Billings, MT 59102

Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy.

Sincerely,

Charlie Foran

**Response to Comment N-18367:**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

I certainly would not bother making the trip from OK to CA without this very important off-road mecca. With costs becoming so high to vacation, we, as a family have to plan trips that appeal to both our children and ourselves. This is one of the few remaining areas that would allow us to camp and enjoy the jeeps, SXS's, and quads that our lives revolve around.

PLEASE KEEP THIS AREA OPEN FOR OUR FAMILIES TO ENJOY.

Sincerely,

Phil Beauchamp

ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would devastate the local economy. Many businesses in Lucerne Valley and Yucca Valley depend on the visitors to the Johnson Valley OHV area. Restaurants, gas stations, markets, auto parts stores, hotels/motels, and other service related industries will experience a severe negative impact by the closure of the OHV area.

The Marine Corps, OHV recreation, and local residents and their economy are better served with an eastward expansion.

Sincerely,  
Kris Tholke

To Whom It May Concern:

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Many of these areas rely heavily on tourism. Bringing in a military base will stop any tourism there, bottoming out some of the only income that these areas will get. Is the govt willing to put more places into homelessness, and economical drought for another military base? Move EAST and that isn't going to be a concern.

Sincerely,  
Joe Aplet

If the Marines were to expand 29 Palms West into Johnson Valley, it would completely crush the local economy. Every time I go to Johnson Valley, I fuel up main and aux. fuel tanks, and buy all of the food and supplies I need for the weekend - either in Yucca Valley or Apple Valley. I know that this is true with THOUSANDS of other people travelling out to Johnson Valley every year, including active duty and retired Marines. Closing Johnson Valley to the public (even if there is a little piece left open) will have a devastating impact on local economy - especially with people spending more and more as time goes by due to rock crawling and rock racing becoming 'popular' and more mainstream. Thank you for regarding the impact that closing Johnson Valley will have on the area's economy and considering alternative areas to use for training.

Sincerely,

John Williams

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

Jonathan Terhune

**Response to Comment N-18383:**

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

No Alternative has clearly made any substantive, detailed description of how a Shared Use area might work.

I believe this is a diversionary tactic in the EIS process.

Due to liability concerns and the risk of the public coming in contact with unexploded ordnance, shared use is unlikely.

Due to budget constraints and the time required to clear the area regularly and prior to the public's turn to use the area, shared use is unlikely.

Due to safety and security concerns with the public having access to a military installation, shared use is unlikely.

Please remove the Shared Use Alternative, as it is not a genuine possibility.

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

Tyler Gowans

dover, DE 19904

Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordnance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

Sincerely,

brad holloway

**Response to Comment N-18391:**

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Chad Kittelmann

**Response to Comment N-18395:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Our sport is evolving at an incredible rate. This is largely due to the King of the Hammers event held each year at Johnson Valley. If the Marines were to take over the area, it would put a massive dampener on our sport. People need a place like Johnson Valley to enjoy OHV use, push the limits of their equipment, and step outside of the box to push the boundaries of our sport.

Sincerely,

Dustin Braaten

To Whom It May Concern:

The importance of Johnson Valley to the OHV industry is incalculable.

There has been more rockcrawling equipment created for, developed at, and tested and marketed in Johnson Valley than at any other singular location in the world.

A great many desert racing parts manufacturers test their new equipment at Johnson Valley.

The UTV industry has discovered Johnson Valley as a testbed for their new vehicles.

Not only will the closure of Johnson Valley have an economic impact on nearby local small businesses, it will have an economic impact to an entire nationwide industry. Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. San Diego, CA 92132-5190

To Whom It May Concern:

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. Please GO EAST MARINES!

Sincerely,

Marie Hauser

**Response to Comment N-18413:**

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

Instead of expanding 29 Palms Marine Base, it makes far more sense to train using the un-used time and locations already available at Fort Irwin. That base was expanded years ago and has not been used nearly to its potential. Do not ignore the fact that the funding saved by taking the Ft Irwin option is the RIGHT THING TO DO. Do not make false assumptions that Ft Irwin could not be used to properly gain the extra training the current missions of the US Marine Corps needs. Marines can get what they need at Fort Irwin, doing so at a far smaller cost, far smaller infrastructure commitment, and utilize lands that are fully under-used, versus taking away lands used for recreation and tourism in the area surrounding Johnson Valley. Please, do not expand the 29 Palms Marine Base into Johnson Valley!

Sincerely,

Christopher Hauser

To Whom It May Concern:

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. Fort Irwin is our nation's army training center. The Army is supposed to be our heavyweights when it comes to action. The Marines are wanting to make 29 Palms BIGGER than the Army's national training center, for what? It doesn't need more space than the biggest military branch. General James F. Amos, Commandant of the Marine Corps was quoted:

"But we see that's probably what the world is going to look like for the next two decades. A lot more information there, but we think that's going to be our backyard because this is primarily the littorals, because these are kind of the nasty missions and things that, quite honestly, don't require 20,000 Marines on the ground. They may only require a Marine rifle company; they may require a training team to go in and help train border police of some of the nations that we want to help gird up and secure their borders."

"We know we're a second land army; we've got to get back to our amphibious roots, we've got to – and then all of a sudden people started using that language. And then they became critical of us: Well, we don't need another second land army."

"And we're making efforts. We already canceled some programs that we not only didn't need but were way too big and way too heavy."

"We are going to lighten the Marine Corps. We're an air-ground task force. Now, it's going to take – it'll go past – it'll go to the 36th and probably the 37th commandant, but we are going to do it. And we're in the process of doing it right now."

Sincerely,

Joe Aplet

The Corps has excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. For all that will be lost by the expansion into Johnson Valley, it is owed to the multiple use groups involved to consider alternative options with a clear and open mind.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

**Response to Comment N-18427:**

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

To Whom It May Concern:

I support our troops but I also love to off road and enjoy all the freedoms that America has to offer. I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms. Truly, is this expansion based on the REAL needs of the Marine Corps in the near and distant future OR is it based on the by-gone needs of yesterday? The way the political, social, cultural, and financial status of the world has appeared recently, it looks as though EVERYTHING is different than it was just a few years ago. Listening to the expansion presentation given by the Marine Corps at a couple of different locations, most all of the planning for this expansion was decided on a VERY long time ago. The world is a different place and continuing with this expansion without ensuring it is what the Corps truly needs is a mistake that will not benefit the Corps and will hurt a large number of Americans along the way.

DO NOT expand the 29 Palms Military base without re-visiting ALL aspects of what Marines TRULY need for the near and distant future. The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Sincerely,

Tyler Gowans

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be affected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

**Response to Comment N-18435:**

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions, mainly because Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc.

All of these groups need to be made aware of the proposed changes and given the chance to add their input on the base expansion. To the best of my knowledge, 29 Palms has not made the effort to reach out to the full diversity of user groups who access Johnson Valley.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

San Diego, CA 92132-5190

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

Richard Carter

**Response to Comment N-18443:**

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions, mainly because Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc.

All of these groups need to be made aware of the proposed changes and given the chance to add their input on the base expansion. To the best of my knowledge, 29 Palms has not made the effort to reach out to the full diversity of user groups who access Johnson Valley.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be affected by the expansion of 29 Palms to the West. Austin, TX 78758

Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

I come from a family with a history of military service. My father served in Korea and two of my brothers are former Marines. I understand the need to have space for training men and testing equipment, but you don't need this particular area of land.

This is some of the best wheeling land in the country and the OHV community fights daily against the shrinkage of land available for use by the enthusiasts of our sport. I am sure that the base at 29 Palms can expand in other directions in order to leave the Johnson Valley for the mixed use recreation that it is currently for.

Sincerely,  
Eliot Towb

**Response to Comment N-18461:**

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Lakeside, CA 92040

Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

To Whom It May Concern:

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions, mainly because Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

Beyond the typically defined OHV user, there are many other groups of people that access Johnson Valley - hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc.

All of these groups need to be made aware of the proposed changes and given the chance to add their input on the base expansion. To the best of my knowledge, 29 Palms has not made the effort to reach out to the full diversity of user groups who access Johnson Valley.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Thomas Harlan

San Diego, CA 92132-5190

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

Chad Kittelmann

**Response to Comment N-18466:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Hello,  
My name is Starr Penniman. I have been a part of the four wheeling community for almost ten years. I know many people that have dedicated their lives to this "lifestyle". It is not just a fun activity, it is certainly a lifestyle that has affected people in a very positive way. Without the use of Johnson Valley, the four wheeling community in a whole will be affected. OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.  
Thank you so much for taking the time to hear my voice. I truly appreciate this opportunity to express my opinion.

Sincerely,

Starr Penniman

Saint George, UT 84770

Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

To Whom It May Concern:

OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.

Sincerely,

John Williams

**Response to Comment N-18483:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. Please GO EAST MARINES!

Sincerely,

Marie Hauser

**Response to Comment N-18485:**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

To Whom It May Concern:

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops.

I have been following the proposed expansion of the 932-square-mile Air Ground Combat Center at Twentynine Palms and the plan to take over more than two-thirds of the Johnson Valley Off-Highway Vehicle Area for live-ammunition training missions, mainly because Johnson Valley is known throughout the world as THE prime off-highway area - home to the famed King of the Hammers race.

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. Even if this IS the case, there is more room for them to train if 29 Palms expands to the East instead.

I do understand the need for training areas for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

To Whom It May Concern:

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-road riding that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

I want Johnson Valley to be accessible so that I can take my 2 boys riding or wheeling just like my father took me there to ride dirt bikes many times over the last 20+ years. There must be some other areas that the military could take over that would not take away from the off road community like this would. We have so few off road areas as it is and to lose this would be a huge blow to the community that I love to belong to.

Sincerely,

Craig Vasconcellos

**Response to Comment N-18503:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Paul Rizzo

**Response to Comment N-18504:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

There is a huge concentration of OHV enthusiasts in the southern California area. Their "Mecca" for off-roading happens to be Johnson Valley. As so many off road areas have been closed in the past few decades, those enthusiasts have so few choices for their activities that the encroachment of the 29 Palms Marine Base into the area will not only devastate their culture, but will end up encouraging a sizable number of them to off-road on closed or protected lands. I would not be surprised if a decent number of them end up on the expanded portion of the base. The simple mention of SHARING of these lands by Marines and OHV is a complete joke...this will not be feasible financially, time-wise, or safety-wise due to unexploded ordnance and a number of other factors. The simple truth is, the loss of recreation lands in this case is unacceptable and will create numerous bad situations that will affect the OHV community, the residential and business communities around Johnson Valley, and ultimately create less-than-safe situations on and around the base itself.

DO NOT expand the 29 Palms Marine Base into Johnson Valley!

Sincerely,  
Christopher Hauser

**Response to Comment N-18508:**

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Please continue to keep land open to the public. Here in CT, there is VERY little space left to legally enjoy our hobby. I definitely understand the importance of Military training, but there are plenty of other areas to do so.

The Military is meant to protect our freedoms, but in this case they would be taking it away.

Sincerely,  
Tim Ford

To Whom It May Concern:

The expansion plans for 29 Palms Marine Base pushing into, and taking over, most of Johnson Valley's multiple-use recreation area appears to be ignorant of the process in doing a proper EIS. There are numerous areas that were left out of the EIS studies, including the impacts on an entire culture of recreationalists...multiple cultures actually.

The activities seen in the Johnson Valley Recreation Area are not just some pop-fad or single event taking place, never to be seen again, but instead are truly "lifestyles", dedicated to participation in a certain activity. Whether it be the rocketeer, the wind-sailer, the rock hound, the off-roader, or any other of the large number of activities taking place in the area, the individual participants invest tens of thousands of dollars, if not hundreds of thousands or even millions of dollars in order to participate. With that much invested, it proves that these activities go far beyond an "intermittent hobby" and are actually in a classification comparable to an entire culture of their own...very large cultures at that.

To ignore something as great as a culture, many cultures in-fact, combined with the fact that Johnson Valley happens to be the "Mecca" of many of those cultures (especially in the off-road world), again shows that the EIS was NOT completed correctly and that the choice to expand into Johnson Valley would be a travesty against a large number of Americans, who are supposed to be protected by the EIS. There are reasons the EIS is a legal process...the way the EIS for the 29 Palms Marine Base expansion has been handled has NOT followed the reasoning for doing an EIS in the first place.

The cultures driven by the unique recreation activities possible in Johnson Valley would be GREATLY impacted by the 29 Palms Base expansion. Do the EIS right, or DO NOT expand the base.

Sincerely,

Norman England

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. Along with the other multiple uses, it is THE Mecca of off-roading that people from all over the world travel to in order to experience it. The King of the Hammers race has made Johnson Valley a household name throughout the world. I doubt that the USMC realizes the full importance of this area to our community and OHV "Culture" that it entails.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

Johnson Valley Recreation area is NOT just a spot for people to go wheeeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

The above statement definatly rings true to my family. We have traveled across country 3 times now just for the chance to visit such a wonderful vast off road opertunity that Johnson Valley provides us.  
I ask that you explore all available options for your expansion and realize that there are many of us that will experence true loss if this opertunity is taken away.  
Thank you for taking the time to review these letters.  
Donnie

Sincerely,  
Donald Buhrmaster

**Response to Comment N-18525:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

There is a huge concentration of OHV enthusiasts in the southern California area. Their "Mecca" for off-roading happens to be Johnson Valley. As so many off road areas have been closed in the past few decades, those enthusiasts have so few choices for their activities that the encroachment of the 29 Palms Marine Base into the area will not only devastate their culture, but will end up encouraging a sizable number of them to off-road on closed or protected lands. I would not be surprised if a decent number of them end up on the expanded portion of the base. The simple mention of SHARING of these lands by Marines and OHV is a complete joke...this will not be feasible financially, time-wise, or safety-wise due to unexploded ordnance and a number of other factors. The simple truth is, the loss of recreation lands in this case is unacceptable and will create numerous bad situations that will affect the OHV community, the residential and business communities around Johnson Valley, and ultimately create less-than-safe situations on and around the base itself.

DO NOT expand the 29 Palms Marine Base into Johnson Valley!

Sincerely,

Tyler Gowans

**Response to Comment N-18528:**

Thank you for your comment. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

To Whom It May Concern:

Upon trying to find the proper mailing address for sending in my comments, I realized that it was not included in the DEIS document and was VERY difficult difficult to find, if not excluded, from every other typical place a concerned citizen may look when they try to find a way to submit any comments they have. I had to rely on a friend who finally dug it up on the Federal Register. How many Americans would know to look on the Federal Register to find an address so important to submitting their comments DURING A PUBLIC COMMENT PERIOD? This alone is enough to demonstrate that people are NOT encouraged to submit their comments and views on this very important subject that affects millions of people.

Due to this major oversight (or possible planned act of discouraging the public to comment), a large percentage of the public may have not found a way to submit their opinions. This means the address(es) should be posted clearly and VERY publicly and the time-period for comments extended.

Furthermore, the amount of time provided for the public comment period is too short for the public to go thoroughly over the documents.

That is two-strikes against the way the public comment period has been handled and all-the-more reason to review what has gone wrong, correct the blatant mistakes, and extend the public comment period to a length of time that satisfies the condition that Americans get a truly fair shot at reviewing all of the documents and issues and having a simple and effective way for them to submit their comments because this time, you'll actually provide the mailing address in locations where EVERYONE who is interested, can find it.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Tyler Gowans

**Response to Comment N-18531:**

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. Along with the other multiple uses, it is THE Mecca of off-roading that people from all over the world travel in order to experience it. The King of the Hammers race has made Johnson Valley a household name throughout the world. I doubt that the USMC realizes the full importance of this area to our community and OHV "Culture" that it entails.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,  
Chad Proctor

To Whom It May Concern:

I support our troops but i alsos love to off road and enjoy all the freedoms that america has to offer. I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms. Truly, is this expansion based on the REAL needs of the Marine Corps in the near and distant future OR is it based on the by-gone needs of yesterday? The way the political, social, cultural, and financial status of the world has appeared recently, it looks as though EVERYTHING is different than it was just a few years ago. Listening to the expansion presentation given by the Marine Corps at a couple of different locations, most all of the planning for this expansion was decided on a VERY long time ago. The world is a different place and continuing with this expansion without ensuring it is what the Corps truly needs is a mistake that will not benefit the Corps and will hurt a large number of Americans along the way.

DO NOT expand the 29 Palms Military base without re-visiting ALL aspects of what Marines TRULY need for the near and distant future.  
Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

Sincerely,

Tyler Gowans

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Thousands of families travel to Johnson Valley to spend time together. In these times family orientation needs to be carefully considered. Children who participate in family activities like off-roading are less likely to join gangs or commit petty crimes for fun.

Sincerely,

Brandon Lowry

**Response to Comment N-18567:**

To Whom It May Concern:

Johnson Valley has been a recreational area since it opened in the early 80's. Generations of families have come to Johnson Valley to spend time together doing the things that they love - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be ended by the expansion of 29 Palms to the West. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,  
Adam Jacob

In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Johnson Valley has been a recreational area since it opened in the early 80's. Generations of families have come to Johnson Valley to spend time together doing the things that they love - OHV users, hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. All of these activities as well as those that go with them such as camping, exploring, rock hounding, shooting etc. will all be ended by the expansion of 29 Palms to the West. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

I understand the need for training for our US military and have the utmost respect and support for our Armed Forces. However, I feel that there are other areas that could be utilized for training that will not have such a great impact as the impact on the Johnson Valley Off-Highway Vehicle Area.

Sincerely,

Tyler DeSpain

People travel from all over the country to enjoy the Johnson Valley OHV area. It's many families' annual vacation destination. They can enjoy their four wheel drive vehicles, ATV's, and motorcycles all in one area. There's also several generations using the area. The kids of the 90's are now bringing their children out to the area, and teaching them how to ride a motorcycle. Johnson Valley is a family friendly recreational area. Don't let the USMC take that away from the people.

Sincerely,

Dustin Braaten

Johnson Valley has been a wonderful chance for our family to share weeks of quality time over the last few years. We have traveled from South Carolina with our girls (age 3,4) and the cross country and camping experience is something they now look forward to for months at a time. Please don't take this opportunity away!  
Thank you for your consideration.  
D

To Whom It May Concern:

As a former Marine, I would ask that you take into consideration the long term effects this will have on the community and Marines stationed at 29 Palms. Once the base has been expanded, it's very difficult if not impossible to reopen it to the public. Expanding East would allow the same training improvements without affecting the public or your Marines personal lives.

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.

Sincerely,  
Kyle Irvin

ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

To Whom It May Concern:

JV is a very important area to many from all around the world. It would be a large loss not only to the OHV community but the entire population if it is shut down to the public. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture." With massive amounts of military vehicles, many of them tracked vehicles; the dust from military maneuvers will greatly affect the air quality in the area. While the documents say that water trucks will be used to suppress dust, it is impossible to water down the entire Johnson Valley. With all the dry vegetation in Johnson Valley and the use of live fire rounds, the possibility of a fire raging out of control in Johnson Valley will be greatly increased. The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area.

Sincerely,  
Tyler Gowans

**Response to Comment N-18607 (Page 1 of 2):**

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

**Comment ID: N-18607 (Page 2 of 2)**

**Response to Comment N-18607 (Page 2 of 2):**

As described in Section 4.4 of the EIS, the environment within the acquisition study areas is similar to that of the existing Combat Center, where wildland fires have not posed a substantial problem due to infrequent occurrence, timely emergency response, low levels of fuel, and strict use of Best Management Practices. Existing emergency response procedures would be applied to acquired land areas. In addition, current procedures for fire management and response contained in the Integrated Natural Resources Management Plan would be extended to any acquired lands.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

To Whom It May Concern:

The beauty of Johnson Valley is one reason thousands of OHV enthusiasts flock to the area every year. These same users generally practice Leave No Trace to preserve the natural beauty of these same areas.

Military operations, including the dropping of shells and the like, will distract from the natural beauty of the area. These same training exercises using live fire will also render the area unsafe for the public to enjoy the natural beauty of Johnson Valley.

With the utmost respect for our fine Marine Corp, I would like to suggest they seriously consider Alternative A which would take them to the East.

Sincerely,

Richard Wilson

**Response to Comment N-18608:**

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

timothy connors jr

**Response to Comment N-18618:**

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

To Whom It May Concern:

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Michael Maskalans

**Response to Comment N-18619:**

Thank you for your comment. As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

To Whom It May Concern:

As a former Marine please take the time to consider all of your options before expanding into Johnson Valley. It should be your last choice only if NONE of the other alternatives are possible. If there is a cost savings in expanding West, consider the loss of income and negative economic impact and realize that there is no real savings in going West. Any additional cost or effort to expand other than West would be in the best interest of everyone involved. I want to believe that the administration would encourage alternatives that would retain the popular support of my Corps by the public!

Currently there are many "routes" in Johnson valley, along with many OHV trails. To Whom It May Concern:

As a former Marine, I would ask that you take into consideration the long term effects this will have on the community and Marines stationed at 29 Palms. Once the base has been expanded, it's very difficult if not impossible to reopen it to the public. Expanding East would allow the same training improvements without affecting the public or your Marines personal lives.

Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. To Whom It May Concern:

JV is a very important area to many from all around the world, it would be a large loss not only to the OHV community but the entire population if it is shut down to the public. Currently the Marines find many of the general public wandering accidentally into 29 Palms. This number would greatly increase if 29 Palms expands into an area that has long been open to the public. Johnson Valley Recreation area is NOT just a spot for people to go wheeling. Currently there are many "routes" in Johnson valley, along with many OHV trails. To this day, there are craters in the desert left over from training during WWII, many of which pose a danger to OHV enthusiasts. With Marines training in the area dropping ordinance, many of these routes will be damaged. This problem has not been addressed in the EIS.

Sincerely,

Tyler Gowans

**Response to Comment N-18631:**

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

To Whom It May Concern:

Former Marines are opposed to this expansion!

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordinance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Sincerely,  
Kyle Irvin

**Response to Comment N-18638:**

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

**Response to Comment N-18639:**

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

As a former Marine, I would ask that you take into consideration the long term effects this will have on the community and Marines stationed at 29 Palms. Once the base has been expanded, it's very difficult if not impossible to reopen it to the public. Expanding East would allow the same training improvements without affecting the public or your Marines personal lives.

Even today, live shells are found occasionally in Johnson valley from training during WWII. With a large amount of ordnance being dropped in the area, the Marines may make Johnson Valley unusable for many years to come if it is ever re-released to the public. This is also an issue with "shared use."

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The Executive Summary on Page 4 explains why the USMC is proposing the establishment of a large-scale training facility at MCAGCC 29Palms. It says the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade (MEB)-sized Air Ground Task Force, and the existing facilities are inadequate.

The underlying strategy was designed over a decade ago. Times and technology have changed. It appears the very foundation for this strategy is changing.

Posted by SWJ Editors on August 13, 2010 4:01 AM

Gates Orders Marine Corps Force Structure Review by Jim Garamone of American Forces Press Service. An excerpt follows:

Defense Secretary Robert M. Gates has ordered a thorough force structure review of the Marine Corps to determine what an expeditionary force in readiness should look like in the 21st century. There are questions about the mission of the Marine Corps, Gates said. Before World War II, the Marines very successfully conducted "small wars" in the western hemisphere. The service also developed the rationale and logistics needed to conduct amphibious warfare.

During World War II, the Corps was wholly dedicated to landing on the beaches in the South and Central Pacific. America's first offensive of World War II was when Marines landed on the beaches of Guadalcanal and began the campaign against Japan in August 1942. Tarawa, Saipan, Peleliu, Iwo Jima and Okinawa are just a few of the landings Marines made.

Since then, Marines have fought on the beaches, mountains and trenches of Korea, the highlands and rice paddies of Vietnam, and the deserts of Kuwait, Iraq and Afghanistan. Although many of these operations saw Marines initially projected from the sea, "they soon turned into long, grinding, ground engagements," Gates said.

The nation does not need a second land army, Gates said, but rather forces that can deploy quickly and sustain themselves for a short period of time.

Also see: Gates: Time has Come to Re-examine Future of Marine Corps by Kevin Baron of Stars and Stripes and Defense Chief Gates Orders Review of Marines' Role by David S. Cloud of The Los Angeles Times.

A more recent article dated Mar. 2, 2011, says that Lt. Gen. George J. Flynn, commanding general of Marine Corps Combat Development Command, spoke to news media about the 2010 Force Structure Review (formed to develop the organization, posture and capabilities of the Marine Corps and its role within the joint force in a fiscally-restrained post-Afghanistan environment; and I quote). Two of the recommendations from the Review are:

Response to Comment N-18648 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-18648 (Page 2 of 2)

Response to Comment N-18648 (Page 2 of 2):

A reduction in force structure from 202,000 to 186,900 when conditions in Afghanistan warrant, and Reduction in ground combat forces, to include a reduction in infantry (regimental headquarters from eight to seven; infantry battalions from 27-24); a reduction in cannon artillery battalions (nine to seven; but a reorganization of batteries to support distributed operations), and a reduction in armor (10 companies to 8).  
See more at <http://www.marines.mil/unit/hqmc/Pages/RestoringBalanceinMarineCorps.aspx>

The Force Structure Review of 2010 itself is attached. Its objectives do not jibe with the objectives stated for the MCAGCC expansion.

The very foundation for this Draft Environmental Impact Study is outdated. Page 4 even says that the training requirement is drawn from an earlier Marine Strategy 21 for 2000. Page 77 Land Use Requirements Study was completed in July of 2005 and based on the earlier training requirements.

On Page 78 it is stated:

1. that MEB-size training is declared (in 2008) by the Marine Corps to be an enduring requirement
2. therefore existing land and air space is insufficient,
3. therefore land acquisition is necessary

Any study of military history shows the last thing any fighting force needs is an enduring requirement. Otherwise, we would still have muzzleloaders, horse-drawn caissons or Sherman tanks. Therefore the judgement that MEB-sized training is required is flawed. Therefore the judgement that existing land and air space is insufficient is called into question. Therefore the judgement that land acquisition is necessary is flawed.

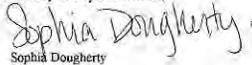

Because the Marines state they must train as they fight, it does not mean they are not already doing so, or that they cannot make quick judgements based on today's conditions for training requirements for tomorrow. Because so much time has been put into this outdated plan does not mean it must roll downhill without taking another look.

The document must be reviewed and anywhere outdated requirements are defined for MEB-sized training, and the existing facilities are declared inadequate, they must be justified to today's needs. Everywhere ideal range requirements are mentioned they must be justified to today's needs. Everywhere airspace requirements are defined they must be justified to today's needs.

The statement on Page 192 that the No-Action Alternative would not meet the needs for the proposed action must be reconsidered in this light also.

Otherwise the entire document must be discarded as it is based on outdated decisions and information.

Thank you for your attention.

Sophia Dougherty

Re: Draft Environmental Impact Statement on 29Palms Base expansion.

Dear Sir,

The DEIS states:  
Potential impacts from six action alternatives and the No-Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomic and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources: The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:

Less than Significant Impacts (LSI):

- Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
- Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):

No impact anticipated from airspace establishment.

Similar judgments are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.

It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:

- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
  - Devaluation of surrounding private property.
  - Increased costs to federal, state and local jurisdictions for increased law enforcement
- All would occur outside the acquisition study boundaries.

Response to Comment N-18649 (Page 1 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley. Furthermore, Sections 3.11 and 4.11 of the EIS has been updated as appropriate to address issues related to the Small Homestead Act.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

If one of the proposed alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment ID: N-18649 (Page 2 of 3)

Response to Comment N-18649 (Page 2 of 3):

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

-These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflowed by helicopters at any hour of the day or night, particularly when they want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.

"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of

Comment ID: N-18649 (Page 3 of 3)

Response to Comment N-18649 (Page 3 of 3):

spiritual values it is worth more than a mansion in a ritzy subdivision.”  
-Desert Magazine 1944

The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves. The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant.  
<http://www.coutant.org/mininternet/saga/index.html>

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

Thank You

Sophia Dougherty

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The communities of Landers and Johnson Valley are in Postal Zip Code 92285.

Landers borders the existing Marine Air Ground Combat Center 29Palms; Johnson Valley is directly southwest of it, and due south of the proposed westward expansion area.

Environmental Justice provisions are addressed in the DEIS because Federal Projects are not supposed to have disproportionate impacts against any ethnic, demographic or socio-economic group.

IN POSTAL CODE 92285, CENSUS 2010 HAS STATED:

- The population is 2,181.
  - The median age of the population is 49.5. 24.7% are 65 years and over. This is almost twice the percentage of people 65 and older in the US population (12.4%). These are very much senior citizen communities.
  - Many residents are retired and on fixed incomes. 39% of our population 16 and over is in the labor force, as compared to 69% in the US.
  - Families below poverty level: 20.8% In the US: 12.4%
  - Individuals below poverty level: 24.9% In the US: 12.4%
  - Disability status (population 5 years and over): 34.8% In the US: 19.3%
- And for good measure:
- Civilian veterans (civilian population 18 years and over): 25.1% In the US 12.7% (and we know many are proud Marines)

[http://factfinder.census.gov/servlet/SAPFFacts?\\_event=Search&geo\\_id=&geoContext=&street=&county=92285&cityTown=92285&state=&zip=92285&lang=en&ssc=on&pxct=fpb&pgsl=010&show\\_2003\\_tab=&redirect=Y](http://factfinder.census.gov/servlet/SAPFFacts?_event=Search&geo_id=&geoContext=&street=&county=92285&cityTown=92285&state=&zip=92285&lang=en&ssc=on&pxct=fpb&pgsl=010&show_2003_tab=&redirect=Y)

The factors listed above indicate the project does raise issues of Environmental Justice for the residents of Landers and Johnson Valley.

The DEIS states that EO 12898 criteria for Environmental Justice say there must be one or more such affected populations within the DEIS area (Page 533). However, very few live WITHIN the EIS area, and it is therefore a contradiction to imply that residents outside the EIS area will not be impacted. The scoping issues (Item 4.3.1.3) listed on the same page include:

- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
- Devaluation of surrounding private property.
- Increased costs to federal, state and local jurisdictions for increased law enforcement.

Response to Comment N-18650 (Page 1 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As outlined in Section 4.3.1.2 of the EIS, three criteria are used to assess the significance of impacts to minority and low-income communities in the context of environmental justice (EO 12898, *Federal Actions to Address Environmental Justice in Minority and Low-Income Populations*): 1) there must be one or more such populations within the project area; 2) there must be adverse (or significant) impacts from the action; and 3) the environmental justice populations within the project area must bear a disproportionate burden of these adverse impacts. If any of these criteria are not met, then impacts with respect to environmental justice would not be significant. All environmental impacts that are attributable to the proposed action would apply equally to any affected persons, regardless of minority or income status; therefore no impacts would occur with respect to environmental justice.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Comment ID: N-18650 (Page 2 of 3)

Response to Comment N-18650 (Page 2 of 3):

The contradiction is the DEIS states that the primary economic impacts would be from displacement of certain activities within the DEIS area causing financial and other hardships to surrounding areas. Therefore the DEIS must be revised to state the criteria for judging Environmental Justice are too narrow, and must state that these criteria also apply to populations outside the DEIS area. Anything less would be easily misunderstood by a less-than-careful reader. Landers and Johnson Valley are within the impact area of the DEIS because of activities that are associated with current activities emanating from the Marine Base, and proposed activities due to the expansion, are above, around and adjacent to Landers and Johnson Valley. To assert otherwise is disingenuous and misleading.

The statement on Page 537 that increase of jobs on the Base would offset jobs lost in the area is self-serving and must be modified, as it does not address the fact that our employed and employable population are outside the 30-minute commute time discussed. Their ability to handle the costs of a longer must be included in the DEIS. The 30-minute commute time is impossible to determine, given traffic and road conditions vary widely throughout the area. The Marines' establishment of the 30-minute commute time is arbitrary.

Landers and Johnson Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

The noise modeling discussed on Page 540 and elsewhere is completely misleading. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

The fact that Landers and other communities have co-existed with the Base for decades is not germane to the discussion. Modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact.

In my personal judgement, most of the residents near the Base and expansion areas are patriots, who support the Marines' dedication to excellent training of the forces who are willing to be sent out to fight where we no longer can or maybe never could. But the nature of Environmental Justice is a direct outgrowth of the life, liberty and pursuit of happiness that they fight to uphold. The DEIS must take a second look at the Base neighbors and their dilemma.

The DEIS judgement is based on estimates and assumptions, therefore I may be allowed to assume that other neighboring communities will be impacted the same as Landers and Johnson Valley.

Therefore, the DEIS conclusion under Item 4.3.2.5 and others must be changed and it must be stated for every Alternative action in the document. Certain socio-economic groups, including, but not limited to, seniors, retirees on fixed incomes, families and individuals below the poverty level, the disabled, and veterans residing in neighboring communities in percentages far greater than in the nation at large, will bear a disproportionate burden if the planned training and area expansions are put into place.

THROUGHOUT THE DOCUMENT, The EO 12898 criteria for Environmental Justice must be added to and expanded to include populations outside the DEIS area, and that citing EO 12898 alone caused a potentially misleading contradiction in the draft document. It also must state, for each Alternative, that significant impacts will occur with respect to Environmental Justice.

The DEIS must state what steps have been taken in previous actions at other Bases to insure equity and

Comment ID: N-18650 (Page 3 of 3)

Response to Comment N-18650 (Page 3 of 3):

fairness in regards to Environmental Justice. The repeated assertion in this DEIS that mitigation is not possible means nothing can be done to insure equity and fairness, and the DEIS must state that fact prominently, and state the draft document had omitted it.

Thank you,

  
Sophia Dougherty

I WAS STATIONED IN 29 PALMS FOR 2 1/2 YEARS WITH 4 BATT. 11<sup>th</sup> MARINES. I KNOW WHAT IT IS LIKE TO LIVE NEAR WAR GAMES.  
I MOVED TO LUCERNE VALLEY TO GET AWAY FROM CITY LIFE, AND I ENJOY THE PEACE AND QUIET IT PROVIDES. IF THE BASE EXPANDS I KNOW THAT WILL ALL END. JUST HOW MANY JETS, HELICOPTERS AND BOMBS WILL THERE BE ONLY A FEW MILES FROM MY HOUSE? MORE THAN I'LL LIKE, I'M SURE.  
PLEASE DON'T TAKE OVER JOHNSON VALLEY. I LIKE WHERE I LIVE, THE WAY IT IS.

Response to Comment N-18652 (Page 1 of 2):

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. The EIS has been revised accordingly. Analysis of noise impacts to wildlife in the Draft EIS were based on the best available information. Noise modeling conducted for the proposed project was focused on impacts to humans. The noise contours developed through the noise modeling effort were considered in the analysis of impacts to biological resources, and the noise metrics from those contours were considered important even though they are weighted toward frequencies important to humans. However, because peak sound levels (and the frequency of occurrence of those sound levels) are of greater concern in analysis of impacts to wildlife than the averaged metrics used in analysis of noise impacts to humans, the biological resources analysis focused more on the locations of ordnance explosion (represented by WDZs and SDZs) and paths of task force travel. Discussion is included throughout the EIS noting the proximity of known populations to these WDZs, SDZs, and task force routes. In addition to this discussion throughout the text, potential noise effects are discussed for the desert tortoise and other wildlife species (see Section 4.10). While the relative importance of various factors in the decline of the desert tortoise are still uncertain and the EIS states this, the published literature that is available indicates that OHVs do adversely affect tortoises via habitat degradation and direct impacts (one such review is Ouren et al. 2007). Analysis of existing disturbance in the west study area from OHVs indicated a significant correlation between areas of high OHV disturbance and lower desert tortoise densities (refer to Appendix I of the EIS).

Comment ID: N-18652 (Page 2 of 2)

Response to Comment N-18652 (Page 2 of 2):

After attending a Public Meeting on the Draft EIS, April 12, 2011 at Joshua Tree, I took some time to study what was presented and listen to comments from in and outside the Wonder Valley Community.

The Wonder Valley Community is supportive of Marines and the Military as a whole. The need to prepare and train our Service men and women is important. Many in the Community are former and present Marines and Sailors. The need to protect our wilderness areas and wildlife is also important.

One area, South Study Area is adjacent to the Cleghorn Lakes Wilderness Area. Quoted from an article in the Hi-Desert Publishing Co. Basin Wide Spirit Magazine, Summer 2010, "Thousands of acres of pristine desert surrounding two dry lakes." It has a canyon of Ghost Flowers (rare find in other areas of the desert), to 4,100 feet in the Bullion Mountains, the perfect habitat for bighorn sheep, in the Sheephole Pass area. Bighorn sheep have been seen in the Pass area, though I have yet to be fortunate to see one. In addition at the lower elevations there are Desert Tortoises and many things not yet discovered in this pristine preserve.

Even if the South Study Area is used for staging, the vibrations from large/heavy trucks, very bright lights at night, noise to name a few will effect the wildlife. The burrows and introduction of exhausts fumes will start to change this beautiful area.

On the East Study Area, of course the bighorn sheep in Sheephole Pass has been mentioned. Amboy Road is regularly used to access areas to the north/east of Wonder Valley (ex: McCarran Airport-Las Vegas). And for the people coming from the north and east to Wonder Valley, to areas in the High/Low Deserts and beyond. That question was asked about Amboy Road closure. Reply: Amboy Road would be blocked on both ends, signs would be put up to notify people of the closed road. My question is: Where would you start? People come from as far west as Interstate 10 and on the east Arizona and Nevada. When the traffic starts to stack up, what then? What would happen in 100 plus degree temperatures, radiators may overflow, car may run out of gas and road shoulders have signs of being soft sand? Health and safety should be a major concern!

I am writing out of concern of the U.S. Marine Corps base expansion into most of the Johnson Valley. While I usually support the U.S. Marine Corps, I do not support this expansion effort to the west. I do support the base expanding its territory to the east.

This expansion into the Johnson Valley puts war games and similar activities within earshot of the Lucerne Valley where I live. In fact, my home sits on a hill with a direct view of the Johnson Valley. I can just imagine our calm and hushed high desert valley being rocked with canon fire, air/ground assaults and the like. Many of us who retired here did so because of the clean air, healthful desert environment, and solitude.

I'm confident that war games will also occur at night which is even more worrisome. We didn't move here to have our evenings saturated with explosions and Afghanistan-like military maneuverings.

I fear expansion of the base into the Johnson Valley will also have a negative economic impact on our businesses, especially our supermarket. Many off-road fans stock up on supplies at our market as they head east for recreational activities in the area the Marine Corps hopes to annex. They also stop at our restaurants and gas stations. If the Marines occupy most of the Johnson Valley thus preventing off-roaders from heading here, it will dry up this vital source of income to our already suffering local economy.

Please head east, not west.

Response to Comment N-18653:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

[www.marines.mil/unit/29palms/las](http://www.marines.mil/unit/29palms/las)

Response to Comment N-18654 (Page 1 of 5):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Comment ID: N-18654 (Page 2 of 5)

(2)

AS MUCH AS 10 MILLION DOLLARS OR MORE AS STATED ARE CHEAP AS COMPARED TO THE ECONOMIC IMPACT THE LOSS OF JOHNSON VALLEY OHV AREA WOULD HAVE ON THE COMMUNITIES AROUND IT IMMEDIATELY AND FOR YEARS TO COME.

EIS FAILED TO STUDY AND NEEDS TO STUDY EASTWARD EXPANSION INTO THE NORTHERN TIP OF THE WILDERNESS AREA AS THIS AREA CONTAINS SIMILAR QUALITIES AS THOSE THE MARINES HAVE STATED THEY NEED TO CONDUCT TRAINING, EVEN IF ALL THE AREA THE MARINES REQUESTED CANNOT BE OBTAINED GOING EAST AND OR NORTH THE EIS FAILED TO COMBINE AND STUDY AREAS TO MINIMIZE WESTWARD EXPANSION.

PUBLIC MEETINGS FAILED TO PROVIDE MAPS TO TAKE SO THAT THE PUBLIC COULD REPLY STUDY THE ALTERNATIVES, ONLY FIXED DISPLAYS WERE PROVIDED.

IT IS UNREALISTIC THAT THE MARINES WOULD BE ABLE TO SHARE USE OF CERTAIN AREAS AS STATED IN ALTERNATIVE 6 SINCE ANY INSTANCE OF UNEXPLODED ORDNANCE THAT COULD HAVE STRAYED

Response to Comment N-18654 (Page 2 of 5):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Comment ID: N-18654 (Page 3 of 5)

(3)

INTO THESE COMMON USE AREAS WOULD CAUSE THEM TO BECOME OFF LIMITS TO THE PUBLIC.

DRAFT EIS FAILED TO STUDY POSSIBLE USE OF OTHER MILITARY BASES FOR EXERCISES SUCH AS FORT IRWIN.

THE MARINE CORPS IN SELECTING ALT. 6 HAVE NOT SELECTED THE BEST ALTERNATIVE AS DETERMINED BY THE SCOPING PERIOD, INSTEAD THEY ~~SO~~ CHOSE THE EASIEST.

JOHNSON VALLEY OHV AREA IS AN IRREPLACEABLE PUBLIC TREASURE AND THE EFFECTS ON THE ECONOMY AND THE ENVIRONMENT BY DISPLACING THE HUNDREDS OF THOUSANDS OF DIVERSE USERS IF ALTERNATIVE 6 WERE TO BE IMPLEMENTED WOULD BE DEVASTATING FOR YEARS TO COME, THEREFORE ALTERNATIVE 1, NO ACTION, OR ALTERNATIVE 3, OR FURTHER STUDY ARE THE ONLY VIABLE OPTIONS

EIS DID NOT STUDY THE ENVIRONMENTAL IMPACT THAT DISPLACED OHV USE ON OTHER AREAS INCLUDING LEGAL AND ILLEGAL LAND USE SINCE MOST ALTERNATIVES

Response to Comment N-18654 (Page 3 of 5):

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Response to Comment N-18654 (Page 4 of 5):

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

RE: Comments on 29 Palms Training Land Acquisition Project and Draft Environmental Impact Statement (EIS)

EIS Project Manager:

I am writing for two purposes: (1) to register my objection to the 29 Palms Training Land Acquisition Project, and (2) to notify you that the EIS for the project is defective with respect to its analysis of project-related impacts on the local economy – impacts for which no meaningful mitigation is offered.

From our perspective, the only rational alternative is the "No Action" alternative. Given that the U.S. Government is dangerously burdened with debt, there is no way that we, as a nation, can responsibly pay for this project at this time. Further, only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels, which is absolutely critical to the survival of the local economy.

Let me explain what I mean. My family recreates in the Johnson Valley OHV area 8 times a year. Our favorite places to visit in Johnson Valley are North Anderson, Cougar Butte where we engage in such activities as Camping, hiking, OHV. When preparing for a trip, we spend \$150 on gas groceries, vehicle parts, etc... in our local area. Then, we spend an additional \$150 in the Johnson Valley/Lucerne Valley/Victorville area while we are camping. Over the years, we have patronized the following businesses, among others, in the Johnson Valley/Lucerne Valley/Victorville Area: Letty's Restaurant, Farmer boys, Arcu Co's Grocery store

If Johnson Valley, or any part of it, were to be closed due to the expansion of the 29 Palms Marine Corps Base, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site.

As written, the Draft EIS provides an inadequate and error-filled analysis of the project's potential impacts on the local economy. The analysis is based on unsupported assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the complete devastation of the local economy is misleading and pure fantasy. This part of the EIS, among others, must be redone.

Respectfully,

Name Tony Nard  
Address 2176 Carden Ave  
Simi Valley, Ca 93065  
Date 5-20-11

Response to Comment N-18655:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Subject: Comment on the Potential Closure of Johnson Valley  
Date: Fri, May 20, 2011 1:01 pm

Comment ID: N-18656  
Date Received: May 27, 2011

**All DEIS Alternatives Would Restrict Access**

As you have no doubt heard by now, the United States Marines are seeking to establish a large-scale training range facility at the Marine Corps Air Ground Combat Center at Twentynine Palms, California. To this end a Draft Environmental Impact Statement (DEIS) has been released. Comments will be accepted until Thursday, May 26<sup>th</sup>.

The DEIS analyzes 6 alternatives for potential impacts to land use, recreation, public health and safety, air quality, noise, biological resources, cultural resources, geological resources, water resources and other resources. The preferred alternative is alternative 6.

The DEIS can be viewed [here](#).

Unfortunately, any of the proposed alternatives, including the Marines' preferred alternative, will ultimately result in the loss of OHV access and possibly a complete closure of the Johnson Valley OHV area.

Please review the DEIS and submit comments by filling in the attached webform found [here](#). You can cut-and-paste the following or insert your own comments. Either way it is imperative that you weigh in before the comment period closes on May 26!

**Suggested Comments:**

As an off-highway vehicle enthusiast I write to urge you to support the "no action" alternative in the *Draft Environmental Impact Statement - Land Acquisition and Airspace Establishment To Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training*. I recognize that the Draft Environmental Impact Statement (DEIS) notes that no action "...is not a viable alternative since it does not meet the purpose and need..." However, none of the 6 proposed alternatives, including preferred alternative 6, adequately address all issues including providing for recreation, particularly motorized recreation.

Local riders, and many from adjoining regions, have been pushed off of public lands and out of many areas of the desert for decades. While I understand that the Marines have a vital mission, there simply must be a better way to provide for adequate training while not essentially eliminating responsible access to Johnson Valley for motorized recreationists.

I encourage you to withdraw the DEIS in favor of developing a new DEIS with a broadened range of alternatives that include options that allow for the continued responsible use of off-highway vehicles (OHVs), and that recognize the vital economic impact that motorized recreation has in the area.

Response to Comment N-18656 (Page 1 of 2):

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Marine base,

Using Johnson Valley for base expansion would wipe out the largest OHV area in the nation. Offroaders & miners & hunters & hikers oppose the expansion of the base.

I support the "No action" alternative, or

This is terrible, why doesn't the base expand east, away from land that already being used.

Dear EIS Project Manager:

First of all, thank you for considering this letter. I fully support our military, its leaders, and the wonderful men and women who fight to secure our freedoms in this country. I am grateful every day for the freedoms I enjoy because of the sacrifice by those who serve. One of the greatest freedoms I enjoy is off road driving and extreme rock crawling. Right now, our freedom of four-wheeling and our military are in conflict, because one of the world's most popular OHV park is in danger of closure for use as a tactical training ground, Johnson Valley OHV park.

My solution, for the benefit of both our military and the vast community of off road enthusiasts, is to expand eastward and/or southward, as outlined in Alternative #3. To me, this Alternative provides the best solution and the easiest to implement for both the Marine Corps, the off road community, and many other groups.

If an eastward and/or southward expansion is simply not possible, Alternative #4 or Alternative #5 would be acceptable, to allow full off road recreation access to Johnson Valley when it is not in use by our Marines.

If even this is not acceptable, the very least alternative I would consider is the favored Alternative #6 BUT with more permitted access northward to include the Outer Limits extreme 4x4 trail, and the access and exit roads. This way, all of the very popular trails remain intact and accessible.

If at all possible, an eastward and southward expansion is acceptable to me, as well as many others. I feel, and I am sure many others would agree, that a permit (which allows access to Johnson Valley 10 months of the year) is only a temporary solution, and a permanent closure and restricted access would be inevitable. Thank you for regarding my input.

Sincerely,

  
Tanya L. Wilson

**Response to Comment N-18657:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The Marine Corps has determined that Alternatives 4, 5, and 6 would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Re: Comments on the 29 Palms Training Land Acquisition/Airspace Establishment Draft EIS

Date: May 25, 2011

The expansion of the 29 Palms Marine Base will have negative impacts on the environment, on animal habitat, and on private property. The preferred option is an expansion into Johnson Valley and Wonder Valley as the sites for the coordinated 72-hr, twice a year training exercises with live ammunition. In addition to training our service members, those of foreign countries will be trained here as well. No matter which area of those under consideration will be chosen for the expansion, the impact will be detrimental.

I am not satisfied with the DEIS in its scope and lack of specifics, especially its limited and vague discussion of mitigation measures. As a property owner and concerned resident I oppose any expansion at this time that will result in destruction of private and BLM lands, of flood infrastructures, of delicate ecosystems, etc., result in increased air pollution, increased noise, and increased tension between residents and illegal off road vehicle (ORV) riders. The burden of the associated costs of the above needs to be assessed realistically and must be guaranteed for any mitigating measures to be effective.

NEPA-1

As property owners we have had plenty of experience with illegal ORV activities, the threats, harassment, and deliberate destruction as retaliation for reporting the illegal activities to the authorities. Displaced ORV riders will increase their incursions into, and their destruction of, individual properties and our communities, especially when enforcement is lacking as right now.

REC-1

The DEIS does not address these issues adequately, there are assumptions vs. facts, mitigating measures are insufficient and should be discussed with affected community members and organizations. Communities are already impacted by air and noise pollution and windows rattling and houses shaking; by expanding the base into our communities, there will be a dramatic increase in all of these.

In addition, I am deeply concerned about the health of the desert communities. The High Desert in general and especially 29 Palms used to be known for its peacefulness and good air quality; people would come from all over to be treated for lung disease and other war-related illnesses. Now there is a risk in the desert communities, including those living on base and training in an environment (sand dust) similar to current war zones. Just as the illegal ORV activities destroy vegetation, animal habitat, flood infrastructures, increase air pollution, and raise noise levels, so will the expansion of the base and the increased training of our service people as well as those from other countries who will train here.

AQ-1

Of course, training is necessary in order to be effective in combat and to increase the chances of survival; however, combat training itself can make our service members (and the civil population)

Response to Comment N-18658 (Page 1 of 3):

NEPA-1:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The types of impacts noted in your comment are discussed in the EIS, and all impact analyses have been based on the best available data. Where data were not available, assumptions were made to inform the analysis, and all such assumptions were clearly described in the EIS. The Marine Corps considered potential mitigation measures for each identified impact but in some cases determined that none were feasible for specific impacts. In some cases, additional text was added in the FEIS to clarify certain mitigations or the lack thereof, as well as to clarify the distinction between “special conservation measures” and “mitigations.”

REC-1:

Additional analysis of the likelihood and potential impacts of possible illegal ORV activity has been incorporated into Section 4.2 of the FEIS. The EIS also addresses impacts related to air and noise and vibrations associated with proposed training activities.

AQ-1:

The Combat Center initiated air monitoring for silica in 2008. Data collected at the Mainside and East SE stations showed that silica content in particulate samples ranged from 5 to 11 percent and that ambient 24-hour concentrations of silica ranged from 0.5 to 1.2 µg/m3.

The following is an approach that qualitatively estimates worst-case impacts to the public from silica generated by the proposed training exercises. The DEIS PM10 dispersion modeling analysis predicts

**Comment ID: N-18658 (Page 2 of 3)**

vulnerable to crystallized silica, dust that becomes respirable under certain condition. The seriousness of the health hazards associated with crystallized silica exposure is demonstrated by the fatalities and disabling illnesses recognized by OSHA. Crystallized silica has been classified as a human lung carcinogen. It can also cause silicosis when silica dust enters the lungs and forms scar tissue thus reducing the lungs' ability to take in oxygen. There is no cure at this time. It also makes people more susceptible to lung infections like tuberculosis.

Since crystallized silica cannot be coughed up and stays in the lungs, it is the cumulative effect that leads to serious health hazards, often not showing up for a long time. I would imagine that, in addition to our service members, young children and the elderly are most vulnerable to this health threat. Health care costs will rise. The increased air and noise pollution may also affect the tourist industry, an important economic factor in this area.

Let's proceed cautiously and gather more information about all of the effects of the proposed expansion, ensure that there is a budget for all mitigating measures for environmental damage and that health and safety of the residents is a priority as well as for our troops so we won't send them to fight with their health already compromised.

You will find, I'm sure, many people in our communities who are equally concerned and would gladly participate with time and ideas to work together toward the best solutions.

AQ-1

**Response to Comment N-18658 (Page 2 of 3):**

that the maximum 24-hour PM10 concentration generated by the proposed training exercises to public lands is 149 ug/m<sup>3</sup>.

The location of this maximum impact is predicted to be on the southwest boundary of the proposed West Area. Assuming these particles have a silica content of 11 percent and taking into consideration a conversion of this impact from a 24-hour to annual period concentration, the maximum annual silica concentration equates to 3.3 ug/m<sup>3</sup>. This result is extremely conservative, as wind directions over an annual period would be much more variable compared to the 24-hour period evaluated in the dispersion modeling analysis, which would produce more dispersion and therefore a lower annual concentration. In addition, due to the remoteness of the maximum PM10 impact location adjacent to the proposed West Area, no one would reside in this location for an entire year and therefore would experience an annual exposure to potential silica emissions generated from the proposed actions. Therefore, silica emissions generated by the proposed training exercises would produce less than significant impacts to the public. Since the dispersion modeling analysis predicted relatively low PM10 impacts to the Mainside portion of the Combat Center, this less than significant silica impact determination also would apply to civilians that reside in this area.

*De minimus* thresholds established by the EPA for particulate matter are health based standards. Since the proposed emissions are below the *de minimus* threshold, no significant impacts are expected. Since the project alternatives would not produce any significant air quality impacts, except the significant impact to ambient PM10

**Comment ID: N-18658 (Page 3 of 3)**

**Response to Comment N-18658 (Page 3 of 3):**

levels estimated for Alternative 3, the increased air pollution associated with the project alternatives would not be expected to significantly affect the tourism industry.

RE: Draft Environmental Impact Statement on 29 Palms Base expansion

Dear Sir,

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley were all founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land with the stipulation the individual would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

These historical communities should be preserved, as they stand now, with no further impact from the 29 Palms Marine base from noise, vibration, air pollution and light pollution. The proposed expansion of training exercises and Combat Center area will do just that.

I urge you to take the base expansion to the east, which will eliminate the negative impacts on these historical communities.

Thank you for your attention.

Sincerely,

Ben Cossart

**Response to Comment N-18659:**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley. Furthermore, Sections 3.11 and 4.11 of the EIS has been updated as appropriate to address issues related to the Small Homestead Act.

May 16, 2011

NAVFAC Southwest  
Attn: 29 Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

Dear Project Manager:

These comments are submitted for consideration on the Twentynine Palms base expansion Draft EIS. My six children (ages now 12 to 15) love wild country, and we all hope the magnificent lands of the California Desert will still be wild when they grow up and explore our beautiful land for themselves.

I do not have any preference among the alternatives, but I suggest one change to Alternative 6, which allows ORVs to continue riding in Johnson Valley when it is not in use for military training. This alternative should be strengthened by adding mitigation measures to protect the land against impacts from illegal ORVs. The Bureau of Land Management has found that illegal ORV riding has done serious damage to many areas of public lands. I hope the Marine Corps will have more success than BLM has had in preventing illegal ORV use.

I applaud the Marine Corps for presenting six alternatives that strictly avoid any conflict with wilderness areas, parks or wildlife refuges. The EIS correctly rejects the notion of repealing parts of the Sheephole Valley, Cleghorn Lakes and Cadiz Dunes Wilderness Areas as part of the base expansion. That should be unthinkable because Congress designated them as wilderness in 1994 to protect their outstanding natural character, after more than 15 years of study and consideration.

Thank you for considering my thoughts. I wish you well in completing this project.

Sincerely yours,

*Betsy Shade M.D.*

**Response to Comment N-18660:**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps has determined that Alternatives 4, 5, and 6 would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

I have been camping at the Johnson Valley OHV Park (specifically Means dry lake bed) 2-5 times per year since 2003 and have always appreciated the varied terrain and close proximity to my home in Anaheim. I believe that closing this (or any part of) OHV recreation area would be doing a great disservice to the outdoor sports minded population of Southern California. As time goes by and more of our wilderness (especially unrestricted) areas are closed we are forced to travel further and further (in many cases to another state) to enjoy outdoor recreation, I hope to be able to share this area with my children some day and greatly appreciate your consideration of keeping it open as it is now.

Response to Comment N-18661:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Draft Environmental Impact Statement (EIS) for Land Acquisition and Airspace Establishment at the Marine Corps Air Ground Combat Center (Combat Center) in Twentynine Palms, Calif.

Dear Project Manager:

Cadiz Inc. ("Cadiz" or "the Company") appreciates the opportunity to provide the U.S. Department of the Navy ("Navy") in cooperation with the Bureau of Land Management and the Federal Aviation Administration with comments on the Draft Environmental Impact Statement ("DEIS") expanding the Marine Corps Air Ground Combat Center in Twentynine Palms, California ("29 Palms Base"). These comments are being submitted to help ensure compliance with the National Environmental Policy Act (42 U.S.C. § 4321 *et seq.*), as well as other federal laws, including the Uniform Relocation Assistance and Real Property Acquisition Policy Act of 1970 (42 U.S.C. §§ 4601-4655.) This letter has been prepared through the joint effort of Cadiz and its legal counsel, Brownstein Hyatt Farber Schreck, LLP. It is also being submitted in conjunction with Cadiz's prior 2009 comments. See January 28, 2009 correspondence attached hereto as Attachment 1. Since the below comments are submitted within the comment period established by Navy under NEPA, Cadiz looks forward to reviewing Navy's responses.

According to the DEIS, the purpose of the expansion of the 29 Palms Base is to fulfill the Marine Corps' requirement to provide sustained, combined-arms, live-fire, and maneuver field training for three Marine Expeditionary Brigade (MEB) sized Marine Air Ground Task Forces (MAGTFs) and associated command, aviation, and combat logistics support elements. Existing training facilities, ranges, and live-fire ground and air maneuver areas are inadequate to support the requirement for MEB-sized training exercises.

I. INTRODUCTION & OVERVIEW OF COMMENTS

A. Cadiz Has a Substantial Interest in the DEIS and Plan

As Navy is aware, Cadiz owns approximately 17,280 acres within the eastern expansion area which is included as part of Alternative 3 in the DEIS. (See attached map of our landholdings clearly marked within the eastern expansion area (Attachment 2). Alternative 3 proposes to add approximately 22,000 acres of land to the South and approximately 177,000 acres to the East of the 29 Palms Base. Alternative 3 is the only alternative being considered that includes the eastern expansion area.

550 SOUTH HOPE STREET  
SUITE 2830  
LOS ANGELES, CALIFORNIA 90071  
P: 213.271.1600  
F: 213.271.1614

Response to Comment N-18663 (Page 1 of 41):

WAT-1:

Section 5.4.13.3 of the EIS acknowledges that Alternative 3 would have a "regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project." The EIS also states that the Cadiz project was uncertain and undergoing environmental review process. The EIS has been revised to update the Cadiz project description for the Final EIS using the information provided by comment letters from Cadiz Inc and others. These revisions are not likely to alter the significance of cumulative impacts from Alternative 3.

NEPA-1:

As indicated in Section 2.4.8 of the EIS, an action alternative must be capable of providing land and associated airspace necessary to meet minimum criteria outlines in Section 2.2.1. All six action alternatives meet these minimum criteria.

NEPA-2:

Sections 3.13 and 4.13 of the EIS discuss baseline information and project impacts to water resources. Section 5.4.13.3 of the EIS discusses cumulative impacts to water resources and acknowledges that implementation of Alternative 3 would interfere with or preclude the Cadiz Water Conservation and Storage Project, which would have a regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project.

Comment ID: N-18663 (Page 2 of 41)

Naval Facilities Engineering Command, Southwest  
ATTN: 29 Palms EIS Project Manager  
May 26, 2011  
Page 2

We believe that the unique geography of the eastern expansion area, including Bristol Dry Lake and a portion of Cadiz Dry Lake, Amboy Road and Sheephole Valley Wilderness Area, would make it difficult to meet the stated goals of the expansion without compromising the training mission in some way.

We also believe the agricultural, biological, socioeconomic, water, and transportation impacts associated with expansion to the East as described in Alternative 3 would be significant and should be avoided. We therefore believe consideration of Alternative 3 should be rejected as unreasonable because the consequences of this alternative have evolved beyond the current analysis contained in the DEIS because Water Project on Cadiz's property is now viable with five (5) separate water agencies contractually obligated which is accounted for in the present analysis. *Vermont Yankee Nuclear Power Corp v NRDC* 435 US 519,551 (1978).

Accordingly, Cadiz supports the selection of Alternative 6, which does not involve lands within the eastern expansion area, as the Preferred Alternative.

1. About Cadiz Inc.

Cadiz was founded in 1983 and is a publicly held renewable resources company that owns and maintains approximately 45,000 acres (~70 square miles) of land in three areas of eastern San Bernardino County. Virtually all of this land is underlain by high-quality groundwater resources. Our Cadiz Valley property, which is included in the eastern expansion area, totals approximately 35,000 acres (~55 square miles) and is the largest contiguous private landholding in the region. The location, geology and hydrology of this property is uniquely suited for development of a water supply and storage project, and we are actively engaged in the development of the Cadiz Valley Water Conservation, Recovery and Storage Project ("Cadiz Valley Water Project" or "Water Project") at the property to provide a sustainable water supply to Southern California.

Additionally, over 9,600 acres of this property is zoned for agriculture and we maintain a sizeable agricultural operation at the property. The infrastructure includes seven wells that are interconnected within this acreage, with total annual production capacity of approximately 13,000 acre feet of water. Additionally, there are housing and kitchen facilities that support up to 300 employees. Permanent crops currently in commercial production include 160 acres of vineyards of certified organic, dried-on-the-vine raisins and 260 acres of lemons. Seasonal vegetable crops include 40 acres of squash and beans.

In addition to water and agricultural development, we are considering solar energy generation and other applications, including recreational and commercial use. We are committed to the implementation of all of our projects.

2. The Cadiz Valley Water Conservation, Recovery and Storage Project

The DEIS improperly relies upon 2009 information about the Project thus incorrectly focusing primarily on the existing agricultural operations on the Cadiz property. (See e.g. DEIS, pp. 3.13-12-3.13-13, 3.1-16, 3.12-19, 5.8 (citing MWD and BLM 2001.)) We include here an update on the status of the development of the Project since 2008 and request that information in the Final Environmental Impact Statement ("FEIS") reflect the advancement of project development. This information should be considered as part of the evaluation of the feasibility of Alternative 3 in the FEIS, which renders it to be considered in the rejected alternative analysis (See DEIS § 2.7). Specifically, the DEIS acknowledges the major detrimental impacts to the local area:

One significant unaccounted for impact which effects the Southern California region is the Cadiz Valley Water Project being implemented by Santa Margarita Water District (SMWD). The Water Project is designed to capture and conserve thousands of acre-feet of native groundwater currently being lost to evaporation through the aquifer system

WAT-1

Response to Comment N-18663 (Page 2 of 41):

NEPA-3:

Section 5.4.13.3 of the EIS acknowledges that Alternative 3 would have a "regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project." The EIS also states that project was uncertain and undergoing environmental review process. The EIS will be revised to update the project description for the Final EIS using the information provided by comment letters from Cadiz Inc and others. These revisions are not likely to alter the significance of cumulative impacts from Alternative 3.

NEPA-4:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. As indicated in Section 2.4.8 of the EIS, an action alternative must be capable of providing land and associated airspace necessary to meet minimum criteria outlines in Section 2.2.1. All six action alternatives meet these minimum criteria

NEPA-5:

Thank you for your comment.

Comment ID: N-18663 (Page 3 of 41)

Page 3

beneath our Cadiz Valley property. The aquifer system is naturally recharged by precipitation (rain and snowfall) that occurs within the Fenner Valley and Orange Blossom Wash watersheds, an area that is approximately 1,300 square miles. The estimated recharge rate of this area is approximately 32,500 acre-feet/year on average. The proposed Project would be executed in two phases: the Conservation and Recovery Component (Phase 1) and the Imported Water Storage Component (Phase 2).

In Phase 1, a wellfield would be constructed on our property to create a sustainable annual water supply through the capture of the average annual natural recharge in the aquifer system plus an amount needed to maintain hydraulic control in the vicinity of the wellfield. Through the implementation of established groundwater management practices an average of approximately 50,000 acre-feet/year would be recovered by wells and conveyed to the Colorado River Aqueduct — via a 42-mile conveyance pipeline constructed within the Arizona and California Railroad (ARZC) right-of-way — for delivery to participating water agencies throughout Southern California over a period of 50 years. In Phase 1 storage capacity would also be available that could be used by participating agencies to carry-over — or “bank” — annual supplies.

Phase 2 is designed to store imported surplus water available during ‘wet’ years on the Colorado River, or — by way of exchanges — from other sources of surplus water. Water would be conveyed to recharge basins on our property in the Fenner Gap to percolate into the ground for storage and future withdrawal as a dry-year supply. Total imported storage capacity is approximately one million acre-feet. Project facilities for both Phase 1 and Phase 2 would be built on Cadiz’s property and other privately-owned land in the eastern expansion area.

Between 1997 and 2002 we pursued a similar project with the Metropolitan Water District of Southern California (“MWD”). Extensive geotechnical, engineering, and environmental analyses were conducted as part of the Final Environmental Impact Report (“EIR”) and Final Environmental Impact Statement (“EIS”) issued in September 2001. The Final EIS was approved by the US Department of the Interior in 2002. However, although the feasibility studies completed under the partnership demonstrated a significant potential for water supply development, MWD decided not to pursue the Program in October 2002. Since 2002, Cadiz has continued to pursue partnerships to develop a revised water supply project different than the Program previously contemplated with MWD.

In September 2008, we secured a right-of-way for the Water Project’s water conveyance pipeline by entering into a lease agreement with the Arizona & California Railroad Company (“ARZC”). The agreement allows for the use of a portion of the railroad’s right-of-way for a period up to 99 years to construct and operate the Water Project’s water conveyance pipeline. The pipeline would be used to convey water between our property and the CRA. The ARZC right-of-way is partly within the eastern expansion area identified in Alternative 3.

In February 2010, we released the details of a comprehensive year-long study measuring the water resources at the Project area. The study was conducted by internationally recognized environmental consulting firm CH2M HILL utilizing new models produced by the U.S. Geological Survey in 2006 and 2008. The work also included the drilling of a series of new wells to further understand the hydrology of the basin. The study estimated the total groundwater in storage in the watersheds tributary to the Project area to be between 17 and 34 million acre-feet, a quantity on par with Lake Mead, the nation’s largest surface reservoir. The study also identified a renewable annual supply of native groundwater in the aquifer system currently being lost to evaporation from Bristol and Cadiz Dry Lakes. CH2M HILL estimated the recharge rate of the groundwater in the system at approximately 32,500 acre-feet per year. CH2M HILL’s findings, which were peer reviewed by leading groundwater experts, confirmed that the aquifer system could sustainably support the Water Project without harm to the environment. Accordingly, the DEIS’ statement that currently “[t]here is some dispute among experts over exactly how much groundwater is available” and that

P. 213.271.1600  
F. 213.271.1614

Response to Comment N-18663 (Page 3 of 41):

WAT-2:

The comments requests that the EIS acknowledge that the proposed Cadiz project would improve water supplies and evaluate alternatives to replace 50,000 AF of water to Southern California, as well as renewable energy generation that would be lost if Alternative 3 precluded the proposed Cadiz project. These issues are beyond the scope of the EIS.

WAT-3:

Section 4.13.4.1 addresses the potential impacts from Alternative 3 to groundwater quality, and concludes “Because of the ongoing management and minimization of MC residues at the Combat Center and implementation of management and minimization of MC residues in the east acquisition area, impacts to surface water quality from Alternative 3 MCs would be less than significant.” The low precipitation rate, intermittent receiving surface water bodies, and deep groundwater, limits the migration of MC residues and thus the potential impacts of use of munitions.

As discussed in Section 3.4.3.1, the Marine Corps’ Range Environmental Vulnerability Assessment (REVA) program uses an EPA-approved screening model for Munitions Constituents in surface and groundwater. The REVA evaluation occurs every 5 years and the first reassessment began in October 2010. Confirmatory sampling will occur if a future REVA evaluation indicates there is a source, pathway, and receptor with detectable levels of Munitions Constituents.

Comment ID: N-18663 (Page 4 of 41)

Naval Facilities Engineering Command, Southwest

 Page 4

"[e]stimates have ranged from 2,000 to 30,000 AF per year (2,500 to 37,000 ML per year)" is erroneous and based on outdated information. (DEIS, p. 3.13-20.)

More importantly, the Project is rapidly moving forward as evidenced by participating agency agreements entered into with five Southern California water providers to participate in the development of the Project. In June 2010, the Company signed agreements with Santa Margarita Water District ("SMWD") and Three Valleys Municipal Water District, which together serve over 650,000 customers in parts of Orange and Los Angeles Counties. These agreements were followed by the addition of Golden State Water Company, California's second largest investor-owned water utility, in late June 2010. In October 2010, the Project also added Suburban Water Systems, a wholly-owned subsidiary of SouthWest Water Company, which provides water, wastewater and municipal utilities services to a population of over one million people from across the southern tier of the U.S.A. In May 2011, Jurupa Community Services District, which serves approximately 100,000 customers in western Riverside County also joined the Project. As part of the agreements, the five water providers have committed agency funds to the review of the Project pursuant to the California Environmental Quality Act ("CEQA"). These funds grant the right to acquire a firm annual supply of water from the final Project. Additionally, the providers acquired options to storage rights in Phase 1 that will allow them to manage their supplies to complement their other water resources. As part of its agreements, SMWD became the lead agency for the CEQA process.

As you are aware, in February 2011, SMWD issued a Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) formally commencing the public portion of the California Environmental Quality Act ("CEQA") process for the Project. (Attachment 3.) A 30-day scoping period was initiated and scoping meetings were held by SMWD on March 16th and March 24th. Preparation of the DEIR is ongoing and the document is expected to be released for public comment in the coming months. Accordingly, the FEIS should reference the new Project and the NOP release in describing the Cadiz Project.

**B. Summary of Comments**

As set forth in greater detail below, Cadiz's comments focus on: (1) the assumptions behind the DEIS and Plan and the funding necessary for the Plan and its mitigation measures; and (2) the analysis of Alternative No. 3 and its environmental effects.

With regard to Navy's assumptions, the DEIS acknowledges that Alternative 3 does not meet all of the project needs and objectives. (DEIS at 2-18) For example, it does not allow for restricted public access for recreational use on at least a portion of the acquired land in the west study area (Johnson Valley), as do Alternatives 4, 5 and 6. Impacts which it does not address or explain are why it would acquire the east study area for exclusive year-around military use which would somehow allow and safeguard public use of Amboy Road. Similarly, Alternative 3 involves reclassifying two existing MOA/Air Traffic Control Assigned Airspace (ATCAAs) as Restricted Areas (with the same lateral dimensions). (*Id.*)

Despite these acknowledgements, Navy assumes that Alternative 3 is reasonable and desirable. Additionally, the analysis in the DEIS does not treat water supply use as a superior economic resource to nearby communities. The Navy's assumptions regarding expanded base operations and its analysis of impacts are inappropriate and result in an DEIS that is tipped in favor of expanded operations rather than recognizing the principal need of a clean and reliable water supply. Additionally, the DEIS does not address that Cadiz, SMWD and the other participating agencies' unique water service area boundaries will be effected by taking of the Cadiz lands. *See generally*, 42 U.S.C. §§ 4601-4655.

WAT-1

NEPA-1

NEPA-2

Response to Comment N-18663 (Page 4 of 41):

**LU-1:**

Section 5.3.2 of the EIS identifies cumulative projects including alternative energy projects proposed within the east acquisition study area boundaries. Section 5.4.1.3 (Cumulative Land Use Impacts with Alternative 3) has been updated to clearly identify cumulative impacts within the east acquisition study area boundaries in regards to alternative energy projects.

**LU-2:**

EIS Section 4.3.4 conservatively assesses that there would be a loss of 100 jobs from displacement of the current operations of Cadiz Inc. In addition to the direct loss of jobs, the analysis includes the impact that those lost jobs would have on regional expenditures and tax revenues (the results of this analysis are shown in Table 4.3-7 & Table 4.3.8). Additional information on Socioeconomics modeling can be found in Appendix K of the Final EIS.

**SOC-1:**

EIS Section 4.3.4 conservatively assesses that there would be a loss of 50 jobs from the displacement of two current mining operations located within the east study area. In addition to the direct loss of jobs, the analysis includes the impact that those lost jobs would have on regional expenditures and tax revenues (the results of which are shown in Table 4.3-7 & Table 4.3.8). Additional information on impacts to businesses, under Alternative 3, has been added to Section 4.3.4 of the Final EIS.

Section 4.3.4.4 has been updated with information on the Cadiz project as indicated in this comment letter.

Comment ID: N-18663 (Page 5 of 41)

Naval Facilities Engineering Command, Southwest  
 ATTN: 29 Palms EIS Project Manager  
 May 26, 2011  
 Page 5

Moreover, the development of the Plan alternatives is inadequate, specifically Alternative 3, is based on outdated and incomplete information. See *infra*, ¶ III (explaining concerns re. impacts on water supply, groundwater quality, energy production, agriculture, socioeconomic impacts on local businesses, residents and the County, economic impacts of land acquisition, and transportation impacts). *State of California v Block* (9th Cir. 1982) 690 F.2d 753, 766-767.

These issues must be analyzed in the DEIS, particularly given that Cadiz and its associated contractors are involved in a water resources proceeding that seeks to balance the protection of Southern California’s water supplies.

**II. THE NAVY’S OBLIGATIONS UNDER THE NATIONAL ENVIRONMENTAL POLICY ACT**

NEPA compels federal agencies to consider the consequences of their proposed activities on the human environment. 42 U.S.C. § 4331. The statute requires federal agencies to produce a DEIS when proposing to engage in any “major Federal actions” that will significantly affect the human environment. 42 U.S.C. § 4332(2)(C). A significance determination requires agencies to consider the context of an action and the intensity of its impacts. First, context refers to analyzing an action in several aspects such as the affected region, the affected interests, and the locality. Under the regulation, both short and long term effects are relevant. Second, intensity refers to the severity of impact which considers a series of factors:

- (a) impacts both beneficial and adverse;
- (b) the degree to which the proposed action affects public health and safety;
- (c) unique characteristics of the geographic area;
- (d) the degree to which effects on the environment are likely to be highly controversial;
- (e) the degree to which effects on the environment are highly uncertain or involve unique or unknown risks;
- (f) the precedential effects of an action;
- (g) whether the action is related to other actions with individually insignificant but cumulatively significant impacts;
- (h) adverse effects on historic resources;
- (i) adverse effects on an endangered or threatened species or its habitat;
- (j) whether the action threatens a violation of a federal, state or local environmental law.

NEPA-3

NEPA-4

<sup>1</sup> A major federal action is federal action that requires substantial planning, time, resources, or expenditure. *Natural Res. Def. Council, Inc. v. Grant* (E.D.N.C. 1972) 341 F.Supp. 356, 366-67.

330 SOUTH HOPE STREET  
 SUITE 2830  
 LOS ANGELES, CALIFORNIA 90071  
 P: 213.271.1600  
 F: 213.271.1614

Response to Comment N-18663 (Page 5 of 41):

**SOC-2:**

Table 4.3-9 shows that the expected reduction in county property tax revenues under Alternative 3 would be \$160,912. Text in Section 4.3.4.3 and explains that this figure is insignificant relative to overall San Bernardino property tax revenues that amounts to \$585.6 million. The determination of less than significant impact is made based on the calculation that lost property tax revenues would represent less than 0.03% of total county property tax revenues.

**NEPA-6:**

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**SOC-3:**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

Comment ID: N-18663 (Page 6 of 41)

Naval Facilities Engineering Command, Southwest  
ATTN: 29 Palms EIS Project Manager  
May 26, 2011  
Page 6

*Environmental Protection Information Center v. Blackwell* (N.D. Cal. 2004) 389 F.Supp.2d 1174.

An agency is then required to prepare an environmental impact statement if the proposed action has the potential to significantly affect the quality of human environment and the action cannot be modified to avoid such impacts. Under these circumstances, as here, NEPA requires a DEIS disclose:

- The environmental impact of the proposed action
- Any adverse environmental effects that will be unavoidable if the proposed action is implemented
- Alternatives to the proposed action
- The relationship between local short-term uses of the environment and the maintenance and enhancement of long-term productivity
- Any irreversible and irretrievable commitments of resources resulting from implementation of the proposed action

42 U.S.C. § 4332(2)(c); see also 40 C.F.R. § 1508.11 (Defining EIS).

In order for the DEIS to adequately justify the expense of taxpayer monies on a project that will cause significant environmental impacts, it must contain a purpose and need section explaining why the action is necessary and worthwhile. This section sets forth the parameters of the required reasonable range of alternatives, including the proposed action. 40 C.F.R. § 1502.13. Here, the Purpose and Need section in the DEIS states the Proposed Action will "fulfill the Marine Corps' requirement to provide sustained, combined-arms, live-fire, and maneuver field training for MEB-sized Marine Air Ground Task Forces (MAGTFs), each consisting of three battalion task forces and associated command, aviation, and combat logistics support elements." (DEIS at p. ES-1.) As set forth below, this need can be adequately achieved without Alternative 3 being considered.

**A. Required Coordination with State and Local Agencies**

In preparing its DEIS, the Navy is governed not only by the text of the NEPA statute and the Council on Environmental Quality's implementing regulations, but also by the Department of the Interior's NEPA implementing procedures. See, e.g., 65 Fed. Reg. 52212 (Aug. 28, 2000). These procedures require that the underlying environmental analysis

"factually, objectively, and comprehensively analyze the environmental effects of the proposed actions and their reasonable alternatives. [The Navy's management should] systematically analyze the environmental impacts of alternatives, and particularly those alternatives and measures that would reduce, mitigate or prevent adverse environmental impacts or which would enhance environmental quality." 65 Fed. Reg. at 55213.

Under NEPA, the Intergovernmental Coordination Act of 1968 (31 U.S.C. § 5506), and the Intergovernmental Coordination Executive Order (Exec. Order No. 12,372, reprinted in 31 U.S.C. § 6506), federal agencies are required to solicit and consider local views on their projects to the degree to which the potential impacts may produce serious conflicts with local entities and conditions.

350 SOUTH HOPE STREET

Response to Comment N-18663 (Page 6 of 41):

TRN-1:

Section 4.6.4 of the EIS addresses transportation and circulation impacts under Alternative 3. As noted in the EIS, since there are no other paved roads in the vicinity of North Amboy Road, it is expected that impacts to transportation and circulation would be significant. To lessen impacts the Marine Corps identified a possible mitigation measure for implementation, which would include coordination with the City of Twentynine Palms, the County of San Bernardino, and other local authorities to provide as much advance notice as possible for the two days per year that North Amboy Road would be closed. Proper signage and warnings would be placed along I-40 and National Trails Highway to the north, and in the City of Twentynine Palms to the south to alert drivers of the road closures.

GEN-1 and GEN-2:

Thank you for your comment.

NEPA-4

NEPA-5

Comment ID: N-18663 (Page 7 of 41)

Response to Comment N-18663 (Page 7 of 41):

Naval Facilities Engineering Command, Southwest  
ATTN: 29 Palms EIS Project Manager  
May 26, 2011  
Page 7

Specifically, the Council on Environmental Quality (CEQ) NEPA Regulations "encourage" integration with state and local land use requirements (with the goal of "one project-one document"). As part of this process the lead agency can designate "cooperating agencies" that are involved in the NEPA document preparation and may use the document to satisfy their own environmental review requirements to the extent allowed by law. At the request of the lead agency, any federal, state, local or tribal agency with jurisdiction by law or special expertise can be a cooperating agency.

To the extent possible, all national, regional, State, and local viewpoints shall be considered in planning development programs and projects of the United States Government or assisted by the Government. State and local government objectives and the objectives of regional organizations shall be considered within a framework of national public objectives expressed in laws of the United States. Available projections of future conditions in the United States and needs of regions, States, and localities shall be considered in plan formulation, evaluation, and review (31 U.S.C. § 6506(c)).

Moreover, CEQ NEPA Regulations require federal agencies to address inconsistencies between a proposal and state/local laws or plans. The NEPA document should describe the extent to which the federal agency would reconcile the inconsistency (40 C.F.R. § 1506.2(d); see also *Village of Palatine v. U.S. Postal Service*, 756 F.Supp. 1079 (N.D.Ill. 1990) addressing the extent to which a federal agency must document compliance with the Intergovernmental Cooperation Act, explain a decision to conflict with local regulations, and consider project alternatives.)

Additionally, the Navy shall:

- (1) Assess environmental consequences of proposed actions that could affect the quality of the human environment in the United States, its territories, and possessions in accordance with DOD and CEQ regulations;
- (2) Use a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and environmental considerations in planning and decisionmaking where there may be an impact on man's environment;
- (3) Ensure that presently unmeasured environmental amenities are considered in the decisionmaking process;
- (4) Consider the reasonable alternatives to recommended actions in any proposal that would involve unresolved conflicts concerning alternative uses of available resources;
- (5) Make available to states, counties, municipalities, institutions, and individuals advice and information useful in restoring, maintaining, and enhancing the quality of the environment; and
- (6) Use ecological information in planning and developing resource-oriented projects.

32 CFR § 775.3.

Relations with state, local and regional agencies. Close and harmonious planning relations with local and regional agencies and planning commissions of adjacent cities, counties, and states, for cooperation and resolution of mutual land use and environment-related problems should be established. Additional coordination may be obtained from state and area-wide planning and development "clearinghouses". These are agencies which have been established pursuant to Executive Order 12372 of July 14, 1982 (3 CFR, 1982 Comp., p. 197).

The clearinghouses serve a review and coordination function for Federal activities and the proponent may gain insights on other agencies' approaches to environmental assessments, surveys, and studies in relation to any current proposal. The clearinghouses would also be able to assist in identifying possible participants in scoping procedures for projects requiring an EIS.

32 CFR § 775.10

III. CONCERNS WITH THE DEIS

Having spent more than 25 years and hundreds of millions of dollars developing the Water Project and our agricultural operations, as described above, including environmental reviews for both endeavors, we welcome the selection of Alternative 6 as the Preferred Alternative and believe it would reduce the direct impacts of this proposed expansion on the Company and our operations.

However, as one of the largest private landowners in the region, we remain concerned about the impacts that expansion of the 29 Palms Base would have on the local community, the environment, and business and industry in the area, and its impacts to Southern California. The following is a list of concerns we have with the DEIS, including Alternative 3. We also provide additional information that should be considered and included in the FEIS:

1. Water Resources: Impacts on Southern California's water supply.

The DEIS correctly finds that Alternative 3 would "result in significant and unmitigable impacts to... water resources as a result of acquisition of Cadiz Inc. landholdings and eliminating or curtailing their agricultural operation and inhibiting Cadiz Inc. from instituting their Conservation and Storage Project." (DEIS, pp. ES-14, ES-36 (Cumulative Impacts), 5-52.) Alternative 3 would result in significant and unmitigable impacts to water resources and "have a regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project." (DEIS, pp. 5-52.) As described above, we are currently pursuing a water project that would make available a reliable supply of water to Southern California. This DEIS fails to recognize that the Cadiz Project will improve water supply reliability by conserving the average annual sustainable yield of the local watersheds, improve supply reliability for Southern California water providers, and reduce dependence on imported water by utilizing a source of water that is not dependent upon the California State Water Project (SWP), the Colorado River, or the Sacramento-San Joaquin Delta (Bay-Delta). The state of California currently faces a long-term water supply crisis. Imported supplies are limited, population growth continues and California hydrology is very unpredictable with dry-years occurring every 3 in 10 years. Southern California receives imported water from the Colorado River and from the Bay-Delta via the SWP, but these supplies are becoming less reliable. The Colorado River flow has diminished due to drought and other factors. The Upper Colorado River Basin is experiencing a protracted multi-year drought which began in October 1999. And, in 2003, California was limited to its basic apportionment of 4.4 million acre-feet from the Colorado River, reducing the supply available to fill the Colorado River Aqueduct. Likewise, SWP flow has diminished due to environmental issues on the Bay-Delta, drought and other factors. The SWP's ability to deliver water to its contractors in any given year depends on many factors, including precipitation, runoff, snowpack levels, water in storage and the pumping capacity in the Bay-Delta. Deliveries fluctuate dramatically from year to year. In its latest reliability report, Department of Water Resources (DWR) predicts that State Water Project contractors will only receive on average, 60% of their contracted allocations. Concerns over pumping water out of the Bay-Delta and lawsuits restricting water use to safeguard threatened and endangered fish species, including several recent judicial decisions, have jeopardized Bay-Delta supplies. In accordance with the recent court decisions, DWR modified its SWP operations to protect endangered species of fish. Modification of these project operations has dramatically reduced SWP deliveries. As a result, many Southern California water agencies have implemented aggressive conservation programs. In addition,

Comment ID: N-18663 (Page 9 of 41)

Response to Comment N-18663 (Page 9 of 41):

Naval Facilities Engineering Command, Southwest  
 ATTN: 29 Palms EIS Project Manager  
 May 26, 2011  
 Page 9

many Southern California water agencies are already maximizing the local water supply through projects that emphasize groundwater development and storage, water reclamation (recycling), and desalination. Nonetheless, these efforts are not sufficient to replace diminishing imported water supplies. The Cadiz Project is one of the few alternatives that could provide a much needed reliable supply of water to Southern California in dry years. This project will also save Southern Californians money by providing a local source of water and therefore use less energy to provide to Southern California agencies.

Importantly, we disagree with the DEIS's findings that "[s]hould Cadiz Inc.'s plans for development of groundwater production to serve the Los Angeles area become viable, it may be possible to provide reasonable access to the groundwater assets, from either inside or outside the boundaries of the Alternative 3 east study area." (DEIS, 4.3-17.) Whether the base expansion to the East could co-exist with the project is uncertain and needs to be analyzed prior to this Alternative being advanced further. Specifically, the concern stems from the "live fire maneuver" requirement dictates removing the Water Project land from consideration for the same reasons as other locales were taken out of consideration. "Other regions studied could not support MEB-sized MAGTF training without significant simulation and constructive forces; thereby failing to meet the criteria for live-fire maneuver training for three battalion task forces." See DEIS, 2-95-96.

WAT-2

Accordingly, as now set forth, this alternative single-handedly may eliminate this new supply, thus hindering California's efforts to find immediate solutions to the ongoing drought and water supply crisis. Without new supplies, such as those made available by the Cadiz Project, Southern California will continue to face several water supply challenges. Accordingly, we suggest that the Final EIS for the 29 Palms Base Expansion thoroughly explore the environmental impacts of each alternative water supply source to replace the 50,000 annual acre-feet provided by this project, as well as the community impacts of depriving Southern California of this much-needed water resource, given the progress we have made in the development of the Project since 2008 and the continued challenges facing California water suppliers.

1. **Water Resources:** Impacts on groundwater water quality —

The DEIS provides that with implementation of mitigation, "Alternative 3 would have [a]...LSI [Less than Significant Impact] to groundwater quality and groundwater flow patterns." While the DEIS recognizes that "[w]ith the exception of the areas underlying and adjacent to Bristol Lake and Cadiz Lake, the quality of the groundwater in the Fenner Gap area is relatively good, with TDS concentrations averaging approximately 300 mg/l," it does not analyze the groundwater quality impacts of expanding the base into the region. (DEIS, p. 13-13.) Instead, the DEIS summarily concludes that [b]ased on the in-place procedures described in Alternative 1, the impacts from the storage and disposal of wastewaters, storage and use of petroleum products, and/or containment and cleanup of spills of waste or hazardous material, Alternative 3 impacts to surface waters would be less than significant." (DEIS, p. 4-13-9.) There is a potential for groundwater contamination from ammunition, bombs, fuel, hazardous chemicals that are used in military exercises on land that overlies the Cadiz Valley aquifer system within the proposed expansion area. These impacts were not adequately assessed in the DEIS and should be considered.

WAT-3

2. **Impacts on energy production —**

Also described above, Cadiz is actively exploring possible solar energy generation and other renewable energy projects at our property. There are also a number of applications on file with the Bureau of Land Management for solar and wind energy projects within the expansion areas. The EIS should analyze how the expansion would limit alternative energy generation in the region, which might lead to environmental consequences such as increased fossil fuel usage, increased carbon dioxide emissions and ultimately exacerbation of global climate change. We also suggest

 May 26, 2011  
 Page 10

that the EIS should examine the environmental impacts of procuring these alternative energy supplies from less environmentally friendly sources, such as fossil fuels, and where these alternative energy sources might come from.

LU-1

3. **Impacts on agriculture** —

As stated in the DEIS, Alternative 3 would be inconsistent with San Bernardino County agricultural land use designation in the east study area and associated agricultural operations on 1,600 acres (648 hectares) within the Cadiz Inc. landholdings. (DEIS, p. 4.1-11.) The DEIS correctly finds that “[t]hese inconsistencies with plans and policies related to mining on public lands and agriculture on private, agriculturally designated lands are considered to be significant and unavoidable. (DEIS, p. 4.1-11.) As described in the DEIS, Alternative 3 would eliminate Cadiz’s agricultural operations, which include grape vineyards, citrus orchards and other diverse plantings, impacting the San Bernardino County’s agricultural sector and eliminating hundreds of farming jobs. It would also limit access to the existing agricultural water supply. We are one of the only agricultural operations in the surrounding area and employ over 100 personnel at our ranch. We can employ up to 300 during full scale harvesting operations. The elimination of this operation should be more thoroughly accounted for in the FEIS, including the value of not only the produced crops, but also the tax revenue associated with these operations that the County receives and the infrastructure in place at the property.

LU-2

4. **Socioeconomic impacts on local businesses** —

In addition to our operations, Alternative 3 would impact the operations of a number of area businesses and their employees, including the salt mining operations on Bristol and Cadiz Dry Lakes; the Burlington Northern Santa Fe Railway Corporation and the Arizona & California Railroad Company; area Marble quarries; and those companies that provide services to these businesses, including water haulers and other suppliers. These impacts are not adequately described in the DEIS and should be considered further in the FEIS.

