a year might seem reasonable, but:

“Access to and use of the area by the general public would only be authorized...when the land is not being utilized for training, and has been designated by the Commanding General as suitable for restricted activities to resume.”

“It is anticipated that the RPAA would be closed to the public twice yearly, for approximately 30 days each time. This would allow for required range preparation, execution of training, and range clearance and public access certification. These periods would be well advertised and published a minimum of 60 to 90 days in advance.”

This failure of the DEIS is, range clearance and certification by the Commanding General are only estimated to fall within the 30-day time period. Also, the DEIS does not address how any delays in certification would be advertised. Indeed, it is difficult to imagine how it would be possible to notify visitors, who could possibly already be en route, that unfortunately, for whatever reason, certification has been delayed (many visitors to Johnson Valley are still just finding out that the Marine Base expansion could exclude them from these traditional public lands).

Therefore, the document must clarify 1) that certification might be delayed indefinitely, and 2) advertising certification delays may not be effective, therefore causing a hardship on those who have traveled to Johnson Valley, with the consequences they may never come again, and they may go to other recreational areas. This would further add to the pressures on those areas already caused by permanent closure of other parts of Johnson Valley.

It is doubtful, given the historic 24-7 free access to the Johnson Valley Open Riding Area, that any person commenting in favor of shared use ever imagined that he or she could visit the RPAA only if all permit requirements and designated safety rules and use restrictions were followed.

Permitting for participants in organized events has been well established. But it is doubtful anyone dreamed that public access to the RPAA would require among other things:

1. each individual (or responsible adult for minors), certify that they have completed the required public education requirement. or:
2. in order to receive the required public education a person must have internet access, or travel to the location and hope to be allowed in.

These unqualified requirements evidently apply to a spectator at an event, as well as a participant; and to a visitor to the area for any purpose. There is no indication as to how long the permit is to be in effect, if there is to be any cost to the visitor, or what happens if the visitor comes to an access point for the permit after hours (unstated in the document). The permit plan must be thought out completely and the what-if's spelled out in the document, or the document must be changed to acknowledge these defects.

Page 2 of 4  
Comment

**Response to Comment 2346 (Page 2 of 4):**

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: 2346 (Page 3 of 4)

Response to Comment 2346 (Page 3 of 4):

The document states the public would be informed by several means that they cannot enter the Restricted Public Access Areas.

“Barriers would be used to block access routes and reduce the potential for public passage into the training area.” However, frequent visitors familiar with Johnson Valley know there are hundred of trails into the area.

“Additionally, the installation would undertake a public outreach effort to ensure that all potential regional stakeholders would be informed of access restrictions. This effort would involve disseminating informational materials through available means, including the Internet, local community channels, and local recreational organizations similar to those described in Section 2.5.4 (e.g., OHV publication or group website).”

Two criticisms of this statement are:

1. In announcing to the public this long-planned and enormous denial of access to public lands, the Marines only made the outreach efforts that they were required to by law: an announcement in the Federal Register (not daily reading for most), and in the local newspaper of record in 29Palms. We are not aware of other announcements.
2. The BLM announced the segregation of the lands for study.

OHV organizations and Base neighbors spread the word as far as they could to stimulate public comment. Whatever effects this had, there are still those who visit Johnson Valley, and live nearby, who do not know.

The DEIS states extra patrols by Conservation Law Enforcement Officers would occur, permanent signage would be placed on, around, and near the training areas, road crossings, and “likely” access points. Signs would be staggered across the boundary lines at logical intervals to make it difficult for the public to enter the area without encountering a sign. The signs would inform the public that the areas are reserved for exclusive military use. They would also warn of potential dangers and against unauthorized entry.

However, no statement as to the costs to the taxpayer of these measures is shown in the DEIS. To the reader unfamiliar with the area, who does not understand the huge perimeter of the expansion area, even in Alternative 6, who does not understand the porosity of the current borders of the Base, who does not understand the difficulties of creating weatherproof signage for the desert, “logical intervals” sounds logical and do-able. The DEIS must clarify the difficulties and costs of patrolling and signing miles of open desert which will be required to divert visitors who are used to generations of unrestricted access.

The DEIS does not spell out the consequences of inadvertent or deliberate trespass should outreach and border control measures fail. Questions of individual injury and liability must be addressed, and the over-riding question in everyone’s mind: in the case someone trespasses or gets hurt, will the RPAA be closed permanently. The document must be corrected to answer these issues, and must state they were not addressed in the draft version.

Comment ID: 2346 (Page 4 of 4)

Response to Comment 2346 (Page 4 of 4):

As a side note:

The reader scanning the document is likely to come upon this verbiage, and similar foggy language throughout the document, making it almost impossible to understand, where it was possibly meant to simplify:

Table ES-4

Aircraft and Ground-delivered  
Ordnance – presence of  
munitions constituents during  
periods of restricted public  
access results in a LSI to public  
health and safety with identified  
SCMs and other specific RPAA  
management measures. No  
cumulative projects would  
contribute to this impact

Possible translation:

Bombs, rockets and ammo – presence of toxic or hazardous remains of munitions, during periods of access by members of the public who have a permit, results in a less-than-significant impact to public health and safety, given the identified (somewhere?) special cleanup measures, and other restricted public access area management measures including\_\_\_\_\_. Past, present and reasonably foreseeable future actions will cause no build up of these hazards.

Still not easy, but at least spelled out. At least someone reading it has a better chance to decide if they agree or disagree on the judgement there will be a less-than-significant impact.

It is unfortunate that fairly technical information has not been not presented in plain English where at all possible; it leaves the preparers of the document facing the criticism that their work is deliberately meant to be hard to understand, turning off public response.

Thank you for your attention,

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

Since the size of the Draft Environmental Impact Statement means it requires a lot of time to study and assimilate; and since there are still stakeholders who are only now hearing of the expansion plans; and since there is confusion as to lack of correct information where to address public comments, calling into question the Marines' good-faith efforts to elicit those comments, **it is requested that the public comment period for the Draft EIS be extended at least another 60 days.**

On Page 570, 574, 578, 582, 583, and 588 under ORDNANCE-RELATED NOISE, and on Page 815 under Sensitive Land Uses, and in other contexts, the Draft Environmental Impact Statement is flawed in its conclusion that noise and vibrations beyond the border only cause "annoyance" and they are "less than significant." Therefore we insist that the study is incomplete with regard to the impact on neighbors of the Base and the proposed expansion areas, if the planned training exercises are carried out.

- The models used in the document evaluate and predict averaged noise projections for the ordnance noise impacts. This is an insurmountable flaw and highly misleading to the non-technical reader. The noise coming from a highway can be averaged because it is a steady level of noise. The noise coming from bombs exploding cannot be averaged, because each explosion is an event. Our ears do not average noise over a 24-hour period. Individual bomb decibel readings at distances as far away as Morongo Valley and Lucerne Valley must be included. As is, the document significantly under-predicts noise impacts and must be corrected.

- The known effects from current training exercises include a significant amount of damage and difficulty to Base neighbors. Everywhere in the document that says or implies the proposed expansion will have no significant impacts from noise to the surrounding communities, please

Page 1 of 2  
Comment

**Response to Comment 2347 (Page 1 of 2):**

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment ID: 2347 (Page 2 of 2)**

**Response to Comment 2347 (Page 2 of 2):**

replace this with words that say or imply there will be a significantly higher degree of impact and damage and cause greatly increased difficulties to the local residents. Also please state that this fact was incorrectly portrayed in the draft document. Also please correct the under-reported noise levels everywhere in the DEIS, including the CNEL Contour maps and impact tables.

Please state the proposed expansion and increase in training exercises will have a highly significant impact to all residents and visitors to the neighboring areas, which will create a detrimental affect on local schools, agriculture, emergency services and residents.

• Nowhere in the DEIS do we find a definition of "sensitive noise receptors." But all humans and wildlife in the area have at least two, called ears. The humans and wildlife for miles around definitely receive disturbing and startling noise from explosions on the Base. The DEIS states the plan is to increase this; to explode more than a million rounds of munitions ground-to-ground and 1.5 million rounds air-to-ground during the various exercises each year. They project that 22% of that will be detonated from 7:00 pm until 10:00 pm and 16% will be detonated from 10:00 pm until 7:00 am.

Humans in the area, their livestock and pets, as well as wildlife above and below ground must therefore sustain an intolerable level of noise, shock and vibration if the training plans proceed as stated.

Any narrative or chart stating that this kind of noise impact outside the borders is "less than significant (LSI)" or a "finding of no significant impact (FONSI)" must be changed to state it is of "significant impact (SI)." On Page 493 Table 4.1.2 showing low projected ordnance noise levels for Baseline and all Alternatives must be corrected to reflect actual individual bomb decibel levels. There also must be a statement that the Draft document omitted this study.

Thank you for your attention,

Betty Munson

**Comment** To whom it may concern, I, along with Johnson Valley residents and property owners, was invited to join a tour last Tuesday that showcased the unique Johnson Valley Open Riding Area. The purpose was to review the proposed expansion of the Marine Base in preparation for the meeting on Wednesday of the State Parks Off-Highway Motor Vehicle Recreation Commission, which had the expansion plans on the agenda. The route chosen showed the visitors some of the best of the Johnson Valley wide and wild variety of terrain. We even got to a trail we had never seen before, through a rocky volcanic pass, just proving every time you go out you find something new. That being said, I am an off-highway vehicle enthusiast and I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area. Thank you for your time, Drew Ashby OC Dualies

**Date Comment Received** 5/27/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under

alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern: I have invested tens of thousands of dollars in off road riding machinery, safety equipment, tow vehicles, living quarters and the like. The only place within 2 hours driving time in my 6 mpg motorhome is Johnson Valley. I am retired and on a fixed income and I vote in every election. I am a personal friend of Congressman Gary Miller and State Senator Bob Huff. I urge you to please consider expanding eastward instead of westward from the existing base. You already have so much land that you are not even using within the confines of the base right now that it makes no sense to displace the homeowners in Johnson Valley that have lived there for decades, not to mention the off roading citizens who have used and maintained Johnson Valley for over half a century. You have other options for expansion (eastward, for example), but we, the off roading public, do not. Any other riding areas are too far away to go there and back for a weekend of riding. This is a multi- million dollar industry that will collapse if this last vestige of riding area within a 2 hour drive is stolen from us. Consider how much money is spent on the following items for off road riding: 1. Motorcycles 2. Quads 3. Helmets 4. Boots 5. Gloves 6. Flak vests 7. Trailers 8. Motorhomes 9. Gasoline 10. Oil 11. Handlebar grips 12. Tires 13. Chains (and sprockets) 14. Air filters 15. Food from local merchants 16. Lawn chairs 17. Various rentals from local businesses (generators, trailers, motorcycles, motorhomes, and so much more) 18. Goggles 19. Riding apparel (pants, shirts, kidney belts, socks, water bottles for the bikes, etc.) 20. Compressors for pumping up tires 21. Items from local hardware stores 22. items from local automotive stores And so many more things that one cannot even count. The off roading community supports the economy. Taking away the right of freedom of recreation in the Johnson Valley desert will further decimate an economy that is already

in serious trouble and may not yet recover in our lifetimes. Also please consider the residents of Johnson Valley who have built homes, dug wells, raised families, and planted trees, some of which are decades old and are just now beginning to provide needed shade and oxygen. In conclusion, please also consider the environmental impact of losing the existing trees and other domestic plants, etc. The wind generally blows from West towards the East. If you expand Eastward, the range of mountains on the existing West Side of the base will act as a windbreak to prevent excessive erosion as troops and ordinance are exercised. Further, if gas warfare training is to be taught, the mountains will act as a barrier to prevent said gases from impacting Big Bear, the surrounding mountain and desert areas, and the Johnson Valley water supply. Johnson Valley is, in fact, the back side of Big Bear. In short, annexing Johnson Valley is a really BAD idea.

**Comment** Comment #6: The Marines Corps failed to analyze impacts from noise and vibrations The Draft Environmental Impact Statement is flawed in its conclusion that noise and vibrations beyond the proposed boundaries of the expansion are less than significant. In the documents, the models used only evaluate and predict an average level of noise projections for the ordnance noise impacts. This method will grossly underestimate the noises from bombs and explosions, and the effects on local residents and wildlife. Each and every explosion must be valued as a singular event, and analyzed as such. Decibel readings must be recorded and reported for each event. Individual bomb decibel readings at distances as far away as Morongo Valley and Lucerne Valley must also be included and effects from current training exercises that include a significant amount of impact to local residents be analyzed. The DEIS states the plan is to explode more than a million rounds of munitions ground-to-ground and 1.5 million rounds air-to-ground during the various exercises each year. They project that 22% of that will be detonated from 7:00 pm until 10:00 pm and 16% will be

detonated from 10:00 pm until 7:00 am. This will effect the health and welfare of local residents due to the increased proximity of bombing exercises during the night, which is not reflected in the document. If a supplemental DEIS is not prepared, please correct the Final EIS to state: there will be a significantly higher degree of impact and damage and the proposed expansion will greatly increased difficulties to the local residents. Also please state that this fact was incorrectly portrayed in the draft document, and correct the under-reported noise levels everywhere in the DEIS, including the CNEL Contour maps and impact tables. Please correct the impression in the document that the proposed expansion and increase in training exercises will not have a highly significant impact to all residents and visitors to the neighboring areas. In fact, if analyzed correctly, the proposed expansion will have a highly detrimental effect on all local residents, wildlife and activities, as well as local schools, agriculture, emergency services and residents. This document significantly underestimates all potential impacts and is an incomplete analysis. The study is incomplete with regard to the impact on neighbors of the Base and the proposed expansion areas. Any statement or chart stating that noise impact outside the borders is "less than significant (LSI)" or a "finding of no significant impact (FONSI)" must be changed to state it is of "significant impact (SI)." On Page 493 Table 4.1.2 showing low projected ordnance noise levels for Baseline and all Alternatives must be corrected to reflect actual individual bomb decibel levels.

**Date Comment Received** 5/27/2011

**Response**

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single- event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts. Noise exposure from existing/current conditions are provided in Chapter 3. Appendix H has four sections: H-1 through H-4. Sections H-1 through H-3 contain a wealth of technical data used in the noise modeling; Section H-4 is the noise primer. Airspace flight operations are assessed using the CNEL<sub>mr</sub> metric consistent with Navy RAICUZ Instructions. This metric accounts for the sporadic nature of airspace activity as well as the “startle” effect caused by low-altitude high-speed flights (see Section 3.9.1). The Maximum Sound Level (L<sub>max</sub>) metric was not specifically designed to measure impulsive sounds and although L<sub>max</sub> provides supplemental noise exposure information, the correct noise metric for assessment of land use compatibility is CNEL (and its derivatives). In addition to the aforementioned high-altitude refueling activity, modeled operations

included low-altitude high-speed flight operations characteristic of existing and proposed flight activity at the Combat Center (see Appendix H).

**Comment** Comment #7: The Marines Corps failed to included accurate assessment of toxic release The Draft Environmental Impact Statement describes in detail the procedures used to comply with recording and reporting releases of TRI chemicals, and addresses the Marines' methods for dealing with hazardous material spill abatement and cleanups, and contaminated soils, but is incomplete in it's analysis. "Munitions Constituents" (MC) from unexploded ordnance and other munitions, and their breakdown elements, are described and mapped for current and historical ranges. Potential migration into humans and animals is addressed with somewhat limited studies, databases on hazardous wastes from many sources and contaminated sites are described as not revealing any relevant sites. On Page 293, one paragraph describes a total of 50 accidental releases, in 2002, of toxic substances and what was done about them. Deliberate releases and munitions constituents are not itemized. The discussion of toxic wastes ends on Page 301 of the DEIS. Nowhere is the Environmental Protection Agency's Toxic Release Inventory mentioned, with its specific amounts, and the relative standing of military sites in general and MCAGCC in particular. Therefore the DEIS must be amended to show not only the methodology for reporting toxic contaminants but also the kinds and quantities. It must also clearly state estimates for any increases in toxic releases for each Alternative course of action. It must also state this information was missing in the draft document. The document states that use of munitions would be similar to existing use, and therefore potential impacts would be minimal. Since ordnance use is planned to be more intensive and of longer duration, the DEIS must be corrected to reflect that fact and state the draft document was in error. This information should be correctly evaluated in the issuance of a Supplemental DEIS. If a Supplemental DEIS is not released, a statement should be included in the Final EIS that toxic releases and the analyses of increased toxic releases due to increased munitions usage was not adequately analyzed and the potential effect to local communities, residents and wildlife remain unknown.

**Date Comment Received** 5/27/2011

**Response** Thank you for your comment. Munitions constituents and toxic chemical release reporting requirements are described in Section 3.4 and 4.4 of the

EIS. As described in the EIS the Combat Center complies with the Emergency Planning and Community Right-to-Know Act (EPCRA) Toxic Release Inventory (TRI) program, and all other federal, state, and local requirements regarding hazardous materials and wastes, and would continue to do so under the proposed action. The Marine Corps is committed to protection of the public and the environment. Therefore, use of spill kits and drip pans is a Standard Operating Procedure. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

**Comment** The state of California, and specifically southern California residents suffer an unjust burden in regards to land used militarily for the protection of our nation. Already the military has 3665.25 mi<sup>2</sup> of southern California land used in the specific type of training that the additional lands are being sought to fulfill, the EIS does not provide adequate non-partisan studies on the combined use of these facilities to satisfy the mandated need of training. Therefore the only alternative Justifiable is no action.