SOC-1

5. **Socioeconomic impact on the County of San Bernardino/Impacts to Displaced Businesses** —

The DEIS provides: The “[d]irect impact from acquisition of private property (103 private parcels): includes two mining operations and one agricultural/water venture potentially purchased and displaced, resulting in a direct loss of an estimated 150 jobs [100 from Cadiz]. Direct regional impact from lost sales and tax revenue (\$24,221 or -0.3% compared to baseline) related to reduced recreational and film industry spending.” (DEIS, p. 6-5.) The DEIS concludes that given “the existence of programs to assist and fairly compensate displaced businesses, and the fact that only three such businesses occur in the acquisition study areas, Alternative 3 would have less than significant direct impacts to private property owners in the west and south study areas.” (DEIS, p. 4-3.18.) We disagree with the DEIS’s findings and analysis of the impacts from acquisition of the Cadiz property. As we stated in our 2009 scoping comment letter, we believe the taking of large amounts of land for the 29 Palms Base expansion could result in a much greater level of reduced tax rolls or increased taxes on remaining property in the area. The potential impacts on the community and on the human environment that could result from removing these lands from the tax rolls were not thoroughly assessed in the DEIS and should be reevaluated in the FEIS. In addition, the DEIS’s estimation that Alternative 3 will result in a direct job loss of 100 jobs from the Cadiz agricultural operations ignores the thousands of jobs that the Cadiz Valley Water Project will support and create in the near future. In May 2011, Inland Empire economist John Husing Ph.D. issued a report which found that the Cadiz Valley Water Project would create and support over 5,900 jobs, generate more than \$878 million in economic activity over its two phases, and infuse tens of

millions in tax revenue to local governments.<sup>2</sup> This report should be considered and consulted when evaluating economic impacts of Alternative 3 in the FEIS. A copy of the report is provided as an attachment to this letter. (Attachment 4.)

SOC-2

6. Economic impacts of land acquisition on the federal budget —

As stated in our 2009 scoping comment letter and reiterated above herein, Cadiz’s landholdings and assets within the eastern expansion area are extremely valuable and include groundwater resources, extensive agricultural operations and other potential uses. The DEIS did not discuss the cost to the Navy, the federal government and ultimately the public of such a significant taking of private land. This should be evaluated in the Final EIS.

NEPA-6

7. Socioeconomic impacts to residents of nearby towns

The expansion would have socioeconomic impacts to nearby towns which need to be more fully addressed in the FEIS. (i.e. Twenty-nine Palms, Ludlow, Amboy, Charming, Danby, Essex, Fenner & Goffs).

SOC-3

8. Transportation Impacts —

The eastern expansion alternative would limit public access to existing roads within the proposed expansion area, including Amboy Road (the only access from Twentynine Palms and the Morongo Basin to Route 66, Interstate 40 and Interstate 15), Route 66 (National Trails Highway), Salsus Road, Cadiz/Rice Road and other unpaved County roads. National Trails Highway is an international destination that currently draws over 300,000 visitors annually. The County of San Bernardino has designated National Trails Highway and Amboy Road as important County connectors in the county surface transportation plan. Additionally, expansion would impact the Arizona & California Railroad Company and its ability to move freight along its existing rail line, and would limit the public’s access to Wilderness Areas within and adjacent to the proposed expansion area. The analysis of Alternative 3 in the DEIS does reference impacts to Amboy Road, but does not adequately plan for traffic impacts should access to this vital transportation route be limited.

TRN-1

9. Other impacts —

In addition, impacts on biological resources, including wildlife, native vegetation (Harwood’s eriastrum) [DEIS, p. 4.10-55 “Significant impacts would occur to populations of Harwood’s eriastrum in the east study area north of Cadiz Dry Lake”], native animals and the view shed within and adjacent to the proposed expansion area, wilderness and recreation areas, as well as regional wildlife movement corridors and wildlife habitat, land use designations, including the CDCA Plan, the NECO Plan, as well as electrical, gas and oil utility corridors, aviation, including impacts to air space for both commercial and civil aviation in and adjacent to the proposed expansion area, air quality, including impacts from increased fuel usage by tanks, airplanes, trucks and other vehicles on the air quality in and adjacent to the proposed expansion area, and cumulative impacts, including those on the community, the environment, culture and way of life (includes land use planning, economic changes, physical changes, disruption and fragmentation of the

sensitive desert environment, and ultimate cleanup of the site) should continue to be addressed by the FEIS as they were in the DEIS.

GEN-1

IV. CONCLUSION

Cadiz thanks the Navy for providing the opportunity to comment upon the proposed 29 Palms Base and Draft Environmental Impact Statement. For the reasons discussed above, Cadiz believes the DEIS can be corrected and requests the Navy, Bureau of Land Management and the Federal Aviation Administration consider these comments reflecting the concerns it, and agencies involved with the Water Project face regarding both water supply, quantity and quality issues while protecting other valuable resources. Specifically, Cadiz respectfully requests consideration of the following: elimination of Alternative 3 from consideration and/or additional reasonable alternatives, conducting further study and evaluation of impacts, further discussion of appropriate mitigation measures, including any necessary condemnation valuation, and take whatever further actions necessary to develop an DEIS in compliance with NEPA which can serve as the basis for informed decision-making and public scrutiny, as well as approval of an appropriate 29 Palms Base expansion of its operations.

GEN-2

We also request to be notified of any and all future actions regarding the DEIS, preparation of additional studies, as well as preparation of the FEIS. Please add Ms. Courtney Degener to your list of persons receiving notice of this project. You may contact her at cdegener@cadizinc.com and/or 213-271-1605.

Sincerely,

CADIZ INC

RE: Notice of Intent to Prepare an Environmental Impact Statement (EIS) for Proposed Acquisition of Lands & Establishment of Airspace Contiguous to the Marine Corp Air Ground Combat Center, Twentynine Palms, California

Dear Mr. Ross:

Cadiz Inc. appreciates the opportunity to comment on the scoping process for the Environmental Impact Statement ("EIS") that the Department of the Navy ("Navy") is developing in cooperation with the Bureau of Land Management and the Federal Aviation Administration to study alternatives for expanding the Marine Corps Air Ground Combat Center in Twentynine Palms, California ("29 Palms Base").

Cadiz understands from the Notice of Intent that the Navy is currently considering five alternatives and a no action alternative for the expansion of the 29 Palms Base. Cadiz owns approximately 30,000 acres within the eastern expansion area under consideration as part of Alternative 3 of the EIS. As described in the Notice of Intent, Alternative 3 would add 22,000 acres of land in the South and would add approximately 228,000 acres to the East of the base and is the only Alternative being considered that includes the eastern expansion area. Attached please find a map of our landholdings clearly marked within the eastern expansion area. According to the Notice of Intent, the purpose of the expansion of the 29 Palms Base is to meet the Marine Corps Marine Expeditionary Brigade (MEB) sustained, combined arms, live-fire and maneuver training requirements by having an area to operate a three battalion training exercise for 48-72 hours.

Founded in 1983, Cadiz, Inc. is a publicly held land and water resource development company that currently owns and maintains approximately 45,000 acres (~70 square miles) of land in three areas of eastern San Bernardino County. Virtually all of this land is underlain by high-quality groundwater resources. Our Cadiz Valley property, which is included in the eastern expansion area, totals approximately 35,000 acres (~55 square miles) and is the largest contiguous private landholding in the region. The aquifer system that underlies this property is naturally recharged by precipitation (both rain and snowfall) within a watershed of approximately 1,300 square miles, which experts estimate contains roughly 30 – 40 million acre-feet of indigenous groundwater. The location, geology and hydrology of this property is uniquely suited for development of an aquifer storage,

350 SOUTH HOPE STREET

Comment ID: N-18663 (Page 14 of 41)

Response to Comment N-18663 (Page 14 of 41):

recovery and dry-year supply project to augment the water supplies available to Southern California and we have been pursuing the implementation of such a project at our property for a number of years.

Additionally, over 9,600 acres of this property is zoned for agriculture and we maintain a sizeable agricultural operation at the property. Approximately 1,000 acres are currently under cultivation and we are beginning preparations to plant 500 new acres in the spring. In addition to our water and agricultural development, we are considering solar energy generation and other applications, including recreational and commercial use, and we are committed to the implementation of these new projects.

The Cadiz Valley Dry Year Supply Project

The Cadiz Valley Dry-Year Supply Project ("Project") is an aquifer storage, recovery and dry-year supply project designed to provide Southern California with as much as 150,000 acre-feet/year of clean and reliable water during droughts, emergencies, or other periods of need. Most of the Project facilities will be constructed on our property within the eastern expansion area. As noted above, the aquifer system that underlies this landholding is naturally recharged by precipitation (rain and snowfall) that occurs within a regional watershed of approximately 1,300 square miles. Government and private sector experts estimate that this watershed is recharged at an average rate of up to 40,000 acre-feet/year. Withdrawals of indigenous and stored groundwater from this aquifer system can provide a new supply of up to 150,000 acre-feet in dry years.

The Project is also designed to store surplus water available during "wet" years on the Colorado River, or – by way of exchanges – from other sources of surplus water. Total storage capacity is greater than one million acre-feet. When needed, indigenous groundwater or previously stored water would be recovered by wells and conveyed to the Colorado River Aqueduct – via a 42-mile conveyance pipeline – for delivery to participating water agencies throughout Southern California.

The Project has undergone extensive geotechnical, engineering, and environmental analyses as part of the Final Environmental Impact Report ("EIR") and Final Environmental Impact Statement ("EIS") issued in September 2001. The EIS was approved by the US Department of the Interior in 2002. Further, in 2006, PCR Services Corporation finalized a complete update study of the EIR for state environmental law purposes.

In furtherance of the Project, we have worked to secure necessary permits from the County of San Bernardino and the state of California and are also in discussions with a number of water agencies that are interested in participating in the Project. In 2008, we also entered into a 99-year lease with the Arizona & California Railroad for constructing the conveyance pipeline and electrical transmission line on their right-of-way (partly within the eastern expansion area.)

Issues to be addressed in Environmental Impact Statement

As one of the largest private landowners in San Bernardino County, we are concerned about the impacts that this proposal would have on the local community, the environment as well as business and industry in the area. Having spent more than 25 years and hundreds of millions of dollars developing the Cadiz Project and our agricultural operations, including extensive environmental reviews for both endeavors, and given that the 29 Palms Base expansion would involve significantly more land and activities than our Project and agricultural operations, we suggest that the EIS provide a comprehensive analysis of the potential impacts on the extensive expansion areas being considered.

310 SOUTH HOPE STREET  
SUITE 2850  
LOS ANGELES, CALIFORNIA 90013  
P: 213.271.1400  
F: 213.271.1814

Comment ID: N-18663 (Page 15 of 41)

Response to Comment N-18663 (Page 15 of 41):

- extensive agricultural operations and other potential uses. The EIS must study the cost to the Navy, the federal government and ultimately the public of such a significant taking of private land.
8. Socioeconomic impacts to residents of nearby towns (i.e. Twenty-nine Palms, Ludlow, Amboy, Chambliss, Danby, Essex, Fenner & Goffs).
  9. Transportation Impacts – The eastern expansion alternative would limit public access to existing roads within the proposed expansion area, including Amboy Road (the only access from Twenty-nine Palms and the Morongo Basin to Route 66, Interstate 40 and Interstate 15), Route 66 (National Trails Highway), Saltus Road, Cadiz/Rice Road and other unpaved County roads. National Trails Highway is an international destination that currently draws over 300,000 visitors annually. The County of San Bernardino has designated National Trails Highway and Amboy Road as important County connectors in the county surface transportation plan. Additionally, expansion would impact the Arizona & California Railroad Company and its ability to move freight along its existing rail line, and would limit the public's access to Wilderness Areas within and adjacent to the proposed expansion area.
  10. Impacts on biological resources, including wildlife, native vegetation, native animals and the view shed within and adjacent to the proposed expansion area.
  11. Impacts on wilderness and recreation areas, as well as regional wildlife movement corridors and wildlife habitat.
  12. Impacts on land use designations, including the CDCA Plan, the NECO Plan, as well as electrical, gas and oil utility corridors.
  13. Aviation impacts, including impacts to air space for both commercial and civil aviation in and adjacent to the proposed expansion area.
  14. Air Quality Impacts, including impacts from increased fuel usage by tanks, airplanes, trucks and other vehicles on the air quality in and adjacent to the proposed expansion area.
  15. Cumulative impacts, including those on the community, the environment, culture and way of life (Includes land use planning, economic changes, physical changes, disruption and fragmentation of the sensitive desert environment, and ultimate cleanup of the site).

In addition to these impacts, we hope that the EIS will also provide a complete explanation of how each alternative would be utilized to meet the stated training goals for the expansion. We believe that the unique geography of the eastern expansion area, including Bristol Dry Lake, Amboy Road and Sheephole Valley Wilderness Area, would make it difficult to meet the stated goals of the expansion without compromising the training mission in some way.

We appreciate the opportunity to provide comments at the scoping stage of the EIS process, and would welcome any dialogue on the concerns we have raised in this letter. We ask to be notified of all future actions with respect to the preparation of this EIS, given our substantial interest in the project. Any follow-up should be directed to: Courtney Degener at 213-271-1603.

Sincerely,  
CADIZ INC.

*Santa Margarita Water District*

**NOTICE OF PREPARATION OF A  
DRAFT EIR AND  
PUBLIC SCOPING MEETING NOTICE**

**Cadiz Valley Water Conservation, Recovery, and Storage Project**

**To:** California Office of Planning and Research;  
Responsible and Trustee Agencies; County Clerks;  
and Other Interested Parties

**Subject:** Notice of Preparation of an Environmental Impact Report and Public  
Scoping Meeting Notice

**Project:** Cadiz Valley Water Conservation, Recovery, and Storage Project

**Lead Agency:** Santa Margarita Water District

This Notice of Preparation (NOP) has been prepared to notify agencies and interested parties that the Santa Margarita Water District (SMWD) as the Lead Agency is beginning preparation of an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA) for the proposed Cadiz Valley Water Conservation, Recovery, and Storage Project (Project). SMWD, along with other participating water agencies acting as Responsible Agencies, is proposing to implement the Project in partnership with Cadiz Inc. (Cadiz), which owns approximately 34,000 acres of land located in the Cadiz and Fenner Valleys of San Bernardino County, and the Fenner Mutual Water Company (FMWC), a non-profit California mutual water company formed to deliver water at cost to its shareholders that are public water systems that purchase water from the Project.

Substantial quantities of percolating groundwater underlie the Cadiz property. The groundwater naturally flows to the Bristol and Cadiz Dry Lakes (Dry Lakes) and is lost to evaporation. The proposed Project would be executed in two phases: the first phase of the Project is the Conservation and Recovery Component, and the second phase is the Imported Water Storage Component. In the first phase, the Conservation and Recovery Component would be constructed to capture and conserve the average annual natural recharge in the Fenner and northern Bristol Valleys that would otherwise discharge to the Bristol and Cadiz Dry Lakes. The Project would construct extraction wells (wellfield) on the Cadiz property and a 42-mile underground water conveyance pipeline within an active railroad right-of-way that intersects the Colorado River Aqueduct (CRA). Comment ID: N-18663 (Page 18 of 41)

Response to Comment N-18663 (Page 18 of 41):

Project would extract the amount of water that would otherwise flow to the Dry Lakes plus the amount needed to maintain hydraulic control in the vicinity of the wellfield. The pipeline would be sized to convey an annual average of 50,000 acre-feet per year (AFY) of water from the Fenner Valley groundwater basin to SMWD and other participating water agencies, for a period of 50 years.

A second phase of the Project, the Imported Water Storage Component, would make available up to one million acre-feet (MAF) of groundwater storage space to be used as part of a conjunctive use project, which is consistent with State policy favoring and supporting conjunctive use projects (Cal. Water Code § 79170 et seq.). Under the Imported Water Storage Component, Colorado River water would be conveyed to recharge basins in the Fenner Valley to percolate into the ground for storage and future withdrawal as a dry-year supply. Because the Imported Water Storage Component would be implemented at a later date, it will be evaluated in the EIR on a programmatic basis. Prior to implementing the Imported Water Storage Component, it will undergo appropriate further environmental review consistent with CEQA.

SMWD is acting as Lead Agency as the first public agency with a discretionary decision regarding the Project and because the Project will be owned in part and operated by SMWD. SMWD is soliciting the views of interested persons and agencies as to the scope and content of the environmental information to be studied in the EIR. In accordance with CEQA, agencies are requested to review the Project description provided in this NOP and provide comments on environmental issues related to the statutory responsibilities of the agency. The EIR will be used by SMWD and other Responsible Agencies when considering approval of the Project. Other confirmed participating water providers include Three Valleys Municipal Water District, Suburban Water Systems, and Golden State Water Company.

In accordance with the time limits mandated by CEQA, comments on the NOP must be received by SMWD no later than 30 days after publication of this Notice. We request that comments on this NOP be received no later than March 30, 2011. Please send your comments, including a return address and contact name, via mail to this address:

Comment ID: N-18663 (Page 19 of 41)

Response to Comment N-18663 (Page 19 of 41):

Public meetings will be held to receive public comments and suggestions on the Project. One scoping meeting will be held in San Bernardino County and a second scoping meeting will be held within SMWD's service area. The scoping meetings will be open to the public on the following dates and in the following locations:

**Wednesday, March 16, 2011, 4 p.m.**  
Santa Margarita Water District  
26111 Antonio Parkway  
Rancho Santa Margarita, CA

**Thursday, March 24, 2011, 6 p.m.**  
Joshua Tree Community Center  
6171 Sunburst Street  
Joshua Tree, CA

#### PROJECT LOCATION AND SETTING

The Project proposes active management of the groundwater basin underlying Cadiz Inc. property in the Cadiz and Fenner Valleys located in the eastern Mojave Desert, San Bernardino County, California (Figure 1). The purpose of the Project is to develop a new, reliable water supply and storage facility for SMWD and other participating water providers. The Project would be operated by FMWC, which is comprised of shareholders that are public water systems.

The Project area is located at the confluence of the Fenner Valley and Orange Blossom Watersheds (Watersheds), which span nearly 1,300 square miles and contain an estimated total volume of groundwater in storage of more than 20 MAF. The Project area is underlain by an aquifer system composed of saturated alluvial materials, limestone-carbonates, and granitic rocks with a depth to groundwater of consistently more than 180 feet below ground surface (bgs) and reaching over 400 feet bgs in many areas.

#### PROJECT DESCRIPTION

The Project would be implemented in two phases:

The first phase, referred to as the **Conservation and Recovery Component**, would employ a strategy to lower water levels beneath Cadiz property in the vicinity of the proposed Project wellfield to establish hydraulic control and intercept groundwater presently migrating to the Bristol and Cadiz Dry Lakes and being lost to evaporation. Facilities that would be constructed under the first

Comment ID: N-18663 (Page 20 of 41)

Response to Comment N-18663 (Page 20 of 41):

phase include a Project wellfield, water conveyance facilities, tie-in to the Colorado River Aqueduct (CRA), access roads, and power supply and distribution facilities.

- The second phase, referred to as the **Imported Water Storage Component**, would use the established hydraulic control for the importation, storage and recovery of imported developed water made available from the CRA. Facilities that would be constructed under the second phase include a Project wellfield expansion, extension of the water conveyance facilities, CRA diversion structure and pump station, access roads, expansion of the power supply and distribution facilities, and spreading basins.

#### A. Conservation and Recovery Component

As part of the Conservation and Recovery Component, native groundwater currently being lost annually to evaporation at the Bristol and Cadiz Dry Lakes from the aquifer system underlying the Project area would be captured and conserved through the active management of the groundwater basin. Wells would be constructed within the Fenner Gap portion of the Watersheds to withdraw the amount of groundwater necessary to achieve an optimal level to create a natural hydraulic barrier. The hydraulic barrier would allow for the recovery of groundwater that otherwise would be lost to evaporation. The proposed wells would be constructed on Cadiz property, and a 42-mile underground pipeline would be installed within the privately-owned railroad right-of-way (ROW) that connects the Project wellfield to the CRA. The recovered groundwater would be conveyed to SMWD and other participating water providers through the CRA delivery system owned and operated by the Metropolitan Water District of Southern California (Metropolitan). The Draft EIR will include a detailed project description showing facility locations and access points. **Figure 2** shows the proposed Project, including the following components:

- wellfield area
  - groundwater wells
  - interconnecting pipelines
  - natural gas distribution system
- 42-mile water conveyance pipeline
- CRA tie-in
- equalization storage reservoir and pump station near CRA (if necessary)

**Comment ID: N-18663 (Page 21 of 41)**

**Response to Comment N-18663 (Page 21 of 41):**

year without losing the water to evaporation because lowering the water table in the wellfield will also change the gradient and intercept groundwater flowing beneath the surface into the wellfield. Accordingly, the groundwater pumping will act as a barrier to outflow from the groundwater basin into the Dry Lakes where it presently evaporates.

In the event that imported water from the Colorado River is subsequently stored in the Project, the existence of hydraulic control will also allow the imported water to be held in storage for longer periods of time without suffering losses.

The potential quantity and schedule for spreading, storage, and extraction will be explored at the programmatic level in this EIR, pursuant to CEQA Guidelines Section 15168 (14 Cal. Code Regs. § 15168.). Further appropriate environmental review would be conducted as required under CEQA and when specific Project participants are identified and express an interest in accessing the storage space. For example, additional information regarding the specific location and design of the proposed wellfield expansion could be necessary to fully evaluate groundwater quality impacts associated with the Imported Water Storage Component.

**PROJECT APPROVALS**

Implementation of the proposed Project will require the following approvals:

- US Fish and Wildlife Service, Endangered Species Act Section 7
- US Army Corps of Engineers, Clean Water Act Section 404
- California Department of Fish and Game, California Fish and Game Code Section 2081 and California Fish and Game Code Section 1602
- Regional Water Quality Control Board, Clean Water Act Section 401; Storm Water Pollution Prevention Plan; Waste Discharge Requirements for spreading basins; and Anti-Degradation Analysis
- Metropolitan Water District of Southern California, Approval to modify CRA and Wheeling Agreement
- Mojave Desert Air Quality Management District, Natural gas engine emissions permits

**PROJECT HISTORY**

In the early 1990s, Cadiz recognized the potential for developing a groundwater storage and transfer project on its properties and partnered with Metropolitan. Metropolitan, as the lead agency, evaluated the feasibility of operating the project, referred to as the "Cadiz Groundwater Storage and Dry-Year Supply Program" (Program). An EIR/EIS (Environmental Impact Statement) was prepared for the Program, which would have involved transporting surplus Colorado River water to the Program site, recharging it

Comment ID: N-18663 (Page 22 of 41)

Response to Comment N-18663 (Page 22 of 41):

through a series of recharge basins, storing the water, and then extracting the stored water during times of drought. A pipeline was proposed to be constructed on federal Bureau of Land Management (BLM) land to convey water from the CRA to the Program site. In August 2002, the United States Department of Interior issued a right-of-way grant for the pipeline.<sup>1</sup> However, although the feasibility studies completed under the partnership demonstrated a significant potential for water supply development, Metropolitan decided not to pursue the Program in October 2002.<sup>2</sup>

Since 2002, Cadiz has continued to pursue partnerships to develop a revised water supply project different than the Program previously contemplated with Metropolitan. Because water supply to Southern California from the State Water Project and Colorado River is often either unreliable or unpredictable, and future costs of supply are uncertain, SMWD and other Southern California water purveyors have partnered with Cadiz to augment their current water supply with the new Project, as proposed.

The new proposed Project is distinct from the prior Program because:

- a) A conservation component has been added to recover native groundwater currently being lost to evaporation, which was not part of the prior Program;
- b) The proposed water conveyance pipeline would be constructed within a privately-owned railroad right-of-way, under a 99-year lease agreement, and not on public lands, as was previously proposed;
- c) End users have been identified as project participants, as opposed to the prior Program, which only identified one public agency. In addition to SMWD, other confirmed Project participants include Three Valleys Municipal Water District, Suburban Water Systems, and Golden State Water Company.
- d) The imported water storage component is not part of the initial project approval. Accordingly, the groundwater extraction facilities have been sized to accommodate the annual variations in the delivery of conserved, recovered and stored indigenous water.

Comment ID: N-18663 (Page 23 of 41)

Response to Comment N-18663 (Page 23 of 41):

**DISCUSSION OF POTENTIAL ENVIRONMENTAL IMPACTS**

The EIR will address all topics listed in Appendix G of the CEQA Guidelines, regardless of whether the potential impact may be significant, so that information regarding this project is available in a single document to facilitate public review. The content of the EIR will also be subject to input received during the NOP comment period. Where necessary, the EIR will identify mitigation measures to minimize potentially significant impacts of the proposed Project. The EIR will evaluate the following environmental resource issues in addition to CEQA-mandated topics such as cumulative impacts, growth inducement, and Project alternatives:

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality and Greenhouse Gas Emissions
- Biological Resources
- Cultural Resources
- Geology, Soils, Faulting and Seismicity
- Hazards and Hazardous Materials
- Hydrology, Water Quality, and Groundwater
- Land Use and Planning
- Population and Housing
- Mineral Resources
- Noise
- Public Services
- Recreation
- Traffic and Circulation
- Utilities & Service Systems / Water Supply

www.johnhusing.com

**Executive Summary**

Looking at the year by year results, the economic impact of the full Cadiz Groundwater Conservation, Recovery, and Imported Water Storage Project yields the following results over its four year period of design and construction:

Summary of Economic Impacts of Construction Activity, Cadiz Water Project						
Type of Impact	Phase 1 Year 1	Phase 1 Year 2	Phase 2 Year 1	Phase 2 Year 2	4-Year Total	Annual Avg.
Job Creation ( <i>man-years</i> )	1,011	2,090	940	1,945	5,986	1,497
Labor & Proprietorship Income	\$53,416,010	\$115,788,200	\$49,713,909	\$107,763,274	\$326,681,393	\$81,670,348
Economic Activity Generated	\$138,561,308	\$316,207,131	\$126,958,046	\$294,291,784	\$878,018,267	\$219,504,567
State & Local Taxes Generated	\$6,113,696	\$13,537,310	\$5,689,975	\$12,599,082	\$37,940,063	\$9,485,016

Longer term, assuming that the increase in the property valuation equals the construction cost of the Cadiz Water Project's facilities, the increase would be \$536,250,000. This property is inside the Needles Unified School District where the tax rate is \$1.00 per \$100 of valuation for San Bernardino County's government and \$0.1143 for the Needles Unified School District. If the assessed valuation is not increased by an inflation factor, the annual property tax revenue generated in San Bernardino County would total \$6.0 million, including \$5,362,500 to San Bernardino County's government and \$612,934 to the Needles Unified School District.

Permanent Property Tax Revenue Increase			
	San Bdrno Co.	Needles Unified	Total
Assumed Property Valuation	\$536,250,000	\$536,250,000	\$536,250,000
\$100 of Assessed Valuation	\$5,362,500	\$5,362,500	\$5,362,500
Tax Rates Per \$100 of AV	\$1.000	\$0.1143	\$1.1143
Annual Tax Revenue	\$5,362,500	\$612,934	\$5,975,434

**Economic Impact of the Proposed Cadiz Valley  
Groundwater Conservation, Recovery, and Imported Water Storage Project**

John E. Husing, Ph.D.

**Project.** The project's northern end is located at Cadiz, California, just south of the SR-66 in northeastern San Bernardino County. Its southern end is at Rice, California located along the SR-62 next to the Colorado River Aqueduct. Underlying Cadiz is an aquifer system that lies at the base of the Fenner Valley and Orange Blossom watersheds. This underground "lake" is naturally recharged by rain and snow in the nearby mountains that over time flows underground into it. The aquifer is roughly equivalent in capacity to Lake Mead, the nation's largest surface reservoir. Ultimately, a good deal of water that reaches the aquifer ends up just below ground at Cadiz Dry Lake and Bristol Dry Lake (*below*) where it converges with saline water and evaporates through the surface.

**Phase I. Conservation and Recovery.** In Phase I of the project, facilities would be built near Cadiz to capture and conserve the average annual natural recharge into the aquifer that would otherwise reach the Cadiz Dry Lake and the Bristol Dry Lake and evaporate. Phase I would include the construction of extraction wells that would be used to extract the amount of water that would otherwise flow to the Dry Lakes plus the amount needed to maintain hydraulic control in the well field area.

Phase I would also include the building of a 42-mile underground water pipeline that would transmit water southeast to the Colorado River Aqueduct near Rice. The pipeline would be

Comment ID: N-18663 (Page 29 of 41)

Response to Comment N-18663 (Page 29 of 41):

buried along the already disturbed railroad right-of-way along which the Arizona-California Railroad (ARZC) currently operates (see photograph). It would be sized to allow the conveyance of an annual average of 50,000 acre-feet of water. Once the water reaches the Colorado River Aqueduct, it would be conveyed down it into Southern California where it would be made available to the Santa Margarita Water District and other participating water districts.

**Phase I: Timing & Budget.** Once environmental approvals are finalized, Phase I of the project is slated to begin. Planning, design and engineering will occur over a six month period. Construction of the well field, pipeline and power facility is anticipated to take an additional 18 months. The construction budget is estimated as:

• Well Field (20-32 wells)	\$23,500,000
• Pipeline	\$211,500,000
• Power Facilities	\$17,500,000
• Planning, engineering, other overhead	<u>\$25,250,000</u>
• Total Phase I Budget	\$277,750,000

**Phase I: Economic Impact.** The primary impact of a project like the Cadiz Valley Groundwater Conservation & Recovery effort would occur during its construction, not its operational phase. As the project will be built in San Bernardino County, this will be the location of all of the activity. In part, this is because the county has an extensive blue collar labor supply that can build the project. It is also because San Bernardino County is home to production facilities like Ameron International Water Transmission Group and Northwest Pipe Company, leading manufacturers of the materials used in construction wells, pipelines and power plants.

Comment ID: N-18663 (Page 30 of 41)

Response to Comment N-18663 (Page 30 of 41):

- It is therefore assumed that 100% of the construction expenditures will be made to workers and suppliers located within San Bernardino County.

**Phase I, Year 1.** In Year 1 of the project, it is assumed that 80% of the planning, engineering and management work on Phase I of the project is completed. Also in Year 1, 25% of construction and the purchase of materials required for it occurs. In addition, it is assumed that 75% of the construction budget for each activity represents construction, while 25% represents materials and supplies. Combined, this places \$83,325,000 of activity into Year 1 (*Exhibit 1*).

Exhibit 1 - Assumptions, Phase I Year 1			
	Period	Share	Year 1
Engineering & Related	80.0%		\$20,200,000
Pipeline Construction	25.0%	75.0%	\$39,666,250
Pipeline Supplies	25.0%	25.0%	\$13,218,750
Power Plant	25.0%	75.0%	\$3,281,250
Power Plant Supplies	25.0%	25.0%	\$1,093,750
Well Field	25.0%	75.0%	\$4,406,250
Well Field Supplies	25.0%	25.0%	\$1,468,750
<b>Total Expenditures</b>			<b>\$83,325,000</b>
Impact Sectors			
Construction			\$47,343,750
Materials & Supplies			\$15,781,250
Engineering & Related			\$20,200,000
<b>Total Expenditures</b>			<b>\$83,325,000</b>

These expenditures are recombined into three broad sectors used by the IMPLAN model to estimate the economic impact on San Bernardino County's economy of these Year 1 expenditures. The IMPLAN model is the standard one used by economists in determining the economic impact of funds coming from the outside world, in this case, the nation's money markets and hitting the local economy through specific types of activities.<sup>1</sup> The model assumes the economy is not operating at full capacity, a realistic assumption given the February 2011 unemployment rate of 13.7% in the county. Those sectors include:

- Construction of other non-residential structures (*Implan Sector #36*)
- Fabricated pipe and pipe fitting manufacturing (*Implan Sector #201*)
- Management, scientific and technical consulting (*Implan Sector #374*)

<sup>1</sup> Minnesota IMPLAN Group, Inc, Impacts For PLANning, model version 3.0.5.2

Comment ID: N-18663 (Page 31 of 41)

Response to Comment N-18663 (Page 31 of 41):

Essentially, what the IMPLAN model does is provide analysts with three types of estimates:

- **Direct.** This is an estimate of the direct effect impact on the local economy of the activity being studied that brings money to the market from the outside world. To use an analogy, this is akin to the money coming to gold miners in the old west who find gold, send it away and bring money to an area that heretofore had no economy.
- **Indirect.** This is made up of activities in local sectors that receive expenditures from the activity being studied in support of it. In the analogy, this would be the general store which sells supplies to the miners. Without the miners, it would not exist. With them, it becomes a viable business.
- **Induced.** This is made up of activities in the local economy that occur simply because money is flowing through it. These activities are not directly or indirectly related to the initial cause of the money coming to the local economy. In the analogy, this would be the saloon that exists because money is being re-spent in the local area by miners and general store workers. The beneficiaries of the induced effects may not even be aware that their success is being caused by the activity being studied.

*Note: During and after World War II, the navy let local tradesman understand how much sailors meant to them by paying them in \$2.00 bills. As these bills changed hands through the local economy, merchants became aware of the induced effect that occurred because a fleet had showed up.*

In Year 1, the activities associated with planning and starting construction on the Conservation and Recovery phase of the Cadiz project will have the impacts shown in Exhibit 2:

Impact Type	Employment	Labor Income	Output
Direct Effect	593	\$34,328,422	\$83,325,000
Indirect Effect	152	\$7,854,712	\$21,284,424
Induced Effect	266	\$11,432,875	\$33,851,882
<b>Total Effect</b>	<b>1,011</b>	<b>\$53,616,010</b>	<b>\$138,561,306</b>

Source: Output from IMPLAN model for San Bernardino County, 2011

- 1,011 full time equivalent jobs would be created in San Bernardino County. Of those, 593 would be working directly on the project either in construction, construction material production or planning and engineering. Another 152 jobs would be created in firms assisting those operations. Firms having essentially no ties to the project would add 266 jobs due to monies flowing generally through the economy.
- \$53.4 million in wages and salaries to workers as well as income to proprietorships in San Bernardino County. \$34.3 million would be to workers or proprietorships working directly on some phase of the project; \$7.7 million would go to workers in firms assisting

Comment ID: N-18663 (Page 32 of 41)

Response to Comment N-18663 (Page 32 of 41):

these operations. \$11.4 million would go to workers in unrelated firms benefiting from the general increase in economic activity in the county.

- \$138.6 million in economic activity would be added into San Bernardino County's economy.

In addition, in Year 1 of the project, \$6.1 million in tax revenues that currently do not exist would be created for the state of California and local governments in San Bernardino County (Exhibit 3).

Exhibit 3 - California & Local Taxes Generated, Phase I, Year 1	
Type of Tax	Amount
Dividends	\$ 573,600
Social Ins Tax- Employee Contribution	\$ 75,645
Social Ins Tax- Employer Contribution	\$ 187,893
Indirect Bus Tax: Sales Tax	\$ 1,360,016
Indirect Bus Tax: Property Tax	\$ 1,524,190
Indirect Bus Tax: Motor Vehicle Licenses	\$ 31,206
Indirect Bus Tax: Severance Tax	\$ 524
Indirect Bus Tax: Other Taxes	\$ 267,511
Indirect Bus Tax: State & Local Non-Taxes	\$ 143,364
Corporate Profits Tax	\$ 285,191
Personal Tax: Income Tax	\$ 1,206,212
Personal Tax: Non-Taxes (Fines- Fees)	\$ 363,468
Personal Tax: Motor Vehicle License	\$ 55,826
Personal Tax: Property Taxes	\$ 28,388
Personal Tax: Other Tax	\$ 10,862
<b>Total State and Local Tax</b>	<b>\$ 6,113,696</b>

Source: Output from IMPLAN model for San Bernardino County, 2011

**Phase I, Year 2.** In Year 2 of the project, it is assumed that 20% of the planning, engineering and management work on Phase 1 of the project is completed. Also in Year 2, 75% of construction and the purchase of materials required for it occurs. In addition, it is again assumed that 75% of the construction budget for each activity represents construction, while 25% represents materials and supplies. Combined, this places \$194,425,000 of activity into Year 2 (Exhibit 4).

Comment ID: N-18663 (Page 33 of 41)

Response to Comment N-18663 (Page 33 of 41):

	Period	Share	Year 2
Engineering & Related	80.0%		\$5,050,000
Pipeline Construction	25.0%	75.0%	\$118,988,750
Pipeline Supplies	25.0%	25.0%	\$39,666,250
Power Plant	25.0%	75.0%	\$9,843,750
Power Plant Supplies	25.0%	25.0%	\$3,281,250
Well Field	25.0%	75.0%	\$13,218,750
Well Field Supplies	25.0%	25.0%	\$4,406,250
<b>Total Expenditures</b>			<b>\$189,425,000</b>
<b>Impact Sectors</b>			
Construction			\$142,031,250
Materials & Supplies			\$47,343,750
Engineering & Related			\$5,050,000
<b>Total Expenditures</b>			<b>\$194,425,000</b>

As before, these expenditures are recombined into three broad sectors used by the IMPLAN model to estimate the economic impact on San Bernardino County's economy of these Year 2 expenditures. It is further assumed that the county's economy will not have fully overcome its 13.7% unemployment rate by Year 2 and be will still be operating at below full capacity:

- Construction of other non-residential structures (*Implan Sector #36*)
- Fabricated pipe and pipe fitting manufacturing (*Implan Sector #201*)
- Management, scientific and technical consulting (*Implan Sector #374*)

Using the IMPLAN model to calculate the direct, indirect and induced impacts of these expenditure yields the following estimates for Year 2 (*Exhibit 5*):

Impact Type	Employment	Labor Income	Output
Direct Effect	1,197	\$73,830,338	\$194,425,000
Indirect Effect	316	\$17,164,297	\$48,151,836
Induced Effect	577	\$24,793,566	\$73,630,295
<b>Total Effect</b>	<b>2,090</b>	<b>\$115,788,200</b>	<b>\$316,207,131</b>

Source: Output from IMPLAN model for San Bernardino County, 2011

Comment ID: N-18663 (Page 34 of 41)

Response to Comment N-18663 (Page 34 of 41):

- 2,090 full time equivalent jobs would be created in San Bernardino County. Of those, 1,197 would be working directly on the project either in construction, construction material production or planning and engineering. Another 316 jobs would be created in firms assisting those operations. Firms having essentially no ties to the project would add 577 jobs due to monies flowing generally through the economy.
- \$115.8 million in wages and salaries to workers, as well as income to proprietorships in San Bernardino County. \$73.8 million would be to workers or proprietorships working directly on some phase of the project; \$17.2 million would go to workers in firms assisting these operations. \$24.8 million would go to workers in unrelated firms benefiting from the general increase in economic activity in the county.
- \$316.2 million in economic activity would be added into San Bernardino County's economy.

In addition, the project would create \$13.5 million in tax revenues that currently do not exist for California and San Bernardino County's local governments (*Exhibit 6*):

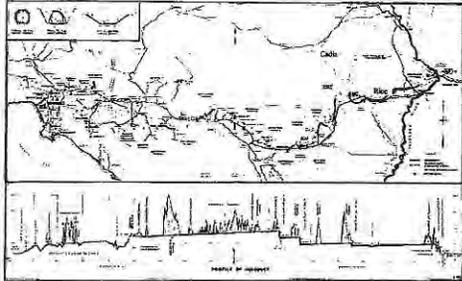

Exhibit 6.-California & Local Taxes Generated, Phase I, Year 2	
Type of Tax	Amount
CA Dividend Taxes	\$ 1,331,795
Social Ins Tax- Employee Contribution	\$ 162,113
Social Ins Tax- Employer Contribution	\$ 402,667
Indirect Bus Tax: Sales Tax	\$ 3,012,145
Indirect Bus Tax: Property Tax	\$ 3,375,756
Indirect Bus Tax: Motor Vehicle Licenses	\$ 69,114

Comment ID: N-18663 (Page 35 of 41)

Response to Comment N-18663 (Page 35 of 41):

**Phase II. Imported Water Storage.** In Phase II of the project, imported water from the Colorado River would be sent down the Colorado River Aqueduct (*see map*) to its junction with the Arizona-California Railroad near Rice. There the water would be pump up through a 44 mile pipeline parallel to the pipeline built in Phase I, terminating in recharge basins in the Fenner Valley above Cadiz. There, the water would then be allowed to percolate into the ground and be stored in the underground aquifer until it is needed as a dry-year supply. The total capacity of the storage system is anticipated to be one million acre feet of ground water storage.

Phase II would also include the building of a 42-mile underground water pipeline that would transmit water southeast to the Colorado River Aqueduct near Rice. The pipeline would be buried along the already disturbed railroad right-of-way along which the Arizona-California Railroad (ARZC) currently operates (*see photograph*). It would be sized to allow the conveyance of an annual average of 50,000 acre-feet of water. Once the water reaches the Colorado River Aqueduct, it would be conveyed down it into Southern California where it would be made available to the parties responsible for storing it.

**Phase II: Timing & Budget.** Once environmental approvals are finalized, Phase II of the project is slated to begin. Planning, design and engineering will occur over a six month period. Construction of the second well field and pipeline is anticipated to take an additional 18 months. The power plant needed to raise the water will be the same one constructed in Phase I. The construction budget is estimated as:

• Well Field	\$23,500,000
• Pipeline	\$211,500,000
• Planning, engineering, other overhead	<u>\$25,250,000</u>
• Total Phase II Budget	<u>\$258,500,000</u>

**Phase II: Economic Impact.** Again, the primary impact of a project like the Cadiz Valley Imported Water Storage effort would occur during its construction, not its operational phase. As the project will be built in San Bernardino County, this will be the location of all of its activity. Again, this is because the county has an extensive blue collar labor supply that can build the project. It is also because San Bernardino County is home to the production facilities of leading manufacturers of the materials used in construction wells and pipelines.

- It is therefore assumed that 100% of the construction expenditures will be made to workers and suppliers located within San Bernardino County.

**Phase II Year 1.** In Year 1 of Phase II of the project, it is assumed that 80% of the planning, engineering and management work on Phase II of the project is completed. Also in Year 1 of Phase II, 25% of construction and the purchase of materials required for it occurs. In addition, it is assumed that 75% of the construction budget for each activity represents construction, while 25% represents materials and supplies. Combined, this places \$77,550,000 of activity into Phase II Year 1 (*Exhibit 7*).

	Period	Share	Phase II Year 1
Engineering & Related	80.0%		\$18,800,000
Pipeline Construction	25.0%	75.0%	\$39,656,250
Pipeline Supplies	25.0%	25.0%	\$13,218,750
Well Field	25.0%	75.0%	\$4,406,250
Well Field Supplies	25.0%	25.0%	\$1,468,750
<b>Total Expenditures</b>			<b>\$77,550,000</b>
<b>Impact Sectors</b>			
Construction			\$44,062,500
Materials & Supplies			\$14,687,500
Engineering & Related			\$18,800,000
<b>Total Expenditures</b>			<b>\$77,550,000</b>

These expenditures are recombined into three broad sectors used by the IMPLAN model to estimate the economic impact on San Bernardino County's economy of these Phase II Year 1 expenditures. Again, the model assumes the economy continues to not be operating at full capacity given the deep hole from which it must recover, due to the county's February 2011 unemployment rate of 13.7%. Those sectors include:

- Construction of other non-residential structures (*Implan Sector #36*)
- Fabricated pipe and pipe fitting manufacturing (*Implan Sector #201*)
- Management, scientific and technical consulting (*Implan Sector #374*)

Comment ID: N-18663 (Page 37 of 41)

Response to Comment N-18663 (Page 37 of 41):

In Phase II Year 1, the activities associated with planning and starting construction on the Imported Water Storage phase of the Cadiz project will have the impacts shown in Exhibit 8:

Impact Type	Employment	Labor Income	Output
Direct Effect	552	\$31,949,224	\$77,550,000
Indirect Effect	141	\$7,124,188	\$19,809,266
Induced Effect	248	\$10,640,497	\$31,598,780
<b>Total Effect</b>	<b>940</b>	<b>\$49,713,909</b>	<b>\$128,958,046</b>

Source: Output from IMPLAN model for San Bernardino County, 2011

- 940 full time equivalent jobs would be created in San Bernardino County. Of those, 552 would be working directly on the project either in construction, construction material production or planning and engineering. Another 141 jobs would be created in firms assisting those operations. Firms having essentially no ties to the project would add 248 jobs due to monies flowing generally through the economy.
- \$49.7 million in wages and salaries to workers, as well as income to proprietorships in San Bernardino County. \$31.9 million would be to workers or proprietorships working directly on some phase of the project; \$7.1 million would go to workers in firms assisting these operations. \$10.6 million would go to workers in unrelated firms benefiting from the general increase in economic activity in the county.
- \$129.0 million in economic activity would be added into San Bernardino County's economy.

In addition, in Phase II Year 1 of the project, \$5.7 million in tax revenues that currently do not exist would be created for the state of California and local governments in San Bernardino County (*Exhibit 9*).

Type of Tax	Amount
Dividends	\$ 533,845
Social Ins Tax- Employee Contribution	\$ 70,403
Social Ins Tax- Employer Contribution	\$ 174,871
Indirect Bus Tax: Sales Tax	\$1,286,757
Indirect Bus Tax: Property Tax	\$1,418,553
Indirect Bus Tax: Motor Vehicle Lic	\$ 29,043
Indirect Bus Tax: Severance Tax	\$ 488
Indirect Bus Tax: Other Taxes	\$ 248,971
Indirect Bus Tax: State & Local NonTaxes	\$ 133,428

Comment ID: N-18663 (Page 38 of 41)

Response to Comment N-18663 (Page 38 of 41):

Corporate Profits Tax	\$ 265,425
Personal Tax: Income Tax	\$1,122,613
Personal Tax: Non-Taxes (Fines- Fees)	\$ 338,277
Personal Tax: Motor Vehicle License	\$ 51,957
Personal Tax: Property Taxes	\$ 26,421
Personal Tax: Other Tax	\$ 9,823
<b>Total State and Local Tax</b>	<b>\$5,686,975</b>

Source: Output from IMPLAN model for San Bernardino County, 2011

**Phase II, Year 2.** In Year 2 of Phase II of the project, it is assumed that 20% of the planning, engineering and management work on Phase II of the project is completed. Also in Year 2, 75% of construction and the purchase of materials required for it occurs. In addition, it is again assumed that 75% of the construction budget for each activity represents construction, while 25% represents materials and supplies. Combined, this places \$180,950,000 of activity into Phase II Year 2 (*Exhibit 10*).

Exhibit 10 - Assumptions, Phase II, Year 2			
	Period	Share	Phase II Year 2
Engineering & Related	80.0%		\$4,700,000
Pipeline Construction	25.0%	75.0%	\$118,968,750
Pipeline Supplies	25.0%	25.0%	\$39,656,250
Well Field	25.0%	75.0%	\$13,218,750
Well Field Supplies	25.0%	25.0%	\$4,406,250
<b>Total Expenditures</b>			<b>\$180,950,000</b>
Impact Sectors			
Construction			\$132,187,500
Materials & Supplies			\$44,062,500
Engineering & Related			\$4,700,000
<b>Total Expenditures</b>			<b>\$180,950,000</b>

As before, these expenditures are recombined into three broad sectors used by the IMPLAN model to estimate the economic impact on San Bernardino County's economy of these Phase II Year 2 expenditures. It is further assumed that the county's economy will still not have fully overcome its 13.7% unemployment rate by this time and will be operating at below full capacity:

- Construction of other non-residential structures (*Implan Sector #36*)
- Fabricated pipe and pipe fitting manufacturing (*Implan Sector #201*)

Comment ID: N-18663 (Page 39 of 41)

Response to Comment N-18663 (Page 39 of 41):

- Management, scientific and technical consulting (*Implan Sector #374*)

Using the IMPLAN model to calculate the direct, indirect and induced impacts of these expenditure yields the following estimates for Phase II, Year 2 (*Exhibit 11*):

Impact Type	Employment	Labor Income	Output
Direct Effect	1,114	\$68,713,383	\$180,950,000
Indirect Effect	294	\$15,974,692	\$44,814,580
Induced Effect	537	\$23,075,199	\$68,527,204
<b>Total Effect</b>	<b>1,945</b>	<b>\$107,763,274</b>	<b>\$294,281,784</b>

Source: Output from IMPLAN model for San Bernardino County, 2011

- 1,945 full time equivalent jobs would be created in San Bernardino County. Of those, 1,114 would be working directly on the project either in construction, construction material production or planning and engineering. Another 294 jobs would be created in firms assisting these operations. Firms having essentially no ties to the project would add 537 jobs due to monies flowing generally through the economy.
- \$107.8 million in wages and salaries to workers, as well as income to proprietorships in San Bernardino County. \$68.7 million would be to workers or proprietorships working directly on some phase of the project; \$16.0 million would go to workers in firms assisting these operations. \$23.1 million would go to workers in unrelated firms benefiting from the general increase in economic activity in the county.
- \$294.3 million in economic activity would be added into San Bernardino County's economy.

In addition, the project would create \$12.6 million in tax revenues that currently do not exist for California and San Bernardino County's local governments (*Exhibit 12*):

Type of Tax	Amount
Dividends	\$ 1,239,492
Social Ins Tax- Employee Contribution	\$ 150,877
Social Ins Tax- Employer Contribution	\$ 374,759
Indirect Bus Tax: Sales Tax	\$ 2,803,383
Indirect Bus Tax: Property Tax	\$ 3,141,793
Indirect Bus Tax: Motor Vehicle Lic	\$ 64,324
Indirect Bus Tax: Severance Tax	\$ 1,080
Indirect Bus Tax: Other Taxes	\$ 551,418
Indirect Bus Tax: S/L NonTaxes	\$ 295,514
Corporate Profits Tax	\$ 616,270
Personal Tax: Income Tax	\$ 2,434,991
Personal Tax: Non-Taxes (Fines- Fees)	\$ 733,716
Personal Tax: Motor Vehicle License	\$ 112,694

Economic Impact: Cadiz Valley Water Project

Response to Comment N-18663 (Page 40 of 41):

Personal Tax: Property Taxes	\$ 57,306
Personal Tax: Other Tax (like Fish/Hunt)	\$ 21,523
<b>Total State and Local Tax</b>	<b>\$12,599,082</b>

Source: Output from IMPLAN model for San Bernardino County, 2011

**Summary.** Looking at the year by year results, the economic impact of the full Cadiz Groundwater Conservation, Recovery, and Imported Water Storage Project yields the following results over its four year period:

Type of Impact	Phase I, Year 1	Phase I, Year 2	Phase II, Year 1	Phase II, Year 2	4-Year Total	Annual Avg.
Job Creation (man-years)	1,011	2,090	940	1,945	5,986	1,497
Labor & Proprietorship Income	\$53,416,010	\$115,788,200	\$49,713,909	\$107,763,274	\$326,681,393	\$81,670,348
Economic Activity Generated	\$138,561,306	\$316,207,131	\$128,958,046	\$294,281,784	\$878,018,267	\$219,504,567
State & Local Taxes Generated	\$6,113,696	\$13,637,310	\$6,689,975	\$12,599,082	\$37,940,063	\$9,485,016

Note that the annual average employment over this period would be 1,497 full time equivalent jobs. Altogether, the project would generate \$326.7 million in income to workers and single proprietors, an average of \$81.7 million per year. The economic activity added into San Bernardino County's economy over the four years would total \$878.0 million, or \$219.5 million per year. State and local taxes generated would total \$37.9 million, or \$9.5 million per year.

Looking longer term, the result of construction of the full Cadiz Water Project would be to increase the assessed valuation of property in the Cadiz area, as well as along the Arizona-California Railroad right of way and in the area where the pipelines would interact with the Colorado River Aqueduct near Rice. If it is assumed that the increase in the property valuation would be equal to the construction cost of the facilities, the increase would be \$536,250,000. All of this property is in unincorporated areas of the Needles Unified School District, where the tax rate is \$1.00 per \$100 of valuation for San Bernardino County's government and \$0.1143 for the Needles Unified School District.

If assessed valuation is not increased by an inflation factor, the annual property tax revenue generated by the Cadiz Water Project within San Bernardino County would total \$6.0 million. This would include \$5,362,000 to San Bernardino County and \$612,934 to Needles Unified School District (*Exhibit 14*).

	San Bernardino Co.	Needles Unified	Total
Assumed Property Valuation	\$536,250,000	\$536,250,000	\$536,250,000
\$100 of Assessed Valuation	\$5,362,500	\$5,362,500	\$5,362,500
Tax Rates Per \$100 of AV	\$1	\$0.1143	\$1.1143
<b>Annual Tax Revenue</b>	<b>\$5,362,500</b>	<b>\$612,934</b>	<b>\$5,975,434</b>

**RE: Comments on the Draft Programmatic Environmental Impact Statement for Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training at Marine Corps Air Ground Combat Center Twentynine Palms, CA (76 FR 10584)**

To whom it concerns:

These comments are submitted on behalf of the Center for Biological Diversity's 320,000 staff, members and on-line activists throughout the western states, regarding the Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training at Marine Corps Air Ground Combat Center Twentynine Palms, CA (76 FR 10584), issued by the Marine Corps Air Ground Combat Center, Twentynine Palms, CA

As proposed, the preferred alternative (Alternative 6) would expand military training into 21,304 acres in the southern expansion area, 146,667 acres in the western expansion of which 38,137 acres would be shared intermittently with off-road vehicle enthusiasts and the remaining 108,530 acres would be used exclusively by the Marine Corps for a total expansion area of 167,971 acres. These Mojave desert lands provide habitat for many species including the threatened desert tortoise. The DEIS for the proposed expansion fails to provide adequate identification and analysis of all of the significant impacts of the proposed project on the desert tortoise, bighorn sheep, golden eagles, and other rare plants, animals and vegetation communities including all Unusual Plant Assemblages (UPAs), and other biological resources. The DEIS also fails to adequately address the significant cumulative impacts of the project; fails to present a clear need for the expansion and lacks consideration of a reasonable range of alternatives.

Of particular concern is the DEIS' failure to include adequate information regarding the impacts to resources and the failure to fully examine the impact of the proposed expansion along with proposed plan amendments to the California Desert Conservation Area (CDCA) Plan from other projects that cumulatively will result in military and industrial areas sprawling across the

Comment ID: N-18664 (Page 2 of 20)

Response to Comment N-18664 (Page 2 of 20):

California Desert within habitat that should be protected to achieve the goals of bioregional plans and endangered species recovery.

In the sections that follow, the Center provides detailed comments on the ways in which the DEIS fails to adequately identify and analyze many of the impacts that could result from the proposed expansion, including but not limited to: impacts to biological resources, direct and indirect impacts, and cumulative impacts.

**I. The DEIS Fails to Comply with NEPA.**

NEPA is the “basic charter for protection of the environment,” 40 C.F.R. § 1500.1(a). In NEPA, Congress declared a national policy of “creat[ing] and maintain[ing] conditions under which man and nature can exist in productive harmony.” *Or. Natural Desert Ass’n v. Bureau of Land Mgmt.*, 531 F.3d 1114, 1120 (9th Cir. 2008) (quoting 42 U.S.C. § 4331(a)). NEPA is intended to “ensure that [federal agencies] ... will have detailed information concerning significant environmental impacts” and “guarantee[] that the relevant information will be made available to the larger [public] audience.” *Blue Mountains Biodiversity Project v. Blackwood*, 161 F.3d 1208, 1212 (9th Cir. 1998).

Under NEPA, before a federal agency takes a “major [f]ederal action[] significantly affecting the quality of the environment,” the agency must prepare an environmental impact statement (EIS). *Kern v. U.S. Bureau of Land Mgmt.*, 284 F.3d 1062, 1067 (9th Cir. 2002) (quoting 43 U.S.C. § 4332(2)(C)). “An EIS is a thorough analysis of the potential environmental impact that ‘provide[s] full and fair discussion of significant environmental impacts and ... inform[s] decisionmakers and the public of the reasonable alternatives which would avoid or minimize adverse impacts or enhance the quality of the human environment.’” *Klamath-Siskiyou Wildlands Ctr. v. Bureau of Land Mgmt.*, 387 F.3d 989, 993 (9th Cir. 2004) (citing 40 C.F.R. § 1502.1). An EIS is NEPA’s “chief tool” and is “designed as an ‘action-forcing device to [e]nsure that the policies and goals defined in the Act are infused into the ongoing programs and actions of the Federal Government.’” *Or. Natural Desert Ass’n*, 531 F.3d at 1121 (quoting 40 C.F.R. § 1502.1).

An EIS must identify and analyze the direct, indirect, and cumulative effects of the proposed action. This requires more than “general statements about possible effects and some risk” or simply conclusory statements regarding the impacts of a project. *Klamath Siskiyou Wildlands Center v. BLM*, 387 F.3d 989, 995 (9th Cir. 2004) (citation omitted); *Oregon Natural Resources Council v. BLM*, 470 F.3d 818, 822-23 (9th Cir. 2006). Conclusory statements alone “do not equip a decisionmaker to make an informed decision about alternative courses of action or a court to review the Secretary’s reasoning.” *NRDC v. Hodel*, 865 F.2d 288, 298 (D.C. Cir. 1988).

NEPA also requires the DEIS to ensure the scientific integrity and accuracy of the information used in its decision-making. 40 CFR § 1502.24. The regulations specify that the agency “must insure that environmental information is available to public officials and citizens before decisions are made and before actions are taken. The information must be of high quality. Accurate scientific analysis, expert agency comments, and public scrutiny are essential.”

Comment ID: N-18664 (Page 3 of 20)

Response to Comment N-18664 (Page 3 of 20):

40C.F.R. §1500.1(b). Where there is incomplete information that is relevant to the reasonably foreseeable impacts of a project and essential for a reasoned choice among alternatives, the Marines must obtain that information unless the costs of doing so would be exorbitant or the means of obtaining the information are unknown. 40 C.F.R. § 1502.22. If the costs are reasonable to obtain information needed to complete the analysis and the DEIS must provide additional information—through a supplement or revised EIS. Even in those instances where complete data is unavailable, the EIS also must contain an analysis of the worst-case scenario resulting from the proposed project. *Friends of Endangered Species v. Jantzen*, 760 F.3d 976, 988 (9th Cir. 1985) (NEPA requires a worst case analysis when information relevant to impacts is essential and not known and the costs of obtaining the information are exorbitant or the means of obtaining it are not known) citing *Save our Ecosystems v. Clark*, 747 F.2d 1240, 1243 (9th Cir. 1984); 40 C.F.R. § 1502.22.

*A. Purpose And Need and Project Description are Too Narrowly Construed and Unlawfully Segment the Analysis*

Agencies cannot narrow the purpose and need statement to fit only the proposed project and then shape their findings to approve that project without a “hard look” at the environmental consequences. To do so would allow an agency to circumvent environmental laws by simply “going-through-the-motions.” It is well established that NEPA review cannot be “used to rationalize or justify decisions already made.” 40 C.F.R. § 1502.5; *Metcalf v. Daley*, 214 F.3d 1135, 1141-42 (9th Cir. 2000) (“the comprehensive ‘hard look’ mandated by Congress and required by the statute must be timely, and it must be taken objectively and in good faith, not as an exercise in form over substance, and not as a subterfuge designed to rationalize a decision already made.”) As Ninth Circuit noted an “agency cannot define its objectives in unreasonably narrow terms.” *City of Carmel-by-the-Sea v. U.S. Dept. of Transportation*, 123 F.3d 1142, 1155 (9th Cir. 1997); *Muckleshoot Indian Tribe v. U.S. Forest Service*, 177 F. 3d 900, 812 (9th Cir. 1999). The statement of purpose and alternatives are closely linked since “the stated goal of a project necessarily dictates the range of ‘reasonable’ alternatives.” *City of Carmel*, 123 F.3d at 1155. The Ninth Circuit recently reaffirmed this point in *National Parks Conservation Assn v. BLM*, 586 F.3d 735, 746-48 (9th Cir. 2009) (holding that “[a]s a result of [an] unreasonably narrow purpose and need statement, the BLM necessarily considered an unreasonably narrow range of alternatives” in violation of NEPA).

The purpose behind the requirement that the purpose and need statement not be unreasonably narrow, and NEPA in general is, in large part, to “guarantee[ ] that the relevant information will be made available to the larger audience that may also play a role in both the decision-making process and the implementation of that decision.” *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 349 (1989). The agency cannot camouflage its analysis or avoid robust public input, because “the very purpose of a draft and the ensuing comment period is to elicit suggestions and criticisms to enhance the proposed project.” *City of Carmel-by-the-Sea*, 123 F.3d at 1156. The agency cannot circumvent relevant public input by narrowing the purpose and need so that no alternatives can be meaningfully explored or by failing to review a reasonable range of alternatives.

Comment ID: N-18664 (Page 4 of 20)

The DEIS' purpose and need for the proposed expansion is "to fulfill the Marine Corps' requirement to provide sustained, combined-arms, live-fire, and maneuver field training for MEB-sized MAGTFs... MEBs must be able to conduct maneuver-intensive operations over extended distances, supported by closely coordinated precision fires, aviation-delivered ordnance, and sustained, focused logistical support... The Marine Corps needs the proposed action because existing facilities, ranges, and live-fire ground and air maneuver areas are inadequate to support the requirement for MEB-sized training exercises." (DEIS at 1-4). The DEIS' purpose and need is very narrowly construed to the proposed expansion areas. The purpose and need provided in the DEIS is impermissibly narrow under NEPA for several reasons, most importantly because it forecloses meaningful alternatives review in the DEIS. Because the purpose and need and the alternatives analysis are at the "heart" of NEPA review and affect nearly all other aspects of the EIS, on this basis and others, agency must revise and re-circulate the DEIS.

NEPA-1

**B. The DEIS Does Not Adequately Describe Environmental Baseline**

DEIS is required to "describe the environment of the areas to be affected or created by the alternatives under consideration." 40 CFR § 1502.15. The establishment of the baseline conditions of the affected environment is a practical requirement of the NEPA process. In *Half Moon Bay Fisherman's Marketing Ass'n v. Carlucci*, 857 F.2d 505, 510 (9th Cir. 1988), the Ninth Circuit states that "without establishing . . . baseline conditions . . . there is simply no way to determine what effect [an action] will have on the environment, and consequently, no way to comply with NEPA." Similarly, without a clear understanding of the current status of these public lands BLM cannot make a rational decision regarding proposed project. See *Center for Biological Diversity v. U.S. Bureau of Land Management, et al.*, 422 F. Supp. 2d 1115, 1166-68 (N.D. Cal. 2006) (holding that it was arbitrary and capricious for BLM to approve a project based on outdated and inaccurate information regarding biological resources found on public lands).

The DEIS fails to provide adequate baseline information and description of the environmental setting in many areas including in particular the status of rare plants, animals and communities including desert tortoise, golden eagles, rare plants, and sand transport corridors.

The baseline descriptions in the DEIS are inadequate particularly for the areas where surveys were a single season, a day, or not performed at all. As discussed below, because of the deficiencies of the baseline data for the proposed project area, the DEIS fails to adequately describe the environmental baseline. Many of the rare and common but essential species and habitats have incomplete and/or vague on-site descriptions that make determining the proposed project's impacts difficult at best. Some of the rare species/habitats baseline conditions are totally absent and as a result no impact assessment is provided either. A supplemental document is required to fully identify the baseline conditions of the site, and that baseline needs to be used to evaluate the impacts of the proposed project.

BIO-1

Response to Comment N-18664 (Page 4 of 20):

**NEPA-1:**

Paragraph 1.3.1 on page 1-4 of the EIS states the purpose and need for the proposed action. This text makes no reference to the proposed expansion areas, and only peripherally refers to the Combat Center as an example of the Marine Corps' largest training site. The purpose and need statement therefore does not foreclose consideration of meaningful alternatives to the proposed expansion areas; on the contrary, as described in Section 2.7, numerous alternatives were considered in addition to the six action alternatives and the No-Action Alternative that were carried forward for analysis in the EIS (Section 2.4). How the purpose and need relates to the analysis of alternatives is addressed in Sections 2.2, 2.3, and 2.7 of the EIS.

**BIO-1:**

In accordance with the CEQ regulations at 40 CFR 1502.2(b) and 40 CFR 1502.15, the EIS succinctly describes the environmental conditions of areas potentially affected by the alternatives, and focuses on resources with the potential for significant impact as determined during scoping and in consultation with cooperating and regulating agencies. To support the EIS analysis, the USMC used a variety of methods to develop baseline data, including requesting wildlife and plant inventory data from the BLM. Detailed surveys were conducted for the EIS including: 1) tortoise abundance and density; 2) abundance of the Mojave fringe-toed lizard, burrowing owl, Mojave ground squirrel, and chuckwalla; 3) distribution and abundance of all sensitive plant species; and 4) occurrence of special status aquatic invertebrate species. The EIS contains the best available information on the occurrence and distribution of species within the study areas.

Comment ID: N-18664 (Page 5 of 20)

C. Failure to Identify and Analyze Direct and Indirect Impacts to Biological Resources

The EIS fails to adequately analyze the direct, indirect, and cumulative impacts of the proposed project on the environment. The Ninth Circuit has made clear that NEPA requires agencies to take a “hard look” at the effects of proposed actions; a cursory review of environmental impacts will not stand. *Idaho Sporting Congress v. Thomas*, 137 F.3d 1146, 1150-52, 1154 (9<sup>th</sup> Cir. 1998). Where the DEIS has incomplete or insufficient information, NEPA requires the agency to do the necessary work to obtain it where possible. 40 C.F.R. §1502.22; see *National Parks & Conservation Ass’n v. Babbitt*, 241 F.3d 722, 733 (9<sup>th</sup> Cir. 2001) (“lack of knowledge does not excuse the preparation of an EIS; rather it requires [the agency] to do the necessary work to obtain it.”)

Moreover, the DEIS must look at reasonable mitigation measures to avoid impacts but failed to do so here. Even in those cases where the extent of impacts may be somewhat uncertain due to the complexity of the issues, the DEIS is not relieved of its responsibility under NEPA to discuss mitigation of reasonably likely impacts at the outset. Even if the discussion may of necessity be tentative or contingent, NEPA requires that the DEIS provide some information regarding whether significant impacts could be avoided. *South Fork Band Council of Western Shoshone v. DOI*, 588 F.3d 718, 727 (9<sup>th</sup> Cir. 2009).

The lack of comprehensive surveys is particularly problematic (DEIS at 4.10-2). Failure to conduct sufficient surveys prior to the implementation of the project also effectively eliminates the most important function of surveys - using the information from the surveys to avoid and minimize harm caused by the project and reduce the need for mitigation. Often efforts to mitigate harm are far less effective than avoiding and preventing the harm in the first place. In addition, without understanding the scope of harm before it occurs, it is difficult to quantify an appropriate amount and type of mitigation.

The DEIS fails to provide all of the information necessary for decisionmakers and the public to adequately review the proposed project. Therefore the impacts cannot be fully analyzed or mitigated appropriately or fully. For this reason alone, a supplemental or revised DEIS needs to be provided and additional alternatives are included (including a preferred alternative) that avoids and reduces the impacts to biological resources.

With regards to transplantation and relocation, the ISA state that “In general, moving organisms from one area to another—for example, out of an impact area into a reserve area—is not a successful conservation action and may do more harm than good to conserved populations by spreading diseases, stressing resident animals, increasing mortality, and decreasing reproduction and genetic diversity. Transplantation or translocations should be considered a last recourse for unavoidable impacts, should never be considered full mitigation for the impact, and in all cases must be treated as experiments subject to long-term monitoring and management.” (at pg. Vii – Executive Summary). Clearly the DEIS fails to consider the impacts of moving both plants and animals from the project site onto adjacent areas. As discussed below the DEIS fails to evaluate the impacts of any of the translocated species on resident species and habitat – at

BIO-2

BIO-3

Response to Comment N-18664 (Page 5 of 20):

BIO-1 Continued:

The Draft EIS presents a discussion of impacts to all sensitive plant and wildlife species known to be present in the proposed action area. Impacts to the desert tortoise are given appropriate prominence in the impact analysis, as it is the only resident species listed under the Federal ESA. Tortoise surveys are currently being conducted at the Combat Center as directed under the Integrated Natural Resources Management Plan and the Basewide Biological Opinion; however, the results of these surveys will not be available until 2012 and thus could not be included in the EIS.

BIO-2:

Please refer to response to comment letter N-18713, Comment number BIO-2 regarding the surveys utilized in the Draft EIS. Additional mitigation measures, developed during the Endangered Species Act Section 7 consultation process with USFWS, have been included in the Final EIS. These include dedication of new Special Use Areas, expansion of monitoring and tortoise “headstarting” programs, and preparation of a detailed translocation plan to reduce the significant impacts to the desert tortoise. Survey and monitoring efforts are best considered as adaptive management projects, where monitoring must be detailed and the results quickly analyzed in order to inform near-term future efforts. Such adaptive management would be a keystone of the headstarting program and detailed translocation plan which would be prepared for the proposed action. In no event would surveys and monitoring be considered full mitigation for the impacts to the desert tortoise, which would remain significant after all currently proposed conservation and mitigation measures.

Comment ID: N-18664 (Page 6 of 20)

a minimum carrying capacity (the ability of the habitat to support species) of the landscape where species area proposed to be moved needs to be included

BIO-3

I. Desert Tortoise

The desert tortoise has lived in the western deserts for tens of thousands of years. In the 1970's their populations were noted to decline. Subsequently, the species was listed as threatened by the State of California in 1989 and by the U.S. Fish and Wildlife Service in 1990, which then issued a Recovery Plan for the tortoise in 1994. The U.S. Fish and Wildlife Service is in the process of updating the Recovery Plan, and a Draft Updated Recovery Plan was issued in 2008, however it has not been finalized to date. Current data indicate a continued decline across the range of the listed species' despite its protected status and recovery actions.

The original and draft Updated Recovery Plans both recognize uniqueness in desert tortoise populations in California. This particular subpopulation of tortoise at the proposed project site is part of the West Mojave Recovery unit<sup>1</sup>. Recent population genetics studies<sup>2</sup> have added to the 1994 Recovery Plan conclusions – not only is the West Mojave Recovery unit unique, within it, there are further genetically unique populations that may indeed require recognition of additional recovery unit subdivisions in the larger West Mojave Recovery Unit. While the proposed project site may have varying desert tortoise densities, this particular recovery unit has also been documented to have a 23% decline in population between 2005 and 2007<sup>3</sup>. The DEIS fails to identify and consider the localized impact from the proposed action in this recovery unit that is already in steep decline.

Currently, up to approximately 3,000 desert tortoises have been estimated to live within the boundaries of the preferred alternative's expansion areas (DEIS at 4.10-47). The DEIS states that the preferred alternative would "result in the take from military training (through death or being moved out of harm's way) of between 154 and 714 adult tortoises over the life of the project (121 to 189 in the acquisition study areas)" (DEIS at 4.10-47). However the assumptions (see below discussion) are so unclear that the proposed estimates appear to be speculative at best. It also fails to take into account "take" for juveniles and eggs, despite the fact that these life stages are essential for preventing further declines in desert tortoise populations. These life stages have been estimated for other proposed projects and should be included in the evaluation of impacts to the desert tortoise, because they most certainly will be affected by the proposed project. Regardless, we agree with the DEIS in the determination that the impact to the federally threatened desert tortoise from the preferred Alternative 6 is significant (DEIS at 4.10-49)

 CDD comment on DEIS/ACN/Expansion EIS  
 May 09, 2011  
 Page 6 of 46

Response to Comment N-18664 (Page 6 of 20):

BIO-3:

Because translocation was not formally proposed as mitigation when the Draft EIS was released, the secondary impacts of translocation were not described. Translocation efforts are best considered as adaptive management projects, where monitoring must be detailed and the results quickly analyzed in order to inform near-term future efforts. Such adaptive management would be a keystone of the detailed translocation plan which would be prepared for the proposed action. In no event would translocation be considered full mitigation for the impacts to the desert tortoise, which would remain significant after all currently proposed conservation and mitigation measures.

BIO-4:

Based on discussions with USFWS during Endangered Species Act Section 7 consultation, the proportional take (i.e., 50% in high-intensity disturbance areas, 10% in medium-intensity disturbance areas) has been removed from the analysis, and all tortoises located within these areas are predicted to be "taken" in some manner, whether by translocation, handling, harassment, injury or death. In addition, calculations of juvenile populations and number of potentially impacted juveniles have been estimated for the proposed action and alternatives using a life table analysis.

BIO-5:

The Biological Assessment was revised based on USFWS consultation. The Biological Opinion is included in the Final EIS as Appendix O.

Comment ID: N-18664 (Page 7 of 20)

While the DEIS references the Biological Assessment for the desert tortoise that includes the potential adverse effects and provides the web link to it (DEIS at 3.10-2), we could not find the Biological Assessment on the site.

BIO-5

The DEIS inappropriately assigns “take” percentage for desert tortoise based on the intensity of disturbance. For example “take” in the “high intensity areas” is presumed to be 50% (DEIS at 4.10-3). It is unclear what this assumption is based on (documented mortality from on-base research?) Additionally, the interval for the “take” is unclear and consequential – is that 50% per year? Over the life of the project? For each military training event? These basic issues need to be clarified in a supplemental EIS.

BIO-6

The DEIS fails to provide any actual mitigation strategy for impacts to desert tortoise. Because the action will be impacting occupied desert tortoise habitat and “take” will occur of desert tortoise, the agency needs to identify the amount and location of desert tortoise habitat that will be acquired and preserved in perpetuity as mitigation for the impacts that will occur to the desert tortoise within the expansion areas. This strategy has been implemented by other Department of Defense expansions and is requisite for this project. In addition to acquisition, other strategies that benefit the conservation of desert tortoise should also be implemented as identified in the current Desert Tortoise Recovery Plan<sup>5</sup> (1994). The DEIS is woefully inadequate with regards to this aspect of desert tortoise impact and mitigation. The supplemental DEIS must include these important issues.

BIO-7

Mitigation acquisition should include appropriate tortoise habitat (occupied or unoccupied) which is currently existing and providing benefits to the species, to off-set the elimination of the proposed expansion area. However, this strategy is still a *net loss of habitat* to the desert tortoise, as currently they are using or could use both the mitigation site and the proposed expansion area. Therefore, in order to aid in recovery of this declining species, at a minimum a 5:1 mitigation ratio should be required as mitigation for the elimination of occupied desert tortoise habitat in the proposed expansion area.<sup>6</sup>

BIO-8

The DEIS also fails to evaluate the potential off-site impacts to desert tortoise that will result from the proposed expansion displacing off-road vehicle (ORV) from the Johnson Valley open area. It is likely that ORV use will be concentrated in the remaining Johnson Valley ORV area (or other nearby ORV open areas) further impacting the existing desert tortoise populations in those areas. Recognition of the increase in illegal ORV activities must also be considered. The agency could offset some of the impact by providing SIGNIFICANTLY increased law enforcement resources to land management agencies in the region to help enforce land management rules and regulations especially in Desert Wildlife Management Areas (DWMA) and wilderness areas, which are key in recovering desert tortoise populations. This type of “mitigation” has been implemented by the Fort Irwin Expansion, where additional law enforcement was provided to the BLM. In that case however, the expansion was not in an ORV open area. In this case, significantly more law enforcement resources would be necessary to control potential illegal uses in adjacent sensitive areas.

BIO-9

<sup>5</sup> [http://ecos.fws.gov/docs/recovery\\_plans/1994/940628.pdf](http://ecos.fws.gov/docs/recovery_plans/1994/940628.pdf)

Response to Comment N-18664 (Page 7 of 20):

**BIO-6:**

Please refer to response to Comment BIO-4 above regarding proportional take. Regarding the duration of impacts, the text on page 4.10-3 of the Draft EIS correctly describes that impacts as described would occur over the lifetime of the project, which for the purposes of analysis has been determined to be 50 years. Refer to response to comment letter N-18732, comment number BIO-2 for a description of how the Marine Corps arrived at the 50-year project lifetime.

**BIO-7:**

A suite of mitigation measures being developed with USFWS, such as a translocation plan, designation of new Special Use Areas, etc. are described in more detail in the Final EIS and would be expected to reduce the take of tortoises, though not to a level of less than significant.

**BIO-8:**

Mitigation for impacts to the desert tortoise is being identified through Endangered Species Act Section 7 consultation with USFWS, and may include purchase of offsite lands or other offsite measures such as funding of conservation law enforcement.

**BIO-9:**

Additional discussion regarding the impacts of displaced OHV activity and intensified OHV activity (within the reduced Johnson Valley OHVA) has been provided in the Final EIS. Refer to Sections 4.10.3.1, 4.10.4.1, 4.10.6.1, 4.10.7.1, 4.10.8.1, and 4.10.9.1 for the additional text.

**BIO-10:**

Relocation of desert tortoises as described in the Draft EIS refers to what is current practice on the Combat Center: moving tortoises a short distance (~100 meters or less) out of harm’s way, for instance off of a roadway. However, please refer to response to Comment BIO-3 above regarding preparation of a translocation plan in consultation with USFWS.

Comment ID: N-18664 (Page 8 of 20)

The DEIS fails to provide details on relocation of desert tortoise “out of harm’s way”. Typically a translocation and relocation plan is provided for public review, but it is missing from the DEIS. Recently a panel of Independent Science Advisors (ISA) was convened to make recommendations<sup>7</sup> for species conservation as part of the proposed Desert Renewable Energy Conservation Plan. The ISA state that “In general, moving organisms from one area to another—for example, out of an impact area into a reserve area—is not a successful conservation action and may do more harm than good to conserved populations by spreading diseases, stressing resident animals, increasing mortality, and decreasing reproduction and genetic diversity. Transplantation or translocations should be considered a last recourse for unavoidable impacts, should never be considered full mitigation for the impact, and in all cases must be treated as experiments subject to long-term monitoring and management. Additionally the Scientific Advisory Committee (SAC) of the Desert Tortoise Recovery Office (DTRO) of the U.S. Fish and Wildlife Service also recognizes that moving desert tortoise is “fraught with long-term uncertainties”<sup>8</sup>. Recent desert tortoise translocations have resulted in significant short-term mortality of 45% or greater<sup>9</sup> and unknown long-term survivorship. The EIS needs to clarify the definition of translocation and relocation. It needs to clarify how far desert tortoise are planned to be moved, where they will be moved, the condition of the host population, and assure that the site will be conserved in perpetuity to prevent subsequent relocation/translocation of desert tortoise. As per the Desert Tortoise Recovery Plan, relocations/translocations should not occur into DWMA’s.

BIO-10

The Center has repeatedly sought stronger protections for desert tortoise and tortoise critical habitat both in the DWMA’s and in other areas within the CDCA as a whole and particularly within the western Mojave desert. Despite the fact that desert tortoise populations in the west Mojave DWMA’s continue to decline, further degradation is proposed not only by this proposed expansion but by other related activities including displaced ORV activities, which could affect DWMA’s, which were established for desert tortoise recovery (not just survival).

BIO-11

2. Sand Transport System

The DEIS fails to consider the impacts that the proposed expansion area has on the sand transport system in the region<sup>10</sup>. The site need not have active dunes on it to be an integral part of the sand transport corridor and overall eolian system. The impacts of the proposed project to the sand transport corridor, and the sand dune habitat which supports the Mojave fringe-toed lizard could be significant and that analysis must be done in a revised or supplemental DEIS.

BIO-12

3. Rare and Special Status Plants and Communities

The DEIS fails to identify if any rare plant surveys were done within the expansion areas. These types of surveys need to be performed, not only for spring flowering rare plants but also for the suite of rare plant species that are triggered by summer monsoonal rains and bloom in the

BIO-13

Response to Comment N-18664 (Page 8 of 20):

**BIO-11:**

Comment noted.

**BIO-12:**

Comment noted. Additional information regarding sand transport in the action area and cumulative effects of the proposed action has been provided in Section 5.4.10 of the Final EIS.

**BIO-13:**

As noted in Table 3.10-1, rare plant surveys were conducted for the west, south and east study areas. The results of these surveys are discussed throughout Section 3.10 and form the basis of impact discussions in Section 4.10.

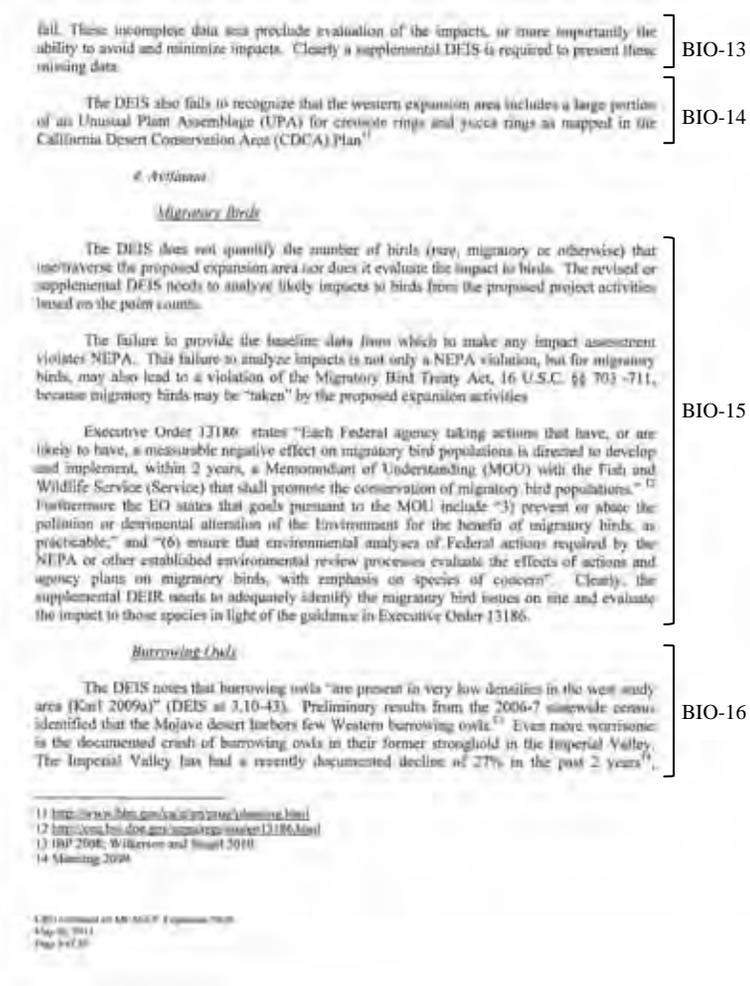

**BIO-14:**

Discussion of the creosote ring UPAs and yucca ring UPAs located within the action area is provided in Section 3.10.3.3 of the Draft and Final EIS.

**BIO-15:**

Please refer to response to comment letter N-18713, comment BIO-1 regarding impacts to migratory birds. Limited information was available regarding migratory bird use of the study areas, but usage is expected to be very low due to the lack of permanent (or even extended duration temporary) water sources. Compliance with Executive Order 13186 will be pursued in the event that the proposed action is approved. In addition, in accordance with the Migratory Bird Rule for military readiness activities, devising migratory bird conservation measures is only needed if significant population-level impacts are expected to occur. This type of impacts is not expected for the proposed action.

Comment ID: N-18664 (Page 9 of 20)

Response to Comment N-18664 (Page 9 of 20):

**BIO-16:**

The proposed action may result in adverse effects to a limited number of burrowing owls in the acquisition areas. The Combat Center Integrated Natural Resources Management Plan includes conservation measures that will greatly minimize these adverse effects. As stated in Section 4.10.7.2, Special Use Areas would provide disturbance-free habitat for desert vegetation and wildlife. In addition, impacts across the training area would be minimized (a type of mitigation) by maintaining the same training footprint for each exercise.

**BIO-17:**

Comment noted. However, golden eagles that may be present in study areas, especially the west study area, are already exposed to substantial human visitation. Although this may increase somewhat in some areas under the proposed action, other areas may experience less visitation that at present due to access restrictions. If nesting pairs of golden eagles are discovered in the potential disturbance areas, the Marine Corps would be expected to prepare and implement an Avian and Bat Protection Plan to avoid violation Bald and Golden Eagle Protection Act. Golden eagle surveys in the action area have been funded and would be conducted in order to inform the preparation of an Avian and Bat Protection Plan.

**BIO-18:**

Comment noted. Information regarding the presence or potential presence of badgers in the action area has been added to Section 3.10, and potential less than significant impacts are now described in Section 4.10.

**BIO-19:**

Information regarding the presence or potential presence of desert kit foxes in the proposed action area has been added to Section 3.10, and potential less than significant impacts are now described in Section 4.10.

Comment ID: N-18664 (Page 10 of 20)

resulting in an even more dire state for burrowing owls in California. Because burrowing owls are in decline throughout California, and now their “stronghold” is documented to be declining severely, the burrowing owls in this proposed expansion area become even more important to species conservation efforts. The recirculated or supplemental DEIS needs to evaluate the potential impact of the proposed project on this regional distribution of owls.

While habitat acquisition specifically for burrowing owls needs to be identified in the DEIS. Mean burrowing owl foraging territories are 242 hectares in size, although foraging territories for owl in heavily cultivated areas is only 35 hectares<sup>15</sup>. Regardless, the acquisition of mitigation acreage should include adequate foraging area. Using the average foraging territory size for mitigation calculations may not accurately predict the carrying capacity and may *overestimate* the carrying capacity of the proposed expansion area – it may be that in this area of the Mojave desert 4,000+ acres is necessary to support 4 burrowing owls. Carrying capacity is tied to habitat quality, so language should be included that mitigation lands that are acquired for burrowing owl be native habitats on undisturbed lands, not cultivated lands, which are subject to the whims of land use changes. The long-term persistence of burrowing owls lie in their ability to utilize natural landscapes, not human-created ones.

While “passive relocation” may minimize immediate direct take of burrowing owls, ultimately the burrowing owls’ available habitat is reduced, and “relocated” birds are forced to compete for resources with other resident burrowing owls and may move into less suitable habitat, ultimately resulting in “take”.

Golden Eagle

The DEIS fails to identify if golden eagles occur on the expansion areas. The lack of basic baseline data precludes the ability to identify or analyze potential impacts to golden eagles from the proposed expansion activities. One fact is clear - significant amounts of foraging habitat will decrease carrying capacity because of training activities and could result in a potential loss of habitat needed to support a nesting pair, which would impact reproductive capacity.

Scientific literature on this subject is clear - the presence of humans detected by a raptor in its nesting or hunting habitat can be a significant habitat-altering disturbance even if the human is far from an active nest<sup>16</sup>. Regardless of distance, a straight-line view of disturbance affects raptors, and an effective approach to mitigate impacts of disturbance for golden eagles involves calculation of viewsheds using a three-dimensional GIS tool and development of buffers based on the modeling<sup>17</sup>. Golden eagles have also been documented to avoid industrialized areas that are developed in their territory<sup>18</sup>. Additionally, the DEIS does not actually clearly analyze the impacts to and mitigations for the golden eagle under the Bald Eagle

15 USFWS 2003

16 Richardson and Miller 1997

17 Camp et al. 1997; Richardson and Miller 1997

18 Walker et al. 2005

Response to Comment N-18664 (Page 10 of 20):

**BIO-20:**

The air quality analysis assumes that at some point in the future, if left undisturbed, any ground disturbed by the proposed training activities would stabilize back to a less emissive state in terms of fugitive dust, regardless of whether these areas contain cryptobiotic soils. This is the case, as (1) disturbed desert soils lose their fine particles relatively quickly due to wind erosion and (2) to a much lesser extent, dew and precipitation would create a crust on the top of the soil. The Draft EIS recognizes the importance of cryptobiotic soil crusts (page 3.10-14), and potential impacts from the proposed action are described on page 4.10-8 and elsewhere. Considering that much of the action area is covered in cryptobiotic soils, mapping them is unnecessary. Protection of cryptobiotic soils will be a benefit of most species conservation measures, including those for the desert tortoise.

To estimate fugitive dust emissions, the DEIS assumed that all ground areas disturbed by the proposed training activities would have the same silt content and therefore the same potential to emit dust (presented in Appendix G Tables G-12 and G-14). Desert pavement is defined as a surface comprised of large angular or rounded rock fragments lying over mixed material. In other words, desert pavement has a lower silt content and therefore lower potential to emit dust compared to average desert soil evaluated in the DEIS. As a result, it is probable that operations on desert pavement would produce lower fugitive dust emissions compared to those estimated for these areas in the DEIS.

**BIO-21:**

An inventory was conducted between 2001 and 2005 of insects on the Combat Center (Pratt 2005), and found no federally-listed species. As such, it is expected that none would occur in the very similar adjacent lands that compose the study areas. In the event that a federally-listed species is discovered after approval of the proposed action, the Combat Center INRMP would be revised in coordination with USFWS to include conservation measures for that species.

Comment ID: N-18664 (Page 11 of 20)

and Golden Eagle Protection Act, which prohibits, except under certain specified conditions, the take, possession, and commerce of such birds.

3. Badger

While badgers were not documented on the site, the proposed expansion area provides good habitat for them. Literature on the highly territorial badger indicates that badger home territories range from 340 to 1,230 hectares<sup>19</sup>. Therefore, the proposed project could displace numerous badger territories. While surveys prior to activities are clearly essential, even passive relocation of badgers into suitable habitat may result "take". Excluding badgers from the site is likely to cause badgers to move into existing badger's territory. The recirculated or supplemental DEIS needs to include an actual analysis of impacts to badgers from the proposed project.