Comment #8: The Marines Corps failed to analyze the effects of the proposed expansion as it refers to Environmental Justice. Environmental Justice concerns the effects on certain ethnic, demographic or socio-economic groups from proposed federal projects. These groups should not bear disproportionate impacts from these project, as this places an unfair burden on these segments of society. The DEIS has failed to analyze the proposed expansion and the effects as referred to Environmental Justice, because it only analyzes the effects on residents living in the actual area of the proposed expansion. It is clear to everyone who visits the Johnson Valley OHV Area that residents do not live within the proposed expansion area, it is an open area dedicated to OHV recreation. However there are many residents living on the proposed border of the expansion, and in surrounding communities. To excluded the analysis of these communities as it pertains to Environmental Justice is disingenuous, and a disservice to these communities. It is clear that the area criteria used in the DEIS is far too narrow, and all the economic and other hardships as they pertain to Environmental Justice need to be reevaluated and the correct area of impact evaluated. The populations outside the immediate DEIS area have not been considered at all, which is incorrect, since the proposed activities due to the expansion are not known. The DEIS is highly misleading in this context. Likewise, Landers and Johnson Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to other locations, where the cost of living will be greatly increased. A supplemental DEIS must be released to accurately portray the effects of the proposed expansion on local communities, as they pertain to Environmental Justice. If a Supplemental DEIS is not released, the Final EIS must contain a statement that notes that the analysis as it pertains to Environmental Justice is incomplete, and the effects of the proposed expansion unknown.

**Date Comment Received** 5/27/2011

**Response**

As outlined in Section 4.3.1.2 of the EIS, three criteria are used to assess the significance of impacts to minority and low-income communities in the context of environmental justice (EO 12898, Federal Actions to Address Environmental Justice in Minority and Low-Income Populations): 1) there must be one or more such populations within the project area; 2) there must be adverse (or significant) impacts from the action; and 3) the environmental justice populations within the project area must bear a disproportionate burden of these adverse impacts. If any of these criteria are not met, then impacts with respect to environmental justice would not be significant. As discussed in the Section 4.3, there are no specific concentrations of minority or low-income populations in the vicinity of the proposed action as defined by the action alternatives. All socioeconomic

and environmental impacts that are attributable to the proposed action would apply equally to any affected persons, regardless of minority or income status; therefore no impacts would occur with respect to environmental justice.

**Comment** Comment #9: The Marines Corps failed to analyze seismic hazards The document discusses existing seismic conditions on the existitng boundaries of the 29Palms Marine base. On Page 449 the DEIS states that the Mojave Desert is highly active seismically, and reports that 50 named and unnamed faults can be found within the current boundaries. It specifies, "in 1999, the magnitude 7.1 Hector Mine earthquake on the Lavic Lake Fault was centered in the northwest portion of the Combat Center. This earthquake caused a 24-mile long surface rupture with a maximum offset of 12 to 15 feet." There is a map showing major fault lines in the west study area. It depicts a thick cluster of parallel faults which include the Camp Rock-Emerson Fault, trending northeast to southwest across the entire western Johnson Valley area through which there are plans to conduct live-fire air-ground training exercises of high intensity and extended duration. But the only comment as to the effects of the proposed expansion and affiliated training exercises are found on page 771 in the DEIS. It states; "The effects of ordnance delivery would be limited to surficial and near- surface soils so the proposed action would not be expected to have an impact on topography or seismic conditions or hazards within the ROI or in the Twentynine Palms region." Although it is possible that the reference to "seismic conditions" in this paragraph concerns the potential of triggering earthquake activity, but this is doubtful. Since this is the only instance in the entire DEIS that concerns seismic activity, and the potential of increased seismic activity, the Marines have omitted a critical component of the necessary analysis of the DEIS. It is clear that the Landers earthquake of 1992 has been forgotten, the evidence that was produced that training exercises were occurring on the base at the very moment of the earthquake. Currently, ordnance used on the bases causes earthquake-like tremors, as well as considerable vibration. This DEIS is incomplete because it has omitted this significant analysis of the proposed expansion, and training exercises in an area full of known seismic faults. Ignoring this issue is a fatal flaw in the document, and a Supplemental DEIS must be produced to correct this error. There is no connection shown between large explosions and seismic activity, nor is there any analysis of potential hazards from increased vibrations to local structures. If a Supplemental DEIS is not produced, please reflect in the Final EIS that seismic issues and hazards

were omitted from the analysis, and it is unknown how the proposed expansion will effect seismic activity in the expansion area.

**Date Comment Received** 5/27/2011

**Comment** I disagree with you taking over the desert in the form your looking at. Maybe a much less area, there are desert tortoises in this area (I have photos to prove this)that will parish, they dig long tunnels that any heavy tanks etc. would crush! and kill off most of there food source on top. These are an endangered species and protected. On the California Nevada state line is a solar power plant being built on 5 square miles with only about 10% grading done that had to stop (mid way through) because of these tortoises. Any part time use wouldn't work because any ammunicions not discharged may accidentally be discharge by a civilian on free time, being harmed or killed. The question is what's the % of usage of time of the land you have

now and can you use it more wisely(how many days of the year are actually used?? )

**Date Comment Received** 5/27/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps appreciates your comment and involvement in the NEPA process. The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. The EIS has been revised accordingly.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range sweep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

**Comment ID** 2359

**Comment** I would like to speak out firmly against the "preferred" Alternative #6. Any proposal that results in the permanent loss of any part of Johnson Valley would be absolutely devastating to the off-road community. Johnson Valley is a truly unique OHV area, not just because of its size and variety of terrain, but also its relative proximity to the enormous population centers of Los Angeles, San Diego, and Las Vegas. As such, it is priceless and irreplaceable. But, beyond the numbers of acres and dollars lost, I feel like the human factors have been grossly undervalued in this whole process. To the Marines, it just a matter of requirements, mandates, logistics, convenience, and money. The Marine driving a tank during training will not

care whether he is in Johnson Valley or the Eastern Study Area. For off-roaders, Johnson Valley is special. For so many of us, it is our sacred place - some families have been riding there for generations. We have lived there, loved there, and even, sadly, lost loved ones there. It is not just a pile of rocks or a set of GPS coordinates. It is also a set of memories and a heritage for millions of people. If we lose Johnson Valley, I fear it will not be long before we will have to add "off-roader" next to the Desert Tortoise on the list of endangered species. I urge the Marine Corps to reconsider their requirements, or, if Alternative #3 is unpalatable, at least put forth a viable alternative that does not involve the annexation of any part of Johnson Valley.

**Date Comment Received** 5/27/2011

**First Name**

**Comment** As an avid recreational rock crawler, the thought of losing Johnson Valley is honestly depressing. It is my favorite area to wheel, and its cherished by many other in the state and country as well. Sure, there are plenty of places I can go wheeling, but the difference is that I can take weekend trips to JV. I do just that at least a handful of times a year even with a busy schedule. Its even a yearly ritual of mine for Thanksgiving... Now, I am a big supporter of our armed forces and feel that our troops need realistic training environments. I am extremely thankful for everything that the armed forces do for me and the country. I understand that 29 palms needs to expand, but I strongly request that it does not expand west into any part of Johnson Valley! Alternative 6, the one preferred by the Marines, is not acceptable in my opinion. Even if there was adequate information detailing the specifics of the shared use procedure, in my eyes it would still be a terrible loss to the public. Instead, I hope that the Marines will expand east, into areas they have used previously for training exercises. Alternative 2 is the only plan that I personally support. This will allow both the public to maintain year round access to JV and the Marines to train their men and women. Also, the reality is that most wheelers are supporters of the armed forces. Taking

away these public lands is hurting your supporters! I have some very fond memories of Johnson Valley, particularly the Hammers trails. Being out on Aftershock in the late afternoon, cresting the last waterfall, and racing back to camp is a picturesque day for me... Another good time was when I was hopelessly stuck on Lower Big Johnson, requiring winches and Hi Lift jacks, all while sporting a huge smile! I hope that someday I can bring my kids out to Johnson Valley, teaching them about the desert and allowing them to enjoy the public lands that I enjoy now. I really hope that the Marines will leave JV intact. The offroad community has lost a lot of our legal wheeling areas in recent years. This additional loss would have an extremely negative impact on our sport and the people who depend on it for their livelihood. California, and particularly the southern half of the state, is a hotbed for manufactures of aftermarket enhancements. Most of the modifications to my Jeep were purchased from companies based in our state. Thank you for serving. Please go east...

**Comment** Comment #10: The Marines Corps failed to accurately analyze the effects of the proposed expansion on the Desert Tortoise The desert tortoise is listed as a threatened species by the U. S. Fish and Wildlife Service, and anyone who engages in activities that will harm a tortoise is subject to penalties and is considered a criminal act. The DEIS is silent as to the current status of tortoise fatalities on the existing base. Without that information, there is no accurate method to extrapolate what the potential hazard there might be to the desert tortoise population in the expansion area. In the table 4.10-2. "Estimated Take of Desert Tortoises from Military Training under the Six Action Alternatives" , it shows that preferred Alternative 6, tortoise take will range between a low of 154 to a high of 714, estimated over a 50-year project lifetime. There is no explanation to what the '154 to 714' is referencing, leaving the reader to wonder if this a

yearly figure, or a average per year, or a total number for 50 years. Since the current mortality rate is not correctly offered, the numbers were arrived at through conjecture and hypothesis. That is not an adequate analysis for this threatened species. As a basis for judgment on the military threat to an endangered species, this confusion and uncertainty are not acceptable. The DEIS is silent regarding the trauma tortoises will experience underground due to the noise, vibration or seismic waves created by use of possible deep penetration, bombing and gunfire during the combat training exercises. The trauma may prevent the tortoise from mating or nesting and have a further deleterious impact on their dwindling population. This is what the analysis in the DEIS is supposed to uncover, but it has fallen sadly short of the mark. Page 711 contains the following a statement indicating that closure of a portion of Johnson Valley due to the proposed expansion would benefit the desert tortoise. It is implied that the impact on wildlife, including the Desert Tortoise, of any motorcycle, quad, four-wheel-drive truck or buggy is comparable to the impact of a 68-ton Abrams tank, which can travel easily over desert terrain at a top speed of 40 mph. Even the impact of great numbers of OHV's over many years has not and will not compare to heavy military vehicles in Marine Expeditionary Brigade-sized numbers engaged in live-fire air-ground combat maneuvers for 24 days twice a year, as well as other smaller training activities the rest of the year. This implication is misleading, and must be deleted. Any comparison in the EIS between OHV activities and combat training must be very clear as to the impacts not only of the heavy armored vehicles and trucks, but the literal impacts of bombs and cannon fire to the tortoise. The DEIS must clarify the methodology, and use credible, current studies to support the analysis. The Marines would be wise to issue a Supplemental DEIS with a correct analysis.

**Date Comment Received** 5/27/2011

**Response**

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. The EIS has been revised accordingly. Analysis of noise impacts to wildlife in the Draft EIS were based on the best available information. Noise modeling conducted for the proposed project was focused on impacts to humans. The noise contours developed through the noise modeling effort were considered in the analysis of impacts to biological resources, and the noise metrics from those contours were considered important even though they are weighted toward frequencies important to humans. However, because peak sound levels (and the frequency of occurrence of those sound levels) are of greater concern in analysis of impacts to wildlife than the averaged metrics used in analysis of noise impacts to humans, the biological resources analysis focused more on the locations of ordnance explosion (represented by WDZs and SDZs) and paths of task force travel. Discussion is included throughout the EIS noting

the proximity of known populations to these WDZs, SDZs, and task force routes. In addition to this discussion throughout the text, potential noise effects are discussed for the desert tortoise and other wildlife species (see Section 4.10). While the relative importance of various factors in the decline of the desert tortoise are still uncertain and the EIS states this, the published literature that is available indicates that OHVs do adversely affect tortoises via habitat degradation and direct impacts (one such review is Ouren et al. 2007). Analysis of existing disturbance in the west study area from OHVs indicated a significant correlation between areas of high OHV disturbance and lower desert tortoise densities (refer to Appendix I of the EIS).

**Comment** In regards to the military taking over areas that the public are currently using for recreational hobbies. I have to say I find it very misleading to say the public and the military can cohabitate. It seems that when the military wants to use the land not only will it devastate the land it may leave behind items that civilians should not have contact with. I am new to the off road community and I look forward to taking my grandchildren. I am very nervous as to what they may find, not to mention having to explain to them why there are dead wild life not caused by natural means. There is no way the military can prevent the killing of wild life that exist in the Johnson Valley area and surrounding areas. On two different times in May when we went out for the day we had the pleasure of seeing Desert Tortoises, Horney Toads, Gila Monsters, snakes and many birds. We even experienced the mating season of the Tarantula Hawks. The flowers and cactus that are there are just beautiful and again I cant see a tank or any type of military vehicle traipsing across this land without devastation. I am very proud of our military and I appreciate the efforts they make to ensure the proper training they need. There has to be a better solution to the use of this land. I hope every concern is listened to and considered when making this decision that could change this area forever.

**Comment** Please note I am a big supporter of the military especially the Navy and Marines but please consider my opinion regarding this matter .I feel that any westward expansion would negatively impact the Johnson Valley OHV area as well as the local economy as many small buisneses rely upon the income brought in by the recreational use of Johnson valley. In addition, the local economy shows their largest profits on weekends that have off-road races in the Johnson Valley OHV area. Races such as the MORE 500 and King of the Hammers bring thousands of competitors, spectaters and vendors to this area. We ask that the Marines expand the base to the East per option 3.

**Date Comment Received** 5/27/2011

RE: Draft Environmental Impact Statement Land Acquisition and Airspace Establishment 29 Palms Base

Dear Sir:

Thank you for the opportunity to comment on the Draft Environmental Impact Statement (DEIS). I have several concerns with Mitigation in the DEIS. I consider myself a stakeholder since myself and my families are frequent visitors to Johnson Valley Off Highway Vehicle (OHV) Area and enjoy camping, riding, and hiking in this important resource. I am submitting this letter as an individual.

The DEIS fails to adequately examine the necessary mitigation measures for the proposed alternatives.

- **In Chapter 4 Section 4.2.2.4 Potential Mitigation Measures** the DEIS states “No mitigation measures are recommended. Consequently, Alternative 1 would result in significant, unmitigable impacts.”
- **In Chapter 4 Section 4.2.3.4 Potential Mitigation Measures** the DEIS states “No mitigation measures are recommended. Consequently, Alternative 2 would result in significant, unmitigable impacts.”
- **In Chapter 4 Section 4.2.5.4 Potential Mitigation Measures** the DEIS states “Therefore, significant, unmitigable impacts to recreational resources would occur with implementation of Alternative 4, albeit much less than those described under Alternative 1.
- **In Chapter 4 Section 4.2.6.4 Potential Mitigation Measures** the DEIS states “Therefore, significant, unmitigable impacts to recreational resources would occur with implementation of Alternative 5, albeit much less than those described under Alternative 1.
- **In Chapter 4 Section 4.2.7.4 Potential Mitigation Measures** the DEIS states “Therefore, significant, unmitigable impacts to recreational resources would occur with implementation of Alternative 6, albeit much less than those described under Alternative 1.

The National Environmental Policy Act (NEPA) 40 C.F.R Section 1508.20 (e) states “Compensating for the impact by replacing or providing substitute resources or environments” The Johnson Valley OHV Area is a vital resource for outdoor recreation.

The DEIS must be changed to include mitigated OHV recreation land in Alternatives, 1,2,4,5, and 6. This must be new open OHV lands, not land that is already open to OHV use, IE: Spangler Hills, El Mirage, etc. If the agency can't afford the replacement land than the only alternative is the No Action Alternative or Alternative 3.

1

Response to Comment 2364 (Page 1 of 2):

Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Comment ID: 2364 (Page 2 of 2)

Response to Comment 2364 (Page 2 of 2):

Thank you for your time and consideration. If you have any question or need assistance I will be happy to help.