6. Desert Kit Foxes

The DEIS fails to mention the desert kit fox, much less provide data on the presence or absence of the species on site or the locations of natal and other types of dens. Desert kit foxes are "protected furbearing mammals" under California Code of Regulations, Title 14, section 460 and may not be "taken" at any time. As such the DEIS fails to analyze the impacts to this species. The revised or supplemental DEIS should identify the density of kit foxes in the proposed expansion area, including natal and other dens. If passive relocation is identified as an avoidance strategy, the DEIS must evaluate if suitable habitat occurs nearby and is not already occupied by existing kit foxes.

7. Cryptobiotic soil crusts and Desert Pavement

The proposed project is located in the Mojave Desert Air Quality Management District area, which is already in non-attainment for PM-10 particulate matter<sup>20</sup>. The construction of the proposed project further increases emissions of these types of particles because of the disruption and elimination of potentially thousands of acres of cryptobiotic soil crusts. Cryptobiotic soil crusts are an essential ecological component in arid lands. They are the "glue" that holds surface soil particles together precluding erosion, provide "soil sites" for seed germination, trap and slowly release soil moisture, and provide CO<sub>2</sub> uptake through photosynthesis<sup>21</sup>.

The DEIS recognizes that on-site cryptobiotic soil crusts exist but defers the quantification and location of them to later. The proposed project will disturb an unidentified portion of these soil crusts and cause them to lose their capacity to stabilize soils and trap soil moisture. The DEIS fails to provide a map of the soil crusts over the project site, and to present any avoidance or minimization measures. It is unclear how many acres of cryptobiotic soils will be affected by the project. The revised or supplemental DEIS must identify the extent of the cryptobiotic soils on site and analyze the potential impacts to these diminutive, but essential desert ecosystem components as a result of this project.

BIO-19

BIO-20

Response to Comment N-18664 (Page 11 of 20):

BIO-22:

Based on available research (e.g., Cutler et al. 1999; Epps et al. 2005, 2006, 2007) the Draft EIS describes the known populations on the Combat Center, in the east study area, and under the proposed airspace. No other populations are described in these sources that would be affected by the proposed action. Population fragmentation is not expected to occur as a result of the proposed project as fencing would be limited to tortoise exclusion fencing (maximum of 24 inches above ground) and three-strand smooth wire fencing (with elevated lower strand) installed in specific areas to protect desert tortoises. In addition, dirt roads in the study areas would not present barriers to dispersal.

BIO-23:

The proposed project is not expected to substantially increase habitat fragmentation, as any new roads would be at-grade or slightly above-grade dirt roads, and fencing would be limited to tortoise exclusion fencing (maximum of 24 inches above ground) and three-strand smooth wire fencing (with elevated lower strand) installed in specific areas to protect desert tortoises.

BIO-24:

Comment noted. Additional and more detailed conservation measures for identified significant impacts to the desert tortoise, as developed through Endangered Species Section 7 consultation with USFWS, are included in the Final EIS. Please refer to Section 2.8.4.

BIO-25:

Potential impacts to ephemeral water bodies are described in Section 4.10.2.1 (e.g., page 4.10-7, 4.10-8), and potential impacts to streams and related sensitive habitats are described in Section 4.13.2.1. No significant impacts to these resources were identified from proposed training activities. Additional discussion of cumulative effects on sand transport has been provided in Section 5.4.10.

Comment ID: N-18664 (Page 12 of 20)

The DEIS fails to address if naturally occurring desert pavements occur in the proposed expansion areas. The issues of desert pavement are similar to cryptobiotic soils in their ability to stabilize surface particles in place, precluding erosion and dust, and they are easily damaged by vehicles and form/reform over geological time scales. The supplemental EIS must quantify the acreage of pavement, identify avoidance and minimization measures and analyze the potential impacts to the desert pavement areas including an evaluation of the impacts to air quality from disturbance of desert pavements.

BIO-20

8. Insects

The DEIS fails to address insects on the proposed project site. In fact no surveys or evaluation of rare or common insects are included in the DEIS. Sandy habitats are notorious for supporting endemic insects, typically narrow habitat specialists<sup>22</sup>. The revised or supplemental DEIS must include an analysis of rare insects in the proposed expansion area and the potential impacts on their survival from training activities. These issues need to be addressed in a supplemental DEIS.

BIO-21

9. Nelson's Bighorn Sheep

Nelson's bighorn sheep are known to inhabit mountain ranges adjacent to the proposed expansion area and the current base. These large mammals require intermountain access in order to maintain herd viability<sup>23</sup> and currently their historic connectivity corridors have been eliminated in parts of their range<sup>24</sup>. Activities in the proposed expansion areas could further restrict connectivity for the bighorn in the area. The DEIS fails to analyze the documented herds in ranges besides the Ship Mountains and the repatriated Bullion- Cleghorn herd. The supplemental DEIS must include an analysis of impact to Nelson's bighorn.

BIO-22

Because the movement corridors for Nelson's bighorn sheep have already been eliminated in key areas, the DEIS should consider participating in the construction of land bridges over Interstate 40 that would re-establish movement of bighorn (and other species) from the mountain ranges north of I-40 to the mountain ranges south of I-40. This feature would significantly increase the ability of herds or rams to re-establish previous movement corridors and increase genetic diversity of the bighorn, provide safe passage for species on the move from climate change, and keep the larger Mojave ecosystem connected.

10. Habitat Fragmentation

The habitat fragmentation, loss of connectivity for terrestrial wildlife, and introduction of predators and invasive weed species associated with the proposed expansion and ensuing activities in the proposed locations may run contrary to an effective climate change adaptation strategy. Siting the proposed expansion in the proposed location impacting ecologically

Response to Comment N-18664 (Page 12 of 20):

AQ-1:

Comment noted. DEIS Table 5-3 in Section 5.4.8 summarizes the calculations for GHG emissions that would occur from the following proposed activities: (1) aircraft operations below 3,000' above ground level (AGL), (2) operation of tactical equipment, (3) operation of tactical support equipment, and (4) on-road transport of personnel and equipment within the Mojave Desert Air Basin. These data represent the overwhelming majority of GHGs that would occur from proposed activities and that are the responsibility of the Marine Corps.

However, to provide a more detailed definition of GHGs that would occur from the project alternatives, Table 5-3 in the FEIS includes the following additional GHG emissions estimates: (1) construction GHG emissions, (2) GHG emissions from the entire flight of proposed aircraft operations within the project air spaces rather than just operations below 3,000' AGL, and (3) the generation of electrical power from sources on the Combat Center. The FEIS does not provide calculations of other sources of GHG emissions requested in the comment, as they are (1) nominal in comparison to the total GHGs generated by the project alternatives and/or (2) not the responsibility of the Marine Corps. It should be noted that the spreadsheet used to calculate GHGs for proposed tactical vehicles/support equipment in the DEIS had some inaccurate formulas that produced erroneously high GHG estimates (as shown in Appendix G Tables G-8 and G-36). Hence, even though the FEIS analysis includes additional sources of proposed GHGs, as requested in this comment, the total GHG estimations for the project alternatives in the FEIS are lower than those presented in the DEIS.

As stated in DEIS page 4.10-8, most crustal biomass in the project region of influence (ROI) occurs within the top 3 millimeters of the soil. This very thin layer of biomass has a limited potential to

Comment ID: N-18664 (Page 13 of 20)

functioning ecosystems, occupied habitat and important habitat linkage areas, major washes and other fragile desert resources could undermine a meaningful climate change adaptation strategy. Moreover, the expansion activities will emit additional greenhouse gases and the DEIS contains no discussion of ways to avoid, minimize or off-set these emissions although such mitigation is clearly necessary. The way to maintain healthy, vibrant ecosystems is not to fragment them and reduce their biodiversity.

BIO-23

11. Failure to Identify Appropriate Mitigation

As stated above, the DEIS not only fails to provide adequate identification and analysis of impacts, inevitably, it also fails to identify adequate mitigation measures for the expansion's environmental impacts. "Implicit in NEPA's demand that an agency prepare a detailed statement on 'any adverse environmental effects which cannot be avoided should the proposal be implemented,' 42 U.S.C. § 4332(C)(ii), is an understanding that an EIS will discuss the extent to which adverse effects can be avoided." *Methow Valley*, 490 U.S. at 351-52. Because the DEIS does not adequately assess the project's direct, indirect, and cumulative impacts, its analysis of mitigation measures for those impacts is necessarily flawed. The DEIS must discuss mitigation in sufficient detail to ensure that environmental consequences have been fairly evaluated." *Methow Valley*, 490 U.S. at 352; *see also Idaho Sporting Congress*, 137 F.3d at 1151 ("[w]ithout analytical detail to support the proposed mitigation measures, we are not persuaded that they amount to anything more than a 'mere listing' of good management practices"). As the Supreme Court clarified in *Robertson*, 490 U.S. at 352, the "requirement that an EIS contain a detailed discussion of possible mitigation measures flows both from the language of [NEPA] and, more expressly, from CEQ's implementing regulations" and the "omission of a reasonably complete discussion of possible mitigation measures would undermine the 'action forcing' function of NEPA."

BIO-24

Although NEPA does not require that the harms identified actually be mitigated, NEPA does require that an EIS discuss mitigation measures, with "sufficient detail to ensure that environmental consequences have been fairly evaluated" and the purpose of the mitigation discussion is to evaluate whether anticipated environmental impacts *can be avoided*. *Methow Valley*, 490 U.S. at 351-52. As the Ninth Circuit recently noted: "[a] mitigation discussion without at least *some* evaluation of effectiveness is useless in making that determination." *South Fork Band Council of Western Shoshone v. DOI*, 588 F.3d 718, 727 (9th Cir. 2009) (emphasis in original).

Here, the DEIS does not provide a full analysis of possible mitigation measures to avoid or lessen the impacts of the proposed project and therefore the DEIS cannot properly assess the likelihood that such measures would actually avoid the impacts of the proposed project.

D. Impacts to Water Resources— Surface and Groundwater Water Impacts

As the DEIS notes, the proposed expansion encompasses a large number of washes and ephemeral streams and dry lakes that are not always dry. These areas provide important habitat values that will be compromised by the proposed training activities. Moreover, any loss of natural surface water flows and the re-direction of surface waters will have significant impacts to

BIO-25

CHD comment on AEC AGCC Expansion DEIS

Response to Comment N-18664 (Page 13 of 20):

AQ-1 Continued:

sequester GHGs. Therefore, any loss of cryptobiotic soils due to proposed operations would result in an imperceptible loss of GHG sequestration. In addition, due to the sparseness of the vegetation within the ROI, any loss of vegetation due to proposed operations would have the same effect.

AQ-2:

The DEIS provides an adequate assessment of proposed PM10 impacts. It acknowledges that the proposed training exercises would generate substantial amounts of fugitive dust, as shown in the tables that present estimations of air emissions for each project alternative (refer to Section 4.8). The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient standard for PM10.

The special conservation measure (SCM) proposed in DEIS Section 2.8.3 to control fugitive dust emissions only applies to proposed construction activities. The construction company that performs the proposed construction would have to comply with this SCM as part of their contract with the Marine Corps. The FEIS clarifies this ambiguity. Due to the immensity and aridity of the proposed training areas, it would be infeasible to control fugitive dust generated from proposed training exercises.

AQ-3:

Table 5-3 in the FEIS has been revised to include the 2009 GHG emissions for the Combat Center. As stated on DEIS page 5-33, currently there are no formally adopted or published NEPA thresholds of significance for proposed GHG emissions.

Comment ID: N-18664 (Page 14 of 20)

the dunes ecosystems. The impacts on soils and particularly on sand transport from the proposed project have not been adequately addressed in the DEIS.

Ephemeral and intermittent streams make up over 81% in the arid and semi-arid southwest (Arizona, New Mexico, Nevada, Utah, Colorado and California). These streams provide a variety of ecosystem services including

- landscape hydrologic connections;
- stream energy dissipation during high-water flows to reduce erosion and improve water quality;
- surface and subsurface water storage and exchange;
- ground-water recharge and discharge;
- sediment transport, storage, and deposition to aid in floodplain maintenance and development;
- nutrient storage and cycling;
- wildlife habitat and migration corridors;
- support for vegetation communities to help stabilize stream banks and provide wildlife services;
- and water supply and water-quality filtering<sup>25</sup>.

Yet the DEIS fails to evaluate the impact of the proposed project on the ephemeral and intermittent streams and the ecosystem processes that they provide both on and off of the proposed project site. The revised or supplement DEIS will need to include an analysis of these important issues.

**E. The DEIS Fails to Adequately Identify, Analyze and Off-set Impacts to Air Quality and GHG Emissions.**

Federal courts have squarely held that NEPA requires federal agencies to analyze climate change impacts. *Center for Biological Diversity v. National Highway Traffic Safety Administration*, 508 F.3d 508 (9th Cir. 2007). As most relevant here, NEPA requires consideration of greenhouse gas emissions (“GHG emissions”) associated with all projects and, in order to fulfill this requirement the agencies should look at all aspects of the project which may create greenhouse gas emissions including operations, construction, and life-cycle emissions from materials. Where a proposed activity will have significant GHG emissions, the agency should identify alternatives and/or mitigation measures that will lessen such effects.

As part of the NEPA analysis federal agencies must assess and, wherever possible, quantify or estimate GHG emissions by type and source by analyzing the direct operational impacts of proposed actions. Assessment of direct emissions of GHG from on-site combustion sources is relatively straightforward. For the proposed activities, energy consumption for vehicles, manufacturing, transportation and construction will be the major source of GHGs. The indirect effects of a project may be more far-reaching and will require careful analysis. Within this category, for example, the supplemental EIS should evaluate, GHG and GHG-precursor emissions associated with construction, electricity use, fossil fuel use, water consumption, waste

<sup>25</sup> Levick et al. 2008.

BIO-25

AQ-1

Response to Comment N-18664 (Page 14 of 20):

**AQ-3 Continued:**

The Final EIS compared projected GHG emissions to Combat Center baseline conditions and the U.S. GHG inventory. This comparison is deemed adequate to determine the significance of proposed GHG emissions for NEPA purposes.

Since the DEIS concludes that GHGs from each project alternative would produce less than significant impacts, the Marine Corps proposes no mitigations to reduce proposed GHGs. However, as stated on DEIS page 5-40, the Marine Corps proposes an SCM that would maximize the use of biodiesel, where feasible, in equipment and vehicles that take part in exercises at the Combat Center under each project alternative, in place of ultra-low sulfur diesel (ULSD) or aviation fuels. The CO2e emission factor for biodiesel is about 7 percent lower than for ULSD, which is the unmitigated fuel evaluated in the DEIS air quality/GHG analyses. In addition, DEIS Section 5.4.8 discusses broad-based programs initiated by the Marine Corps and Department of the Navy that will reduce energy consumption, will shift to renewable and alternative fuels, and thereby will offset proposed GHG emissions.

Regarding the lack of the DEIS to consider loss of carbon sequestration or to perform a life cycle analysis, please see the response to comment CBD AQ-1.

The DEIS evaluated 6 project alternatives and the difference in annual GHG emissions between these 6 alternatives is about 3 percent. Regarding measures that would reduce proposed GHGs, please see the first paragraph of this response.

Comment ID: N-18664 (Page 15 of 20)

disposal, transportation, the manufacture of building materials (lifecycle analysis), and land conversion. Moreover, because many project may undermine or destroy the value of carbon sinks, including desert soils, the activities may have additional indirect effects from reduction in carbon sequestration, therefore both the direct and quantifiable GHG emissions as well as the GHG effects of destruction of carbon sinks should be analyzed.

AQ-1

The DEIS also fails to adequately address other air quality issues including PM10 both during activities which is of particular concern in this area which is a nonattainment area for PM10 and ozone. It is clear that extensive soil disturbing activities will result in significant amounts of bare soils and increased PM10 may be introduced into the air by wind and that the use of the area during training activities and operations will lead to additional PM10 emissions from the site. Although some mitigation measures are suggested they are not specific and enforceable and because the extent of the impact has not been adequately addressed as an initial matter there is no way to show that the mitigation measures proffered will reduce the impacts to less than significance.

AQ-2

The DEIS fails to analyze the GHG emissions in a meaningful way and therefore does not provide for avoidance, minimization, or mitigation. The DEIS has also failed to include the loss of carbon sequestration from soils in its calculations or to provide a lifecycle analysis of GHG emissions that include manufacturing and disposal of equipment. Moreover, it is undisputed that in the near-term GHG emissions will increase emissions during training activities, and in the manufacturing and transportation of the equipment. The DEIS fails to consider any alternatives to the project that would minimize such emissions or to require that these near-term emissions be off set in any way.

AQ-3

**F. The Analysis of Cumulative Impacts in the DEIS is Inadequate**

A cumulative impact is “the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.” 40 C.F.R. § 1508.7. The Ninth Circuit requires federal agencies to “catalogue” and provide useful analysis of past, present, and future projects. *City of Carmel-By-The-Sea v. U.S. Dept. of Transp.*, 123 F.3d 1142, 1160 (9<sup>th</sup> Cir. 1997); *Muckleshoot Indian Tribe v. U.S. Forest Service*, 177 F.3d 800, 809-810 (9<sup>th</sup> Cir. 1999).

“In determining whether a proposed action will significantly impact the human environment, the agency must consider ‘[w]hether the action is related to other actions with individually insignificant but cumulatively significant impacts. Significance exists if it is reasonable to anticipate a cumulatively significant impact on the environment.’ 40 C.F.R. § 1508.27(b)(7).” *Oregon Natural Resources Council v. BLM*, 470 F.3d 818, 822-823 (9<sup>th</sup> Cir. 2006). NEPA requires that cumulative impacts analysis provide “some quantified or detailed information,” because “[w]ithout such information, neither courts nor the public . . . can be assured that the Forest Service provided the hard look that it is required to provide.” *Neighbors of Cuddy Mountain v. United States Forest Service*, 137 F.3d 1372, 1379 (9<sup>th</sup> Cir. 1998); see also *id.* (“very general” cumulative impacts information was not hard look required by NEPA). The

Response to Comment N-18664 (Page 15 of 20):

**CI-1:**

Notwithstanding the summary of NEPA requirements and applicable court cases, it is not clear from these comments what specifically is perceived to be inadequate about the cumulative analysis in the DEIS. There are very few examples provided. Nonetheless, a few revisions have been made to help clarify or explain selected portions of the analysis in Chapter 5 of the FEIS. The Department of the Navy considers cumulative impacts to be adequately addressed in the EIS.

The reference to an incomplete discussion of rare plants elsewhere in the EIS, and the suggestion that the cumulative impact assessment is therefore incomplete, is unfounded. Reconnaissance level surveys were used to determine which rare plants would be subject to focused surveys, and those focused surveys were completed.

**CI-2:**

Comment noted, but no specific examples of inadequate analysis are provided. The Department of the Navy considers cumulative impacts to be adequately addressed in the EIS.

**CI-3:**

Comment noted, but no specific examples of inadequate analysis are provided. Due to the nature of the proposed action, there is nothing about any of the project alternatives that would be considered growth-inducing. Indirect effects of the proposed action are addressed as appropriate in the individual resource sections in Chapter 4.

Comment ID: N-18664 (Page 16 of 20)

discussion of future foreseeable actions requires more than a list of the number of acres affected, which is a necessary but not sufficient component of a NEPA analysis; the agency must also consider the actual environmental effects that can be expected from the projects on those acres. See *Klamath-Siskiyou Wildlands Ctr. v. BLM*, 387 F.3d 989, 995-96 (9th Cir. 2004) (finding that the environmental review documents “do not sufficiently identify or discuss the incremental impact that can be expected from each [project], or how those individual impacts might combine or synergistically interact with each other to affect the [ ] environment. As a result, they do not satisfy the requirements of the NEPA.”) Finally, cumulative analysis must be done as early in the environmental review process as possible, it is not appropriate to “defer consideration of cumulative impacts to a future date. “NEPA requires consideration of the potential impacts of an action before the action takes place.” *Neighbors*, 137 F.3d at 1380 quoting *City of Tenakee Springs v. Clough*, 915 F.2d 1308, 1313 (9<sup>th</sup> Cir. 1990) (emphasis in original).

The DEIS identifies some of the cumulative projects but does not meaningfully analyze the cumulative impacts to resources in the California desert from the many proposed projects (including renewable energy projects, transmission, and others). Moreover, because the initial identification and analysis of impacts is unfinished, the cumulative impacts analysis cannot be complete. For example, because the identification of potentially occurring rare plants on site is unfinished and incomplete, the cumulative impacts are also therefore inadequate.

The DEIS also fails to consider all reasonably foreseeable impacts in the context of the cumulative impacts analysis. See *Native Ecosystems Council v. Dombek, et al*, 304 F.3d 886 (9th Cir. 2002) (finding future timber sales and related forest road restriction amendments were “reasonably foreseeable cumulative impacts”). The DEIS also fails to provide the needed analysis of how the impacts might combine or synergistically interact to affect the environment in this region. See *Klamath-Siskiyou Wildlands Ctr. v. BLM*, 387 F.3d 989, 995-96 (9th Cir. 2004).

The NEPA regulations also require that indirect effects including changes to land use patterns and induced growth be analyzed. “Indirect effects,” include those that “are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable. Indirect effects may include growth inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate, and related effects on air and water and other natural systems, including ecosystems.” 40 C.F.R. s.1508.8(b) (emphasis added). See *TOMAC v. Norton*, 240 F. Supp.2d 45, 50-52 (D.D.C. 2003) (finding NEPA review lacking where the agency failed to address secondary growth as it pertained to impacts to groundwater, prime farmland, floodplains and stormwater run-off, wetlands and wildlife and vegetation); *Friends of the Earth v. United States Army Corps of Eng’rs*, 109 F. Supp.2d 30, 43 (D.D.C. 2000) (finding NEPA required analysis of inevitable secondary development that would result from casinos, and the agency failed to adequately consider the cumulative impact of casino construction in the area); see also *Mullin v. Skinner*, 756 F. Supp. 904, 925 (E.D.N.C. 1990) (Agency enjoined from proceeding with bridge project which induced growth in island community until it prepared an adequate EIS identifying and discussing in detail the direct, indirect, and cumulative impacts of and alternatives to the proposed Project); *City of Davis v. Coleman*, 521 F.2d 661 (9th Cir. 1975) (requiring agency to prepare an EIS on effects of proposed freeway interchange on a major interstate highway in an agricultural area and to

CI-2

CI-3

Response to Comment N-18664 (Page 16 of 20):

CI-4:

The results of Section 7 consultation with USFWS have been incorporated into the FEIS, including the cumulative impact assessment, as appropriate. Additional text has been added regarding sand transport systems, but the impacts (including cumulative) are still expected to be less than significant because no structures would be constructed in the midst of a transport corridor under the any of the project alternatives (which is how solar developments disrupt sand transport). The proposed action is not expected to contribute to any cumulative sand transport impacts that may be associated with other types of projects. Additional discussion about cumulative effects to Mojave fringe-toed lizard habitat and water resources has been added in the FEIS. Golden eagles would not be substantially affected by the proposed action, and their populations in the desert are stable (and increasing). Cumulative impacts to this species are expected to be minimal (see also response to Comment N-18664, BIO-17).

NEPA-2:

The purpose and need statement on page 1-4 of the DEIS does not foreclose consideration of meaningful alternatives to the proposed expansion areas; on the contrary, as described in Section 2.7, numerous alternatives were considered in addition to the six action alternatives and the No-Action Alternative that were carried forward for analysis in the DEIS (Section 2.4). How the purpose and need relates to the analysis of alternatives is addressed in Sections 2.2, 2.3, and 2.7 of the DEIS.

include a full analysis of both the environmental effects of the exchange itself and of the development potential that it would create).

Among the cumulative impacts to resources that have not been fully analyzed are impacts to desert tortoise, impacts to sand transport systems and Mojave fringe-toed lizard habitat, impacts to golden eagles, and impacts to water resources. The cumulative impacts to the resources of the California deserts has not been fully identified or analyzed, and mitigation measures have not been fully analyzed as well.

CI-4

**G. The EIS' Alternatives Analysis is Inadequate**

NEPA requires that an EIS contain a discussion of the "alternatives to the proposed action." 42 U.S.C. §§ 4332(C)(iii),(E). The discussion of alternatives is at "the heart" of the NEPA process, and is intended to provide a "clear basis for choice among options by the decisionmaker and the public." 40 C.F.R. §1502.14; *Idaho Sporting Congress*, 222 F.3d at 567 (compliance with NEPA's procedures "is not an end in itself . . . [but] it is through NEPA's action forcing procedures that the sweeping policy goals announced in § 101 of NEPA are realized.") (internal citations omitted). NEPA's regulations and Ninth Circuit case law require the agency to "rigorously explore" and objectively evaluate "all reasonable alternatives." 40 C.F.R. § 1502.14(a) (emphasis added); *Env'tl. Prot. Info. Ctr. v. U.S. Forest Serv.*, 234 Fed. Appx. 440, 442 (9th Cir. 2007). "The purpose of NEPA's alternatives requirement is to ensure agencies do not undertake projects "without intense consideration of other more ecologically sound courses of action, including shelving the entire project, or of accomplishing the same result by entirely different means." *Env'tl. Defense Fund, Inc. v. U.S. Army Corps of Engrs.*, 492 F.2d 1123, 1135 (5th Cir. 1974). An agency will be found in compliance with NEPA only when "all reasonable alternatives have been considered and an appropriate explanation is provided as to why an alternative was eliminated." *Native Ecosystems Council v. U.S. Forest Serv.*, 428 F.3d 1233, 1246 (9th Cir. 2005); *Bob Marshall Alliance v. Hodel*, 852 F.2d 1223, 1228-1229 (9th Cir. 1988). The courts, in the Ninth Circuit as elsewhere, have consistently held that an agency's failure to consider a reasonable alternative is fatal to an agency's NEPA analysis. *See, e.g., Idaho Conserv. League v. Mumma*, 956 F.2d 1508, 1519-20 (9th Cir. 1992) ("The existence of a viable, but unexamined alternative renders an environmental impact statement inadequate.").

If the EIS rejects an alternative from consideration, it must explain why a particular option is not feasible and was therefore eliminated from further consideration. 40 C.F.R. § 1502.14(a). The courts will scrutinize this explanation to ensure that the reasons given are adequately supported by the record. *See Muckleshoot Indian Tribe v. U.S. Forest Service*, 177 F.3d 800, 813-15 (9th Cir. 1999); *Idaho Conserv. League*, 956 F.2d at 1522 (while agencies can use criteria to determine which options to fully evaluate, those criteria are subject to judicial review); *Citizens for a Better Henderson*, 768 F.2d at 1057.

Here, the DEIS too narrowly construed the project purpose and need such that the DEIS did not consider an adequate range of alternatives to the proposed project. The alternatives analysis is inadequate even with the inclusion of the alternative site configurations and a reduced acreage alternative. Additional feasible alternatives should be considered which would avoid occupied desert tortoise habitat as well as alternatives that would have used other existing

NEPA-2

military bases in the area for cooperative training exercises.

**II. Conclusion**

Thank you for your consideration of these comments. In light of the many omissions in the environmental review to date, we urge MCAGCC to revise and re-circulate the DEIS or prepare a supplemental DEIS before making any decision regarding the proposed expansion areas and activities. In the event MCAGCC chooses not to revise the DEIS and provide adequate analysis, the MCAGCC should reject the expansion proposal. Please feel free to contact me if you have any questions about these comments or the documents provided.

Sincerely,

May 24th, 2011

Dear 29Palms EIS Project Manger, or Whom it May Concern,

I write this letter with great sadness, and have to tell you that we are opposed to your alternatives, including alternative 7. We feel this is nothing more than a massive land grab. The Marines don't need over a million acres of land for training. You already have the largest training facility in the country (932 square miles.) Why not use Fort Irwin's base or the more than 700 bases that we have around the world that cost about 100 billion to maintain each year? The military budget for 2010 was 693 billion dollars, however it went somewhere between 1.10 trillion to 1.35 trillion dollars for our national defense in 2010. Our military spends more than China, Russia, Japan, India, and the rest of NATO combined. To date it's estimated we have spent 373 billion for the war in Afghanistan & at least 745 billion for the war in Iraq. U.S. government has the biggest mountain of debt in the history of the world. Our Congress continues to cut Medicare, Medicaid and Social Security, but somehow our military is allowed to keep recklessly spending. The U.S does doesn't need to be world's policeman, and the last thing the USMC needs is another 188,000 acres of land.

I've attended every meeting since this has started. The last meeting I attended was at the Ontario High School. This is the second time I've gone to look at your alternative maps that don't show street names or indicate where a highway is. Seven maps that don't show you anything but dots. How stupid is that?

The next map was from the "Desert Tortoise Expert." I can honestly tell you that I know more about this animal than he does. Maps were so small and still have no idea where his study took place. He began to tell me that over the last two years every square inch of the desert (188,000 plus acres) have been covered on foot to find out approximately how many tortoise's there are in this area. I find this amazing, I've been in the desert for the last two years and never seen anyone "walking/studing" anything.

He then said whoever did all this walking found over 2,500 desert tortoises in this area. So I asked him what are you going to do with all those tortoises? Are you going to do another relocation experiment like Fort Irwin? He said no, we would never do that. So what then I asked?? He surprisingly said that there will more than likely be a significant loss of life! Nice answer.

Here's a quote from BLM's website..... "The desert tortoise is listed by the US Fish and Wildlife Service as a threatened species. Under the provisions of the endangered species act (ESA) Anyone who takes, disturbs, harass, ham, pursue, hunt, shoot, wound, kill, trap, capture, collect or attempt to engage in any such conduct is subject to a civil and or criminal penalties of up to a 50,000 fine and one year in jail or both. The desert tortoise is also considered by California to be a THREATENED species." How is the military immune to these laws???

He then claimed that tortoise's living on the base are doing just fine. What kind of study is that, captive tortoise's? It's impossible to re-locate these animals, and its not ok for the U.S. military to be immune to laws the are set in place to protect them. Here is a quote from Ilene Anderson, a biologist with the Center for Biological Diversity. "Fort Irwin's translocation program was disastrous for tortoises, and it is unfathomable that they are proposing the same disaster for 1,000 more. This species is already threatened with

Response to Comment N-18665 (Page 2 of 7):

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: N-18665 (Page 3 of 7)

extinction, and this proposal (relocation) is destined to kill off more of them.<sup>2</sup> They also found that Fort Irwin tortoises are distinctly different from their relatives to the north, east and south. So please tell me what's your plan, other than just killing them I would like to have a clear plan for these animals, and any other animal in the area.

He then began to tell me a few stories of how stupid some of the off roaders are, and how they have unknowingly been on the 29 Palms base to check out the airplane crash sight, and how he can't believe that these "stupid people" just drive where ever they want. So I asked him instead of spending millions and millions of dollars on an unwanted expansion, why not put up a "stupid" fence? His comment was a fence would be too costly.

Also couldn't make out what properties would be affected by this. Was told at least 20 percent of homes/land-owners would loose their properties. Most of the people who live in this area are on fixed incomes, moving is out of the question. Home values/properties are down almost 30 percent. So receiving a fair market value in this economy would basically be worthless. That is so un-American, it really is.

Another point I want to address is the noise this will create. We experience this noise on a regular basis with windows that rattle and the ground that shakes by helicopters flying by, jets flying by etc. One report I read said that the war in Iraq has led to epidemic rates of hearing loss among troops. Your training will be no different, so as a civilian, we will be susceptible to loosing our hearing as well, especially because were just outside the two mile boundary. The locals in Lucerne Valley hear the noise from your training everyday & they are over 60 miles away.

Also, a comment for the BLM. Petroglyph's are not being protected. Have been to Numerous sites in the desert, and none of them have any protection around them. In 2010, our family was out off roading in the desert & came upon a blacked out SUV escorted by a fully loaded helicopter with more experts taking photos of the petroglyph's in an area just off Bessemer Mine Road. The petroglyph's are in such bad condition that you can hardly see them anymore. Also, why is the military flying around with a fully loaded helicopter with civilians in the area?

I can tell you from experience the one thing the BLM does do well is harass you. Our family was out off roading when a BLM ranger pulled us over. He accused us of taking a piece of wood from outside a boundary marker. This was not the least bit true. This BLM ranger had a gun on each calf, a gun on each thigh and 2 more around his waist. He also had handcuffs, a billy club, pepper spray, nunchucks, and to top it off a beer mug flag on top of his vehicle. Could also see an AR15 on the dash of his truck. He was absolutely terrible to us. Made our 5 year old cry & asked if she was enjoying her wilderness adventure. I did address this with someone at BLM, & they told me they didn't know anyone like that & claimed it must have been one of the volunteers. (and that's O.K??)

Google BLM and see how they are currently paying millions of dollars to settle harassment lawsuits all over the US, with taxpayers money no less.

How do you plan to keep historical artifacts like the petroglyph's from being ruined?? The desert tortoise? What about the Joshua Trees? As a property owner I'm not even allowed to cut one down because they are protected. Once again how is the USMC immune to this?? What about all the other plants and animals??? Below is a look at things the Marines will destroy:

Response to Comment N-18665 (Page 3 of 7):

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range sweep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

**Desert Grasses:**

Big Galleta, Indian Rice Grass, Bush Muhly, Fluff Grass, Red Brome, Desert Needle.

This doesn't include, natural rock formations, natural sand dunes, craters & volcanic formations, natural water sources, canyons, faults, abandoned mines, old abandoned historical houses and historical land marks, the tourist industry, the filming industry, and the off roading industry. Not to mention the locals in Lucerne Valley who depend on the money generated by off roaders.

If we had to pick one alternative, it would be for you to move east, far away from Johnson Valley. Another expert at one of the meetings told me that moving east is just not possible. He said there is a railroad in the area, a natural pipeline in this area, and lastly when they try to drive tanks on a particular lake bed they sink down to low. Since when do you need perfect areas to practice on? Your going to have issues like that in

Comment ID: N-18665 (Page 6 of 7)

Response to Comment N-18665 (Page 6 of 7):

5

combat. Moving a pipeline and railroad is nothing compared to ruining all the things listed above in this letter.

The off roading community has never done the damage or would ever do the damage that the USMC will do to this precious and one of a kind area left in the world. Allowing you or any one else to come in and ruin this area is un-thinkable. In fact, we still find metal debris, and bomb fragments left over from the 1950's when you used this valley for target bombing/practicing. This area has had enough of that.

For the last 30 years all over the U.S. riding areas have been closing down. We're already so limited with places to ride thanks to the Pelosi's, the Boxer's, and the Feinstein's of the world. Quite frankly we're fed up and sick of it. What you're planning is terrible, and really not the least bit justified when you have access to training facilities all over the world.

It's time to Stay out of Johnson Valley.

Sincerely,

Christina Wilson

RE: Comments on 29 Palms Training Land Acquisition Project and Draft Environmental Impact Statement (EIS)

EIS Project Manager:

I am writing for two purposes: (1) to register my objection to the 29 Palms Training Land Acquisition Project, and (2) notify you that the EIS for the project is defective with respect to its analysis of project-related impacts on the local economy – impacts for which no meaningful mitigation is offered.

From our perspective, the only rational alternative is the "No Action" alternative. Given that the U.S. Government is dangerously burdened with debt, there is no way that we, as a nation, can responsibly pay for this project at this time. Further, only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels, which is absolutely critical to the survival of the local economy.

Let me explain what I mean. My family recreates in the Johnson Valley OHV area 15 times a year. Our favorite places to visit in Johnson Valley are NORTH ANDERSON, ROCK PILE, where we engage in such activities as RAKING, TRAIL RIDING. When preparing for a trip, we spend \$1000+ on gas, groceries, vehicle parts, etc... in our local area. Then, we spend an additional \$500 in the Johnson Valley/Lucerne Valley/Victorville area while we are camping. Over the years, we have patronized the following businesses, among others, in the Johnson Valley/Lucerne Valley/Victorville Area: LETTIES, HOMETOWN BUFFET, TOM'S NO. 2, STATE BROS.

If Johnson Valley, or any part of it, were to be closed due to the expansion of the 29 Palms Marine Corps Base, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site.

As written, the Draft EIS provides an inadequate and error-filled analysis of the project's potential impacts on the local economy. The analysis is based on unsupported assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the complete devastation of the local economy is misleading and pure fantasy. This part of the EIS, among others, must be redone.

Respectfully,

Name William Lighthart WILLIAM LIGHTHART  
Address 7900 CORA ST, SUNLAND, CA 91040

Date 5-4-2011

Response to Comment N-18666:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Comments on 29 Palms Training Land Acquisition Project and Draft Environmental Impact Statement (EIS)

EIS Project Manager:

I am writing for two purposes: (1) to register my objection to the 29 Palms Training Land Acquisition Project, and (2) notify you that the EIS for the project is defective with respect to its analysis of project-related impacts on the local economy – impacts for which no meaningful mitigation is offered.

From our perspective, the only rational alternative is the "No Action" alternative. Given that the U.S. Government is dangerously burdened with debt, there is no way that we, as a nation, can responsibly pay for this project at this time. Further, only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels, which is absolutely critical to the survival of the local economy.

Let me explain what I mean. My family recreates in the Johnson Valley OHV area 15 times a year. Our favorite places to visit in Johnson Valley are CAMP ROCK RD, where we engage in such activities as CAMPING and RIDING. When preparing for a trip, we spend \$500 on gas groceries, vehicle parts, etc... in our local area. Then, we spend an additional \$300 in the Johnson Valley/Lucerne Valley/Victorville area while we are camping. Over the years, we have patronized the following businesses, among others, in the Johnson Valley/Lucerne Valley/Victorville Area: RESTAURANT, GAS STATION.

If Johnson Valley, or any part of it, were to be closed due to the expansion of the 29 Palms Marine Corps Base, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site.

As written, the Draft EIS provides an inadequate and error-filled analysis of the project's potential impacts on the local economy. The analysis is based on unsupported assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the complete devastation of the local economy is misleading and pure fantasy. This part of the EIS, among others, must be redone.

Respectfully,

Name SAM DEMPSEY

Response to Comment N-18675:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To me Johnson valley's Means dry lake bed is a huge part of my family's and friends lives. we get together on the lake bed for the holidays to go rumping, and to drive my Rock crawler. we have many traditions that involve going to the lakebed for Anniversaries, club runs, races, and birthdays. This is one of the few OHV areas that is still open to the public, if this OHV area were to be closed or taken away from us it would hurt families by taking traditions away and hurt the economy by not having a place for off road vehicles to use.

Response to Comment N-18676:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

*Johnson Valley (the hamsters) is like a second home to me. I have been going out there since my daughter was one. So like 7 yrs now I love the dirt roads, camping, the trucks. I see all my friends that live far away miss family event. My dad, brother and boyfriend all off road. I couldn't imagine not going. Its my weekend vacation. My brother got married & all the boys went on a "honeymoon run". Every yr we go to celebrate their anniversary. Hopefully one day I could have my own run. We always clean up after ourselves as well as everyone else that we come across. There are not that many places we have left in CA to do our runs. I hope you don't close us down.*

Response to Comment N-18677:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Johnson Valley (The Hammer) has been the source of numerous, irreplaceable memories of exploration, adventure, and growth. I have been vacationing at Means lake bed the past 10 years and can't say there is any other place in California that makes me happier. The scenic environment and adventure trails have allowed me to grow as a person and escape from clutter of everyday life. My adventures there began with a truck & a bunch of friends exploring the inhospitable terrain & more recently has escalated to building a custom vehicle specifically for the hard core trails that define the Johnson Valley area. The offroad group I now "wheel" with plans their year around trips to the region and would be lost if it were to be taken by the military.

Response to Comment N-18681:

Thank you for your comment. The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I would ask you to please reconsider closing the hammer recreation area. I feel that the revenue loss to the US economy will drastically impact employment. Also I have invested alot of money and equipt to this govt. Do the right thing and take the desert East of 29 Palms.

Response to Comment N-18682:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps appreciates your comment and involvement in the NEPA process.

Dear EIS Project Manager:

First of all, thank you for considering this letter. I fully support our military, its leaders, and the wonderful men and women who fight to secure our freedoms in this country. I am grateful every day for the freedoms I enjoy because of the sacrifice by those who serve. One of the greatest freedoms I enjoy is off road driving and extreme rock crawling. Right now, our freedom of four-wheeling and our military are in conflict, because one of the world's most popular OHV park is in danger of closure for use as a tactical training ground, Johnson Valley OHV park.

My solution, for the benefit of both our military and the vast community of off road enthusiasts, is to expand eastward and/or southward, as outlined in Alternative #3. To me, this Alternative provides the best solution and the easiest to implement for both the Marine Corps, the off road community, and many other groups.

If an eastward and/or southward expansion is simply not possible, Alternative #4 or Alternative #5 would be acceptable, to allow full off road recreation access to Johnson Valley when it is not in use by our Marines.

If even this is not acceptable, the very least alternative I would consider is the favored Alternative #6 BUT with more permitted access northward to include the Outer Limits extreme 4x4 trail, and the access and exit roads. This way, all of the very popular trails remain intact and accessible

If at all possible, an eastward and southward expansion is acceptable to me, as well as many others. I feel, and I am sure many others would agree, that a permit (which allows access to Johnson Valley 10 months of the year) is only a temporary solution, and a permanent closure and restricted access would be inevitable. Thank you for regarding my input.

Sincerely,

  
\_\_\_\_\_  
\_\_\_\_\_

**Response to Comment N-18685:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The Marine Corps has determined that Alternatives 4, 5, and 6 would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Dear EIS Project Manager:

First of all, thank you for considering this letter. I fully support our military, its leaders, and the wonderful men and women who fight to secure our freedoms in this country. I am grateful every day for the freedoms I enjoy because of the sacrifice by those who serve. One of the greatest freedoms I enjoy is off road driving and extreme rock crawling. Right now, our freedom of four-wheeling and our military are in conflict, because one of the world's most popular OHV park is in danger of closure for use as a tactical training ground; Johnson Valley OHV park.

My solution, for the benefit of both our military and the vast community of off road enthusiasts, is to expand eastward and/or southward, as outlined in Alternative #3. To me, this Alternative provides the best solution and the easiest to implement for both the Marine Corps, the off road community, and many other groups.

If an eastward and/or southward expansion is simply not possible, Alternative #4 or Alternative #5 would be acceptable, to allow full off road recreation access to Johnson Valley when it is not in use by our Marines.

If even this is not acceptable, the very least alternative I would consider is the favored Alternative #6 BUT with more permitted access northward to include the Outer Limits extreme 4x4 trail, and the access and exit roads. This way, all of the very popular trails remain intact and accessible.

If at all possible, an eastward and southward expansion is acceptable to me, as well as many others. I feel, and I am sure many others would agree, that a permit (which allows access to Johnson Valley 10 months of the year) is only a temporary solution, and a permanent closure and restricted access would be inevitable. Thank you for regarding my input.

Sincerely,

Branson Rogers

To me, this Alternative provides the best solution and the easiest to implement for both the Marine Corps, the off road community, and many other groups.

If an eastward and/or southward expansion is simply not possible, Alternative #4 or Alternative #5 would be acceptable, to allow full off road recreation access to Johnson Valley when it is not in use by our Marines.

If even this is not acceptable, the very least alternative I would consider is the favored Alternative #6 BUT with more permitted access northward to include the Outer Limits extreme 4x4 trail, and the access and exit roads. This way, all of the very popular trails remain intact and accessible.

If at all possible, an eastward and southward expansion is acceptable to me, as well as many others. I feel, and I am sure many others would agree, that a permit (which allows access to Johnson Valley 10 months of the year) is only a temporary solution, and a permanent closure and restricted access would be inevitable. Thank you for regarding my input.

Sincerely,

Jeremiah Rogers

**Response to Comment N-18696:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The Marine Corps has determined that Alternatives 4, 5, and 6 would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Dear EIS Project Manager:

First of all, thank you for considering this letter. I fully support our military, its leaders, and the wonderful men and women who fight to secure our freedoms in this country. I am grateful every day for the freedoms I enjoy because of the sacrifice by those who serve. One of the greatest freedoms I enjoy is off road driving and extreme rock crawling. Right now, our freedom of four-wheeling and our military are in conflict, because one of the world's most popular OHV park is in danger of closure for use as a tactical training ground; Johnson Valley OHV park.

My solution, for the benefit of both our military and the vast community of off road enthusiasts, is to expand eastward and/or southward, as outlined in Alternative #3. To me, this Alternative provides the best solution and the easiest to implement for both the Marine Corps, the off road community, and many other groups.

If an eastward and/or southward expansion is simply not possible, Alternative #4 or Alternative #5 would be acceptable, to allow full off road recreation access to Johnson Valley when it is not in use by our Marines.

If even this is not acceptable, the very least alternative I would consider is the favored Alternative #6 BUT with more permitted access northward to include the Outer Limits extreme 4x4 trail, and the access and exit roads. This way, all of the very popular trails remain intact and accessible

Dear Project Manager:  
I am writing this letter to protest your proposed expansion west into Johnson and Lucerne valleys. I've lived here eighteen years. Its peaceful, quiet, and the air is clean, people are hospitable. I have seen it grow from a village to a town. Our local businesses depend on local and tourist dollars to keep their doors open. Most of the people living here are retirees and ex servicemen and old age pensioners. Money is tight. Your expansion west will cause a lot of tourists to go elsewhere. With Bin Laden out of the picture, things in the middle east will improve. I hope you would reconsider going west and instead go east.

Response to Comment N-18699 (Page 1 of 2):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Response to Comment N-18700:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Response to Comment N-18701:

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. Section 2.8.4 of the EIS outlines several measures that would be taken to reduce impacts from the proposed action to biological resources, including establishment of desert tortoise protection areas.

Response to Comment N-18706:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Draft Environmental Impact Statement on 29 Palms Base expansion

Dear Sir,

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley were all founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land with the stipulation the individual would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

These historical communities should be preserved, as they stand now, with no further impact from the 29 Palms Marine base from noise, vibration, air pollution and light pollution. The proposed expansion of training exercises and Combat Center area will do just that.

I urge you to take the base expansion to the east, which will eliminate the negative impacts on these historical communities.

Thank you for your attention.

Sincerely,

Debby Cossart

**Response to Comment N-18709:**

Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-18710:

Thank you for your comment. The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. Section 2.8.4 of the EIS outlines several measures that would be taken to reduce impacts from the proposed action to biological resources, including establishment of desert tortoise protection areas.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-18711:

Thank you for your comment you submitted on May 19th 2011 regarding the proposed 29 Palms Training Land Acquisition / Airspace Establishment project. The Marine Corps recognizes that this is an important topic for many different people and organizations and it's important to us to receive public feedback on the proposal.

In regard to your specific concerns you listed in your comment, we want to assure you that your specific property is not included in any of our study areas. Your house and property are roughly two (2) miles outside of the edge of our western study area. You do not need to worry about losing your house.

We here at the Combat Center are committed to being good neighbors to the best of our ability. Though the public comment period has ended, please feel free to contact us if you have any concerns or questions about the project. For more information on the project, please call 760-830-3764, or contact the program office by mail at:

29 Palms Training Land /Airspace  
MAGTF, MCGACC  
Building 1554, Box 788104  
Twentynine Palms, CA 92278-8104

Thank you again for your comment and we hope we reassured you on your concern about your property and our project.

I, Gary R. Buzza, own property located at 6074 Maloof Ln., Lucerne Valley, 92356, and 54375 Mi Casa Ln., Johnson Valley, 92285. These 2 properties are located 5 miles south of Means Dry Lake. I AM STRONGLY OPPOSED TO ANY BASE EXPANSION TO THE WEST. I have been visiting this area since 1971 for recreational purposes such as hiking, horseback riding, motorcycle and dune buggy riding, and socializing with a large group of friends. Base expansion to the west would negatively impact all homeowners and residents by excessive noise, dust and eliminate a great portion of existing recreational space. I question the need for the base to acquire more land, but if needed, the expansion should be to the east, as this action would negatively impact far less civilians. I have included a printout of further concerns and facts that also express my feelings. THANK YOU.

Response to Comment N-18712 (Page 1 of 4):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley. Furthermore, Sections 3.11 and 4.11 of the EIS has been updated as appropriate to address issues related to the Small Homestead Act.

Re: Draft Environmental Impact Statement on 29 Palms Base expansion

Dear Sir:

The DEIS states:  
Potential Impacts from six action alternatives and the No-Action Alternative have been analyzed.  
Potential impacts have been analyzed for land use, recreation, socioeconomic and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:

Less than Significant Impacts (LSI):

- Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
- Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):

No impact anticipated from airspace establishment.

Similar judgements are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.  
It is therefore a contradiction to imply that residents and Cultural Resources outside the

**Response to Comment N-18712 (Page 2 of 4):**

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-18712 (Page 3 of 4)

EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:

- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
- Devaluation of surrounding private property.
- Increased costs to federal, state and local jurisdictions for increased law enforcement. All would occur outside the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

-These homestead communities have co-existed with the Base for decades as the DEIS

CR-1

AQ-1

NOI-1

Response to Comment N-18712 (Page 3 of 4):

CR-1:

Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act.

AQ-1:

It is acknowledged that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative. The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM10.

NOI-1:

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: N-18712 (Page 4 of 4)

Response to Comment N-18712 (Page 4 of 4):

correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

NOI-1

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflowed by helicopters at any hour of the day or night, particularly when they want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.

"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision."  
—Desert Magazine 1944

The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves. The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant.  
<http://www.coutant.org/mminternet/saga/index.html>

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

Re: Comment Letter re Draft Environmental Impact Statement for Land Acquisition and  
Airspace Establishment for Proposed Expansion of Twenty-Nine Palms USMC Base

Dear Project Manager:

This firm represents EcoLogic Partners, Inc. ("EcoLogic"), a consortium of family-oriented recreation groups dedicated to preserving public access to outdoor recreational venues in California and throughout the American West. On behalf of EcoLogic and its members, we have reviewed the Draft Environmental Impact Statement ("EIS") for the Department of the Navy's "Land Acquisition and Airspace Establishment" project, which is the necessary antecedent to the proposed expansion of the United States Marine Corps base at Twenty-Nine Palms, California. For the reasons discussed below, EcoLogic objects to the proposed Project, including the Navy's preferred alternative (Alternative 6), and herein takes the position that the Project, while certainly providing some marginal benefit to the Marine Corps training mission, is not necessary to that mission nor justified in light of its cost. Further, EcoLogic finds the Draft EIS analytically deficient. Not only does the document fail to study key impacts, many of its conclusions rest on dubious, unsupported assumptions. Perhaps worst of all, the Draft EIS omits fundamental baseline information regarding the environmental resources that currently exist in the proposed expansion area, rendering an impact analysis impossible.

1. THE PROPOSED PROJECT IS TOO COSTLY

Although the training facilities currently available at Twenty-Nine Palms and other USMC bases have allowed the Marines to ably conduct military operations in Kuwait, Iraq, and Afghanistan, the Department of the Navy has now decided that it needs to expand the Twenty-

NEPA-1

Response to Comment N-18713 (Page 1 of 20):

NEPA-1, NEPA-2, and NEPA-3:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

GEN-1:

Chapter 3 of the EIS contains background information for each resource area, while impacts are analyzed in Chapter 4. All relevant technical studies and additional information are contained as appendices in Volume 2. References cited are included in the project Administrative Record.

Comment ID: N-18713 (Page 2 of 20)

Nine Palms facility by more than 200,000 acres to provide for “sustained, combined-arms, live-fire, and maneuver field training for MEB-sized Marine Air Ground Task Forces (MAGTFs), each consisting of three battalion task forces and associated command, aviation, and combat logistics support elements.” (DEIS, ES-1) It is difficult to see how the recent wars in the Middle East, or any reasonably anticipated conflict elsewhere in the world, would require that an entire MEB be trained simultaneously at a single military installation. Increasingly, military experts and civilian decision-makers are beginning to question the strategic and tactical value of maintaining and training such large (and costly) forces.

A few recent comments demonstrate the point:

- George Will (Washington Post – May 3, 2011):
  - “[T]he enormous military footprint in Afghanistan, next door to bin Laden’s Pakistan refuge, seems especially disproportionate in the wake of his elimination by a small cadre of specialists.”
  - Jim Lacey of the Marine Corps War College notes that Gen. David Petraeus has said there are perhaps about 100 al-Qaida fighters in Afghanistan. ‘Did anyone,’ Lacey asks, do the math?’ There are, he says, more than 140,000 coalition soldiers in Afghanistan, or 1,400 for every al-Qaida fighter. It costs about \$1 million a year to deploy and support every soldier – or up to \$140 billion, or close to \$1.5 billion a year, for each al-Qaida fighter. ‘In what universe do we find strategists to whom this makes sense?’ he asked.”
- Mark Thompson (Time – “How To Save A Trillion Dollars” – April 25, 2011):
  - “The U.S. continues to field and maintain a global force designed during an era of sky’s-the-limit defense budgets.”
  - “Across Washington, all sorts of people are starting to ask the unthinkable questions about long-sacred military budgets. Can the U.S. really afford more than 500 bases at home and around the world? Do the Air Force, Navy and Marines really need \$400 billion in new jet fighters when their fleets of F-15s, F-16s and F-18s will give them vast air superiority for years to come? Does the Navy need 50 attack submarines when America’s main enemy hides in caves?”
  - “It may seem strange to talk about defense cuts while the U.S. is waging one war in Afghanistan, is mopping up a second in Iraq and has just launched a half-war in Libya. But those conflicts have made it easy to forget the warning of Admiral

NEPA-1

Response to Comment N-18713 (Page 2 of 20):

NEPA-4:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

NEPA-5:

Section 4.13 of the EIS addresses impacts to water resources. As described in the EIS, development of new groundwater sources in other basins for potable water supply would not occur under the proposed action. The analysis of water resources impacts is presented in Section 4.13 of the EIS. A long-term water study is not within the scope of this EIS. If one of the alternatives proposed in the EIS is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Mike Mullen, Chairman of the Joint Chiefs of Staff, that ‘the single biggest threat to our national security is our debt.’ Which points to an almost tragic irony of Washington’s \$700 billion annual appetite for military stores: we are borrowing cash from China to pay for weapons that we would presumably use against it. If the Chinese want to slay us, they don’t need to attack us with their missiles. They just need to call in their loans.”

- o “Numbers alone tell much of the story: We are now spending 50% more (even excluding the wars in Afghanistan and Iraq) than we did on 9/11. We are spending more on the military than we did during the Cold War, when U.S. and NATO troops stared across Germany’s Fulda Gap at a real superpower foe with real tanks and thousands of nuclear weapons aimed at U.S. cities. In fact, the U.S. spends about as much on its military as the rest of the world combined.”
- o “While the U.S.’s military spending has jumped from \$1,500 per capita in 1998 to \$2,700 in 2008, its NATO allies have been spending \$500 per person over the same span. As long as the U.S. is overspending on its defense, it lets its allies skimp on theirs and instead pour the savings into infrastructure, education and health care. So even as U.S. taxpayers fret about their health care costs, their tax dollars are paying for a military that is subsidizing the health care of their European allies.”
- o “[R]evising America’s defense budget will happen only if the U.S. takes a hard-eyed look at the dozens of military operations that are no longer vital or affordable.”
- o “\$1 trillion in cuts wouldn’t really be as drastic as it sounds – or as the military’s no-surrender defenders insist. Such a trim would still leave the Pentagon fatter than it was before 9/11.”
- o “California Representative Howard McKeon, the Republican chairman of the Armed Services Committee, says, ‘A defense budget in decline portends an America in decline.’ Attitudes like that can bankrupt a nation, and the public senses its.”
- o “For too long, an uninterested and distracted citizenry has been content to leave the messy business of national defense to those with bottom-line reasons for force-feeding it like foie gras goose. It’s long past time . . . for U.S. taxpayers to demand that its government spend what is needed to defend the country – not a penny more.”

NEPA-1

Response to Comment N-18713 (Page 3 of 20):

NOI-1:

Noise exposure from existing/current conditions are provided in Chapter 3. Appendix H as four sections: H-1 through H-4. Sections H-1 through H-3 contain a wealth of technical data used in the noise modeling; Section H-4 is the noise primer.

As explained in Section 3.9.3, the aircraft and ordnance operations for the Baseline scenario was *initially* based on WR 02-13. However, all modeled operations from Wr 02-13 were updated and validated by the USMC to represent current activity. For example, the EAF and airspace operations were updated in 2009-2010 for the MV-22 West Coast Basing EIS as stated in Section 3.9.3.1. Furthermore, ordnance operations from WR 02-13 were doubled relative to the 2003 noise study to better represent current activity at the Combat Center as stated in Section 3.9.3.1.

Modeling for the EAF is consistent with the Navy AICUZ Instruction which recommends use of annual average daily operations. If annual average busy day operations were modeled, it is estimated CNEL would be only 3 dB greater than CNEL reported in the DEIS and exposure to airfield noise exposure greater than or equal to 65 dB would likely be fully contained within the Combat Center boundary.

Comment ID: N-18713 (Page 4 of 20)

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest

May 24, 2011  
Page 4

- Robert Gates, United States Secretary of Defense
  - "Given America's difficult economic circumstances and parlous fiscal condition, military spending on things large and small can and should expect closer, harsher scrutiny. The gusher has been turned off, and will stay off for a good period of time." (CNN, May 9, 2010)
  - "The department must start setting priorities, making real trade-offs and separating appetites from real requirements." (Quoted in Huffington Post, August 9, 2010)
  - "We are not exempt from scrutiny and being asked to figure out what we are doing with less dollars." (Quoted in MSNBC.com, January 6, 2011.)
  - "The spigot of defense funding opened by 9/11 is closing."
  - "It is important to remember that every defense dollar spent to over-ensure against a remote or diminishing risk — or in effect to run up the score in a capability where the United States is already dominant — is a dollar not available to take care of our people, reset the force, win the wars we are in and improve capabilities in areas where we are underinvested and potentially vulnerable." (As quoted in Associated Press article, April 6, 2009).

NEPA-1

These quotations demonstrate that well-informed commentators, military experts, and the Secretary of Defense himself believe it is time that the desires of the Army, Air Force, Marines, and Navy yield to the economic realities facing the United States. Former Secretary of State Colin Powell has also stated that the defense spending must be brought into line with prevailing economic conditions, stating "I don't think the defense budget can be made sacrosanct and it can't be touched."<sup>1</sup> Gregg Easterbrook, writing for *The New Republic*, describes the Pentagon's recent spending behavior as "unprecedented" and "irrational."<sup>2</sup> The problem, as Easterbrook points out, is that very few people question the military when it asks for more money: "[S]ecurity spending and military deployment are presented to the nation as virtually untouchable. If the Pentagon wants something, the logic goes, then it must be necessary. This is far from true."<sup>3</sup>

<sup>1</sup> Mandell, Nina. "Colin Powell: Cut Military Spending to Reduce Deficit," *Daily News*, January 24, 2011.  
<sup>2</sup> Easterbrook, Gregg. "Wasteland: The Pentagon's nearly unprecedented, wildly irrational spending binge." *The New Republic*. Printed on *The New Republic* (<http://www.tnr.com>). November 10, 2010.  
<sup>3</sup> *Ibid.*

Response to Comment N-18713 (Page 4 of 20):

NOI-1 Continued:

Airspace flight operations are assessed using the CNELmr metric consistent with Navy RAICUZ Instructions. This metric accounts for the sporadic nature of airspace activity as well as the "startle" effect caused by low-altitude high-speed flights (see Section 3.9.1). The Maximum Sound Level (Lmax) metric was not specifically designed to measure impulsive sounds and although Lmax provides supplemental noise exposure information, the correct noise metric for assessment of land use compatibility is CNEL (and its derivatives). In addition to the aforementioned high-altitude refueling activity, modeled operations included low-altitude high-speed flight operations characteristic of existing and proposed flight activity at the Combat Center (see Appendix H).

BIO-1:

Analysis of noise impacts to wildlife in the Draft EIS were based on the best available information. As noted in your comment, noise modeling conducted for the proposed project was focused on impacts to humans. The noise contours developed through the noise modeling effort were considered in the analysis of impacts to biological resources, and the noise metrics from those contours were considered important even though they are weighted toward frequencies important to humans. However, because peak sound levels (and the frequency of occurrence of those sound levels) are of greater concern in analysis of impacts to wildlife than the averaged metrics used in analysis of noise impacts to humans, the biological resources analysis focused more on the locations of ordnance explosion (represented by WDZs and SDZs) and paths of task force travel.

Comment ID: N-18713 (Page 5 of 20)

GATZKE DILLON & BALLANCE LLP  
 Naval Facilities Engineering Command Southwest  
 ATTN: 29 Palms EIS Project Manager  
 May 24, 2011  
 Page 5

The situation has become so bad that President Obama is calling for \$400 billion in defense cuts over the next 12 years. This same sentiment is echoed in a letter signed by 57 members of Congress and submitted last October to the President's "National Commission on Fiscal Responsibility and Reform."<sup>4</sup> It is now clear that, to make a sizeable dent in the national debt, every branch of the military must scale back its wish list. Only those programs, weapon systems, force structures, and facilities projects with an established, well-documented need should be funded. All others must either be revamped to better address an actual military deficiency or be abandoned. Ironically, it is the nation's unwillingness or inability to curb defense spending – which has *doubled* since September 11, 2001 – that has made the United States so debt-ridden and vulnerable.<sup>5</sup>

NEPA-1

With respect to the proposed base expansion at Twenty-Nine Palms, the Project documents, including the Draft EIS, are remarkable in that they fail to explain why the current facilities, however small when compared to what the Marines want, are inadequate to meet the basic training needs of this branch of the military. Nowhere does the Marine Corp identify or describe any mission failure, large or small, that resulted from an inability to train an entire MEB simultaneously at the same site. In fact, in both Iraq and Afghanistan, the expeditionary portion of the Marine's mission was carried out with great success.<sup>6</sup> It has been the long-term occupation of these countries, and the forced, constant exposure to IEDs and similar low-tech weapons, that has caused the majority of casualties. So while the Marines certainly *desire* a larger base and could probably make productive use of the extra space, there is no evidence that they *need* more land or that their combat readiness will suffer markedly without it.

NEPA-2

The Draft EIS and other documents also fail to mention how much the proposed Project will cost. While the land may be transferred from the Bureau of Land Management to the Department of the Navy for next to nothing, and while the ongoing costs of maintaining the site may not be prohibitive, the expense of conducting the full-MEB training twice a year could be

NEPA-3

<sup>4</sup> Klein, Ezra. "Barney Frank, Ron Paul and 55 others advocate for defense cuts." *Economic and Domestic Policy, and Lots of It*. October 13, 2010.

<sup>5</sup> Ramesar, Romesh. "Military Spending Must Be Part of the Deficit Debate." *Time*. April 11, 2011. ["Though we can never be entirely safe from harm, our strategic advantages far exceed our vulnerabilities. In fact, the one clear and present threat to the American way of life is the size of the national debt."] Note that it is not enough to target "waste" in military procurement. "[S]imply going after Pentagon waste and abuse won't be enough. To conserve its power, the U.S. will need to reduce the size of its armed forces, curtail expensive missions and shrink America's military footprint around the world." *Ibid*.

<sup>6</sup> The Draft EIS admits this fact on page 1-23, stating, "Marine Corps successes in the first Gulf War in 1991, in leading the introduction of U.S. forces into Afghanistan in 2001, and again in Operation Iraqi Freedom in 2003, have validated the Marine Corps' doctrinal training philosophy of live-fire combined arms MAGTF integration through CAX."

Response to Comment N-18713 (Page 5 of 20):

BIO-1 Continued:

Discussion is included throughout the EIS noting the proximity of known populations to these WDZs, SDZs, and task force routes. In addition to this discussion throughout the text, potential noise effects are discussed for Nelson's bighorn sheep (page 4.10-14 and others) and the desert tortoise (page 4.10-11).

BIO-2:

Section D, Paragraphs 1-3: The Draft EIS contains the best available information on the occurrence and -distribution of special status and other status animal and plant species in the west study area. The BLM is a cooperating agency in the preparation of the EIS, and was unable to provide any wildlife or plant inventory information. As a result, the detailed surveys conducted for the EIS, which include surveys for: 1) tortoise abundance and density; 2) abundance of the Mojave fringe-toed lizard, burrowing owl, Mojave ground squirrel, and chuckwalla; 3) distribution and abundance of all sensitive plant species; 4) occurrence of special status aquatic invertebrate species; represent the best available information.

Section D, Paragraph 4: The Marine Corps is committed to protection of the public and the environment. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including expended ordnance) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

Comment ID: N-18713 (Page 6 of 20)

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 24, 2011  
Page 6

huge, running to the tens of millions of dollars per annum. Again, no one can be sure how expensive this will be, because the Marines did not bother to calculate the cost (or if they did calculate it, they did not feel compelled to disclose the figures.) This is precisely the kind of budgetary arrogance that typifies military spending requests.<sup>7</sup> Without accurate estimates regarding the cost of the proposed project, there is no means to weigh its purported benefits against its fiscal, environmental, and socio-economic impacts.

II. THE DRAFT EIS IS INADEQUATE

A. Failure to Provide Basic, Necessary Studies

Before identifying the specific defects of the EIS on a topic-by-topic basis, it is important first to examine a systemic flaw that plagues the entire EIS – the failure to provide the technical studies that purportedly support the document’s impact analyses.

Data set forth in the EIS indicate that the proposed base expansion and the training activities contemplated on the newly-acquired land could adversely affect air quality, ambient sound/noise levels, biological resources, recreational activities, cultural resources, and socio-economic conditions. Other data from the EIS suggests that the project could also result in adverse impacts on hazardous materials, airspace management, water supply, water quality, and greenhouse gas emissions. As to each of these impact categories, the EIS concludes that the project’s potential effects are either (a) not significant, or (b) significant and unavoidable. However, in most cases, the EIS fails to include the technical studies necessary to support such conclusions.

For example, the EIS fails to provide a water supply study, a water quality study, or an inventory of potential greenhouse gas sources and emissions. The EIS *does* provide a technical appendix for noise, but it is not a study *per se* of the project’s potential impacts on the existing ambient environment. Instead, it is merely a primer on noise metrics – very helpful in terms of understanding noise measurements, but not helpful at all in terms of determining the actual noise impacts of the project.

<sup>7</sup> In a detailed letter to President Obama’s special “Commission on Fiscal Responsibility and Reform,” Senator Tom A. Coburn, M.D. (R., Okla.) states that part of the problem is that “the Pentagon doesn’t know how it spends its money.” According to Senator Coburn, who is a trained CPA, “This incomprehensible condition has been documented in hundreds of reports over three decades from both the Government Accountability Office (GAO) and the Department’s own Inspector General (DOD IG).” In fact, the DOD Inspector General issued a report which concluded that DOD’s financial management systems do not facilitate but actually “prevent DOD from collecting and reporting financial information . . . that is accurate, reliable, and timely.” *Id.* While the accounting nightmares at the Pentagon may *explain* why the Marines have not disclosed the cost of the proposed Project over its lifetime, it does not *excuse* their unwillingness to develop this information and present to the public.

NEPA-3

GEN-1

Response to Comment N-18713 (Page 6 of 20):

BIO-2 Continued:

Section D, Paragraph 5: The Draft EIS presents a discussion of impacts to all sensitive plant and wildlife species known to be present in the proposed action area. Impacts to the desert tortoise are given appropriate prominence in the impact analysis, as it is the only resident species listed under the Federal ESA.

Section D, Paragraphs 6-7: While it is true that survey methods have changed and continue to change, it is not true that these changes invalidate previous estimates of tortoise density or abundance. The surveys conducted in 1997/1999 (Woodman et al. 2001) represent the best available information for tortoise density on the Combat Center. Tortoise surveys are currently being conducted at the Combat Center as directed under the Integrated Natural Resources Management Plan and the Basewide Biological Opinion; however, the results of these surveys will not be available until 2012 and thus could not be included in the EIS. Surveys conducted for the study areas (Karl 2010) used both the accepted USFWS protocol and the TRED model survey. Calculations of abundance and density for were performed for both methods for the preferred alternative (Alternative 6) as part of the Section 7 consultation process with USFWS. The values generated by these two methods were similar, with the TRED model survey providing a smaller confidence interval and greater precision than the USFWS. Therefore, the TRED model survey was presented in the EIS as the most accurate and detailed model. The conclusion drawn in your comment regarding the comparison of tortoise densities on the Combat Center and the west study area (Section D, paragraph 7) is inaccurate.

The Biological Resource appendix is likewise deficient. It does not describe existing biological conditions on the affected site(s) or specifically identify where they exist. Nor does it explain how and to what extent biological resources will be affected by the project. Rather, the Biological Resource appendix simply describes the types of disturbances that currently occur on the Combat Center and in the proposed expansion areas, and then draws some conclusions regarding the project's potential impacts on the federally-listed desert tortoise. No other species is discussed. So this Biological Resource appendix cannot serve as the technical basis for the impact analysis set forth in the biology section of EIS. Even if the desert tortoise discussion was adequate (which it is not, see below), the absence of any assessment of project impacts on desert birds, mammals, other reptiles, sensitive plants, and wildlife movement, renders the document incomplete and defective. The EIS also refers to the 2007 Basewide Biological Opinion prepared by the USFWS (the 2007 BO), and contends that the conservation measures from this BO will effectively mitigate Project impacts on desert tortoise. As with other critical documents, however, the 2007 BO is not included in the EIS as an appendix, so there is no way for the public to review its contents or test the assertions made in the EIS.

GEN-1

The Cultural Resource appendix is also of little value. It is merely a compendium of the various known artifacts and historical sites that exist in the areas being proposed for annexation to the base. Nowhere does the appendix actually evaluate the proposed Project's potential to damage or destroy these artifacts and/or historical sites. Therefore, it, too, is wholly inadequate and may not serve as the technical basis for the EIS's analysis of Project impacts on cultural resources.

Finally, as indicated above, the EIS provides no data whatsoever as to the cost of the proposed Project, including costs associated with the MEB training operations to be conducted on the newly-acquired land.

NEPA-4

**B. The EIS Fails to Analyze USMC Potential to Deplete Aquifers in Western Study Area**

On page 3.13-19, the EIS makes a startling disclosure: The Combat Center is running out of water and has no current means to augment its supply.<sup>8</sup> Specifically, the Combat Center obtains all of its water – potable and non-potable – through groundwater pumping. However, the aquifer that provides most of this water, Surprise Spring, is becoming dangerously depleted. In

NEPA-5

<sup>8</sup> The EIS attempts to downplay this problem by claiming that conservation efforts at the Combat Center have reduced water consumption by 26% over the last decade. However, despite these reductions in consumption, the Combat Center still overdrafts the Surprise Spring aquifer by 2,900 acre feet (AF) per year, and overdrafts the Twenty-nine Palms Valley aquifer by 1,040 AF per year. (Table 3.13-5).

Response to Comment N-18713 (Page 7 of 20):

**BIO-2 Continued:**

Information from one survey cannot be used to identify a trend – the USFWS requires more than 10 years of surveys across their monitoring strata to even begin to identify population trends (USFWS 2010). Further, mountainous areas not suitable for desert tortoises compose a much larger portion of the Combat Center than in the west study area, thus leading to large areas of low desert tortoise density on the Combat Center. Taking into account the different density categories used in the Combat Center desert tortoise density surveys as compared to the west study area surveys, as well as the topography, the densities observed on the Combat Center after decades of military training are roughly comparable to those observed in the west study area – large areas of low densities with pockets of moderate density where habitat is most suitable and disturbance is lower.

Section D, Paragraph 8: The estimates of take presented in the Draft EIS include a large range only when including potential impacts on the existing Combat Center. Estimates of take in the lands to be acquired have much less spread due to survey data with a greater number of density “categories”. As noted in your comment, the Marine Corps consulted with the USFWS under Section 7 of the Endangered Species Act to formally identify an estimate of “take” under the preferred alternative, as well as appropriate conservation measures to minimize or offset potential impacts to tortoises and tortoise habitat. The outcome of this consultation is detailed in the Biological Opinion (see Appendix O of the FEIS). The Draft EIS does not state that the project would have “no significant effects” on biological resources, as your comment suggests.

Comment ID: N-18713 (Page 8 of 20)

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 24, 2011  
Page 8

fact, the Marine's have so overdrafted the aquifer that groundwater levels have dropped by as much as 190 feet. (EIS, 3.13-19) Worse, Surprise Spring is an ancient aquifer that does not recharge readily, which means that it "is not a renewable resource." (EIS, 3.13-19) In short, the Combat Center's primary source of water is rapidly disappearing and the Marines desperately need to find another one.

The Western Study Area ("WSA"), by contrast, overlies a different groundwater subbasin – one with a substantial supply of water. (EIS, 3.13-20; Table 3.13-5) It would appear, then, that the Marine Corps, apart from wanting the WSA for military training operations, may also be looking to acquire access to the groundwater resources beneath it. Although the groundwater from the Johnson Valley and Means Valley aquifers is high in Total Dissolved Solids (TDS), it can either be treated for potable uses, or "blended" with higher-quality water for a variety of potable and non-potable uses. The EIS never acknowledges that the Marines plan to use WSA groundwater to supplement existing supplies. Indeed, the EIS does not even discuss this very plausible scenario, and for this reason alone is defective. Nevertheless, the EIS does mention that the Marines are "evaluating plans to 'blend' groundwater from the Surprise Spring subbasin with those [sic] from another aquifer(s)." (EIS, 3.13-19) These blending scenarios were apparently modeled by the USGS in 2008. (*Ibid.*) However, the details of this modeling effort are not provided.

Nevertheless, the water resource data set forth in the EIS, while cryptic, suggest strongly that the Marine Corps, once it secures possession of the WSA, will begin pumping groundwater from the Johnson Valley and Means Valley aquifers to blend with water derived from Surprise Spring. The EIS, however, fails to assess whether and to what extent this effort to temporarily address the Combat Center's water shortage will deplete the aquifers in Johnson Valley and Means Valley. In fact, the EIS does not even disclose how much water the proposed Project will require. As a result, the EIS is deficient as a matter of law.

In short, the Combat Center's undisclosed desire to acquire the water beneath the WSA reminds one of the following dialogue from the movie *Chinatown*:

Noah Cross: "You see Mr. Gittes. Either you bring the water to L.A. – or your bring L.A. to the water."

Jake Gittes: "How do you do that?"

<sup>9</sup> The Combat Center also draws groundwater from the Twentynine Palms Valley subbasin, which is also depleted and functions at a recharge deficit. (Table 3.13-5)

Response to Comment N-18713 (Page 8 of 20):

BIO-2 Continued:

In several locations (e.g., Table ES-2, page 4.10-11, Table 4.10-14), it is clearly stated that impacts to the desert tortoise would be significant. Finally, a suite of mitigation measures being developed with USFWS, such as a translocation plan, designation of new Special Use Areas, etc. are described in more detail in the Final EIS and would be expected to reduce the take of tortoises, though not to a level of less than significant.

REC-1:

Section 4.2.1, Approach to Analysis for Recreation, acknowledges incomplete or unavailable information, therefore, in accordance with CEQ regulations the Marine Corps conducted interviews with BLM and other key recreation organizations and stakeholders to obtain reliable data and assumptions on annual visitor-days of use. The Marine Corps worked closely with BLM to develop reasonable assumptions for estimated loss of visitor-days of use from Johnson Valley as described under each action alternative. These assumptions were approved by BLM staff knowledgeable about and responsible for recreation management of the Johnson Valley OHV Area.

As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a Displaced OHV Recreation Study (DORS) to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS.

C. The EIS Noise Analysis is Inadequate

As indicated above, the EIS does not actually provide a Noise Study as a technical appendix. Instead, Appendix H is simply a primer on noise modeling and does not provide any data on the existing sound environment or the Project’s impact on that environment. Likewise, the EIS itself fails to describe ambient sound levels in and adjacent to the three study areas – i.e., the WSA, the Eastern Study Area (“ESA”), or the Southern Study Area (“SSA”). Without existing sound level data, there is no way to measure the extent to which the Project will alter the current sound environment. Nor is there any way to determine whether the Project’s net impact on noise is significant.

Even the baseline used for “existing” noise conditions at the *Combat Center* defies logic. Rather than measure *current* aircraft noise (i.e., from 2008 or 2009), the EIS uses a 2003 noise study – WR 02-13 – that is based on airfield operations that took place in 2001. Not only is such information 10 years old, it fails to account for the significant increase in flight operations that has occurred since the “War on Terror” began. It appears that the Marines, in an effort to trim costs and/or save time, simply pulled an old noise study off the shelf rather than perform a new one. NEPA does not permit this kind of sloppy work, especially since there is nothing preventing the Marines from conducting a fully updated noise study at the *Combat Center*. There is also no explanation for altering the noise model to reflect “annual average daily operations” instead of “annual average busy day operations.” (See, EIS, 3.9-4) This change results in an underreporting of potential noise effects.

The EIS noise analysis also uses the wrong metric for determining the significance of project-related noise events. For example, the MEB training contemplated by the proposed Project entails low-altitude strafing and bombing runs by fixed and non-fixed wing aircraft.<sup>10</sup> Flight operations such as these create high-intensity noise of very short duration, resulting in substantial annoyance to any person living or working nearby. Rather than assess this impact using the Lmax noise metric, which is specifically designed to measure impulsive sound, the EIS uses the Community Noise Equivalent Level (CNEL) metric, which averages noise levels over a certain period of time, usually 24 hours. Obviously, this metric will not fully capture the noise

<sup>10</sup> According to the EIS, combat training flights will be conducted at altitudes as low as 500 feet above ground level (AGL). (EIS, 3.7-9)

NOI-1

Response to Comment N-18713 (Page 9 of 20):

REC-1 Continued:

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

AQ-1:

Comment noted. Table 5-3 in the FEIS has been revised to include the 2009 GHG emissions for the *Combat Center*. The FEIS GHGs cumulative analysis also compares proposed GHGs to these emissions. The Final EIS compared projected GHG emissions to *Combat Center* baseline conditions and the U.S. GHG inventory. However, the spreadsheet used to calculate GHGs for proposed tactical vehicles/support equipment in the DEIS had some inaccurate formulas that produced erroneously high GHG estimates (as shown in Appendix G Tables G-8 and G-36). Hence, even though the FEIS analysis includes additional sources of proposed GHGs, the total GHG estimations for the project alternatives in the FEIS are lower than those presented in the DEIS.

Climate change is a global effect or impact. As stated on DEIS page 5-33, currently, there are no formally adopted or published NEPA thresholds of significance for GHG emissions. The Marine Corps

Comment ID: N-18713 (Page 10 of 20)

GATZKE DILLON & BALLANCE LLP  
 Naval Facilities Engineering Command Southwest  
 ATTN: 29 Palms EIS Project Manager  
 May 24, 2011  
 Page 10

(and annoyance) that results from very intense but sporadic noise events caused by military jet flyovers. To make matters worse, it does not appear that the EIS measured aircraft noise while in combat mode – i.e., flying fast and at low altitude.<sup>11</sup> Instead, the EIS aircraft noise model was based on two aerial *refueling* tracks – one at 19,000 feet AGL and one at 22,000 AGL. (EIS, 3.9-6)<sup>12</sup>. Again, this kind of modeling decision results in an underreporting of aircraft noise impacts.

We would point out that using the CNEL metric *does* make sense when determining noise impacts near the Combat Center airports, where the number of flight operations is high enough to warrant time-averaging. It just doesn't make sense when determining noise impacts in those areas affected by combat training flights.

In addition, the EIS fails to analyze adequately the effect of project-related noise on wildlife. The EIS's discussion on this topic is remarkably brief and general, even though military operations such as artillery firing, ordnance explosions, combat flights, and tank and troop movements generate the kind of high-intensity noise that frightens wildlife and may disrupt their normal behaviors. For example, according to Figure 3.1-8 of the EIS, the Noise Study included only two (2) "points of interest" located within the WSA. This demonstrates that the Noise Study was focused exclusively on impacts to humans, ignoring entirely the Project's potentially devastating noise effects on animals in the desert.<sup>13</sup> Birds, reptiles, ungulates (and other mammals) all are highly-sensitive to sound changes. Given the number of wildlife species in the proposed acquisitions areas (especially the WSA) – including the federally-threatened desert tortoise – the EIS should provide a more thorough and searching analysis of the Project's potential to cause noise-related impacts on biological resources.

**D. The EIS's Biological Impacts Analysis is Inadequate**

Available data from the BLM and other sources show that the WSA is home to a wide array of sensitive plant and wildlife species, including the desert tortoises. Yet the EIS does not indicate where these species are located within the WSA; nor does it overlay the proposed military training exercises onto species maps to determine where potential conflicts might arise. Without such overlays, it is impossible for the public (and the Marine Corps) to know with any kind of precision whether the proposed MEB training activities will kill, injure, disrupt, or displace sensitive plants and animals. This is not a speculative concern. The Marine Corps,

<sup>11</sup> The EIS admits that, with the Project, "[o]verflights would increase within existing and proposed airspace and could operate at lower altitudes than currently allowed in specified areas. (EIS, 4.1-5). However, the EIS does not measure the noise impacts of such overflights.

<sup>12</sup> Unlike refueling operations, bombing and strafing runs occur at very low altitudes.

<sup>13</sup> See, EIS at 3.9-1 [Describing noise metrics as measuring sound in relation to *human* sensitivities.]

BIO-2

Response to Comment N-18713 (Page 10 of 20):

**AQ-1 Continued:**

chooses to use the U.S. GHG inventory as an indicator of the baseline for global GHG emissions on which to compare proposed GHG emissions. This comparison is deemed adequate to determine the significance of proposed GHG emissions for NEPA purposes. The fact that the Marine Corps utilized one of the approved methods for demonstrating conformity that resulted in a commitment from the MDAQMD to account for criteria emissions in their next attainment planning budget bears no legal nexus to what standards should be used to determine the significance of project GHG emissions.

**SOC-1:**

The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**WAT-1:**

Section 3.13.1 of the EIS states that all naturally occurring, surface water features are ephemeral and contain water only during and after infrequent rain events. The EIS also states that no information is

Comment ID: N-18713 (Page 11 of 20)

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 24, 2011  
Page 11

during the planned MEB exercises, intends to activate 15,000 to 20,000 troops, backed by tanks and other vehicles, and engage in live-fire combat training. This will involve hundreds of thousands of rounds of small arms ammunition, artillery rounds, tank rounds, and missiles delivered from aircraft. The exercise areas will effectively be transformed into highly-violent war zones. In such a situation, there is no question that existing wildlife will be killed or injured or, at the very least, displaced. However, the EIS provides very little information on this subject.

Perhaps the Marine Corps is assuming the Section 7 Biological Opinion will cover these issues. If so, the assumption is unfounded. First, the Biological Opinion, when completed, will only address potential impacts on federally-listed species – i.e., the desert tortoise. No other species will be covered. Second, the Biological Opinion is required under the Endangered Species Act; it does not satisfy the Marine Corps' separate and independent obligation under NEPA to disclose impacts to biological resources.

Part of the problem is that the Marines, in preparing the EIS, conducted very few wildlife studies of the 180,000-acre WSA. According to Table 3.10-1 of the EIS, the Marines performed the following biological resource surveys in the WSA: (1) one survey for special status plants in 2008, (2) one survey for reptiles and burrowing owl in 2008, and (3) one survey for Mojave ground squirrel in 2008. No bird surveys (other than for burrowing owl) were conducted. No mammal surveys (other than for Mojave ground squirrel) were conducted. There was no attempt to identify and locate bat roosts. Insects were not surveyed at all. As a result, the EIS does not provide a complete or reliable inventory of the various plant and wildlife species that exist in the WSA, even though the BLM possesses much of this information.<sup>14</sup>

The EIS also fails to discuss the potential for lead and other chemicals from expended ordnance to enter the water supply used by wildlife or to accumulate in the plant materials eaten by wildlife.

Another shortcoming of the EIS biological impacts analysis is that it tends to focus myopically on the desert tortoise and pays scant attention to the other sensitive species in the

<sup>14</sup> Although Figure 3.10-5 of the EIS purports to depict the vegetation communities of the West, East, and South studies areas, the vegetative mapping for the WSA so coarse as to be worthless. The EIS itself admits that "[i]n]like the Combat Center and the other two acquisition study areas, plant communities have not been mapped to a high level of detail within the entirety of the west study area." (EIS, 3.10-34) In fact, only 57% of the WSA has been subjected to high-quality mapping. With respect to where in the WSA certain wildlife species reside, Table 3.10-7 provides only the most general information. For example, when discussing the desert tortoise, the table indicates that the species "[o]ccurs in suitable habitat throughout the west study area." As to the Mojave fringe-toad lizard, the table states that this species "[o]ccurs in the southern portion of the west study area." For purposes of determining whether the military activities contemplated under the proposed Project will affect these species and their habitat, such vague statements have almost no value.

BIO-2

Response to Comment N-18713 (Page 11 of 20):

WAT-1 Continued:

available on existing water quality conditions associated with intermittent wet areas (washes and playas) at the Combat Center. It is likely that water quality for intermittent flows is influenced by the amounts of suspended sediment and/or dissolved salts, which are expected to vary for different substrate types, such as bedrock, alluvial fans, and playa surfaces.

The impacts to ephemeral streams or intermittent washes are discussed on page 4.13-5 in section 4.13.2.1. The EIS mentions that exercises avoid playas to the extent possible. Specifically, "Combat Center Order 5090.1D (MAGTF Training Command 2006) provides general guidance for avoiding impacts to natural resources, as well as specific guidance for avoiding disturbance of playas or other sensitive areas. The existing INRMP and compliance under Combat Center Order 5090.1D applies to existing and continued use in the Combat Center and would be expanded to cover the acquisition areas."

AQ-2:

The purpose of the consideration of the Combat Center year 2002 emissions in the DEIS is to accurately identify the future baseline conditions upon initiation of the proposed action in 2014 or 2015. The level of 2002 emissions at the Combat Center, plus emissions from the proposed MEB Building Block training exercises, would not be expected to exceed the Combat Center year 2009 emissions. This determination enabled the air quality analysis to focus on impacts from the MEB Exercises, and to compare these impacts to the most recent Combat Center emissions inventory (2009).

Comment ID: N-18713 (Page 12 of 20)

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 24, 2011  
Page 12

affected areas. This is not to say that impacts on the tortoise are unimportant. On the contrary, they are critically important, and this Project has the potential to “take” scores of tortoises annually, possibly upsetting the fragile state of the species’ recovery. However, the tortoise is *not* an umbrella species for all or even most of the other wildlife in the study areas. Therefore, the EIS must give a full accounting of potential impacts on all sensitive birds, mammals (including bats), reptiles, amphibians, and insects that use or reside in these parts of the Mojave Desert.

With respect to Project impacts on the desert tortoise, the EIS has major baseline data problems. In recent years, tortoise experts and statisticians have realized that survey methods used in the 1980s and 1990s, including the manner in which transects were run, produced unreliable results. In fact, data from surveys conducted prior to 2005 are largely unusable; and they certainly cannot be mixed with or compared to data from surveys conducted from 2005 onward. However, this is exactly the error that the EIS makes in its tortoise analysis. For tortoise densities on the *Combat Center*, the EIS relies on strip transect surveys conducted in 1997 and 1999. (EIS, 3.10-24) For tortoise densities in the *WSA*, the EIS relies on tortoise sign surveys conducted in 2009. (EIS, 3.10-41) The EIS then tries to compare these two data sets, which any tortoise expert knows is a dubious exercise.

About the only meaningful conclusion to be drawn from the tortoise data derived from surveys of the *Combat Center* is that base operations have resulted in significant reductions in tortoise density, at least compared to similar habitat areas adjacent to the base – e.g., those in *WSA*. In light of this, the proposed Project, if implemented in the *WSA*, may cause similar tortoise declines in the expansion area. The EIS does not really tackle this issue. Instead, it suggests that there will be no net change in threats to the tortoise, since the Project would displace existing OHV activities. However, this is an oversimplified and inaccurate analysis. There is no data indicating that OHV use in the *WSA* (Johnson Valley) has resulted in perceptible declines in tortoise populations. In fact, tortoise densities in Johnson Valley have been and remain significantly higher than tortoise densities on the *Combat Center* (allowing, of course, for discrepancies in the survey methods and data).

Finally, on the matter of the Project’s anticipated “take” of tortoises, the EIS states that under Alternative 6 (Preferred Alternative), the Project, over its 50-year life, would result in the take of between 154 and 714 tortoises at the base. (Table 4.10-10)<sup>15</sup> This is quite a large range. Although the Biological Opinion for this Project has not yet been released, it would be unusual for the USFWS to issue an Incidental Take Statement (“ITS”) where the “take” range is so wide. The Marines must conduct a more thorough study of potential “take” to predict with greater

<sup>15</sup> These figures include “take” of tortoises in the *Combat Center* as well as the proposed acquisition areas. (See Table 4.10-10)

BIO-2

Response to Comment N-18713 (Page 12 of 20):

AQ-2 Continued:

Therefore, year 2002 is not some arbitrary point in the past, as stated in the comment. Text has been added to Section 4.8 of the EIS to clarify assumptions used in the analysis.

AQ-3:

The method utilized by the Marine Corps to demonstrate conformity in this case is specifically prescribed by MDAQMD Rule 2002(H)(1)(e). The SIP revision method for demonstrating conformity was not pre-decisional because, at the time that the conformity analysis was submitted to the MDAQMD, no irreversible or irretrievable commitments of resources had been dedicated to any of the project alternatives. Moreover, the similarity of the air impacts associated with each alternative and the flexibility of the consultation process ensures that no particular institutional bias supported the preferred alternative or any other alternative. In short, both the Marine Corps and the State of California were free to disapprove the preferred alternative and to consider air impacts associated with other alternatives. That flexibility remains to this day.