Sincerely,

*Steve Hewitt*

**Comment** I favor Option 2, for the military to select option #2 with the land areas East of Johnson Valley to be used for military Training. I am disabled and this is one of the very few outdoor sports/recreational activities that I can participate in, since I cannot walk or do many other things. It enables me to see the nature and the outdoors from a vehicle seat. Thank you, Phil Cunningham

**Date Comment Received** 5/27/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** To whom it may concern, This letter is in regards to the DEIS that was recently released for the acquisition and annexation of Johnson Valley OHV area into the existing Twentynine Palms Marine Air Ground Combat Center. I strongly object to the Department of the Navy's move to acquire any or all of the existing Johnson Valley OHV area. My family frequently recreates at Johnson Valley OHV area, usually six to ten times a year and Alternative 6 that was identified in the DEIS will severely impact those opportunities. I strongly encourage that Department of the Navy look to the east of the Twentynine Palms MACGC facility for any future expansion, or at a minimum, give further consideration to Alternatives 4 or 5 as described in the DEIS as a shared use alternative. PLEASE DO NOT MOVE FORWARD WITH ALTERATIVE 6. This will severely impact my family's OHV recreational opportunities. Sincerely, Eric Paulsen AMA D-37 CORVA

**Comment** Comment #11: The Marines Corps used incorrect criteria to eliminate Alternative 3. The screening criteria for evaluating the alternatives was devised by the project's Executive Steering Committee, composed of Marine Corps leadership. But the screening criteria is not law, and as seen in the rest of the document, the screening criteria are applied at random, when convenient to an analysis. It is noted in the document that Alternative 3 does not comply with Screening Criteria number 5, which states; "Avoid congressionally-designated wilderness areas, parks, wildlife refuges, designated critical habitat for threatened or endangered species, cities/towns, and interstate highways." This is the only reason that is given in the DEIS for excluding Alternative 3 for serious review as the preferred alternative. Yet Alternative 6 also violates screening criteria number 5 in that the preferred alternative will go into habitat that is known to contain threatened species, yet little emphasis has been placed on that violation. All alternatives, except Alternative 3 and the unnumbered No Action Alternative, indeed violate screening criteria number 5 to a much larger degree. The choice of Alternative 6 as the preferred alternative also violates screening criteria number 5 in that it would entail the closest proximity to cities and towns, have the highest impact to cities and towns, and cause the greatest financial impact to cities and towns. In reviewing all the screening criteria, it appears that Alternative 3 has the highest compliance with all the screening criteria. If this is indeed the methodology that has been used to determine the appropriateness of a preferred alternative, Alternative 3 should have been chosen. By not applying screening criteria in a consistent manner, the public has been misled. A Supplemental DEIS must be produced that applies the screening criteria in a fair analysis over all the alternatives. It is clear in the document that Alternative 3 was eliminated in a haphazard manner, inconsistent with good analysis.

**Date Comment Received** 5/27/2011

**Response** Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. The objective and threshold training requirements and generic MEB Exercise training template described in Section 2.2, MEB Training Requirements and Representative MEB Exercise Template, directly influenced the development and application of the screening criteria described in the EIS. Some of the screening criteria are exclusionary in nature, representing conditions that must be true for an alternative to be considered reasonable. Only alternatives (with the exception of the No-Action Alternative, see Section 2.4.7) that would satisfy the criteria described in the EIS were considered reasonable and carried forward for detailed evaluation. Section 2.4.3 of the EIS describes Alternative 3, which would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Section 2.4.8 described the Marine Corps rationale for selecting Alternative 6 as the preferred alternative. However, as described in the EIS, all six action alternatives (including Alternative 3) meet the minimum selection criteria for an alternative to be considered feasible, and as such, all action alternatives have been equally carried forward for detailed analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**First Name** Robert

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS

in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/27/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

Re: Public Comment – Twentynine Palms Expansion DEIS

Ladies and Gentlemen:

This document constitutes both comments regarding subject DEIS and a solution that is consistent with National Defense Doctrine for the Real Parties of Interest. The People of the United States and the men and women of the American Defense Forces.

On January 31, 2009, I timely delivered my public comments by e-mail to Mr. Joseph Ross, Land Acquisition Manager at MAGTF/C, MCAGCC and upon request I received an e-mail acknowledging its timely receipt. In important part, my comments included a proposed ALTERNATIVE that included a TOPO map to establish a "379,585 acre Training Site" centrally located on the Gulf Coast, specifically on the boundary lines between Kansas and Oklahoma such that the U.S. Marines could "ramp up for a specific mission – to the West, East, North, and South – anywhere in the world – in the LEAST AMOUNT OF ASSEMBLY AND TRAVEL TIME."

I then called the contact number provided in the DEIS Notice and left a message to return my call such that I could acquire the official response to my public comments. No response. I then tried numerous times to make contact with personnel at MCAGCC but no response was forthcoming.

Perhaps part of the reasons for no response is that my 2009 public comment document stated that *"It is apparent that the 'process' thus far has been POLITICALLY driven, rather than driven by the best civilian and military minds available,"* and *"Simply stated the Center for Naval Analysis' . . . data would be inadequate to undertake even a startup of a LEMONADE STAND ON A NEIGHBORHOOD CORNER."*

Nevertheless, I continued my research and analysis regarding what is really needed by the U.S. Marines as to the scope and location of an adequate Training Range.

**Here I would point out that America's 350 million residents live on only three percent of the total land mass of the United States.**

**Why are we quibbling about a million or two acres?**

**How is it that subject DEIS contains thousands of pages of environmental rhetoric, but does NOT address the key issue: American sovereignty?**

**Response to Comment 2369 (Page 1 of 12):**

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: 2369 (Page 2 of 12)

Response to Comment 2369 (Page 2 of 12):

**Thus, how is it possible that the Twentynine Palms base is one of only two such bases in the United States – and the second base in Florida is being closed or has been closed down?**

**And protecting the Twentynine Palms Military Base “must be achieved,” yet the following issues have NOT been addressed?**

All of the “Base Expansion” programs via Congressional Legislation and related Appropriation Bills are one like the other, just the title of the Military Base changes, except that the Appropriation Bills DICTATE the outcome because of micromanagement of the process to conform with Environmental Law, paid for via the Defense Budget.

My position is that the process for Fort Erwin / National / Training Center has been underway since 2001 and it is NOT CLEAR WHETHER THE EXPANSION WAS COMPLETED AND DECLARED OPERATIONAL. OR AFTER 10 YEARS, IS IT STILL “A WORK IN PROGRESS”?

SIMPLY STATED, THE 1.22 MILLION ACRES OF THE FORT ERWIN FACILITY SHOULD BE ABLE TO PROVIDE FOR ALL THAT IS PLANNED FOR THE TWENTYNINE PALMS BASE, BUT THIS HAS NOT BEEN DONE.

THUS THE TWENTYNINE PALMS BASE DEIS PROCESS MUST BE SUSPENDED UNTIL THE STATUS OF ALL THE “BASE EXPANSIONS” THAT CONSTITUTE ABOUT 1/6<sup>TH</sup> OF THE LAND MASS IN THE REGION HAVE NOT BEEN COMPILED INTO A SINGLE DEIS DOCUMENT SUCH THAT THE ATRIBUTUTES AND STATUS OF EACH FACILITY ARE DISCLOSED.

IT IS MY POSITION THAT THIS MUST BE TIMELY PERFORMEND IN A “SUPPLIMENTAL DEIS/ DEIR.”

Key points and issues follow, NONE OF WHICH WERE ADDRESSED IN ANY OF SUBJECT EIR’S FOR MILITARY BASES:

FORT IRWIN EXPANSION, KEY ELEMENTS DOCUMENT

Dated  
January 12, 2001

KEY ELEMENTS  
OF  
PROPOSED EXPANSION PLAN  
FOR

FORT IRWIN AND THE NATIONAL TRAINING CENTER

**Executive Summary.**

Congress DIRECTED the Department of the Army and Department of Interior to draft a proposed plan that would expand the maneuver training lands at the National Training Center while protecting endangered and threatened species and their critical habitats; Public Law 106-554, “Consolidated Appropriations Act, 2001,” incorporates by reference H.R. 5666, “Miscellaneous

Comment ID: 2369 (Page 3 of 12)

Response to Comment 2369 (Page 3 of 12):

Appropriations.” Section 323 of which requires that the Secretaries jointly provide to Congress the key elements of the proposed expansion plan no later than 45 days after enactment. Within 90 days after enactment, the Director of the Fish and Wildlife Service is to provide the Secretaries with a preliminary review of the plan that identifies an approach for implementing the plan consistent with the Endangered Species Act. Within 120 days of enactment, the Secretaries are required to submit a proposed expansion plan and to propose legislation for the withdrawal and reservation of public lands for the National Training Center expansion.

All activities are to be taken in full compliance with the Endangered Species Act, the National Environmental Policy Act, and other applicable laws and regulations.

Introduction.

The National Training Center (NTC) at Fort Irwin, California, is the only instrumented training area in the world suitable for force-on-force and live fire training of heavy brigade-sized military forces. It provides the Army with essential training opportunities necessary to maintain and improve military readiness and promote national security. The NTC must be expanded to meet the critical need of the Army for additional training lands suitable for the maneuver of large numbers of military personnel and equipment, which is necessitated by advances in equipment, by doctrinal changes, and by Army Transformation requirements.

The lands being considered for expansion of the NTC are home to the desert tortoise (*Gopherus agassizii*) and Lane Mountain milkvetch (*Astragalus jaegerianus*), which are protected under the Endangered Species Act of 1973 (ESA), 16 U.S.C. §§1531 et seq. Any plan for the expansion of the NTC must provide for such expansion in a manner that complies with the ESA, the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. §§4321 et seq., and other applicable laws.