The following discussion illustrates the 9th Circuit’s approach to timing of NEPA analysis: “As provided in the regulations promulgated to implement NEPA, ‘agencies shall integrate the NEPA process with other planning *at the earliest possible time* to insure that planning and decisions reflect environmental values, to avoid delays later in the process, and to head off potential conflicts.’ 40 C.F.R. § 1501.2 (emphasis added); *see also id.* § 1502.5 (‘An agency shall commence preparation of an [EIS] as close as possible to the time the agency is developing or is presented with a proposal....’).

Comment ID: N-18713 (Page 13 of 20)

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 24, 2011  
Page 13

precision that actual number of tortoise that will be lost as a result of the Project. Without such a thorough study, the EIS is inadequate. Further, without a more exact range of potential take, the USFWS will not be able to issue a Biological Opinion and ITS that comply with Section 7 of the ESA. We would also point out that any project with the potential to “take” more than 14 federally-listed desert tortoises per year cannot be described as having “no significant effects” on biological resources.<sup>16</sup> In addition, nothing in the EIS indicates that the proposed mitigation measures, including those to be developed and included in the not-yet-released Biological Opinion, will reduce the number of tortoises “taken” as a result of the Project.

**E. The EIS Provides an Inadequate Analysis of Project Impacts on Recreation**

The EIS concludes correctly that the proposed Project, if implemented in the WSA, will have a significant effect on outdoor recreation. However, on the issue of recreation impacts, the EIS makes certain erroneous assumptions that result in a skewed assessment of project alternatives. Specifically, the EIS assumes that the number of “dispersed use” visitor days lost under Alternative 6 (the “Preferred Project”) will be the same as the number lost under Alternatives 4 and 5. (EIS, Table 4.2-4) This is almost certainly incorrect, given that under Alternative 6 only 44% of the Johnson Valley OHV area would be available for part-time public use (through the proposed Restricted Public Access program), whereas under Alternatives 4 and 5 the entire Johnson Valley OHV area (100%) would be available for part-time public use. The difference is not inconsequential, as it amounts to more than 106,000 acres of land. Given that “dispersed use” means exactly that – *dispersed use* – it is irrational to assume that the 82,802 acres available for public use under Alternative 6 will accommodate the same number of visitors as the 189,470 acres available for public use under Alternatives 4 and 5. The more reasonable assumption is that a significant percentage of potential visitors will bypass Johnson Valley rather than be crowded into the small area provided under the RPAA for Alternative 6.

It is critical that this analytical error be corrected, because it infects the EIS’s assessment of the project’s impacts on (1) recreational use displacement, and (2) socio-economic conditions. This is easily explained. If fewer OHV users visit Johnson Valley under Alternative 6 than under Alternative 4 or 5, those users will likely travel to some other OHV venue, taking their dollars with them. The EIS, therefore, must evaluate this “displacement” scenario for impacts on natural resources at the “substitute” venue(s) and for the economic loss suffered by local businesses near Johnson Valley. Note also that the EIS’s discussion of recreational displacement impacts generally is very poor, even though data included in the EIS indicate that the proposed Project will contribute to the 30-year trend of reducing the space available for OHV-related recreation. (See Figure 3.2-6) During that period, acreage available for OHV recreation

<sup>16</sup> The Alternative 6 take figures set forth in Table 4.10-10 amortize to an estimated take of between 3.08 and 14.28 tortoises *per year*.

BIO-2

REC-1

Response to Comment N-18713 (Page 13 of 20):

AQ-3 Continued:

Furthermore, (the Ninth Circuit) has interpreted these regulations as requiring agencies to prepare NEPA documents, such as an EA or an EIS, ‘before any irreversible and irretrievable commitment of resources.’ *Conner v. Burford*, 848 F.2d 1441, 1446 (9th Cir. 1988); *see also EDF v. Andrus*, 596 F.2d 848, 852 (9th Cir. 1979).” *Metcalf v. Daley*, 214 F.3d 1135, 1143 (9th Cir. 2001).

In this case, only the emissions associated with the approved alternative were submitted to the air quality experts for their review and approval. However, any of the six alternatives could be subjected to the same or similar analysis if it were chosen, even still to this day. Only one alternative was submitted in order to maintain administrative efficiency and avoid unnecessary work requests to the State agencies. No irreversible or irretrievable commitments of resources were (or are) dedicated to the preferred alternative when the conformity analyses were submitted to the State and Federal air quality experts.

Neither MDAQMD Rule 2002 nor Part 93 of Title 40 of the CFR requires the EPA to formally approve the conformity analysis for this project. The Marine Corps provided EPA Region IX with its conformity analysis along with all other required recipients discussed in Rule 2002(E)&(F). This included publishing notice of the availability of the conformity analysis in locally published newspapers.

decreased by 48%; the proposed Project would effectively close the Johnson Valley OHV area, removing another 180,000 acres from public recreational use. The loss of so much recreational land simply shunts more people and more vehicles onto the few open areas that remain, placing added stress on their human and environmental resources, and effectively ruining the “wilderness experience” of those seeking an escape from urban life. These secondary impacts of the Project are real and the EIS must analyze them in detail. Currently, however, it fails to do so.

The EIS also provides little assurance that the Marine Corps will not arbitrarily close the RPAA area contemplated under Alternatives 2, 4, 5, and 6. Nothing in the EIS or the Project generally indicates that this would not or could not happen. On the contrary, the EIS does not even describe the conditions under which such a closure would be allowed. Instead, the decision to close the RPAA appears to rest solely with the Marine Corps, with no right to appeal. In light of this fact, the EIS should (but does not) disclose that the Project’s recreation impacts under Alternatives 2, 4, 5, and 6 may ultimately be identical to those of Alternative 1.

**F. The EIS Provides an Inadequate Analysis of Project-Related Greenhouse Gas Emissions**

The EIS includes a greenhouse gas (GHG) discussion (as part of the Cumulative Impacts analysis), but does not present a meaningful assessment of the project’s GHG impacts. First, the EIS fails to provide a GHG inventory for the Combat Center, so there is no means to determine the base’s existing carbon footprint or to calculate how much that footprint will grow once the Project is implemented. This kind of “project-to-ground” assessment is central to every NEPA analysis. Second, the EIS, for purposes of determining impact significance, compares the Project’s GHG emissions against the total GHG inventory of the entire United States. Not surprisingly, the Project’s contribution to the national total is very small, amounting to .00014%. Based on this number, the EIS concludes that the Project will have an insignificant impact on global climate change. (EIS, 5-33) Such an analysis is meaningless and unhelpful. No conceivable project – no matter how much GHG it might generate – will contribute more than a fraction of a percent to the national inventory of GHG emissions. Using the EIS’s logic, then, no project would ever make a significant contribution to global climate change. For this reason, the significance criterion used in the EIS is invalid.

Regardless of whether the EPA or any other federal agency has established significance thresholds for GHG emissions, the Marine Corps can and must develop significance criteria that are meaningful for this EIS. Ironically, the proposed project is located in the one state in the Union that has developed standards for evaluating GHG emissions on a project-by-project basis. The Marines should take advantage of this and use California’s standards for determining the significance of the Project’s GHG emissions. In fact, given that the Marines have asked for – and received – permission from the Mojave Air Pollution Control District to be included in the

REC-1

AQ-1

Response to Comment N-18713 (Page 14 of 20):

AQ-3 Continued:

Section I, Last Paragraph: Although there have been informal suggestions that particulate matter (PM) could play a role in Upper Respiratory Tract Disease, there is no published literature that demonstrates a linkage. Therefore, inclusion of such a statement would be speculative. However, please note that text in the Final EIS has been revised to mention the potential for impacts to tortoises and other animals due to reduced plant productivity associated with dust deposition on leaf surfaces (see Wildlife, Desert Tortoise impact discussions). Note that the author of the studies on productivity and dust deposition noted that the summer rainstorms typical of the west Mojave ameliorate much of the dust impact (Sharifi 1999).

AQ-4:

Compliance with ambient air quality standards is determined by estimating the impacts of proposed emissions to “public lands” and not within the “facility” that contains these emissions. In the case of the DEIS PM<sub>10</sub> dispersion modeling analyses, the “facility” is defined as any location within the Combat Center boundaries proposed by each project alternative. Any location outside of these boundaries is considered to be “public lands”. The focus of the dispersion modeling analysis is to identify the maximum project PM<sub>10</sub> impact on public lands, which would occur immediately outside of these boundaries. This is the case, as due to the nature of atmospheric dispersion, “PM<sub>10</sub> disperses quickly over distance”, as acknowledged by the commenter. Therefore, the DEIS and project PM<sub>10</sub> conformity determination did not under-report modeled PM<sub>10</sub> impacts.

Page 15

District's portion of the California State Implementation Plan, GGH emissions from the Combat Center and the proposed Project should be assessed using California's standards.

**G. The EIS Provides a Skewed Assessment of the Project's Adverse Impacts on the Local Economy**

The EIS contends that the Project will add 70 personnel to the existing population at the Combat Center, and that these 70 individuals will generate, collectively, \$4.5 million in county-wide spending, thus off-setting the economic losses caused by shutting down the Johnson Valley OHV area. This claim is hard to square with the fact that, according to the EIS, Johnson Valley OHV area experiences approximately 300,000 visitor days per year. (See, EIS, Table 3.2-9)<sup>17</sup> For the EIS's claim to be valid, each visitor would have to spend less than \$15 per day. This contradicts Table 3.3-8 of the EIS, which indicates that the average person spends more than \$31.00 per visitor use day.

The \$4.5 million attributed to new base employee spending, while not inconsequential, cannot compete with the \$338.8 million (in 2003 dollars) generated by recreational visitation, including OHV-related recreation, in the Mojave Desert Region. (See EIS Table 3.3-7, citing Economic Benefits study conducted by California Department of Parks and Recreation.)

More important, however, is the fact that the Project will have a disproportionate and devastating economic impact on those communities closest to, and most dependent on, the Johnson Valley OHV area – e.g., Lucerne Valley. (See, Table 4.3-13)<sup>18</sup> The EIS speculates that these businesses will be able to make up the difference by serving non-OHV visitors on their way to Big Bear Lake. (EIS, 4.3-9) However, there is no evidence to support this contention. The EIS also argues that because Lucerne Valley has historically experienced a 20% turnover rate in its businesses, the community is accustomed to economic fluctuations and will adjust to the new reality occasioned by the project. (EIS, 4.3-9) Based on this rather flip analysis, the EIS concludes that the Project will not have a significant impact on Lucerne Valley or other local economies. Such a conclusion reflects both insensitivity to and ignorance of the economic

<sup>17</sup> We believe the 300,000 annual visitor use day figure used is low by a factor of at least two. The figure is comes from the BLM, which historically underreports visitor numbers. Further, as pointed out in the EIS, Johnson Valley has a number of entry and exit points, most of which are not monitored by BLM. As a result, many visitors are never counted and the durations of their visits are not determined.

<sup>18</sup> According to Table 4.3-13, the Project, under Alternative 6 (the Preferred Project), would reduce recreational and film spending in the local community by 24.6% and local tax revenues by 24.7%. Given the small profit margins of most small businesses, this kind of drop in revenues would be devastating.

AQ-1

SOC-1

Response to Comment N-18713 (Page 15 of 20):

**NEPA-6:**

The proposed action and alternatives, including the No-Action Alternative are described in Chapter 2 of the EIS. Although the No-Action Alternative does not meet the purpose of and need for the proposed action, it has been carried forward for analysis in the EIS as described in Chapter 4 under each resource area. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**NEPA-7:**

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**NEPA-8:**

In accordance with NEPA, the EIS discloses and analyzes the environmental consequences of the proposed action and alternatives under each resource area, as described in Chapter 4 of the EIS.

**AQ-5:**

Comment noted. The FEIS includes definitions of sensitive receptors and qualitatively discusses how proposed air emissions would impact these receptors.

 Page 16

realities facing the business owners (and employees) of Lucerne Valley and the other towns that rely on OHV-related revenues.

SOC-1

**H. The EIS Provides an Inadequate Analysis of the Project's Impacts on Water Quality**

As shown in Figure 3.13-1 of the EIS, the WSA is laced with washes, rivulets, and dry lake beds that receive and/or convey water during rain events. In addition, much of the WSA overlies groundwater aquifers. These water sources are critical to the vegetation and wildlife in the WSA. The EIS, however, does not describe the existing water quality conditions at these water sources. Nor does it provide anything more than a superficial analysis of the proposed Project's potential to contaminate these water sources with munitions constituents (MC) and hydrocarbons from fuel discharges.

WAT-1

**I. The EIS Provides an Inadequate Analysis of the Project's Impacts on Air Quality**

**1. Baseline Emissions.**

The method used to perform the Air Quality impacts analysis is highly-suspect. For example, when establishing baseline pollutant levels (including those for PM<sub>10</sub>), the EIS uses emissions levels from the Combat Center as measured in 2002, even though emissions data from 2009 are available. Of course, the 2009 emissions are substantially higher. The EIS discounts these, however, claiming that "the high levels of existing training exercises at the Combat Center would revert back to pre-war levels (before 2003)." (EIS, 4.8-2) There is no evidence offered in support of this assumption; and for purposes of NEPA, baseline conditions are those which exist at the time the EIS is being prepared, not those that existed at some arbitrary point in the past.

AQ-2

**2. Ozone.**

The EIS acknowledges that the proposed Project will generate ozone (O<sub>3</sub>) in quantities that exceed National Ambient Air Quality Standards (NAAQS), thereby requiring that the Marines subject the Project to a "conformity analysis." (EIS, 4.8-6) In this case, however, the Marines did not perform a conformity analysis at all. Instead, they requested that the Mojave Desert Air Quality Management District ("MDAQMD") and the California Air Resources Board ("CARB") "include these emissions from Alternative 6 into the next O<sub>3</sub> SIP revision for the MDAB (MDAQMD 2010a and ARB 2011)." (*Ibid.*)<sup>19</sup> According to the EIS, this will ensure

AQ-3

<sup>19</sup> See also EIS, 4.8-18.

Comment ID: N-18713 (Page 17 of 20)

Response to Comment N-18713 (Page 17 of 20):

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 24, 2011  
Page 17

that Alternative 6 conforms to the SIP, thereby eliminating the “significance” of the Project’s ozone impacts.

There are two problems with this analysis. First, it was “pre-decisional” and therefore unlawful for the Marines to request that the MDAQMD and/or CARB include the ozone emissions from Alternative 6 (or any alternative) in the revised SIP. By making such a request, the Marines have signaled that they intend to adopt Alternative 6, regardless of the NEPA process. In other words, the current NEPA process is a sham and a charade. The die is already cast and the Marines will not be diverted from Alternative 6, no matter what the environmental analysis might show.

Second, any SIP revision – including the one requested by the Marines for this Project – must be approved by the U.S. EPA; and there is no evidence that this has occurred. Note, too, that EPA approval, especially with respect to local changes to SIPs, is never guaranteed. As the Imperial County Air Quality District recently discovered, EPA is more than willing to disapprove any portion of a SIP revision with which it disagrees. In light of these facts, it is incorrect to assume that the Project – i.e., Alternative 6 – conforms to the SIP for ozone.

3. Particulate Matter.

The EIS also acknowledges that the Project will generate more PM<sub>10</sub> than the NAAQSs allow. (EIS, 4.8-6; 4.8-18) To address this impact, the EIS purports to conduct a conformity analysis pursuant to MDAQMD Rule 2202(H)(1)(d)(i). (EIS, 4.8-18) In this analysis, the EIS concludes that, under Project conditions, PM<sub>10</sub> concentrations at the boundary separating the WSA and the Combat Center would be 97 µg/m<sup>3</sup>. When these emissions are added to background concentrations of 52 µg/m<sup>3</sup>, the cumulative total concentration of PM<sub>10</sub> is 149 µg/m<sup>3</sup>, just under the 24-hour PM<sub>10</sub> NAAQS of 150 µg/m<sup>3</sup>.

What makes this conclusion dubious, however, is that the Project’s PM<sub>10</sub> emissions, while measured at the WSA boundary, do not actually occur at that location or reach their highest concentration there. According to the EIS, emissions will be highest during the so-called “Final Exercise,” which will take place “in close proximity to the boundary of the Combat Center.” (EIS, 4.8-19) The EIS does not define “close proximity,” but it is safe to assume that it means the exercise will not take place on the boundary itself, which is where the air quality model makes its measurements. Because PM<sub>10</sub> disperses quickly over distance, the actual emissions generated by the Final Exercise will not be fully captured if measured or modeled at

AQ-3

AQ-4

Comment ID: N-18713 (Page 18 of 20)

Response to Comment N-18713 (Page 18 of 20):

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 24, 2011  
Page 18

the WSA/Combat Center boundary line.<sup>20</sup> As a result, the PM<sub>10</sub> concentrations described in the EIS are underreported. This, of course, directly affects the conformity determination, because if the Project's PM<sub>10</sub> emissions were measured/modeled at the source – i.e., at the Final Exercise ground location – rather than at the WSA/Combat Center boundary, total PM<sub>10</sub> concentrations would surely exceed the NAAQS threshold of 150 µg/m<sup>3</sup>. Therefore, the EIS conclusion regarding the “insignificance” of the Project's PM<sub>10</sub> is in error.

Then there is the matter of dust and PM<sub>10</sub> impacts on biological resources, especially the desert tortoise. As acknowledged in the EIS, the desert tortoises in the Mojave are susceptible to upper respiratory tract disease (URTD), which can be fatal. The EIS, however, fails to assess the extent to which dust and PM<sub>10</sub> from the Project could make tortoises more vulnerable to URTD or other diseases. In addition, the EIS includes data demonstrating that project-related dust could substantially disrupt photosynthesis of desert plants, thus reducing their productivity. (EIS, 4.10-5) What the EIS fails to evaluate, however, is whether the dust impacts on plant productivity will have secondary adverse effects on available forage and shelter for desert tortoises. This issue must be addressed in the Final EIS.

AQ-4

**J. The EIS Provides an Inadequate Discussion of the No-Action Alternative**

The EIS fails to provide an adequate description of the No-Action Alternative; nor does it explain why the No-Action Alternative would frustrate the basic mission of the Marines. In fact, the EIS is largely dismissive of this alternative, even though NEPA *requires* that it be analyzed and considered. Worse, because the EIS does not provide a clear description of the No-Action Alternative and its effects, it is difficult to compare the other alternatives to it. Finally, the EIS should explore the possibility of improving MEB training within the confines of the No-Action Alternative. For reasons not explained in the document, this concept was not analyzed in the EIS. Note that this analysis must include a cost-benefit component.

NEPA-6

**K. The EIS Fails to Recommend Feasible Mitigation Measures to Offset Significant Impacts; EIS Findings of “Infeasibility” are Not Supported by Sufficient Evidence**

The EIS identifies a multitude of significant impacts that will result from the proposed Project. Only in the rarest of cases, however, does the EIS recommend mitigation measures to reduce or avoid those impacts. In all other instances (and most notably in the discussion of impacts to OHV recreation), the EIS simply concludes, without evidence or analysis, that the

NEPA-7

<sup>20</sup> The EIS itself admits that “PM<sub>10</sub> concentrations quickly decrease with distance from the Combat Center boundary.” (EIS, 4.8-20)

GATZKE DILLON & BALLANCE LLP  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 24, 2011  
Page 19

Marine Corps could not identify feasible mitigation measures and therefore does not intend to implement any. NEPA does not allow federal agencies, even the military, to sidestep their mitigation obligations so easily. For each significant impact of the proposed Project, the Marines must develop mitigation measures or demonstrate – *with evidence* – that such measures cannot be reasonable undertaken. The Draft EIS, as currently written, does not meet this standard.

With respect to the Project significant effects on OHV recreation, the EIS cannot credibly argue that no feasible mitigation measures exist to offset these impacts. On the contrary, mitigation for such impacts is not only feasible, it's easy: The Marines can simply provide money to BLM and/or the OHV Division of the California Department of Parks and Recreation ("DPR") to purchase land near Johnson Valley for use as an OHV recreation area. Not only is the western Mojave Desert dotted with private in-holdings that could be acquired for this purpose, the OHV Division of State Parks has an actual program for purchasing such properties and turning them into OHV parks. So the EIS is incorrect in stating that there is no feasible means to mitigate the Project's impacts on recreation.

**L. The EIS Provides an Inadequate Description of the Project**

The EIS does not quantify the extent to which the proposed Project will increase military training operations when compared to existing conditions. That is, the EIS fails to calculate and disclose the net increase in flight operations, tank miles traveled, troop exercises, ordnance expended, etc. resulting from the proposed Project. For this reason, it is impossible to fully comprehend the Project's potential impacts on the environment.

**M. The EIS Fails to Assess Project Impacts on Sensitive Receptors Within the Combat Center**

The Combat Center at Twenty-nine Palms supports more than just combat troops conducting training exercises. It is a comprehensive military installation with on-base housing, on-base shopping centers and restaurants, and on-base civilians. Nevertheless, the EIS fails to address the Project's potential impacts on (1) Combat Center civilians, and (2) Combat Center troops not engaged in Project-related training exercises. Given that the Project will generate substantial noise and air pollution at the Combat Center, this is a major omission that must be corrected.

**CONCLUSION**

As discussed above, the proposed Project cannot be justified in terms of military necessity or cost. And the EIS prepared in support of the Project simply does not meet the minimum analytical standards established under NEPA and controlling case law. In light of

NEPA-7

NEPA-8

May 22, 2011

NAVFAC Southwest  
ATTN: 29 Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-5190

Dear Project Manager:

Please include this letter as our comment on the draft EIS for the expansion of the US Marine Corps 29 Palms training base. I (George) had duties at military facilities in the California Desert during my service in the US Air Force, although I never was at 29 Palms. My mother grew up near Bakersfield and traveled all over this area.

We compliment the US Marine Corps on the environmental impact statement. We appreciate the Corps' systematic approach to this project. We have no preference among the alternatives. However, we submit the following comments on several points.

**Comment Opportunities**

We notice that ORV fans are protesting that the postal address for comments was not publicized adequately. Where have they been? We received a postcard from the USMC at the start of the comment period giving the NAVFAC San Diego address very clearly. A USMC press release dated February 25, 2011, contained the same address. We think the Marine Corps has been forthright in seeking comments and directing them to the San Diego address. There has been plenty of time to study the EIS and prepare comments during the 90 days provided. We would not favor an extension. It's time to get on with the project in the interest of national defense.

**Alternatives**

We think the six action alternatives are well conceived and are responsive to the comments during the scoping period. Alternative 6 responds to the concerns expressed by ORV buffs by providing shared use of the Johnson Valley area. It allows ORV riders to continue their recreation when that area is not in use for Marine training.

Elsewhere offroaders have grudgingly accepted limitations on their use of federal lands—usually after loudly complaining and sometimes after suing the agency. On most national forests and BLM public lands, ORVs are limited to designated routes, and seasonal closures are used to avoid excessive impacts in winter.

**Add Mitigation Measures**

Alternative 6 needs improvement to guard against damage to the lands and resources by ORVs used illegally. Both BLM and the Forest Service have had serious problems preventing rogue riders from going off designated routes and creating new trails. These

**Response to Comment N-18714 (Page 1 of 2):**

Thank you for your comments.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-18714 (Page 2 of 2)

Response to Comment N-18714 (Page 2 of 2):

rogue trails lack the design features to prevent erosion, and they often run through sensitive wildlife habitat. Mitigation measures should be added to Alternative 6 to deter illegal riding and to rehabilitate lands abused by illegal riding. How will the USMC assure compliance with restrictions on ORV riding? What law enforcement agencies will pursue illegal riders? What agency will perform rehabilitation of damaged lands?

**Unreasonable Alternative**

ORV groups have suggested an *unreasonable* alternative that calls for the US Congress to repeal the protection of all or part of three wilderness areas: Sheephole Valley, Cleghorn Lakes, and Cadiz Dunes. The USMC was correct to exclude that idea from the EIS. Congress has dedicated those wilderness areas to protection of their wild character, wildlife populations and habitat, desert plants, and public use for recreation and inspiration. Their designation was a result of 18 years of consideration that started with the BLM wilderness inventory in 1976 under the mandate of the Federal Land Policy and Management Act and ended with enactment of the California Desert Protection Act of 1994, Public Law 103-433. Repealing the wilderness status of those areas does not deserve further consideration in this base expansion project.

**Reasonable Priorities**

The use of Johnson Valley for ORV recreation is not a high priority in the national interest. ORV travel has been curtailed in many parts of the California Desert to protect wildlife habitat, scenic values, and other public uses. This may be the time to end it at Johnson Valley in the interest of national defense.

We send our thanks once again to all who contributed to the EIS. Please keep us informed of further action on this project.

Sincerely,

George and Frances Alderson

**Comment ID: N-18715**

Comment ID: N-18715  
Date Received: May 27, 2011

Dear EIS Project Manager:

First of all, thank you for considering this letter. I fully support our military, its leaders, and the wonderful men and women who fight to secure our freedoms in this country. I am grateful every day for the freedoms I enjoy because of the sacrifice by those who serve. One of the greatest freedoms I enjoy is off road driving and extreme rock crawling. Right now, our freedom of four-wheeling and our military are in conflict, because one of the world's most popular OHV park is in danger of closure for use as a tactical training ground; Johnson Valley OHV park.

My solution, for the benefit of both our military and the vast community of off road enthusiasts, is to expand eastward and/or southward, as outlined in Alternative #3. To me, this Alternative provides the best solution and the easiest to implement for both the Marine Corps, the off road community, and many other groups.

If an eastward and/or southward expansion is simply not possible, Alternative #4 or Alternative #5 would be acceptable, to allow full off road recreation access to Johnson Valley when it is not in use by our Marines.

If even this is not acceptable, the very least alternative I would consider is the favored Alternative #6 BUT with more permitted access northward to include the Outer Limits extreme 4x4 trail, and the access and exit roads. This way, all of the very popular trails remain intact and accessible.

If at all possible, an eastward and southward expansion is acceptable to me, as well as many others. I feel, and I am sure many others would agree, that a permit (which allows access to Johnson Valley 10 months of the year) is only a temporary solution, and a permanent closure and restricted access would be inevitable. Thank you for regarding my input.

Sincerely,

  
Jeremy J. Wilson  
56610 Hidden Gold Dr.  
Yucca Valley, CA 92284

**Response to Comment N-18715:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The Marine Corps has determined that Alternatives 4, 5, and 6 would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The People of the United States may be about to lose total access to two-thirds of Johnson Valley OHV Area, permanently. If so, this two-thirds will go to the 29 Palms Marine Training Area, permanently, with no access or use for any civilian purpose, ever again. This is unacceptable. Our OHV funds have been taken and used for purposes other than intended and now our largest single OHV area in Southern California is being threatened.

If this happens, Johnson Valleys OHV area would be reduced to a size too small to use for our most popular organized racing events. These hugely popular events plus the access to this unique landscape all year around, bring together tourists, businesses, OHV enthusiasts and more from California and many other states far and wide in record numbers year after year. This important tourism supports our local economy here in the High Desert with this OHV area acting as a pressure valve of sorts for the overcrowded residents of L.A. and in surrounding counties who use this space regularly.

There is plenty of uninhabited land to the east. Could you not expand towards the river? If this unwelcome expansion westward must be, can we get an off set? Can another area be opened or an adjacent area expanded? Can part of Kelso Dunes be added to the Razor OHV Area off I-15 near Soda Lake, for example? What will the State receive in payment for the Marines use of this proposed training area? Will any of this be available for local projects? Will the Desert Tortoise be relocated? How did the relocation from the expansion on Fort Irwin fare with the tortoise population? Finally, the Airline path over Lucerne Valley is within 10 miles of the proposed Marine Border. Is this a potential "accidental" target?

I have lived in Lucerne Valley for 22 years, blessed by the fact that it is dark at night and quiet. It is my hope that the destructive, invasive and disturbing rumbings of artillery will not be moving 19 miles closer to my home.

Response to Comment N-18716 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an

**Comment ID: N-18716 (Page 2 of 2)**

**Response to Comment N-18716 (Page 2 of 2)**

annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

tal Impact Statement**

This letter is in regards to the proposed westward expansion of the 29 Palms Training Grounds. As the state of California certainly needs all the tax revenue it can get these days of economic woe, it seems counterproductive for the state to purchase roughly 40 square miles of private westward properties (I assume through Eminent Domain using taxpayer monies) rather than expanding to the east. Expanding westward would also remove these 40 square miles of private land from state property tax roles.

At the information meeting with the Marines in Victorville on April 14, 2011 I asked two different representatives what the Marines would pay for the use of this land they want to expand into towards the west and their answer was "Nothing". This proposal does not appear to benefit the state of California, delivering instead another financial blow.

This unwelcome move to the west will bring the training grounds much too close to the populated parts of the Mojave Desert, including Lucerne Valley, Apple Valley Victorville and Hesperia. The Marines see the land as uninhabited and useless for anything but a military training ground, yet I debate that these areas are incredibly scenic and unique and are already heavily used by the above populations for tourism and recreation, providing local revenue which would be sorely missed. These lands also are already a vital pressure valve of sorts for the entire population of the LA basin to let off steam as they get away from crowded conditions there.

All of these things deserve to be seriously considered as a decision is made about how these lands will be used. Finally, please consider the fact that directly to the east of 29 Palms lies the least populated and unused expanse of land in Southern California. Please do California a big favor and have the Marines expand towards the east.

I welcome the Marines, whether they expand east or west from their current space.

I was a small child when they were using the area in question during World War II and later into the late 1950's. We very seldom had any problems with excess noise from either artillery fire or aircraft - only low flying jets occasionally.

I am not sure where they get their gas or how they can afford it, but it seems as if as many or more off-road people come through on the weekends looking for recreation. And just because they are not in city traffic do not slow down for speed zones unless they are planning to stop.

To whom it may concern:

The EIS for the Twentynine Palms Marine Corps Base Expansion is fatally flawed because it does not comply with the Plain Writing Act of 2010.

That law was passed by Congress and signed by President Obama in October 2010.

<http://centerforplainlanguage.org/plain-writing-laws/plain-writing-act-of-2010/>

<http://abcnews.go.com/WN/obama-signs-law-understand/story?id=11902841>

Even though it does not take full effect until October 2011, your EIS must comply with this act to put this government publication into plain understandable English.

You must issue another draft EIS that is in compliance with this law.

The Final EIS to be published in December of this year must be in compliance with this law.

One way to make the second draft and final EIS comply is by using the attached interim guidelines recommended for government use by the Plain Writing experts.

Also, in this December 2009 document on Page 76, General Amos talks about expansion projects at Twentynine Palms, Guam and Georgia:

<http://www.gpo.gov/fdsys/pkg/CHRG-11...1sbrg53693.pdf>

He also says "at the direction of the Commandant, an initiative is underway to establish an overarching land acquisition strategy addressing current, emerging, and future training requirements and associated land and airspace needs (through 2060) to ensure the Marine Corps remains fully missioncapable."

It sounds like the Marines have other plans for more expansion in the future. These are not addressed in the EIS. You must include those as part of the future and cumulative impacts sections.

Thank you.

Sincerely,

Lisa Vallance

Response to Comment N-18719 (Page 2 of 5):

The Plain Language Action and Information Network (PLAIN) is a community of federal employees dedicated to the idea that citizens deserve clear communications from government. We first developed this document in the mid-90s. We continue to revise it every few years to provide updated advice on clear communication. We hope you find this document useful, and that it helps you improve your writing — and your agency's writing — so your users can:

- find what they need,
- understand what they find; and
- use what they find to meet their needs.

We've divided the document into five major topics, although many of the subtopics fit within more than one topic. We start with a discussion of your audience because you should think about them before you start to write your document or your web content. In fact, you should start to think about them before you start to plan. From there we move to organization, because developing a good organization is important during your planning stage. Next, we discuss writing principles, starting at the word level and moving up through paragraphs and sections. This is the most extensive topic. We follow principles of writing documents with principles of writing for the web. We conclude with a short discussion of testing techniques.

When we first wrote this document, we were primarily interested in regulations. We've broadened our coverage, but the document still bears the stamp of its origin. If you have a suggestion about something we should add to address other types of writing, or have a comment on this edition, contact us at [www.plainlanguage.gov/contactus.cfm](http://www.plainlanguage.gov/contactus.cfm).

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The Executive Summary on Page 4 explains why the USMC is proposing the establishment of a large-scale training facility at MCAGCC 29Palms. It says the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade (MEB)-sized Air Ground Task Force, and the existing facilities are inadequate.

The underlying strategy was designed over a decade ago. Times and technology have changed. It appears the very foundation for this strategy is changing.

<http://smallwarsjournal.com/blog/2010/08/gates-time-has-come-to/>

Posted by SWJ Editors on August 13, 2010 4:01 AM

**Gates Orders Marine Corps Force Structure Review** by Jim Garamone of American Forces Press Service. An excerpt follows:

Defense Secretary Robert M. Gates has ordered a thorough force structure review of the Marine Corps to determine what an expeditionary force in readiness should look like in the 21st century.

There are questions about the mission of the Marine Corps, Gates said. Before World War II, the Marines very successfully conducted “small wars” in the western hemisphere. The service also developed the rationale and logistics needed to conduct amphibious warfare.

During World War II, the Corps was wholly dedicated to landing on the beaches in the South and Central Pacific. America’s first offensive of World War II was when Marines landed on the beaches of Guadalcanal and began the campaign against Japan in August 1942. Tarawa, Saipan, Peleliu, Iwo Jima and Okinawa are just a few of the landings Marines made.

Since then, Marines have fought on the beaches, mountains and trenches of Korea, the highlands and rice paddies of Vietnam, and the deserts of Kuwait, Iraq and Afghanistan. Although many of these operations saw Marines initially projected from the sea, “they soon turned into long, grinding, ground engagements,” Gates said.

The nation does not need a second land army, Gates said, but rather forces that can deploy quickly and sustain themselves for a short period of time.

**Comment ID: N-18720 (Page 4 of 12)**

**Response to Comment N-18720 (Page 4 of 12):**

Role by David S. Cloud of The Los Angeles Times.

A **more recent article** dated Mar. 2, 2011, says that Lt. Gen. George J. Flynn, commanding general of Marine Corps Combat Development Command, spoke to news media about the 2010 Force Structure Review (formed to develop the organization, posture and capabilities of the Marine Corps and its role within the joint force in a fiscally-restrained post-Afghanistan environment; and I quote).

Two of the recommendations from the Review are:

A reduction in force structure from 202,000 to 186,800 when conditions in Afghanistan warrant, and

Reduction in ground combat forces, to include a reduction in infantry (regimental headquarters from eight to seven; infantry battalions from 27-24); a reduction in cannon artillery battalions (nine to seven; but a reorganization of batteries to support distributed operations), and a reduction in armor (10 companies to 8).

See more at

<http://www.marines.mil/unit/hqmc/Pages/RestoringbalanceinMarineCorps.aspx>

**The Force Structure Review** of 2010 itself is attached. Its objectives do not jibe with the objectives stated for the MCAGCC expansion.

The very foundation for this Draft Environmental Impact Study is outdated.

Page 4 even says that the training requirement is drawn from an earlier Marine Strategy 21 for 2000.

Page 77 Land Use Requirements Study was completed in July of 2005 and based on the earlier training requirements.

On Page 78 it is stated:

**Comment ID: N-18720 (Page 5 of 12)**

**Response to Comment N-18720 (Page 5 of 12):**

Otherwise the entire document must be discarded as it is based on outdated decisions and information.

Thank you for your attention,

Mike Hawkins

DEPARTMENT OF THE NAVY  
Headquarters, United States Marine Corps  
Washington, DC 20350-3000

14 March 2011

**Foreword**

In the fall of 2010 the Marine Corps conducted a Force Structure Review (FSR) to evaluate and refine the organization, posture and capabilities required of America's Expeditionary Force in Readiness in a post-OEF security environment. The FSR was conducted by senior field grade officers and civilian Marines under the direct cognizance of an executive steering group comprised of the Deputy Commandants, the Commanders of Marine Corps Forces Command and Marine Corps Forces Pacific, and the Commanding Generals of our Marine Expeditionary Forces. The participants of the FSR brought extensive operational experience across the range of military operations, along with a deep breadth of knowledge regarding capabilities, force organization, training and education, equipment, deployment, employment and sustainment to inform the process. Additionally, numerous subject matter experts from within and outside the Marine Corps contributed their knowledge and insights to the FSR. The work was routinely reviewed and guided by me and the Assistant Commandant of the Marine Corps.

This report is promulgated to promote understanding and to start implementation of FSR recommendations. Additional analysis through established capability development constructs will determine the how and timeline of the execution and implementation of FSR decisions.

  
JAMES F. AMOR  
General, U.S. Marine Corps  
Commandant of the Marine Corps

Response to Comment N-18720 (Page 9 of 12):

**Reshaping America's  
Expeditionary Force in Readiness  
Report of the 2010 Marine Corps  
Force Structure Review Group**

*"The Marine Corps is America's Expeditionary Force in Readiness—a balanced air-ground-logistics team. We are forward-deployed and forward-engaged: shaping, training, deterring, and responding to all manner of crises and contingencies. We create options and decision space for our Nation's leaders. Alert and ready, we respond to today's crisis, with today's force ... TODAY. Responsive and scalable, we team with other services, allies and interagency partners. We enable and participate in joint and combined operations of any magnitude. A middleweight force, we are light enough to get there quickly, but heavy enough to carry the day upon arrival, and capable of operating independent of local infrastructure. We operate throughout the spectrum of threats—irregular, hybrid, conventional—or the shady areas where they overlap. Marines are ready to respond whenever the Nation calls ... wherever the President may direct."*

—General James F. Amos, Commandant of the Marine Corps

Purpose

The 2010 Marine Corps Force Structure Review convened to develop the organization, posture and capabilities of America's Expeditionary Force in Readiness and affirm its role within the joint force in a complex and uncertain post-OPERATION ENDURING FREEDOM-Afghanistan security environment that is going to be further challenged by fiscal constraints.

Geostrategic Challenge

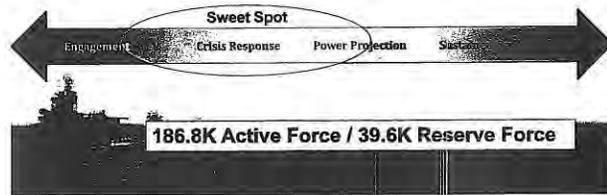

The geostrategic environment has changed dramatically in the last two decades, shifting from a competition between superpowers to a world of increasing instability and conflict, characterized by poverty, competition for resources, urbanization, overpopulation and extremism. Failed states or those that cannot adequately govern their territory can become safe havens for terrorist, insurgent and criminal groups that threaten the U.S. and our allies. Characterized by inherently unpredictable hybrid threats that combine irregular and conventional capabilities in a highly lethal manner, this environment demands a flexible, adaptable, and versatile military force that is ready and capable of being forward-deployed and forward-engaged, building partnerships, and immediately responding to crises or contingencies. Responding to a wide range of crises in a timely manner will require regionally-focused headquarters and forces that are both forward-postured and immediately deployable with a minimum of strategic lift. Sea-based forces, in particular, will be invaluable for discreet engagement activities, rapid crisis response, and sustainable power projection.

Comment ID: N-18720 (Page 10 of 12)

Response to Comment N-18720 (Page 10 of 12):

The 21<sup>st</sup> Century Marine Corps

Addressing these challenges, the 21<sup>st</sup> century Marine Corps builds on our historic role as the Nation's crisis response force and provides "best value" in terms of capability, cost, and readiness relative to the operational requirements of our Geographic Combatant Commanders (GCC). The Marine Corps' force structure must provide a strategically mobile, *middleweight force* optimized for rapid crisis response and forward-presence. It must be light enough to leverage the flexibility and capacity of amphibious shipping, yet heavy enough to accomplish the mission. Larger than special operations forces, but lighter and more expeditionary than conventional Army units, we must be able to engage and respond quickly – often from the sea – with enough force to carry the day upon arrival.

The dual demands of sustained forward presence and sufficient lift for the assault echelons of two Marine Expeditionary Brigades (MEB) result in a requirement for 38 amphibious ships. Given fiscal constraints, however, the Navy and Marine Corps have agreed to accept risk with 33 ships, increasing the imperative to design a lean and effective force structure. We will also explore options for employing Marines from a wider variety of Navy ships, seeking innovative naval solutions to GCC requirements.

Furthermore, our force structure must be able to exploit the carrying capacity of maritime prepositioning ships and the speed of strategic airlift. As necessary, we must be able to aggregate Marine Corps capabilities, often provided by our reserve component, as well as integrate with capabilities provided by Joint Force, Coalition or interagency partners for sustained operations ashore. The ability of Marines to rapidly aggregate from widely dispersed locations to form cohesive Marine Air-Ground Task Forces (MAGTFs) is the foundation of our organization. MAGTFs enable coordinated action throughout the range of military operations.

Re-Shaping Marine Corps Capabilities and Capacities

The imperative for the Marine Corps is to preserve capabilities developed since 9/11, expand our engagement efforts, respond to crisis, and still be able to project power for the most dangerous threat scenarios. To that end we will accept a degree of risk by reducing our active component capacity for conducting multiple, major sustained operations ashore, relying on an

Comment ID: N-18720 (Page 11 of 12)

Response to Comment N-18720 (Page 11 of 12):

- maintaining the capacity and capabilities to conduct amphibious operations across the range of military operations;
- increasing the depth, availability and responsiveness of our combat service support capabilities by reorganizing Marine logistics groups to establish standing combat logistics battalions habitually aligned to specific Marine expeditionary units and infantry regiments;
- capitalizing on the ISR, C2 and future strike capabilities of unmanned aircraft systems via a 25% increase in capacity;
- reorganizing our intelligence collection and exploitation capabilities to enhance readiness by directly linking deployed forces, garrison support and the intelligence community;
- increasing capacity for cyber network defense, exploitation and attack operations by augmenting our communication and radio battalions, and by increasing the structure of Marine Corps Forces Cyberspace Command;
- enhancing capabilities to conduct and manage battlefield biometric, forensic, and law enforcement operations by creating a law enforcement support battalion within each Marine Expeditionary Force (MEF);
- retaining and better integrating the training, advising, and assistance organizations designed to enable and enhance irregular warfare capabilities, partner-nation engagement, and cultural understanding;
- strengthening the capabilities of Marine Special Operations Command through a 44% increase in critical combat support and combat service support Marines;
- increasing support to U.S. Army and partner-nation forces by adding another air and naval gunfire liaison company; and
- reducing overhead in the supporting establishment where parallel or duplicative functions could be efficiently combined or eliminated, including conversion of certain military billets to civilian positions while achieving an overall reduction in civilian personnel.

Risk Mitigation

Reshaping the Marine Corps from a wartime footing of 202,000 Marines to a force of approximately 186,800 imposes some risk. All proposed force structure changes were wargamed against approved Department of Defense scenarios and selected operation plans. The resulting force will be capable of operating across the range of military operations but will assume some risk in the capacity to conduct simultaneous major combat operations and campaigns. This risk is created by combining a MARFOR with a MEF headquarters, preserving the core warfighting

Response to Comment N-18720 (Page 12 of 12):

Major Initiatives	
<p><b>Optimize Forces</b></p> <ul style="list-style-type: none"> <li>• Reduced infantry battalions (77 to 24)</li> <li>• Reduced artillery battalions (11 to 9)</li> <li>• Reduced flying squadrons (70 to 61)</li> <li>• Reduced wing support group HQs (3 to 0)</li> <li>• Increased unmanned aircraft system squadrons (4 to 5)</li> <li>• Reorganized Marine logistics groups</li> <li>• Consolidated military police to support law enforcement requirements</li> <li>• Built five joint task force capable MEB HQs for GCCs</li> <li>• Increased regional component capacity</li> <li>• Preserved 60% of the irregular warfare enablers from the 2022 force</li> <li>• Increased Cyber structure &gt;250</li> <li>• Increased Marine Corps Forces Special Operations Command by &gt;1000</li> </ul>	<p><b>Reserve Component</b></p> <ul style="list-style-type: none"> <li>• Cadet division, wing, logistics group, and Mobilization Command headquarters</li> <li>• Increased civil affairs groups (3 to 5)</li> <li>• Doubled counter-intelligence/human intelligence</li> <li>• Increased air and naval gunfire liaison companies (2 to 3)</li> </ul> <p><b>Supporting Establishment</b></p> <ul style="list-style-type: none"> <li>• Reorganized installations commands</li> <li>• Training Command HQ consolidated into Training and Education Command HQ</li> <li>• No changes to HMX-1, nuclear weapon security, joint billets, Chemical-Biological Incident Response Force, or State Department support</li> <li>• Reduced civilian structure &gt;2900</li> </ul>

Conclusion

Our number one priority remains operations in Afghanistan. Some force structure changes do not impact those operations and are already underway, especially with respect to the command, aviation, and logistics combat elements and the reserve component. Many of these adjustments will actually enhance our capabilities in Afghanistan. We will conduct more detailed planning with respect to implementing further changes, many of which will be conditions-based. This will include wargaming, experimentation, allied, inter-Service, and inter-agency collaboration designed to test the force structure, improve interoperability and increase responsiveness to the GCCs.

We believe the aggregate utility of our proposed force structure will meet Title 10 responsibilities, broaden capabilities, enhance speed and response options, and foster the partnerships necessary to execute the range of military operations, while providing “best value” to the Nation.

6 Reasons to Expand to the East

1. There is empty space to the east with limited impact to the public.
2. By leaving the Johnson Valley area as it, you are providing a public benefit. Off hi-way vehicle enthusiasts have a place to play and train. Some of these young people are future servicemen and women; this opportunity develops skills and dedication.
3. This off hi-way playground supports local businesses and contributes to the economy as people come here from all over the world.
4. Using this space for military maneuvers will distress local residents with increased noise and vibrations.
5. Use will forever change the fragile eco-system.
6. Environmental issues to be addressed include protected species: kangaroo rats, desert turtles, Joshua trees and creosote bushes.

Response to Comment N-18721 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

1220 Pacific Highway  
San Diego, California 92132-5190

Thank you for the opportunity to express my concerns regarding the proposed Twenty-Nine Palms Marine Corp Base Expansion. I was informed at a recent public meeting held by base personnel at the Copper Mountain College facility that alternative no. 6 is the preferred alternative.

Alternative no. 6 includes shared boundaries with the remaining public land used for OHV recreation and many other activities. My concern is for the safety of the public.

At a meeting I attended early this year on base regarding fencing and or signage at these boundaries I was informed that knowing these boundaries is the responsibility of the public and that fencing was too expensive. However the signage would be upgraded at some locations.

I was told "Ignorance is no Excuse"! And I agree, however I feel that the military base has a responsibility to safeguard the public when extraordinary hazards and conditions exist especially when you intend to expand into existing public recreation area and remain contingent to this open public land.

It has been documented that civilians have been injured while trespassing on base both unknowingly and intentionally. They were able to trespass onto base property from any number of locations not marked or fenced.

The base recognized the trespass condition and has upgraded enforcement. Recently 36 private citizens were cited and appeared in court for the violation. No signs or fences were apparent at access locations.

In your DEIS 3.4-14 you state:

*In-place remediation incorporates the consideration of installing temporary fences or barriers to keep wildlife out of spill areas and other known contaminated areas that have not yet been remediated (MAGTF Training Command 2007a).*

I ask that the DEIS reflect the same consideration for the public as it does for the wildlife. An active live fire training/bombing range must be fence to prevent public access.

**Response to Comment N-18724 (Page 1 of 2):**

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-18724 (Page 2 of 2)

Response to Comment N-18724 (Page 2 of 2):

On page es6 you indicate the following:

*Assist local governments and community members with posting of appropriate signage (for restricted use/limited use areas) at key points of entry, areas of concern, or areas that have experienced frequent illegal OHV use.*

*Permanent signage would be staggered across the boundary lines of acquired lands (for any RPAA or exclusive military use areas) at an acceptable interval to make it difficult for anyone to enter the area without having seen a sign. Signage would be maintained.*

This verbiage is unacceptable. You must specify what "appropriate signage" is and what "acceptable intervals" are for a motorcyclist or hikers to see a sign.

Please respond to these concerns at the following address and make appropriate changes to your EIS.

Sincerely,

Ray Pessa

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The DEIS states:

Potential impacts from six action alternatives and the No-Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomic and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources: The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:

Less than Significant Impacts (LSI):

- Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
- Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):

No impact anticipated from airspace establishment.

Similar judgements are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.

It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:

- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
- Devaluation of surrounding private property.

• Increased costs to federal, state and local jurisdictions for increased law enforcement.

All would occur outside the acquisition study boundaries.

**Response to Comment N-18725 (Page 1 of 3):**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley. Furthermore, Sections 3.11 and 4.11 of the EIS has been updated as appropriate to address issues related to the Small Homestead Act.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

If one of the proposed alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment ID: N-18725 (Page 2 of 3)

Response to Comment N-18725 (Page 2 of 3):

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

-These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflown by helicopters at any hour of the day or night, particularly when the want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.

"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of

Comment ID: N-18725 (Page 3 of 3)

Response to Comment N-18725 (Page 3 of 3):

spiritual values it is worth more than a mansion in a ritzy subdivision."  
—Desert Magazine 1944

The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves. The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant.  
<http://www.coutant.org/mminternet/saga/index.html>

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

Thank You

Ryan Dougherty

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The Executive Summary on Page 4 explains why the USMC is proposing the establishment of a large-scale training facility at MCAGCC 29Palms. It says the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade (MEB)-sized Air Ground Task Force, and the existing facilities are inadequate.

The underlying strategy was designed over a decade ago. Times and technology have changed. It appears the very foundation for this strategy is changing.

<http://smallwarsjournal.com/blog/2010/08/gates-time-has-come-to/>

Posted by SWJ Editors on August 13, 2010 4:01 AM

Gates Orders Marine Corps Force Structure Review by Jim Garamone of American Forces Press Service. An excerpt follows:

Defense Secretary Robert M. Gates has ordered a thorough force structure review of the Marine Corps to determine what an expeditionary force in readiness should look like in the 21st century. There are questions about the mission of the Marine Corps, Gates said. Before World War II, the Marines very successfully conducted "small wars" in the western hemisphere. The service also developed the rationale and logistics needed to conduct amphibious warfare. During World War II, the Corps was wholly dedicated to landing on the beaches in the South and Central Pacific. America's first offensive of World War II was when Marines landed on the beaches of Guadalcanal and began the campaign against Japan in August 1942. Tarawa, Saipan, Peleliu, Iwo Jima and Okinawa are just a few of the landings Marines made. Since then, Marines have fought on the beaches, mountains and trenches of Korea, the highlands and rice paddies of Vietnam, and the deserts of Kuwait, Iraq and Afghanistan. Although many of these operations saw Marines initially projected from the sea, "they soon turned into long, grinding, ground engagements," Gates said.

The nation does not need a second land army, Gates said, but rather forces that can deploy quickly and sustain themselves for a short period of time.

Also see Gates: Time Has Come to Re-examine Future of Marine Corps by Kevin Baron of Stars and Stripes and Defense Chief Gates Orders Review of Marines' Role by David S. Cloud of The Los Angeles Times.

A more recent article dated Mar. 2, 2011, says that Lt. Gen. George J. Flynn, commanding general of Marine Corps Combat Development Command, spoke to news media about the 2010 Force Structure Review (formed to develop the organization, posture and capabilities of the Marine Corps and its role within the joint force in a fiscally-restrained post-Afghanistan environment; and I quote):  
Two of the recommendations from the Review are:

Response to Comment N-18726 (Page 1 of 2):

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-18726 (Page 2 of 2)

Response to Comment N-18726 (Page 2 of 2):

A reduction in force structure from 202,000 to 186,800 when conditions in Afghanistan warrant, and Reduction in ground combat forces, to include a reduction in infantry (regimental headquarters from eight to seven; infantry battalions from 27-24); a reduction in cannon artillery battalions (nine to seven; but a reorganization of batteries to support distributed operations), and a reduction in armor (10 companies to 8).  
See more at <http://www.marines.mil/unit/hqmc/Pages/RestoringbalanceinMarineCorps.aspx>

The Force Structure Review of 2010 itself is attached. Its objectives do not jibe with the objectives stated for the MCAGCC expansion.

The very foundation for this Draft Environmental Impact Study is outdated.  
Page 4 even says that the training requirement is drawn from an earlier Marine Strategy 21 for 2000.  
Page 77 Land Use Requirements Study was completed in July of 2005 and based on the earlier training requirements.

On Page 78 it is stated:

1. that MEB-size training is declared (in 2008) by the Marine Corps to be an enduring requirement
2. therefore existing land and air space is insufficient,
3. therefore land acquisition is necessary

Any study of military history shows the last thing any fighting force needs is an enduring requirement. Otherwise, we would still have muzzleloaders, horse-drawn caissons or Sherman tanks.  
Therefore the judgement that MEB-sized training is required is flawed.  
Therefore the judgement that existing land and air space is insufficient is called into question.  
Therefore the judgement that land acquisition is necessary is flawed.

Because the Marines state they must train as they fight, it does not mean they are not already doing so, or that they cannot make quick judgements based on today's conditions for training requirements for tomorrow. Because so much time has been put into this outdated plan does not mean it must roll downhill without taking another look.

The document must be reviewed and anywhere outdated requirements are defined for MEB-sized training, and the existing facilities are declared inadequate, they must be justified to today's needs. Everywhere ideal range requirements are mentioned they must be justified to today's needs. Everywhere airspace requirements are defined they must be justified to today's needs.

The statement on Page 192 that the No-Action Alternative would not meet the needs for the proposed action must be reconsidered in this light also.

Otherwise the entire document must be discarded as it is based on outdated decisions and information.

Thank you for your attention.

Re: Draft Environmental Impact Statement on 29Palms Base expansion

The Environmental Protection Agency's Toxic Release Inventory (TRI) is attached. It totals toxic releases during the years 2007-2009, the latest report available.

A "TRI release" is defined as the amount of on-site toxic chemical releases to air, water, underground injection, landfills and other land disposal, and the amount transferred off-site for disposal. The top ten facilities with the most chemical releases in California included Marine Camp Pendleton at #10.

PBT Chemical releases are releases of Persistent, Bioaccumulative and Toxic Chemicals. Merriam-Webster defines "persistent" as "existing for a long or longer than usual time or continuously."

It defines "bioaccumulation" as "the accumulation of a substance (such as a pesticide) in a living organism."

It defines "toxic" as "poisonous."

In other words, it means poisons that last a long time, and collect in the bodies of plants and animals and the animals that eat them.

Of the top 10 California release sites, numbers 6-10 were military, one Army and four Marine, all in Southern California. The Marine Corps Air Ground Combat Center 29Palms is #7, with a little under half the PBT chemical releases that were measured at Camp Pendleton.

Though the trend shown in the inventory is generally downward for the state, if live fire combat training increases in intensity and duration on the scale the DEIS describes, MCAGCC will obviously rise on the list.

Starting on Page 293, the Draft Environmental Impact Statement describes in detail the procedures used to comply with recording and reporting releases of TRI Chemicals. It addresses the Marines' methods for dealing with hazardous material spill abatement and cleanups, and contaminated soils.

"Munitions Constituents" (MC) from unexploded ordnance and other munitions, and their breakdown elements, are described and mapped for current and historical ranges. Potential migration into humans and animals is addressed with somewhat limited studies. Perchlorate is described as an indicator munitions constituent as it is a good example of PBT (see definitions above). Perchlorate recently came to public notice again as a constituent of the drinking water in Barstow, CA.

Databases on hazardous wastes from many sources and contaminated sites are described as not revealing any relevant sites. Formerly used defense sites are discussed. All are declared not relevant.

On Page 293, one paragraph describes a total of 50 accidental releases, in 2002, of toxic substances and what was done about them. Deliberate releases and munitions constituents are not itemized. The discussion of toxic wastes ends on Page 301 of the DEIS. Nowhere is the Environmental

Response to Comment N-18727 (Page 1 of 2):

Thank you for your comment. Munitions constituents and toxic chemical release reporting requirements are described in Section 3.4 and 4.4 of the EIS. As described in the EIS the Combat Center complies with the Emergency Planning and Community Right-to-Know Act (EPCRA) Toxic Release Inventory (TRI) program, and all other federal, state, and local requirements regarding hazardous materials and wastes, and would continue to do so under the proposed action.

Comment ID: N-18727 (Page 2 of 2)

Response to Comment N-18727 (Page 2 of 2):

Protection Agency's Toxic Release Inventory mentioned, with its specific amounts, and the relative standing of military sites in general and MCAGCC in particular.

Therefore the DEIS must be amended to show not only the methodology for reporting toxic contaminants but also the kinds and quantities. It must also clearly state estimates for any increases in toxic releases for each Alternative course of action. It must also state this information was missing in the draft document.

On Page 295 is a map of munitions constituents loading areas on the existing Base. Maps must be added to the DEIS to show where planned MC loading areas would be in each Alternative course of action.

On Page 796 it is stated that use of munitions under Alternative One would be similar to existing use, and therefore potential impacts from the use of munitions would be minimal. Since ordnance use is planned to be more intensive and of longer duration, the DEIS must be corrected to reflect that fact and state the draft document was in error. This must also be done for all the other Alternatives.

Thank you,

Ryan Dougherty

Comment ID: N-18728  
Date Received: May 31, 2011

5/22/11  
13443 Coachella Rd  
Apple Valley, CA 92308

Dear EIS Project Leader:

These are my comments on the Draft EIS for the 29 Palms Base Expansion:

FIGURE 1-4: Put the fixed range numbers on this map so it will correlate with Table B-2 Appendix B.

PAGE 1-16: You say there are 25 fixed ranges. Table B-2 shows 29.

PAGE 2-85: You say "Alternatives 4 and 5 would have greater adverse impacts..." but a paragraph later you say "Alternative 5 is the environmentally preferred alternative." This is inconsistent. The environmentally preferred alternative should be the one with the less adverse impacts.

PAGE 2-99: How is "special conservation measures" different than "mitigation measures"?

PAGE 2-107: Provide the references for the two documents mentioned in section 2.8.7.

PAGE 3.1-2: The Federal Land Policy and Management Act of 1976 (P.L. 94-579) (43 U.S.C. 1701-1771, and other U.S.C. sections; 90 Stat. 2743), approved October 21, 1976, constitutes an "Organic Act" for the Bureau of Land Management. Among other things, it establishes new procedures for creating, modifying and terminating withdrawals and reservations of public lands. "FLPMA" directs the BLM to manage public lands on the basis of multiple use, in a manner that "recognizes the Nation's need for domestic sources of minerals, food, timber, and fiber from the public lands." FLPMA requires the development and maintenance of land use plans based on an inventory of all public lands and their resources. Requires that public lands be retained unless it is determined that disposal will serve the national interest. FLPMA also places fish and wildlife management on an equal footing with other traditional land uses.

PAGE 3.1-2: Your project and EIS ignore the requirements of several Federal laws, as well as the impact your project will have on the intent of these laws. Other Federal "Regulatory Framework" that you must recognize and consider in the EIS (this section and also in chapter 7) includes:

- Mineral Leasing Act of 1920 (Mineral Lands Leasing Act) 30 USC 181
- Mining Act of 1872 30 USC 26
- Administrative Procedures Act 5 USC 551
- Mining and Minerals Policy Act of 1970 30 USC 21a
- Multiple Surface Use Act of 1955 60 Stat. 367

GEN-1  
GEN-2  
GEN-3  
GEN-4  
LU-1

Response to Comment N-18728 (Page 1 of 20):

**GEN-1:**

Thanks for your comment. The discrepancy between the text on page 1-16 and the number of ranges listed in Table B-2 has been corrected.

**GEN-2:**

Section 2.8 describes the Preferred Alternative evaluation. As indicated in the EIS, Alternative 1 is the best alternative from an operational perspective, while Alternative 5 is the best alternative from an environmental perspective. Alternative 6 was determined to be the Preferred Alternative based on the training value afforded and the amount of land area that would still be available and accessible to the public for recreational purposes.

**GEN-3:**

Section 2.8 of the EIS has been updated to clarify the distinction between special conservations measures incorporated into the proposed action and potential mitigation measures that have been identified for certain resources under specific alternatives.

**GEN-4:**

A reference for the REVA study has been added to Section 2.8.7 as suggested. As indicated in the text, the IESS is currently being prepared, therefore, no reference is currently available.

**LU-1:**

Appropriate regulatory framework has been identified in Chapter 3 for each resource area.

LU-1

PAGE 3.1-4: The purpose of Executive Order 11644 of 1972 (Use of Off Road Vehicles on Public Lands) is to establish policies and provide for procedures that will ensure the control of off road vehicles on public lands to protect resources, promote safety, and minimize conflicts. In Sec 6, it says that "The respective agency head shall, where authorized by law, prescribe appropriate penalties for violation of regulations adopted pursuant to the order and shall establish procedures for the enforcement of these regulations. To the extent permitted by law, he may enter into agreements with State or local government agencies for cooperative enforcement of laws and regulations relating to off road vehicle use." Your EIS must indicate how you plan to "control" ORVs, provide mitigation for them when displaced from Johnson Valley, enter into cooperative agreements, and establish procedures for enforcement of regulations.

REC-1

PAGE 3.1-4: Executive Order 11989 of 1977 (Off Road Vehicles (ORV)) directs heads of Federal agencies to close areas to ORV use whenever it is determined that use of ORVs is or will cause considerable adverse impact on soil, vegetation, wildlife, wildlife habitat, or certain other resources on the public lands. Agencies are also authorized to adopt the policy that portions of the public lands shall be closed to ORVs except for designated open areas and trails. Within your EIS, you must indicate whether adverse impacts are being caused by ORVs before you can propose additional closures of public lands to them.

REC-2

PAGE 3.1-5: Reference Appendix B. Provide a reference for Table 3.1-1. Also, this table is redundant with Table B-1 Appendix B.

LU-2

PAGE 3.1-11: Under "mining," you need to quantify the number of inactive mines, shafts and tunnels in the EIS. That information is needed now for public disclosure and good impact analysis. It cannot wait until the "real estate survey and appraisal process."

LU-3

FIGURES 3.1-4 and 3.2-3 are redundant. The first one doesn't even include Dumont Dunes, Spangler Hills, Dover Springs, Jawbone Canyon and Keysville. You also need to include all the ones to the south such as Imperial Dunes, Glamis and more.

LU-4

Response to Comment N-18728 (Page 2 of 20):

**REC-1:**

The specific details on management of the RPAA have not been formalized at this time. Section 2.5 outlines the management procedures that have been developed at this time. If the alternative selected is one that would involve an RPAA, a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies.

**REC-2:**

Section 4.2 analyzes impacts to recreation. An additional study of impacts to recreation and loss of recreational lands was completed and the EIS has been updated appropriately.

**LU-2:**

A reference has been added as suggested. Appendix B is stand-alone to the EIS, therefore, redundancy should be expected and no change has been made.

**LU-3:**

Comment noted. Only active and potentially active mines were quantified for the impact analysis. Other non-operating mines and mining facilities would be further identified after completion of this NEPA analysis, as part of the real estate survey and appraisal process, if one of the action alternatives were selected.

Comment ID: N-18728 (Page 3 of 20)

PAGE 3.2-1. Pertaining to the regulatory framework for recreation, your project and the EIS for it ignore the requirements of several Federal laws, as well as the impact your project will have on the intent of these laws. Other Federal "Regulatory Framework" that you must recognize and consider in the EIS includes:

Recreation and Public Purposes Act of 1926	43 USC 869
National Trails Systems Act of 1968	16 USC 1241
Wilderness Act of 1964	16 USC 1131

The *Recreation and Public Purposes Act of 1926* (P.L. 69-386) (44 Stat. 741, 43 U.S.C. 869) allows the Secretary of the Interior to dispose of any public lands to a State, Territory, county, or municipality for any public purposes, or to a nonprofit corporation or association for any recreational or public purpose consistent with its articles of incorporation or other creating authority. Before the land may be disposed of, it must be shown that the land is to be used for an established or definitively proposed project. Authorizes the lease or sale of historic properties under certain conditions. (See 43 CFR Subpart 2741 and Manual Section 2740.) **You must indicate in the EIS if your project is or isn't in compliance with this Act. By closing public lands, I feel that your project would not be in compliance as you would preclude these recreation opportunities.**

The *National Trails System Act of 1968* (P.L. 90-543) (82 Stat. 919; 16 U.S.C. 1241-1249) institutes a national system of recreation and scenic trails. Designates the Appalachian Trail and the Pacific Crest Trail as the initial components of that system and prescribes the methods by which, and standards according to which, additional components may be added to the system. Additional trails should be established primarily near urban areas and secondarily within established, more remotely located scenic areas. Secretaries of Interior and Agriculture may designate National Recreation Trails. Designation of National Scenic Trails requires specific Acts of Congress. **Your project and EIS are not in compliance with this Act as your proposed closure of public lands would preclude the development of national trails there.**

The *Wilderness Act of 1964* (P.L. 88-577) (78 Stat. 890; 16 U.S.C. 1131-1136) establishes a National Wilderness Preservation System to be composed of Federally owned areas designated by Congress as wilderness areas, and these shall be administered for the use and enjoyment of the American people in such a manner as will leave them unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of these areas, the preservation of their wilderness character, and for the gathering and dissemination of information regarding their use and enjoyment as wilderness. Directs the Secretary of the Interior, within ten years, to review every roadless area of 5,000 or more acres and every roadless island (regardless of size) and to recommend the suitability of each for inclusion in the System. Provides criteria for determining suitability and contains provisions related to activities that can be undertaken in a designated area. **Your project and EIS are not in compliance with this Act as you have not called for the repeal of wilderness areas east of the USMC base which do not meet the suitability criteria.**

TABLE 3.2-2. How many visitors go to each of these areas? How many more can each area accommodate? You need to list the current visitation and identify if each area can handle all the displaced use that will result if/when Johnson Valley is closed.

REC-2

REC-3

Response to Comment N-18728 (Page 3 of 20):

LU-4:

Figure 3.1-4 shows the open BLM OHV areas in the immediate vicinity of the Proposed Acquisition Study Areas and is not intended to include all the regional OHV areas. Figure 3.2-3 shows a broader view of the regional OHV areas in relation to the Proposed Acquisition Study Areas. In addition, Appendix M includes additional data regarding regional OHV areas.

REC-2:

Appropriate regulatory framework has been identified in Chapter 3 for each resource area.

REC-3:

Based on public input and comments, a Displaced OHV Recreation Study (DORS) has been completed and added to the EIS. Please see Appendix M and Section 4.2 for more information.

SOC-1:

Appropriate regulatory framework has been identified in Chapter 3 for each resource area.

SOC-2:

The data presented is the most current data available from the US Census Bureau.

Comment ID: N-18728 (Page 4 of 20)

PAGE 3.3-1: Other Federal "Regulatory Framework" that you must recognize and consider in the EIS includes:  
 Administrative Procedures Act 5 USC 551  
 Freedom of Information Act of 1974 5 USC 552  
 Energy Security Act of 1980 30 USC 1501

**Administrative Procedures Act**, as amended (P.L. 79-404) (5 U.S.C. 551-559, 701-706, 1305-1310, 3344, 4301, 5362, 7521; 60 Stat. 237) outlines the several forms of administrative proceedings (hearings, adjudication, etc.) and prescribes procedural and substantive limitations thereon. The Act also provides for judicial review of Federal agency decisionmaking actions. **Your project and EIS are not in compliance with this Act as you have not provided hearings.**

**Freedom of Information Act of 1974** (P.L. 93-502) (5 U.S.C. 552; 88 Stat. 1561) requires all Federal agencies to make available to the public for inspection and copying administrative staff manuals and staff instructions, official published and unpublished policy statements, final orders deciding case adjudication and other documents. Special exemptions have been reserved for nine categories of privileged material, including but not limited to confidential matters relating to National defense or foreign policy, law enforcement records and trade or commercial secrets. The Act requires the party seeking the information to pay search and duplication costs. **Your project and EIS are not in compliance with this Act as you have not made documents, statements, orders and instruction readily available to the public for inspection.**

**Energy Security Act of 1980** (30 U.S.C. 1501) promotes the development and use of alternative energy resources including oil shale, synthetic fuels, wind power, and geothermal resources. **Your project and EIS are not in compliance with this Act as you are proposing to close public lands to clean energy development and use.**

TABLE 3.3-4: USMC is mentioned for Twentynine Palms and Yucca Valley. Why not for Joshua Tree too? Put the number of employees with each major employer. Hero Catering is a major employer in Landers? The local mini market probably employs more people.

PAGE 3.4-2: You have not been complete and forthcoming in your application of the following "Regulatory Framework." You must recognize and consider these further in the EIS:  
 Comprehensive Environmental Response, Compensation and Liability Act of 1980 42 USC 9601  
 Emergency Preparedness and Community Right-to-Know Act of 1986 42 USC 11001  
 Resource Conservation and Recovery Act of 1976 42 USC 6901  
 Executive Order 11514, Protection and Enhancement of Environmental Quality (1970)  
 Executive Order 11752, Prevention, Control, Abatement of Pollution at Federal Facilities (1973)  
 Executive Order 12088, Federal Compliance with Pollution Control Standards (1978)

**Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (Superfund) of 1980** (P.L. 96-510) (42 U.S.C. 9601) establishes a process for identifying, investigating and cleanup of hazardous substances releases from uncontrolled or abandoned hazardous waste sites. Provides for funding and authority to respond to hazardous substance spills, and for remediation of waste sites. Covers releases, cleanups, liability, inventory,

SOC-1

SOC-2

PHS-1

Response to Comment N-18728 (Page 4 of 20):

**PHS-1:**

Appropriate regulatory framework has been identified in Chapter 3 for each resource area.

**PHS-2:**

Appendix F identifies munitions proposed for use under the proposed action and the hazards that are associated, including any explosive hazards. As indicated in the notes, the Cadiz Lake Sonic Target #3 is located within the former southeast study area, see Figure 2-3.

**AQ-1:**

Appropriate regulatory framework has been identified in Section 3.8.2.

**BIO-1:**

Appropriate regulatory framework has been identified in Chapter 3 for each resource area.

**BIO-2:**

Figures have been updated as appropriate to show the correct south study area boundary and show identified wildlife linkages.

Comment ID: N-18728 (Page 5 of 20)

hazardous rank score, natural resources damages, public involvement, community relations planning, Federal facility compliance, and national contingency planning.

*Emergency Planning and Community Right-To-Know Act (EPCRA) of 1986* (42 U.S.C. 11001) helps bring about state and local preparedness to deal with emergency situations caused by the unplanned release of hazardous materials. It mandates emergency response and emergency planning authorities. It also requires facilities to report if they have "extremely hazardous substances" in above threshold quantities and to report spills above specific "reportable" quantities.

*Resource Conservation and Recovery Act (RCRA) of 1976* (P.L. 94-580, 42 U.S.C. 6901 et seq.) gave EPA the responsibility of regulating solid waste, a subset which is hazardous waste. RCRA addresses various topics relating to solid waste management including: hazardous waste management, waste oil management, land disposal restrictions, and tracking medical wastes. The RCRA regulations seek to manage hazardous waste from "cradle to grave," or from the point of generation to ultimate disposal.

*Executive Order 11514 of 1970* (Protection and Enhancement of Environmental Quality) is in furtherance of NEPA (1969, P.L. No. 91190), whereas the Federal Government shall provide leadership in protecting and enhancing the quality of the nation's environment. Agencies will monitor, evaluate, and control on a continuing basis so as to protect and enhance the quality of the environment. Such activities shall include those directed to controlling pollution and enhancing the environment... Agencies shall develop programs and measures to protect and enhance environmental quality.

*Executive Order 11752 of 1973* (Prevention, Control and Abatement of Pollution at Federal Facilities) assures that design, construction, management, operation and maintenance of federal facilities apply with standards for prevention, control and abatement of environmental pollution in cooperation with state and local governments.

*Executive Order 12088 of 1978* (Federal Compliance with Pollution Control Standards) makes each agency responsible for ensuring that all necessary actions are taken for the prevention, control and abatement of environmental pollution with respect to Federal facilities and activities.

PAGE 3.4-10 and 11: You say that Appendix F identifies if each munition is dud-producing. That information is not shown in Appendix F.

TABLE 3.4-7: Why is that site listed? The title of the table is FUDS within the East Study Area. The first entry is not within the East Study Area, and it's not within any area still being studied for expansion.

PAGE 3.8-2: You have not been complete and forthcoming in your application of the Clean Air Act of 1955 (42 U.S.C. 7401, 69 Stat. 322, P.L. 89-272, P.L. 89-675, 42 U.S.C. 1857, P.L. 91-

As indicated by the legend, Figure 3.13-1 shows watersheds and playa lake beds, hence the multiple names seen on the figure.

**GEN-5 and AIR-2:**

The evaluation criteria used for analyzing impact is discussed at the beginning of each resource section in Chapter 4.

**GEN-6:**

Consideration of cost of the project are outside the scope of this EIS analysis, although it is one of the several factors decision makers consider when selecting an alternative. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-18728 (Page 6 of 20)

604, P.L. 101-549). It provides national ambient air quality standards for sulfur dioxide, particulate matter less than ten microns, carbon monoxide, nitrogen dioxide, photochemical oxidants (ozone), and lead. The CAA also established national emission standards for 189 hazardous air pollutants (per revised CAA, 1990). Further, the CAA requires air discharge permits.

AQ-1

PAGE 3.10-2: You must acknowledge that the *Endangered Species Act of 1973, as amended* (16 U.S.C. 1531 et seq., 87 Stat. 884, P.L. 93 205, P.L. 94 359, 90 Stat. 913 (1974), P.L. 95 212, 91 Stat. 1493 (1977), P.L. 95 632, 92 Stat. 3751 (1978), P.L. 96 159 (1979), P.L. 97 304 (1982), P.L. 100-653 (1988)) provides a means whereby ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the (relevant) treaties and conventions. The ESA requires all Federal departments and agencies to utilize their authorities to conserve species, subspecies, or populations of plants and animals officially listed by the Secretary of the Interior or Secretary of Commerce as threatened or endangered. All Federal departments and agencies shall seek to conserve endangered species and threatened species and shall utilize their authorities in furtherance of the purposes of the Act. The ESA requires Federal agencies to ensure that the continued existence of listed species is not jeopardized and that designated critical habitat of listed species is not destroyed or adversely modified. Requires consultation on agency actions to ensure that listed species are not jeopardized.

BIO-1

The ESA requires consultation with the U.S. Fish and Wildlife Service (FWS) or National Marine Fisheries Service (NMFS) if it is determined that any Federal action (e.g., a militaryland withdrawal) may affect a federally listed species or its critical habitat. The ESA requires conference with FWS if it is determined that an action may affect a proposed threatened and endangered (T&E) species. **The EIS must present the results of this consultation with the U.S. Fish and Wildlife Service.** The ESA says that the appropriate Secretary shall utilize the land acquisition and other authority under the Fish and Wildlife Act of 1956 to acquire by purchase, donation, or otherwise land necessary to conserve wildlife including those listed as T&E. **To conserve tortoises and other species, the EIS must present your plan for mitigation (land acquisition elsewhere).**

Funds from the Land and Water Conservation Fund Act of 1965 as amended may be used to acquire lands. The ESA says that the Secretary is authorized to enter into a cooperative agreement with states for the conservation of T&E species. Both listed and proposed species are protected under Section 7 of the ESA. Candidate species are not protected but are species that the service is considering for inclusion on the list.

PAGE 3.10-3: You must acknowledge that the *Migratory Bird Treaty Act of 1918, as amended* (16 U.S.C. 703-711; 40 Stat. 755) implemented the 1916 Convention between the United States and Great Britain (for Canada) for the Protection of Migratory Birds (39 Stat. 1702) thereby

Response to Comment N-18728 (Page 6 of 20):

**AIR-1:**

As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace for the preferred alternative. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted and if the preferred alternative is changed. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

**AIR-2:**

Table 4.7-11 provides a summary of impacts for each alternative. For a more in-depth explanation of impact conclusion please see the discussion within Section 4.7.

**GEN-7:**

Thank you for your comment.

**NOI-1:**

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts. An overview of assumptions used for the noise analysis is presented in Section 4.9.1.1 with a more detailed discussion contained in Appendix H with the noise modeling.

Comment ID: N-18728 (Page 7 of 20)

establishing a Federal responsibility for protection of the international migratory bird resource. Amendments of June 20, 1936 (49 Stat. 1556), implemented the 1936 Convention between the United States of America and the United Mexican States for the Protection of Migratory Birds and Game Mammals (50 Stat. 1311), as amended, and June 1, 1975, Public Law 93-300 (88 Stat. 190), among other things, implemented the 1973 Convention between the Government of the United States of America and the Government of Japan for the Protection of Migratory Birds and Birds in Danger of Extinction, and their Environment (25 U.S.T. 3329; T.I.A.S. 7990), as amended. As amended by Public Law 86-732, September 8, 1960 (74 Stat. 866), the Act provides for regulations to control taking, selling, transporting and importing migratory birds, their nests, eggs, parts or products, when such items are included in the terms of any treaty, and provides enforcement authority and penalties for violations.

PAGE 3.10-4: In addition, the *Bald Eagle Act of 1940, as amended* (16 U.S.C. 668-668d; 54 Stat 250), as amended June 25, 1959, by Public Law 86-70 (73 Stat. 143), October 23, 1972, by Public Law 92-535 (86 Stat. 1064) provides for protection of the bald eagle (the national emblem) and the golden eagle by prohibiting except under certain specified conditions the taking, possession and commerce in such birds. The 1972 amendments increased penalties for violating provisions of the Act or regulations issued pursuant thereto and strengthened other enforcement measures.

SECTION 3.10-2: You must also acknowledge the importance of the following regulatory framework:  
 Fish and Wildlife Coordination Act of 1934 16 USC 661  
 Sikes Act of 1960 16 USC 670a  
 Migratory Bird Conservation Act of 1929 16 USC 715

*Fish and Wildlife Coordination Act of 1934, as amended in 1946, 1958 and 1965 (16 U.S.C. 661 667e.* (1958), 48 Stat. 401, 60 Stat. 1080, 72 Stat. 563, 79 Stat. 216, 82 Stat. 563) authorizes the Secretary of the Interior to assist Federal, State and other agencies in the development, protection, rearing and stocking fish and wildlife on Federal lands, and to study the effects of pollution of fish and wildlife. Provides for donating land and funds in furthering purposes of the Act and for appropriation of funds. Requires action agency to consult with the FWS and the State species managing agency to develop mitigation or compliance for proposed land-use authorizations wherein waters of any stream or other water body are proposed to be impounded, diverted, channelized or otherwise controlled or modified. Authorizes Federal water resource agencies to acquire lands or interests in connection with water use projects specifically for mitigation and enhancement of fish and wildlife. **Your project is not in compliance with this Act as you have not proposed adequate mitigation for wildlife impacts.**

*Sikes Act of 1960, as amended* (P.L. 86-797) (16 U.S.C. 670a-f; 74 Stat 1052, P.L. 93-452, 88 Stat 1369 (1974), P.L. 95-420, and 92 Stat 921 (1978)) – Title II extended Sikes Act authority for wildlife program development from strictly military reservations to public lands administered by the U.S. Forest Service and BLM. **YOU and the BLM must:** "...plan, develop, maintain and coordinate programs for the conservation and rehabilitation of wildlife, fish and game." a) Title I

BIO-1

Response to Comment N-18728 (Page 7 of 20):

GEN-8:

A summary of public scoping issues is contained at the beginning of each resource section in Chapter 4 of the EIS, titled “Public Scoping Issues”. The section does not list specific comments, rather summarizes the comments provided as key issues and themes.

GEN-9:

Mitigation measures were developed if feasible for resource area alternatives for which significant impacts were expected. As noted in the EIS, less than significant noise impacts are expected or no mitigation measures were determined to be feasible (in addition to the Special Conservation Measures outlined in Section 2.8).

LU-5:

Table 4.1-1 of the EIS provides summary of impacts to land use under all alternatives.

REC-4:

Section 3.2 of the EIS identifies areas that are open for legal OHV riding. This information is utilized in the analysis in Section 4.2. Table 4.2-6 provides summary of impacts to recreation under all alternatives. Recreation SCMs 1-3 would apply to all alternatives. Mitigation Measure REC-1 would apply only to alternatives 4, 5, and 6 as discussed in Section 4.2 of the EIS.

Comment ID: N-18728 (Page 8 of 20)

extends wildlife programs on military reservations and provides funding authorization by Title II authorizes key elements for wildlife program management, such as cooperative agreements, close working relationships with State wildlife agencies, wildlife agency habitat management plans (HMPs), integration of wildlife program with planning and environmental assessment, on the ground wildlife habitat improvement, maintenance, and protection; management of both Federal and State listed threatened and endangered species; and establishment of a potential hunting and fishing stamp program for State wildlife agencies to use if and when they deem fit. The mandates of Title II, Section 202(c)(3), of the amended Sikes Act apply to both federally and State listed fish and wildlife, i.e., all listed animals. Programs planned, developed, maintained, or coordinated under the Sikes Act for the protection and development of wildlife resources must include provisions for the conservation of federally listed animals and the critical habitats on which they depend. Conservation of such animals and habitats should be a key criterion for mutual USMC/State justification of Sikes Act programs. **The EIS must be more forthcoming in how you plan to comply with this Act.**

**Migratory Bird Conservation Act of 1929, as amended** (16 U.S.C. 715-715d, 715e, 715f-715k, 715n-715r; 45 Stat. 1222) establishes a Migratory Bird Conservation Commission to approved areas recommended by the Secretary of the Interior for acquisition with Migratory Bird Conservation funds. Commission consists of the Secretary of the Interior as chairman, the Secretaries of Transportation and Agriculture, two members of the Senate and two of the House of Representatives, and a member ex officio from each State in which acquisition is being considered. The Commission through its chairman is directed to report by the first Monday in December of each year to Congress on its activities. The Secretary of the Interior is authorized to cooperate with local authorities in wildlife conservation, as well as conduct investigations, publish documents related to North American Birds, and to maintain and develop refuges. Provides for cooperation with States in enforcement. Procedures are established for acquisition by purchase, rental or gift of areas approved by the commission as sanctuaries for migratory birds, and an amendment February 17, 1976, Public Law 94-215 (90 Stat. 190), clarified that authority as applying to the purchase or rental of a partial interest. **The EIS must be more forthcoming in how you plan to comply with this Act.**

FIGURE 3-10-5: The South Study Area boundary is incorrect.

PAGE 3.10-38: You should show these wildlife linkages on a map. You have also not analyzed the impacts on these wildlife linkages in Chapter 4.

FIGURE 3.10-9: South Study Area boundary is incorrect. It was changed to eliminate a bunch of acres.

FIGURE 3.10-10: South Study Area boundary is incorrect. It was changed to eliminate a bunch of acres.

FIGURE 3.10-11: South Study Area boundary is incorrect. It was changed to eliminate a bunch of acres.

BIO-2

Response to Comment N-18728 (Page 8 of 20):

**WAT-3:**

The EIS has been revised to update the project description for the Cadiz Conservation and Storage Project using the information provided by comment letters from Cadiz Inc and others.

**SOC-3:**

Table 4.3-16 of the EIS provides summary of impacts to socioeconomics under all alternatives. As indicated in the table, there would be less than significant or no impact to socioeconomics from implementation of the proposed action alternatives.

**PHS-3:**

Analysis of impacts from the presence of the high-pressure natural gas pipeline is contained in Section 4.4 (*Public Health and Safety*) due to the safety hazard if heavy military vehicles continually cross at the same points or if maneuver activities compromise the integrity of underground pipelines, resulting in potential impacts if an underground pipeline ruptures.

Beneficial impacts are identified for resource area action alternatives were only noted when they exist.

Comment ID: N-18728 (Page 9 of 20)

PAGE 3.11-1: In reference to the *National Historic Preservation Act of 1966* (P.L. 89-665) (80 Stat. 915; 16 U.S.C. 470) as amended, you must acknowledge that the law declares a national policy of historic preservation (defined in the Act as "the protection, rehabilitation, restoration, and reconstruction of districts, sites, buildings, structures, and objects significant in American history, architecture, archeology, or culture"), including the encouragement of preservation on the state and private levels; directs the expansion of the National Register of Historic Places to include cultural resources of state and local as well as national significance; authorizes matching Federal grants to states and the National Trust for Historic Preservation for acquisition and rehabilitation of National Register properties; established an Advisory Council on Historic Preservation. **The EIS must be more forthcoming in how you plan to comply with this Act.**

PAGE 3.11-1: Rather than just listing them, you must acknowledge the specific importance of the following regulatory framework:  
Executive Order 11593, Protection and Enhancement of the Cultural Environment (1971)  
American Indian Religious Freedom Act of 1978 42 USC 1996  
Antiquities Act of 1906 16 USC 431  
Archeological and Historic Preservation Act of 1974 16 USC 469  
Archaeological Resources Protection Act of 1979 16 USC 470aa  
Historic Sites, Buildings, and Antiquities Act of 1935 16 USC 461

*Executive Order 11593 of 1971 (Protection and Enhancement of the Cultural Environment)* says that the federal government will provide leadership in preserving, restoring and maintaining the historic and cultural environment of the Nation. Agencies will practice stewardship and trusteeship, initiate measure to preserve, restore and maintain such resources, and, in consultation with the Advisory Council on Historic Preservation, institute procedures to ensure that plans and programs are contribute to the preservation/enhancement of non-federal sites, structures and objects of historic, archaeological or architectural importance. This Order (36 F.R. 8921, May 13, 1971) directs Federal Agencies to inventory cultural properties under their jurisdiction, to nominate to the National Register of Historic Places all federally owned properties that meet the criteria, to use due caution until the inventory and nomination processes are completed, and also to assure that Federal plans and programs contribute to preservation and enhancement of nonfederally owned properties. Some of the provisions of the Executive Order were incorporated in Section 110 of the National Historic Preservation Act by amendment. **The EIS must mention and must be more forthcoming in how you plan to comply with this Act.**

*American Indian Religious Freedom Act of 1978* (P.L. 95-431) (42 U.S.C. 1996, 92 Stat. 469) establishes U.S. policy to protect and preserve for the American Indian, Eskimo, Aleut and Native Hawaiian, the right of freedom to believe, express, and exercise their traditional religions, including access to religious sites, use and possession of sacred objects, and freedom to worship through ceremonies and traditional rites. Such rights and freedoms cannot be disrupted by Federal agency practices. The act, a specific expression of First Amendment religious freedom guarantees, is not implemented by regulations. A court ruling determined there is a compliance element in the Act, requiring that a) the views of Indian leaders be obtained and considered when a proposed land use might conflict with traditional religious beliefs and practices, and that b) unnecessary interference with Indian religious practices be avoided during project implementation, but specifying that c) conflict need not necessarily bar Federal agencies from

CR-1

Response to Comment N-18728 (Page 9 of 20):

**TRAN-1:**

Table 4.6-2 of the EIS has been updated to refer to mitigation measure TRAN-1. As noted in Section 4.6.4.3 of the EIS although impacts would be lessened with implementation of mitigation measure TRAN-1, it is expected that impacts to transportation and circulation would still be significant since there are no other paved roads in the vicinity of North Amboy Road.

**AIR-3:**

Table 4.7-7 of the EIS has been updated to clarify impacts.

**BIO-3:**

Text in Section 4.10 has been modified to clarify the lack or presence of wildlife linkages. Level of impact to biological resources depends on the species and alternative. Please see table 4.10-14 for a listing by alternative of significant impacts (SI), significant impact mitigable to less than significant (SI-M), and less than significant impact (LSI). Table 4.10-14 of the EIS has been updated to refer to mitigation measures for biological resources.

**CR-2:**

Table 4.11-1 identifies archaeological sites by alternatives. Potential mitigation measures for cultural resources are described in Section 4.11.2.4 of the EIS.

Comment ID: N-18728 (Page 10 of 20)

adopting proposed land uses in the public interest (Wilson v. Block, 708 F.2d 735, 747). The EIS must mention and must be more forthcoming in how you plan to comply with this Act.

*Antiquities Act of 1906* (16 U.S.C. 431 et seq., 34 Stat. 225) provides for the protection of historic or prehistoric remains, or any object of antiquity, on Federal lands; establishes criminal sanctions for unauthorized destruction or appropriation of antiquities; and authorizes scientific investigation of antiquities on Federal lands, subject to permit and regulations. Permits must be obtained for examination of ruins, excavation of archaeological sites and the gathering of objects of antiquity. The EIS must mention and must be more forthcoming in how you plan to comply with this Act.

*Archaeological and Historic Preservation Act of 1974, as amended* (16 U.S.C. 469-469c; 74 Stat. 220) directs Federal agencies to notify the Secretary of the Interior whenever they find a Federal or Federally assisted, licensed or permitted project may cause loss or destruction of significant scientific, prehistoric, historic or archaeological data. Funds may be appropriated, donated and/or transferred for the recovery, protection and preservation of such data. Amended the Reservoir Salvage Act of 1960 (see separate entry). The EIS must mention and must be more forthcoming in how you plan to comply with this Act.

*Archaeological Resources Protection Act of 1979, as amended* (P.L. 96-95, 16 U.S.C. 470, 93 Stat. 721, P.L. 100-555, P.L. 100-588) provides felony-level penalties, more severe than those of the Antiquities Act, for the unauthorized excavation, removal, damage, alteration, or defacement of any archeological resource, more than 100 years of age, found on public lands or Indian lands. The act also prohibits the sale, purchase, exchange, transportation, receipt, or offering of any archeological resource obtained from public lands or Indian lands in violation of any Federal law. No distinction is made regarding National Register eligibility. The act establishes definitions, permit requirements, and criminal and civil penalties, among other provisions, to correct legal gaps and deficiencies in the Antiquities Act, which this act partially overlaps and supersedes. It is implemented by uniform regulations and departmental regulations, both at 43 CFR Part 7. The EIS must mention and must be more forthcoming in how you plan to comply with this Act.

*Historic Sites, Buildings and Antiquities Act of 1935, as amended* (P.L. 74-292) (49 Stat. 666; 16 U.S.C. 461-467) also popularly known as simply the Historic Sites Act, as amended by Public Law 89-249, October 9, 1965 (70 Stat. 971), declares it a national policy to preserve historic sites and objects of national significance. Provides procedures for designation administration and protection of sites, and establishes an Advisory Board. This act authorizes the programs that are known as the Historic American Buildings Survey, the Historic American Engineering Record, and the National Survey of Historic Sites and Buildings; authorizes the establishment of National Historic Sites and otherwise authorizes the preservation of properties "of national significance"; authorizes the designation of National Historic Landmarks; establishes criminal sanctions for violation of regulations pursuant to the act, authorizes interagency, intergovernmental, and interdisciplinary efforts for the preservation of cultural resources; and other provisions. The program is administered by the National Park Service. The EIS must mention and must be more forthcoming in how you plan to comply with this Act.

CR-1

Response to Comment N-18728 (Page 10 of 20):

GEN-10:

Chapter 6 contains tables that contain a summary of environmental impacts under each action alternative, potential mitigation measures, and summary of cumulative impacts. The chapter is designed to be a summary; therefore, there will be tables that are duplicated from other areas of the document.

As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace for the preferred alternative. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted and if the preferred alternative is changed, therefore, mitigation measure AM-1 is applicable to all alternatives. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Table 6.3 should read "Summary of Cumulative Impacts". The EIS has been modified to reflect this change.

Appropriate regulatory framework has been identified in Chapter 3 for each resource area.

No glossary or index has been included with the EIS. A summary "How To Use This Document" is provided on the backside of the cover page and a table of contents occurs at the beginning of the EIS to provide a layout of document content. As required by NEPA, the EIS was written at a level that is understandable by the public and technical jargon is explained as needed within each resource section.

Comment ID: N-18728 (Page 11 of 20)

Response to Comment N-18728 (Page 11 of 20):

PAGE 3.12-1: You must also acknowledge the importance of the following regulatory framework:

Soil and Water Resources Conservation Act of 1977 16 USC 2001  
Mineral Leasing Act of 1920 (Mineral Lands Leasing Act) 30 USC 181  
Mining Act of 1872 30 USC 26  
Mining and Minerals Policy Act of 1970 30 USC 21a  
Material Sales Act of 1947, as amended 30 USC 601  
Multiple Surface Use Act of 1955 60 Stat. 367

*Soil and Water Resources Conservation Act of 1977* (P.L. 95-192) (16 U.S.C. 2001, 91 Stat. 1407) recognizes the importance of and need for obtaining and maintaining information of the current status of soil, water and related resources. Authorizes and directs a continuing appraisal of the Nation's soil, water and related resources. The appraisal includes: a) data on the quality and quantity of such resources, including fish and wildlife habitats; b) data on the capability and limitations of those resources for meeting current and projected demands on the resource base; c) data on the changes that have occurred in the status and condition of those resources resulting from various past uses; d) data on current federal and state laws, policies, programs, rights, regulations, ownerships and trends and considerations relating to use, development and conservation; e) data on the costs and benefits of alternative conservation practices; f) data on alternative irrigation techniques regarding costs, benefits, and impact on conservation, crop production and environmental factors. **The EIS must mention and must be more forthcoming in how you plan to comply with this Act.**

GEO-1

*Mineral Leasing Act of 1920, as amended* (41 Stat. 437; 30 U.S.C. 181, P.L. 93-153, 87 Stat. 576) a) States that deposits of coal, phosphate, sodium, oil, oil shale, or gas, and lands containing such deposits owned by the United States... shall be subject to disposition in the form and manner provided by this act. b) The Mineral Leasing Act and the following listed regulations and operating agreements provide for protection of all types of surface resources on lands subject to oil and gas leasing. c) 43 CFR 3045. Surface Management Requirements for Geophysical Exploration. d) 43 CFR 3109. Surface Management Requirements for Oil and Gas Leasing. e) NTL-6 Operating Procedures. Surface operating standards for oil and gas exploration and development. f) Lease Stipulations are necessary to protect specific surface resources prior to lease issuance. **The EIS must mention and must be more forthcoming in how you plan to comply with this Act. Your project and EIS are not in compliance with this Act as your proposed closure of public lands would preclude the development of mining there.**

*Mining Act of 1872* (30 U.S.C. 21, 17 Stat. 91) known as the General Mining Law, restates the mineral policy on the public domain as spelled out in the Acts of 1866 and 1870. The 1872 law declared that "valuable" mineral deposits rather than simply "mineral deposits" as stated in the Lode Mining Law of 1866 were to be "free and open to exploration and purchase." Addresses placer and lode claims. Placers are "all forms of deposit, excepting veins of quartz, or other rock in place." The cost of patenting a placer claim was set at \$2.50 an acre. Local mining customs were still recognized. Lode locations could be no more than 1,500 feet long and 600 feet wide. Individual claimants were limited to 20 acres, while associations or groups could have 160-acre claims. To protect claims from others, claimants had to perform \$100 of assessment work yearly

and show at least \$500 worth of improvements before the claims could be patented. Milling or processing sites could be entered on nonmineral land but could not exceed 5 acres. **Your project and EIS are not in compliance with this Act as your proposed closure of public lands would preclude the development of mining there.**

*Mining and Minerals Policy Act of 1970* (P.L. 91 631, 84 Stat. 1876; 30 U.S.C. 21a) declares a continuing policy of the Federal government in the national interest to foster and encourage private enterprise in: a) The development of economically sound and stable domestic mining, minerals, metal, and mineral reclamation industries. b) The orderly and economic development of domestic mineral resources, reserves, and reclamation of metals and minerals to help assure satisfaction of industrial, security, and environmental needs. c) Mining, mineral, and metallurgical research, including the use and recycling of scrap to promote the wise use of our natural and reclaimable mineral resources. d) The study and development of methods for the disposal, control and reclamation of mined land, so as to lessen any adverse impact of mineral extraction and processing upon the physical environment that may result from mining or mineral activities. **The EIS must mention and must be more forthcoming in how you plan to comply with this Act. Your project and EIS are not in compliance with this Act as your proposed closure of public lands would preclude the development of mining there.**

GEO-1

*Multiple Surface Use Act of 1955* (P.L. 167) (60 Stat. 367) amends the 1872 Mining Law and Material Sales Act. It authorizes the Federal Government to manage and dispose of the surface vegetation resources and other resources on unpatented mining claims. Excluded from location under the mining laws are common varieties of mineral materials such as sand, stone, gravel, pumice, pumicite, cinders, etc. The above laws, plus subsequent regulations (3600), provide for disposal of common variety mineral materials. All deposits are subject to the NEPA process and adequate measures must be taken to protect, minimize, or correct damage to the environment. No mineral materials are to be sold if it is determined that the aggregate damage to the public lands and resources would exceed the benefits derived from the proposed sale. **The EIS must mention and must be more forthcoming in how you plan to comply with this Act. Your project and EIS are not in compliance with this Act as your proposed closure of public lands would preclude the development of mining there.**

PAGE 3. 13-1: *Federal Water Pollution Control Act of 1948 (Clean Water Act)*, as amended (P.L. 92-500) (33 U.S.C. 1251 et seq., 86 Stat. 816, P.L. 95-217) was originally passed in 1948, and amendments of 1972 set up a Federal permit and license system to carry out certain pollution discharge activities in navigable waters. Section 402 requires permits from EPA for the discharge of any pollutant into navigable waters (Natl. Pollution Discharge Elimination System Permits). Section 404 provides for the Corps of Engineers to issue permits for the discharge of dredged or fill materials into the navigable waters with oversight by the EPA. Permit applications may be reviewed by USFWS for impacts on fish and wildlife. Activities associated with Marine Corps have the potential to impact surface water as a nonpoint source (NPS) of pollution. The objective of the Clean Water Act is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" (Section 101(a)). Both point and nonpoint source pollution are addressed. The amended Act of 1987 (Water Quality Act of 1987) added to this section that "it is the national policy that programs for the control of nonpoint sources of pollution be developed and implemented in an expeditious manner so as to enable the goals of

WAT-1

Comment ID: N-18728 (Page 13 of 20)

Response to Comment N-18728 (Page 13 of 20):

this Act to be met through the control of both point and nonpoint sources of pollution" (Section 101(a)(7)). The amendments to the Clean Water Act of 1987 also added Section 319 which identified the role of Best Management Practices in the control NPS. The Act requires the development of BMPs to control and reduce nonpoint source pollution "to the maximum extent practicable". The Nonpoint Source Task Force Report (1985) defined BMPs as "methods, measures, or practices to prevent or reduce water pollution, including, but not limited to, structural and nonstructural controls and operation and maintenance procedures". **The EIS must mention and must be more forthcoming in how you plan to comply with this Act.**

Section 313 of the CWA and Executive Order 12088 requires Federal Agencies to comply with all State requirements and programs to control water pollution from nonpoint sources. Is the Dept of Navy or Marine Corps a "Designated Management Agency" charged with implementing and enforcing programs for the protection of water quality on federal lands under its jurisdiction through sound management practices or Best Management Practices? If so, you must state this in the EIS. BMPs "meet the substantive requirements of the State practices" and follow the State approved nonpoint source management strategy addressing water quality standards in compliance with the CWA. **The EIS must mention and must be more forthcoming in how you plan to comply with this Act.**

PAGE 3, 13-1: You fail to acknowledge the importance of these Laws and Executive Orders:  
Safe Drinking Water Act of 1974 42 USC 300(f)  
Soil and Water Resources Conservation Act of 1977 16 USC 2001  
Executive Order 11988, Floodplain Management (1977)  
Executive Order 11990, Protection of Wetlands (1977)

*Safe Drinking Water Act of 1974* (P.L. 93-523) (43 U.S.C. 300, 88 Stat. 1660) requires each federal agency with jurisdiction over any federally owned or maintained public water system to comply with all national primary drinking water regulations, and shall comply with any applicable underground injection control program, and shall keep such records and submit reports as required under such program. **The EIS must mention and must be more forthcoming in how you plan to comply with this Act.**

*Soil and Water Resources Conservation Act of 1977* (P.L. 95-192) (16 U.S.C. 2001, 91 Stat. 1407) recognizes the importance of and need for obtaining and maintaining information of the current status of soil, water and related resources. Authorizes and directs a continuing appraisal of the Nation's soil, water and related resources. The appraisal includes: a) data on the quality and quantity of such resources, including fish and wildlife habitats; b) data on the capability and limitations of those resources for meeting current and projected demands on the resource base; c) data on the changes that have occurred in the status and condition of those resources resulting from various past uses; d) data on current federal and state laws, policies, programs, rights, regulations, ownerships and trends and considerations relating to use, development and conservation; e) data on the costs and benefits of alternative conservation practices; f) data on alternative irrigation techniques regarding costs, benefits, and impact on conservation, crop production and environmental factors. **The EIS must mention and must be more forthcoming in how you plan to comply with this Act.**

WAT-1

*Executive Order 11988 of 1977 (Floodplain Management)* is an order to avoid, to the extent possible, long and short term adverse impacts associated with occupancy and modification of floodplains, and to avoid support of floodplain development wherever there is a practicable alternative. Each agency shall provide leadership and shall take action to reduce the risk of flood loss, to minimize the impact of floods on human safety, health and welfare and to restore the natural and beneficial values served by floodplains. Calls for evaluating potential effects, considering alternatives, providing early public review, incorporating floodplain management into planning. **The EIS must mention and must be more forthcoming in how you plan to comply with this Order.**

WAT-1

*Executive Order 11990 of 1977 (Protection of Wetlands)* directs agencies to provide leadership and take action to minimize destruction, loss or degradation of wetlands, and to enhance and preserve the natural and beneficial values of wetlands when a)acquiring, managing and disposing of lands and facilities, b)providing construction and improvements, and c)conducting land use activities and programs. **The EIS must mention and must be more forthcoming in how you plan to comply with this Order.**

FIGURE 3.13-1: Why is each dry lake labeled two or three times each? Emerson is labeled four times! What's the name of the "Dry Lake" near Amboj? Ericksen and Troy Lakes aren't even shown on the map. Shouldn't "Ericksen Dry Lake" actually be "Anderson Dry Lake"?

WAT-2

PAGE 4.1-1: Explain what you mean by significant impact (SI), less than significant (LSI), no impact (NI). Also SI-M and BI. Explain how special conservation measures and mitigation measures are different, if they are.

PAGE 4.1-1: You also introduce significant impact-mitigatable (SI-M) in the biology section. If a significant impact is mitigatable, are you saying the residual impact would be LSI? You identify mitigation in various other sections, but you never use the SI-M acronym there. What good is the mitigation if the significant impacts are not being mitigated?

GEN-5

PAGE 4.1-1: You only introduce BI (beneficial impacts) in the public health and safety section. I find it real hard to believe that you have not been able to identify any beneficial impacts in any other sections.

CHAPTER 4: You need to more clearly quantify the thresholds for determining significance for each impact identified. In nearly every case that you say an impact is "less than significant," you provide no quantified rationale to back that up. Your conclusions about significance are unsubstantiated. I will provide some specific examples when I come to them. One example is the impact on local economies.

PAGE 4.1-4: What's the cost of closing and reclaiming 325 active mines? Quantify the number of inactive mines to be closed. How many will need remediation? What will be the cost? American Mine alone will cost millions to close and reclaim. How can you conclude that incompatibility with mining are considered "less than significant" under alternatives 1, 2, 4, 5 and 6?

GEN-6

Comment ID: N-18728 (Page 15 of 20)

Response to Comment N-18728 (Page 15 of 20):

PAGE 4.7-15: Under Alternative 1, you list a potential mitigation measure AM-1, but you say that the aeronautical study would only be completed by the FAA on the preferred alternative. Does this mitigation measure apply to alternative 1, the preferred alternative 6, or both, or all alternatives? It is unclear. Any why is the FAA only doing the study on the preferred alternative? They should be studying all the alternatives. It appears that the USMC and FAA have already made a decision and a secret agreement.

AIR-1

TABLE 4.7-11: If the impacts are “minimal to moderate,” then why are they “significant”? Identify which are minimal, and which are moderate? Identify which are LSI and which are SI.

AIR-2

PAGE 4.8-1: List the key data, assumptions and conclusions up front in section 4.8.1.1. It is unacceptable to just refer to Appendix G which has about 150 pages. You need a table of contents just for this lengthy, complex, technical appendix. There are sixty tables and a figure which have no explanations with each. Then you have an Appendix G.1 (LAS project conformity determinations), Attachment A (conformity evaluation), Attachment A-2 (PM10 dispersion modeling analyses), Appendix G.1.1 (Regulatory Review Status), Appendix G.2 (NO2 dispersion modeling analyses), Appendix G.3.1 (PM10 modeling for alternative 3), Appendix G.3.2 (NO2 modeling for alternative 3). It is unacceptable to have appendices within appendices. You are just trying to baffle the public with a bunch of bull.

AQ-2

PAGE 4.8-15: You need to try a lot harder to find some potential feasible mitigation measures. The public has identified a bunch. If you reject the public suggestions for mitigation, please explain why.

GEN-7

PAGE 4.9-1: List the key noise data, assumptions and conclusions up front in section 4.9.1.1. It is unacceptable to just refer to Appendix H which has about 150 pages. You need a table of contents just for this lengthy, complex, technical appendix. There are no explanations for the four different sections within Appendix H. The general public is supposed to be able to read this and understand it. As is, it is meaningless. You are just trying to baffle the public with a bunch of bull.

NOI-1

PAGE 4.9-5: You only list one public scoping issue (noise from training and activities). List all the scoping issues that were identified, not just one example. I would like to make sure that you have properly analyzed all the issues that were identified.

GEN-8

PAGE 4.9-9: You need to try a lot harder to find some potential feasible mitigation measures. The public has identified a bunch. Look in your own scoping report. I’m sure many will be proposed during this public comment period on the Draft EIS too. After listing all measures considered, if you reject the public suggestions for mitigation, please explain why.

GEN-9

TABLE 4.9-3: There will be significant localized noise impacts. It is wrong to say that noise will be “less than significant” under all alternatives.

1220 Pacific Highway  
San Diego, CA 92132-519

Dear sir:

Subject: Comments on the Draft EIS for 29 Palms

**AIR QUALITY**

You have been remiss in not addressing all of the state and national ambient air quality standards that are applicable in California. Your EIS must be revised to fully analyze:

State and National Ambient Air Quality Standards Applicable in California Pollutant	Averaging Time	Standards in Parts Per Million by Volume	Standards in Parts Per Million by Volume	Standards in Micrograms Per Cubic Meter	Standards in Micrograms Per Cubic Meter	Violation Criteria California	Violation Criteria National
		California	National	California	National		
Ozone	1 Hour	0.09	Standard rescinded	180	Standard rescinded	If exceeded	Not applicable
Ozone	8 Hours	0.070	0.075	137	147	If exceeded	If exceeded by the mean of annual 4th highest daily values for a 3-year period
Carbon Monoxide	1 Hour	20	35	23,000	40,000	If exceeded	If exceeded on more than 1 day per year
Carbon Monoxide	8 Hours	9.0	9	10,000	10,000	If exceeded	If exceeded on more than 1 day per year
Carbon Monoxide	8 Hours (Lake Tahoe Basin only)	6.0	9	7,000	10,000	If equalled or exceeded	If exceeded on more than 1 day per year
Nitrogen Dioxide	Annual Average	0.050	0.053	57	100	If exceeded	If exceeded
Nitrogen Dioxide	1 Hour	0.18	0.100	339	188	If exceeded	If exceeded by the mean of annual 98th percentile values over 3 years
Sulfur Dioxide	Annual Average	No standard	0.030	No standard	80	Not applicable	If exceeded

AQ-1

Response to Comment N-18729 (Page 1 of 10):

**AQ-1:**

Thank you for your comment. Table 3.8-1 of the DEIS includes the National/California ambient air quality standards (N/CAAQS) that are most applicable to the evaluation of the project alternatives, although it inadvertently does not include the CAAQS for 24-hour SO2. Table 3.8-1 does not contain the State standards for sulfates, hydrogen sulfide, or vinyl chloride, as the project alternatives would emit only minor amounts or none of these pollutants. A full listing of the N/CAAQS is available at <http://www.arb.ca.gov/research/aaqs/aaqs2.pdf>.

Section 4.8.1.2 of the EIS defines annual emission thresholds that are used as indicators in the air quality analysis to determine if proposed emissions would contribute to a significant impact. In other words, these emission thresholds determine the potential for proposed emissions to contribute to an exceedance of the ambient air quality standards.

**AQ-2:**

Many of the dust control measures listed in the comment are not applicable to proposed construction or operations. Section 3.8.2.3 of the EIS identifies one of the main MDAQMD rules that would apply to project emissions – Rule 403 (Fugitive Dust). MDAQMD Rule 403.2 (Fugitive Dust Control for the Mojave Desert Planning Area [MDPA]), also would apply to proposed construction activities that occur in the project West and South Study Areas, but no other areas, as they would occur outside of the MDPA. Rule 403.2 would not apply to project operations, as they are not applicable source categories identified in the rule (Section 403.2(A)(2)).

Comment ID: N-18729 (Page 2 of 10)

Sulfur Dioxide	24 Hours	0.04	0.14	103	355	If exceeded	If exceeded on more than 1 day per year
Sulfur Dioxide	3 Hours	No standard	0.5	No standard	1,300	Not applicable	If exceeded on more than 1 day per year
Sulfur Dioxide	1 Hour	0.25	No standard	635	No standard	If exceeded	Not applicable
Inhalable Particulate Matter (PM10)	Annual Arithmetic Mean	Not applicable	Not applicable	20	Standard rescinded	If exceeded	Not applicable
Inhalable Particulate Matter (PM10)	24 Hours	Not applicable	Not applicable	50	150	If exceeded	For 1997 non-attainment areas, if exceeded on more than 1 day per year. For other areas, if exceeded by the mean of annual 99th percentile values over 3 years
Particulate Matter (PM2.5)	Annual Arithmetic Mean	Not applicable	Not applicable	12	15.0	If exceeded	If exceeded as a 3-year spatial average of data from designated stations
Fine Particulate Matter (PM2.5)	24 Hours	Not applicable	Not applicable	No standard	35	Not applicable	If exceeded by the mean of annual 98th percentile values over 3 years
Lead Particles (TSP sampler)	Calendar Quarter	Not applicable	Not applicable	No standard	1.5	Not applicable	If exceeded
Lead Particles (TSP sampler)	Rolling 3-Month Average	Not applicable	Not applicable	No standard	0.15	Not applicable	If exceeded during a 3-year period
Lead Particles (TSP sampler)	30 Days	Not applicable	Not applicable	1.5	No standard	If exceeded	Not applicable
Sulfate Particles (TSP sampler)	24 Hours	Not applicable	Not applicable	25	No standard	If equalled or exceeded	Not applicable
Hydrogen Sulfide	1 Hour	0.05	No standard	42	No standard	If exceeded	Not applicable
Vinyl Chloride	24 Hours	0.01	No standard	26	No standard	If equalled or exceeded	Not applicable

Notes:

All standards except the national PM10 and PM2.5 standards are based on measurements corrected to 25 degrees C and 1 atmosphere pressure. The national PM10 and PM2.5 standards are based on direct flow volume data without correction to standard temperature and pressure. Decimal places shown for standard reflect the rounding or truncating conventions used for evaluating compliance.

AQ-1

Response to Comment N-18729 (Page 2 of 10):

AQ-2 Continued:

However, the project alternatives would cover the surfaces of new dirt roads constructed within these areas with gravel, which would minimize fugitive dust emissions from vehicles that operate on these roads. In addition, DEIS Section 4.8.2.1 identifies Special Conservation Measures (SCMs) for proposed construction activities that would exceed the applicable dust control requirements in Rule 403.2.

The DEIS performed a dispersion modeling analysis which determined that fugitive dust emissions from proposed operations would produce less than significant impacts to ambient PM10 levels for Alternatives 1, 2, and 4-6. However, the analysis determined that Alternative 3 would contribute to an exceedance of the NAAQS for PM10. Therefore, except for Project Alternative 3, the project alternatives would comply with the purpose of MDAQMD Rule 403.2, which is to ensure that the NAAQS for PM10 will not be exceeded due to anthropogenic sources of fugitive dust within the MDPA (Section 403.2(A)(1)(a)).

In addition to the MDAQMD rules identified above, Section 3.8.2.1 of the DEIS states that MDAQMD Rule 2002 (General Federal Actions Conformity) would apply to proposed construction and operation. As discussed below, proposed activities also would comply with this rule. Therefore, the EIS evaluated all applicable MDAQMD rules and regulations that apply to proposed construction and operation.

Comment ID: N-18729 (Page 3 of 10)

The "10" in PM10 and the "2.5" in PM2.5 are not particle size limits; these numbers identify the particle size class (aerodynamic diameter in microns) collected with 50% mass efficiency by certified sampling equipment. The maximum particle size collected by PM10 samplers is about 50 microns. The maximum particle size collected by PM2.5 samplers is about 6 microns. Data Sources: 40 CFR Part 50, 53, and 58; CARB (2010a); EPA (2010b).

In California, air quality regulation is a joint responsibility between CARB and local air quality management agencies. Local agencies are either a single county or a multi-county agency, typically called an Air Pollution Control District (APCD) or an Air Quality Management District (AQMD). APCDs and AQMDs have primary responsibility for most air quality regulatory programs, with CARB retaining oversight responsibilities. CARB directly implements statewide regulatory programs for motor vehicles, portable equipment, and hazardous air pollutants. The project area is under the jurisdiction of the Mojave Desert Air Quality Management District (MDAQMD).

You must identify if the MDAQMD has adopted other regulations that affect facility construction and operation. Training activities would be subject to fugitive dust control requirements that prohibit creation of dust plumes that are visible beyond the property line of the emission source, and requires all "active operations" (construction/demolition activities, earthmoving activities, heavy or light duty vehicle movements, or creation of disturbed surface areas) to implement applicable best available control measures as defined by MDAQMD. You must summarize all best available dust control measures outlined in MDAQMD rules as general dust control measures. Enhanced dust control requirements would apply since the training is considered large operations. A large operation could be any active operations on property which contains 50 or more acres of disturbed surface area, or any earthmoving operation with a daily throughput volume of 5,000 cubic yards or more three or more times during the most recent 365-day period.

You have not fully addressed Clean Air Act conformity. Section 176(c) of the CAA requires federal agencies to ensure that actions undertaken in nonattainment or maintenance areas are consistent with the CAA and with federally enforceable air quality management plans. EPA has promulgated separate rules that establish conformity analysis procedures for highway/mass-transit projects (40 CFR Part 93, Subpart A) and for other (general) federal agency actions (40 CFR Part 93, Subpart B). General conformity requirements are potentially applicable to many federal agency actions, but apply only to those aspects of an action that involve on-going federal agency responsibility and control over direct or indirect sources of air pollutant emissions.

The EPA conformity rule establishes a process that is intended to demonstrate that the proposed federal action:

- Would not cause or contribute to new violations of federal air quality standards;
- Would not increase the frequency or severity of existing violations of federal air quality standards; and
- Would not delay the timely attainment of federal air quality standards.

The EPA general conformity rule applies to federal actions occurring in nonattainment or maintenance areas when the total direct and indirect emissions of nonattainment pollutants (or their precursors) exceed specified thresholds. The emission thresholds that trigger requirements of the conformity rule are called de minimis levels. Emissions associated with stationary sources that are subject to permit programs incorporated into the SIP are not counted against the de minimis threshold.

In the DEIS, compliance with the conformity rule can be demonstrated in several ways. Compliance is presumed if the net increase in direct and indirect emissions from a federal action would be less than the relevant de minimis level. If net emissions increases exceed the relevant de minimis value, a formal conformity determination process must be followed. Federal agency actions subject to the general conformity rule cannot proceed until there is a demonstration of consistency with the SIP. **Your DEIS is currently inadequate in this regard.**

**NOISE**

**Your EIS has not adequately addressed:**

- Noise Descriptors
- Decibel Scales
- Decibel Values
- Applicability with Plans, Policies and Regulations
- Federal Criteria and Standards
- State Criteria and Standards
- Local Criteria and Standards (specifically San Bernardino County)
- Vibration

AQ-1

AQ-2

AQ-3

NOI-1

Response to Comment N-18729 (Page 3 of 10):

AQ-3

Regarding the adequacy of the project conformity evaluations, please see the responses to DEIS comments N-18713, AQ-3 and 2247, AQ-1. Appendix G.1.1 of the DEIS includes a letter from the MDAQMD stating their concurrence that the proposed action would comply with the requirements of MDAQMD Rule 2002, i.e., that the proposed action would conform to the State Implementation Plan (SIP).

**NOI-1:**

Appendix H has four sections – H-1 through H-4. Sections H-1 through H-3 contain a wealth of technical data used in the noise modeling. Only Section H-4 is the noise primer. Noise exposure from existing/current conditions are provided in Section 3.9. The EIS evaluates noise impacts under each of the action alternatives in Section 4.9. As noted in Section 4.1.2.7, *Sensitive Land Uses*, there are no sensitive receptors located within the areas where 62 dBC CNEL countour extends outside of the proposed boundaries. As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts. Impacts from noise and vibration would be less than significant, therefore, no mitigation measures have been proposed.

Comment ID: N-18729 (Page 4 of 10)

Noise is defined as unwanted or extraneous sound. Sound is caused by vibrations that generate waves of minute air pressure fluctuations. Air pressure fluctuations that occur from 20 to 20,000 times per second can be detected as audible sound. The number of pressure fluctuations per second is normally reported as cycles per second or Hertz (Hz). Different vibration frequencies produce different tonal qualities for the resulting sound. In general, sound waves travel away from the noise source as an expanding spherical surface. The energy contained in a sound wave is consequently spread over an increasing area as it travels away from the source. This results in a decrease in loudness at greater distances from the noise source.

**Decibel Scales**

Human hearing varies in sensitivity for different sound frequencies. The ear is most sensitive to sound frequencies between 800 and 8,000 Hz, less sensitive to higher and lower sound frequencies, and least sensitive to sound frequencies below 250 Hz. Peak sensitivity to pure tones typically occurs at frequencies between 2,000 Hz and 6,000 Hz. Relative sensitivity remains fairly high between about 250 Hz and 2,000 Hz. Relative sensitivity drops off slightly above 7,000 Hz, and drops off significantly below 200 Hz. In addition, relative sensitivity to different acoustic frequencies also varies with the intensity of the sound. Several different frequency weighting schemes have been developed, using different decibel (dB) adjustment values for each octave or 1/3 octave interval. Some of these weighting schemes are intended to approximate the way the human ear responds to noise levels, others are designed to account for the response of building materials to airborne vibrations and sound. The most commonly used decibel weighting schemes are the A-weighted and C-weighted scales.

The "A-weighted" decibel scale (dBA) is normally used to approximate human hearing response to sound. The A-weighted scale significantly reduces the measured pressure level for low frequency sounds while slightly increasing the measured pressure level for some middle frequency sounds. The "C-weighted" decibel scale (dBC) is often used to characterize low frequency sounds capable of inducing vibrations in buildings or other structures. The C-weighted scale makes only minor reductions to the measured pressure level for low frequency components of a sound while making slightly greater reductions to high frequency components than does the A-weighted scale.

**Common Noise Descriptors**

Varying noise levels are often described in terms of the equivalent constant decibel level. Equivalent noise levels (Leq) are used to develop single-value descriptions of average noise exposure over various periods. Such average noise exposure ratings often include additional weighting factors for annoyance potential due to time of day or other considerations. The Leq data used for these average noise exposure descriptors are generally based on A-weighted sound level measurements, although other weighting systems are used for special conditions (such as blasting noise).

Average noise exposure over a 24-hour period is often presented as a day-night average sound level (Ldn) or a community noise equivalent level (CNEL). Ldn values are calculated from hourly Leq values, with the Leq values for the nighttime period (10:00 PM to 7:00 AM) increased by 10 dB to reflect the greater disturbance potential from nighttime noises. CNEL values are very similar to Ldn values, but include a 5 dB annoyance adjustment for evening (7:00 PM to 10:00 PM) Leq values in addition to the 10 dB adjustment for nighttime Leq values. Except in unusual situations, the CNEL descriptor will be within 1.5 dB of the Ldn descriptor for the same set of noise measurements. Unless specifically noted otherwise, Ldn and CNEL values are assumed to be based on dBA measurements.

**Working with Decibel Values**

The nature of dB scales is such that individual dB ratings for different noise sources cannot be added directly to give the dB rating of the combination of those sources. Two noise sources producing equal dB ratings at a given location will produce a composite noise level 3 dB greater than either sound alone. When two noise sources differ by 10 dB, the composite noise level will be only 0.4 dB greater than the louder source alone. Most people have difficulty distinguishing the louder of two noise sources that differ by less than 1.5 to 2 dB. In general, a 10 dB increase in noise level is perceived as a doubling in loudness. A 2 dB increase represents a 15 percent increase in loudness, a 3 dB increase is a 23 percent increase in loudness, and a 5 dB increase is a 41 percent increase in loudness.

When distance is the only factor considered, sound levels from an isolated noise source will typically decrease by about 6 dB for every doubling of distance away from the noise source. When the noise source is essentially a continuous line (e.g., vehicle traffic on a highway), noise levels decrease by about 3 dB for every doubling of distance.

**Applicable Plans, Policies, and Regulations**

Response to Comment N-18729 (Page 4 of 10):

**GEO-1:**

As indicated in Section 3.12 of the EIS public health and safety regarding earthquake-related hazards are addressed by the Alquist-Priolo Earthquake Fault Zoning Act, State Seismic Hazards Mapping Act, and the California Building Code. Section 4.12.1.1 and 4.12.1.2 of the EIS discuss methodology and evaluation criteria, respectively, in regards to the analysis for impacts to geological resources in regards to the identified regulatory framework.

**CR-1:**

Section 2.8.5 identifies Special Conservation Measures that would be implemented to manage cultural resources, including paleontological resources.

**PHS-1:**

The list of Regulatory Framework provided has been reviewed and incorporated into the EIS as appropriate.

NOI-1

Comment ID: N-18729 (Page 5 of 10)

Various federal, state, and local agencies have developed guidelines for evaluating land use compatibility under different noise level ranges. The federal Noise Control Act of 1972 (Public Law 92-574) established a requirement that all federal agencies must administer their programs in a manner that promotes an environment free from noise that jeopardizes public health or welfare. The US Environmental Protection Agency (EPA) was given the responsibility for: providing information to the public regarding identifiable effects of noise on public health or welfare, publishing information on the levels of environmental noise that will protect the public health and welfare with an adequate margin of safety, coordinating federal research and activities related to noise control, and establishing federal noise emission standards for selected products distributed in interstate commerce. The federal Noise Control Act also directed all federal agencies to comply with applicable federal, state, interstate, and local noise control regulations to the same extent that any person is subject to such requirements.

Although EPA was given major public information and federal agency coordination roles, each federal agency retains authority to adopt noise regulations pertaining to agency programs. EPA can require other federal agencies to justify their noise regulations in terms of the federal Noise Control Act policy requirements, but has no authority to approve or disapprove the noise regulations and policies of other federal agencies. The Occupational Safety and Health Administration has primary authority for setting workplace noise exposure standards. Due to aviation safety considerations, the Federal Aviation Administration has primary jurisdiction over aircraft noise standards.

*Federal Criteria and Standards*

In response to the requirements of the federal Noise Control Act, EPA (1974) has identified indoor and outdoor noise limits to protect public health and welfare (hearing damage, sleep disturbance, and communication disruption). Outdoor Ldn values of 55 dB and indoor Ldn values of 45 dB are identified as desirable to protect against speech interference and sleep disturbance for residential, educational, and health care areas. Noise level criteria to protect against hearing damage in commercial and industrial areas are identified as 24-hour Leq values of 70 dB (both outdoors and indoors).

In 1980 the Federal Interagency Committee on Urban Noise (FICUN) developed guidelines to evaluate whether existing and proposed land uses are compatible with prevailing noise levels. The primary federal agencies participating in the FICUN report included EPA, the Department of Defense, the Department of Housing and Urban Development (HUD), the Department of Transportation, and the Veterans Administration. The FICUN guidelines address land use compatibility and recommend building design considerations according to three noise level categories.

Zone 1 = Ldn or CNEL levels below 65 dB;  
Zone 2 = Ldn or CNEL levels of 65 to 75 dB; and  
Zone 3 = Ldn or CNEL levels above 75 dB.

The FICUN guidelines indicate that all land uses are compatible with Zone 1 noise levels. Educational and residential land uses generally are not compatible with Zone 2 noise levels unless special acoustic treatments and designs are used to ensure acceptable interior noise levels. Residential and educational land uses are not compatible with Zone 3 noise levels. Industrial and manufacturing land uses may be acceptable in Zone 3 areas if special building designs and other measures are implemented.

The Federal Highway Administration (FHWA) has adopted criteria for evaluating noise impacts associated with federally funded highway projects and for determining whether these impacts are sufficient to justify funding noise mitigation actions (47 FR 13129653-29656). FHWA noise abatement criteria are based on peak hour Leq noise levels, not Ldn or 24-hour Leq values. The peak 1-hour Leq criteria for residential, educational, and health care facilities are 67 dB outdoors and 52 dB indoors. The peak 1-hour Leq criterion for commercial and industrial areas is 72 dB (outdoors).

The relationship between peak hour Leq values and associated Ldn values depends on the distribution of traffic over the entire day. There is no precise way to convert a peak hour Leq value to an Ldn value. In urban areas with heavy traffic, the peak hour Leq value is typically 2 to 4 dB lower than the daily Ldn value. In less heavily developed areas, the peak hour Leq is often equal to the daily Ldn value. For rural areas with little nighttime traffic, the peak hour Leq value will often be 3 to 4 dB greater than the daily Ldn value.

HUD has established guidelines for evaluating noise impacts on residential projects seeking financial support under various grant programs (44 FR 13540860-40866). Sites are generally considered acceptable for residential use if they are exposed to outdoor Ldn values of 65 dB or less. Sites are considered "normally unacceptable" if they are exposed to outdoor Ldn values of 65 to 75 dB. Sites are considered unacceptable if they are exposed to outdoor Ldn values above 75 dB.

NOI-1

Response to Comment N-18729 (Page 5 of 10):

GEN-1:

No glossary or index has been included with the EIS. A summary "How To Use This Document" is provided on the backside of the cover page and a table of contents occurs at the beginning of the EIS to provide a layout of document content. As required by NEPA, the EIS was written at a level that is understandable by the public and technical jargon is explained as needed within each resource section.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

*State Criteria and Standards*

The California Governor's Office of Planning and Research (2003) has published guidelines for the noise element of local general plans. These guidelines include a noise level/land use compatibility chart that categorizes outdoor CNEL/Ldn levels into as many as four compatibility categories (normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable), depending on land use. For many land uses, the chart shows overlapping CNEL/Ldn ranges for two or more compatibility categories.

The noise element guidelines chart identifies the normally acceptable range for low density residential uses as CNEL/Ldn values less than 60 dB, while the conditionally acceptable range is 55 to 70 dB. The normally acceptable range for high density residential uses is identified as CNEL/Ldn values below 65 dB, while the conditionally acceptable range is identified as 60 to 70 dB. For educational and medical facilities, CNEL/Ldn values below 70 dB are considered normally acceptable, while values of 60 to 70 dB are considered conditionally acceptable. For office and commercial land uses, CNEL/Ldn values below 70 dB are considered normally acceptable, while values of 67.5 to 77.5 dB are categorized as conditionally acceptable. The overlapping CNEL/Ldn ranges are intended to indicate that local conditions (existing noise levels and community attitudes toward dominant noise sources) should be considered in evaluating land use compatibility at specific locations.

*Local Criteria and Standards*

Cities and counties in California are required to adopt a noise element as part of their general plans. Many cities and counties have incorporated the California Department of Health Services land use compatibility guidelines as a key item in the general plan noise element, while other cities and counties have developed their own land use compatibility guidelines. In addition to local general plan noise elements, some cities and counties have adopted noise ordinances to legally define noise nuisances. Local noise ordinances vary considerably in their format and coverage. Many noise ordinances establish property line performance standards for different land use or zoning categories. There is considerable variation among communities as to the types of noise sources covered under local noise ordinances.

The DEIS must say if there is a noise element of the San Bernardino County General Plan that identifies noise-sensitive land uses for: ?

- Residential uses,
- Schools,
- Hospitals,
- Rest homes,
- Long-term care facilities,
- Mental care facilities,
- Libraries,
- Places of worship, and
- Passive recreation uses.

Your EIS must identify if San Bernardino County has adopted land use compatibility criteria as part of the noise element of the County Land Use Plan.

In Riverside County, for example, the noise element of the County General Plan includes numerous policies intended to minimize noise-related conflicts between adjacent types of land uses. These policies include the following:

- Discourage noise-sensitive land uses from being located in areas exposed to CNEL levels above 65 dBA;
- Guide noise-tolerant land uses into areas committed to land uses that are noise-producing, such as transportation corridors or areas adjacent to airports;
- Minimize noise spillover or encroachment from commercial and industrial land uses into adjoining residential neighborhoods or noise-sensitive areas;
- Discourage projects that cannot successfully mitigate excessive noise;
- Require commercial or industrial truck delivery hours to be limited when next to noise-sensitive land uses unless there is no feasible alternative or there are overriding transportation benefits;

NOI-1

Comment ID: N-18729 (Page 7 of 10)

Response to Comment N-18729 (Page 7 of 10):

- New land use development within Airport Influence Areas should comply with airport land use noise compatibility criteria contained in the applicable airport land use compatibility plan;
- Require development that generates increased traffic and subsequent increases in ambient noise level adjacent to noise-sensitive land uses to provide for appropriate mitigation measures;
- Ensure that construction activities are regulated to establish hours of operation in order to prevent or mitigate the generation of excessive or adverse noise impacts on surrounding areas;
- Require that all construction equipment utilize noise reduction features (such as mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer; and
- Consider the issue of adjacent residential land uses when designing and configuring all new non-residential development. Design and configure on-site ingress and egress points to divert traffic away from nearby noise-sensitive land uses to the greatest degree practicable.

The DEIS must also identify if the noise element of the San Bernardino County General Plan also identifies preferred noise standards for stationary noise sources that affect residential land uses.

Again as an example, Riverside County has adopted a noise ordinance (Ordinance 847) to regulate noise sources on one property that may impact adjacent properties. The noise ordinance sets general noise standards according to the land use designation of the affected property. Table 3.10-4 summarizes the basic noise standards in Riverside County Ordinance 847. The Riverside County noise ordinance also includes special provisions related to sound amplification systems, live music, audio equipment, and power tools. The noise ordinance also provides for exceptions from the general and special noise standard provisions.

**Vibration**

The DEIS does not adequately analyze the impacts of vibration.

Ground-borne vibrations can be a source of annoyance to people or a source of structural damage to some types of buildings. Although vibration measurements can be presented in many different forms, peak particle velocity (PPV) is the unit of measure used most often to assess building damage potential. The California Department of Transportation (Caltrans) has identified vibration impact criteria for both building damage potential and human annoyance (Caltrans 2002, 2004). These references are listed below. Both human annoyance effects and building damage effects depend in part on whether vibration events are isolated, discrete events or a relatively continuous episode of vibrations. In general, there is less sensitivity to single, discrete events than to continuous events or frequently repeated discrete events.

You must utilize the following references for adequate analysis:

Caltrans (California Department of Transportation). 2002. Transportation Related Earibhorne Vibrations. Technical Advisory TAV-02-01-R9601. Sacramento, CA. Internet Web site: <http://www.dot.ca.gov/hq/env/noise/publications.htm>. Accessed on March 04, 2008.

Caltrans (California Department of Transportation). 2004. Transportation- and Construction-Induced Ground Vibration Guidance Manual. Prepared by Jones & Stokes. Sacramento, CA. Internet Web site: <http://www.dot.ca.gov/hq/env/noise>. Accessed on March 04, 2008.

The EIS must summarize Caltrans criteria for assessing the effects of ground-borne vibration. Type of criteria can be either human response OR building damage. Threshold conditions pertain to the perceptibility for human response, or it can involve varying levels of cosmetic damage for building damage. The DEIS must analyze the peak particle velocity in inches/second to determine if vibration thresholds will be exceeded, especially as a result of transient and/or continuous/frequent sources in all areas and airspace proposed for possible acquisition by the U.S. Marine Corps.

The DEIS must also include consideration of ground-borne vibrations. The following land uses are typically identified by the noise element in a County land use plan as being vibration sensitive:

- Hospitals,
- Residential areas,

NOI-1

- Concert halls,
- Libraries,
- Sensitive research operations,
- Schools, and
- Offices.

The DEIS must consider noise and vibration mitigation to vibration include the following:

- Restrict the placement of sensitive land uses in proximity to vibration-producing land uses, and
- Prohibit the exposure of residential dwellings to ground vibration from passing trains that would be perceptible on the ground or second floors (vibrations are presumed to be perceptible if they exceed a peak particle velocity of 0.01 inch per second over a range of 1 to 100 Hz)

NOI-1

**GEOLOGY AND EARTHQUAKE HAZARD**

The DEIS is not adequate in its recognition and analysis of compliance with the following application State of California laws:

*Alquist-Priolo Earthquake Fault Zoning Act*

The Alquist-Priolo Earthquake Fault Zoning Act of 1972 regulates development and construction of buildings intended for human occupancy to avoid the hazard of surface fault rupture. This act provides mitigation against surface fault rupture of known active faults beneath occupied structures, and requires disclosure of the presence of any seismic faults to potential real estate buyers and a 50-foot setback for new occupied buildings. The Alquist-Priolo Earthquake Fault Zoning Act helps define where fault rupture is most likely to occur. This act groups faults into categories of active, potentially active, and inactive. **This information must be disclosed in the EIS.**

GEO-1

*Seismic Hazards Mapping Act*

The Seismic Hazards Mapping Act of 1990 directs the California Geological Survey to delineate seismic hazard zones. The purpose of this act is to reduce the threat to public health and safety, and to minimize the loss of life and property by identifying and mitigating seismic hazards. These seismic hazards include areas that are subject to the effects of strong ground shaking such as liquefaction, landslides, tsunamis and seiches. Cities, counties, and state agencies are directed to use seismic hazard zone maps developed by the California Geological Survey in their land use planning and permitting processes. This act requires that site-specific geotechnical investigations **Those must be undertaken before any land acquisition can proceed. This information must be disclosed in the EIS.**

**PALEONTOLOGICAL RESOURCES**

Paleontological resources constitute a fragile and nonrenewable scientific record of the history of life on earth. The BLM policy is to manage paleontological resources for scientific, educational, and recreational values and to protect these resources from adverse impacts. To accomplish this goal, the USMC and your cooperating agency (BLM) must ensure that proposed land uses that it initiates or authorizes do not inadvertently damage or destroy important paleontological resources or public lands.

To ensure the protection of paleontological resources, the USMC considers paleontological data as early as possible in the decision-making process for any project. As part of this ongoing consideration, the USMC and BLM must collate existing information on paleontological resources and uses this information to classify the geologic formations present for their potential to contain vertebrate fossils or invertebrate or plant fossils that are scientifically important. **The EIS must include this information.**

CR-1

**Applicable Plans, Policies, and Regulations**

The major laws protecting paleontological resources on federal lands include the Paleontological Resources Preservation Act (PRPA) which was signed into law as part of the Omnibus Public Lands Management Act (OPLA) of 2009. The PRPA requires the Secretary of the Interior to manage and protect paleontological resources on federal land using scientific principles and expertise, and requires the USMC to develop appropriate plans for inventorying, monitoring, and the scientific and educational use of paleontological resources, in accordance with applicable agency laws, regulations, and policies. Where possible, these plans should emphasize interagency coordination and collaborative efforts with non-federal partners, the scientific community, and the general public.

Comment ID: N-18729 (Page 9 of 10)

Response to Comment N-18729 (Page 9 of 10):

Other major authorities protecting paleontological resources on federal lands are the Federal Land Policy and Management Act (FLPMA), NEPA, and various sections of regulations.

While paleontological resources are often discussed in parallel to or linked with historical and cultural resources in planning and environmental impact analyses, the identification and classification of paleontological resources is based on geologic units. BLM is a cooperator on your EIS. Therefore, you should use their system for analyzing impacts on paleontological resources. On October 15, 2007, the BLM formalized the use of a new classification system for identifying fossil potential on public lands with the release of instruction memorandum IM 2008-009. The Potential Fossil Yield Classification (PFYC) system is based on the potential for the occurrence of significant paleontological resources in a geologic unit, and the associated risk for impacts to the resource based on federal management actions. Occurrences of paleontological resources are closely tied to the geologic units (i.e., formations, members, or beds) that contain them.

Using the PFYC system, geologic units are classified (Class 1 – Very Low through Class 5 – Very High) based on the relative abundance of vertebrate fossils or scientifically significant invertebrate or plant fossils and their sensitivity to adverse impacts, with a higher class number indicating a higher potential. It is used to set management policies and not intended to be applied to specific paleontological localities or small areas within units.

While they are being updated to reflect the requirements of the PRPA and the PFYC system, the BLM Manual 8270 and BLM Handbook H-8270-1 contain the agency's guidance for managing paleontological resources on public land. The manual has more information on the authorities and regulations related to paleontological resources. The handbook gives procedures for permit issuance, requirements for qualified applicants, information on paleontology and planning, and a classification system for potential fossil-bearing geologic formations on public lands.

Your DEIS is currently not adequate in its analysis on paleontological resources.

**PUBLIC HEALTH, SAFETY, TRANSPORTATION AND ACCESS**

*Oil Pollution Prevention (40 CFR Part 112)*

The goal of the oil pollution prevention regulation in 40 Code of Federal Regulations (CFR) Part 112 is to prevent oil discharges from reaching navigable waters of the United States or adjoining shorelines. Facilities that could reasonably be expected to discharge oil into navigable waters in quantities that may be harmful are required to develop and implement Spill Prevention, Control and Countermeasures (SPCC) plans per the SPCC rule.

*Occupational Safety and Health Administration*

The Occupational Safety and Health Administration (OSHA) administers health standards that: (1) provide regulations for safety in the workplace; (2) regulate construction safety; and (3) require a Hazards Communication Plan. The plan includes identification and inventory of all hazardous materials for which Material Safety Data Sheets (MSDS) would be maintained, and employee training in safe handling of said materials.

*Federal Aviation Administration Regulations (14 CFR 77)*

Title 14 CFR Section 77 contains standards for determining physical obstructions to navigable airspace. Form 7460-1, Notice of Proposed Construction or Alteration, must be filed with the Federal Aviation Administration (FAA) if an object to be constructed has the potential to affect navigable airspace according to these standards.

*Federal Transportation Regulations (49 CFR, Subtitle B)*

Title 49 CFR, Subtitle B, contains procedures and regulations pertaining to interstate and intrastate transport, including hazardous materials program procedures, and

*State of California*

*California Environmental Protection Agency*

The California Environmental Protection Agency (Cal EPA) unifies California's environmental authority, consolidating the California Air Resources Board (CARB), State Water Resources Control Board (SWRCB), Regional Water Quality Control Board (RWQCB),

CR-1

PHS-1

Comment ID: N-18729 (Page 10 of 10)

Response to Comment N-18729 (Page 10 of 10):

Integrated Waste Management Board (IWMB), the DTSC, Office of Environmental Health Hazard Assessment (OEHHA), and the Department of Pesticide Regulation (DPR) under one agency. The California Hazardous Waste Control Law is administered by Cal EPA's DTSC.

*Department of Toxic Substance Control*

The DTSC is the primary agency in California that regulates hazardous waste, administers clean-ups of existing contamination and looks for ways to reduce hazardous waste produced in California. The DTSC regulates hazardous waste in California primarily under the authority of RCRA and the California Health and Safety Code. The DTSC manages, maintains and monitors the Cortese list of hazardous waste sites. The Cortese list, or Hazardous Waste and Substances Sites List, is a planning resource used by the state, local agencies, and developers to comply with CEQA requirements in providing information about the location of hazardous materials release sites.

*California Emergency Management Agency*

The California Emergency Management Agency (Cal/EMA) was formed January 1, 2009 as a result of a merger between the Governor's Office of Emergency Services (OES) and the Office of Homeland Security. The Hazardous Materials Unit of the Cal/EMA is responsible for HAZMAT emergency planning and response, spill release notifications, and HAZMAT enforcement of the Unified Program. The OES provides emergency response services in support of local jurisdictions.

*California Public Utilities Commission*

You must state and analyze whether you would use the CPUC General Order 95 and 165, as related to fire-safe design and maintenance practices for transmission lines, to establish minimum requirements for the Project regarding inspection (including maximum allowable inspection cycle lengths), condition rating, scheduling and performance of corrective action, record keeping and reporting, in order to ensure a safe and high-quality electrical service.

*California Vehicle Code*

The California Vehicle Code contains regulations applicable to roadway damage, licensing, size, weight, and load of vehicles operated on highways; safe operation of vehicles; and the transportation of hazardous materials.

*San Bernardino County*

The DEIS has not adequately addressed all applicable plans, policies and regulation of the:

County of San Bernardino Department of Environmental Health

County of San Bernardino Fire Department

All Other Applicable San Bernardino County Departments

**OTHER COMMENTS**

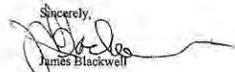

Please include a glossary in the EIS.

Due to the volume and complexity of this project and EIS, please extend the comment period for an additional 90 days.

Please schedule formal public hearings on this proposal.

PHS-1

GEN-1

Sincerely,  
  
James Blackwell

4505 Maryland Parkway  
RAJ 280 Box 452040  
Las Vegas, Nevada 89154-2040

Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-519

To whom it may concern:

Despite your best intentions to get the 29 Palms EIS in compliance with CEQ implementation regulations for NEPA (40 CFR 1500-1508), you have failed. The following are my comments, along with relevant references to the CEQ regulations that you have failed to comply with:

**Cover Sheet:**

- \* You have not identified the cooperating agencies assisting with this project §1502.11 (a)
- \* CEQ requires a one-paragraph abstract, and you have put in four §1502.11 (e)
- \* You have not identified when comments must be received §1502.11 (f)
- \* Regarding agency-specific requirements, you have not provided a proper reference to the Marine Corps Order P5090.2A, Change 2. Include that item in your references cited.

NEPA-1

**Summary:**

- \* CEQ requires it to be less than 15 pages §1502.12. With the 4 tables, your summary is 36 pages.
- \* You have failed to stress major conclusions §1502.12
- \* You fail to stress areas of controversy §1502.12
- \* You fail to stress issues raised by agencies, by the public and those that be resolved §1502.12

NEPA-2

**Table of Contents:**

- \* Your page numbering is messed up. Numbers run sequentially for chapter 1 and 2, but then you just give section references for chapter 3 and 4 before going back to sequential page numbering for chapter 5 until end. Use sequential numbering for all chapters.

NEPA-3

**Purpose and Need:**

- \* You have failed to relate the Purpose & Need to alternatives including the proposed action §1502.13

NEPA-4

**Proposed Action and Alternatives:**

- \* You have failed to base this section on information/analysis in sections on Affected Environment and Environmental Consequences §1502.14
- \* You have failed to rigorously explore all reasonable alternatives §1502.14 (a). While you study the east half of Johnson Valley, you don't study just the north half or just the south half.
- \* You have failed to objectively evaluate all reasonable alternatives §1502.14 (a). You haven't studied the repeal of wilderness areas to the east of the base. To meet your needs, you haven't studied the possibility of putting training corridors through the wilderness areas to the south and east of the base.
- \* You haven't adequately stated why certain alternatives were eliminated from detailed study §1502.14 (a). For example, your reasoning for not studying an integrated training area with the Army is inadequate, as is the reason for not studying the repeal of wilderness areas.
- \* You have failed to include reasonable alternatives not within the jurisdiction of the agency §1502.14 (c). The examples above are just a few that you need to study.
- \* You have not included mitigation measures in this section not described elsewhere §1502.14 (f)

NEPA-5

Response to Comment N-18730 (Page 1 of 3):

**NEPA-1:**

Thank you for your comment. The FEIS will have a CEQ compliant cover sheet. As for the abstract, a document of this size justifies more than one paragraph.

**NEPA-2:**

The CEQ regulations at 40 CFR § 1502.12 do not require a Summary to be less than 15 pages. The regulations say a Summary should usually be no longer than 15 pages. The longer the document, the longer the Summary will likely be. Major conclusions are found in Table ES-2. Areas of controversy, as raised during the scoping process are addressed on pages ES-5 and ES-6.

**NEPA-3:**

Comment noted.

**NEPA-4:**

The cited regulation requires the EIS to briefly specify the underlying purpose and need of the proposed action. Paragraph 1.3.1 on page 1-4 of the DEIS states the who, what, where, when and why of the proposed action. How the purpose and need relates to the proposed action is addressed in Chapter 2 of the DEIS. The screening criteria for alternatives are included in Section 2.3

**NEPA-5:**

*Forty Most Asked Questions Concerning CEQ's NEPA Regulations* (46 Fed. Reg. 18026) clarifies the CEQ regulations, "In order to avoid duplication between these two [alternatives and environmental consequences] sections, most of the 'alternatives' section should be devoted to describing and comparing the alternatives." Chapter 2 presents the alternatives in comparative form and is indeed based on

Comment ID: N-18730 (Page 2 of 3)

**Affected Environment:**

- It is unclear how many total pages are in this chapter, but it is not "succinct description" as required by CEQ regulation §1502.15
- This chapter should be "no longer than necessary to understand the effects of alternatives" §1502.15. In sections where you conclude No Impacts or Less than Significant Impacts, you should make those Affected Environment sections much more succinct.
- These sections are to be "commensurate with importance of impacts" §1502.15. In sections where you conclude No Impacts or Less than Significant Impacts, you should make those Affected Environment sections much more succinct.
- Your DEIS is inadequate because you have not attempted to "summarize, consolidate, or reference less important material" in accord with CEQ reg §1502.15
- Your DEIS is inadequate because you have not attempted to "concentrate effort and attention on the important issues" per CEQ reg §1502.15

NEPA-6

**Environmental Consequences:**

- This section is meant to be the scientific and analytic basis for comparison of alternatives §1502.16. You have failed to show the adverse effects which cannot be avoided 102(2)(C) i.
- While some direct effects are show, you have not provided thresholds (in terms of quantification, scope, magnitude, duration, intensity) to clearly show their significance with substantiated conclusions § 1502.16 (a). For example, it could be argued that impacts to local businesses would be significant rather than "less than significant." One person's business failing is very significant to that business and its owner.
- You have failed to indicate indirect effects and significance § 1502.16 (b). For example, the failure of one business will have domino effects on our associated business, as well as recreation, tourism
- You fail to show conflicts with various laws, other plans and policies § 1502.16 (c)
- You need to analyze and quantify the energy requirements and conservation potentials of alternatives and mitigation measures. It is required by CEQ regulation § 1502.16(e)
- You fail to indicate the natural or depletable resource requirements and conservation potentials of alternatives and mitigation measures § 1502.16 (f)
- You are required to show the urban quality, historic and cultural resources, and design of the built environment, including reuse and conservation potential of alternatives and mitigation measures § 1502.16 (g)
- You have failed to show adequate mitigation measures § 1502.16 (h). Many examples include finding replacement wheeling areas to open, a BLM land sale program with money raised to purchase new areas, Congressional appropriations for OHV land purchase, signing, boundary marking, law enforcement support, public outreach, planning, coordination, a public committee to provide oversight in the restricted area.
- Your section on cumulative impacts is not complete § 1508.7. There are many additional projects that have not been included. For example, see the latest list of wind, solar, geothermal projects maintained by BLM.
- The EIS should use conditional language (e.g. "Would" instead of "Will") when describing the proposed action, alternatives, impacts and the future. For example your "Environmental Consequences" section has many instances of the word "will" when it should be "would" in the majority of cases, especially in reference to impacts. This use of "will" instead of "would" is very prevalent in the geology, transportation, airspace and biology sections of chapter 4.

NEPA-7

**Appendix:**

- These are meant to be material prepared specifically for EIS § 1502.18, and which substantiate fundamental analyses § 1502.18. Appendices are supposed to be analytic and relevant to decision § 1502.18. Appendix B is not needed. The information in Appendix B is already within the EIS.

NEPA-8

Response to Comment N-18730 (Page 2 of 3):

**NEPA-5 Continued:**

the information and analysis of Chapters 3 and 4. All reasonable alternatives, i.e., those meeting the selection criteria and the purpose and need of the proposed action, are considered. The alternatives you suggest do not meet these standards. Section 2.7 on pages 2-95 to 2-99 discusses why a variety of alternatives were considered but eliminated. Section 2.8 on pages 2-99 to 2-107 describes Special Conservation Measures that are part of the proposed action. Potential mitigation measures are addressed in Chapter 4. Table ES-28 in the Executive Summary and Table 6-2 in Chapter 6 cover all mitigation measures.

**NEPA-6:**

The Affected Environment section presents the baseline conditions that would continue under the No-Action Alternative. The description of the affected environment as presented in the EIS enables decisionmakers, resource agencies, and the public to compare the magnitude of environmental effects of the action alternatives. Chapter 3 on the Affected Environment seeks to provide the reader with the essential information on each resource area. Resource areas of greater impact importance are comparatively longer than are those of less impact. For example, the Transportation and Circulation section is seven pages in length, while the Biological Resources section is 62 pages.

**NEPA-7:**

Chapter 4 begins each resource section by explaining the methodology used to analyze each alternative's impact on that resource area, the evaluation criteria used to determine the significance of such impacts, and issues that were raised about each

**Comment ID: N-18730 (Page 3 of 3)**

- The air quality section fails to evaluate whether the action and alternatives would be subject to New Source Performance Standards.
- The air quality section fails to evaluate whether the action and alternatives would be subject to National Emissions Standards for Hazardous Air Pollutants.
- You must show the results and conclusions of consultation with the US Fish and Wildlife Service.
- The EIS must analyze the impacts of the action on biodiversity of the affected ecosystem, including genetic diversity and species diversity.
- The EIS must quantify the habitat types and provide estimates by type for the amount of habitat lost or adversely affected.
- The EIS must consider and show the measures to protect, restore and enhance wildlife habitat.
- The EIS must consider a reasonable spectrum of potential accident scenarios that could occur over the life of the proposed action, including the maximum reasonably foreseeable accident. This is especially important within all areas to be shared with the public, as well as for transportation accidents.

NEPA-8

I look forward to seeing how you address all my comments in the Final EIS.

Yours truly,  
James Howell

**Response to Comment N-18730 (Page 3 of 3):**

**NEPA-7 Continued:**

resource area during the public scoping process. Both direct and indirect impacts area analyzed. Each resource section concludes with a summary of impacts for each alternative. The geographic and temporal boundaries for the Cumulative Effects section are described in Section 5.2. Finally, the EIS does use conditional language, i.e., “would” instead of “will” throughout the document. The USMC has reviewed the EIS to ensure there are no improper uses of “will.”

**NEPA-8:**

Appendix B provides the reader with a more detailed description of all 23 training areas and any current restriction or focused uses that may apply. None of the activities, or operations contemplated by the proposed action would result in stationary or area sources of hazardous air pollutants. Similarly, the proposed action implicates no source category governed by emissions guidelines or new source performance standards. All mobile sources would be in compliance with all requirements of applicable regulations and standards.

This is a Draft EIS; consultation with the USFWS was ongoing at the time of the DEIS publication. Final results of that consultation are included in the FEIS. The DEIS thoroughly analyzes the impacts of each alternative on various biological resources. See Section 4.10-1 to 4.10-60. Special Conservation Measures for biological resources are described in Section 2.8.4. Potential mitigation measures are also described in Section 4.10. Public Health and Safety, including traffic accidents, are addressed in Sections 4.4 and 4.6.

Comment ID: N-18731  
Date Received: May 31, 2011

4555 Burley Drive, Suite A  
Pocatello, ID 83202-1921

Dear sirs:

The EIS for the Twentynine Palms USMC base expansion is deficient because it has not adequately or accurately analyzed the potential for the Marine Corps and Army to "train as they fight," side-by-side. I could find no reference to a "Marine Corps Operations" document that is mentioned and linked on your project website:

<http://www.marines.mil/unit/29palms/LAS/pages/links.aspx>

The link to the "Marine Corps Operations" manual is:

[www.dtic.mil/doctrine/jel/service\\_pubs/mcdp10.pdf](http://www.dtic.mil/doctrine/jel/service_pubs/mcdp10.pdf)

The document is "MCDP 1-0" and coded as "PCN 142 000014 00"

Below are key excerpts and quotes from Marine Corps Operations that must be developed into a new alternative calling for the Marines to "train as they fight" with the Army. Two new alternatives should find a way for the USMC and Army to close either MCAGCC or NTC and train together in a joint environment. There is Corps Bias Against Integration. On March 26, 2011 Corps spokesman, Captain Nick Mannweiler, told the BLM's Desert Advisory Council that, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services." This is unacceptable and two new alternatives need to be developed that includes JOINT, UNIFIED & MULTINATIONAL Operations. One alternative would be to close MCAGCC and train at NTC. The other alternative would be to close NTC and train together at MCAGCC.

**UNIFIED ACTION**

Unified action is a generic term that refers to a broad scope of activities (including the synchronization of activities with governmental and nongovernmental agencies) taking place within unified commands, sub-unified commands, or joint task forces under the overall direction of the commanders of those commands. The national military strategy calls for the Marine Corps to act as part of fully interoperable and integrated joint forces. The joint force commander synchronizes the employment of Marine Corps forces with that of the other Services to fully exploit the capabilities of the joint force and to effectively and efficiently accomplish the mission.

**Joint Operations**

Joint operations are operations that include forces of two or more Military Departments under a single commander. Joint force commanders use joint forces within their AOs to participate in engagement activities and to conduct military operations in support of the geographic combatant commanders' contingency and war plans. Combatant commanders and their staffs are responsible for preparing plans for engagement with other nations and their forces throughout the theater. They also must prepare and maintain contingency and war plans for their theater of operations.

Engagement is the use of military forces to contribute to regional stability, reduction of potential conflicts, and the deterrence of aggression. Engagement activities are pro-active, conducted at home and abroad, that take advantage of opportunities to shape the international security environment. They include overseas presence, forward deployment, foreign internal development, and alliance and coalition training and exercises.

Contingency plans are plans for major contingencies that can reasonably be expected to occur within the theater of operations. Contingency planning can be deliberate or can be conducted under time constraints in crisis action planning. Contingency plans differ from operation plans as they are in an abbreviated format and require

Response to Comment N-18731 (Page 1 of 4):

Comment noted.

NEPA-2:

NEPA-1

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

NEPA-2

significant time or considerable expansion or alteration to convert them to operation plans or orders. War plans are completed operation plans for major contingencies such as major theater wars.

One of the techniques the combatant commanders and their staffs employ in contingency and war planning is flexible deterrent options. These are tailored military forces and operations designed to effectively and efficiently accomplish an anticipated mission or meet an unexpected contingency. Joint planners use flexible deterrent options within a planning framework intended to facilitate early decision and rapid response by laying out a range of forces and capabilities to be employed by the combatant commanders to accomplish particular missions. Flexible deterrent options are carefully tailored to send the right signal to the threat and the United States and world public. These options should include the minimum military force necessary to accomplish the objectives and the coordinated use of economic, diplomatic, and political actions appropriate to the particular situation. For more on Marine Corps participation in joint operations see chapter 3.

**Multinational Operations, Alliances, and Coalitions**

Although the United States may act unilaterally when the situation requires, it pursues its national interests through alliances and coalitions when possible. Alliances and coalitions can provide larger and more capable forces, share the costs of the operation, and enhance the legitimacy of the operation in world and United States public opinion. Multinational operations are usually conducted within the structure of an alliance or coalition. Alliances normally have established agreements for long term objectives, developed contingency plans, and standardized some equipment and procedures to ease interoperability. Coalitions are normally established for shorter periods or for specific multinational operations. They normally do not have established procedures or standardized equipment. However organized, multinational operations normally involve complex cultural issues, interoperability challenges, conflicting national command and control procedures, intelligence sharing, and other support problems. Even long established alliances experience some degree of these obstacles. Unity of command is difficult to achieve in multinational operations. To compensate for this, commanders concentrate on obtaining unity of effort between the participating national forces. Consensus building is the key element in building unity of effort in multinational operations. Multinational operations command and control is usually based on parallel or lead nation command and control structures. Parallel command requires coordinated political and senior military leadership to make decisions and transmit their decisions through existing chains of command to their deployed forces. This is the simplest to establish but limits tempo. Lead nation command and control requires that one nation (usually the one providing the preponderance of forces or capabilities) provides the multinational force commander and uses that nation's command and control system. Other nations' forces are then assigned as subordinate forces. Normally, this structure requires some integration of national staffs.

Multinational commanders must be prepared to accommodate differences in operational and tactical capabilities by nations within the combined force. The commander's intentions, clear guidance, and plans must be articulated to avoid confusion that might occur due to differences in doctrine and terminology. Detailed planning, wargaming, exchange of standing operating procedures and liaison officers, and rehearsals help to overcome procedural difficulties between nations. Finally, the commander should ensure that the missions assigned to nations within the multinational force reflect the specific capabilities and limitations of each national contingent. Mission success should not be jeopardized because of unrealistic expectations of the capabilities or political will of member forces.

**Role and Responsibilities to the Joint Force Commander**

The joint force commander conducts campaigns through a series of related operations. He conducts his campaigns by assigning component commanders missions that accomplish strategic and operational objectives. The orientation of the Marine Corps component commander is normally at the operational level of war, while the MAGTF commander is normally at the tactical level. See figure 3-2. Naturally, there is some overlap. The Marine Corps component commander is normally responsible to set the conditions for Marine Corps tactical

NEPA-2

Comment ID: N-18731 (Page 3 of 4)

Response to Comment N-18731 (Page 3 of 4):

reconnaissance sorties or other military capability made available. The policy for the command and control of Marine Corps aviation, specifically covered by the Chairman of the Joint Chiefs of Staff "Policy for Command and Control of USMC Tactical Air in Sustained Operations Ashore," is found in JP 0-2.

The Marine Corps component commander retains command—OPCON and ADCON—of those Marine Corps forces and capabilities not designated by the joint force commander for tasking by functional component commanders. The Marine Corps component commander advises functional component commanders on the most effective use of Marine Corps forces or capabilities made available. Marine Corps forces or capabilities made available by the joint

force commander respond to the functional component commander for operational matters based on the existing command relationship. All Marine Corps forces receive administrative and logistic support from the Marine Corps component commander. The joint force commander may also establish a support relationship between components to facilitate operations. See MCDP 1-0.1 for more information on the designation and responsibilities of functional component commanders.

Designation of a functional component commander must not affect the command relationships between Service component commanders and the joint force commander. The joint force commander must specifically assign the responsibilities and authority of the functional component commander. He defines the responsibilities and authority based on the concept of operations and may alter these responsibilities and authority during the course of an operation. Functional component commander responsibilities are found in JP 0-2 and JP 3-0, *Doctrine for Joint Operations*.

**JOINT AND MULTINATIONAL OPERATIONS**

Marine forces often deploy for operations as part of a joint or multinational task force. Logistic support of joint or multinational operations may call for compliance with specific operational and administrative requirements that are unique to those operations. Current joint and multinational doctrine provides a standard frame of reference for the planning, direction, and conduct of joint or multinational operations.

Joint and multinational operations are complex and bring together diverse military organizations that must operate together and logistically support one force. Multinational forces may have differences in command and control systems, language, terminology, doctrine, and operating standards.

The following considerations minimize the impact of this diversity and promote efficiency:

\* Liaison is the basis for effective command and control of logistics in joint and multinational operations. Liaison representatives (e.g., liaison officers, liaison teams, couriers) are chosen specifically for their knowledge and familiarity with the capabilities, limitations, and logistic concept of operations of their Service/national organization.

\* The demand for information often exceeds the capabilities of command and control equipment within joint and multinational commands. It is crucial that the commander identify, as early as possible, the command and control requirements that are external to the command or that require the use of national and/or host nation equipment.

\* Standardization of logistic procedures by joint or multinational forces is essential.

\* Agreements are made with probable joint or multinational partners regarding command and control of logistics. These agreements should cover principles, procedures, and overall logistic report requirements (including standard text format, standard databases, and data formats). Agreements should be arrived at by mutual agreement in advance of the operation.

NEPA-2

Comment ID: N-18731 (Page 4 of 4)

Response to Comment N-18731 (Page 4 of 4):

\* Joint or multinational forces adopt the procedures of one Service or nation if command and control agreements have not been determined in advance.

\* The commander of all United States forces provides interpreters to facilitate command and control and ensure that United States interests are adequately protected.

\* The operational acceptability and disclosure or release of communications security to allied governments for multinational operations will be determined and approved by national authorities before entering into discussions with allied nations.

In joint operations, the Services are normally responsible for providing their own logistics. However, the combatant commander, acting through the commanders of the component forces, is responsible for overall logistic coordination. The combatant commander must oversee the logistics for all parts of the unified force and may direct Marine Corps resources to support other Services. The combatant commander is specifically responsible for developing and sustaining military effectiveness by establishing an effective logistic structure. The combatant commander makes recommendations for joint efforts to improve economy consistent with military efficiency, reviews requirements, and recommends priorities and programs. He has the authority to coordinate the logistics of the Service components and to control distribution of that support when shortages occur. The most common type of support is single Service logistic support. However, plans may require or direct the use of other types of support such as common servicing, cross-servicing or joint servicing at the force, theater, military department, or Department of Defense-level.

The Marine Corps component commander may establish a MLC to provide or coordinate operational logistics as an interface between the MAGTF and joint logistic organizations and agencies. The MLC establishes the Marine Corps theater support structure to facilitate reception, staging, onward movement, and integration operations, as well as provide long-term logistic support for sustained operations ashore.

In multinational operations, logistics is a national responsibility. However, agreements may be made to establish the framework for mutual support. The exchange of logistic support between United States forces and alliance or coalition participants can create significant economies of effort and cost savings. This type of logistic support or cross-servicing may be in the form of supplies and/or services. Host-nation support agreements normally establish or specify the type and amount of such support. An acquisition cross-Service agreement is a nation-to-nation bilateral agreement that specifies procedures and points of contact for equal value exchange, replacement in kind or acquisition of goods and services between United States forces and the forces of the given nation. If no appropriate international agreements exist, no authority exists whereby combatant commanders can provide for or accept logistic support from allies or coalition forces. Combatant commanders are not authorized to enter into logistic support relationships with other nations without direction from the National Command Authorities. Under these circumstances, and with National Command Authorities' approval, United States commanders should acquire as much logistical support as possible through tact and diplomacy, their knowledge of the other nation's doctrine, and personal and professional relations with the other nation's commanders and appropriate political leaders. In the absence of approved formal support agreements, authorization for Marine Corps forces to receive logistic support from the other nation's forces or to provide support to these forces must come from higher authority in the operational chain of command. This does not preclude normal contracting of goods and services from the local economy.

NEPA-2

Sincerely,

  
Donald Albright

Comment ID: N-18732  
Date Received: May 31, 2011

1500 West El Camino Ave, #352  
Sacramento, CA 95833-1945  
May 15, 2011

Dear Project Manager,

I am very concerned about the Marine Corps project to expand the base at 29 Palms. On March 26, a Marine Corps representative (Captain Nick Mannweiler) said, "What makes the Marine Corps special is that we play really well with each other and not really very well with the other services. We like to have our own aircraft because we think we do it better than the other guys. But we train for everyone to fight on the ground." This indicates a clear bias towards training together with the Army at Ft. Irwin or Ft. Polk. I believe that the military has enough ground (and airspace) for training. Congress should direct the entire Department of Defense to do a study on how to more effectively and efficiently work together to cut costs and eliminate that ever present need for more, more, more land and air restrictions.

At that same meeting, (Mr. Proudfoot) said the following "We spent about eight years studying in detail different options, different pieces of the puzzle." The transcription of this speech is on-line at:

[http://www.blm.gov/pgdata/etc/medialib/blm/ca/pdf/cdd/upcoming\\_dac\\_meeting/meeting\\_minute\\_s.Par.37191.File.dat/Meeting%20Minutes%20-%20March%2026,%202011.pdf](http://www.blm.gov/pgdata/etc/medialib/blm/ca/pdf/cdd/upcoming_dac_meeting/meeting_minute_s.Par.37191.File.dat/Meeting%20Minutes%20-%20March%2026,%202011.pdf)

Why are you only now informing the public now about this project and asking for our input? You should have asked for public involvement six, seven, eight years ago before lining out all your decisions and now trying to justify them to the public. Future wars will be smaller. Budgets will be smaller. The Marines should find ways to train on the 598,000 acres already provided to them at Twentynine Palms.

Why are you only allowing 90 days for the public to comment? If you have been working on this for 8 years, then you need to give us at least another 90 days to review the draft EIS.

Later in his speech, Mr. Proudfoot said, "if we received other comments that allowed us to find other mitigation elements, that's what we could do."

I request that you find replacement areas for OHV wheeling to mitigate the displacement that would take place. I request that you ask the BLM to sell isolated tracks of land that they don't manage, and then use the income to buy land for off-road recreation. I request that you approach Congress for money to properly mark your base boundaries, install signs, prepare information and education materials, conduct public outreach meetings, hold hearings, and support local law enforcement. You must mitigate all the other impacts you have identified, whether they are significant or less than significant. You should agree to pay relocation costs to private landowners and miners that would be forced to sell and move. You should avoid all

**Response to Comment N-18732 (Page 1 of 2):**

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.).

**Comment ID: N-18732 (Page 2 of 2)**

desert tortoise areas. You should agree to grade and water all roads you use to cut down on air pollution.

Mr. Proudfoot also said "Legally, our requirement is to not search for alternative places to accept the displacement. And at that point that's a legal mandate for our EIS process, meaning what you are really asking is if we support getting out, finding other areas, helping someone else designate the area. That's outside the scope of this project."

I do not agree with this position of the Marine Corps. The National Environmental Policy Act requires you to find mitigation. The BLM is your cooperator. Both agencies must work together to develop a plan for the displacement and problems that will occur if Johnson Valley is closed. You and the BLM need to de-designate areas in order to open them up more for races.

The mitigation in the EIS is not adequate to address the loss of OHV recreation or open area recreation. You must correct this before issuing a Final EIS. You cannot pass the buck, kick the can down the road and expect Congress to come in and direct you and the BLM to identify new areas by such and such a date and so forth.

It was also pointed out the Marine Corps representatives that there may be water districts that have wells that might be impacted. Some of them are board governed, so they have the County of San Bernardino standing behind them. So you must be sensitive to those. You must work out all these boundary issues, as San Bernardino County has hundreds of special districts throughout the county.

Mr. Proudfoot also referred to a "negotiation process" that is currently taking place with the FAA for airspace. The process has not been open to the public. It has not been defined in the EIS. I am fearful that you are negotiating deals with them behind closed doors with proper public scrutiny and transparency. In the EIS, you must explain what negotiations are taking place along with the results of these consultations and discussions. That information must be presented now in the EIS rather than later in some separate document, and after a decision has already been made by the Marine Corps.

I do not agree that the restricted area in Johnson Valley will work. That is an accident waiting to happen. It would be very difficult to enforce and patrol. Also, if you decide to close certain acreage in Johnson Valley for a couple months each year, you should close it for the same two months every year instead of varying that. It would be very confusing if you close land in January and July one year, and then March and September another. Make a schedule and stick to it.

Sincerely,  
Stephen Berg

**Response to Comment N-18732 (Page 2 of 2):**

The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Please see Section 4.7 of the EIS for information on expected impacts to Airspace Management; Jet Routes are discussed in this section. Section 4.7 describes expected significant impacts on Jet Routes transiting within the proposed restricted area. The Marine Corps is working with the FAA to minimize these impacts through advanced planning and coordination efforts. The Marine Corps is sensitive to the potential effects the airspace proposals could have on all commercial and civil aviation activities. The airspace proposals will be reviewed by the FAA in an Aeronautical Study which will examine potential impacts on all airspace uses and those measures to be discussed with the Marine Corps, airport operators, and other aviation interests, to minimize any impacts. The Marine Corps will also continue its outreach to the civil aviation community to discuss those issues and concerns affecting their operations within the Combat Center airspace environment and those measures that can be taken to best accommodate all aviation interests.

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Palmdale, CA 93552

Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-519

To whom it may concern:

As an advocate for responsible off-highway vehicle recreation and the Marine Corps also, I feel that there is room to the east of 29 Palms and think the Marines should expand there.

As far as your Draft EIS, I have some serious concerns about the validity of many of your assumptions used in the analysis:

Chapter 1, page 24 and Chapter 2, page 1: It is assumed in this EIS that by the time the proposed action were implemented (approximately 2015), requirements for EMV iterations would likely be reduced to align with pre-war CAX levels of about 4-5 EMV-equivalent exercises annually. This expected reduction would be offset by the increase in MEB Building Block training (see Section 2.1), such that the overall training throughput of tenant and transient units up to a single battalion in size would approximate 2010 levels.

**COMMENT – This is not a valid assumption as the Marine Corps' 2015 budget will be nothing like their 2010 budget. Assumptions must be clearly tied to reasonable budget projections. As the Defense Department seeks additional cost cuts to support President Barack Obama's deficit-reduction efforts, weapons systems, major procurement programs, acquisitions, and contracted goods and services will all be on the table to find ways to increase buying power. Revise this assumption to more accurately correlate to the Marine Corps' expected budget downsizing by 2015.**

Page 2-35: The vehicle mileage assumed during Building Block training is encompassed in the Air Quality baseline modeling (see Appendix G).

**COMMENT – This is not a valid assumption as the Marine Corps' 2015 budget will be reduced. Combined with the increasing costs of gas, you need to assume less vehicle use as a part of overall cost-cutting and energy-savings measures that are sure to be implemented by the Marine Corps. Revise this assumption to more accurately correlate to the Marine Corps' expected budget downsizing, as well as less vehicle and energy use.**

3.2-1: "event-related" visits are assumed to include those participants and spectators of organized OHV races or other similar events that visit exclusively because of a scheduled event (and would not visit if the event were not being held).

Dispersed use visitors are also assumed to include a proportion of race spectators that would come to the project area anyway, even if race events did not occur.

**Response to Comment N-18733 (Page 1 of 9):**

Thank you for your comment. This letter is a duplicate to Comment ID: N-18858. Please see response provided for that comment.

Comment ID: N-18733 (Page 2 of 9)

Response to Comment N-18733 (Page 2 of 9):

COMMENT – Please explain why a proportion of race spectators would still come to the area, even if race events did not occur. What proportion are you referring to?

3.2-25: For the purposes of providing an estimated number of visitors for this event alone [KOH], it was assumed that the 15,146 visitors estimated for 2010, visited Johnson Valley for an average of 3 days; therefore, the total visitor-days of use for this event in 2010 was estimated to be 45,438 visitor-days of use.

COMMENT – This is not a valid assumption as it's not consistent with the BLM's use data for this one event. The event promoter is required to accurately submit visitor use data, and then pay a fee. Rather than make up a number based on an unvalidated assumption, reference the event promoter's official submission to BLM. If you use something different, then you are also publicly showing that the BLM is not doing an adequate, proper job in their permitting process to monitor events, visitor use, and collect appropriate fees.

3.2-26: The visitor-days of use for the King of the Hammers event was estimated separately (45,438 visitor-days). To estimate the visitor-days of use of activity related to other organized events throughout the year, 50% of remaining event visitors were assumed to recreate in Johnson Valley for 2 days and the other 50% of event visitors was estimated to recreate in Johnson Valley for 3 days (BLM 2009).

COMMENT – This is not a valid assumption as it does not take into consideration the many people who camp out and recreate in Johnson Valley for extended periods of time (greater than just 2 or 3 days.) You should also reference the information that organized event promoters submit to BLM. That is supposed to be accurate and is monitored by BLM to ensure that proper event fees are paid.

3.9-8: The projected baseline level of ordnance activity within the Combat Center range complex at the time the proposed action would be implemented (approximately 2014 or 2015) is assumed to be approximately double (2x) the baseline ordnance use modeled in the 2003 noise study, WR 03-11 (Wyle 2003b). An assumed doubling of the ordnance use since 2002 represents the estimated change that has occurred due to higher wartime training requirements and deployments in recent years, and that is expected to continue.

COMMENT – This is not a valid assumption as the Marine Corps' 2015 budget will be reduced. Combined with the increasing costs of gas, you need to assume less ordnance activity as a part of overall cost-cutting and energy-savings measures that are sure to be implemented by the Marine Corps. Revise this assumption to more accurately correlate to the Marine Corps' expected budget downsizing, as well as less ordnance use.

3.10-60: Areas that might potentially be affected by new airspace are assumed to be limited to those where new low altitude (e.g., to 1,500 feet [457 meters] above ground surface or lower) limits are established. Aircraft operations at higher altitudes are not likely to affect biological resources because noise levels would be lower and operation would be above the flight altitude of migratory birds.

COMMENT – This is not a valid assumption as it has been clearly documented that many kinds of birds fly at altitudes higher than 1,500 feet. Please see the attachment entitled "Migratory Bird Altitude" put out by the USGS.

Comment ID: N-18733 (Page 4 of 9)

Response to Comment N-18733 (Page 4 of 9):

4.1-5: For the purposes of the land use impact analysis, it is assumed that all applicable federal statutes, regulations, and programs related to property acquisition, acquisition of existing rights-of-way, surface and subsurface mining rights, and other property rights and ownership, would apply. For example, this includes purchase of private property at fair market value and, as appropriate, applicable relocation assistance.

**COMMENT – This is not a valid assumption because there are no cost estimates in the EIS of how much these things will cost for each of the alternatives. This information must be openly disclosed to the public, as well as factored into the EIS analysis. The Marine Corps does not have an open checkbook. I was told at the public meetings that it would cost about \$50-100 million. This is an unreasonable assumption, especially in light of the efforts to reduce the Dept of Defense's budget.**

4.2-1: Specifically, a Year 2015 baseline estimate of 337,000 average annual visitor-days was assumed in this analysis, based on 2010 visitor data estimated by BLM and the agency's projections for growth in visitors to the area over the next few years.

**COMMENT – This is not a valid assumption because you have not factored in the rising cost of gas. Recreation growth is going to decline if it gets too expensive for people to travel long distances to the desert and then feed there gas-guzzlers once there.**

4.2 -1: For purposes of this analysis, a level of 800 visitor-days per year was assumed for the south study area and 500 visitor-days per year was assumed for the east area.

**COMMENT – This is not a valid assumption because if Johnson Valley and the south areas are closed then you can expect more people to recreate in the east area instead.**

4.2-6: Notes: 1 Assumes that 90% of dispersed use visitor-days under each alternative from Table 4.2-3, would be displaced to other recreation and OHV areas within San Bernardino County. Assumes that none of the event-related visitor-days would be accommodated at regional OHV areas.

**COMMENT – I find it hard to believe that NONE of the events could be accommodated at other regional OHV areas. There are a number of motorcycle races, for example, that could use Stoddard Valley instead. This is not a valid assumption.**

4.2-11: As mentioned above, it is reasonable to assume that roughly 60% of existing racing events, including car and truck races that currently occur within the Johnson Valley OHV Area would be displaced or eliminated.

**COMMENT – This is not clear. How much of the 60% would be displaced vs. eliminated? The statement is also inconsistent with the footnote on page 4.2-6 that says you assumed that "none of the event-related visitor-days would be accommodated at regional OHV areas" for that alternate.**

4.2-20: As mentioned above, it is reasonable to assume that roughly half of the existing racing events, including car and truck races that currently occur within the Johnson Valley OHV Area, would be displaced or eliminated.

**Comment ID: N-18733 (Page 5 of 9)**

**Response to Comment N-18733 (Page 5 of 9):**

**COMMENT – This is not clear. How much of the 60% would be displaced vs. eliminated? The statement is also inconsistent with the footnote on page 4.2-6 that says you assumed that “none of the event-related visitor-days would be accommodated at regional OHV areas” for that alternate.**

4.3-2: for Johnson Valley only, the spending pattern differences based on visitor origin (e.g., “local” visitors are assumed to spend all of the daily amount within the local area, while visitors from outside the county are expected to spend some proportion in their home county before they leave, some on the way, and the rest in the local area during their visit).

**COMMENT – This is not clear. Clarify how much is spent at home, on the way, & in the local area.**

4.3-5: Specifically, a Year 2015 baseline estimate of 337,000 average annual visitor-days was assumed in this analysis, based on 2010 visitor data estimated by BLM and the agency’s projections for growth in visitors to the area over the next few years.

**COMMENT – This is not a valid assumption because you have not factored in the rising cost of gas. Recreation growth is going to decline if it gets too expensive for people to travel long distances to the desert and then feed there gas-guzzlers once there.**

Recreational visits to Johnson Valley include a mix of single-day and multi-day trips (the analysis assumed a mix of 20% single-day and 80% multi-day).

For purposes of this analysis, a level of 800 visitor-days per year was assumed for the south study area and 500 visitor-days per year was assumed for the east area: all visits were assumed to be single day instead of multi-day visits and all by local area residents only. See Appendix K for a complete description of modeling assumptions and results.

**COMMENT – This is not a valid assumption because if Johnson Valley and the south areas are closed then you can expect more people to recreate in the east area instead.**

The assumed baseline level of film industry spending in the project area is approximately \$1.6 million per year, based on the total level of such spending in the Johnson Valley area between 2001 and 2008 (Inland Empire Film Commission 2010a). All benefits of this film industry spending was assumed to accrue to the “local” area within 50 miles (80 km) of Johnson Valley. Half of film industry expenditures were assumed to be taxable at a 10% rate (average transient occupancy tax rate for the area).

**COMMENT – This is not a valid assumption because rising gas costs will keep the film industry closer to home. I would expect the majority of films requiring desert scenes to be shot in the Mojave as close to Hollywood as possible. I expect greater movie filming use in the Palmdale and Lancaster areas.**

As shown in Table 4.3-1, the total estimated direct county-wide expenditures (2015 baseline conditions) related to recreational use of all three acquisition study areas and film industry use of Johnson Valley (including sales tax) is approximately \$8.7 million per year (expressed in 2015 dollars). Approximately \$6 million of this amount is assumed to be spent in the area within 50 miles (80 km) of Johnson Valley. Almost \$7.5 million in additional trip spending is assumed to occur outside the county as visitors travel to Johnson Valley from other counties and states.

Comment ID: N-18733 (Page 6 of 9)

Response to Comment N-18733 (Page 6 of 9):

4.3-6: Alternative 1. In addition, the analysis assumed that 100% of organized race events would be displaced (along with all visitor-days of use associated with such events) and 75% of the visitor-days categorized as dispersed use would not occur.