By legislation, Public Law 106-554, “Consolidated Appropriations Act, 2001,” incorporating by reference H.R. 5666, “Miscellaneous Appropriations,” Section 323, entitled “Fort Irwin National Training Center Expansion” (Attachment 1), Congress directed the Secretaries of the Interior and Army to:

Within 45 days of enactment, prepare and submit to Congress a joint report on key elements of a proposed plan to expand the NTC and to provide for conservation measures;

Within 90 days of enactment, obtain the U.S. Fish and Wildlife Service's (FWS) preliminary review of the proposed expansion plan for the purpose of identifying an approach for implementing the plan consistent with the ESA;

Within 120 days of enactment, prepare and submit to Congress a proposed expansion plan that takes into account the content of the FWS's preliminary review; and

Within 120 days of enactment, prepare and submit to Congress proposed legislation providing for withdrawal and reservation of public lands for the expansion of the NTC;

Initiate as soon as practicable, and complete within 24 months of enactment, consultation required under Section 7 of the ESA;

IS IT NOT ALL BUT IMPOSSIBLE TO PERFORM  
THE ABOVE STEPS IN A THROUGH MANNER  
IN A MATTER OF A FEW DAYS, NOT MONTHS ANDYEARS?

Within 30 months of enactment, complete any analysis required under NEPA.

**Comment ID: 2369 (Page 4 of 12)**

**Response to Comment 2369 (Page 4 of 12):**

THE FOLLOWING RHETORIC IS THE SAME FOR SUBJECT DEIR..

III. Fort Irwin and the National Training Center.

A. Establishment, Purpose, and Mission.

In 1940, President Roosevelt established the Mojave Anti-Aircraft Range, a military reservation of 1,000 square miles, in the area of present-day Fort Irwin. In 1942, the post was re-named Camp Irwin in honor of Major General G. Leroy Irwin, World War I commander of the 57th Field Artillery Brigade. The post was deactivated in 1944. It was reactivated in 1951 as a training center for combat units in the Korean War.

The post was designated a permanent Class 1 installation in August 1961 and was designated Fort Irwin. During the Viet Nam buildup, many units, primarily artillery and engineer, were trained and deployed to Southeast Asia directly from the post.

In January 1971, the post was again deactivated and placed in maintenance status under the control of Fort McArthur, California. Despite deactivation, the post continued to serve as a training site for the National Guard and Army Reserve.

On October 16, 1980, Fort Irwin was selected from several candidates to become the site of the new National Training Center. On July 1, 1981 Fort Irwin was reactivated as an active Army installation.

The mission of the NTC since its inception has been to provide tough, realistic combined arms and joint training to be conducted under conditions that must remain relevant to the combat situations our forces must face.

Advances in weaponry, demands in logistics and command/control, and developments in information technology emphasize the need to train brigades across the full spectrum of operations.

Such training carries the added benefit of allowing brigades to be trained with their full complement of combat and support units during each NTC rotational training exercise.

These larger training operations enhance the development of doctrine and technology for the future.

The NTC is limited by its current available acreage to provide a realistic training environment to meet the expanding needs of Army brigades.

B. Need for Expansion.

The expansion of the NTC at Fort Irwin is essential to maintaining operational readiness for National Security.

It is the only instrumented training area in the world suited for force-on-force and live fire training of heavy brigade-sized and battalion task forces. Advances in equipment (e.g., longer engagement ranges of weapon systems), doctrinal changes (expansion of the battle space by at least a factor of four), and the ongoing Army Transformation require the expansion.

Because of advances in weapon systems, brigades and battalions are required to cover more ground; they operate in dispersed areas of operation; mass to conduct decisive combat operations; and then disperse again.

Comment ID: 2369 (Page 5 of 12)

Response to Comment 2369 (Page 5 of 12):

*It is my position that subject "New Doctrine" is FATALLY FLAWED because the New Doctrine may be able to TAKE ground during BATTLE, but would be UNABLE to KEEP the ground upon ATTACK by a subsequent MASSED offensive by the enemy because of the LACK of an ADEQUATE level of US Soldiers deployed in the "Field of Battle," thus incurring US Soldier casualties for which there can be NO possible justification*

*And THIS New Doctrine was propounded by President Bush Sr. during the 1990-1991 "Persian Gulf War" that Secretary of Defense Dick Cheney and Joint Chiefs of Staff Chairman Gen Colin Powell's "Desert Shield" doctrine CREATED as the only option available to overcome the Democrats' 1970's "Vietnam Peace Benefit" that was FUNDED by CUTTING IN HALF military personnel, Defense Dept R & D, etc., and thus the military budget . . . totaling Billions of Dollars . . . that Congressional Democrats' spent wildly and freely . . . and are STILL doing so today as shown by subject "Twentynine Palms Expansion" which DUPLICATES BOTH THE INTENT AND THE CONTENT IMPOSED BY THE ABOVE 2001 "FORT IRWIN EXPANSION" DOCUMENT.*

Key Points and Issues  
That are NOT Addressed in Subject DEIR

Units are [now] required to cover and operate over more ground than ever before -- 50km x 100km, as opposed to the 26km x 58km-maneuver space currently available.

These factors drive the Army's requirement for additional maneuverable training land at the NTC to accommodate brigade-sized and battalion task force training operations.

When Fort Irwin was designated the NTC in 1980, tactics were structured around equipment that could effectively engage an enemy at ranges of 1 to 12 miles.

Today, the Army effectively engages the enemy at ranges up to 60 miles away.

Comment ID: 2369 (Page 8 of 12)

Response to Comment 2369 (Page 8 of 12):

C. History and Alternatives.

In the mid-1980s, the need for additional land for training at the NTC was identified because of changes in doctrine, equipment, and tactics. This need was subsequently validated and quantified by two Land Use Requirements Studies (LURS).

[“Studies” performed by WHO? - “The Center for Naval Analysis, Alexandria, VA” [aka] “The Center for Naval Analysis” that performed the “study” to expand the “Twentynine Palms Marine Base”? Equals “Junk Science !!!”

The studies indicated a shortfall of about 193,000 net maneuverable acres on the NTC to adequately meet training needs. Various alternatives were developed and studied to enable the NTC to meet the needs identified in the LURS. These alternatives included variations of land configurations adjacent to the NTC, as well as use of other military installations. Each of the studied alternatives presented disadvantages as to impacts on the environment, training value of the land, cost, and co-use complications.

The Army has identified a proposed expansion plan that incorporates the advantages of both an eastern and western expansion.

This alternative involves acquisition of approximately 110,000 new acres on the east and southwest sides of the existing NTC and the return to training use of about 22,000 acres in the south that are currently set aside [for WHAT?] on the NTC. While this total is less than the 193,000 acres identified in the LURS, it satisfies the most critical needs [WHAT?] for additional maneuver lands, while taking into account the Army’s environmental stewardship responsibilities.

IV. West Mojave Desert.

A. Endangered and Threatened Species

Twelve federally listed threatened and endangered species are found within the West Mojave Desert. These include endemic plants with a very limited range to wide ranging species that are endangered by disease and human-related actions. An additional 106 unlisted species have been identified as target species for protection by the West Mojave Desert Coordinated Management Plan (West Mojave Plan), a habitat conservation plan that is being prepared in accordance with section 10(a)(1)(B) of the ESA, 16 U.S.C. §1539(a)(1)(B). This plan is described in greater detail in section C of this part of the Report.

Two listed species occur within the proposed Fort Irwin expansion area -- the desert tortoise and the Lane Mountain milkvetch. Training activities on the proposed Fort Irwin expansion lands will not proceed unless the Army determines, pursuant to section 7(a)(2) of the ESA, 16 U.S.C. §1536(a)(2), and

Comment ID: 2369 (Page 9 of 12)

Response to Comment 2369 (Page 9 of 12):

in consultation with the FWS, that the training activities will not be likely to jeopardize the continued existence of these species or destroy or adversely modify any designated critical habitat. Critical habitat is defined as areas that contain the physical or biological features essential to the conservation of the species, and that may require special management considerations or protection. In 1994, the FWS designated critical habitat for the desert tortoise that includes substantial tracts of land on and around Fort Irwin, including the Superior Valley portion of the proposed expansion area. 59 Fed. Reg. 5820-5866 (1994). The FWS has not designated critical habitat for the Lane Mountain milkvetch.

While the proposed expansion area does encompass desert tortoise habitat, it avoids the important tortoise habitat immediately south and southwest of the proposed expansion area, including the Paradise Valley and the Coyote Basin. Based on surveys [by WHOM?] completed in 1998 and 1999, these areas apparently [i.e., NO evidence of] support some of the highest numbers of desert tortoises remaining in the West Mojave Desert.