COMMENT – This is not a valid assumption because if the entire area is exclusive military use then dispersed use should also decrease by 100% there. Also, if 100% of the organized events are “displaced,” then you need to state where they will be displaced to and analyze the impacts of that. If you actually meant that a percentage would be “eliminated,” then state and analyze that. My guess is that some will be displaced and some will be eliminated.

4.3-7: New military personnel were assumed to be distributed 25% living on the installation and 75% living in surrounding communities. It was also assumed that 70% of all new positions would be filled by people migrating from outside the county.

COMMENT – Is this assumption similar to the current distribution of military personnel on base vs. off base? Provide the current distribution and your rationale for assuming something different. Are 70% of new positions currently filled with people coming in from outside the County? Provide the current percentage and your rationale for assuming something different.

4.3-8: Based on their locations relative to the two main routes used to travel to Johnson Valley, it could be assumed that Lucerne Valley and Yucca Valley together benefit from the majority of the “local” spending from Johnson Valley visits.

COMMENT – This is not a valid assumption because I’m sure that many wheelers come to the area along I-10 and I-40, through Barstow and Palm Springs. There will also be impacts to those communities.

4.3-9: As indicated in the analysis described above and in Appendix K, it is conservatively assumed that at least 25% of the total dispersed use OHV activity (which represents 83% of total visitor-days) would continue to occur after implementation of Alternative 1.

COMMENT – How could 25% of the dispersed use continue to occur if the area becomes exclusive for military use?

4.3-14: The socioeconomic analysis assumed that 60% of organized race events would be displaced (along with all visitor-days associated with such use) and 25% of the dispersed use would no longer occur. Based on input from the BLM, the analysis also assumed that 90% of the total annual visitor-days displaced by Alternative 2 in the “local” area (within 50 miles [80 km] of Johnson Valley) would be transferred to the other designated OHV areas and recreational opportunities in the county. Other assumptions used in the analysis are described in Appendix K.

COMMENT – If 60% of the organized events are “displaced,” then you need to state where they will be displaced to and analyze the impacts of that. If you actually meant that a percentage would be “eliminated,” then state and analyze that. My guess is that some will be displaced and some will be eliminated.

**Comment ID: N-18733 (Page 7 of 9)**

**Response to Comment N-18733 (Page 7 of 9):**

4.3-21: For purposes of this analysis, it was assumed that the average annual visitor-days of use would be reduced by 15% for both organized events and multi-day dispersed use. Single-day dispersed use visits were assumed to decline by 30%.

**COMMENT - How much will be displaced? How much will be totally eliminated? If 15% of the organized events are "displaced," then you need to state where they will be displaced to and analyze the impacts of that. If you actually meant that a percentage would be "eliminated," then state and analyze that. My guess is that some will be displaced and some will be eliminated.**

4.6-5: For the purpose of this analysis, a worst-case scenario is assumed, whereby all 8,000 Marines would arrive by bus on the same day (though this would never likely be the case). This would equate to roughly 200 buses (40 passengers per bus) arriving at the Combat Center on the same day. The greatest percent increase in traffic volume would therefore occur on Lear Avenue (an approximate 6% increase in traffic volume [3,461 vehicles per day to 3,661 vehicles per day]). Such an increase would not meet the threshold of significance (12%) as described in Section 4.6.1.2, and therefore, would not substantiate a significant shift in LOS.

**COMMENT – This is not a valid assumption because there is no likelihood that all 8000 Marines would arrive by bus on the same day. While that would be a great reason for a parade in the high desert, please use an assumption for analysis that has more credibility. The EIS itself admits that "this would never likely be the case." Thus, it shouldn't even be presented as a worst-case scenario.**

4.7-2: The number of sortie-operations was assumed to be equally accounted for in multiple SUA areas since the proposed SUA would allow all sortie operations to be more widely dispersed throughout the entire airspace complex.

**COMMENT – This is not a valid assumption because MEB exercises don't call for equal dispersement of sorties. If the battalions are moving east to west, then there would be a different dispersement of aircraft in comparison to when they move west to east. Analyze the differences accurately by alternative rather than assume equal dispersement through entire airspace complex.**

4.7-7: Many of the ongoing Combat Center operations are staged out of the Expeditionary Airfield (EAF), as described in Section 3.7.3.1, and it is assumed MEB Exercise aircraft would also operate from this airfield.

**COMMENT – This isn't valid assumption because that airfield isn't equipped to handle F-35s, etc.**

4.8-5: All emissions are assumed to occur in calendar year 2013.

**COMMENT – This is not a valid assumption because emissions will occur over multiple years. The MEB exercises aren't even scheduled to begin until 2015.**

4.9-2: For each of the action alternatives, it was generally assumed that each airspace sortie would generate an arrival and departure at the EAF and no run-ups. The exception would include F-35B aircraft because the EAF matting surface is currently not designed to withstand the temperatures caused by an F-35B performing a rolling vertical landing or a purely vertical landing. No F-35 flight or run-up operations

**Comment ID: N-18733 (Page 8 of 9)**

**Response to Comment N-18733 (Page 8 of 9):**

were modeled at the EAF for any alternative. This is consistent with the F-35B West Coast Basing EIS (DoN 2010).

**COMMENT –** The Draft EIS indicates a variety of other aircraft also. Historical data most likely shows much aircraft used in training missions there as coming from Yuma or other places. Thus, it isn't valid to assume all but the F-35 would generate an arrival and departure at the EAF.

4.9-4: Ordnance operations were assumed to be distributed uniformly across all firing/target locations.

**COMMENT –** This is not a valid assumption because MEB exercises don't call for equal dispersment of ordnance. If the battalions are moving east to west, then there would be a different dispersment of ordnance in comparison to when they move west to east. Analyze the differences accurately by alternative rather than assume uniform dispersment across all firing/target locations. The company objectives and final MEB objective should also receive more ordnance, wouldn't they?

4.9-23: One of the S2 POIs would have CNEL greater than or equal to 62 dBC. The residentially-zoned west study area site would have a CNEL of 64 dBC. However, it is assumed that the west study area site would not have occupied housing.

**COMMENT –** This is not a valid assumption because there is occupied housing within close proximity in Johnson Valley.

4.10-1: The quantitative estimates of disturbance are totals over the project lifetime, which is assumed to be approximately 50 years; however, direct impacts would be greatest when military training under the proposed action begins.

**COMMENT –** Why wouldn't the project lifetime correlate with the term of the military land withdrawal that is being proposed? Isn't that only 20 or 25 years and would be subject to renewal by Congress?

4.10-3: The same basemap was used with GIS analysis to estimate the number of tortoises located within the disturbance footprint, and a presumed amount of take was derived (assumed to be 50% in high-intensity disturbance areas and 10% in medium-intensity disturbance areas). These impact quantifications were limited to anticipated areas of high- and medium-intensity disturbance.

Modeling also assumes that densities would remain constant over the lifetime of the project, does not account for movement of tortoises into or out of disturbed areas, and does not account for recovery of disturbed areas (which would not be expected due to ongoing disturbance and long recovery times). The wide range reported for potential take of desert tortoises is related to the uncertainty in estimating desert tortoise density (Karl 2010). Refer to Appendix 1 for detailed assumptions and methodology used in assessment of impacts to tortoise habitat and take of tortoises.

**COMMENT –** How can you assume a 50% take with all the conservation measures and mitigation that being proposed for tortoises? That seems awfully high. Don't the Marines try to avoid high density tortoise areas whenever possible?

Comment ID: N-18733 (Page 9 of 9)

Response to Comment N-18733 (Page 9 of 9):

4.12-6: This assumes that the two known alternative sources of local iron ore (Baxter Quarry and Silver Lake Mine) would continue to be in production until at least 2020 and 2022, respectively, as per their current SMARA permits (see discussion in Section 3.12.3.2).

**COMMENT – This is not a valid assumption because MEE exercises within exclusive military use areas would not be compatible with producing mines. Please explain how those very disparate and clashing uses can jointly occur. Better yet, assume both will have to be closed or bought out by 2015 when the training exercises begin and analyze that in terms of costs and impacts to mining.**

4.13-1: The impact analysis assumed that no additional water infrastructure would be developed to supply water for the training exercises. Instead, it was assumed that all water required to support the training exercises would be supported by existing groundwater supplies at the Combat Center (i.e., the Surprise Spring subbasin), and none of the project alternatives would extract groundwater from the proposed west, south, or east study areas. The analysis also assumed that two or three communication towers (depending on the alternative) would be constructed, with no other permanent structures constructed.

**COMMENT –How long can the existing water supplies last? The visual impacts of communications towers have not been adequately analyzed in the EIS.**

Please keep me informed of all progress on this project.

Sincerely,

Tammy Blackwell

San Diego, CA 92132-519

Dear sir,

I have many comments of the Draft EIS due to your shortcomings in the Issues, Alternatives and Mitigations sections.

**ISSUES**

I have done a comparison of the issues brought up during scoping with those that you analyzed in the Draft EIS. Even if some issues are not relevant or applicable, you must acknowledge them in the EIS with an indication that you considered them and why they weren't further analyzed. Specifically,

**All Public Scoping Issues** – In each impact section, you typically state the public issues raised as "including but not limited to ..." Your EIS would be much better if you would acknowledge and list all the relevant issues that were raised by the public during scoping.

**Ground Movement** – You have failed to address this issue identified by the public. Your scoping report said you would study "potential impacts of ordnance to aquifers and geologic faults."

**DEIS Reclamation Plan** – You have failed to present a reclamation plan for all the areas that the Marines will be impacting due to erosion, vegetation destruction, etc. In addition, when you acquire contaminated lands, you must also present a plan (with costs) as part of your analysis. An example is on page 4.4-15 where you say "Land that would be acquired as part of Alternative 3 is known to have operations with the potential to contaminate the environment. An example is the America Mine, an open pit gold mine in the east study area that is no longer in use and could require cleanup." How do the Marines propose to do this. Cost?

**FAA Compliance** – You have failed to indicate how the FAA will reroute air traffic to comply with the greater amount of military airspace restrictions. In the scoping report you said you would study "Increased costs to the airline industry from flight corridor alteration and/or scheduling restrictions and conflicts." You have failed to do this.

**Airspace Issues** – On page 4.7-3, you only recognize the public scoping issues that were raised pertaining to airports and airfields. Please list all the relevant airspace issues that were raised in the 20,000 public comments received during scoping.

**Response to Comment N-18734 (Page 1 of 12):**

Thank you for your comment. This letter is a duplicate to Comment ID: N-18857. Please see response provided for that comment.

**Comment ID: N-18734 (Page 2 of 12)**

**Response to Comment N-18734 (Page 2 of 12):**

**Examine impacts of action on existing land use plans** – You have failed to address how the expansion would trigger the need for many amendments and updates to existing Federal, State and local land use plans.

**Examine Safety Issues of new boundary** – Management for the "RPAA" is not clearly defined. You fail to lay out the measures needed to ensure clear marking of the boundaries and to ensure public safety. Despite what you said in the scoping report, you have failed to fully study and quantify "the increased costs with installing proper signage in limited use areas and implementing an education campaign regarding location of remaining OHV areas." The costs could be great and better spent elsewhere. You have also failed to fully study and quantify the "increased law enforcement costs to federal, state, and local jurisdiction with respect to enforcing trespassing on private property and other areas where OHV travel is not allowed." Are the local jurisdictions able to bear these increased costs? Will taxes be raised?

**Cumulative loss to OHV** – You have not presented any trend analysis showing the cumulative loss of OHV area over the past four decades. This past, coupled with future foreseeable loss of OHV playground, must be examined as cumulative impact.

**Impacts of Scientific Research** – You need to read and reference such documents as "Impacts of Military Vehicle Training Activities on Vegetation: Bibliography With Abstracts ERDC/CERL Special Report 01-17" by J.S. Fehmi, Tyrone Farmer, and J.A. Zimmerman. The available literature on impacts of military vehicles on military lands was surveyed. The bibliography has been divided into two parts: (1) military references developed from military vehicles or military lands and representing primary observations or research, and (2) supporting references that were not developed from the military but which have applicability to training activities on military lands by military vehicles or are derivative from primary works on the military. This report contains 61 references with abstracts.

**Quality of Life** – You mention air, water and scenic quality, but you failed to analyze one of the most important of all overall qualities to desert residents – quality of life. You must assess the impacts of the project on the quality of life and loss of "desert outdoor experience" in the area.

**Environment Justice** – On page 4.3-29 of the EIS, you say "There are no specific concentrations of minority or low-income populations in the vicinity of the proposed action as defined by Alternative 6 and all socioeconomic or environmental impacts that are attributable to Alternative 6 would apply equally to any affected persons, regardless of minority or income status." This is not an accurate statement because many of the people who live in Lucerne Valley, Landers, and Johnson Valley are low income compared to other areas. To better understand this, just look at the average cost of living and real estate costs there.

**Transportation and Circulation** – On Page 4.6-2, you say "There were no transportation and circulation issues raised during the public scoping period for this

**Comment ID: N-18734 (Page 3 of 12)**

**Response to Comment N-18734 (Page 3 of 12):**

EIS." This is simply not true. In your own scoping report, you stated that the following (at a minimum) were brought up by the public for complete study and analysis: 1) Increased usage of utility and infrastructure may impact current systems (e.g., disruption to traffic circulation, impacts to existing communications and energy transmission lines and pipelines, damage to utilities/infrastructure from vehicle movements). 2) Potential impacts to Fire and Police Department times and their ability to provide coverage for acquired lands. 3) Increased waste disposal requirements and the potential for the requirements to be unfulfilled. 4) Impacts on roadways, railroads, and airspace from movement of equipment and personnel to/from the installation for training events. 5) Injuries or impacts from convoy crossings of public roads.

**Carbon Footprint** - On Page 4.8-4, you acknowledge that the public raised an issue regarding "increased carbon footprint." However, you never addressed "carbon footprint" again other than to reference increased levels of carbon monoxide.

**Noise Issues** – On page 4.9-5, you only recognize the public scoping issues that were raised pertaining to noise from additional training activities. Please list all the relevant noise issues that were raised in the 20,000 public comments received during scoping.

**Renewable Energy Opportunity Costs** – You fail to acknowledge, quantify or assess the impacts of the lost renewable energy development opportunities due to the land closure. Your scoping report said you would analyze "Possible prevention of other development opportunities (e.g., solar and wind energy generators as well as geothermal exploration) on the lands being studied."

**Loss of Future Mining Opportunities** - You fail to acknowledge, quantify or assess the impacts of the lost mining development opportunities due to the land's long-term closure. It is unacceptable to say that there is a potential for indirect impacts of this type to occur, but then to conclude that "such impacts are speculative in nature and the level of any such impact cannot be estimated at this time." You must work with the BLM to more adequately present the mineral resources that would be locked up due to military base expansion. On page 4.12-13, you improperly say that "Loss of access to inactive mines and unworked mining claims would not restrict the overall availability of mineral resources (gold in the case of the Vulcan and America Mine sites), so there would be no indirect impacts to mineral resources due to purchase of claims that are unworked or are associated with inactive mines." Any loss of access would, of course, restrict availability.

**Devaluation of surrounding private property** – Living near a military base and the resulting noise and safety issues WILL result in devaluation of property. Your analysis is incorrect to conclude, "If property values were to decline as an indirect impact, the reduction would likely be marginal and less than significant." Your scoping report said you would analyze "Decrease in property value of homes and land located near the expansion area." You have also failed to analyze the direct impact of devaluation on Wonder Valley properties.

**Comment ID: N-18734 (Page 4 of 12)**

**Response to Comment N-18734 (Page 4 of 12):**

**Traditions / Archeological and Historical** – On page 4.11-2, you say “During the public scoping process for this proposed project, no comments were received from the public regarding cultural resources.” How can this be? Didn’t the Tribes present some issues? Also your own scoping report says these issues were raised: 1) Impacts to cultural resources of the region, including artifacts, historic coins, and historic mining/freighting sites. 2) Potential destruction or elimination of significant archaeological and religious sites. 3) Violation of tribal concerns and rights, which includes the access to culturally significant sites and the compromise of culturally significant sites and their settings. 4) Possible destruction or elimination of historic structures and/or districts, including potentially historically important mines. 5) Potential impacts to various plant species historically used by Native Americans for subsistence. The impacts to all these items and more (like the historic values of Highway 242) need to be fully disclosed in the EIS.

**Access for Other Activities** – While you mention some activities like hiking, sightseeing and geocaching, you have failed to acknowledge the use of this land by so many others (scouts, model rocketry clubs, ultralite aviators, hang-gliders, landsailers, rockhounds, equestrians etc.) The Partnership for Johnson Valley can fill you in on all the uses that take place out there.

**Accuracy/Adequacy of the Economic Analysis** - The Yucca Valley City Council has better economic data indicating an impact of at least \$5 million. The Johnson Valley Usage Survey that was done at the King of the Hammers shows \$1.6 million dollars spent in the area during the of the 2011 race week alone. Those survey results are very conservative. The economic impact for the communities along Hwy 18, 247 and 62 will be many times more than that \$1.6 million. The economic impact of the Marines going east would be minimal and maybe not even be negative. You need to correct that section in the EIS and also recognize that certain impacts (especially in the cities and towns of the high desert) will be significant as incomes and revenues decline, and businesses fail.

**More of a BLM lead even though it is a military EIS** – Even though BLM is a cooperator, the EIS is inadequate because it appears they have not provided you with information regarding lost energy development opportunities, mineral resource development opportunities, or areas that can be expanded or opened to wheeling as a result of the loss of Johnson Valley.

**Impacts to other current land uses** – You have failed to fully analyze the impacts on the railways, gas lines, SCE distribution lines and facilities, and especially all the impacts on rights-of-way, easements, and other land uses and authorizations/designations in all three study areas. Your scoping report said that you would do this.

**Costs** – You need to fully evaluate, quantify and disclose ALL COSTS for:  
a) enforcing OHV laws and dealing with illegal riding in other areas.  
b) signing and education campaigns.

Comment ID: N-18734 (Page 5 of 12)

Response to Comment N-18734 (Page 5 of 12):

- c) real estate acquisition
- d) mine acquisitions
- e) hazardous material contamination reviews of lands and mines to be acquired.
- f) cleaning up all contaminated lands acquired.
- g) relocating utility lines.
- h) closing Amboy road under alternate 3.
- i) lost renewal energy development opportunities.
- j) lost mineral development opportunities.
- k) mitigating the lost Johnson Valley OHV lands with replacement lands for wheeling.
- l) grazing rights acquisitions.

How can a good decision be made without knowing the costs associated with each alternative? The government does not have an open checkbook. You must clearly show (in dollars and cents) the costs and benefits for each option.

ALTERNATIVES

During the scoping period, the public suggested various alternative actions the USMC could consider, as well as suggested modifications to the currently proposed scoping alternatives.

You have failed to analyze a full range of reasonable alternatives because you have not looked at alternatives to:

- 1) **Repeal the three wilderness areas near the base (Cleghorn, Sheephole, Cadiz).** Why wasn't the repeal of wilderness studied as an alternative? Explain this to the public in the EIS. Why doesn't an alternative analyze the opening of National Park or wilderness land for Marine training? Isn't it true that Congress made them so Congress can take them away? That would open up lots of land east of the base for Marine training. General Patton used that ground for tank training back in WWII days. It was good enough for him. Marines would have to shut down Amboy Road for a few days, but I can live with that. Ask them to analyze opening Sheephole, Cadiz, Cleghorn and even more wilderness. Why can't the Marines use those? In the 1500 pages of "legislative history" section for that law.  
[http://www.wilderness.net/NVWPS/documents/legis/ativehistory/111\\_11\\_SH\\_0723\\_87.pdf](http://www.wilderness.net/NVWPS/documents/legis/ativehistory/111_11_SH_0723_87.pdf) At page 862 a BLM COMMENT to some allegation say, "Several wilderness amendments in the 1981 and 1982 period were intended to be a further refinement of preliminary BLM decisions. The changes referred to were based on new data, reconsideration of existing data, and a public opinion. The changes and alternatives were analyzed in a draft and final environmental impact statement, and represent about a 10 percent decrease in the area recommended suitable (from 2.1 to 1.9 million acres). For each WSA the Record of Decision gives the rationale for the change.....The largest area dropped was Sheephole/Cadiz (WSA 305) which had been impacted by World War II military maneuvers and lacked wilderness qualities. The subsequent environmental impact statement

Comment ID: N-18734 (Page 6 of 12)

Response to Comment N-18734 (Page 6 of 12):

was neither protested or appealed." BLM NEVER RECOMMENDED THOSE AREAS AS WILDERNESS! THOSE AREAS SHOULD NEVER BEEN DESIGNATED IN THE FIRST PLACE! THEY NEED TO BE REPEALED NOW TO ALLOW FOR USMC TRAINING THERE!

- 2) Provide for "Non-Wilderness Training Corridors" through the wilderness areas. According to that link Mike sent, there was a ton of new wilderness areas created by California Desert Protection Act of 1994 - Public Law 103-433 (10/31/1994). <http://www.wilderness.net/index.cfm?...derness%20Laws> There is a special provision in that law for the Cleghorn Lakes wilderness next to the base. See: <http://www.wilderness.net/index.cfm?...D=0&C;ID=0&key=> (13) Certain lands in the California Desert Conservation Area, of the Bureau of Land Management, which comprise thirty-three thousand nine hundred and eighty acres, as generally depicted on a map entitled "Cleghorn Lakes Wilderness—Proposed", dated July 1993, and which shall be known as the Cleghorn Lakes Wilderness. The Secretary may, pursuant to an application filed by the Department of Defense, grant a right-of-way for, and authorize construction of, a road within the area depicted as "nonwilderness road corridor" on such map. Has this road already been built for Marine training through the Cleghorn wilderness? If not, the Marines should build it now and train there. Even if they don't admit their mistake and repeal the wilderness designations, maybe congress can create more "nonwilderness corridors" in Cleghorn, Sheephole AND Cadiz Dunes to help the Marines better train east of the base? The EIS must consider this.
- 3) Only expand into the NORTH half of Johnson Valley. You studied an alternative (#2) that expanded into the east half of Johnson Valley. That one doesn't make much sense to me. The Marines should be more adaptable and able to accomplish all their training objectives north of Emerson Lake. Why can't the Marines leave the whole area in the south for us wheelers? Run that 3rd (southern) brigade from the base through the channel just south of Emerson Lake (north of Hartwell Hills, Los Padre and Blue Ribbon mines). Please see the attached map. The Marines would still get the necessary of training time. All 3 brigades would still be able to converge together at red map dot ("MEB objective") during their couple training exercises. This new alternative would only require Marines to expand into about 60,000 acres of Johnson Valley. It would leave over 120,000 acres for wheelers to continuing riding in. You must develop and fully study another alternative to consider this.

**ADDITIONAL COMMENTS/QUESTIONS**

1) How much is it going to cost to buy 100+ private properties? At the public meetings, I was told that land acquisition cost alone would be about \$50 million for the smallest acquisition alternative. You FAQ document on-line also says that "Estimates will be developed for the various alternatives that will be studied in accord with NEPA, and this

Comment ID: N-18734 (Page 7 of 12)

Response to Comment N-18734 (Page 7 of 12):

number continues to be an accurate estimate." This has not been done and needs to be ASAP.

2) I just can't understand why you guys say the economic impacts are "less than significant." The expansion takes over 100 private properties, closes mines, reduces sales & tax revenue, results in some business going under. Lucerne Valley could become a ghost town if they lose \$1.5 million or -25% compared to baseline due to reduced recreational and film industry spending. Why is it "significant" in the EIS to take 154-714 desert tortoises but "less than significant" to take that many private properties, mines, businesses? People are endangered species too. Taking one private property or closing one business is definitely significant in my book.

3) How much is it going to cost to buy out the miners?

4) Why wouldn't the noise from the tanks, bombs, aircraft, and artillery be significant?

5) How did the EIS come up with just 300,000 visitors in Johnson Valley? You failed to recognize many other uses there.

6) How do the airlines feel about more restricted airspace over the desert?

7) Your 1500+ page EIS treatise was not written for clear public understanding and discourse. You are not in compliance with the NEPA law. Instead, your EIS was development specifically with the goal of baffling the public with complex, technical, rambling and redundant bureaucratic obfuscation and gobbledygook. Your use of acronyms and insider military jargon is atrocious. For one example, what do these significant impacts (from the Executive Summary section) mean? They are even more difficult to understand in the airspace section. Explain these (and all the impacts) in terms that the public can understand: "Minimal to moderate impacts on Victor airway and moderate to significant impacts on jet route IFR air traffic within or adjacent to new and modified SUA. □ Minimal to moderate impacts on routes used by general aviation VFR aircraft. □ Minimal to moderate impacts on public airports and instrument approach procedures within close proximity to SUA. □ Minimal to moderate impacts on private airfields within, beneath, or bordering SUA."

8) The EIS must study the location of OHV areas that can be expanded or created, to make up for acreage loss in Johnson Valley. The EIS must address and propose possible mitigation for the public values lost. If recreation use is simply displaced without providing alternative areas for use within the same travel parameters, then the EIS must address the costs to both BLM and local law enforcement agencies to deal with trespass and resource damage that would likely occur.

9) The EIS must study the possibility of BLM selling some surplus land and then use the income to buy land for wheeling.

**Comment ID: N-18734 (Page 8 of 12)**

**Response to Comment N-18734 (Page 8 of 12):**

10) For mitigation, the EIS must identify the possibility of Congress creating a \$10-20M/year (or more) appropriation for OHV land purchase, management of dual-use area, law enforcement, education and outreach programs to prevent illegal riding etc.

11) The EIS must include a full justification for the expansion. Much of the justification that the County and public have seen to-date in preliminary presentations involves the need for large units and large-scale ground maneuver training. The Department of the Navy should assess the warfare situations that may likely face Marines in the next 25 years and whether the more likely future scenarios will be similar to the current engagements of small units in semi-urban settings.

12) DEIS says the expansion will have no visual impacts to the residents of the area. The glaring lights of Baghdad City and newly installed beacons are already an impact, and they are on the existing base. New beacons and desert maneuvers will light up our dark skies even more, and this needs to be addressed.

13) There will also be lack of restriction from the airspace above our homes. Low flying helicopters are already terrible. The EIS must address this.

14) As far as the escalating noise is concerned, the EIS projects doubling ordnance activity including dropping bombs from aircraft. There is no mention of vibrations in the EIS. You must study and quantify: 1) broken windows miles from the explosions, 2) empty tortoise shells near the border, 3) an increase in anxiety levels among the neighbors.

15) Under Cultural Resources, the EIS does not mention the historic eligibility of Johnson Valley or other neighboring homestead communities, and the impact of the light, noise and vibration on them. The recent 150 mph wind dramatizes the likelihood of disruption of training schedules. Accuracy hitting the targets can be questioned with unpredictable high winds. The last bombardment right near the border with Johnson Valley makes this idea even scarier.

16) How will the taking of private land, grazing rights and mining claims be compensated for?

17) How is 29 Palms planning to deal with the liability risk at events?

18) What restrictions will be placed on people trying to hold events on this "dual use" land?

19) What will the BLM role be, if any, in permitting & managing events in the dual use area?

20) Illegal OHV use on private land will increase. What will 29 Palms and BLM do (if anything at all) to help curtail this activity?

**Comment ID: N-18734 (Page 9 of 12)**

**Response to Comment N-18734 (Page 9 of 12):**

21) Why can't some wilderness be opened for OHVs? If they just have to train in Johnson Valley, get rid of the wilderness but then open it for wheeling. Open 3 acres of wilderness to wheelers for every acre lost in Johnson Valley. There's already way too much wilderness. Hardly anyone goes there. They are not accessible. How many people hike, camp or ride horses in them? The EIS must develop mitigation of opening wilderness areas. Analyze the current wilderness use that would be lost, as well as the OHV use to be gained by opening them to wheeling.

22) Where can current OHV areas be expanded? There might be a way to expand Stoddard, Razor and others. 29 Palms and BLM need to study this.

23) Where can new OHV territory be created? A 3:1 ratio was suggested at BLM advisory committee meeting (3 new acres opened, for every acre closed). The law requires they look at mitigation. Where does the EIS talk about expanding or creating new areas for riding? If 150,000 acres are lost in Johnson Valley, the EIS should suggest congressional designation for 450,000 acres OHV area. Some ideas are: Expand Stoddard to south. Expand Razor to west. Designate Dumont Dunes, Dove Springs, Jawbone Canyon, Keysville, Spangler Hills, El Mirage, Glamis, Imperial Dunes etc. What other areas can be designated? What areas have been closed in the past that can now be re-opened? There are a million acres to consider nationwide. Lawmakers can pick 450,000 acres from that.

24) Please go east or don't expand at all.

25) Please address these comments in the next draft of the EIS.

26) Please add me to your mailing list for a copy of the Final EIS.

Sincerely,  
Ronald Sidderi

Comment ID: N-18734 (Page 10 of 12)

Response to Comment N-18734 (Page 10 of 12):

### Cut the military's budget

*President Obama proposes \$400 billion in reductions*

**A**mong the many differences between Republicans' and President Obama's plans for reducing the federal deficit, the most glaring may be their respective approaches to Pentagon spending.

The Republican long-term deficit reduction plan views military spending as sacrosanct. While GOP lawmakers are willing to dismantle Medicare, most seem to view military spending and fiscal responsibility as a contradiction in terms.

In contrast, President Obama last week proposed \$400 billion in military cuts over 12 years. That's less than the \$1 trillion over 10 years recommended by the president's deficit reduction commission, but it's welcome recognition of the need to make military spending sustainable in the midst of an economic crisis that isn't going away any time soon. It also acknowledges what even many Pentagon leaders agree is the very real threat to national security posed by the nation's skyrocketing debt.

The president's proposal represents a welcome shift in Washington thinking on military spending. Since the attacks of Sept. 11, 2001, the Pentagon has been swilling at the federal trough like a herd of tapeworm-infested pigs. Just about anything that military officials and industry lobbyists requested, lawmakers gave them as they chanted the "support our troops" mantra. When weapons or programs went over budget, as they invariably did, there were few, if any, questions. Even when weapons underperformed or were designed for a Cold War that no longer existed, lawmakers couldn't shove the taxpayer dollars fast enough.

Defense spending has nearly dou-

bled to \$553 billion since Sept. 11 — and that doesn't include the cost of the wars in Afghanistan and Iraq, which is expected to add at least another \$160 billion this year.

Defense Secretary Robert Gates understands the need to restrain spending, although it's unclear if he agrees with the scope of Obama's proposed cuts. Earlier this year Gates proposed finding \$175 billion in defense savings over the next five years. He has eliminated several costly and unneeded weapons programs. He has ratcheted up pressure and oversight on contractors and has required the services to find ways to reduce spending. The defense secretary even has proposed the first increase in health insurance premiums in 16 years for working age military retirees.

There is room in the bloated Pentagon budget for cuts well above those sought by Gates and Obama. Skeptics should consider that the United States accounts for nearly as much military spending as the rest of the nations of the world put together.

There are signs that Republicans are beginning to understand the need to cut defense spending. It's encouraging that 110 House Republicans joined Democrats to support Gates' call to cut future spending for a redundant alternative engine for the F-35 fighter jet, saving between \$2 billion to \$3 billion. In the Senate, Oklahoma Republican Tom Coburn has criticized the military for a lack of budgetary transparency and has warned of steep cuts.

It's a start, but there is more to be done in reducing military spending to a fiscally reasonable and sustainable level that ensures the military can meet national security challenges without undermining the economy.

Re: Proposed Expansion of the Twentynine Palms Marine Base  
May 24, 2011

To Whom It May Concern —

First, I would like to commend the MCAGCC and the authors of the thorough and highly-detailed Draft Environmental Impact Statement (DEIS) that they have presented for public review. The report is very comprehensive, and the effort in creating it and candor it represents is very much appreciated.

Having reviewed the document, I would like to register some concerns regarding the proposed expansion plans.

Arguably one of the most significant and immediate effects of training at the Base upon the surrounding area is the explosive vibration propagated throughout the Morongo Basin during live fire exercises. The larger ordnances (presumably artillery) can routinely make the ground shake *twenty to thirty miles away*— far beyond the confines of the Base proper. This is one of the most significant overall impacts on day-to-day living for residents of the region, as many such "hits" are subjectively reminiscent of a modest earthquake, and much more frequent.

The DEIS has attempted to account for these undesired externalities in Table 4.1-2, "Projected Ordnance Noise."

Notably, though, those estimates utilize *C-Weighted* measurements. Indeed, at relatively close distances to the ordnance (i.e., on-base), the resulting noise is more broad-spectrum; hence, this makes for a perfectly adequate measurement in that case.

However, at longer distances (i.e., in the numerous residential areas of the Basin), most of the vibration transmitted is very low frequency (much of it below 20 Hertz). At those frequencies, the "rolloff" utilized in the C-weighting curve dramatically underestimates the intensity of those shocks— by anywhere from approximately 10 to 25 decibels.

This is not your typical residential noise.

Further, because ordnance fire creates *impact* vibration (which is intermittent), rather than typical *ambient* noise, simply averaging the measurements over a 24-hour period (as per CNEL) further underestimates its net effect.

Indeed, these measurement biases are inevitably reflected in Table 4.1-2, as well as the report's conclusions, which are correspondingly minimizing in this regard.

Given the unique nature of the phenomenon being measured, the numbers as presented are actually quite deceiving; and thus, in this key regard, the DEIS falls short of conveying accurate ramifications to the surrounding population of the expansion of the MCAGCC.

Recommendations:

In order to mitigate the environmental impact, a key and common-sense goal of the expansion might be to shift heavy artillery fire further away from the more-populated western portion of the Morongo Basin, and for as much of the year as possible.

GEN-1

NOI-1

Response to Comment N-18735 (Page 1 of 2):

GEN-1:

Thank you for your comment.

NOI-1:

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: N-18735 (Page 2 of 2)

Response to Comment N-18735 (Page 2 of 2):

This could still be accomplished in the context of expanding the Base, and meeting its expanded operational needs.

For example, a land acquisition such as Alternative 6 might better meet all of these requirements if it incorporated modifications such as these:

- *West-to-East* direction of maneuver, similar to that in Alternative 4. This presumably shifts more of the heavy live fire toward a MEB Objective in the eastern (and less populated) end of the Basin.

- MEB Building Block training within *existing* Combat Center boundaries (also a la Alternative 4), as opposed to in the west study area. This is particularly important in view of the necessity of such training "up to 40 weeks/year" [see Table 2.3].

More than many other concerns addressed in the report, the effects of ordnance noise can arguably be felt (quite literally) far outside the confines of the Base. Thus, the changes proposed in the report could easily have a detrimental impact on the surrounding community, if not planned for carefully.

Given the conscientious tone of the Draft Environmental Impact Statement, and keeping the above considerations in mind, it should be possible to better balance the imperative for expansion of the Base with these externalities, and thus help preserve the quality of life for the majority of residents of the Morongo Basin, now and into the future.

Thank you for the opportunity to comment on the DEIS and the proposed expansion. I hope that this feedback proves of value to the planning process and the final report.

If you need any clarification to any of the foregoing, kindly do not hesitate to contact me.

Respectfully Yours,

Re: *Comment Letter re Draft Environmental Impact Statement for Land Acquisition and  
Airspace Establishment for Proposed Expansion of Twenty-Nine Palms USMC Base*

Dear Project Manager:

The Off-Road Business Association ("ORBA") is a trade organization whose members provide goods and services to the off-highway vehicle (OHV) market. On behalf of its members, and on behalf of the millions of OHV users throughout the western United States, ORBA reviews legislation and participates in administrative processes that have the potential to affect public access to recreational space, including and especially those areas controlled by the Bureau of Land Management. ORBA members have customers in virtually every state in the union, but the heart of the OHV market is located in southern California. The OHV industry, which pumps more than \$2 billion dollars into the state economy each year, cannot survive if public OHV areas are shut down or dedicated to non-public purposes.

Over the last decade, as interest in OHV recreation has increased, the desert and forest areas available for such recreation has diminished substantially, resulting in more users being herded on to smaller parcels of land. This causes user conflicts, natural resource impacts, safety problems, and a diminished wilderness experience. Now, OHV recreation faces its greatest threat to date – loss of the Johnson Valley OHV Area. Not only is Johnson Valley large and capable of supporting a large number and wide variety of recreational uses, it possesses some of the preeminent OHV venues in the entire world (e.g., "the Hammers"). Now, however, the United States Marine Corps, based on a "need" identified in the immediate aftermath of the 9/11 attacks, which to expand the Twenty-nine Palms military base to the west for "simultaneous, live-fire MEB training exercises." ORBA opposes this project for the following reasons:

Comment ID: N-18736 (Page 2 of 20)

Naval Facilities Engineering Command Southwest  
 ATTN: 29 Palms EIS Project Manager  
 May 23, 2011  
 Page 2

- The Marines have not demonstrated a clear need for the project. That is, the Marines have not identified a serious training deficiency or a mission failure that would be addressed by the project. Instead, the Marines have simply indicated that the proposed expansion project would improve their ability to “train as they fight.” This is insufficient, in light of the loss to the public in terms of recreational access and use.
- The Marines have not analyzed or disclosed the actual cost of the proposed project, which could run into the tens of millions of dollars. Given that defense spending has doubled since 9/11, and given that the U.S. Government can no longer meet its existing budget commitments and is drowning in debt, it is irresponsible for the Marines to propose yet another defense project with an open-ended – and undisclosed – price tag. The project is simply out of step with the belt-tightening program being advanced by experts within and outside the government.
- The proposed Project, by canceling all or most public use of the existing Johnson Valley OHV area, will greatly damage the local economy, leaving businesses no stable source of revenue. In addition, the loss of Johnson Valley will reverberate throughout the entire OHV industry, affecting businesses throughout southern California and beyond. These economic impacts can hardly be justified in the name of military necessity, as the Marines have not established one.
- The Environmental Impact Statement, which purports to assess and disclose the project’s effects on the human environment, is wholly inadequate to its purpose. In many cases, the Marines have based their impact analyses on antiquated data. In others, they have used analytical methods that cause impacts to be underreported. Indeed, much of the document does not satisfy NEPA’s “hard look” requirement.

NEPA-1

NEPA-2

SOC-1

NEPA-3

In the discussion set forth below, ORBA explains these four basic points in more detail.

I. THE MARINES HAVE NOT IDENTIFIED A CLEAR NEED FOR THE PROPOSED PROJECT

Although the training facilities currently available at Twenty-Nine Palms and other USMC bases have allowed the Marines to ably conduct military operations in Kuwait, Iraq, Afghanistan, the Department of the Navy has now decided that it needs to expand the Twenty-Nine Palms facility by more than 200,000 acres to provide for “sustained, combined-arms, live-fire, and maneuver field training for MEB-sized Marine Air Ground Task Forces (MAGTFs),

NEPA-4

Response to Comment N-18736 (Page 2 of 20):

**NEPA-1:** As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. The lack of a training site large enough to provide the required training of a MEB-sized Marine Air Ground Task Force is considered to be a “serious training deficiency” by the DoN and the Marine Corps.

**NEPA-2:** Consideration of effects of the Proposed Action on the DoD budget and the National debt or deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**SOC-1:** As described in Sections 2.4 and 4.2 of the EIS, the “action alternatives” evaluated in the EIS would enable varying amounts of continued public access to all or sizeable portions of Johnson Valley for recreation. Section 4.3 of the EIS evaluates socioeconomic impacts under each of the action alternatives, and identifies a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Based on public comments on the DEIS, additional information and analysis of the socioeconomic impacts to the OHV industry have been added to the FEIS.

**NEPA-3:** As this comment appears to summarize a conclusion linked to specific comments offered as examples in Section IV of this letter, the response is deferred in favor of the point-by-point responses to each focused comment in Section IV below.

**Comment ID: N-18736 (Page 3 of 20)**

Naval Facilities Engineering Command Southwest

Page 3

each consisting of three battalion task forces and associated command, aviation, and combat logistics support elements.” (DEIS, ES-1) It is difficult to see how the recent wars in the Middle East, or any reasonably anticipated conflict elsewhere in the world, would require than an entire MEB be trained simultaneously at a single military installation.

NEPA-4

**II. THE MARINES HAVE NOT DISCLOSED OR JUSTIFIED COST OF THE PROJECT**

It is now clear that the greatest threat to the security of the United States is debt. Nevertheless, the Pentagon seems blind to this fact and continues to request billions of dollars in public money to fund projects that have only marginal military benefits. Despite the end of the Cold War and diminished threats from those countries with actual armies and navies, the United States continues to increase spending on weapons systems, force structures, and military installations. At long last, military experts and civilian decision-makers are beginning to question the strategic and tactical value of such an approach to defense procurements.

A few recent comments demonstrate the point:

- George Will (*Washington Post* – May 3, 2011):
  - “[T]he enormous military footprint in Afghanistan, next door to bin Laden’s Pakistan refuge, seems especially disproportionate in the wake of his elimination by a small cadre of specialists.”
  - Jim Lacey of the Marine Corps War College notes that Gen. David Petraeus has said there are perhaps about 100 al-Qaida fighters in Afghanistan. “Did anyone,” Lacey asks, do the math? There are, he says, more than 140,000 coalition soldiers in Afghanistan, or 1,400 for every al-Qaida fighter. It costs about \$1 million a year to deploy and support every soldier – or up to \$140 billion, or close to \$1.5 billion a year, for each al-Qaida fighter. “In what universe do we find strategists to whom this makes sense?” he asked.”
- Mark Thompson (*Time* – “How To Save A Trillion Dollars” – April 25, 2011):
  - “The U.S. continues to field and maintain a global force designed during an era of sky’s-the-limit defense budgets.”
  - “Across Washington, all sorts of people are starting to ask the unthinkable questions about long-sacred military budgets. Can the U.S. really afford more than 500 bases at home and around the world? Do the Air Force, Navy and Marines really need \$400 billion in new jet fighters when their fleets of F-15s, F-

**Response to Comment N-18736 (Page 3 of 20):**

**NEPA-4:** Comment noted. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-18736 (Page 4 of 20)

Response to Comment N-18736 (Page 4 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 4

- 16s and F-18s will give them vast air superiority for years to come? Does the Navy need 50 attack submarines when America's main enemy hides in caves?"
- "It may seem strange to talk about defense cuts while the U.S. is waging one war in Afghanistan, is mopping up a second in Iraq and has just launched a half-war in Libya. But those conflicts have made it easy to forget the warning of Admiral Mike Mullen, Chairman of the Joint Chiefs of Staff, that 'the single biggest threat to our national security is our debt.' Which points to an almost tragic irony of Washington's \$700 billion annual appetite for military stores: we are borrowing cash from China to pay for weapons that we would presumably use against it. If the Chinese want to slay us, they don't need to attack us with their missiles. They just need to call in their loans."
  - "Numbers alone tell much of the story: We are now spending 50% more (even excluding the wars in Afghanistan and Iraq) than we did on 9/11. We are spending more on the military than we did during the Cold War, when U.S. and NATO troops stared across Germany's Fulda Gap at a real superpower foe with real tanks and thousands of nuclear weapons aimed at U.S. cities. In fact, the U.S. spends about as much on its military as the rest of the world combined."
  - "While the U.S.'s military spending has jumped from \$1,500 per capita in 1998 to \$2,700 in 2008, its NATO allies have been spending \$500 per person over the same span. As long as the U.S. is overspending on its defense, it lets its allies skimp on theirs and instead pour the savings into infrastructure, education and health care. So even as U.S. taxpayers fret about their health care costs, their tax dollars are paying for a military that is subsidizing the health care of their European allies."
  - "[R]evising America's defense budget will happen only if the U.S. takes a hard-eyed look at the dozens of military operations that are no longer vital or affordable."
  - "\$1 trillion in cuts wouldn't really be as drastic as it sounds – or as the military's no-surrender defenders insist. Such a trim would still leave the Pentagon fatter than it was before 9/11."
  - "California Representative Howard McKeon, the Republican chairman of the Armed Services Committee, says, 'A defense budget in decline portends an America in decline.' Attitudes like that can bankrupt a nation, and the public senses its."

Page 5

- o "For too long, an uninterested and distracted citizenry has been content to leave the messy business of national defense to those with bottom-line reasons for force-feeding it like foie gras goose. It's long past time . . . for U.S. taxpayers to demand that its government spend what is needed to defend the country – not a penny more."
- Robert Gates, United States Secretary of Defense
  - o "Given America's difficult economic circumstances and parlous fiscal condition, military spending on things large and small can and should expect closer, harsher scrutiny. The gusher has been turned off, and will stay off for a good period of time." (CNN, May 9, 2010)
  - o "The department must start setting priorities, making real trade-offs and separating appetites from real requirements." (Quoted in Huffington Post, August 9, 2010)
  - o "We are not exempt from scrutiny and being asked to figure out what we are doing with less dollars." (Quoted in MSNBC.com, January 6, 2011.)
  - o "The spigot of defense funding opened by 9/11 is closing."
  - o "It is important to remember that every defense dollar spent to over-ensure against a remote or diminishing risk — or in effect to run up the score in a capability where the United States is already dominant — is a dollar not available to take care of our people, reset the force, win the wars we are in and improve capabilities in areas where we are underinvested and potentially vulnerable." (As quoted in Associated Press article, April 6, 2009).

These quotations demonstrate that well-informed commentators, military experts, and the Secretary of Defense himself believe it is time that the desires of the Army, Air Force, Marines, and Navy yield to the economic realities facing the United States. Only those programs, weapon systems, force structures, and facilities projects with an established, well-documented need should be funded. All others must either be revamped to better address an actual military deficiency or be abandoned. Ironically, it is the nation's unwillingness or inability to curb defense spending – which has *doubled* since September 11, 2001 – that has made the United States so debt-ridden and vulnerable.

With respect to the proposed base expansion at Twenty-Nine Palms, the Project documents, including the Draft EIS, are remarkable in that they fail to explain why the current facilities, however small when compared to what the Marines want, are inadequate to meet the

NEPA-5

Comment ID: N-18736 (Page 6 of 20)

May 23, 2011  
Page 6

basic training needs of this branch of the military. Nowhere does the Marine Corp identify or describe any mission failure, large or small, that resulted from an inability to train an entire MEB simultaneously at the same site. In fact, in both Iraq and Afghanistan, the expeditionary portion of the Marine's mission was carried out with great success.<sup>1</sup> It has been the long-term occupation of these countries, and the forced, constant exposure to IEDs and similar low-tech weapons, that has caused the majority of casualties. So while the Marines certainly *desire* a larger base and could probably make productive use of the extra space, there is no evidence that they *need* more land or that their combat readiness will suffer markedly without it.

NEPA-5

The Draft EIS and other documents also fail to mention how much the proposed Project will cost. While the land may be transferred from the Bureau of Land Management to the Department of the Navy for next to nothing, and while the ongoing costs of maintaining the site may not be prohibitive, the expense of conducting the full-MEB training twice a year could be huge, running to the tens of millions of dollars per annum. Again, no one can be sure how expensive this will be, because the Marines did not bother to calculate the cost (or if they did calculate it, they did not feel compelled to disclose the figures.) This is precisely the kind of budgetary arrogance that typifies military spending requests. Without accurate estimates regarding the cost of the proposed project, there is no means to weigh its purported benefits against its fiscal, environmental, and socio-economic impacts.

**III. THE PROJECT WILL DEVASTATE THE LOCAL ECONOMY AND SEVERELY DAMAGE THE OHV INDUSTRY**

Perhaps more than most organizations, ORBA is intimately familiar with the economic stress experienced by communities near Johnson Valley. These businesses rely heavily on the revenue generated by the OHV groups and individuals who visit the Johnson Valley OHV area. The proposed expansion of the USMC base, however, will effectively kill the local economy. As explained below, there is no way that the 70 additional military personnel added by the Project will spend enough to offset the loss of the OHV revenue currently generated in Johnson Valley.

SOC-2

In addition, the Project has the potential to wreak serious damage on the OHV industry in southern California and throughout the state. OHV-related businesses, many of which are small shops operating with razor-thin margins, have taken a huge hit since the economy collapsed in 2008; any additional loss of revenue could be fatal. The loss of Johnson Valley, will have repercussion well-beyond Lucerne Valley and Victorville; it will affect businesses in Los Angeles and Phoenix, among other places. While some OHV users, if closed out of Johnson Valley, will seek out other recreational venues (something that is increasingly difficult to find),

SOC-3

<sup>1</sup> The Draft EIS admits this fact on page J-23, stating, "Marine Corps successes in the first Gulf War in 1991, in leading the introduction of U.S. forces into Afghanistan in 2001, and again in Operation Iraqi Freedom in 2003, have validated the Marine Corps' doctrinal training philosophy of live-fire combined arms MAGTF integration through CAX."

Response to Comment N-18736 (Page 6 of 20):

**NEPA-5:** Sections 1.3, 1.4.3, 2.3, and 2.7 of the EIS explain why the current facilities (at the Combat Center as well as at other training sites) are inadequate to meet MEB training requirements. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. It is the role of decision-makers, including ultimately the U.S. Congress, to weigh the relative priority and importance of that training requirement along with other national defense priorities, financial concerns, the information in the EIS, and many other factors as they make decisions about the Proposed Action. Consideration of effects of the Proposed Action on the DoD budget and the National debt or deficit are outside the scope of an EIS analysis.

**SOC-2:** Section 4.3 of the EIS evaluates socioeconomic impacts under each of the action alternatives, and identifies a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Based on public comments on the DEIS, additional information and analysis of the socioeconomic impacts to the OHV industry have been added to the FEIS.

**SOC-3:** While additional information about the broader OHV-related industry has been added to Sections 3.3 and 4.3 in the Final EIS, it should be noted that, as the size of the economy under consideration increases (e.g., the southern California region or the entire State), the impacts would represent a smaller and smaller proportion of the overall economy. The analysis acknowledges the potential impact on individual businesses in the project vicinity, and estimates the likelihood of OHV users seeking out other recreational venues.

many will simply decide that such an effort is too much trouble. They will stop bringing their families to the desert; they will sell their RVs and Jeeps and motorcycles, or let them mold in the garage. They will fall out of the market, and more of ORBA's members will go out of business. This seems a high price to pay for military exercises conducted just twice a year, the need for which has not been demonstrated.

SOC-3

IV. THE DRAFT EIS IS INADEQUATE

A. Failure to Provide Basic, Necessary Studies

Before identifying the specific defects of the EIS on a topic-by-topic basis, it is important first to examine a systemic flaw that plagues the entire EIS – the failure to provide the technical studies that purportedly support the document's impact analyses.

Data set forth in the EIS indicate that the proposed base expansion and the training activities contemplated on the newly-acquired land would adversely affect air quality, ambient sound/noise levels, biological resources, recreational activities, cultural resources, and socio-economic conditions. Other data from the EIS suggests that the project could also result in adverse impacts on hazardous materials, airspace management, water supply, water quality, and greenhouse gas emissions. As to each of these impact categories, the EIS concludes that the project's potential effects are either (a) not significant, or (b) significant and unavoidable. However, in most cases, the EIS fails to include the technical studies necessary to support such conclusions.

GEN-1

For example, the EIS fails to provide a water supply study, a water quality study, or an inventory of potential greenhouse gas sources and emissions. The EIS *does* provide a technical appendix for noise, but it is not a study *per se* of the project's potential impacts on the existing ambient environment. Instead, it is merely a primer on noise metrics – very helpful in terms of understanding noise measurements, but not helpful at all in terms of determining the actual noise impacts of the project.

The Biological Resource appendix is likewise deficient. It does not describe existing biological conditions on the affected site(s) or specifically identify where they exist. Nor does it explain how and to what extent biological resources will be affected by the project. Rather, the Biological Resource appendix simply describes the types of disturbances that currently occur on the Combat Center and in the proposed expansion areas, and then draws some conclusions regarding the project's potential impacts on the federally-listed desert tortoise. No other species is discussed. So this Biological Resource appendix cannot serve as the technical basis for the impact analysis set forth in the biology section of EIS. Even if the desert tortoise discussion was adequate (which it is not, see below), the absence of any assessment of project impacts on desert birds, mammals, other reptiles, sensitive plants, and wildlife movement, renders the document

Comment ID: N-18736 (Page 8 of 20)

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 8

incomplete and defective. The EIS also refers to the 2007 Basewide Biological Opinion prepared by the USFWS (the 2007 BO), and contends that the conservation measures from this BO will effectively mitigate Project impacts on desert tortoise. As with other critical documents, however, the 2007 BO is not included in the EIS as an appendix, so there is no way for the public to review its contents or test the assertions made in the EIS.

GEN-1  
Continued

The Cultural Resource appendix is also of little value. It is merely a compendium of the various known artifacts and historical sites that exist in the areas being proposed for annexation to the base. Nowhere does the appendix actually evaluate the proposed Project's potential to damage or destroy these artifacts and/or historical sites. Therefore, it, too, is wholly inadequate and may not serve as the technical basis for the EIS's analysis of Project impacts on cultural resources.

NEPA-6

Finally, as indicated above, the EIS provides no data whatsoever as to the cost of the proposed Project, including costs associated with the MEB training operations to be conducted on the newly-acquired land.

**B. The EIS Fails to Analyze USMC Potential to Deplete Aquifers in Western Study Area**

On page 3.13-19, the EIS makes a startling disclosure: The Combat Center is running out of water and has no current means to augment its supply.<sup>2</sup> Specifically, the Combat Center obtains all of its water – potable and non-potable – through groundwater pumping. However, the aquifer that provides most of this water, Surprise Spring, is becoming dangerously depleted. In fact, the Marine's have so overdrafted the aquifer that groundwater levels have dropped by as much as 190 feet. (EIS, 3.13-19) Worse, Surprise Spring is an ancient aquifer that does not recharge readily, which means that it "is not a renewable resource." (EIS, 3.13-19) In short, the Combat Center's primary source of water is rapidly disappearing and the Marines desperately need to find another one.<sup>3</sup>

WAT-1

The Western Study Area ("WSA"), by contrast, overlies a different groundwater subbasin – one with a substantial supply of water. (EIS, 3.13-20; Table 3.13-5) It would appear, then, that the Marine Corps, apart from wanting the WSA for military training operations, may also be looking to acquire access to the groundwater resources beneath it. Although the groundwater

<sup>2</sup> The EIS attempts to downplay this problem by claiming that conservation efforts at the Combat Center have reduced water consumption by 26% over the last decade. However, despite these reductions in consumption, the Combat Center still overdrafts the Surprise Spring aquifer by 2,900 acre feet (AF) per year, and overdrafts the Twentynine Palms Valley aquifer by 1,040 AF per year. (Table 3.13-5).

<sup>3</sup> The Combat Center also draws groundwater from the Twentynine Palms Valley subbasin, which is also depleted and functions at a recharge deficit. (Table 3.13-5)

Response to Comment N-18736 (Page 8 of 20):

**NEPA-6:** The proposed action and alternatives, including the No-Action Alternative are described in Chapter 2 of the EIS. Although the No-Action Alternative does not meet the purpose of and need for the proposed action, it has been carried forward for analysis in the EIS as described in Chapter 4 under each resource area. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**WAT-1:** Please refer to response to comment letter N-18713, comment WAT-1.

Comment ID: N-18736 (Page 9 of 20)

Response to Comment N-18736 (Page 9 of 20):

Naval Facilities Engineering Command Southwest

Page 9

from the Johnson Valley and Means Valley aquifers is high in Total Dissolved Solids (TDS), it can either be treated for potable uses, or “blended” with higher-quality water for a variety of potable and non-potable uses. The EIS never acknowledges that the Marines plan to use WSA groundwater to supplement existing supplies. Indeed, the EIS does not even discuss this very plausible scenario, and for this reason alone is defective. Nevertheless, the EIS does mention that the Marines are “evaluating plans to “blend” groundwater from the Surprise Spring subbasin with those [sic] from another aquifer(s).” (EIS, 3.13-19) These blending scenarios were apparently modeled by the USGS in 2008. However, the details of this modeling effort are not provided.

WAT-1  
continued

The water resource data provided in the EIS, while cryptic, suggest strongly that the Marine Corps, once it secures possession of the WSA, will begin pumping groundwater from the Johnson Valley and Means Valley aquifers to blend with water derived from Surprise Spring. The EIS, however, fails to assess whether and to what extent this effort to temporarily address the Combat Center’s water shortage will deplete the aquifers in Johnson Valley and Means Valley. In fact, the EIS does not even disclose how much water the proposed Project will require. As a result, the EIS is deficient as a matter of law.

In short, the Combat Center’s undisclosed desire to acquire the water beneath the WSA reminds one of the following dialogue from the movie *Chinatown*:

Noah Cross: “You see Mr. Gittes. Either you bring the water to L.A. – or your bring L.A. to the water.”

Jake Gittes: “How do you do that?”

Noah Cross: “—just incorporate the Valley into the city so the water goes to L.A. after all. It’s very simple.”

— *Chinatown* (Screenplay by Robert Townes)

**C. The EIS Noise Analysis is Inadequate**

As indicated above, the EIS does not actually provide a Noise Study as a technical appendix. Instead, Appendix H is simply a primer on noise modeling and does not provide any data on the existing sound environment or the Project’s impact on that environment. Likewise, the EIS itself fails to describe ambient sound levels in and adjacent to the three study areas – i.e., the WSA, the Eastern Study Area (“ESA”), or the Southern Study Area (“SSA”). Without existing sound level data, there is no way to measure the extent to which the Project will alter the

NOI-1

**NOI-1:** Please refer to response to comment letter N-18713, comment NOI-1.

Comment ID: N-18736 (Page 10 of 20)

Response to Comment N-18736 (Page 10 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 10

current sound environment. Nor is there any way to determine whether the Project's net impact on noise is significant.

Even the baseline used for "existing" noise conditions at the *Combat Center* defies logic. Rather than measure *current* aircraft noise (i.e., from 2008 or 2009), the EIS uses a 2003 noise study – WR 02-13 – that is based on airfield operations that took place in 2001. Not only is such information 10 years old, it fails to account for the significant increase in flight operations that has occurred since the "War on Terror" began. It appears that the Marines, in an effort to trim costs and/or save time, simply pulled an old noise study off the shelf rather than perform a new one. NEPA does not permit this kind of sloppy work, especially since there is nothing preventing the Marines from conducting a fully updated noise study at the Combat Center. There is also no explanation for altering the noise model to reflect "annual average daily operations" instead of "annual average *busy* day operations." (See, EIS, 3.9-4) This change results in an underreporting of potential noise effects.

The EIS noise analysis also uses the wrong metric for determining the significance of project-related noise events. For example, the MEB training contemplated by the proposed Project entails low-altitude strafing and bombing runs by fixed and non-fixed wing aircraft.<sup>4</sup> Flight operations such as these create high-intensity noise of very short duration, resulting in substantial annoyance to any person living or working nearby. Rather than assess this impact using the Lmax noise metric, which is specifically designed to measure impulsive sound, the EIS uses the Community Noise Equivalent Level (CNEL) metric, which averages noise levels over a certain period of time, usually 24 hours. Obviously, this metric will not fully capture the noise (and annoyance) that results from very intense but sporadic noise events caused by military jet flyovers. To make matters worse, it does not appear that the EIS measured aircraft noise while in combat mode – i.e., flying fast and at low altitude.<sup>5</sup> Instead, the EIS aircraft noise model was based on two aerial *refueling* tracks – one at 19,000 feet AGL and one at 22,000 AGL. (EIS, 3.9-6)<sup>6</sup> Again, this kind of modeling decision results in an underreporting of aircraft noise impacts.

We would point out that using the CNEL metric *does* makes sense when determining noise impacts near the Combat Center airports, where the number of flight operations is high enough to warrant time-averaging. It just doesn't make sense when determining noise impacts in those areas affected by combat training flights.

<sup>4</sup> According to the EIS, combat training flights will be conducted at altitudes as low as 500 feet above ground level (AGL). (EIS, 3.7-9)

<sup>5</sup> The EIS admits that, with the Project, "[o]verflights would increase within existing and proposed airspace and could operate at lower altitudes than currently allowed in specified areas. (EIS, 4.1-5). However, the EIS does not measure the noise impacts of such overflights.

<sup>6</sup> Unlike refueling operations, bombing and strafing runs occur at very low altitudes.

NOI-1 continued

Comment ID: N-18736 (Page 11 of 20)

Response to Comment N-18736 (Page 11 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 11

In addition, the EIS fails to analyze adequately the effect of project-related noise on wildlife. The EIS's discussion on this topic is remarkably brief and general, even though military operations such as artillery firing, ordnance explosions, combat flights, and tank and troop movements generate the kind of high-intensity noise that frightens wildlife and may disrupt their normal behaviors. For example, according to Figure 3.1-8 of the EIS, the Noise Study included only two (2) "points of interest" located within the WSA. This demonstrates that the Noise Study was focused exclusively on impacts to humans, ignoring entirely the Project's potentially devastating noise effects on animals in the desert.<sup>7</sup> Birds, reptiles, ungulates (and other mammals) all are highly-sensitive to sound changes. Given the number of wildlife species in the proposed acquisitions areas (especially the WSA) – including the federally-threatened desert tortoise – the EIS should provide a more thorough and searching analysis of the Project's potential to cause noise-related impacts on biological resources.

BIO-1

**BIO-1:** Please refer to response to comment letter N-18713, comment BIO-1.

**D. The EIS's Biological Impacts Analysis is Inadequate**

Available data from the BLM and other sources show that the WSA is home to a wide array of sensitive plant and wildlife species, including the desert tortoises. Yet the EIS does not indicate where these species are located within the WSA; nor does it overlay the proposed military training exercises onto species maps to determine where potential conflicts might arise. Without such overlays, it is impossible for the public (and the Marine Corps) to know with any kind of precision whether the proposed MEB training activities will kill, injure, disrupt, or displace sensitive plants and animals. This is not a speculative concern. The Marine Corps, during the planned MEB exercises, intends to activate 15,000 to 20,000 troops, backed by tanks and other vehicles, and engage in live-fire combat training. This will involve hundreds of thousands of rounds of small arms ammunition, artillery rounds, tank rounds, and missiles delivered from aircraft. The exercise areas will effectively be transformed into highly-violent war zones. In such a situation, there is no question that existing wildlife will be killed or injured or, at the very least, displaced. However, the EIS provides very little information on this subject.

BIO-2

**BIO-2:** Please refer to response to comment letter N-18713, comment BIO-2.

Perhaps the Marine Corps is assuming the Section 7 Biological Opinion will cover these issues. If so, the assumption is unfounded. First, the Biological Opinion, when completed, will only address potential impacts on federally-listed species – i.e., the desert tortoise. No other species will be covered. Second, the Biological Opinion is required under the Endangered Species Act; it does not satisfy the Marine Corps' separate and independent obligation under NEPA to disclose impacts to biological resources.

Part of the problem is that the Marines, in preparing the EIS, conducted very few wildlife studies of the 180,000-acre WSA. According to Table 3.10-1 of the EIS, the Marines performed the following biological resource surveys in the WSA: (1) one survey for special status plants in

<sup>7</sup> See, EIS at 3.9-1 [Describing noise metrics as measuring sound in relation to human sensitivities.]

Comment ID: N-18736 (Page 12 of 20)

Response to Comment N-18736 (Page 12 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 12

2008, (2) one survey for reptiles and burrowing owl in 2008, and (3) one survey for Mojave ground squirrel in 2008. No bird surveys (other than for burrowing owl) were conducted. No mammal surveys (other than for Mojave ground squirrel) were conducted. There was no attempt to identify and locate bat roosts. Insects were not surveyed at all. As a result, the EIS does not provide a complete or reliable inventory of the various plant and wildlife species that exist in the WSA, even though the BLM possesses much of this information.<sup>8</sup>

The EIS also fails to discuss the potential for lead and other chemicals from expended ordnance to enter the water supply used by wildlife or to accumulate in the plant materials eaten by wildlife.

Another shortcoming of the EIS biological impacts analysis is that it tends to focus myopically on the desert tortoise and pays scant attention to the other sensitive species in the affected areas. This is not to say that impacts on the tortoise are unimportant. On the contrary, they are critically important, and this Project has the potential to “take” hundreds of tortoises annually, possibly frustrating the fragile state of the species recovery. However, the tortoise is *not* an umbrella species for all or even most of the other wildlife in the study areas. Therefore, the EIS must give a full accounting of potential impacts on all sensitive birds, mammals (including bats), reptiles, amphibians, and insects that use or reside in these parts of the Mojave Desert.

With respect to Project impacts on the desert tortoise, the EIS has major baseline data problems. In recent years, tortoise experts and statisticians have realized that survey methods used in the 1980s and 1990s, including the manner in which transects were run, produced unreliable results. In fact, data from surveys conducted prior to 2005 are largely unusable; and they certainly cannot be mixed with or compared to data from surveys conducted from 2005 onward. However, this is exactly the error that the EIS makes in its tortoise analysis. For tortoise densities on the *Combat Center*, the EIS relies on strip transect surveys conducted in 1997 and 1999. (EIS, 3.10-24) For tortoise densities in the *WSA*, the EIS relies on tortoise sign surveys conducted in 2009. (EIS, 3.10-41) The EIS then tries to compare these two data sets, which any tortoise expert knows is a dubious exercise.

<sup>8</sup> Although Figure 3.10-5 of the EIS purports to depict the vegetation communities of the West, East, and South studies areas, the vegetative mapping for the WSA so coarse as to be worthless. The EIS itself admits that “[u]nlike the Combat Center and the other two acquisition study areas, plant communities have not been mapped to a high level of detail within the entirety of the west study area.” (EIS, 3.10-34) In fact, only 57% of the WSA has been subjected to high-quality mapping. With respect to where in the WSA certain wildlife species reside, Table 3.10-7 provides only the most general information. For example, when discussing the desert tortoise, the table indicates that the species “[o]ccurs in suitable habitat throughout the west study area.” As to the Mojave fringe-toad lizard, the table states that this species “[o]ccurs in the southern portion of the west study area.” For purposes of determining whether the military activities contemplated under the proposed Project will affect these species and their habitat, such vague statements have almost no value.

BIO-2 continued

Comment ID: N-18736 (Page 13 of 20)

Response to Comment N-18736 (Page 13 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 13

About the only meaningful conclusion to be drawn from the tortoise data derived from surveys of the Combat Center is that base operations have resulted in significant reductions in tortoise density, at least compared to similar habitat areas adjacent to the base – e.g., those in WSA. In light of this, the proposed Project, if implemented in the WSA, may cause similar tortoise declines in the expansion area. The EIS does not really tackle this issue. Instead, it suggests that there will be no net change in threats to the tortoise, since the Project would displace existing OHV activities. However, this is an oversimplified and inaccurate analysis. There is no data indicating that OHV use in the WSA (Johnson Valley) has resulted in perceptible declines in tortoise populations. In fact, tortoise densities in Johnson Valley have been and remain significantly higher than tortoise densities on the Combat Center (allowing, of course, for discrepancies in the survey methods and data).

BIO-2  
continued

Finally, on the matter of the Project’s anticipated “take” of tortoises, the EIS states that under Alternative 6 (Preferred Alternative), the Project, over its 50-year life, would result in the take of between 154 and 714 tortoises at the base. (Table 4.10-10)<sup>9</sup> This is quite a large range. Although the Biological Opinion for this Project has not yet been released, it would be unusual for the USFWS to issue an Incidental Take Statement (“ITS”) where the “take” range is so wide. The Marines must conduct a more thorough study of potential “take” to predict with greater precision that actual number of tortoise that will be lost as a result of the Project. Without such a thorough study, the EIS is inadequate. Further, without a more exact range of potential take, the USFWS will not be able to issue a Biological Opinion and ITS that comply with Section 7 of the ESA. We would also point out that any project with the potential to “take” more than 14 federally-listed desert tortoises per year cannot be described as having no significant effects on biological resources.<sup>10</sup> In addition, nothing in the EIS indicates that the proposed mitigation measures, including those to be developed and included in the not-yet-released Biological Opinion, will reduce the number of tortoises “taken” as a result of the Project.

**E. The EIS Provides an Inadequate Analysis of Project Impacts on Recreation**

The EIS concludes correctly that the proposed Project, if implemented in the WSA, will have a significant effect on outdoor recreation. However, on the issue of recreation impacts, the EIS makes certain erroneous assumptions that result in a skewed assessment of project alternatives. Specifically, the EIS assumes that the number of “dispersed use” visitor days lost under Alternative 6 (the “Preferred Project”) will be the same as the number lost under Alternatives 4 and 5. (EIS, Table 4.2-4) This is almost certainly incorrect, given that under Alternative 6 only 44% of the Johnson Valley OHV area would be available for part-time public

REC-1

**REC-1:** Please refer to response to comment letter N-18713, comment REC-1.

<sup>9</sup> These figures include “take” of tortoises in the Combat Center as well as the proposed acquisition areas. (See Table 4.10-10)

<sup>10</sup> The Alternative 6 take figures set forth in Table 4.10-10 amortize to an estimated take of between 3.08 and 14.28 tortoises *per year*.

Comment ID: N-18736 (Page 14 of 20)

Response to Comment N-18736 (Page 14 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 14

use (through the proposed Restricted Public Access program), whereas under Alternatives 4 and 5 the entire Johnson Valley OHV area (100%) would be available for part-time public use. The difference is not inconsequential, as it amounts to more than 106,000 acres of land. Given that "dispersed use" means exactly that – *dispersed use* – it is irrational to assume that the 82,802 acres available for public use under Alternative 6 will accommodate the same number of visitors as the 189,470 acres available for public use under Alternatives 4 and 5. The more reasonable assumption is that a significant percentage of potential visitors will bypass Johnson Valley rather than be crowded into the small area provided under the RPAA for Alternative 6.

It is critical that this analytical error be corrected, because it infects the EIS's assessment of the project's impacts on (1) recreational use displacement, and (2) socio-economic conditions. This is easily explained. If fewer OHV users visit Johnson Valley under Alternative 6 than under Alternative 4 or 5, those users will likely travel to some other OHV venue, taking their dollars with them. The EIS, therefore, must evaluate this "displacement" scenario for impacts on natural resources at the "substitute" venue(s) and for the economic loss suffered by local businesses near Johnson Valley. Note also that the EIS's discussion of recreational displacement impacts generally is very poor, even though data included in the EIS indicate that the proposed Project will contribute to the 30-year trend of reducing the space available for OHV-related recreation. (See Figure 3.2-6) During that period, acreage available for OHV recreation decreased by 48%; the proposed Project would effectively close the Johnson Valley OHV area, removing another 180,000 acres from public recreational use. The loss of so much recreational land simply shunts more people and more vehicles onto the few open areas that remain, placing added stress on their human and environmental resources, and effectively ruining the "wilderness experience" of those seeking an escape from urban life. These secondary impacts of the Project are real and the EIS must analyze them in detail. Currently, however, it fails to do so.

REC-1  
continued

The EIS also provides little assurance that the Marine Corps will not arbitrarily close the RPAA area contemplated under Alternatives 2, 4, 5, and 6. Nothing in the EIS or the Project generally indicates that this would not or could not happen. On the contrary, the EIS does not even describe the conditions under which such a closure would be allowed. Instead, the decision to close the RPAA appears to rest solely with the Marine Corps, with no right to appeal. In light of this fact, the EIS should (but does not) disclose that the Project's recreation impacts under Alternatives 2, 4, 5, and 6 may ultimately be identical to those of Alternative 1.

GEN-2

**GEN-2:** Please refer to response to comment letter N-18713, comment GEN-2.

**F. The EIS Provides an Inadequate Analysis of Project-Related Greenhouse Gas Emissions**

The EIS includes a greenhouse gas (GHG) discussion (as part of the Cumulative Impacts analysis), but does not present a meaningful assessment of the project's GHG impacts. First, the EIS fails to provide a GHG inventory for the Combat Center, so there is no means to determine the base's *existing* carbon footprint or to calculate how much that footprint will grow once the

AQ-2

**AQ-2:** Please see the response to comment N-18713, AQ-1.

Comment ID: N-18736 (Page 15 of 20)

Page 15

Project is implemented. This kind of “project-to-ground” analysis is central to every NEPA analysis. Second, the EIS, for purposes of determining impact significance, compares the Project’s GHG emissions against the total GHG inventory of *the entire United States*. Not surprisingly, the Project’s contribution to the national total is very small, amounting to .00014%. Based on this number, the EIS concludes that the Project will have an insignificant impact on global climate change. (EIS, 5-33) Such an analysis is meaningless and unhelpful. No conceivable project – no matter how much GHG it might generate – will contribute more than a fraction of a percent to the national inventory of GHG emissions. Using the EIS’s logic, then, no project would ever make a significant contribution to global climate change. For this reason, the significance criterion used in the EIS is invalid.

AQ-2  
continued

Regardless of whether the EPA or any other federal agency has established significance thresholds for GHG emissions, the Marine Corps can and must develop significance criteria that are meaningful for this EIS. Ironically, the proposed project is located in the one state in the Union that has developed standards for evaluating GHG emissions on a project-by-project basis. The Marines should take advantage of this and use California’s standards for determining the significance of the Project’s GHG emissions. In fact, given that the Marines have asked for – and received – permission from the Mojave Air Pollution Control District to be included in the District’s portion of the California State Implementation Plan, GHG emissions from the Combat Center and the proposed Project should be assessed using California’s standards.

**G. The EIS Provides a Skewed Assessment of the Project’s Adverse Impacts on the Local Economy**

The EIS contends that the Project will add 70 personnel to the existing population at the Combat Center, and that these 70 individuals will generate, collectively, \$4.5 million in county-wide spending, thus off-setting the economic losses caused by shutting down the Johnson Valley OHV area. This claim is hard to square with the fact that, according to the EIS, Johnson Valley OHV area experiences approximately 300,000 visitor days per year. (See, EIS, Table 3.2-9)<sup>11</sup> For the EIS’s claim to be valid, each visitor would have to spend less than \$15 per day. This contradicts Table 3.3-8 of the EIS, which indicates that the average person spends more than \$31.00 per visitor use day.

SOC-4

**SOC-4:** Please refer to response to comment letter N-18713, comment SOC-1.

The \$4.5 million attributed to new base employee spending, while not inconsequential, cannot compete with the \$338.8 million (in 2003 dollars) generated by recreational visitation, including OHV-related recreation, in the Mojave Desert Region. (See EIS Table 3.3-7, citing Economic Benefits study conducted by California Department of Parks and Recreation.)

<sup>11</sup> We believe the 300,000 annual visitor use day figure used is low by a factor of at least two. The figure is comes from the BLM, which historically underreports visitor numbers. Further, as pointed out in the EIS, Johnson Valley has a number of entry and exit points, most of which are not monitored by BLM. As a result, many visitors are never counted and the durations of their visits are not determined.

Comment ID: N-18736 (Page 16 of 20)

Response to Comment N-18736 (Page 16 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 16

More important, however, is the fact that the Project will have a disproportionate and devastating economic impact on those communities closest to, and most dependent on, the Johnson Valley OHV area – e.g., Lucerne Valley. (See, Table 4.3-13)<sup>12</sup> The EIS speculates that these businesses will be able to make up the difference by serving non-OHV visitors on their way to Big Bear Lake. (EIS, 4.3-9) However, there is no evidence to support this contention. The EIS also argues that because Lucerne Valley has historically experienced a 20% turnover rate in its businesses, the community is accustomed to economic fluctuations and will adjust to the new reality occasioned by the project. (EIS, 4.3-9) Based on this rather flip analysis, the EIS concludes that the Project will not have a significant impact on Lucerne Valley or other local economies. Such a conclusion reflects both insensitivity to and ignorance of the economic realities facing the business owners (and employees) of Lucerne Valley and the other towns that rely on OHV-related revenues.

SOC-4  
continued

**H. The EIS Does Not Analyze Project Impacts on Regional OHV Market**

Although the EIS makes a half-hearted (and misleading) attempt to evaluate the Project's potential impact on the local economy, it ignores complete the Project's effects on the regional OHV market, which has suffered substantially since the economic downturn in 2008. The loss of Johnson Valley may and likely will cause a reduction in OHV-related sales throughout southern California. This, in turn, may result in business failures among those manufacturers, distributors, and retailers that serve the OHV market. This impact should have been analyzed in the EIS but was not.

SOC-5

**I. The EIS Provides an Inadequate Analysis of the Project's Impacts on Water Quality**

As shown in Figure 3.13-1 of the EIS, the WSA is laced with washes, rivulets, and dry lake beds that receive and/or convey water during rain events. In addition, much of the WSA overlies groundwater aquifers. These water sources are critical to the vegetation and wildlife in the WSA. The EIS, however, does not describe the existing water quality conditions at these water sources. Nor does it provide anything more than a superficial analysis of the proposed Project's potential to contaminate these water sources with munitions constituents (MC) and hydrocarbons from fuel discharges.

WAT-2

<sup>12</sup> According to Table 4.3-13, the Project, under Alternative 6 (the Preferred Project), would reduce recreational and film spending in the local community by 24.6% and local tax revenues by 24.7%. Given the small profit margins of most small businesses, this kind of drop in revenues would be devastating.

**SOC-5:** Additional information and analysis regarding potential impacts to the regional OHV industry were added for the Final EIS.

**WAT-2:** Section 3.13.1 of the EIS states that all naturally-occurring surface water features are ephemeral and contain water only during and after infrequent rain events. The EIS also states that no information is available on existing water quality conditions associated with intermittent wet areas (washes and playas) at the Combat Center. It is likely that water quality for intermittent flows is influenced by the amounts of suspended sediment and/or dissolved salts, which are expected to vary for different substrate types, such as bedrock, alluvial fans, and playa surfaces. The potential for munitions contaminants to affect the quality of surface and groundwaters are evaluated in Section 4.13. The low precipitation rate, intermittent receiving surface water bodies, and deep groundwater, limit the potential migration of MC residues and thus the impact of munitions on water quality was determined to be less than significant. No changes to the EIS are required.

Comment ID: N-18736 (Page 17 of 20)

Response to Comment N-18736 (Page 17 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 17

**J. The EIS Provides an Inadequate Analysis of the Project's Impacts on Air Quality**

a. Baseline Emissions.

The method used to perform the Air Quality impacts analysis is highly-suspect. For example, when establishing baseline pollutant levels (including those for PM<sub>10</sub>), the EIS uses emissions levels from the Combat Center as measured in 2002, even though emissions data from 2009 are available. Of course, the 2009 emissions are substantially higher. The EIS discounts these, however, claiming that "the high levels of existing training exercises at the Combat Center would revert back to pre-war levels (before 2003)." (EIS, 4.8-2) There is no evidence offered in support of this assumption; and for purposes of NEPA, baseline conditions are those which exist at the time the EIS is being prepared, not those that existed at some arbitrary point in the past.

AQ-3

**AQ-3:** Please see the response to comment letter N-18713, comment AQ-2.

b. Ozone.

The EIS acknowledges that the proposed Project will generate ozone (O<sub>3</sub>) in quantities that exceed National Ambient Air Quality Standards (NAAQS), thereby requiring that the Marines subject the Project to a "conformity analysis." (EIS, 4.8-6) In this case, however, the Marines did not perform a conformity analysis at all. Instead, they requested that the Mojave Desert Air Quality Management District ("MDAQMD") and the California Air Resources Board ("CARB") "include these emissions from Alternative 6 into the next O<sub>3</sub> SIP revision for the MDAB (MDAQMD 2010a and ARB 2011)." (*Ibid.*)<sup>13</sup> According to the EIS, this will ensure that Alternative 6 conforms to the SIP, thereby eliminating the "significance" of the Project's ozone impacts.

AQ-4

**AQ-4:** Please see the response to comment letter N-18713, comment AQ-3.

There are two problems with this analysis. First, it was "pre-decisional" and therefore unlawful for the Marines to request that the MDAQMD and/cr CARB include the ozone emissions from Alternative 6 (or any alternative) in the revised SIP. By making such a request, the Marines have signaled that they intend to adopt Alternative 6, regardless of the NEPA process. In other words, the current NEPA process is a sham and a charade. The die is already cast and the Marines will not be diverted from Alternative 6, no matter what the environmental analysis might show.

Second, any SIP revision – including the one requested by the Marines for this Project – must be approved by the U.S. EPA; and there is no evidence that this has occurred. Note, too, that EPA approval, especially with respect to local changes to SIPs, is never guaranteed. As the Imperial County Air Quality District recently discovered, EPA is more than willing to disapprove any portion of a SIP revision with which it disagrees. In light of these

<sup>13</sup> See also EIS, 4.8-18.

Comment ID: N-18736 (Page 18 of 20)

Response to Comment N-18736 (Page 18 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 18

facts, it is incorrect to assume that the Project – i.e., Alternative 6 – conforms to the SIP for ozone.

AQ-4

3. Particulate Matter

The EIS also acknowledges that the Project will generate more PM<sub>10</sub> than the NAAQS allow. (EIS, 4.8-6; 4.8-18) To address this impact, the EIS purports to conduct a conformity analysis pursuant to MDAQMD Rule 2202(H)(1)(d)(i). (EIS, 4.8-18) In this analysis, the EIS concludes that, under Project conditions, PM<sub>10</sub> concentrations at the boundary separating the WSA and the Combat Center would be 97 µg/m<sup>3</sup>. When these emissions are added to background concentrations of 52 µg/m<sup>3</sup>, the cumulative total concentration of PM<sub>10</sub> is 149 µg/m<sup>3</sup>, just under the 24-hour PM<sub>10</sub> NAAQS of 150 µg/m<sup>3</sup>.

What makes this conclusion dubious, however, is that the Project's PM<sub>10</sub> emissions, while measured at the WSA boundary, do not actually occur at that location or reach their highest concentration there. According to the EIS, emissions will be highest during the so-called "Final Exercise," which will take place "in close proximity to the boundary of the Combat Center." (EIS, 4.8-19) The EIS does not define "close proximity," but it is safe to assume that it means the exercise will not take place on the boundary itself, which is where the air quality model makes its measurements. Because PM<sub>10</sub> disperses quickly over distance, the actual emissions generated by the Final Exercise will not be fully captured if measured or modeled at the WSA/Combat Center boundary line.<sup>14</sup> As a result, the PM<sub>10</sub> concentrations described in the EIS are underreported. This, of course, directly affects the conformity determination, because if the Project's PM<sub>10</sub> emissions were measured/ modeled at the source – i.e., at the Final Exercise ground location – rather than at the WSA/Combat Center boundary, total PM<sub>10</sub> concentrations would surely exceed the NAAQS threshold of 150 µg/m<sup>3</sup>. Therefore, the EIS conclusion regarding the "insignificance" of the Project's PM<sub>10</sub> is in error.

AQ-5

Then there is the matter of dust and PM<sub>10</sub> impacts on biological resources, especially the desert tortoise. As acknowledged in the EIS, the desert tortoises in the Mojave are susceptible to upper respiratory tract disease (URTD), which can be fatal. The EIS, however, fails to assess the extent to which dust and PM<sub>10</sub> from the Project could make tortoises more vulnerable to URTD or other diseases. In addition, the EIS includes data demonstrating that project-related dust could substantially disrupt photosynthesis of desert plants, thus reducing their productivity. (EIS, 4.10-5) What the EIS fails to evaluate, however, is whether the dust impacts on plant productivity will have secondary adverse effects on available forage and shelter for desert tortoises. This issue must be addressed in the Final EIS.

AQ-5: Please see the response to comment letter N-18713, comment AQ-4.

<sup>14</sup> The EIS itself admits that "PM<sub>10</sub> concentrations quickly decrease with distance from the Combat Center boundary." (EIS, 4.8-20)

Comment ID: N-18736 (Page 19 of 20)

Response to Comment N-18736 (Page 19 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 19

**K. The EIS Provides an Inadequate Discussion of the No-Action Alternative**

The EIS fails to provide an adequate description of the No-Action Alternative; nor does it explain why the No-Action Alternative would frustrate the basic mission of the Marines. In fact, the EIS is largely dismissive of this alternative, even though NEPA requires that it be analyzed and considered. Worse, because the EIS does not provide a clear description of the No-Action Alternative and its effects, it is difficult to compare the other alternatives to it. Finally, the EIS should explore the possibility of improving MEB training within the confines of the No-Action Alternative. For reasons not explained in the document, this concept was not analyzed in the EIS. Note that this analysis must include a cost-benefit component.

NEPA-7

**L. The EIS Fails to Recommend Feasible Mitigation Measures to Offset Significant Impacts; EIS Findings of “Infeasibility” are Not Supported by Sufficient Evidence**

The EIS identifies a multitude of significant impacts that will result from the proposed Project. Only in the rarest of cases, however, does the EIS recommend mitigation measures to reduce or avoid those impacts. In all other instances (and most notably in the discussion of impacts to OHV recreation), the EIS simply concludes, without evidence or analysis, that the Marine Corps could not identify feasible mitigation measures and therefore does not intend to implement any. NEPA does not allow federal agencies, even the military, to sidestep their mitigation obligations so easily. For each significant impact of the proposed Project, the Marines must develop mitigation measures or demonstrate – with evidence – that such measures cannot be reasonable undertaken. The Draft EIS, as currently written, does not meet this standard.

NEPA-8

With respect to the Project significant effects on OHV recreation, the EIS cannot credibly argue that no feasible mitigation measures exist to offset these impacts. On the contrary, mitigation for such impacts is not only feasible, it’s easy: The Marines can simply provide money to BLM and/or the OHV Division of the California Department of Parks and Recreation (“DPR”) to purchase land near Johnson Valley for use as an OHV recreation area. Not only is the western Mojave Desert dotted with private in-holdings that could be acquired for this purpose, the OHV Division of State Parks has an actual program for purchasing such properties and turning them into OHV parks. So the EIS is incorrect in stating that there is no feasible means to mitigate the Project’s impacts on recreation.

**M. The EIS Provides an Inadequate Description of the Project**

The EIS does not quantify the extent to which the proposed Project will increase military training operations when compared to existing conditions. That is, the EIS fails to calculate and disclose the net increase in flight operations, tank miles traveled, troop exercises, ordnance

NEPA-9

**NEPA-7:** The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**NEPA-8:** In accordance with NEPA, the EIS discloses and analyzes the environmental consequences of the proposed action and alternatives under each resource area, as described in Chapter 4 of the EIS.

**NEPA-9:** Please refer to response to comment letter N-18713, comment NEPA-7.

Comment ID: N-18736 (Page 20 of 20)

Response to Comment N-18736 (Page 20 of 20):

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 23, 2011  
Page 20

expended, etc. resulting from the proposed Project. For this reason, it is impossible to fully comprehend the Project's potential impacts on the environment.

**N. The EIS Fails to Assess Project Impacts on Sensitive Receptors Within the Combat Center**

The Combat Center at Twenty-nine Palms supports more than just combat troops conducting training exercises. It is a comprehensive military installation with on-base housing, on-base shopping centers and restaurants, and on-base civilians. Nevertheless, the EIS fails to address the Project's potential impacts on (1) Combat Center civilians, and (2) Combat Center troops not engaged in Project-related training exercises. Given that the Project will generate substantial noise and air pollution at the Combat Center, this is a major omission that must be corrected.

**CONCLUSION**

As discussed above, the proposed Project cannot be justified in terms of military necessity or cost. And the EIS prepared in support of the Project simply does not meet the minimum analytical standards established under NEPA and controlling case law. In light of these facts, ORBA hereby registers its opposition to the Project and request that the Marine Corps scale back substantially its desire to expand the base at Twenty-Nine Palms.

Thank you for the opportunity to comment on this Project and the Draft EIS. If you have any questions concerning the content of this letter, please contact me at the address or phone number listed above.

Very truly yours,

NEPA-9  
continued

AQ-6

**AQ-6:** Comment noted. The FEIS includes definitions of sensitive receptors and qualitatively discusses how proposed air emissions would impact these receptors.

RE: 29 PALMS – TRAINING LAND ACQUISITION/AIRSPACE  
ESTABLISHMENT EIS

LVEDA's Mission Statement:

*Provide a forum for discussion and action on important community issues –  
promote infrastructure improvements – work with County and developers to  
promote development that is both "economic" and compatible with our rural  
lifestyle, environment and resource availability.*

LVEDA fully supports and appreciates our military and its mission – helping to  
maintain our Republic and safety. The following focuses on the inadequacies of  
the DEIS – primarily related to economic impacts.

**CONFLICTING OBJECTIVES:** The Expansion's "MEB-sized training" purpose –  
requiring a tremendous amount of new acreage - conflicts with recent  
statements/news articles re: military objectives – a major discrepancy - thus lacks  
credibility as a viable or necessary "project" – one with a myriad of significant,  
unnecessary impacts – in sink with the "No Action" alternative.

Sec. Gates: The nation does not need a second land army, Gates said,  
but rather forces that can deploy quickly and sustain themselves for a  
short period of time.

Also see Gates: Time has Come to Re-examine Future of Marine Corps  
by Kevin Baron of Stars and Stripes and Defense Chief Gates Orders  
Review of Marines' Role by David S. Cloud of The Los Angeles Times.

Lt. Gen. George J. Flynn – Commanding General of Marine Corps Combat  
Development Command – (Mar. 2, 2011):

Two of the recommendations from the Force Structure Review are:  
A reduction in force structure from 202,000 to 186,800 when conditions in  
Afghanistan warrant (and)

NEPA-1

Response to Comment N-18737 (Page 1 of 4):

NEPA-1:

As described in Section 1.3 of the EIS, the purpose of the proposed  
action is to fulfill a Marine Corps training requirement. In  
November 2006, the Marine Corps validated the need to establish a  
large-scale training area for live fire and maneuver training of a  
Marine Expeditionary Brigade (MEB) composed of three battalion  
task forces.

Comment ID: N-18737 (Page 2 of 4)

<p>Reduction in ground combat forces, to include a reduction in infantry (regimental) headquarters from eight to seven; infantry battalions from 27-24); a reduction in cannon artillery battalions (nine to seven; but a reorganization of batteries to support distributed operations), and a reduction in armor (10 companies to 8).</p>	<p>NEPA-1</p>
<p><b>FT. IRWIN ALTERNATIVE:</b> NEPA requires that every feasible alternative needs to be "on the table" and assessed – including the option for joint or separate exercises at Ft. Irwin – particularly enhanced by its recent expansion and its vehicular connectivity. In-house rejections of any viable alternative – for whatever reason – still require full public review and analysis. Its absence nullifies the adequacy of the DEIS.</p>	<p>NEPA-2</p>
<p><b>EAST VS. WEST:</b> Elimination of the eastern alternative area from Sen. Feinstein's recent Desert Protection Act makes it a viable option – selection of which would eliminate the significant impacts and tremendous burdens on communities associated with the western proposal – particularly Alt 6 – and would likely result in quicker implementation – assuming any expansion is really required.</p>	<p>NEPA-3</p>
<p><b>MITIGATION COSTS:</b> A western expansion will require significant costs for tortoise mitigation - which may not even be available in the w. Mojave by the time Congress makes its decision - but certainly at a much higher cost than potential bighorn sheep mitigation in the alternative eastern area. The DEIS lacks the required descriptions of mitigation/compensation areas and projects.</p>	<p>NEPA-4</p>
<p><b>OHV DISPLACEMENT:</b> <u>The EIS totally fails to assess the full environmental implications of Alt. 6.</u> The JV OHV Area is the largest and most established in the nation and cannot be replaced. It provides the space for long-distance race courses no other s. Calif. facility offers. It has become an "icon" not just for off-roading, but for a myriad of other recreational and resource-related land-uses. The other OHV Areas in the Mojave Desert cannot accommodate JV's current use. Even with the small portion of the open area remaining in the Anderson Dry Lake areas adjacent to Camprock Rd. - displacement will result in more local, private land trespass and incursion into environmentally sensitive and protected BLM areas – especially the adjacent Ord Mt. Desert Wildlife Mgt. Area (ACEC).</p>	<p>REC-1</p>
<p>Alt. 6's current configuration will likely preclude access to the JV OHV area's eastern race courses – thus diluting the very integrity of the "joint use" concept – forcing more use and resource destruction in the remaining northwest portion of the open area – not adequately described or mitigated in the DEIS.</p>	
<p>It is critical that BLM maintains its land-use jurisdiction over any expansion area – particularly the "joint use" portion - issuing DOD a R/W or easement for its use – not allowing it to become fully under military authority - thus giving BLM and the public involvement and discretion WHEN (more likely than "IF") DOD – for</p>	

Response to Comment N-18737 (Page 2 of 4):

NEPA-2:

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Comment ID: N-18737 (Page 3 of 4)

whatever reason – decides in the future that "joint use" is no longer practical and wants full control.

REC-1

**SOCIO/ECONOMICS:** With Alt. 6's substantial reduction of the JV OHV Area and its current function - Lucerne Valley would definitely suffer a significant loss of revenue from OHV-related traffic - major filming/commercials - mining - general recreation - etc. for the Lucerne Valley Market/Hardware (shopping center) - 3 gas stations - our restaurants - a multitude of other businesses, etc. The "profit margin" for our businesses is already a "stay-open/break-even" situation. Loss of current weekend business - 10% and greater total revenue for some - would be the "straw on the camel's back" that would force them to shut down. Our very survival as a community is at stake.

The DEIS totally ignores the fact that Lucerne Valley is a state-designated "Economically Disadvantaged Community" – certainly describing our current economic status that would be especially vulnerable to the disruption caused by Alt. 6's or any other western expansion. The DEIS' "mitigation" of job and sales tax creation (only benefiting the 29 Palms region anyway) absolutely fails to acknowledge or mitigate significant adverse impacts to Lucerne Valley and our viability as a "community" – with so-called "mitigation" having no nexus to our impact – the impact not even considered a "significant" finding - blatantly disregarding our "on the ground" reality and the basic requirements of an adequate NEPA process and document.

SOC-1

Even a direct monetary compensation to the Lucerne Valley "community" wouldn't fully mitigate our ultimate losses. However, DOD could at least ameliorate the effect. Current use of the OHV area is generally split between the Anderson Dry Lake staging areas in the northwest portion and the Soggy Dry lake segment at its southern end. With the likely loss of extensive OHV use in the southern areas - the only usable portion of the JV OHV area remaining would be its western (Anderson area) segment – or what's left of it – with traffic able to access it utilizing Rabbit Springs Rd. directly off Hwy 18 to Camprock Rd. – bypassing the town's commercial corridor. The very least DOD can do to partially alleviate both loss of OHV-related commerce and the impact to the County's marginally maintained Rabbit Springs Rd. (with numerous residences, etc.) - would be to have Caltrans and the County designate Rabbit Springs Rd. for "local use only" – directing OHV-related traffic east through Hwy. 18 and the town's commercial corridor – then east on Hwy 247 (both of which are state highways and better maintained) – enhancing more commercial activity – and provide funding for an east-bound left-turn pocket off Hwy 247 north onto Camprock Rd. to facilitate turning movements and safety.

**IRON ORE MINE:** The recently approved (Hahm) iron ore mining operation within the eastern portion of the expansion area ABSOLUTELY MUST be considered a joint-use – allowing it to operate to its fullest capacity – with no access restrictions, etc. A "buyout" is not mitigation/compensation for our society

LU-1

Response to Comment N-18737 (Page 3 of 4):

**NEPA-3:**

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the

Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**NEPA-4:**

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

**REC-1:**

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**SOC-1:**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, socioeconomic impacts are expected to be less than significant and unmitigable.

Comment ID: N-18737 (Page 4 of 4)

that cannot afford any further dependence on foreign sources of our basic necessities – critical for our local cement industry – with the only feasible alternate sources in Utah or further east – or more likely China. It would be absolutely irresponsible for DOD – the Marines – which totally depend on iron and steel for its “stuff” – to close down this viable and economically critical mine.

LU-1

ORD MT. CATTLE ALLOTMENT: A significant portion of this active cattle allotment is within northern JV – included in the western expansion area – potentially rendering the Allotment economically useless – with no specific or quantified remedy stated in the DEIS.

NOISE: The DEIS dismisses the effects of intensive noise impacts on Lucerne Valley and surrounding communities – and does not fully describe the full range of related aircraft activity in the expanded air space.

NOI-1

Note: There seem to be discrepancies in the text and summary tables re: findings of significance.

Response to Comment N-18737 (Page 4 of 4):

**LU-1:**

As indicated in Section 2.6 of the EIS individual mine properties would be evaluated before implementation of and selected project alternative to determine whether the property would be acquired or if reasonable access to the property would be afforded so that the operations could continue following project implementation.

**NOI-1:**

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

RE: Draft Environmental Impact Statement for the Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training

To Whom It May Concern:

The Local Agency Formation Commission for San Bernardino County (LAFCO) received the abovementioned notice and would like to provide comments regarding the Draft Environmental Impact Statement (DEIS) prepared for the proposed expansion for the Marine Corps Air Ground Combat Center (MCAGCC).

In San Bernardino County, there are a number of agencies that provide a variety of services within the areas identified in the alternative study areas. The proposed base expansion will affect some of these agencies/districts and their ability to serve within these areas identified in the study. Although, most of these agencies/districts were identified in the DEIS, some were not (i.e. Mojave Desert Resource Conservation District, County Service Area 29, etc.). Depending on the alternative pursued by the Marine Corps, some of these agencies/districts may or may not be affected by this proposal.

The following are the agencies/districts that may be affected by the proposed expansion including the services they currently provide (or are authorized to provide):

LU-1

Response to Comment N-18738 (Page 1 of 9):

LU-1:

Thank you for your comment. The information provided has been reviewed and added to the EIS as appropriate.

Comment ID: N-18738 (Page 2 of 9)

Response to Comment N-18738 (Page 2 of 9):

Draft EIS  
Proposed Expansion for the MCA GCC  
Page 2 of 5

- Mojave Desert Resource Conservation District (MDRCD) - see Attachment #1 map  

The MDRCD is a district that provides resources conservation within its jurisdiction. It currently provides services such as runoff control, soil erosion prevention, improvement of land capabilities, and habitat preservation. The district collaborates with a number of State and Federal agencies in their conservation programs. It should be noted that the MDRCD overlays the entirety of the base as it currently exists.
- San Bernardino County Fire Protection District (SBCFPD) - see Attachment #2 map  

The SBCFPD, which encompasses the area of San Bernardino County that is not within an independent fire provider's jurisdiction, is authorized to provide the following services related to fire protection: structural, watershed, prevention, inspection, suppression, weed abatement, hazardous materials services, rescue, first aid, paramedic, ambulance transportation, emergency response, and disaster preparedness planning. Both the SBCFPD South Desert and the SBCFPD North Desert Service Zones may be affected by this proposal, including the SBCFPD Service Zone FP-4 (Wonder Valley – east of the City of Twentynine Palms), which is a special taxing entity within the South Desert Service Zone. It should also be noted that the SBCFPD South Desert Service Zone overlays the entirety of the base as it currently exists.
- Mojave Water Agency (MWA) – see Attachment #3 map  

The MWA is a special act water agency that provides wholesale water within its boundaries (water from the State Water Project). In cooperation with other water entities, MWA is also responsible for managing the water resources within its boundaries to ensure a sustainable supply of water for the benefit of its constituents. In addition, MWA is also the court-appointed Watermaster for the Mojave River Basin adjudication. It should also be noted that the lower portion of the West Study Area is within MWA's Improvement District M, which was formed to fund the pipeline to recharge the basins located in the Yucca Valley region.
- County Service Area 29 (CSA 29) – see Attachment #4 map  

CSA 29 is a county service area that provide cemetery, TV transiator, park and recreation, street lighting and water services within its boundaries, which is generally identified as the Lucerne Valley area. The district is also authorized to provide sewer service and has the ability to provide such service in the future, if needed.
- Bighorn Desert View Water Agency (BDVWA) - see also Attachment #4 map  

BDVWA provides domestic and retail water service within the communities of Johnson Valley, Flamingo Heights, and Landers. The district is developing plans in conjunction with MWA for recharge of water to the groundwater basin.

Comment ID: N-18738 (Page 3 of 9)

Draft EIS  
Proposed Expansion for the MCAGCC  
Page 3 of 5

- County Service Area 70 Improvement Zone M (Wonder Valley) see also Attachment #4 map
- CSA 70 M is a county service area zone that provides park and recreation services within its current boundaries through imposition of special taxes.

LU-1

Below is a table that identifies the different areas (East, South, and West Study Areas) and a range of reasonable alternatives that were evaluated in the DEIS. Depending on the alternative use, the matrix below identifies the agencies/districts that may potentially be affected.

	East Study Area	South Study Area	West Study Area
Alternative 1	None	<ul style="list-style-type: none"> <li>• MDRCD</li> <li>• SBCFPD South Desert Service Zone</li> <li>• SBCFPD Service Zone FP-4 (Wonder Valley)</li> <li>• CSA 70 M (Wonder Valley)</li> </ul>	<ul style="list-style-type: none"> <li>• MDRCD</li> <li>• SBCFPD South Desert Service Zone</li> <li>• SBCFPD North Desert Service Zone</li> <li>• MWA and its Imp. District M</li> <li>• BDVWA</li> <li>• CSA 29</li> </ul>
Alternative 2	None	<ul style="list-style-type: none"> <li>• MDRCD</li> <li>• SBCFPD South Desert Service Zone</li> <li>• SBCFPD Service Zone FP-4 (Wonder Valley)</li> <li>• CSA 70 M (Wonder Valley)</li> </ul>	<ul style="list-style-type: none"> <li>• MDRCD</li> <li>• SBCFPD South Desert Service Zone</li> <li>• MWA and its Imp. District M</li> <li>• BDVWA</li> </ul>
Alternative 3	<ul style="list-style-type: none"> <li>• MDRCD</li> <li>• SBCFPD South Desert Service Zone</li> </ul>	<ul style="list-style-type: none"> <li>• MDRCD</li> <li>• SBCFPD South Desert Service Zone</li> <li>• SBCFPD Service Zone FP-4 (Wonder Valley)</li> <li>• CSA 70 M (Wonder Valley)</li> </ul>	None

LU-2

Response to Comment N-18738 (Page 3 of 9):

LU-2, CI-1:

As indicated in Section 2.8 of the EIS, the Combat Center would complete and implement the Installation Energy and Sustainability Strategy (IESS) that balances water demands (including those associated with the proposed action) with water supplies by increasing water conservation, using more recycled water, importing water, treating lower quality groundwater, and/or other methods deemed appropriate. The strategy would address sustainable water usage within the Combat Center, as well as regional water management, particularly if the strategy included groundwater extraction from other than the Surprise Spring aquifer.

Comment ID: N-18738 (Page 4 of 9)

Response to Comment N-18738 (Page 4 of 9):

AIR-1:

The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

LU-2

Chapter 4 of the DEIS identifies a potential effect on the instrument approaches for the Big Bear Airport. The airport is operated by the Big Bear Airport District. Mitigation or measures to counter the potential effect are not identified in the DEIS. Mitigation should be identified in the document.

AIR-1

Comment ID: N-18738 (Page 5 of 9)

Response to Comment N-18738 (Page 5 of 9):

CI-2:

Section 5.4.13.3 of the EIS states that “while acquisition of the Cadiz Inc. land may be beneficial for the water supply on the Combat Center, it would have a regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project.”

PHS-1:

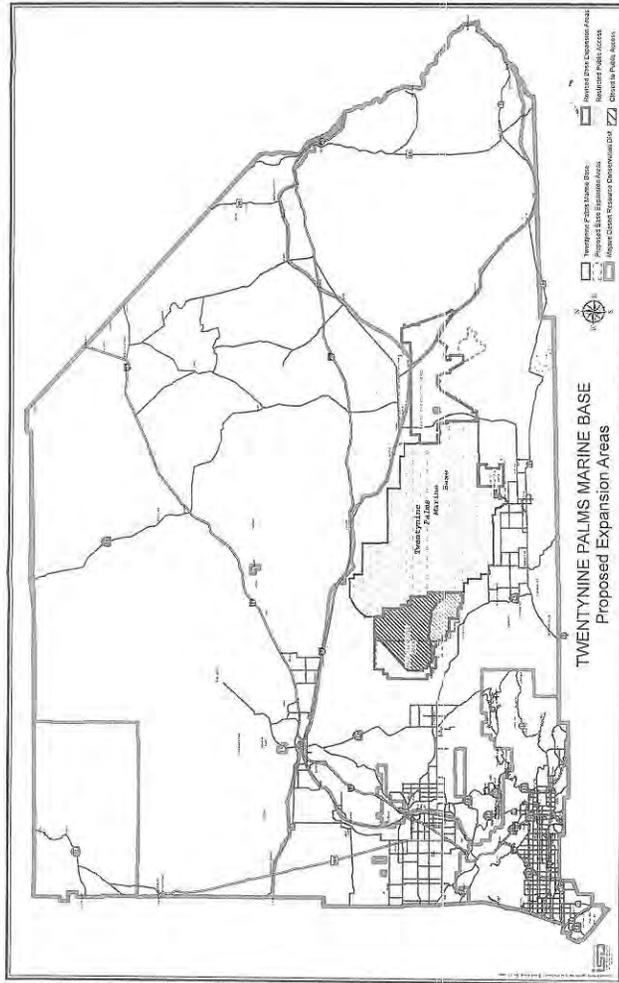

The EIS has been updated to reflect the change from Yucca Valley Fire Protection District to the San Bernardino County Fire Protection District. The Final EIS has been modified as appropriate.

1220 Pacific Highway  
San Diego, CA 92132-5190

VIA CERTIFIED MAIL

RE: NOTICE OF AVAILABILITY OF THE DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS)  
FOR THE 29 PALMS TRAINING LAND ACQUISITION/AIRSPACE ESTABLISHMENT PROJECT

Dear Project Manager,

The County appreciates the opportunity to review and comment on the Draft (EIS) for the proposed establishment of a large-scale training range facility at the Marine Corps Air Ground Combat Center at Twentynine Palms, (the "Combat Center").

1. Morris Lode Mineral Resources

Alternatives 1, 2, 4, 5 and 6 presented in the EIS identify potential impacts to mining, including the Morris Lode deposit. The EIS notes that the Morris Lode Mine has an estimated 30 years worth of iron ore reserves. This mine is on a patented claim, and the County has recently granted the operators of the mine a California State Surface Mining and Reclamation Act (SMARA) permit. The mine is expected to begin operations this year.

The County has identified the Morris Lode as having proven economic potential in the Johnson Valley. Southern California cement plants depend on iron sources for required raw materials. Currently, there are two iron mines operating in the Southern California / Western Nevada area: the Silver Lake and Baxter mines. Both of these have finite lives, and the Morris Lode is the only identified future source of iron for the eight cement plants operating in the southern California region. The next nearest producing iron mine is near Cedar City, Utah.

Section 4.12 of the EIS identifies the potential loss of the Morris Lode as "less than significant" relative to national or worldwide supplies of iron ore. However on a regional basis, the loss of the Morris Lode would be a significant impact. The Southern California cement plants would be forced to transport iron ore from out of state and the region would lose a valuable mineral resource. This transport of ore from out of state would result in increased truck vehicle miles and potentially significant increases to air pollutant and greenhouse (GHG) emissions. The EIS should be revised to address these impacts.

LU-1

GREGORY D. DEVEREAUX  
Chief Executive Officer

Board of Supervisors  
BRAD MITZELFELT, Vice Chairman First District  
JANICE RUTHERFORD, Second District  
JOSIE GONZALES, Third District

NINA DEFRY, Third District  
GARY C. COMPTON, Fourth District

Comment ID: N-18739 (Page 2 of 3)

NOTICE OF AVAILABILITY OF THE DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS) FOR THE 29 PALMS TRAINING LAND ACQUISITION/AIRSPACE ESTABLISHMENT PROJECT  
May 25, 2011  
Page 2 of 3

Although the EIS offers that decisions on whether to purchase a mining claim, or provide access to the claim, would be made on a case-by-case basis, it does not identify the criteria that the Department of Navy will use to make such decisions. The County requests that the EIS identify appropriate criteria for allowing mining operations, including the value of regionally important mineral resources, and consultations with the County and mine owners.

LU-1

2. Socioeconomic Impacts

Section 4.3.2.4 of the EIS acknowledges that the acquisition of the Morris Lode Mine would have a potential future indirect impact on the economy. However the EIS then states that there are too many unknown factors involved in estimating the future value of this potential and that attempting to quantify these impacts would be speculative.

SOC-1

Information regarding the economics of California's cement industry is readily available. California is the largest cement producing state in the U.S., accounting for between 10% and 15% of U.S. cement production and cement industry employment. The Lawrence Berkeley National Laboratory published a cement industry study indicating that the cement industry employed about 2,000 workers and contributed \$850 million to California's economy. Cement is California's second most important mineral commodity, after construction aggregates, and represents 25% of California's total annual mineral production. About 80% of the cement produced in California is consumed within the State. Eight of the eleven plants manufacturing cement are located in Southern California. Three are located in Victor Valley area, in close proximity to the Morris Lode Iron Mine, and these plants produce nearly five million tons of cement annually, or about 40% of California's annual production.

The loss of the Morris Lode Mine would result in potentially significant increases to the cost to manufacture cement, increasing the cost of cement in California and reducing economic benefits associated with the jobs and revenue that the mine would generate. These impacts are both local and regional. The County requests that the EIS use available information regarding the California mining industry and the Morris Lode Mine resources to quantify the economic impact that the loss of the mine would have to the local and regional economy.

3. Cadiz Valley Water Project

WAT-1

Alternative 3 presented in the EIS would encompass the private landholding owned by Cadiz Inc. in the northern portion of the east study area. This alternative would result in the potential loss of current agricultural operations on the Cadiz property, as well as the potential loss of groundwater extraction, recharge and storage opportunities from underneath the property. The EIS identifies the Cadiz Valley Dry Year Supply Project as an aquifer storage, recovery, and dry-year supply project designed to provide southern California with as much as 150,000 acre-feet (AF) per year, and identifies the Final Environmental Impact Report (FEIR) for the Cadiz Groundwater Storage and Dry-Year Supply Program (MWD and BLM 2001) as the source for this information. However, the FEIR was never certified and the Cadiz Valley Dry Year Supply Project was never approved. A modified water conservation, recovery and storage project is currently being proposed by Santa Margarita Water District's (SMWD) for the Cadiz property. (Reference Notice of Preparation of a Draft EIR Cadiz Valley Water Conservation, Recovery, and Storage Project SCH # 2011031002.) Current entitlements for the Cadiz property include: GPA/90-0017, CUP/90-0019, CUP/90-0031, CUP/90-0032 and CUP/95-0015 (as revised). Maximum entitlements permitted under GPA/90-0017, CUP/90-0019, CUP/90-0031, CUP/90-0032 are limited to the groundwater

Response to Comment N-18739 (Page 2 of 3):

SOC-1:

Additional research has been conducted related to mining operations in the EIS study areas. Additional information on mining has been added to multiple resources sections.

WAT-1:

Section 5.4.13.3 of the EIS acknowledges that Alternative 3 would have a “regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project.” The EIS also states that the Cadiz project was uncertain and undergoing environmental review process. The EIS has been revised to update the Cadiz project description for the Final EIS using the information provided by comment letters from Cadiz Inc and others. These revisions are not likely to alter the significance of cumulative impacts from Alternative 3.

Comment ID: N-18739 (Page 3 of 3)

NOTICE OF AVAILABILITY OF THE DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS) FOR THE 29 PALMS TRAINING LAND ACQUISITION/AIRSPACE ESTABLISHMENT PROJECT  
May 25, 2011  
Page 3 of 3

extraction assumptions evaluated under certified Final EIR SCH #89020203, and Mitigation Measure WRS which stipulates provisions for groundwater monitoring. The County requests the EIS correct and update its discussion regarding potential groundwater operations on the Cadiz property.

4. Off-Highway Vehicle (OHV) Impacts

The EIS finds that the action alternatives (depending on the alternative selected) would be inconsistent with the Johnson Valley OHV Area Management Plan and the extraordinary uniqueness of the regional setting. Additionally, any action would result in an unavoidable adverse impact relative to the loss of access to and the use of substantial portions of the Johnson Valley OHV Area. The DEIS does not attempt to identify mitigation measures that would replace the OHV areas lost to the project. Finding suitable mitigation land which would accommodate the level of use that occurs is unlikely, considering how the desert has been allocated. These impacts are both local and cumulative. If the alternative selected reflects the loss of a dramatic amount of Johnson Valley, the largest OHV area in the country, then the loss may lead to an increase in illegal OHV use. In addition to the socioeconomic impacts, this loss would have a potentially tremendous impact on habitat and other environmental issues. The economic impact to the business communities along Highway 247 and Highway 82 is a concern. The County requests that the EIS identify mitigation measures that would replace OHV areas impacted by the project and provide a proposed recreation plan or program in order to access the area remaining and how the plan or program will be administered.

The County appreciates Department of the Navy's attention to its concerns regarding the deficiencies of the NOP. The County looks forward to working with the Department to achieve a thorough and adequate EIS.

Please do not hesitate to contact me at (909) 387-4431 should you have any questions.

Sincerely,

  
CHRISTINE KELLY, Director  
Land Use Services Department

WAT-1

REC-1

Response to Comment N-18739 (Page 3 of 3):

REC-1:

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Re: *Comments on Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment for the proposed Expansion of the 29 Palms USMC Base*

Dear Project Manager:

I am writing to comment on the Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment for the proposed Expansion of the 29 Palms USMC Base ("Draft EIS"). I recreate frequently in Johnson Valley and participate in American Motorcyclist Association District 37 motorcycle racing events held in Johnson Valley. The public Off Highway Vehicle ("OHV") land in Johnson Valley is to Southern California, as Central Park is to New Yorkers. The proposed expansion would eliminate the largest and most important single piece of OHV land in the United States.

The detrimental effect of taking this large contiguous piece of land is multiplied by Johnson Valley's proximity to the densely populated Southern California population. In other words, no other piece of land is more important to a greater number of recreational users. The primary flaw in the Draft EIS is its failure to recognize the nexus of (1) Johnson Valley's large contiguous OHV space; and (2) its close proximity to dense population centers of Southern California, which are filled with millions of persons who use the public lands for recreating. The Draft EIS does not include an adequate analysis of the value associated with this nexus. The Draft EIS fails to address the heightened effect/harm caused by taking the most important piece of land closest to the greatest number of users in the country. The failure to evaluate all of the recreational impacts of eliminating this OHV land is reason alone for stopping the proposed expansion into Johnson Valley or, at a minimum, requiring a supplemental environmental impact analysis and allowing for further public comments. The Draft EIS suffers from other flaws and does not conform to the requirements of National Environmental Policy Act ("NEPA") as more specifically stated below.

1

Response to Comment N-18740 (Page 1 of 5):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

**Comment ID: N-18740 (Page 2 of 5)**

For the reasons state herein, I object to Draft EIS and the proposed expansion of the 29 Palms base into Johnson Valley, demand further analysis and preparation of a revised draft EIS that is corrected and allows for further public comment. Without waiving any rights and without conceding the adequacy or accuracy of the Draft EIS in anyway, I request that the no action alternative be selected. I further object to any alternative that takes public land in Johnson Valley. Without a supplemental analysis in the form of a revised draft EIS, the Draft EIS underlying this proposed 29 Palms expansion will remain incomplete and inaccurate and any taking/withdrawal of land based on the Draft EIS would be inconsistent with NEPA and the requirements for completing an EIS.

**I. The Draft EIS Does Not Sufficiently Identify a Need for Action**

The scoping and contemplated expansion of the 29 Palms base was initiated years ago under the Bush administration. The United States budget deficit and changing military needs do not currently warrant any expansion, and in particular the expansion of the base into Johnson Valley. Military activities in Iraq and Afghanistan have been scaled down since the initial scoping period. A supplemental Draft EIS should be prepared which appropriately states the need for the expansion under current budget and military conditions.

The need for taking Johnson Valley land has not been articulated and the reasons for selecting 29 Palms for expansion over other base alternatives, such as South Carolina, was not adequately addressed in the Draft EIS. Although the expansion into Johnson Valley may be convenient for the Marines, it is not necessary. The military claims that no other base in the U.S. is more appropriate than 29 Palms for expansion. The Marine's contend 29 Palms is already so large that a further expansion at 29 Palms into Johnson Valley would be the most appropriate place to fulfill their training objections—in essence 29 Palms is "too big to fail." The contention does not constitute a valid statement of a purpose or need for the expansion into Johnson Valley under NEPA.

Although expanding 29 Palms may be convenient for the military, when that convenience is balanced against the full impact of the proposed expansion into Johnson Valley, the scale tips decidedly in favor of no action, or no expansion into Johnson Valley. In fact, when I attended an Open House Public Meeting presented by the military in Victorville, California on April 14, 2011, I met with Lt. Col. Bruce Nyholm and Lt. Col. Brent Nyquist who explained that the Marines would only be actively using live ordnance in the proposed Johnson Valley portion of the 29 Palm base expansion for three (3) days per year, per live exercise (to be held twice a year). Removing public land from Johnson Valley for such a minimal amount of time cannot be justified when the cost and impacts of the proposed expansion are considered.

Given the failure to articulate a need for the expansion under current conditions, the current budget crises, the significant impact on the Southern California economy and OHV recreational opportunities, the need for an accurate and complete Draft EIS is all the more important.

**Response to Comment N-18740 (Page 2 of 5):**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and was used in conjunction with assumptions provided by BLM about future recreational visitor patterns and using average expenditure data adjusted for inflation as the basis for the analysis. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

**Comment ID: N-18740 (Page 3 of 5)**

**2. All Environmental Consequences Have Not Been Adequately Evaluated**

The Draft EIS does not consider all of the environmental impacts of the proposed expansion into Johnson Valley. If Johnson Valley were taken, current users would very likely need to travel longer distances to reach open OHV land. The effect on OHV users travelling longer distances to alternative OHV sites has not been considered. The Draft EIS could have, but did not, identify the location of alternative OHV recreational areas to which the millions of persons who currently use Johnson Valley will have to drive in order to recreate, nor the environmental impact of that change or relocation including, without limitation, the effect on air quality and carbon emissions. The air quality and carbon footprint of travelling those distances has not been adequately considered. The Draft EIS is insufficient without such an analysis.

**3. The Analysis of the Impact on Recreation is Inadequate**

Johnson Valley is a unique open land used by millions of people for various OHV purposes. People from Southern California, Northern California, Nevada, Idaho and other areas around the country regularly use Johnson Valley for national motorcycle competitions. The Draft EIS fails to consider the national consequences of eliminating this open OHV space used by persons across the nation and the effect of eliminating this national resource. Further, as mentioned above, the Draft EIS fails to evaluate the nexus between the OHV land in Johnson Valley and the densely populated Southern California area. Supplemental analysis should be conducted to evaluate the adverse recreational impact on all users including, without limitation, residents of Los Angeles County, Orange County, San Diego County Ventura County, Riverside County, Southern Nevada, and Idaho.

A supplemental draft EIS should identify and include the cost of providing the public with substantially similar substitute lands on which they might recreate.

**4. The Analysis of the Socio-Economic and Environmental Justice Impacts is Inadequate**

The report is woefully inadequate in its evaluation of economic impacts. The scope of the socio-economic and environmental justice impacts is too narrow and the analysis contains unfounded assumptions. If Johnson Valley is taken most, if not all, of the recreational activity occurring therein will be lost along with the sales revenue, jobs, and tax revenue associated with that recreation. The Draft EIS does not consider the effect of lost sales throughout the nation let alone Southern California, lost sales taxes, lost state and federal income taxes, lost employment, and lost property taxes. For example, in direct connection with my use of Johnson Valley I spend on average approximately \$150 on motorcycle parts per month, another approximate \$150 on fuel travelling to and returning home from Johnson Valley each trip. I also buy groceries and supplies for camping in Johnson Valley and I buy food at restaurants in connection with my trips to and from Johnson Valley; the money spent on these food and supply items ranges from approximately \$50 to \$300 for a group of persons, per trip. Depending on the circumstances, I buy these items in Johnson Valley, in the surrounding communities, and/or near my home in Orange County, California. The Draft EIS fails to adequately evaluate the economic impact of my spending outside the small town of Johnson Valley the effect of that lost spending activity if

**Response to Comment N-18740 (Page 3 of 5):**

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-18740 (Page 4 of 5)

Response to Comment N-18740 (Page 4 of 5):

Johnson Valley is taken. As a result, the Draft EIS economic analysis is inadequate and should be supplemented.

As to the Draft EIS's consideration of the impact of my spending in Johnson Valley, the report makes assumptions and under-estimates the amount of money spent by users of Johnson Valley. The Draft EIS should be revised to more accurately identify the number of people and the amounts spent by those people travelling to and from Johnson Valley and how those figures will change if Johnson Valley is taken in whole or in part.

**5. The Analysis of the Public Health and Safety Impacts is Inadequate**

The Draft EIS fails to consider the expansion's potential for increasing illegal off-road use and related adverse effects on the public's health and safety. Although not appropriate, the reality is that the taking of the single most valuable piece of contiguous OHV land in California without sufficient mitigation measure of providing substantially similar substitute land would very likely lead to illegal OHV because many persons would no longer have accessible public land on which to recreate. The Draft EIS does not address the consequences and costs of this activity including, without limitation, additional lawful enforcement activity.

The Draft EIS and the military's entire plan for massive live fire drills, including the use of major jet fighter and other aircraft, so close to major population centers is alarming. The Draft EIS does not adequately address the potential adverse public health and safety impact of: (1) potential errant munitions harming the public, animals, or natural resources surrounding the 29 Palms base; and (2) the potential for unexploded ordinance at or near the proposed expansion borders to cause harm to the public, animals or nature resources surrounding the base. No matter how small the chance of such harm, the consequences would be severe. Supplemental analysis should address the risk and impact of these potential harms.

**6. The Analysis of the Adverse Impact on Cultural Resources Inadequate**

The Draft EIS fails to adequately evaluate the adverse effect on cultural resources. The decision to expand the 29 Palms base in a manner that takes any or all of Johnson Valley goes against American principles of freedom and family. Johnson Valley contains open lands with varied views of vistas, geologic formations and contiguous open spaces that are uniquely suitable for motorcycle and other desert racing. Families use Johnson Valley for camping and competing in off-road motorcycle racing events and enjoy the freedom provided by large expanses of open OHV space. Children and adults compete, exercise, and learn to solve problems and operate independently in challenging desert racing events. This desert racing culture has been enjoyed by multiple generations of families. The OHV land in Johnson Valley cannot be replaced—no other similar open OHV land exists in California. The Draft EIS fails to evaluate the harmful human effect of eliminating this culture and this cultural experience of recreating in this manner in the remote environment offered only in Johnson Valley.

To allow a taking of this valuable land without conforming to the requirements of NEPA and based on a flawed EIS would undercut the very principles of freedom that Marines fight to protect in the first place.

Comment ID: N-18740 (Page 5 of 5)

Response to Comment N-18740 (Page 5 of 5):

7. Conclusion

The Draft EIS is incomplete under NEPA and inaccurate as written. In order to properly evaluate the full costs and impacts of the proposed 29 Palms expansion, supplemental analysis and/or a supplemental draft EIS and corrections to the existing Draft EIS are required. I object to any expansion of the base into the OHV areas of Johnson Valley and request that a supplemental Draft EIS report be completed with opportunity for further public comments for the reasons stated herein.

Sincerely,

John P. Cleveland

Dear Palma EIS Project Manager:

Please accept these written  
comments in lieu of testimony  
against the proposed expansion  
of MCRABCE 2d Palma.

That's right. I'm opposed  
to any expansion of the  
facilities in any direction.  
My family has lived in  
the Marine Base since 1952.  
Four generations of us.  
In that time we have  
witnessed the transformation  
of Argentine Palma from the  
Hub of Commerce - Banking,  
shopping, entertainment and  
education - initially promoted  
by the establishment and  
growth of our Marine Base -  
to the area to a military

Response to Comment N-18741 (Page 1 of 3):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Section 4.3 also evaluates expected environmental justice impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-18741 (Page 2 of 3):

now particularly because of the military practice of siting retail and dining facilities on the base instead of in the City where they could be used by the general public.

IV. The Galunson Valley recreation area to the West of the base provides more than tourist revenue and a fair share of land use for OHV riders. Millions of <sup>dollars</sup> are saved because of the safety value that the ~~GV~~ recreation area provides for Morongo Basin law enforcement, OHV enforcement, Code enforcement and road maintenance expenses. After years of review at the County of San Bernardino level and years of negotiations between conservationists and OHV enthusiasts, everyone seems to have just gotten the message of peaceful co-existence. Why mess with that?

Comment ID: N-18741 (Page 3 of 3)

Response to Comment N-18741 (Page 3 of 3):

biological, geological, archaeological,  
historical, commercial and  
open space resources – all of  
which serve us better than  
an expansion of the largest  
naval base in the world

IV. Environmental justice is not  
served by this proposal,  
which would establish  
a military installation in  
these deserts while  
destroying the self-determination  
of Mojave Basin residents  
and the life they choose for  
themselves.

Respectfully submitted

Re: Draft Environmental Impact Statement on 29-Palms Base expansion

Dear Sir:

As a property owner in Johnson Valley I am concerned with the impact of the 29-Palms Base Expansion and I feel there are significant areas of concern in the DEIS.

The DEIS does not state the inadequacy of mitigation lands to replace OHV recreational areas removed from public access. There are not enough public lands in the California Desert Conservation Area to mitigate the proposed Base expansion. There certainly are no lands available in the vicinity of the Johnson Valley OHV area, contiguous to or accessible from the existing area.

Therefore there is no mitigation for the economic losses to the Homestead Valley. There are no potential mitigation measures stated for Socio-economics, Cultural Resources and Environmental Justice in the Homestead Valley. Therefore, because there is no discussion of how the issue of mitigation lands can be addressed, the document cannot meet NEPA requirements.

On Page 33, Table ES-3 states: Mitigation measures will be developed in consultation with SHPO, the Tribes and interested parties. In addition, the ICRMP would be modified and developed in consultation with SHPO and the Native American Tribes that have an interest in lands under the jurisdiction of the Marine Corps. However, as the DEIS area does NOT include the Homestead Valley communities per se, it is not clear what mitigation measures, if any, will be considered for them.

Stating mitigation measures will be developed in the future leaves no basis for judgment as to whether any mitigation measures are possible at all. Therefore, the DEIS must be changed to clarify and enumerate any mitigation measures.

The DEIS estimates revenue lost due to reduction in OHV visits in the Lucerne Valley area, an historic agricultural settlement that is a close neighbor of the Homestead Valley; it also mentions the Town of Yucca Valley. They are described as "the nearest communities with any appreciable retail and traveler services presence that can support the purchasing needs of people visiting Johnson Valley." It is true that both have markets, fuel, restaurants and other services within a half-hour drive of the OHV area. But the DEIS is completely dismissing the presence of the commercial zone on Hwy 247 in Flamingo Heights that also enjoys a huge increase in business on the big weekends, and are even closer to the OHV area. These merchants and restaurants are very important to residents in the Homestead Valley. However, there is not enough local population to keep them in business. They rely heavily on travelers on Hwy 247, especially those enjoying the Johnson Valley OHV area.

SOC-1

CR-1

SOC-2

Response to Comment N-18742 (Page 1 of 2):

**SOC-1:**

Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**CR-1:**

EIS Section 4.11 discusses potential mitigation measures. At this point in time, potential mitigation measures are unknown. The EIS does note some possibilities for potential mitigation measures including avoidance and protection or data recovery.

**SOC-2:**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Regional economic impact analysis includes analysis of county-wide impacts, to include Flamingo Heights.

Comment ID: N-18742 (Page 2 of 2)

DEIS does not report that most grocery stores operate on a profit of 3 to 5 percent. Loss of 7 plus percent, as is stated for the Lucerne Valley Market and Hardware, almost guarantees closure of the business. The smaller businesses in the Homestead Valley also would be severely impacted. When these businesses close, there will be no place for the residents to buy supplies locally. The document must be corrected to give the true picture of what the base expansion will do to these neighbors.

SOC-2

The DEIS compares loss of property tax from acquired lands to total county dollars received from taxes, rather than make the comparison with other rural desert communities' tax dollars. Therefore the reader is completely misled as to the true magnitude of the loss. Not only should the comparison be between rural desert communities, the preparers do not address what those lost dollars have been supporting, and how that loss will impact these communities (i.e. waste management, library, park, county services, etc.) The seemingly small number of tax dollars may just mean the difference between a facility remaining open or closed, or services being provided or not. The county of San Bernardino is already undergoing severe budget cuts, due to economic conditions that did not exist when these expansion plans were begun. Therefore the DEIS fails to accurately portray and evaluate impacts, and must be corrected to reflect real-time conditions, which are not forecast to change very soon.

SOC-3

The DEIS estimates creation of 90 new jobs, of which about 77 will be on base and 13 off base. The DEIS states lost merchant jobs and dollars from reduced recreational opportunities are not significant and will likely be made up by the new jobs created and more Marines moving in and out of 29 Palms.

As most of the new jobs, if not all, are likely to be located in the city of 29 Palms (the base headquarters) the preparers of this DEIS have ignored the impact of lost dollars on more distant communities in the Homestead Valley and beyond. Lost jobs in Lucerne Valley cannot be mitigated by a few jobs in 29 Palms. The death or near death of small but historic desert communities near the Johnson Valley OHV Area has not been given due consideration.

SOC-4

Therefore the DEIS fails to give a true picture of the very significant impacts on the job market in the Homestead Valley, and it must be corrected.

Sincerely,

Dixie Peyton Coutant

<http://www.coutant.org/mminternet/saga/index.html>

Response to Comment N-18742 (Page 2 of 2):

SOC-3:

The EIS evaluates socioeconomic impacts (see Section 4.3). As noted in the EIS, there is expected to be lost tax revenue related to reduced recreational and film industry spending. Section 4.3 clearly identifies the expected decline in county and local sales tax revenue, for each action alternative.

SOC-4:

The EIS evaluates socioeconomic impacts under each action alternative. As noted in the EIS, Alternative 3 would be expected to lead to potential net job losses while Alternatives 1,2,4,5 and 6 would be expected to lead to potential net job increases. Estimates of changes in Net jobs are calculated on a county-wide basis.

Re: Draft Environmental Impact Statement on 29-Palms Base expansion

Dear Sir:

As a property owner in Johnson Valley I am concerned with the impact of the 29-Palms Base Expansion and I feel there are significant areas of concern in the DEIS.

The DEIS states that under the Marines' preferred Alternative 6, access to and use of approximately 56% of the Johnson Valley OHV Area would be lost, representing a significant impact. It does acknowledge that the resource is unique to the region, given its combination of vast open space, large variety of desert views and scenic vistas, and unique geologic formations.

It does not emphasize the region is considered unique to the entire country, and draws visitors from all over the world. 44% of the Johnson Valley OHV Area would be available for public recreation for an unspecified and possibly variable 10 months per year (for the portion acquired as Restricted Public Access area), or all of the year (for the area not acquired, which is the farthest west). It does acknowledge that the displacement of recreational users to the remaining portion of the Johnson Valley OHV Area would result in significant impacts to recreational resources in the west study area.

This brings us to the impact on the community next to the westward expansion area, less than five miles outside the study area.

The unincorporated community of Johnson Valley lies directly south of what became the Johnson Valley OHV Area over 30 years ago. The Johnson Valley Improvement Association (JVIA) was begun 53 years ago for the benefit of the early homesteaders.

JVIA volunteers built, maintain and operate the Johnson Valley Community Center, which is the hub of social and educational activities in this isolated and widely scattered settlement. It also served as an emergency center after the 1992 earthquake. Three meals a day for over two weeks were served to all comers, and those who needed shelter found it there.

The DEIS does not specifically address impacts on the Johnson Valley community, although researchers for the document and other Marine representatives repeatedly visited during the scoping period. Several focus group meetings were held in the Community Center building, overlooking the valley the Marines wish to close to public access. When the expansion plans were originally formed, the planners may not have known that citizens lived in Johnson Valley. But USMC representatives did come and meet them. They listened closely to the citizens' comments, and took copious notes. But as was feared, the overwhelming impact of the proposed actions on Johnson Valley is not

NEPA-1

Response to Comment N-18743 (Page 1 of 2):

NEPA-1:

Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable to the 1938 Small-Tract Homestead Act. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Comment ID: N-18743 (Page 2 of 2)

reflected in the DEIS. To a reader in another part of the US who may know nothing about the California high desert and its history, they are rated as less than significant, and therefore the document is misleading and must be corrected.

The Johnson Valley Community Center is largely supported by the breakfast it serves each Saturday (cooked and served by volunteers) to the "weekenders" who own property in Johnson Valley, and the visitors from the OHV area.

Page 557, Table 4.3-13 shows the estimated loss of 24.6% in direct expenditures in the area if the preferred Alternative 6 is chosen. This will be even greater for the Community Center during the two or more months the public would not be allowed access during training exercises. Those two months will be during Spring and Fall, which are the months of largest use of the OHV area, and attendance at the Saturday Breakfast. It is not unusual to serve 120+ guests on long weekends when the weather is good. It is not unusual to see that number dwindle to 40 in the high summertime.

Therefore the denial of public access to the remnant "shared use" area will inevitably reduce the numbers of guests at the Saturday Breakfast, as well as the number of potential property owners attracted to Johnson Valley. It will jeopardize the future of the JVIA and of the Community Center.

Therefore, the DEIS must be corrected to make it very clear to even the most cursory of readers that the economy, and very existence of Johnson Valley, and indeed the viability of all the historic Homestead Valley communities, are threatened under all Alternatives except #3, due to the closure or partial denial of public access to the Johnson Valley OHV area. It must also state that these impacts were not properly presented in the draft document.

We also strongly urge an extension of the May 26 public comment period, as there are many citizens who are only now learning about the proposed Base expansion, and need more time to go into this enormous document in detail.

Sincerely,

Dixie Peyton Coutant

NEPA-1

SOC-1

GEN-1

GEN-2

Response to Comment N-18743 (Page 2 of 2):

**SOC-1:**

Comment noted. The Marine Corps has not made a decision on what two months of the year that the RPAA would be closed to public use.

**GEN-1, GEN-2:**

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

*RE: 29Palms Training Land Acquisition/Airspace Establishment Draft EIS*

I am writing on behalf of the American Motorcyclist Association District 37 Off-Road (AMA D37 Off-Road). We are a non-profit organization dedicated to providing our members with fun, family oriented events, and protecting the rights of our members to be able to enjoy the sport of motorcycling. AMA D37 Off-Road has been involved with protecting the rights of motorcyclists for over 40 years. We have over 3500 members and hold 40 events a year in the high desert of Southern California, half of those are held in the Johnson Valley OHV Area.

**GENERAL COMMENTS**

My group believes that the "No Action" alternative is the only reasonable option in this situation. Considering the federal governments massive debt it would be financially irresponsible for the Department of Defense to fund this project. The preferred alternative would devastate the local businesses that serve the OHV enthusiasts in the area. The taking of this land, in the form of the preferred alternative, would all but eliminate most events that currently occur in Johnson Valley. Therefore the amount of money that is spent in Lucerne Valley, Johnson Valley, Victorville and other surrounding communities that serve the events attendees would be severely decreased.

If the Department of Defense chooses to move forward with any type of expansion then the only acceptable "Action" alternative is the eastward expansion studied in Alternative 3. This alternative does not impact OHV recreation or the economies of the surrounding communities. Even the eastward expansion alternative would be an imprudent use of our county's limited financial resources.

The DEIS as written has several fatal flaws. Those flaws include neglecting to address certain scoping comments, insufficient data for visitor-days of use, insufficient data for analyzing economic impacts, ineffective mitigation measures, and an insufficient range of alternatives. Because of these and other flaws which we will go into more detail in this letter, we believe that the DEIS needs to be re-written.

Comment ID: N-18744 (Page 2 of 5)

**SPECIFIC FLAWS IN THE DEIS**

- ❖ The DEIS fails to address the hundreds of scoping letters suggesting this document study alternatives that include opening up new land for OHV recreation. The document acknowledges the receipt of these comments but fails to explain why such alternatives were not included in the DEIS. } NEPA-1
- ❖ The DEIS fails to study alternatives that include opening up new OHV recreation areas to mitigate for this unprecedented loss. NEPA requires that a reasonable range of alternatives be studied. It is reasonable to study alternatives that offer new OHV recreation opportunities considering the fact that this project proposes, probably, the largest one-time loss of OHV recreation opportunity in recent history. } NEPA-2
- ❖ The DEIS fails to provide sufficient mitigation for the loss of OHV recreation area. The only recreation mitigation offered – REC 1, calls for the Marines to prepare a Recreation Management Plan which includes a recreational carrying capacity analysis that addresses recreational use, user profile, demand preference, conflicts and conditions consistent with other applicable natural resource and environmental laws. Since this plan does not mention searching for new OHV areas it can only be used to further curtail OHV use in the area remaining. Carrying capacities are utilized to figure out how many people can appropriately use an area. This study will obviously determine the amount of acceptable user for the remaining portion of Johnson Valley. In the future it is highly likely that only a certain number of users will be allowed to recreate in the area. Either way OHV recreation will be profoundly negatively impacted. The result of these impacts will be that off-roaders will recreate in other areas. Some of these areas might not be appropriate for OHV use and harmful to the environment. } REC-1
- REC-1 Simply is NOT a sufficient or effective mitigation measure. Where are all of the displaced OHV enthusiasts going to go if Johnson Valley is not an option and appropriate replacement areas are not provided? This sport is only growing and people are not going to sell their vehicles as a result of this project. Unfortunately they might recreate on lands designated as DWMA's, ACEC's or Wildernesses. The BLM and local law enforcement do not have the funding to properly enforce the restrictions in these areas. Considering our current economic state these funding issues will continue to be a problem in the foreseeable future. The only way to prevent damage to these areas is to provide new OHV lands for the displaced users. Failing to do so will most likely result in significant environmental damage to sensitive lands in San Bernardino and Riverside counties. } REC-1
- ❖ The Special Conservation Measures identified in section 2.8.1 Recreation fail to conserve OHV recreational opportunities or the surrounding the environment. The loss of an OHV recreation area of this magnitude cannot be dealt with by simply launching an education campaign and coordinating that campaign with local entities, law enforcement and user groups. Conservation, as defined by the World English Dictionary, is the act of or an instance of conserving or keeping } NEPA-3

Response to Comment N-18744 (Page 2 of 5):

NEPA-1, NEPA-2:

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

REC-1:

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

NEPA-3:

Comment noted.

Comment ID: N-18744 (Page 3 of 5)

from change, loss, injury, etc. These measures neither conserve OHV recreation or the environment. If the DEIS chose to provide replacement OHV lands then these measures would be helpful but alone they fail to conserve anything.

❖ The DEIS fails to obtain accurate data on visitor-use days for Johnson Valley. This fact makes it impossible to properly analyze the impacts to recreation and the surrounding environment. On page 4.2-1 the document states that the number they are using was obtained from the BLM and the BLM acknowledges that those numbers are not accurate and underestimate the number of visitor-use days. A new study *must* be conducted to obtain the correct number of visitor-use days. Only after that study is complete and taken into account can this document properly analyze the impacts to recreation and the environment.

❖ The DEIS fails to obtain accurate data on the economic impact OHV recreation has on the area. The study they refer to "Kroeger and Manalo 2007" uses information obtained in a study done by California State Parks OHV Division from 1994 and a study from Mohave County, AZ dated 2004. These studies do not provide accurate or up-to-date information for this document to properly analyze the economic impact of this project. An accurate and up-to-date study of the actual economic impacts OHV recreation has on the area *must* be done for the before the document can properly analyze the projects impacts.

**SPECIFIC COMMENTS/CONCERNS**

Pg. ES 31 – Table ES-4 Summary of Cumulative Impacts – Recreation – 5j

It states that there is an expected increase in demand on recreational resources now and into the future. SB 2921 and CDPA 2010 would minimize and potentially offset some recreation cumulative effects. This statement is patently false. This piece of proposed legislation simply protects the status quo. It in no way increases the area available for OHV use. The only way to mitigate for the cumulative effects of the loss of OHV recreation area is to provide new areas. The statement also doesn't take into consideration that there is no guarantee this legislation will ever be passed and made into a law.

Pg. 2-86 –92 Management of RPAA's Under Alternatives 4, 5, And 6.

This section states that CERTAIN public uses may be permitted, subject to restrictions etc... We would like to know specifically what will and won't be permitted. And what those permitting requirements and standards are going to be. Will the current BLM permitting requirements for events/races be adhered to for this new area or will the DoN create a whole new process with different requirements and standards?

Would the DoN tier off of the existing management plans for the environmental analysis (NEPA) required to put on the events that currently occur in the area? Or would there be additional environmental analysis required? If additional environmental analysis is required for these events we formally request the DoN to have that completed as part of *this* environmental analysis. It is

NEPA-3

REC-2

SOC-1

REC-3

NEPA-4

Response to Comment N-18744 (Page 3 of 5):

**REC-2:**

Section 4.2 presents the best available data on recreational use of Johnson Valley.

**SOC-1:**

The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**REC-3:**

Comment noted.

**NEPA-4, NEPA-5:**

The specific details on management of the RPAA in regards to permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies.

Comment ID: N-18744 (Page 4 of 5)

Response to Comment N-18744 (Page 4 of 5):

unfair to further burden this community with that requirement in light of the fact that the analysis is already part of the current management plan.

How will the exclusive military use Company Objective areas be restricted to the public while the RPAA is open to the public? Signs and posts? No fencing will be used according to page 2-91.

How will the Marines determine which two months a year the RPAA will be closed to the public? For planning purposes the OHV community would rather these dates were kept the same every year. D37 has held some events on the same date for over forty years. Having an event on a known date every year can mean the difference between having a successful event or a poorly attended one. Having a set date every year when the public cannot access the RPAA would also help in educating them about the closure. If the closure of the area changed from year to year it would be more problematic to educate the public about those closures.

NEPA-4

Pg. 2-93 -94 Permitted Uses in the RPAA

This section states - The Marine Corps would develop specific requirements and restrictions as appropriate to maximize safe and compatible use of the acquired land should one of these alternatives be selected in the Record of Decision (ROD) and implemented.

It would only be appropriate that the Marine Corps consult with the BLM and local user groups while developing these use restrictions and requirements for the RPAA.

It also states - Organized recreational events (i.e., sponsored OHV races) would require special permits. These permits would require event sponsors to obtain liability insurance related to the event and are intended to enable the Marine Corps to schedule additional public outreach efforts, provide sufficient pamphlets and information to the event organizers, and to schedule sufficient Conservation Law Enforcement Officers, and state and local law enforcement.

NEPA-5

What it doesn't explain is the process for obtaining the event/race permits and whether or not there will be a charge to the permit applicant for the processing of these permits. Will the permit applicant be charged for the military to monitor the event? Currently the BLM has a cost recovery regulation that applies to these types of permits. What type of costs associated with these events will the permit applicants be required to bear?

The costs associated with obtaining these permits is of utmost importance to D37 Off-Road. Our clubs are not for profit organizations and barely make enough money to put on their races. If the permits and costs associated with obtaining them are higher than what the BLM currently requires we will not be able to hold them, therefore rendering the remaining areas useless for our races/events.

Additionally it states - Public access to the RPAA would require each individual (or responsible adult for minors), to certify that they have completed the required public education requirement. Sponsoring adults would be responsible for supervising minors at all times. Public education would

Comment ID: N-18744 (Page 5 of 5)

be accessible through the internet or in person at the installation. In order for my organization to properly analyze the RPAA's impacts we need the following questions answered:

- A permit would be required of any member of the public who enters the RPAA, not just those that are going to recreate with or on OHV's, correct?
- Would people who enter the RPAA be required to carry the permit on their person at all times?
- How will the Marines be able to tell if a person has completed the permit process? What happens if the user could not print the permit or if they lost it on the trail?
- Will there be a separate process for minors? Or will they be required to be supervised at all times with an adult with a permit?
- At what age can a minor start obtaining their own permits 14, 16, 18?

My organization strongly believes that this document must address all of the questions I have listed about the RPAA and its management. Without this information it is unclear as to how my organization or this document can fully analyze the impacts of the project.

**CONCLUSION**

Thank you for the opportunity to comment on this document. If the preferred alternative were to be adopted it would have profoundly negative effects on OHV recreation, the local economy and the environment. In order for this document to properly analyze the impacts of this project new studies must be done to obtain accurate visitor-use days and accurate economic data. The document also needs to include appropriate mitigation measures and a wider range of alternatives that include replacement lands for the unprecedented loss of OHV recreation lands. Lastly and most importantly, D37 Off-Road feels it is financially irresponsible to go forward with a project of this type considering the current economic state of our country.

Sincerely,  
  
Jerry Grabow  
President  
AMA D37 Off-Road

*Re: Comment Letter re Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment for Proposed Expansion of Twenty-Nine Palms USMC Base*

Dear Project Manager:

The American Motorcyclists Association District 37 ("D37") is a long-standing recreational organization based in southern California. Its [insert number] members engage in on-road and off-road recreation throughout the state; among D37's favorite venues is the Johnson Valley Off-Highway Vehicle Recreation Area, located to the immediate west of the USMC base at Twenty-nine Palms. For many years, D37 has held annual race events in Johnson Valley, along with other organized activities in the area. Each of these events is attended by hundreds of people, each of whom patronize local business and support the local economy to the tune of millions of dollars per year. Much of D37's recreational program is now being threatened by the proposed westward expansion of the Twenty-nine Palms Marine Corps base, which would remove all or most of Johnson Valley from public use. D37 opposes the base expansion project for the following reasons:

The Marines have not demonstrated a clear need for the project. That is, the Marines have not identified a serious training deficiency or a mission failure that would be addressed by the project. Instead, the Marines have simply indicated that the proposed expansion project would improve their ability to "train as they fight." This is insufficient, in light of the loss to the public in terms of recreational access and use.

PURPOSE AND NEED

To quote commandant James F. Amos, "The current and future operating environment requires an expeditionary mindset geared toward increased efficiency and reduced consumption, which will make our forces lighter and faster."

Per the March 14, 2011 report Reshaping America's Expeditionary Force in readiness, under Geostrategic Challenge, "Sea-based forces, in particular, will be invaluable deployable with a minimum of strategic lift." Sea-based forces, in particular, will be invaluable for discreet engagement activities,

NEPA-1

Response to Comment N-18745 (Page 1 of 2):

NEPA-1:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Comment ID: N-18745 (Page 2 of 2)

Response to Comment N-18745 (Page 2 of 2):

rapid crisis response, and sustainable power projections." ... "Larger than special operation forces, but lighter and more expeditionary than conventional Army units, we must be able to engage and respond quickly-often from the sea-with enough force to carry the day upon arrival." This same report recommends reduction in forces from 202,000 troops to 186,800.

Quoting Defense Secretary Robert M. Gates, "The nation does not need a second land army, but rather forces that can deploy quickly and sustain themselves for a short period of time."

The U.S. Army has recently completed a large expansion of Fort Irwin, to enhance their training, they are the primary land army, not the Marines as shown by the Commandant's and Secretary's own words as well as the study quoted above

The DEIS MUST PROOVE purpose and need per NEPA. The simple statement, "...the Marine Corps has identified a need for greater reliance on MEB's..." section I.2 introduction. This is in direct contradiction with the way The Marines are currently fighting and the anticipated fighting in the upcoming decades.

**Response to Comment N-18748:**

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Sirs!  
The expansion will be too expensive. EIS must disclose all the costs. The DOD needs to cut back. This is a good place to start. Please read and consider the attached articles and editorial.  
Thank you.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I don't approve of the U.S. Marine Corps' land grab of Johnson Valley OHV for training exercises.

I thank the U.S. Marine Corps for my FREEDOM, but don't take away my FREEDOM to enjoy Johnson Valley OHV area's motor sports events with my family and friends.

I participate in desert racing in JV OHV.

I want the BLM to continue issuing SRP for motor sports events.

THIS IS NOTHING MORE THAN A GOVERNMENT LAND GRAB. THE U.S. MARINE CORPS DOES NOT NEED MORE LAND - CHECK CHINA LAKE THOUSANDS OF ACRES OF UNUSED LAND. FORT ORD = REOPEN GEORGE AIR BASE - USE THE THOUSANDS OF ACRES AT PENDTON. THIS SEEMS TO ME TO BE ANOTHER MANUEVER TO SLIP THE UNITED NATIONS INTO ANOTHER TAKE OVER OF AMERICAN PROPERTY. THE SILENT TREATMENT OF THE WORLD CURRENTLY CONTROL CITIZENS OF THE USA. I SAY USE THE LAND THE MARINES HAVE AT 29 PALMS. CLINTON CLOSED MANY BASES GO THERE. WE NEED OUR SPACE

Response to Comment N-18759:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the Draft EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the Draft EIS).

*The San Manuel Band of Mission Indians appreciates the opportunity to comment on the 29 Palms EIS. The SMBMI is concerned about impact to archaeological sites, rock art sites, shelters and other cultural resources in all the alternatives. The SMBMI requests government to government consultation in the development of the ICMAP once the preferred alternative is selected. The SMBMI prefers the no action alternative.*

Response to Comment N-18760:

Thank you for your comment. Sections 3.11 and 4.11 of the EIS identify and discuss impacts to Cultural Resources. Section 4.11.2.4 explains that the Marine Corps would engage in consultations to address potential mitigations.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

*RE: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land  
Acquisition/Airspace Establishment Study*

EIS Project Manager:

I am writing to you today because my family recreates in the Johnson Valley OHV Area and the no action alternative is the only acceptable alternative. We spend quality family time together there away from all of the distractions of everyday life.

We visit Johnson Valley 4 times a year. When we are preparing for a trip we spend \$ 100 on gas groceries, parts, etc... in our local area. Additionally we spend \$ 100 in or around the Johnson Valley/Lucerne Valley/Victorville area during the time we are camping. We normally camp in the following areas of Johnson Valley Stoddard Wells OHV and Victorville.

The no action alternative protects my family's recreation opportunity and the economic impact it has to Southern California.

Respectfully,

Name Corey West

Address 12313 Black Horse St

Mira Loma, CA 91752

Date 5/18/2011

**Response to Comment N-18761:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land  
Acquisition/Airspace Establishment Study

EIS Project Manager:

I am writing to you today because my family recreates in the Johnson Valley OHV Area. I strongly object to the Training Land Acquisition Project and feel the "no action" alternative is the only acceptable alternative. My family and I spend a lot of quality time in Johnson Valley and it would be a great loss if this land was restricted from public use.

We visit Johnson Valley about 15 times a year and stay for the entire weekend. When we are preparing for a trip we spend about \$150.00 on gas groceries, parts, etc in our local area. Additionally we spend about \$200.00 in or around the Johnson Valley/Lucerne Valley/Victorville area during the time we are camping. We normally camp in the following areas of Johnson Valley, Cougar Buttes, Anderson Dry Lake, North Anderson, and the Rock Pile.

The "No Action" alternative protects my family's recreation opportunity and the economic impact it has to Southern California.

Dear Project Manager,

I am writing you in regards to the 29 Palms Marine Base expansion. I am member, in good standing, of American Motorcycle Association, District 37 and So Cal MC. I feel the expansion of the base is unnecessary and will ruin a recreational area used by thousand and will also destroy the town of Lucerne.

As a member of District 37 I pass through Lucerne every time on my way to Johnson's Valley. I always stop at the local business's, whether it is the gas station or a restaurant, to spend money and support the locals. If the base is expanded and takes over Johnson's Valley there will be no reason for anyone to drive through Lucerne.

I would say that less than half the people who use Johnson's Valley are part of District 37. I know I have been coming out to Johnson's Valley long before I joined the AMA and D37. I came out with family and friends, kids, parents, brothers and sisters. These OHV areas are a way to bring everyone close to you together in one place and enjoy the sport we all love. We are loosing the land we pay our hard tax dollars every year and loosing the areas we recreate in.

I ask you to reconsider the expansion of the 29 Palms Marine Base. I understand the need for training Marines and also appreciate everything the Marines do for this country. But I can not see the need for expansion, the Marines do hold vast amount land in California and the US.

Sincerely,  
Garrett Severen

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

To whom it may concern:

Comment ID: N-18767  
Date Received: May 31, 2011

Regarding the proposed expansion of the Marine Base into the Johnson Valley "Offroad Reserve" I have seen and heard the aggressive and often hostile attitudes of an alarming percentage of offroaders (who seem to regard themselves as valiant reclaimers of frontier freedom). Assurances that offroad incursions into illegal and unwelcoming areas will be minimal, are unrealistic in the extreme. The prevailing conditions of Code Enforcement are disarmingly inadequate. Because they can invade with relative impunity, they will do it. My adamant opposition to the Johnson Valley plan is not a reflection of disrespect for the needs of the Marine Corp.; but rather, a gut level despair at the prospect of losing the most loved qualities of the place my wife and I chose to spend the remaining years of our lives (she is no longer with me). I will not leave this place. Could not leave it if I wanted to. These closing lines have the resonance of a comically pathetic outcry, but... well... they are what they are.

Sincerely,  
Wes Torgerson

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Dear Sir or Madam,

*My concerns lie primarily with the loss of public lands that this proposal will cause. As a Marine myself I understand the need for areas to train, I have actually been trained up at 29 Palms myself. However I don't feel that taking a large tract of OHV accessible land is the answer. My family recreates on that land and the company I work for is in the off road industry, both would be negatively affected. There is very little land available for off highway vehicle use, the loss of Johnson Valley seems unnecessarily painful.*

[www.marines.mil/unit/29palms/las](http://www.marines.mil/unit/29palms/las)

Response to Comment N-18768:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

*My family & I have been enjoying the Johnson valley OHV area for about six years. We use the area for camping, OHV trucks, motorcycles/dirt bikes & quads. We enjoy the diversity of the area including the hammocks, dry lake beds, sand dunes & general desert areas. We have found memories of this area & have met wonderful friends there. To close down this area to public use / OHV use would be a tragedy for the OHV community. I urge you to reconsider closing the area & leaving it free to public use as it is now.  
 Thank you for your consideration in this matter.*

Response to Comment N-18770:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

PUBLIC COMMENT SUBMISSION

Name Withheld by Request

TO: Naval Facilities Engineering Command, Southwest  
ATTN: 29 Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132 – 5190

Dear Sir:

Please include me on the mailing list and send me updates about the EIS.

Withhold my name and address from public review or from disclosure under the Freedom of Information Act (FOIA).

COMMENT

I am an owner of valid mining claims in the exploration and development of a heavy minerals and precious metals deposit within Sections 3 and 4, Township 4 North Range 3 East S.B.B.M. and Sections 27, 28, 29, 32, 33 and 34, Township 5 North Range 3 East S.B.B.M..

This extensive and valuable deposit should be reserved as an excepted area if in future it is included within the boundary of any withdrawal of public lands for the 29 Palms Training Land Acquisition and Airspace Establishment Project.

The full operation of the public land laws and Federal regulations relating to conservation, utilization and development of mineral resources must be allowed to continue toward the future production of precious and strategic metals and mineral commodities contained within this significant deposit.

Very truly yours,

/s/

**Response to Comment N-18771:**

Thank you for your comment. As indicated in Section 2.6 of the EIS, under the proposed action mining claim owners would be offered fair market value for their claims, or would be afforded reasonable access to their claims. Decisions on whether to purchase a mining claim, or provide access to the claim, would be made on a case-by-case basis. The location of the mining claim relative to MEB training locations would determined whether a mining claim is to be purchased or reasonable access provided. Your contact information has been added to the project mailing list as requested.

COMMENT

I am an owner of valid mining claim Orchid Placer No. 1 in Sections 21 and 28, Township 6 North Range 4 East S.B.B.M. The claim is being developed for precious and base metals and decorative stone.

This mining claim should be reserved as an excepted area if in the future it is included within the boundary of any withdrawal of public lands for the 29 Palms Proposed Training Land Acquisition and Airspace Establishment Project.

The full operation of the public land laws and Federal regulations relating to conservation, utilization and development of mineral resources must be allowed to continue for the valuable metals and commodities contained within this mining claim.

Very truly yours,

/s  
Dated: May 26, 2011.

**Response to Comment N-18772:**

Thank you for your comment. Ref: Responding to your Land Acquisition Study

SIR:

Your public meetings in 2010 advised that we and others would probably learn conclusions on this subject on or before the summer of 2011. While we have received no information whatever from you since those meetings, the recent newspaper publicity asking for "final comments" makes us feel we should state our case once again concerning your possible move in our direction.

Accordingly, it is our belief your intended expansion should not be to the East. In our 61 years of operating on Bristol Dry Lake it is our opinion that this area could have no value for military training. Rather it would be a liability, due to its size and uselessness in bad weather.

It should be noted here that Bristol Dry Lake is the important western source for the valuable mineral, calcium chloride, and a military occupation would remove it from industry, as well as probably cause three mineral companies to go out of business.

An eastward expansion would certainly jeopardize the existence of Amboy Road, which is a vital highway for commerce and tourism to this area.

The above is offered for your Study, respectfully.

National Chloride Company  
of America

  
Tom Beeghly, President

**Response to Comment N-18773:**

Thank you for your comment. As indicated in Section 2.6 of the EIS, under the proposed action mining claim owners would be offered fair market value for their claims, or would be afforded reasonable access to their claims. Decisions on whether to purchase a mining claim, or provide access to the claim, would be made on a case-by-case basis. The location of the mining claim relative to MEB training locations would determined whether a mining claim is to be purchased or reasonable access provided. As described in Section 2.6 of the EIS, under Alternatives 1, 2, and 6, Morris Lode and Bessemer mines would be acquired.

The EIS has been updated to discuss mineral resources of the east study area as suggested.

Your contact information has been added to the project mailing list as requested.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

*Many people recreate here during different times of the year. It is not snow appropriate for bicycles and ATVs. None of the terrain is torn up or abused. Higher elevation speed racing along with campfires and walking are very popular. It is enjoyed by all who come. So hopefully the Marine Corp will consider this plea to keep it open.*

Dear EIS Project Manager:

First of all, thank you for considering this letter. I fully support our military, its leaders, and the wonderful men and women who fight to secure our freedoms in this country. I am grateful every day for the freedoms I enjoy because of the sacrifice by those who serve. One of the greatest freedoms I enjoy is off road driving and extreme rock crawling. Right now, our freedom of four-wheeling and our military are in conflict, because one of the world's most popular OHV park is in danger of closure for use as a tactical training ground; Johnson Valley OHV park.

My solution, for the benefit of both our military and the vast community of off road enthusiasts, is to expand eastward and/or southward, as outlined in Alternative #3. To me, this Alternative provides the best solution and the easiest to implement for both the Marine Corps, the off road community, and many other groups.

If an eastward and/or southward expansion is simply not possible, Alternative #4 or Alternative #5 would be acceptable, to allow full off road recreation access to Johnson Valley when it is not in use by our Marines.

If even this is not acceptable, the very least alternative I would consider is the favored Alternative #6 BUT with more permitted access northward to include the Outer Limits extreme 4x4 trail, and the access and exit roads. This way, all of the very popular trails remain intact and accessible

If at all possible, an eastward and southward expansion is acceptable to me, as well as many others. I feel, and I am sure many others would agree, that a permit (which allows access to Johnson Valley 10 months of the year) is only a temporary solution, and a permanent closure and restricted access would be inevitable. Thank you for regarding my input.

Sincerely,

54999 MARTINEZ TRAIL # 25  
YUCCA VALLEY, CA 92284

**Response to Comment N-18775:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The Marine Corps has determined that Alternatives 4, 5, and 6 would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

My husband and I are currently interested in purchasing an off road vehicle for the Johnson Valley ORA. We've ~~also~~ enjoyed visiting the off road events for several years.

If this area is closed, we will have no reason to purchase an off road vehicle.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Means Dry Lake Bed is the most essential location for the sport of rock crawling and off-road racing. Events are held here year round and offer fun and recreation for families as well as competition for our sport. This is the largest remaining off road area in Southern California. I hope that in the future, our enthusiasts will be able to use this area for future generations. This is a "minority" sport to some, but each year there are over thirty thousand people who come to view the King of the Hammers race as well as other events. Johnson Valley must be preserved for off-road use!

\* Joshua Trees are protected, mortar shells tend to destroy these, also very noisy.

\* FT CARSON, Co. 1970's: A young paper boy wandered on to the firing range, put an unexploded mortar shell in his newspaper bag, the shell detonated, killing him instantly. There are many individuals that will try to salvage metals for monies, putting them in jeopardy, for health & safety.

\* This is a "Recreational Area", taking this away will hurt many.

\*\*\*Please Print\*\*\*

Response to Comment N-18781 (Page 1 of 2):

Thank you for your comment. Joshua trees have been mapped on the Combat Center, within the extreme southwestern corner in Sand Hill Training. Joshua trees have not been mapped in the west study area, but biological surveys for rare plants have noted that they are present. The Marine Corps would attempt to avoid intact stands of Joshua tree during exercise design and conduct of military training, consistent with the goal of conserving natural resources as proscribed in the Combat Center INRMP. However, Joshua trees are not protected under federal law, and state and local regulations would not apply to the proposed project.

The Marine Corps understands the public's concern in regards to public safety. Please see Section 3.4.3.1 of the text for information on "scrapers" and the current procedures used by the base under Ground Training Operations.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is

**Response to Comment N-18781 (Page 2 of 2):**

selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety. As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS). The specific details on management of the RPAA in regards to permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies.

Dear EIS Project Manager:

First of all, thank you for considering this letter. I fully support our military, its leaders, and the wonderful men and women who fight to secure our freedoms in this country. I am grateful every day for the freedoms I enjoy because of the sacrifice by those who serve. One of the greatest freedoms I enjoy is off road driving and extreme rock crawling. Right now, our freedom of four-wheeling and our military are in conflict, because one of the world's most popular OHV park is in danger of closure for use as a tactical training ground; Johnson Valley OHV park.

My solution, for the benefit of both our military and the vast community of off road enthusiasts, is to expand eastward and/or southward, as outlined in Alternative #3. To me, this Alternative provides the best solution and the easiest to implement for both the Marine Corps, the off road community, and many other groups.

If an eastward and/or southward expansion is simply not possible, Alternative #4 or Alternative #5 would be acceptable, to allow full off road recreation access to Johnson Valley when it is not in use by our Marines.

If even this is not acceptable, the very least alternative I would consider is the favored Alternative #6 BUT with more permitted access northward to include the Outer Limits extreme 4x4 trail, and the access and exit roads. This way, all of the very popular trails remain intact and accessible.

If at all possible, an eastward and southward expansion is acceptable to me, as well as many others. I feel, and I am sure many others would agree, that a permit (which allows access to Johnson Valley 10 months of the year) is only a temporary solution, and a permanent closure and restricted access would be inevitable. Thank you for regarding my input.

Sincerely,

Dillon W Douglas  
7447 CHERRYBEE TRL  
JOHNSON VALLEY, CA 92284  
Dillon W Douglas

**Response to Comment N-18784:**

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The Marine Corps has determined that Alternatives 4, 5, and 6 would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-18785:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

I feel that taking the land away is a very bad idea. There is thousands of people that come thru the town of Luxerne valley (with a population of around 700). Most of the population is low income families & without the people we will be worse than we are. Also there is nothing to do in our town & no money to go out of town, that I'm sure im not the only one to consider that what we need as my backyard. Everyone comes here to see the land & that the only thing we have is that land. I also believe that there is historical land marks in that area as well. I want there to be an r'n land around here that they could put it somewhere else where it will not be effecting so many people & things.  
Please reconsider another area please!!!

Response to Comment N-18787 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. As described in Section 2.8 of the EIS, under any action alternative the Marine Corps would implement a variety of measures to avoid and minimize impacts to Cultural Resources. The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion

**Comment ID: N-18787 (Page 2 of 2)**

**Response to Comment N-18787 (Page 2 of 2):**

task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-18788:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

We support our military and understand training needs. However moving west toward Lucerne Valley is not in anyone's best interest. While I have studied the reasons I can't agree on a lot of the reasons in general, but this community does not need this use of land making in optics. Perhaps it would be the right thing to do to consider the loss of land value farming offered use which helps the town survive and is family used. This would be a disaster to ~~our town~~ and ~~therefore~~ we fight it.

Response to Comment N-18789:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As indicated in Section 2.6 of the EIS, under the proposed action mining claim owners would be offered fair market value for their claims, or would be afforded reasonable access to their claims. Decisions on whether to purchase a mining claim, or provide access to the claim, would be made on a case-by-case basis. The location of the mining claim relative to MEB training locations would be determined whether a mining claim is to be purchased or reasonable access provided.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

While I support our Armed forces 100% I believe the main Corp base should be expanded to the EAST, NOT WEST TOWARDS LUCERNE VALLEY WE ENJOY A QUIET PEACEFUL RANCH SETTING AND WE WANT IT TO STAY THAT WAY. NOISE FROM MUNITIONS TRAINING, TARGET PRACTICE IS SOMETHING WE DO NOT WANT IN OUR BACKYARD

I AM ALSO CONCERNED A WESTWARD EXPANSION WOULD ELIMINATE A GREAT DEAL OF OFF ROAD RECREATION. OUR TOWN DEPENDS ON OUT OF TOWN BUSINESS TO SURVIVE. I NEED MY JOB! PLEASE GO EAST!

Response to Comment N-18790:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

THE MARINE CORPS EXPANSION SHOULD NOT BE EVEN CONSIDERED FOR EXPANSION TOWARD LUCERNE VALLEY. IF THIS OCCURS THE ECONOMY OF LUCERNE VALLEY WILL BE DESTROYED. THE DRV SITE OF LUCERNE VALLEY/JOHNSON VALLEY WILL NO LONGER EXIST - THIS TOURISM SUPPORTS THE ECONOMY IN THIS REGION. PROPERTY VALUES WILL BE DESTROYED. NOISE & DESTRUCTION OF OUR PEACEFUL LIFESTYLE WILL BE DESTROYED. THE MARINE CORPS HAS NEVER EXPLAINED WHY THEY WANT TO COME HERE. THE EXPANSION SHOULD BE TOWARD THE EAST - TOWARD THE OPEN DESERT EAST TO THE COLORADO RIVER. THAT MAKES SENSE. THE EXPANSION AND FUTURE EXPANSIONS WOULD BE BARELY NOTICED & CAUSE NO PROBLEMS FOR CITIZENS. EXPLANATION REQUEST.

[www.marines.mil/unit/29palms/las](http://www.marines.mil/unit/29palms/las)

Response to Comment N-18792 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated

**Comment ID: N-18792 (Page 2 of 2)**

**Response to Comment N-18792 (Page 2 of 2):**

to decrease directly or indirectly from impacts of the proposed action.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The EIS evaluates impacts to transportation under each of the action alternatives (see Section 4.6). Under alternatives that acquire land in the west acquisition study area, the EIS determined that marginal temporary traffic increases on Highway 247 due to MEB mobilization would not create significant impacts.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

The EIS evaluates impacts to transportation under each of the action alternatives (see Section 4.6). Under alternatives that acquire land in the west acquisition study area, the EIS determined that marginal temporary traffic increases on Highway 247 due to MEB mobilization would not create significant impacts.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-18795:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

*Recreation in the areas surrounding Lucerne valley is a major source of income for local businesses, as people traveling through the area stop and purchase services and goods. Limiting these recreational areas would be a huge blow to the local economy. In addition, families in the area have also taken part in enjoying the desert, and it would be a shame for that to no longer be possible.*

Response to Comment N-18796:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

I've lived in Lucerne Valley since 1966  
and the weekenders have always been in our  
stores, gas stations, restaurants.  
I love our deserts. I have a Jeep 4x4  
we enjoy our time out there these days  
and America is losing everything (DON'T TAKE  
OUR DESERT FOR REC) and our (LUCRY HOOD)  
you take the weekenders away you take our  
TOWN INCOME!

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Response to Comment N-18811:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-18821:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

MY COMMENT IS ABOUT (you may mark an "X" to all that apply):

<input type="checkbox"/> Aesthetic/Visual resources	<input type="checkbox"/> Environmental justice	<input type="checkbox"/> Public services
<input checked="" type="checkbox"/> Air quality	<input type="checkbox"/> Hazardous materials/wastes	<input checked="" type="checkbox"/> Recreation
<input checked="" type="checkbox"/> Airspace/Air traffic	<input checked="" type="checkbox"/> Land use	<input type="checkbox"/> Socioeconomics
<input type="checkbox"/> Biological resources	<input type="checkbox"/> Mining/Minerals	<input type="checkbox"/> Transportation
<input type="checkbox"/> Cultural resources	<input type="checkbox"/> Noise	<input type="checkbox"/> Utilities/Infrastructure
<input type="checkbox"/> Energy development	<input type="checkbox"/> Public health and safety	<input type="checkbox"/> Water resources
	<input type="checkbox"/> Public lands withdrawal	<input type="checkbox"/> Other _____

I agree with letters and comments that I have read from the associations listed and I stand with the American Motorcyclist Association, Blueribbon Coalition, Town of Apple Valley, Ca., Town of Yucca Valley, Ca., City of Twentynine Palms, Ca., Lucerne Valley, Ca. numerous motorcycle and 4x4 off highway vehicle groups and associations, and ask that you chose a **No-Action Alternative** for the 29 Palms Training Land Acquisition.

Please keep are airspace and all of our BLM public lands totally and completely open for the public to use and enjoy. Again I chose a **No-Action Alternative!!!!**

Response to Comment N-18835:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Subject: Notice of Availability of the Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study Contiguous to the Marine Corps Air Ground Combat Center, San Bernardino County**

Dear Sir or Madam:

The California State Lands Commission (CSLC) staff has reviewed the subject EIS for 29 Palms Training Land Acquisition/Airspace Establishment Study (Project), which is being prepared by the Department of the Navy (DON) as the lead agency under the National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.). The CSLC has prepared these comments because of its jurisdiction over portions of the Project located on state school lands as well as its trust responsibility for any and all projects that could directly or indirectly affect state owned "sovereign" land and/or school lands, and their resources or uses (pursuant to CEQA Guidelines<sup>1</sup> §§ 15381, 15386, subd. (b)).

The EIS is being prepared to evaluate the potential environmental impacts associated with the proposed establishment of a large-scale training range facility at the Marine Corps Air Ground Combat Center at Twentynine Palms, California (the "Combat Center") to accommodate Marine Expeditionary Brigade (MEB) training. To implement the proposed action, the Marine Corps would acquire additional land adjacent to the Combat Center, establish and modify military Special Use Airspace (SUA) above the proposed MEB-sized training range, and conduct specified MEB training.

**CSLC Jurisdiction**

In 1853, the United States Congress granted to California hundreds of thousands of acres of land for the specific purpose of supporting public schools. In 1984, the State Legislature passed the School Land Bank Act (Act), which established the School Land Bank Fund (SLBF) and appointed the CSLC as its trustee (Pub. Resources Code § 8700 et seq.). The Act directed the CSLC to develop school lands into a permanent

<sup>1</sup> The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Response to Comment N-18847 (Page 1 of 3):

Thank you for your comment. The Marine Corps has met with the State of California to discuss CEQA requirements for state actions that could be undertaken following the project decision. State agencies are encouraged to use NEPA documents when such documents comply with CEQA. To the extent practicable, the EIS has incorporated CEQA requirements to allow state agencies to utilize the EIS analysis to support any future project-specific analyses that may be required by CEQA.

Comment ID: N-18847 (Page 2 of 3)

Response to Comment N-18847 (Page 2 of 3):

29 Palms EIS Project Manager

Page 2

May 26, 2011

and productive resource base for revenue generating purposes. The CSLC manages approximately 469,000 acres of school lands held in fee ownership by the State and the reserved mineral interests on an additional 790,000± acres where the surface estates have been sold. Revenue from school lands is deposited in the State Treasury for the benefit of the Teachers' Retirement Fund (Pub. Resources Code § 6217.5).

On January 27, 2009, CSLC staff submitted comments in response to the Notice of Intent to prepare an EIS. In order to determine the State's interest in the Project, CSLC staff requested a more detailed map showing exactly where the proposed Project would be located. Based on information contained on the maps provided to the CSLC by Project representatives, staff has identified more than 8,000 acres of fee-owned school lands within the areas analyzed in the EIS (including all alternatives), and an additional, 15,000± acres of lands with reserved mineral interests. This conclusion is without prejudice to any future assertion of State ownership or public rights, should circumstances change, or should additional information become available. This letter is not intended, nor should it be construed as, a waiver or limitation of any right, title, or interest of the State of California in any lands under its jurisdiction.

Because the Project would involve the use of school lands, the DON would need to purchase the identified school lands from the CSLC at fair-market value. The sale of these lands would require approval by the CSLC at a properly noticed public meeting, and as a discretionary action, would also require the CSLC to comply with the California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.). The CEQA Guidelines provide a mechanism by which an EIS can be used by an approving agency if specified conditions are met (see generally §§ 15220-15225). In early 2009, CSLC staff and Project representatives discussed the CSLC's obligations under CEQA. As part of these discussions, Project representatives indicated that the EIS would meet CEQA requirements. CSLC staff has reviewed the EIS for compliance with the conditions set forth in CEQA and the CEQA Guidelines and offers the following comments.

Circulation of Documents:

Pursuant to section 15225 of the CEQA Guidelines, the CSLC may only use the EIS in place of an Environmental Impact Report if the federal lead agency circulated the EIS in accordance with CEQA and gave notice of the document's availability as specified in section 15087 of the CEQA Guidelines. Because the CSLC is a state agency, when it acts as a lead agency under CEQA, it is required to circulate environmental documents through the State Clearinghouse at the Governor's Office of Planning and Research. For the Project EIS, CSLC staff has been unable to verify that the DON gave such notice; therefore, prior to the DON's approval of the Project and before the CSLC can use the EIS to consider approval of the sale of school lands for the Project, the EIS will need to be noticed and circulated in accordance with CEQA requirements. Please contact the CSLC staff identified below for further assistance in meeting this requirement.

To Whom It May Concern:

I have invested tens of thousands of dollars in off road riding machinery, safety equipment, tow vehicles, living quarters and the like. The only place within 2 hours driving time in my 6 mpg motorhome is Johnson Valley.

I am retired and on a fixed income and I vote in every election. I am a personal friend of Congressman Gary Miller and State Senator Bob Huff. I urge you to please consider expanding eastward instead of westward from the existing base. You already have so much land that you are not even using within the confines of the base right now that it makes no sense to displace the homeowners in Johnson Valley that have lived there for decades, not to mention the off roading citizens who have used and maintained Johnson Valley for over half a century.

You have other options for expansion (eastward, for example), but we, the off roading public, do not. Any other riding areas are too far away to go there and back for a weekend of riding.

This is a multi-million dollar industry that will collapse if this last vestige of riding area within a 2 hour drive is stolen from us.

Consider how much money is spent on the following items for off road riding:

1. Motorcycles
2. Quads
3. Helmets
4. Boots
5. Gloves
6. Flak vests
7. Trailers
8. Motorhomes
9. Gasoline
10. Oil
11. Handlebar grips
12. Tires
13. Chains (and sprockets)
14. Air filters
15. Food from local merchants
16. Lawn chairs

Response to Comment N-18848 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Comment ID: N-18848 (Page 2 of 2)

Response to Comment N-18848 (Page 2 of 2):

17. Various rentals from local businesses (generators, trailers, motorcycles, motorhomes, and so much more)
18. Goggles
19. Riding apparel (pants, shirts, kidney belts, socks, water bottles for the bikes, etc.)
20. Compressors for pumping up tires
21. Items from local hardware stores
22. Items from local automotive stores

And so many more things that one cannot even count. The off roading community supports the economy. Taking away the right of freedom of recreation in the Johnson Valley desert will further decimate an economy that is already in serious trouble and may not yet recover in our lifetimes. Also please consider the residents of Johnson Valley who have built homes, dug wells, raised families, and planted trees, some of which are decades old and are just now beginning to provide needed shade and oxygen. In conclusion, please also consider the environmental impact of losing the existing trees and other domestic plants, etc. The wind generally blows from West towards the East. If you expand Eastward, the range of mountains on the existing West Side of the base will act as a windbreak to prevent excessive erosion as troops and ordinance are exercised. Further, if gas warfare training is to be taught, the mountains will act as a barrier to prevent said gases from impacting Big Bear, the surrounding mountain and desert areas, and the Johnson Valley water supply. Johnson Valley is, in fact, the back side of Big Bear. In short, annexing Johnson Valley is a really BAD idea.

Re: Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment for Proposed Expansion of Twenty-Nine Palms USMC Base

Dear 29 Palms EIS Project Manager:

Please accept this document as official comments of the American Motorcyclist Association (AMA) and our partner organization, the All-Terrain Vehicle Association (ATVA). The AMA and the ATVA firmly support the "No Action" alternative as it relates to the Draft Environmental Impact Statement (DEIS) for Land Acquisition and Airspace Establishment for Proposed Expansion of Twenty-Nine Palms U.S. Marine Corps (USMC) Base.

Founded in 1924, the AMA is the premier individual rider-based advocate of the motorcycling community. Along with our partner organization, the ATVA, we represent the interests of millions of on- and off-highway motorcyclists and all-terrain vehicle (ATV) riders nationwide. However, this document shall not preclude any of our individual members, chartered clubs or district organizations from submitting their own additional comments.

The Bureau of Land Management's (BLM) Johnson Valley Off-Highway Vehicle Area (Johnson Valley) offers unparalleled opportunities for a variety of multiple use visitors, the film industry and local residents throughout high desert communities year-round. Its varied landscape, with steep mountains, rolling hills, open valleys, dry lakebeds and sandy washes is truly unique.

It is used for everything from competitive racing events to casual family off-highway vehicle (OHV) recreation, gem and mineral collecting, rocketry, land sailing and dispersed camping. No other designated "open" area in the California desert, or indeed the entire United States, provides such a variety of recreational opportunities to the general public.

Given the unequalled importance of the Johnson Valley when it comes to recreational opportunity throughout the entire Western United States, the AMA and the ATVA firmly support the "No Action" alternative. Only the "No Action" alternative will allow the public continued access at its current levels and also avoid the economic-related impacts and disruptions to the surrounding communities.

Response to Comment N-18849 (Page 1 of 5):

NEPA-1:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-18849 (Page 2 of 5)

29Palms  
DEIS Comments  
May 25, 2011

*Our Specific Concerns with the DEIS are as Follows:*

- **Need for the Base Expansion**

To date, despite repeated requests from numerous sources, the USMC has provided scarce evidence to support the proposed base expansion plan. Nothing within the DEIS explains sufficiently why this expansion is needed in this specific area, especially given the potential for a combined training facility at the neighboring China Lake or Fort Irwin facilities.

A comprehensive review of the “no action” alternative was requested during the scoping phase of the process, yet it would appear the decision to move ahead with the expansion was the priority. Also the possibility of the facility expanding in a different direction was apparently not given serious consideration as it is not even included in the range of alternatives offered. Specifically, the eastward expansion would present the least conflict with the current multiple use recreation on the public lands in this area, and would have the smallest impact on the local communities and their residential and economic interests.

NEPA-1

- **Project Cost**

The DEIS fails to indicate how much the proposed project would cost. Granted the land transfer from the BLM to the USMC itself may be done at a nominal cost, and even the ongoing costs of securing and maintaining the site may not be unreasonable, but the expense of conducting the proposed training biannually would indeed be significant, potentially in the tens of millions of dollars per year. However, the public cannot evaluate this substantial concern properly because the DEIS does not include a cost estimate for these activities.