While the desert tortoise has received most of the attention during the longstanding efforts by Interior and Army to accommodate an expansion of Fort Irwin, the milkvetch presents equally challenging questions to address during the consultation process. Two of the three known occurrences of the Lane Mountain milkvetch are within the proposed expansion area, and these are located within areas susceptible to training maneuvers (20% slopes). Other potential impacts of the proposed expansion that could occur on or off the expansion area include, but are not limited to, dust and obscuration. Potential habitat exists, however, outside the proposed expansion area on Lane Mountain and in the Paradise Range, and efforts will be made during the pre-consultation period to locate other populations in these and perhaps other areas outside the proposed expansion area.

A number of unlisted, but sensitive, plants and animals occur within the proposed expansion area. Animals include the LeConte's thrasher, Bendire's thrasher, golden eagle, prairie falcon, burrowing owl, and the state-listed Mohave ground squirrel. Major populations are present for LeConte's thrasher and Mohave ground squirrel. Plants include small-flowered androstaphium, desert cymopterus, Barstow woolly sunflower, alkali mariposa lily, and Clokey's cryptantha. The small annual plant, Clokey's cryptantha, is known from only two locations, and about half of its predicted distribution is within the proposed expansion area. Many of the mitigation measures that will be implemented to protect listed species, especially land acquisition, should have a salutary impact on these unlisted species.

B. Description and Purpose of West Mojave Desert Wildlife Management Areas.

The Desert Tortoise (Mojave Population) Recovery Plan (1994) recommended that four Desert Wildlife Management Areas (DWMA) be established within the West Mojave Desert: Superior-Cronese, Fremont-Kramer, Ord-Rodman, and Joshua Tree.

These areas consist of approximately 1.5 million acres of habitat that is considered essential to the conservation of tortoises.

Through the West Mojave planning process, biologists used 1998 and 1999 tortoise survey information, land ownership patterns, and discussion with scientists and [what?] agency personnel to propose DWMA boundaries for consideration by the West Mojave Supergroup, a group that includes federal, state, and local agency officials, as well as representatives of the environmental community and development interests.

The Superior Valley portion of the proposed expansion area lies within the Superior-Cronese DWMA.

**If the proposed expansion goes forward, the boundaries of this DWMA will need to be changed to exclude most of these lands.**

Comment ID: 2369 (Page 10 of 12)

Response to Comment 2369 (Page 10 of 12):

C. Description and Purpose of Wilderness Study Areas.

Five former BLM Wilderness Study Areas (WSA) identified in the 1980 California Desert Conservation Area Plan lie adjacent to the National Training Center. The Death Valley National Park Boundary, Kingston, Avawatz Mountains, South Avawatz Mountains, and Soda Mountains WSAs were legislatively designated in October 1994 by the California Desert Protection Act (CDPA) [S-21] and the public lands withdrawn from entry.

**The CDPA allowed these areas to remain under wilderness review pending a final decision on the National Training Center expansion.**

[PROOF - The "implementation rules" in THIS document all but PRECLUDE "Fort Irwin" from EVER being authorized to be as stated herein [HND OUT IF IT WAS!], THUS leaving ALL the above areas being ABSORBED in Feinsteins/Scarry Harry's 2011 Desert Protection Act - ALONG WITH THE "TWENTYNINE PALMS [29Palms]" BASE EXPANSION that has been set with similar "implementation rules" as has likely the "El Centro" base expansion - CREATING "ENVIRO HEAVEN" and 1,000s of ENVIRO JOBS - AND VOTES - LEAVING THE MILITARY CRIPPLED AND AMERICA DEFENSELESS.]

If Fort Irwin expands as proposed, conserving sensitive species in the western Mojave Desert will become more difficult, because most of the lands in the proposed expansion area will no longer be available for species conservation purposes.

The conservation measures proposed as part of the expansion should be taken into account as the West Mojave Coordinated Management Plan is developed.

Consequently, the development of the West Mojave Coordinated Management Plan and the proposed expansion of Fort Irwin should be coordinated closely to ensure that the adverse and beneficial impacts of both actions can be fully considered in the decision-making processes.

**Comment** To: Naval Facilities Engineering Command, Southwest ATTN: 29Palms EIS Project Manager 1220 Pacific Highway San Diego, CA 92132-5190  
Re: Draft Environmental Impact Statement on 29Palms Base expansion  
Dear Sir: The communities of Landers and Johnson Valley are in Postal Zip Code 92285. Landers borders the existing Marine Air Ground Combat Center 29Palms; Johnson Valley is directly southwest of it, and due south of the proposed westward expansion area. Environmental Justice provisions are addressed in the DEIS because Federal Projects are not supposed to have disproportionate impacts against any ethnic, demographic or socio-economic group. IN POSTAL CODE 92285, CENSUS 2010 HAS STATED: The population is 2,181. The median age of the population is 49.5. 24.7% are 65 years and over. This is almost twice the percentage of people 65 and older in the US population (12.4%). These are very much senior citizen communities. Many residents are retired and on fixed incomes. 39% of our population 16 and over is in the labor force, as compared to 69% in the US. Families below poverty level: 20.8% In the US: 12.4% Individuals below poverty level: 24.9% In the US: 12.4% Disability status (population 5 years and over): 34.8% In the US: 19.3% And for good measure: Civilian veterans (civilian population 18 years and over): 25.1% In the US 12.7% (and we know many are proud Marines)

[http://factfinder.census.gov/servlet/SAFFFacts?\\_event=Search&geo\\_id=&\\_geoContext=&\\_street=&\\_county=92285&\\_cityTown=92285&\\_state=&\\_zip=92285&\\_lang=en&\\_sse=on&pctxt=fph&pgsl=010&show\\_2003\\_tab=&redirect=Y](http://factfinder.census.gov/servlet/SAFFFacts?_event=Search&geo_id=&_geoContext=&_street=&_county=92285&_cityTown=92285&_state=&_zip=92285&_lang=en&_sse=on&pctxt=fph&pgsl=010&show_2003_tab=&redirect=Y) The factors listed above indicate the project does raise issues of Environmental Justice for the residents of Landers and Johnson Valley. The DEIS states that EO 12898 criteria for Environmental Justice say there must be one or more such affected populations within the DEIS area (Page 533). However, very few live WITHIN the EIS area, and it is therefore a contradiction to imply that residents outside the EIS area will not be impacted. The scoping issues (Item 4.3.1.3) listed on the same page include: Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries Devaluation of surrounding private property. Increased costs to federal, state and local jurisdictions for increased law enforcement. The contradiction is the DEIS states that the primary economic impacts would be from displacement of certain activities within the DEIS area causing financial and other hardships to surrounding areas. Therefore the DEIS must be revised to state the criteria for judging Environmental Justice are too narrow, and must state that these criteria also apply to populations outside the DEIS area. Anything less would be easily misunderstood by a less-than-careful reader. Landers and Johnson Valley are within the impact area of the DEIS because of activities that are associated with current ac

**Comment** Our State is huge but OHV riding areas are very limited here in southern California. Considering all the land the federal govt controls why can't the Marines use another area. In the last few years we have lost our trails in the Angeles Forest region. We love,honor, and respect the Marines but the Feds should find another location.

**Date Comment Received** 5/27/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** Please DO NOT allow the military to take over the OHV recreational areas in Johnson Valley. The military already has hundreds of thousands of

acres of suitable training grounds. Why steal this small parcel from us off-road enthusiasts? Balance the needs of the people who are paying, through heavy taxation, with 80% of their tax bill going to the military, against a greedy, inefficient government arm who DO NOT NEED MORE LAND for their purposes. OHV recreationalists are real-estate poor. The military is rich enough already. In other words, stop STEALING FROM THE POOR to give to the RICH.

**Date Comment Received** 5/28/2011

**Response** Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large- scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**Comment** As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action...is not a viable alternative since it does not meet the purpose and need; However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation. Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists. I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

**Date Comment Received** 5/30/2011

**Response** Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific

portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment** Please do not close or take any more of the johnson vally off highway are out by twenty nine palms. We our family (kids, aunts, uncles, parents, grandparent and friends) all enjoy the outdoors and sharing in teaching our kids nature. The population continues to grow and they keep on reducing the amount of open area to enjoy. Also, if you close these area, then it makes it to costly to drive farther and shortens the important time with family and friends.

**Response** Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**Comment** I am wholeheartedly against the US Marine Corp expansion that would lead to any loss of Johnson Valley Off-Highway Vehicle area. Please consider other alternatives that have less impact on lands that are enjoyed by

thousands of Americans. These lands provide recreational opportunities that can not be replaced. Furthermore, the local economy depends on this recreation to provide additional financial activity.

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment** I DO NOT support the Corps taking away CA. Largest OHV area (Johnson Valley). I feel America has plenty of unused areas for the Corps to utilize. As proud Americans we spent a lovely Memorial Weekend 2011 there with talks of our grandfathers while creating new memories. Here's an idea.. Texas, USA!

**Comment** The Johnson Valley is critical to the freedom and use of the off-road enthusiasts and ask that our voices be heard and respected. Please keep this land open to the public as many years of riding and memories would be needlessly done away with. With technology, I do not believe this land is necessary to acquire that our armed forces will use for actual use. I salute our soldiers, however this land belongs to those who use it and respect it namely the off-road community. Thank you and God bless the United States of America!!!

**Comment** I wanted to comment on the 29 Palms expansion into Johnson Valley Of-Highway Vehicle Area. The OHV areas are getting smaller every year as the off-road community is attacked by anti-access groups. I can't believe the Marines now want to attach the off-road community by taking away one of the best OHV areas around. The Marines can expand to the East without displacing a group who can't move somewhere else. There's no movement for the off-road community. The Marines on the other hand can move a different direction and leave a long time riding area open to the public that supports the Marines.

**Date Comment Received** 6/4/2011

**Response** Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

| <b>Comment</b>               | <p>To whom this concerns; i am an officer and an off road person with a family and we love the outdoors. My family loves to go out wheelin and camping all over the united states and out in the johnson valley area. I teach my boys about our land and how important it is. Also i teach them to take care of it for future generations to come. We, are family respect the land and do are part in packing in packing out, what we bring. Please don't take it away there are alternitives and I, we also believe in the military and trainning. But i have other ideas for where that should happen, just with the president would listen. Thank you for your time. Brian</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Date Comment Received</b> | 6/5/2011                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Response</b>              | <p>Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).</p> <p>The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.</p> |

**Appendix N – Response to Public Comments on the Draft EIS**

**Re: Draft Environmental Impact Statement on Proposed Twentynine Palms Marine Base Expansion**

Dear Project Manager:

I appreciate the opportunity to provide comments on the Draft Environmental Impact Statement (DEIS) for the Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training dated February 2011. I recognize the extensive amount of work and effort behind the preparation of the document. However, the DEIS contains a serious flaw that must be addressed and corrected before the analysis can be finalized.

**Screening Criteria is Flawed**

The DEIS describes that the Screening Criteria and alternatives used to systematically identify the range of reasonable alternatives carried forward for analysis were ratified by the project's Executive Steering Committee, which was comprised of Marine Corps leadership. The objective and threshold training requirements and generic MEB Exercise training template described in the DEIS directly influenced the development and application of the screening criteria, which were used to identify and evaluate potential alternatives for the proposed action. To be considered a viable and reasonable alternative according to the screening committee, any land acquisition and airspace modification/establishment scenario must satisfy all of the established conditions (at least to a threshold level where appropriate). There are 8 screening criteria listed, and criteria number 5 specifies that the EIS will "Avoid congressionally-designated wilderness areas, parks, wildlife refuges designated critical habitat for threatened or endangered species, cities/towns, and interstate highways."

The DEIS however does not provide an explanation or justification as to why the decision of the Executive Steering Committee (i.e. Marine Corps) to avoid congressionally-designated wilderness areas was established as a planning criteria. It simply states this determination, and this decision significantly influences and serves as the foundation for the development of the alternatives evaluated in the DEIS. At the same time, the screening criteria fails to include a condition to avoid areas in which congressional action will be required to remove from public use large portions of a federally managed Off-highway Vehicle Area (Johnson Valley OHV Area). No explanation or justification is given for this decision either. As a result, Alternatives

1

**Response to Comment 2383 (Page 1 of 3):**

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. The objective and threshold training requirements and generic MEB Exercise training template described in Section 2.2, *MEB Training Requirements and Representative MEB Exercise Template*, directly influenced the development and application of the screening criteria described in the EIS. Some of the screening criteria are exclusionary in nature, representing conditions that must be true for an alternative to be considered reasonable. Only alternatives (with the exception of the No-Action Alternative, see Section 2.4.7) that would satisfy the criteria described in the EIS were considered reasonable and carried forward for detailed evaluation. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**Comment ID: 2383 (Page 2 of 3)**

1, 2, 4, 5 and 6 were developed and include expansion scenarios into the Johnson Valley OHV Area.

It would appear that screening criteria 5 is based on a political calculation of the Executive Steering Committee that the potential re-designation and withdrawal from public use of one type of land use (wilderness<sup>1</sup>) is not acceptable while the re-designation and withdrawal of another land use type is (a unique federally managed OHV area<sup>2</sup>). The withdrawal of federal lands from public use are decisions for Congress to ultimately make, not a federal department. Therefore, to examine a full range of potential alternatives for base expansion, the DEIS needs to be modified to include Screening Criteria for analysis that 1) also considers a withdrawal of a portion of a wilderness area(s) or 2) also removes from consideration any areas upon which future congressional action is required for the withdrawal of a significant portion of federally managed OHV areas. Either of these approaches would level the playing field and treat each potential withdrawal equally, and thus allow a thorough review of the potential environmental impacts of the proposed project that is not pre-decisional or prejudiced. To do otherwise is neither reasonable nor appropriate.

Preferred Alternative 6 states "Access to and use of approximately 56% of the Johnson Valley OHV Area would be lost. This resource is unique to the region."<sup>iii</sup> On the other hand, there are 3,878,113 acres of wilderness in California under BLM jurisdiction. Regionally, there are only 380,753 acres of BLM OHV Areas, representing approximately 62% of total BLM OHV Areas in the state. The loss of public access to Johnson Valley would be significant. Under Alternative 1, the loss of OHV acreage regionally available would be 47%; Alternative 2, 30%; Alternative 3, no loss; Alternative 4, 47%; Alternative 5, 47% and Alternative 6, 29%. Screening Criteria number 5 points the DEIS in a direction that will result in significant and adverse impacts and prevents other possible planning alternatives potentially much less so from moving forward.

To correct this, the DEIS must address the flaw in the Screening Criteria described above. The public will benefit from review of additional alternatives as will the region and local communities that would be most affected by a base expansion. Thank you for your attention and consideration.

Respectfully,

Clayton Miller

**Response to Comment 2383 (Page 2 of 3):**

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Comment ID: 2383 (Page 3 of 3)

Response to Comment 2383 (Page 3 of 3):

<sup>1</sup> The BLM is responsible for 85 wilderness areas in California that total 3,878,113 acres. See [http://www.blm.gov/ca/pa/wilderness/wa/wa\\_list.html](http://www.blm.gov/ca/pa/wilderness/wa/wa_list.html)

<sup>2</sup> Johnson Valley is the largest BLM managed OHV in California. Table 4.2-2 illustrates this point. Further information about BLM managed OHV Areas in California can also be found here. [http://www.blm.gov/wo/st/en/prog/blm\\_special\\_areas/NLCS/summary\\_tables.html](http://www.blm.gov/wo/st/en/prog/blm_special_areas/NLCS/summary_tables.html)

Table 4.2-2: Regional OHV Acreages

| Recreation Areas                | Acres          |
|---------------------------------|----------------|
| Johnson Valley                  | 189,470        |
| Spangler Hills                  | 57,000         |
| Stoddard Valley                 | 53,000         |
| Rasor                           | 30,000         |
| El Mirage                       | 24,000         |
| Dumont Dunes                    | 8,150          |
| Kevesville                      | 7,133          |
| Jawbone                         | 7,000          |
| Dove Springs                    | 5,000          |
| <b>TOTAL Regional OHV Acres</b> | <b>380,753</b> |

Under Preferred Alternative 6, "access to and use of approximately 56% of the Johnson Valley OHV Area would be lost. This resource is unique to the region." Further, the impact to Regional OHV is illustrated in Table 4.2-3 here:

Table 4.2-3: Percentage Loss of Regional OHV Acreages under each Alternative

| Alternative   | Loss of Open OHV Acreages | Total Regional OHV Acres | Percent Loss of Regional OHV Acreages |
|---------------|---------------------------|--------------------------|---------------------------------------|
| Alternative 1 | 180,353                   | 380,753                  | 47%                                   |
| Alternative 2 | 113,558                   | 380,753                  | 30%                                   |
| Alternative 3 | NA (1)                    | NA (1)                   | 100%                                  |
| Alternative 4 | 180,353 (2)               | 380,753                  | 47%                                   |
| Alternative 5 | 180,353 (2)               | 380,753                  | 47%                                   |
| Alternative 6 | 108,530 (3)               | 380,753                  | 29%                                   |

Notes: 1. Alternative 3 is not applicable (NA) since the east study area is not an open OHV area.  
 2. Acreages lost under Alternatives 4 and 5 would only occur 2 months per year.  
 3. Acreages lost under Alternative 6 includes the exclusive military use area only since 38,137 acres would be available for restricted public access 10 months per year.