By understating or omitting much of the necessary cost information associated with the proposal, it is very difficult for members of the public to properly evaluate the project's cost to comment appropriately. The DEIS simply fails to provide the needed level of information and why it is deemed essential to future military readiness.

Also, by which accurate estimates regarding the cost of the proposed project, there is no means to weigh its purported benefits against its fiscal, environmental, and socio-economic impacts. The DEIS must demonstrate to an apprehensive public that the costs associated with this project, including those relating to ongoing training, have been accurately predicted and can be met with existing resources.

NEPA-2

Response to Comment N-18849 (Page 2 of 5):

**NEPA-2:**

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**SOC-1:**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

Comment ID: N-18849 (Page 3 of 5)

Z9Palm  
DEIS Comments  
May 25, 2011

• Economic Impacts

As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local and regional economy. Economic impacts were clearly understated and some alternatives attempt to portray the expansion as economically positive for the surrounding communities, despite little evidence to substantiate such a claim.

The provided analysis is based on unproven assumptions that contradict proven and long documented substantial economic contributions made by the recreating public to the local communities. To suggest that the proposed project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative.

Also, the DEIS has failed to adequately consider the economic impact the loss of the Johnson Valley OHV Area would have on the larger Southern California region as a whole. The closure of Johnson Valley would significantly affect sales of all types of OHVs and other closely related vehicles, including motorcycles, ATVs, sand rails, dune buggies and trailers. This impact, especially given current tough economic times, could be devastating to the regional motorsports dealers. The businesses that service and modify these vehicles would also be negatively impacted.

• Effects to Other Areas

There are approximately 500,000 registered OHVs in Southern California alone, with significant numbers in the surrounding states as well. As per our comments during the scoping phase, the DEIS must identify and ensure the OHV public access to other BLM lands currently closed to OHV use as part of a comprehensive mitigation strategy.

If the proposed base expansion were to take place, the impacts to other California, Arizona and Nevada public lands (e.g., BLM, Forest Service and similar state facilities) will be significant and therefore, must be fully investigated. As the recreating public is forced to seek out new opportunities, these other areas will see increased user numbers and the related issues that come from such demands.

The DEIS fails to adequately address this cumulative effect the loss of this important area will have on other recreation areas. These impacts will be significant. Visitors would be forced to seek other areas to supplant opportunities lost in Johnson Valley.

The number of displaced users would clearly be extensive given the estimated 800,000 – 1,000,000 annual visitors who recreate in the Johnson Valley currently. A clear plan to address

SOC-1

REC-1

Response to Comment N-18849 (Page 3 of 5):

REC-1:

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

GEN-1:

All relevant technical studies are contained in Volume II of the EIS (*Appendices*).

Appendix H of the EIS has four sections – H-1 through H-4. Sections H-1 through H-3 contain a wealth of technical data used in the noise modeling. Only Section H-4 is the noise primer. As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Section 3.10 of the EIS describes the existing biological conditions, while Section 4.10 analyzes the impacts on vegetative and wildlife species present in each acquisition study area.

Comment ID: N-18849 (Page 4 of 5)

29Palms  
DEIS Comments  
May 25, 2011

these displaced users must be formulated and implemented prior to any closure.

The final plan must include specific plans for land use amendments that would allow for recreation and competition events in areas that are currently unavailable and stipulate an acre for an acre mitigation of any lost opportunities. This “no net loss” policy will help to assure a proper balance on public lands and minimize impacts on the surrounding areas.

Through congressional designation, lands currently closed to off-highway enthusiasts could be reclassified and made available to the recreating public; however, no such mitigation plan is offered in the document. Instead, the DEIS states those impacted will be addressed through the development of a Recreation Management Plan at some later time (section 6.2 of the DEIS).

• Environmental and Noise impacts

The DEIS discloses that the proposed base expansion and related training activities will negatively impact surrounding air quality, ambient noise levels, biological and cultural resources. Other data included in the DEIS indicates that the project will result in impacts to airspace management, water supply, water quality, and result in increased greenhouse gas emissions. However, when disclosing each of these impacts the DEIS concludes that the project’s potential effects are simply not significant, or significant yet unavoidable. Nevertheless, the DEIS fails to include the technical studies or data necessary to support these conclusions or allow the public to understand how they were reached.

For example, the DEIS includes a technical appendix for noise impacts, but not a study of the project’s specific potential impacts on the surrounding area. In its place, it includes a briefing on noise metrics. This is valid in terms of general noise effect information and measuring methodology. It is not suitable in terms of determining the actual noise impacts of this specific project.

Similarly, the Biological Resource appendix is incomplete. It fails to describe existing biological conditions on the impacted area or even identify where they exist. Nor does it give details as to what extent these biological resources will be when disturbed by the project. In fact, the Biological Resources section only discusses the project’s potential impacts on the desert tortoise while ignoring other species that are present in the area entirely. Given this oversight there is no way for the public to sufficiently review or comment properly on the biological impacts.

• Future Uses

The DEIS provides little guarantees that the USMC will not close the Restricted Public Access Area (RPAA) envisioned under Alternatives 2, 4, 5, and 6. Nothing in the DEIS or the project

REC-1

GEN-1

NEPA-1

Response to Comment N-18849 (Page 4 of 5):

NEPA-1:

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

As outlined in Section 3.4, Combat Center Order 3500.4h SOP for Range/Training Area and Airspace provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range weep, and range clearance) that would be implemented under Alternatives 4, 5 or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5.3 of the EIS).

Comment ID: N-18849 (Page 5 of 5)

29Palms  
DEIS Comments  
May 25, 2011

indicates that this would not or could not happen. On the contrary, the DEIS does not even describe the conditions under which such a closure could occur.

The decision to close the RPAA is left to the USMC, with no specific process on how to appeal such a decision. The DEIS must disclose the project's recreation impacts under Alternatives 2, 4, 5, and 6 may finally be indistinguishable to those of Alternative 1.

Finally, the DEIS has failed to incorporate a comprehensive plan to return any withdrawn land to public use once it has fulfilled its purpose for the military. In all likelihood, the USMC will not need to train in this manner indefinitely. When training operations cease, plans must be included to rehabilitate and return these lands to the public domain. Plans and the necessary funding for such an effort need careful consideration and must be put in place now as part of this process.

• Conclusion

This proposal and the supporting DEIS does not meet the minimum standards established under the National Environmental Policy Act guidelines. Given these deficiencies, the AMA and the ATVA are opposed to the project and requests that the USMC re-examine and reconsider carefully its needs. Efforts to work with and coordinate training exercises that utilize existing facilities and lands must be revisited. Until such an effort is made we will remain in support of the "No Action" alternative as the only viable option.

Thank you for the opportunity to comment on the DEIS. If you have any questions concerning the content of this letter, please do not hesitate to contact me directly.

Sincerely,

Nicholas Harris  
Western States Representative

NEPA-1

GEN-2

Response to Comment N-18849 (Page 5 of 5):

GEN-2:

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

*Re: Comment Letter re Draft Environmental Impact Statement for Land Acquisition and  
Airspace Establishment for Proposed Expansion of Twenty-Nine Palms USMC Base*

Dear Project Manager:

This firm represents EcoLogic Partners, Inc. ("EcoLogic"), a consortium of family-oriented recreation groups dedicated to preserving public access to outdoor recreational venues in California and throughout the American West. On behalf of EcoLogic and its members, we have reviewed the Draft Environmental Impact Statement ("EIS") for the Department of the Navy's "Land Acquisition and Airspace Establishment" project, which is the necessary antecedent to the proposed expansion of the United States Marine Corps base at Twenty-Nine Palms, California. For the reasons discussed below, EcoLogic objects to the proposed Project, including the Navy's preferred alternative (Alternative 6), and herein takes the position that the Project, while certainly providing some marginal benefit to the Marine Corps training mission, is not necessary to that mission nor justified in light of its cost. Further, EcoLogic finds the Draft EIS analytically deficient. Not only does the document fail to study key impacts, many of its conclusions rest on dubious, unsupported assumptions. Perhaps worst of all, the Draft EIS omits fundamental baseline information regarding the environmental resources that currently exist in the proposed expansion area, rendering an impact analysis impossible.

**I. THE PROPOSED PROJECT IS TOO COSTLY**

Although the training facilities currently available at Twenty-Nine Palms and other USMC bases have allowed the Marines to ably conduct military operations in Kuwait, Iraq,

NEPA-1

Response to Comment N-18850 (Page 1 of 18):

**NEPA-1 and NEPA-2:**

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

**NEPA-3 and NEPA-4:**

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**GEN-1:**

Chapter 3 of the EIS contains background information for each resource area, while impacts are analyzed in Chapter 4. All relevant technical studies and additional information are contained as appendices in Volume 2. References cited are included in the project Administrative Record.

Afghanistan, the Department of the Navy has now decided that it needs to expand the Twenty-Nine Palms facility by more than 200,000 acres to provide for "sustained, combined-arms, live-fire, and maneuver field training for MEB-sized Marine Air Ground Task Forces (MAGTFs), each consisting of three battalion task forces and associated command, aviation, and combat logistics support elements." (DEIS, ES-1) It is difficult to see how the recent wars in the Middle East, or any reasonably anticipated conflict elsewhere in the world, would require that an entire MEB be trained simultaneously at a single military installation. Increasingly, military experts and civilian decision-makers are beginning to question the strategic and tactical value of maintaining and training such large (and costly) forces.

A few recent comments demonstrate the point:

- George Will (*Washington Post* – May 3, 2011):
  - "[T]he enormous military footprint in Afghanistan, next door to bin Laden's Pakistan refuge, seems especially disproportionate in the wake of his elimination by a small cadre of specialists."
  - Jim Lacey of the Marine Corps War College notes that Gen. David Petraeus has said there are perhaps about 100 al-Qaida fighters in Afghanistan. "Did anyone," Lacey asks, do the math? There are, he says, more than 140,000 coalition soldiers in Afghanistan, or 1,400 for every al-Qaida fighter. It costs about \$1 million a year to deploy and support every soldier – or up to \$140 billion, or close to \$1.5 billion a year, for each al-Qaida fighter. "In what universe do we find strategists to whom this makes sense?" he asked."
- Mark Thompson (*Time* – "How To Save A Trillion Dollars" – April 25, 2011):
  - "The U.S. continues to field and maintain a global force designed during an era of sky's-the-limit defense budgets."
  - "Across Washington, all sorts of people are starting to ask the unthinkable questions about long-sacred military budgets. Can the U.S. really afford more than 500 bases at home and around the world? Do the Air Force, Navy and Marines really need \$400 billion in new jet fighters when their fleets of F-15s, F-16s and F-18s will give them vast air superiority for years to come? Does the Navy need 50 attack submarines when America's main enemy hides in caves?"
  - "It may seem strange to talk about defense cuts while the U.S. is waging one war in Afghanistan, is mopping up a second in Iraq and has just launched a half-war in

NEPA-1

Response to Comment N-18850 (Page 2 of 18):

NEPA-5:

Section 4.13 of the EIS addresses impacts to water resources. As described in the EIS, development of new groundwater sources in other basins for potable water supply would not occur under the proposed action. The analysis of water resources impacts is presented in Section 4.13 of the EIS. A long-term water study is not within the scope of this EIS. If one of the alternatives proposed in the EIS is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment ID: N-18850 (Page 3 of 18)

Libya. But those conflicts have made it easy to forget the warning of Admiral Mike Mullen, Chairman of the Joint Chiefs of Staff, that "the single biggest threat to our national security is our debt." Which points to an almost tragic irony of Washington's \$700 billion annual appetite for military stores: we are borrowing cash from China to pay for weapons that we would presumably use against it. If the Chinese want to slay us, they don't need to attack us with their missiles. They just need to call in their loans."

- "Numbers alone tell much of the story: We are now spending 50% more (even excluding the wars in Afghanistan and Iraq) than we did on 9/11. We are spending more on the military than we did during the Cold War, when U.S. and NATO troops stared across Germany's Fulda Gap at a real superpower foe with real tanks and thousands of nuclear weapons aimed at U.S. cities. In fact, the U.S. spends about as much on its military as the rest of the world combined."
- "While the U.S.'s military spending has jumped from \$1,500 per capita in 1998 to \$2,700 in 2008, its NATO allies have been spending \$500 per person over the same span. As long as the U.S. is overspending on its defense, it lets its allies skimp on theirs and instead pour the savings into infrastructure, education and health care. So even as U.S. taxpayers fret about their health care costs, their tax dollars are paying for a military that is subsidizing the health care of their European allies."
- "[R]evising America's defense budget will happen only if the U.S. takes a hard-eyed look at the dozens of military operations that are no longer vital or affordable."
- "\$1 trillion in cuts wouldn't really be as drastic as it sounds – or as the military's no-surrender defenders insist. Such a trim would still leave the Pentagon fatter than it was before 9/11."
- "California Representative Howard McKeon, the Republican chairman of the Armed Services Committee, says, 'A defense budget in decline portends an America in decline.' Attitudes like that can bankrupt a nation, and the public senses its."
- "For too long, an uninterested and distracted citizenry has been content to leave the messy business of national defense to those with bottom-line reasons for force-feeding it like foie gras goose. It's long past time . . . for U.S. taxpayers to

NEPA-1

Response to Comment N-18850 (Page 3 of 18):

NOI-1:

Noise exposures from existing/current conditions are provided in Chapter 3. Appendix H has four sections: H-1 through H-4. Sections H-1 through H-3 contain a wealth of technical data used in the noise modeling; Section H-4 is the noise primer.

As explained in Section 3.9.3, the aircraft and ordnance operations for the Baseline scenario was *initially* based on WR 02-13. However, all modeled operations from WR 02-13 were updated and validated by the USMC to represent current activity. For example, the EAF and airspace operations were updated in 2009-2010 for the MV-22 West Coast Basing EIS as stated in Section 3.9.3.1. Furthermore, ordnance operations from WR 02-13 were doubled relative to the 2003 noise study to better represent current activity at the Combat Center as stated in Section 3.9.3.1.

Modeling for the EAF is consistent with the Navy AICUZ Instruction which recommends use of annual average daily operations. If annual average busy day operations were modeled, it is estimated CNEL would be only 3 dB greater than CNEL reported in the DEIS and exposure to airfield noise exposure greater than or equal to 65 dB would likely be fully contained within the Combat Center boundary.

demand that its government spend what is needed to defend the country – not a penny more.”

- Robert Gates, United States Secretary of Defense
  - “Given America’s difficult economic circumstances and parlous fiscal condition, military spending on things large and small can and should expect closer, harsher scrutiny. The gusher has been turned off, and will stay off for a good period of time.” (CNN, May 9, 2010)
  - “The department must start setting priorities, making real trade-offs and separating appetites from real requirements.” (Quoted in Huffington Post, August 9, 2010)
  - “We are not exempt from scrutiny and being asked to figure out what we are doing with less dollars.” (Quoted in MSNBC.com, January 6, 2011.)
  - “The spigot of defense funding opened by 9/11 is closing.”
  - “It is important to remember that every defense dollar spent to over-ensure against a remote or diminishing risk — or in effect to run up the score in a capability where the United States is already dominant — is a dollar not available to take care of our people, reset the force, win the wars we are in and improve capabilities in areas where we are underinvested and potentially vulnerable.” (As quoted in Associated Press article, April 6, 2009).

NEPA-1

These quotations demonstrate that well-informed commentators, military experts, and the Secretary of Defense himself believe it is time that the desires of the Army, Air Force, Marines, and Navy yield to the economic realities facing the United States. Only those programs, weapon systems, force structures, and facilities projects with an established, well-documented need should be funded. All others must either be revamped to better address an actual military deficiency or be abandoned. Ironically, it is the nation’s unwillingness or inability to curb defense spending — which has *doubled* since September 11, 2001 — that has made the United States so debt-ridden and vulnerable.

With respect to the proposed base expansion at Twenty-Nine Palms, the Project documents, including the Draft EIS, are remarkable in that they fail to explain why the current facilities, however small when compared to what the Marines want, are inadequate to meet the basic training needs of this branch of the military. Nowhere does the Marine Corp identify or describe any mission failure, large or small, that resulted from an inability to train an entire MEB

NEPA-2

Response to Comment N-18850 (Page 4 of 18):

NOI-1 Continued:

Airspace flight operations are assessed using the CNELmr metric consistent with Navy RAICUZ Instructions. This metric accounts for the sporadic nature of airspace activity as well as the “startle” effect caused by low-altitude high-speed flights (see Section 3.9.1). The Maximum Sound Level (Lmax) metric was not specifically designed to measure impulsive sounds and although Lmax provides supplemental noise exposure information, the correct noise metric for assessment of land use compatibility is CNEL (and its derivatives). In addition to the aforementioned high-altitude refueling activity, modeled operations included low-altitude high-speed flight operations characteristic of existing and proposed flight activity at the Combat Center (see Appendix H).

BIO-1:

Analysis of noise impacts to wildlife in the Draft EIS were based on the best available information. As noted in your comment, noise modeling conducted for the proposed project was focused on impacts to humans. The noise contours developed through the noise modeling effort were considered in the analysis of impacts to biological resources, and the noise metrics from those contours were considered important even though they are weighted toward frequencies important to humans. However, because peak sound levels (and the frequency of occurrence of those sound levels) are of greater concern in analysis of impacts to wildlife than the averaged metrics used in analysis of noise impacts to humans, the biological resources analysis focused more on the locations of ordnance explosion (represented by WDZs and SDZs) and paths of task force travel.

Comment ID: N-18850 (Page 5 of 18)

**GATZKE DILLON & BALLANCE LLP**  
 Naval Facilities Engineering Command Southwest  
 ATTN: 29 Palms EIS Project Manager  
 May 11, 2011  
 Page 5

simultaneously at the same site. In fact, in both Iraq and Afghanistan, the expeditionary portion of the Marine's mission was carried out with great success.<sup>1</sup> It has been the long-term occupation of these countries, and the forced, constant exposure to IEDs and similar low-tech weapons, that has caused the majority of casualties. So while the Marines certainly *desire* a larger base and could probably make productive use of the extra space, there is no evidence that they *need* more land or that their combat readiness will suffer markedly without it.

NEPA-2

The Draft EIS and other documents also fail to mention how much the proposed Project will cost. While the land may be transferred from the Bureau of Land Management to the Department of the Navy for next to nothing, and while the ongoing costs of maintaining the site may not be prohibitive, the expense of conducting the full-MEB training twice a year could be huge, running to the tens of millions of dollars per annum. Again, no one can be sure how expensive this will be, because the Marines did not bother to calculate the cost (or if they did calculate it, they did not feel compelled to disclose the figures.) This is precisely the kind of budgetary arrogance that typifies military spending requests. Without accurate estimates regarding the cost of the proposed project, there is no means to weigh its purported benefits against its fiscal, environmental, and socio-economic impacts.

NEPA-3

**II. THE DRAFT EIS IS INADEQUATE**

**A. Failure to Provide Basic, Necessary Studies**

Before identifying the specific defects of the EIS on a topic-by-topic basis, it is important first to examine a systemic flaw that plagues the entire EIS – the failure to provide the technical studies that purportedly support the document's impact analyses.

GEN-1

Data set forth in the EIS indicate that the proposed base expansion and the training activities contemplated on the newly-acquired land would adversely affect air quality, ambient sound/noise levels, biological resources, recreational activities, cultural resources, and socio-economic conditions. Other data from the EIS suggests that the project could also result in adverse impacts on hazardous materials, airspace management, water supply, water quality, and greenhouse gas emissions. As to each of these impact categories, the EIS concludes that the project's potential effects are either (a) not significant, or (b) significant and unavoidable. However, in most cases, the EIS fails to include the technical studies necessary to support such conclusions.

<sup>1</sup> The Draft EIS admits this fact on page 1-23, stating, "Marine Corps successes in the first Gulf War in 1991, in leading the introduction of U.S. forces into Afghanistan in 2001, and again in Operation Iraqi Freedom in 2003, have validated the Marine Corps' doctrinal training philosophy of live-fire combined arms MAGTF integration through CAX."

Response to Comment N-18850 (Page 5 of 18):

**BIO-1 Continued:**

Discussion is included throughout the EIR noting the proximity of known populations to these WDZs, SDZs, and task force routes. In addition to this discussion throughout the text, potential noise effects are discussed for Nelson's bighorn sheep (page 4.10-14 and others) and the desert tortoise (page 4.10-11).

**BIO-2:**

Section D, Paragraphs 1-3: The Draft EIS contains the best available information on the occurrence and -distribution of special status and other status animal and plant species in the west study area. The BLM is a cooperating agency in the preparation of the EIS, and was unable to provide any wildlife or plant inventory information. As a result, the detailed surveys conducted for the EIS, which include surveys for: 1) tortoise abundance and density; 2) abundance of the Mojave fringe-toed lizard, burrowing owl, Mojave ground squirrel, and chuckwalla; 3) distribution and abundance of all sensitive plant species; 4) occurrence of special status aquatic invertebrate species; represent the best available information.

Section D, Paragraph 4: The Marine Corps is committed to protection of the public and the environment. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including expended ordnance) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

Comment ID: N-18850 (Page 6 of 18)

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 6

For example, the EIS fails to provide a water supply study, a water quality study, or an inventory of potential greenhouse gas sources and emissions. The EIS *does* provide a technical appendix for noise, but it is not a study *per se* of the project's potential impacts on the existing ambient environment. Instead, it is merely a primer on noise metrics – very helpful in terms of understanding noise measurements, but not helpful at all in terms of determining the actual noise impacts of the project.

The Biological Resource appendix is likewise deficient. It does not describe existing biological conditions on the affected site(s) or specifically identify where they exist. Nor does it explain how and to what extent biological resources will be affected by the project. Rather, the Biological Resource appendix simply describes the types of disturbances that currently occur on the Combat Center and in the proposed expansion areas, and then draws some conclusions regarding the project's potential impacts on the federally-listed desert tortoise. No other species is discussed. So this Biological Resource appendix cannot serve as the technical basis for the impact analysis set forth in the biology section of EIS. Even if the desert tortoise discussion was adequate (which it is not, see below), the absence of any assessment of project impacts on desert birds, mammals, other reptiles, sensitive plants, and wildlife movement, renders the document incomplete and defective. The EIS also refers to the 2007 Basewide Biological Opinion prepared by the USFWS (the 2007 BO), and contends that the conservation measures from this BO will effectively mitigate Project impacts on desert tortoise. As with other critical documents, however, the 2007 BO is not included in the EIS as an appendix, so there is no way for the public to review its contents or test the assertions made in the EIS.

The Cultural Resource appendix is also of little value. It is merely a compendium of the various known artifacts and historical sites that exist in the areas being proposed for annexation to the base. Nowhere does the appendix actually evaluate the proposed Project's potential to damage or destroy these artifacts and/or historical sites. Therefore, it, too, is wholly inadequate and may not serve as the technical basis for the EIS's analysis of Project impacts on cultural resources.

Finally, as indicated above, the EIS provides no data whatsoever as to the cost of the proposed Project, including costs associated with the MEB training operations to be conducted on the newly-acquired land.

GEN-1

NEPA-4

Response to Comment N-18850 (Page 6 of 18):

**BIO-2 Continued:**

Section D, Paragraphs 5: The Draft EIS presents a discussion of impacts to all sensitive plant and wildlife species known to be present in the proposed action area. Impacts to the desert tortoise are given appropriate prominence in the impact analysis, as it is the only resident species listed under the Federal ESA.

Section D, Paragraphs 6-7: While it is true that survey methods have changed and continue to change, it is not true that these changes invalidate previous estimates of tortoise density or abundance. The surveys conducted in 1997/1999 (Woodman et al. 2001) represent the best available information for tortoise density on the Combat Center. Tortoise surveys are currently being conducted at the Combat Center as directed under the Integrated Natural Resources Management Plan and the Basewide Biological Opinion; however, the results of these surveys will not be available until 2012 and thus could not be included in the EIS. Surveys conducted for the study areas (Karl 2010) used both the accepted USFWS protocol and the TRED model survey. Calculations of abundance and density for were performed for both methods for the preferred alternative (Alternative 6) as part of the Section 7 consultation process with USFWS. The values generated by these two methods were similar, with the TRED model survey providing a smaller confidence interval and greater precision than the USFWS. Therefore, the TRED model survey was presented in the EIS as the most accurate and detailed model. The conclusion drawn in your comment regarding the comparison of tortoise densities on the Combat Center and the west study area (Section D, paragraph 7) is inaccurate.

May 11, 2011  
Page 7

**B. The EIS Fails to Analyze USMC Potential to Deplete Aquifers in Western Study Area**

On page 3.13-19, the EIS makes a startling disclosure: The Combat Center is running out of water and has no current means to augment its supply.<sup>2</sup> Specifically, the Combat Center obtains all of its water – potable and non-potable – through groundwater pumping. However, the aquifer that provides most of this water, Surprise Spring, is becoming dangerously depleted. In fact, the Marine’s have so overdrafted the aquifer that groundwater levels have dropped by as much as 190 feet. (EIS, 3.13-19) Worse, Surprise Spring is an ancient aquifer that does not recharge readily, which means that it “is not a renewable resource.” (EIS, 3.13-19) In short, the Combat Center’s primary source of water is rapidly disappearing and the Marines desperately need to find another one.

The Western Study Area (“WSA”), by contrast, overlies a different groundwater subbasin – one with a substantial supply of water. (EIS, 3.13-20; Table 3.13-5) It would appear, then, that the Marine Corps, apart from wanting the WSA for military training operations, may also be looking to acquire access to the groundwater resources beneath it. Although the groundwater from the Johnson Valley and Means Valley aquifers is high in Total Dissolved Solids (TDS), it can either be treated for potable uses, or “blended” with higher-quality water for a variety of potable and non-potable uses. The EIS never acknowledges that the Marines plan to use WSA groundwater to supplement existing supplies. Indeed, the EIS does not even discuss this very plausible scenario, and for this reason alone is defective. Nevertheless, the EIS does mention that the Marines are “evaluating plans to ‘blend’ groundwater from the Surprise Spring subbasin with those [sic] from another aquifer(s).” (EIS, 3.13-19) These blending scenarios were apparently modeled by the USGS in 2008. However, the details of this modeling effort are not provided.

The water resource data provided in the EIS, while cryptic, suggest strongly that the Marine Corps, once it secures possession of the WSA, will begin pumping groundwater from the Johnson Valley and Means Valley aquifers to blend with water derived from Surprise Spring. The EIS, however, fails to assess whether and to what extent this effort to temporarily address the Combat Center’s water shortage will deplete the aquifers in Johnson Valley and Means

<sup>2</sup> The EIS attempts to downplay this problem by claiming that conservation efforts at the Combat Center have reduced water consumption by 26% over the last decade. However, despite these reductions in consumption, the Combat Center still overdrafts the Surprise Spring aquifer by 2,900 acre feet (AF) per year, and overdrafts the Twentynine Palms Valley aquifer by 1,040 AF per year. (Table 3.13-5)  
<sup>3</sup> The Combat Center also draws groundwater from the Twentynine Palms Valley subbasin, which is also depleted and functions as a recharge deficit. (Table 3.13-5)

NEPA-5

Response to Comment N-18850 (Page 7 of 18):

**BIO-2 Continued:**

Information from one survey cannot be used to identify a trend – the USFWS requires more than 10 years of surveys across their monitoring strata to even begin to identify population trends (USFWS 2010). Further, mountainous areas not suitable for desert tortoises compose a much larger portion of the Combat Center than in the west study area, thus leading to large areas of low desert tortoise density on the Combat Center. Taking into account the different density categories used in the Combat Center desert tortoise density surveys as compared to the west study area surveys, as well as the topography, the densities observed on the Combat Center after decades of military training are roughly comparable to those observed in the west study area – large areas of low densities with pockets of moderate density where habitat is most suitable and disturbance is lower.

Section D, Paragraph 8: The estimates of take presented in the Draft EIS include a large range only when including potential impacts on the existing Combat Center. Estimates of take in the lands to be acquired have much less spread due to survey data with a greater number of density “categories”. As noted in your comment, the Marine Corps consulted with the USFWS under Section 7 of the Endangered Species Act to formally identify an estimate of “take” under the preferred alternative, as well as appropriate conservation measures to minimize or offset potential impacts to tortoises and tortoise habitat. The outcome of this consultation is detailed in the Biological Opinion (see Appendix O of the Final EIS). The Draft EIS does not state that the project would have “no significant effects” on biological resources, as your comment suggests.

Comment ID: N-18850 (Page 8 of 18)

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 8

Valley. In fact, the EIS does not even disclose how much water the proposed Project will require. As a result, the EIS is deficient as a matter of law.

In short, the Combat Center's undisclosed desire to acquire the water beneath the WSA reminds one of the following dialogue from the movie *Chinatown*:

Noah Cross: "You see Mr. Gittes. Either you bring the water to L.A. – or your bring L.A. to the water."

Jake Gittes: "How do you do that?"

Noah Cross: "—just incorporate the Valley into the city so the water goes to L.A. after all. It's very simple."

— *Chinatown* (Screenplay by Robert Townes)

**C. The EIS Noise Analysis is Inadequate**

As indicated above, the EIS does not actually provide a Noise Study as a technical appendix. Instead, Appendix H is simply a primer on noise modeling and does not provide any data on the existing sound environment or the Project's impact on that environment. Likewise, the EIS itself fails to describe ambient sound levels in and adjacent to the three study areas – i.e., the WSA, the Eastern Study Area ("ESA"), or the Southern Study Area ("SSA"). Without existing sound level data, there is no way to measure the extent to which the Project will alter the current sound environment. Nor is there any way to determine whether the Project's net impact on noise is significant.

Even the baseline used for "existing" noise conditions at the *Combat Center* defies logic. Rather than measure *current* aircraft noise (i.e., from 2008 or 2009), the EIS uses a 2003 noise study – WR 02-13 – that is based on airfield operations that took place in 2001. Not only is such information 10 years old, it fails to account for the significant increase in flight operations that has occurred since the "War on Terror" began. It appears that the Marines, in an effort to trim costs and/or save time, simply pulled an old noise study off the shelf rather than perform a new one. NEPA does not permit this kind of sloppy work, especially since there is nothing preventing the Marines from conducting a fully updated noise study at the *Combat Center*. There is also no explanation for altering the noise model to reflect "annual average daily operations" instead of "annual average busy day operations." (See, EIS, 3.9-4) This change results in an underreporting of potential noise effects.

NEPA-5

NOI-1

Response to Comment N-18850 (Page 8 of 18):

**BIO-2 Continued:**

In several locations (e.g., Table ES-2, page 4.10-11, Table 4.10-14), it is clearly stated that impacts to the desert tortoise would be significant. Finally, a suite of mitigation measures being developed with USFWS, such as a translocation plan, designation of new Special Use Areas, etc. are described in more detail in the Final EIS and would be expected to reduce the take of tortoises, though not to a level of less than significant.

**REC-1:**

Section 4.2.1, *Approach to Analysis for Recreation*, acknowledges incomplete or unavailable information, therefore, in accordance with CEQ regulations the Marine Corps conducted interviews with BLM and other key recreation organizations and stakeholders to obtain reliable data and assumptions on annual visitor-days of use. The Marine Corps worked closely with BLM to develop reasonable assumptions for estimated loss of visitor-days of use from Johnson Valley as described under each action alternative. These assumptions were approved by BLM staff knowledgeable about and responsible for recreation management of the Johnson Valley OHV Area.

As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a Displaced OHV Recreation Study (DORS) to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS.

Comment ID: N-18850 (Page 9 of 18)

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 9

The EIS noise analysis also uses the wrong metric for determining the significance of project-related noise events. For example, the MEB training contemplated by the proposed Project entails low-altitude strafing and bombing runs by fixed and non-fixed wing aircraft.<sup>4</sup> Flight operations such as these create high-intensity noise of very short duration, resulting in substantial annoyance to any person living or working nearby. Rather than assess this impact using the Lmax noise metric, which is specifically designed to measure impulsive sound, the EIS uses the Community Noise Equivalent Level (CNEL) metric, which averages noise levels over a certain period of time, usually 24 hours. Obviously, this metric will not fully capture the noise (and annoyance) that results from very intense but sporadic noise events caused by military jet flyovers. To make matters worse, it does not appear that the EIS measured aircraft noise while in combat mode – i.e., flying fast and at low altitude.<sup>5</sup> Instead, the EIS aircraft noise model was based on two aerial refueling tracks – one at 19,000 feet AGL and one at 22,000 AGL. (EIS, 3.9-6)<sup>6</sup> Again, this kind of modeling decision results in an underreporting of aircraft noise impacts.

We would point out that using the CNEL metric *does* make sense when determining noise impacts near the Combat Center airports, where the number of flight operations is high enough to warrant time-averaging. It just doesn't make sense when determining noise impacts in those areas affected by combat training flights.

In addition, the EIS fails to analyze adequately the effect of project-related noise on wildlife. The EIS's discussion on this topic is remarkably brief and general, even though military operations such as artillery firing, ordnance explosions, combat flights, and tank and troop movements generate the kind of high-intensity noise that frightens wildlife and may disrupt their normal behaviors. For example, according to Figure 3.1-8 of the EIS, the Noise Study included only two (2) "points of interest" located within the WSA. This demonstrates that the Noise Study was focused exclusively on impacts to humans, ignoring entirely the Project's potentially devastating noise effects on animals in the desert.<sup>7</sup> Birds, reptiles, ungulates (and other mammals) all are highly-sensitive to sound changes. Given the number of wildlife species in the proposed acquisitions areas (especially the WSA) – including the federally-threatened desert tortoise – the EIS should provide a more thorough and searching analysis of the Project's potential to cause noise-related impacts on biological resources.

<sup>4</sup> According to the EIS, combat training flights will be conducted at altitudes as low as 300 feet above ground level (AGL). (EIS, 3.7-9)

<sup>5</sup> The EIS admits that, with the Project, "[o]verflights would increase within existing and proposed airspace and could operate at lower altitudes than currently allowed in specified areas. (EIS, 4.1-5). However, the EIS does not measure the noise impacts of such overflights.

<sup>6</sup> Unlike refueling operations, bombing and strafing runs occur at very low altitudes.

<sup>7</sup> See, EIS at 3.9-1 [Describing noise metrics as measuring sound in relation to human sensitivities.]

Response to Comment N-18850 (Page 9 of 18):

REC-1 Continued:

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

AQ-1:

Comment noted. Table 5-3 in the FEIS has been revised to include the 2009 GHG emissions for the Combat Center. Climate change is a global effect or impact. As stated on DEIS page 5-33, currently, there are no formally adopted or published NEPA thresholds of significance for GHG emissions. The Marine Corps chooses to use the U.S. GHG inventory as an indicator of the baseline for global GHG emissions on which to compare proposed GHG emissions. This comparison is deemed adequate to determine the significance of proposed GHG emissions for NEPA purposes. The fact that the Marine Corps utilized one of the approved methods for demonstrating conformity that resulted in a commitment from the MDAQMD to account for criteria emissions in their next attainment planning budget bears no legal nexus to what standards should be used to determine the significance of project GHG emissions.

**D. The EIS's Biological Impacts Analysis is Inadequate**

Available data from the BLM and other sources show that the WSA is home to a wide array of sensitive plant and wildlife species, including the desert tortoises. Yet the EIS does not indicate where these species are located within the WSA; nor does it overlay the proposed military training exercises onto species maps to determine where potential conflicts might arise. Without such overlays, it is impossible for the public (and the Marine Corps) to know with any kind of precision whether the proposed MEB training activities will kill, injure, disrupt, or displace sensitive plants and animals. This is not a speculative concern. The Marine Corps, during the planned MEB exercises, intends to activate 15,000 to 20,000 troops, backed by tanks and other vehicles, and engage in live-fire combat training. This will involve hundreds of thousands of rounds of small arms ammunition, artillery rounds, tank rounds, and missiles delivered from aircraft. The exercise areas will effectively be transformed into highly-violent war zones. In such a situation, there is no question that existing wildlife will be killed or injured or, at the very least, displaced. However, the EIS provides very little information on this subject.

Perhaps the Marine Corps is assuming the Section 7 Biological Opinion will cover these issues. If so, the assumption is unfounded. First, the Biological Opinion, when completed, will only address potential impacts on federally-listed species – i.e., the desert tortoise. No other species will be covered. Second, the Biological Opinion is required under the Endangered Species Act; it does not satisfy the Marine Corps' separate and independent obligation under NEPA to disclose impacts to biological resources.

Part of the problem is that the Marines, in preparing the EIS, conducted very few wildlife studies of the 180,000-acre WSA. According to Table 3.10-1 of the EIS, the Marines performed the following biological resource surveys in the WSA: (1) one survey for special status plants in 2008, (2) one survey for reptiles and burrowing owl in 2008, and (3) one survey for Mojave ground squirrel in 2008. No bird surveys (other than for burrowing owl) were conducted. No mammal surveys (other than for Mojave ground squirrel) were conducted. There was no attempt to identify and locate bat roosts. Insects were not surveyed at all. As a result, the EIS does not

BIO-2

Response to Comment N-18850 (Page 10 of 18):

**SOC-1:**

The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

**WAT-1:**

Section 3.13.1 of the EIS states that all naturally occurring, surface water features are ephemeral and contain water only during and after infrequent rain events. The EIS also states that no information is available on existing water quality conditions associated with intermittent wet areas (washes and playas) at the Combat Center. It is likely that water quality for intermittent flows is influenced by the amounts of suspended sediment and/or dissolved salts, which are expected to vary for different substrate types, such as bedrock, alluvial fans, and playa surfaces.

Comment ID: N-18850 (Page 11 of 18)

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 11

provide a complete or reliable inventory of the various plant and wildlife species that exist in the WSA, even though the BLM possesses much of this information.<sup>8</sup>

The EIS also fails to discuss the potential for lead and other chemicals from expended ordnance to enter the water supply used by wildlife or to accumulate in the plant materials eaten by wildlife.

Another shortcoming of the EIS biological impacts analysis is that it tends to focus myopically on the desert tortoise and pays scant attention to the other sensitive species in the affected areas. This is not to say that impacts on the tortoise are unimportant. On the contrary, they are critically important, and this Project has the potential to “take” hundreds of tortoises annually, possibly frustrating the fragile state of the species recovery. However, the tortoise is *not* an umbrella species for all or even most of the other wildlife in the study areas. Therefore, the EIS must give a full accounting of potential impacts on all sensitive birds, mammals (including bats), reptiles, amphibians, and insects that use or reside in these parts of the Mojave Desert.

With respect to Project impacts on the desert tortoise, the EIS has major baseline data problems. In recent years, tortoise experts and statisticians have realized that survey methods used in the 1980s and 1990s, including the manner in which transects were run, produced unreliable results. In fact, data from surveys conducted prior to 2005 are largely unusable; and they certainly cannot be mixed with or compared to data from surveys conducted from 2005 onward. However, this is exactly the error that the EIS makes in its tortoise analysis. For tortoise densities on the *Combat Center*, the EIS relies on strip transect surveys conducted in 1997 and 1999. (EIS, 3.10-24) For tortoise densities in the *WSA*, the EIS relies on tortoise sign surveys conducted in 2009. (EIS, 3.10-41) The EIS then tries to compare these two data sets, which any tortoise expert knows is a dubious exercise.

About the only meaningful conclusion to be drawn from the tortoise data derived from surveys of the *Combat Center* is that base operations have resulted in significant reductions in

<sup>8</sup> Although Figure 3.10-5 of the EIS purports to depict the vegetation communities of the West, East, and South studies areas, the vegetative mapping for the WSA so coarse as to be worthless. The EIS itself admits that “[u]nlike the *Combat Center* and the other two acquisition study areas, plant communities have not been mapped to a high level of detail within the entirety of the west study area.” (EIS, 3.10-34) In fact, only 57% of the WSA has been subjected to high-quality mapping. With respect to where in the WSA certain wildlife species reside, Table 3.10-7 provides only the most general information. For example, when discussing the desert tortoise, the table indicates that the species “[o]ccurs in suitable habitat throughout the west study area.” As to the Mojave fringe-toad lizard, the table states that this species “[o]ccurs in the southern portion of the west study area.” For purposes of determining whether the military activities contemplated under the proposed Project will affect these species and their habitat, such vague statements have almost no value.

BIO-2

Response to Comment N-18850 (Page 11 of 18):

WAT-1 Continued:

The impacts to ephemeral streams or intermittent washes are discussed on page 4.13-5 in section 4.13.2.1. The EIS mentions that exercises avoid playas to the extent possible. Specifically, “*Combat Center Order 5090.1D (MAGTF Training Command 2006)* provides general guidance for avoiding impacts to natural resources, as well as specific guidance for avoiding disturbance of playas or other sensitive areas. The existing INRMP and compliance under *Combat Center Order 5090.1D* applies to existing and continued use in the *Combat Center* and would be expanded to cover the acquisition areas.”

AQ-2:

The use of the 2002 baseline data provides for a more conservative analysis than using the higher 2009 baseline, thus ultimately providing a more accurate calculation of change in emissions since the higher 2009 levels would not be representative of emissions levels in future years.

Comment ID: N-18850 (Page 12 of 18)

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 12

tortoise density, at least compared to similar habitat areas adjacent to the base – e.g., those in WSA. In light of this, the proposed Project, if implemented in the WSA, may cause similar tortoise declines in the expansion area. The EIS does not really tackle this issue. Instead, it suggests that there will be no net change in threats to the tortoise, since the Project would displace existing OHV activities. However, this is an oversimplified and inaccurate analysis. There is no data indicating that OHV use in the WSA (Johnson Valley) has resulted in perceptible declines in tortoise populations. In fact, tortoise densities in Johnson Valley have been and remain significantly higher than tortoise densities on the Combat Center (allowing, of course, for discrepancies in the survey methods and data).

Finally, on the matter of the Project’s anticipated “take” of tortoises, the EIS states that under Alternative 6 (Preferred Alternative), the Project would result in the take of between \_\_\_ and \_\_\_ tortoises. This is a huge range. Although the Biological Opinion for this Project has not yet been released, it would be unusual for the USFWS to issue an Incidental Take Statement (“ITS”) where the “take” range is so wide. The Marines must conduct a more thorough study of potential “take” to predict with greater precision that actual number of tortoise that will be lost as a result of the Project. Without such a thorough study, the EIS is inadequate. Further, without a more exact range of potential take, the USFWS will not be able to issue a Biological Opinion and ITS that comply with Section 7 of the ESA.

**E. The EIS Provides an Inadequate Analysis of Project Impacts on Recreation**

The EIS concludes correctly that the proposed Project, if implemented in the WSA, will have a significant effect on outdoor recreation. However, on the issue of recreation impacts, the EIS makes certain erroneous assumptions that result in a skewed assessment of project alternatives. Specifically, the EIS assumes that the number of “dispersed use” visitor days lost under Alternative 6 (the “Preferred Project”) will be the same as the number lost under Alternatives 4 and 5. (EIS, Table 4.2-4) This is almost certainly incorrect, given that under Alternative 6 only 44% of the Johnson Valley OHV area would be available for part-time public use (through the proposed Restricted Public Access program), whereas under Alternatives 4 and 5 the entire Johnson Valley OHV area (100%) would be available for part-time public use. The difference is not inconsequential, as it amounts to more than 106,000 acres of land. Given that “dispersed use” means exactly that – *dispersed use* – it is irrational to assume that the 82,802 acres available for public use under Alternative 6 will accommodate the same number of visitors as the 189,470 acres available for public use under Alternatives 4 and 5. The more reasonable assumption is that a significant percentage of potential visitors will bypass Johnson Valley rather than be crowded into the small area provided under the RPAA for Alternative 6.

It is critical that this analytical error be corrected, because it infects the EIS’s assessment of the project’s impacts on (1) recreational use displacement, and (2) socio-economic conditions.

BIO-2

REC-1

Response to Comment N-18850 (Page 12 of 18):

**AQ-3:**

The method utilized by the Marine Corps to demonstrate conformity in this case is specifically prescribed by MDAQMD Rule 2002(H)(1)(e). The SIP revision method for demonstrating conformity was not pre-decisional because, at the time that the conformity analysis was submitted to the MDAQMD, no irreversible or irretrievable commitments of resources had been dedicated to any of the project alternatives. Moreover, the similarity of the air impacts associated with each alternative and the flexibility of the consultation process ensures that no particular institutional bias supported the preferred alternative or any other alternative. In short, both the Marine Corps and the State of California were free to disapprove the preferred alternative and to consider air impacts associated with other alternatives. That flexibility remains to this day.

The following discussion illustrates the 9th Circuit’s approach to timing of NEPA analysis: “As provided in the regulations promulgated to implement NEPA, ‘agencies shall integrate the NEPA process with other planning *at the earliest possible time* to insure that planning and decisions reflect environmental values, to avoid delays later in the process, and to head off potential conflicts.’ 40 C.F.R. § 1501.2 (emphasis added); *see also id.* § 1502.5 (‘An agency shall commence preparation of an [EIS] as close as possible to the time the agency is developing or is presented with a proposal....’).

Comment ID: N-18850 (Page 13 of 18)

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 13

This is easily explained. If fewer OHV users visit Johnson Valley under Alternative 6 than under Alternative 4 or 5, those users will likely travel to some other OHV venue, taking their dollars with them. The EIS, therefore, must evaluate this "displacement" scenario for impacts on natural resources at the "substitute" venue(s) and for the economic loss suffered by local businesses near Johnson Valley. Note also that the EIS's discussion of recreational displacement impacts generally is very poor, even though data included in the EIS indicate that the proposed Project will contribute to the 30-year trend of reducing the space available for OHV-related recreation. (See Figure 3.2-6) During that period, acreage available for OHV recreation decreased by 48%; the proposed Project would effectively close the Johnson Valley OHV area, removing another 180,000 acres from public recreational use. The loss of so much recreational land simply shunts more people and more vehicles onto the few open areas that remain, placing added stress on their human and environmental resources, and effectively ruining the "wilderness experience" of those seeking an escape from urban life. These secondary impacts of the Project are real and the EIS must analyze them in detail. Currently, however, it fails to do so.

The EIS also provides little assurance that the Marine Corps will not arbitrarily close the RPAA area contemplated under Alternatives 2, 4, 5, and 6. Nothing in the EIS or the Project generally indicates that this would not or could not happen. On the contrary, the EIS does not even describe the conditions under which such a closure would be allowed. Instead, the decision to close the RPAA appears to rest solely with the Marine Corps, with no right to appeal. In light of this fact, the EIS should (but does not) disclose that the Project's recreation impacts under Alternatives 2, 4, 5, and 6 may ultimately be identical to those of Alternative 1.

**F. The EIS Provides an Inadequate Analysis of Project-Related Greenhouse Gas Emissions**

The EIS includes a greenhouse gas (GHG) discussion (as part of the Cumulative Impacts analysis), but does not present a meaningful assessment of the project's GHG impacts. First, the EIS fails to provide a GHG inventory for the Combat Center, so there is no means to determine the base's existing carbon footprint or to calculate how much that footprint will grow once the Project is implemented. This kind of "project-to-ground" analysis is central to every NEPA analysis. Second, the EIS, for purposes of determining impact significance, compares the Project's GHG emissions against the total GHG inventory of the entire United States. Not surprisingly, the Project's contribution to the national total is very small, amounting to .00014%. Based on this number, the EIS concludes that the Project will have an insignificant impact on global climate change. (EIS, 5-33) Such an analysis is meaningless and unhelpful. No conceivable project – no matter how much GHG it might generate – will contribute more than a fraction of a percent to the national inventory of GHG emissions. Using the EIS's logic, then, no project would ever make a significant contribution to global climate change. For this reason, the significance criterion used in the EIS is invalid.

REC-1

AQ-1

Response to Comment N-18850 (Page 13 of 18):

AQ-3 Continued:

Furthermore, (the Ninth Circuit) has interpreted these regulations as requiring agencies to prepare NEPA documents, such as an EA or an EIS, 'before any irreversible and irretrievable commitment of resources.' *Conner v. Burford*, 848 F.2d 1441, 1446 (9th Cir. 1988); *see also EDF v. Andrus*, 596 F.2d 848, 852 (9th Cir. 1979)." *Metcalf v. Daley*, 214 F.3d 1135, 1143 (9th Cir. 2001).

In this case, only the emissions associated with the approved alternative were submitted to the air quality experts for their review and approval. However, any of the six alternatives could be subjected to the same or similar analysis if it were chosen, even still to this day. Only one alternative was submitted in order to maintain administrative efficiency and avoid unnecessary work requests to the State agencies. No irreversible or irretrievable commitments of resources were (or are) dedicated to the preferred alternative when the conformity analyses were submitted to the State and Federal air quality experts.

Neither MDAQMD Rule 2002 nor Part 93 of Title 40 of the CFR requires the EPA to formally approve the conformity analysis for this project. The Marine Corps provided EPA Region IX with its conformity analysis along with all other required recipients discussed in Rule 2002(E)&(F). This included publishing notice of the availability of the conformity analysis in locally published newspapers.

Comment ID: N-18850 (Page 14 of 18)

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 14

Regardless of whether the EPA or any other federal agency has established significance thresholds for GHG emissions, the Marine Corps can and must develop significance criteria that are meaningful for this EIS. Ironically, the proposed project is located in the one state in the Union that has developed standards for evaluating GHG emissions on a project-by-project basis. The Marines should take advantage of this and use California's standards for determining the significance of the Project's GHG emissions. In fact, given that the Marines have asked for – and received – permission from the Mojave Air Pollution Control District to be included in the District's portion of the California State Implementation Plan, GHG emissions from the Combat Center and the proposed Project should be assessed using California's standards.

AQ-1

**G. The EIS Provides a Skewed Assessment of the Project's Adverse Impacts on the Local Economy**

The EIS contends that the Project will add 70 personnel to the existing population at the Combat Center, and that these 70 individuals will generate, collectively, \$4.5 million in county-wide spending, thus off-setting the economic losses caused by shutting down the Johnson Valley OHV area. This claim is hard to square with the fact that, according to the EIS, Johnson Valley OHV area experiences approximately 300,000 visitor days per year. (See, EIS, Table 3.2-9)<sup>9</sup> For the EIS's claim to be valid, each visitor would have to spend less than \$15 per day. This contradicts Table 3.3-8 of the EIS, which indicates that the average person spends more than \$31.00 per visitor use day.

SOC-1

The \$4.5 million attributed to new base employee spending, while not inconsequential, cannot compete with the \$338.8 million (in 2003 dollars) generated by recreational visitation, including OHV-related recreation, in the Mojave Desert Region. (See EIS Table 3.3-7, citing Economic Benefits study conducted by California Department of Parks and Recreation.)

More important, however, is the fact that the Project will have a disproportionate and devastating economic impact on those communities closest to, and most dependent on, the Johnson Valley OHV area – e.g., Lucerne Valley. (See, Table 4.3-13)<sup>10</sup> The EIS speculates that

<sup>9</sup> We believe the 300,000 annual visitor use day figure used is low by a factor of at least two. The figure is comes from the BLM, which historically underreports visitor numbers. Further, as pointed out in the EIS, Johnson Valley has a number of entry and exit points, most of which are not monitored by BLM. As a result, many visitors are never counted and the durations of their visits are not determined.

<sup>10</sup> According to Table 4.3-13, the Project, under Alternative 6 (the Preferred Project), would reduce recreational and film spending in the local community by 24.6% and local tax revenues by 24.7%. Given the small profit margins of most small businesses, this kind of drop in revenues would be devastating.

Response to Comment N-18850 (Page 14 of 18):

**AQ-3 Continued:**

Section I, Last Paragraph: Although there have been informal suggestions that particulate matter (PM) could play a role in Upper Respiratory Tract Disease, there is no published literature that demonstrates a linkage. Therefore, inclusion of such a statement would be speculative. However, please note that text in the Final EIS has been revised to mention the potential for impacts to tortoises and other animals due to reduced plant productivity associated with dust deposition on leaf surfaces (see Wildlife, Desert Tortoise impact discussions). Note that the author of the studies on productivity and dust deposition noted that the summer rainstorms typical of the west Mojave ameliorate much of the dust impact (Sharifi 1999).

**AQ-4:**

Compliance with ambient air quality standards is determined by estimating the impacts of proposed emissions to “public lands” and not within the “facility” that contains these emissions. In the case of the DEIS PM<sub>10</sub> dispersion modeling analyses, the “facility” is defined as any location within the Combat Center boundaries proposed by each project alternative. Any location outside of these boundaries is considered to be “public lands”. The focus of the dispersion modeling analysis is to identify the maximum project PM<sub>10</sub> impact on public lands, which would occur immediately outside of these boundaries. This is the case, as due to the nature of atmospheric dispersion, “PM<sub>10</sub> disperses quickly over distance”, as acknowledged by the commenter. Therefore, the DEIS and project PM<sub>10</sub> conformity determination modeled PM<sub>10</sub> impacts appropriately.

Comment ID: N-18850 (Page 15 of 18)

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 15

these businesses will be able to make up the difference by serving non-OHV visitors on their way to Big Bear Lake. (EIS, 4.3-9) However, there is no evidence to support this contention. The EIS also argues that because Lucerne Valley has historically experienced a 20% turnover rate in its businesses, the community is accustomed to economic fluctuations and will adjust to the new reality occasioned by the project. (EIS, 4.3-9) Based on this rather flip analysis, the EIS concludes that the Project will not have a significant impact on Lucerne Valley or other local economies. Such a conclusion reflects both insensitivity to and ignorance of the economic realities facing the business owners (and employees) of Lucerne Valley and the other towns that rely on OHV-related revenues.

**H. The EIS Provides an Inadequate Analysis of the Project's Impacts on Water Quality**

As shown in Figure 3.13-1 of the EIS, the WSA is laced with washes, rivulets, and dry lake beds that receive and/or convey water during rain events. In addition, much of the WSA overlies groundwater aquifers. These water sources are critical to the vegetation and wildlife in the WSA. The EIS, however, does not describe the existing water quality conditions at these water sources. Nor does it provide anything more than a superficial analysis of the proposed Project's potential to contaminate these water sources with munitions constituents (MC) and hydrocarbons from fuel discharges.

**L. The EIS Provides an Inadequate Analysis of the Project's Impacts on Air Quality**

**1. Baseline Emissions.**

The method used to perform the Air Quality impacts analysis is highly-suspect. For example, when establishing baseline pollutant levels (including those for PM<sub>10</sub>), the EIS uses emissions levels from the Combat Center as measured in 2002, even though emissions data from 2009 are available. Of course, the 2009 emissions are substantially higher. The EIS discounts these, however, claiming that "the high levels of existing training exercises at the Combat Center would revert back to pre-war levels (before 2003)." (EIS, 4.8-2) There is no evidence offered in support of this assumption; and for purposes of NEPA, baseline conditions are those which exist at the time the EIS is being prepared, not those that existed at some arbitrary point in the past.

**2. Ozone.**

The EIS acknowledges that the proposed Project will generate ozone (O<sub>3</sub>) in quantities that exceed National Ambient Air Quality Standards (NAAQS), thereby requiring that the Marines subject the Project to a "conformity analysis." (EIS, 4.8-6) In this case, however,

SOC-1

WAT-1

AQ-2

AQ-3

Response to Comment N-18850 (Page 15 of 18):

**NEPA-6:**

The proposed action and alternatives, including the No-Action Alternative are described in Chapter 2 of the EIS. Although the No-Action Alternative does not meet the purpose of and need for the proposed action, it has been carried forward for analysis in the EIS as described in Chapter 4 under each resource area. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**NEPA-7:**

Section 2.8 of the EIS outlines several Special Conservation Measures that would be implemented as part of the proposed action to reduce impacts to resources areas. In addition, the EIS identifies mitigation measures that would be implemented under certain alternatives for specific resources areas to further reduce impacts.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

**NEPA-8:**

In accordance with NEPA, the EIS discloses and analyzes the environmental consequences of the proposed action and alternatives under each resource area, as described in Chapter 4 of the EIS.

Comment ID: N-18850 (Page 16 of 18)

Response to Comment N-18850 (Page 16 of 18):

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 16

the Marines did not perform a conformity analysis at all. Instead, they requested that the Mojave Desert Air Quality Management District (“MDAQMD”) and the California Air Resources Board (“CARB”) “include these emissions from Alternative 6 into the next O<sub>3</sub> SIP revision for the MDAB (MDAQMD 2010a and ARB 2011).” (*Ibid.*)<sup>11</sup> According to the EIS, this will ensure that Alternative 6 conforms to the SIP, thereby eliminating the “significance” of the Project’s ozone impacts.

There are two problems with this analysis. First, it was “pre-decisional” and therefore unlawful for the Marines to request that the MDAQMD and/or CARB include the ozone emissions from Alternative 6 (or any alternative) in the revised SIP. By making such a request, the Marines have signaled that they intend to adopt Alternative 6, regardless of the NEPA process. In other words, the current NEPA process is a sham and a charade. The die is already cast and the Marines will not be diverted from Alternative 6, no matter what the environmental analysis might show.

Second, any SIP revision – including the one requested by the Marines for this Project – must be approved by the U.S. EPA; and there is no evidence that this has occurred. Note, too, that EPA approval, especially with respect to local changes to SIPs, is never guaranteed. As the Imperial County Air Quality District recently discovered, EPA is more than willing to disapprove any portion of a SIP revision with which it disagrees. In light of these facts, it is incorrect to assume that the Project – i.e., Alternative 6 – conforms to the SIP for ozone.

3. Particulate Matter.

The EIS also acknowledges that the Project will generate more PM<sub>10</sub> than the NAAQS allow. (EIS, 4.8-6; 4.8-18) To address this impact, the EIS purports to conduct a conformity analysis pursuant to MDAQMD Rule 2202(H)(1)(d)(i). (EIS, 4.8-18) In this analysis, the EIS concludes that, under Project conditions, PM<sub>10</sub> concentrations at the boundary separating the WSA and the Combat Center would be 97 µg/m<sup>3</sup>. When these emission are added to background concentrations of 52 µg/m<sup>3</sup>, the cumulative total concentration of PM<sub>10</sub> is 149 µg/m<sup>3</sup>, just under the 24-hour PM<sub>10</sub> NAAQS of 150 µg/m<sup>3</sup>.

What makes this conclusion dubious, however, is that the Project’s PM<sub>10</sub> emissions, while measured at the WSA boundary, do not actually occur at that location or reach their highest concentration there. According to the EIS, emissions will be highest during the so-called “Final Exercise,” which will take place “in close proximity to the boundary of the Combat Center.” (EIS, 4.8-19) The EIS does not define “close proximity,” but it is safe to assume that it

<sup>11</sup> See also EIS, 4.8-18.

Page 17

means the exercise will not take place on the boundary itself, which is where the air quality model makes its measurements. Because PM<sub>10</sub> disperses quickly over distance, the actual emissions generated by the Final Exercise will not be fully captured if measured or modeled at the WSA/Combat Center boundary line.<sup>12</sup> As a result, the PM<sub>10</sub> concentrations described in the EIS are underreported. This, of course, directly affects the conformity determination, because if the Project's PM<sub>10</sub> emissions were measured/ modeled at the source – i.e., at the Final Exercise ground location – rather than at the WSA/Combat Center boundary, total PM<sub>10</sub> concentrations would surely exceed the NAAQS threshold of 150 µg/m<sup>3</sup>. Therefore, the EIS conclusion regarding the "insignificance" of the Project's PM<sub>10</sub> is in error.

AQ-4

**J. The EIS Provides an Inadequate Discussion of the No-Action Alternative**

The EIS fails to provide an adequate description of the No-Action Alternative; nor does it explain why the No-Action Alternative would frustrate the basic mission of the Marines. In fact, the EIS is largely dismissive of this alternative, even though NEPA *requires* that it be analyzed and considered. Worse, because the EIS does not provide a clear description of the No-Action Alternative and its effects, it is difficult to compare the other alternatives to it. Finally, the EIS should explore the possibility of improving MEB training within the confines of the No-Action Alternative. For reasons not explained in the document, this concept was not analyzed in the EIS. Note that this analysis must include a cost-benefit component.

NEPA-6

**K. The EIS Fails to Recommend Feasible Mitigation Measures to Offset Significant Impacts; EIS Findings of "Infeasibility" are Not Supported by Sufficient Evidence**

The EIS identifies a multitude of significant impacts that will result from the proposed Project. Only in the rarest of cases, however, does the EIS recommend mitigation measures to reduce or avoid those impacts. In all other instances (and most notably in the discussion of impacts to OHV recreation), the EIS simply concludes, without evidence or analysis, that the Marine Corps could not identify feasible mitigation measures and therefore does not intend to implement any. NEPA does not allow federal agencies, even the military, to sidestep their mitigation obligations so easily. For each significant impact of the proposed Project, the Marines must develop mitigation measures or demonstrate – *with evidence* – that such measures cannot be reasonable undertaken. The Draft EIS, as currently written, does not meet this standard.

NEPA-7

<sup>12</sup> The EIS itself admits that "PM<sub>10</sub> concentrations quickly decrease with distance from the Combat Center boundary." (EIS, 4.8-20)

Comment ID: N-18850 (Page 18 of 18)

Response to Comment N-18850 (Page 18 of 18):

**GATZKE DILLON & BALLANCE LLP**  
Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms EIS Project Manager  
May 11, 2011  
Page 18

With respect to the Project significant effects on OHV recreation, the EIS cannot credibly argue that no feasible mitigation measures exist to offset these impacts. On the contrary, mitigation for such impacts is not only feasible, it's easy: The Marines can simply provide money to BLM and/or the OHV Division of the California Department of Parks and Recreation ("DPR") to purchase land near Johnson Valley for use as an OHV recreation area. Not only is the western Mojave Desert dotted with private in-holdings that could be acquired for this purpose, the OHV Division of State Parks has an actual program for purchasing such properties and turning them into OHV parks. So the EIS is incorrect in stating that there is no feasible means to mitigate the Project's impacts on recreation.

NEPA-7

**L. The EIS Provides an Inadequate Description of the Project**

The EIS does not quantify the extent to which the proposed Project will increase military training operations when compared to existing conditions. That is, the EIS fails to calculate and disclose the net increase in flight operations, tank miles traveled, troop exercises, ordnance expended, etc. resulting from the proposed Project. For this reason, it is impossible to fully comprehend the Project's potential impacts on the environment.

NEPA-8

**CONCLUSION**

As discussed above, the proposed Project cannot be justified in terms of military necessity or cost. And the EIS prepared in support of the Project simply does not meet the minimum analytical standards established under NEPA and controlling case law. In light of these facts, EcoLogic hereby registers its opposition to the Project and request that the Marine Corps scale back substantially its desire to expand the base at Twenty-Nine Palms.

Thank you for the opportunity to comment on this Project and the Draft EIS. If you have any questions concerning the content of this letter, please contact me at the address or phone number listed above.

Very truly yours,

Re: Draft Environmental Impact Statement on 29-Palms Base expansion

Dear Sir:

As a property owner in Johnson Valley I am concerned with the impact of the 29-Palms Base Expansion and I feel there are significant areas of concern in the DEIS.

The DEIS estimates revenue lost due to reduction in OHV visits in the Lucerne Valley area, an historic agricultural settlement that is a close neighbor of the Homestead Valley; it also mentions the Town of Yucca Valley. They are described as "the nearest communities with any appreciable retail and traveler services presence that can support the purchasing needs of people visiting Johnson Valley." It is true that both have markets, fuel, restaurants and other services within a half-hour drive of the OHV area. But the DEIS is completely dismissing the presence of the commercial zone on Hwy 247 in Flamingo Heights that also enjoys a huge increase in business on the big weekends, and are even closer to the OHV area. These merchants and restaurants are very important to residents in the Homestead Valley. However, there is not enough local population to keep them in business. They rely heavily on travelers on Hwy 247, especially those enjoying the Johnson Valley OHV area.

DEIS does not report that most grocery stores operate on a profit of 3 to 5 percent. Loss of 7 plus percent, as is stated for the Lucerne Valley Market and Hardware, almost guarantees closure of the business. The smaller businesses in the Homestead Valley also would be severely impacted. When these businesses close, there will be no place for the residents to buy supplies locally. The document must be corrected to give the true picture of what the base expansion will do to these neighbors.

The DEIS compares loss of property tax from acquired lands to total county dollars received from taxes, rather than make the comparison with other rural desert communities' tax dollars. Therefore the reader is completely misled as to the true magnitude of the loss. Not only should the comparison be between rural desert communities, the preparers do not address what those lost dollars have been supporting, and how that loss will impact these communities (i.e. waste management, library, park, county services, etc.) The seemingly small number of tax dollars may just mean the difference between a facility remaining open or closed, or services being provided or not. The county of San Bernardino is already undergoing severe budget cuts, due to economic conditions that did not exist when these expansion plans were begun. Therefore the DEIS fails to accurately portray and evaluate impacts, and must be corrected to reflect real-time conditions, which are not forecast to change very soon.

The DEIS estimates creation of 90 new jobs, of which about 77 will be on base and 13 off base. The DEIS states lost merchant jobs and dollars from reduced recreational

SOC-1

SOC-2

SOC-3

SOC-4

Response to Comment N-18851 (Page 1 of 2):

**SOC-1 and SOC-4:**

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

**SOC-2:**

Section 4.3 has been updated to acknowledge indirect impacts to other companies that provide services to local businesses.

**SOC-3:**

Thank you for your comment. Section 4.3 of the EIS has been updated to acknowledge the indirect effects of reduced property tax revenue.

Comment ID: N-18851 (Page 2 of 2)

Response to Comment N-18851 (Page 2 of 2):

opportunities are not significant and will likely be made up by the new jobs created and more Marines moving in and out of 29 Palms.

As most of the new jobs, if not all, are likely to be located in the city of 29 Palms (the base headquarters) the preparers of this DEIS have ignored the impact of lost dollars on more distant communities in the Homestead Valley and beyond. Lost jobs in Lucerne Valley cannot be mitigated by a few jobs in 29 Palms. The death or near death of small but historic desert communities near the Johnson Valley OHV Area has not been given due consideration.

Therefore the DEIS fails to give a true picture of the very significant impacts on the job market in the Homestead Valley, and it must be corrected.

ATTN: 29 PALMS EIS PROJECT MGR.  
1220 PACIFIC HWY.  
SAN DIEGO, CA. 92132-5190

... TO WHOM IT MAY CONCERN:

I OPPOSE THE WESTERN EXPANSION OF THE  
TRAINING RANGE AT MARINE CORPS AIR GROUND COMBAT  
CENTER PRIMARILY FOR FOUR(4) MAIN REASONS.

1) SAFETY AND RISK MANAGEMENT CONCERNS  
NEED FURTHER STUDY. THE PROPOSALS INDICATE  
LIVE FIRE EXERCISES MOVING WEST TOWARD AN AREA  
OF GREATER POPULATION DENSITY. ACCIDENTS ARE  
GOING TO HAPPEN. THE USMC MUST REDUCE THIS  
RISK TO ITSELF AND THE CIVILIAN POPULATION.  
EXPANSION, IF NEEDED, SHOULD GO EAST.

2) NOISE PRESENTS A SIMILAR PROBLEM, AND ALSO  
NEEDS MORE STUDY, ON ITS IMPACT ON THE CIVILIAN  
POPULATION, AND THEIR REACTIONS. I TRAINED WITH  
1/4/11 AT MCRCC 29 PALMS, AND WE WERE REQUIRED  
TO SUSPEND FIRING IN DELTA CORRIDOR AFTER A  
SET TIME OF NIGHT. THIS WILL NOT MEET THE  
STATED GOAL OF TRAINING LIKE WE FIGHT."

P 1

Response to Comment N-18852 (Page 1 of 3):

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 2.3 of the EIS, in accordance with the established Combat Center safety policy (Combat Center Order P3500.4h), any acquired lands would provide for at least 3,280 feet (1,000 meters) of buffer area between live-fire areas (including SDZs and WDZs) and any proposed or existing installation boundary.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). As indicated in the EIS, there would be significant impacts to desert tortoise under all alternatives. The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

Comment ID: N-18852 (Page 2 of 3)

P. 2

3) UPPER JOHNSON VALLEY HAS A GOOD POPULATION OF THE DESERT TORTOISE. THESE UNIQUE REPTILES ARE AT RISK OF EXTINCTION, SO IT DOES NOT MAKE SENSE TO CHANGE TO A LAND USE THAT WILL IMPACT THEM ~~BE~~ MUCH LESS FAVORABLY. THIS TOO, NEEDS MORE STUDY, WITH EMPHASIS ON SUPPORTING THIS VIABLE POPULATION.

4) BECAUSE OF ITS SIZE (THE LARGEST) AND ITS LOCATION (REASONABLY CLOSE TO POPULATION CENTERS) THE JOHNSON VALLEY OFF-HIGHWAY VEHICLE AREA IS A PREMIER RECREATIONAL AREA. ITS LOSS WOULD NOT ONLY GREATLY REDUCE OPPORTUNITIES FOR RECREATION, BUT ALSO WOULD REMOVE THE MONEY BROUGHT INTO THE NEAR-BY COMMUNITIES. IF TAKEN, IT MUST BE REPLACED BY AN AREA OF EQUAL OR GREATER VALUE AS AN OFF-ROAD RECREATIONAL RESOURCE, AND THERE ARE NO SIMILAR AREAS LOCATED NEARBY.

EASTWARD EXPANSION SEEMS FEASIBLE, POSSIBLY AS FAR AS THE ARIZONA AND CALIFORNIA RAILROAD TRACKS. STATE HIGHWAYS 62 AND 66 COULD BE LINKED AT THE NEW BASE EASTERN BOUNDARY, AND AMBOY ROAD CLOSED.

Response to Comment N-18852 (Page 2 of 3):

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Thank you for your suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Comment ID: N-18852 (Page 3 of 3)

Response to Comment N-18852 (Page 3 of 3):

P. 3

THE USMC COULD ALSO USE, ON A TEMPORARY,  
AS NEEDED, AND FOR SHORT PERIODS, PARTS  
OF THE OHV AREA WITHIN 2-3 MILES OF  
THE PRESENT BASE/OHV AREA BOUNDARIES,  
FOR STAGING TRAINING OPERATIONS, VIA  
THE AEM PERMIT PROCESS.

THANK YOU FOR YOUR CONSIDERATION,

*William R. Richardson*

Re: Draft Environmental Impact Statement on 29-Palms Base expansion

Dear Sir:

My family homesteaded in Johnson Valley in 1954, and we were very involved with starting the Johnson Valley Improvement Association (JVIA). The expansion of the 29-Palms Base will greatly impact this historic association and the many residents who it services.

The unincorporated community of Johnson Valley lies directly south of what became the Johnson Valley OHV Area over 30 years ago. JVIA volunteers built, maintain and operate the Johnson Valley Community Center, which is the hub of social and educational activities in this isolated and widely scattered settlement. It also served as an emergency center after the 1992 earthquake. Three meals a day for over two weeks were served to all comers, and those who needed shelter found it there.

The DEIS does not specifically address impacts on the Johnson Valley community, although researchers for the document and other Marine representatives repeatedly visited during the scoping period. Several focus group meetings were held in the Community Center building, overlooking the valley the Marines wish to close to public access. When the expansion plans were originally formed, the planners may not have known that citizens lived in Johnson Valley. But USMC representatives did come and meet them. They listened closely to the citizens' comments, and took copious notes. But the overwhelming impact of the proposed actions on Johnson Valley is not reflected in the DEIS. To a reader in another part of the US who may know nothing about the California high desert and its history, they are rated as less than significant, and therefore the document is misleading and must be corrected.

The Johnson Valley Community Center is largely supported by the breakfast it serves each Saturday (cooked and served by volunteers) to the "weekenders" who own property in Johnson Valley, and the visitors from the OHV area.

Page 557, Table 4.3-13 shows the estimated loss of 24.6% in direct expenditures in the area if the preferred Alternative 6 is chosen. This will be even greater for the Community Center during the two or more months the public would not be allowed access during training exercises. Those two months will be during Spring and Fall, which are the months of largest use of the OHV area, and attendance at the Saturday Breakfast. It is not unusual to serve 120+ guests on long weekends when the weather is good. It is not unusual to see that number dwindle to 40 in the high summertime.

Therefore the denial of public access to the remnant "shared use" area will inevitably reduce the numbers of guests at the Saturday Breakfast, as well as the number of potential

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

Comment ID: N-18853 (Page 2 of 2)

Response to Comment N-18853 (Page 2 of 2):

property owners attracted to Johnson Valley. It will jeopardize the future of the JVIA and of the Community Center.

Therefore, the DEIS must be corrected to make it very clear to even the most cursory of readers that the economy, and very existence of Johnson Valley, and indeed the viability of all the historic Homestead Valley communities, are threatened under all Alternatives except #3, due to the closure or partial denial of public access to the Johnson Valley OHV area. It must also state that these impacts were not properly presented in the draft document.

Sincerely,

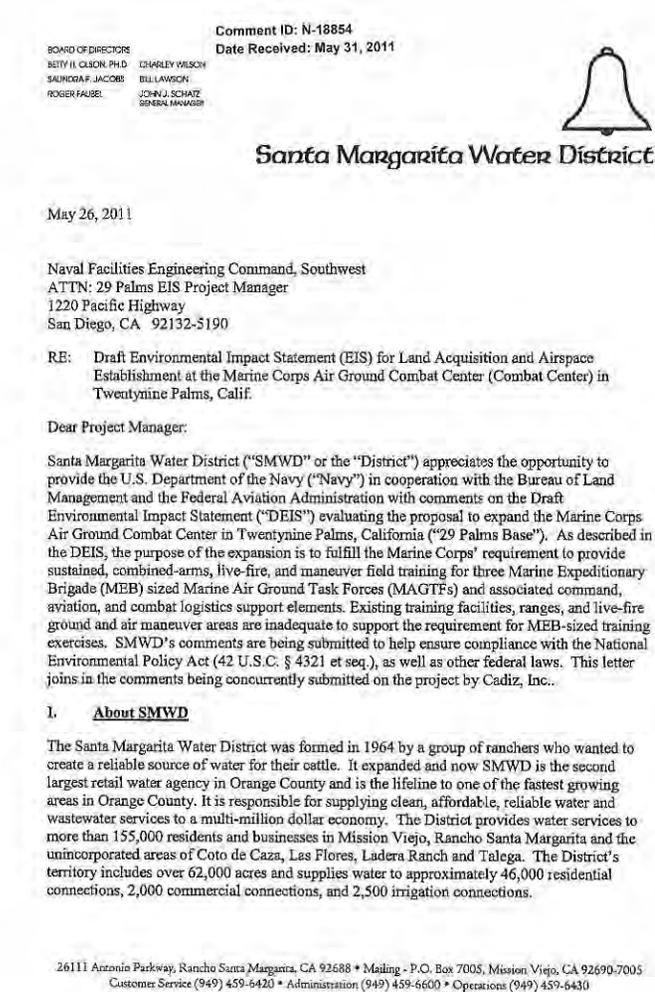

Stanley O Coutant

Response to Comment N-18854 (Page 1 of 3):

NEPA-1:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

WAT-1:

Section 5.4.13.3 of the EIS acknowledges that Alternative 3 would have a" regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project. The EIS also states that the project was uncertain and undergoing environmental review process. The EIS has been revised to update the project description for the Final EIS using the information provided by comment letters from Cadiz Inc. and others. These revisions are not likely to alter the significance of cumulative impacts from Alternative 3.

Page 2

SMWD's Water Project Planned for the Cadiz Property

SMWD's interest in the proposed 29-Palms Base expansion relates to SMWD's water project on the Cadiz, Inc. property which is within the eastern expansion area included as part of Alternative 3 in the DEIS. SMWD is a project participant as well as the Lead Agency for the Cadiz Valley Water Conservation, Recovery and Storage Project (Water Project) under the California Environmental Quality Act (CEQA) review process. The Water Project is a potential new water source from a large, renewable aquifer located in the eastern Mojave Desert east of the existing military base. It is designed to manage the aquifer and conserve water from nearby watersheds otherwise being lost to evaporation in local dry lakes. Conserved water would be collected and delivered to SMWD as well as other participating water agencies. There would also be an option for carry-over water storage in the Cadiz Aquifer. The Project will diversify SMWD's water portfolio and help drought-proof the District to ensure its water demands are met regardless of the state's supply.

As SMWD is the Lead Agency for the Water Project currently underway, any action, including the proposed Alternative 3, is of serious concern because it may adversely impact the District's ability to move forward with the Water Project. To help the Navy understand the extent of resources presently committed to the Water Project, please see SMWD's website, available at <http://www.smwd.com/operations/the-cadiz-valley-project.html>.

**II. Concerns with Alternative 3 and Its Potential Adverse Significant Impacts**

NEPA compels federal agencies to consider the consequences of their proposed activities on the human environment, 42 U.S.C. § 4331. The statute requires federal agencies to produce a DEIS when proposing to engage in any "major Federal actions" that will significantly affect the human environment, 42 U.S.C. § 4332(2)(C). See *Natural Res. Def. Council, Inc. v. Grant* (E.D.N.C. 1972) 341 F.Supp. 356, 366-67. A significance determination requires agencies to consider the context of an action and the intensity of its impacts. See *Environmental Protection Information Center v. Blackwell* (N.D. Cal. 2004) 389 F.Supp.2d 1174.

SMWD has the following concerns relating to the NEPA review and DEIS for the expansion project, particularly including its consideration of the eastern expansion in Alternative 3:

1. **Water Supply:** Impacts on Southern California's water supply: Selection of Alternative 3 would impact Southern California's water supply because it may prevent implementation of the Water Project. The Water Project which will improve water supply reliability by conserving the average annual sustainable yield of the local watersheds, and is critical for supply reliability for Southern California water providers. It will also reduce dependence on imported water by utilizing a source of water that is not dependent upon the California State Water Project (SWP), the Colorado River, or the Sacramento-San Joaquin Delta (Bay-Delta). Therefore, and because of the nature of the base expansion including "live-fire maneuver training for three battalion task forces", we disagree with the DEIS's findings that the Project may co-exist with expansion under Alternative 3, and request that further analysis be commenced under the FEIS to evaluate the impacts it may cause. See DEIS, 2-95-96.

NEPA-1

WAT-1

Response to Comment N-18854 (Page 2 of 3):

**WAT-2:**

Section 4.13.4.1 addresses the potential impacts from Alternative 3 to groundwater quality, and concludes "because of the ongoing management and minimization of MC residues at the Combat Center and implementation of management and minimization of MC residues in the east acquisition area, impacts to surface water quality from Alternative 3 MCs would be less than significant." The low precipitation rate, intermittent receiving surface water bodies, and deep groundwater, limits the migration of MC residues and thus the potential impacts of use of munitions.

Chapter 2 of the EIS has been revised to include a more detailed description of the current range clearance operations. As discussed in Section 3.4.2.1, the Marine Corps' Range Environmental Assessment (REVA) program uses an EPA-approved screening model for Munitions Constituents in surface and groundwater. The REVA evaluation occurs every 5 years and the first reassessment began in October 2010. These evaluations have not found detectable levels of Munitions Constituents at the Combat Center.

**SOC-1:**

Thank you for your comment. Updated information on the Cadiz project and the effects of Alternative 3 have been added to the EIS in Sections 3.13 and 4.13.

Comment ID: N-18854 (Page 3 of 3)

Naval Facilities Engineering Command, Southwest  
May 26, 2011  
Page 3

2. Water Quality: Impacts on groundwater water quality: Alternative 3 would negatively impact the local groundwater quality because it creates potential for groundwater contamination from ammunition, bombs, fuel, hazardous chemicals that are used in military exercises on land that overlies the Cadiz Valley aquifer system within the proposed expansion area. These impacts were not adequately assessed in the DEIS and should be considered.

WAT-2

3. Impacts to Cadiz Operations and the Local Community: SMWD shares the concerns expressed by Cadiz that Alternative 3 may have on Cadiz, its operations, and the local community: impacts on energy production; impacts on agriculture; local socioeconomic impacts; economic impacts of land acquisition on the federal budget; transportation impacts; and impacts to biological resources. Please contact the District if you would like further explanation regarding these additional concerns.

SOC-1

III. Conclusion

SMWD appreciates the opportunity to comment on the proposed 29 Palms Base and Environmental Impact Statement, and requests that the FEIS evaluates the concerns described above. Specifically, SWMD respectfully requests consideration of the following: 1) elimination of Alternative 3 from consideration and/or additional reasonable alternatives, 2) conducting further study and evaluation of impacts, 3) further discussion of appropriate mitigation measures, and take whatever further actions necessary to develop an DEIS in compliance with NEPA which can serve as the basis for informed decision-making and public scrutiny.

GEN-1

We request to be notified of any and all future actions regarding the DEIS, preparation of additional studies, as well as preparation of the FEIS. Please add me to your list of persons receiving notice of this project. You may contact me at [johns@smwd.com](mailto:johns@smwd.com).

Sincerely,

SANTA MARGARITA WATER DISTRICT

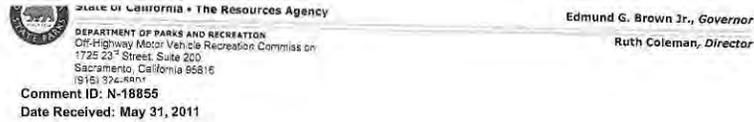

John J. Schatz  
General Manager

Response to Comment N-18854 (Page 3 of 3):

Thank you for your comment. Responses to each of these issues are presented in the earlier portions of this letter.

Comment ID: N-18855 (Page 1 of 3)

May 27, 2011

Naval Facilities Engineering Command Southwest  
ATTN: 29 Palms DRAFT EIS Project Manager Chris Proudfoot  
MAGTFTC, MCAGCC  
Bldg. 1554, Box 788104  
Twentynine Palms, CA 92278-9104

**RE: Comment Letter regarding Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment for Proposed Expansion of Twenty-Nine Palms USMC Air Ground Combat Center**

Dear Mr. Proudfoot:

The California Department of Parks and Recreation, Off-Highway Motor Vehicle Recreation Commission (Commission) appreciates the opportunity to comment on the Draft Environmental Impact Statement (Draft EIS) for the Department of the Navy's "Land Acquisition and Airspace Establishment" project, for the proposed expansion of the United States Marine Corps Air Ground Combat Center at Twentynine Palms, California (the "Combat Center").

This letter serves to address concerns the Commission has with regard to the impact the proposed project will have on the Californians whom the California Off-Highway Motor Vehicle Recreation Program (OHMVR Program) is established and mandated to serve. As stated in section 2.1 the Draft EIS identifies six action alternatives that would meet the Marine Corps' purpose and need for Military Expeditionary Brigade training capabilities. The Commission is concerned about the ramifications of all the proposed alternatives including specifically Preferred Alternative 6, and the long term impacts to OHV recreation in California.

The OHMVR Program has a substantial commitment and legislative mandate to ensure that the citizens of California have sustained opportunities for Off-Highway Vehicle (OHV) Recreation. The OHMVR Program has longstanding cooperative relationships with various Federal, State and Local agencies, and in this case specifically the Bureau of Land Management (BLM), in support of, and providing financial assistance to, effectively managed OHV recreation areas.

Response to Comment N-18855 (Page 1 of 3):

**REC-1:**

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a Displaced OHV Recreation Study (DORS) to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS.

**SOC-1:**

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Comment ID: N-18855 (Page 2 of 3)

Mr. Chris Proudfoot  
May 26, 2011  
Page Two of Three

The Johnson Valley OHV area, managed by BLM, with financial assistance from the OHMVR Program, is an irreplaceable resource that will be substantially lost for OHV recreation should the proposed Preferred Alternative be implemented. Johnson Valley, at 189,667 acres, is the largest OHV area of its kind, not only in California, but in the Nation. In short, Johnson Valley OHV area is one of the premier areas among public lands that are managed to provide OHV recreational opportunities in California.

Johnson Valley provides a unique and irreplaceable OHV opportunity to over 150,000 OHV recreationists per year that would be displaced should the proposed Preferred Alternative be approved and implemented. We foresee closure of an OHV area of this magnitude as contributing to a very serious public safety issue when those displaced recreationists seek other places to ride. Displaced recreationists would be required to travel longer distances to smaller facilities, thereby increasing user density levels that would likely lead to increases in OHV related accidents, increased environmental impacts and increased trespass onto non-OHV public lands and private properties. Compounding the above concerns would be the devastating economic impacts associated with the loss of the Johnson Valley OHV area as it currently exists. All of the proposed alternatives, including the Preferred Alternative, if implemented, will have a significant effect not only in the Mojave Desert Region, but also outdoor recreation in all of California. During uncertain economic times, large state budget deficits, and closing 70 State Parks, reduction in any recreation area, as stated above, will have long term negative effects to the citizens of California.

With California's continued population growth, and the increasing popularity of OHV recreation, coupled with ongoing reductions in areas available for OHV use, we are concerned with any proposal that affects OHV recreation, but specifically the proposed Preferred Alternative 6 acquisition. Alternative 6 includes 146,667 acres of the 189,470 acres that is currently Johnson Valley OHV area. Of the 146,667 acres to be acquired, only 22%, or 38,137 acres, would be available for recreation 10 months of the year. This is unacceptable.

The OHMVR Program is charged by California's Legislature with the duty to support "sustained" OHV recreation activities for the citizens of California. Losing the largest and one of the most visited OHV venues in the nation will have a profound impact on maintaining that directive.

We recognize the many challenges facing the Marines and our Military during these tumultuous times and appreciate the security our forces provide for the citizens of the United States. We also recognize that you are mandated by the President and Congress to maintain a national military program that adapts training, management, and operational strategies to keep current with the various global threats which includes providing venues to conduct training. However, it is our mandate as stated above to support OHV recreation in the State of California. The Commission thanks you for taking the time to listen to our concerns and answering our questions during our OHMVR Commission Meeting in Ontario California on May 25.

REC-1

SOC-1

REC-2

NEPA-1

Response to Comment N-18855 (Page 2 of 3):

**REC-2:**

Comment noted. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

**NEPA-1:**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

**Comment ID: N-18855 (Page 3 of 3)**

Mr. Chris Proudroot  
May 26, 2011  
Page Three of Three

In conclusion, the Commission strongly opposes all alternatives that reduce OHV recreation at Johnson Valley OHV area. The alternatives as written are unacceptable for our constituents. The Commission encourages the Marine Corps to look into other alternatives that would facilitate its training requirements without resulting in the loss of the important recreational resource at Johnson Valley. To the extent the OHMVR Commission may assist in this effort, we stand ready to do so.

NEPA-2

Thank you again for the opportunity to provide comment on the Draft EIS document.

Sincerely,

Eric Lueder, Chairman  
Off-Highway Motor Vehicle Recreation Commission

cc: Senator Diane Feinstein  
Senator Barbara Boxer  
Congressman Jerry Lewis

**Response to Comment N-18855 (Page 3 of 3):**

**NEPA-2:**

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Comment ID: N-18856 (Page 1 of 5)

Comment ID: N-18856  
Date Received: May 31, 2011

36456 El Camino Dr  
Palmdale, CA 93551  
May 19, 2011

Ladies and Gentlemen,

Freedom is what America was founded on. While I support the military and thank them for their service, I am opposed to land acquisition for the 29 Palms Marine base. To close Johnson Valley to recreation would be yet another example of removing people's freedom. This brings up a major deficiency in the Draft EIS published in February. **You failed to ever consider people's freedom, quality of life, feelings and beliefs as part of a sociological values analysis. You must explain why people live and play in such remote, isolated, and hot areas. Then you must fully analyze how your alternatives will impact those social values, beliefs, principles, emotions, and feelings.** The freedom to ride in wide open spaces is at stake. So is our ability to enjoy the quiet, peaceful, serene environment of the desert.

NEPA-1

I also have a comment about your views on mitigation. On March 26, I heard the Marine Corps representative tell the BLM advisory committee in Victorville, "Legally, our requirement is to not search for alternative places to accept the displacement. And at that point that's a legal mandate for our EIS process, meaning what you are really asking is if we support getting out, finding other areas, helping someone else designate the area. That's outside the scope of this project. That would take congressional action. As BLM looked at it, they might come and say we need to de-designate an area in order to open it up more for races. I think one was proposed earlier in this very meeting. But what I am saying is part of this proposed action, we are not required legally to come up with that particular alternative."

NEPA-2

**I wish to point out and remind you that according to Sec. 1508.20, mitigation includes:**  
(a) Avoiding the impact altogether by not taking a certain action or parts of an action.  
(b) Minimizing impacts by limiting the degree or magnitude of the action and its implementation.  
(c) Rectifying the impact by repairing, rehabilitating, or restoring the affected environment.  
(d) Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action.  
(e) Compensating for the impact by replacing or providing substitute resources or environments.

The Draft EIS is very inadequate in its discussion of possible mitigation measures, not only for the significant impacts identified but for ALL impacts (even those which are "less than significant"). It is improper for you to only feel that mitigation is needed for the significant impacts. In your website, you say "through the EIS process, mitigation measures would be developed to reduce or eliminate any significant impacts to specific resources areas." This is an erroneous interpretation of NEPA. **My first comment is that mitigation should be developed for ALL impacts, NOT just the significant ones.**

To back up my position, please refer to this document published by the Counsel for Environmental Quality: <http://ceq.hss.doe.gov/nepa/regs/40/11-19.HTM#19>

At question "19a" referring to "Mitigation Measures," the question is asked: What is the scope of mitigation measures that must be discussed? They say:

"A. The mitigation measures discussed in an EIS must cover the range of impacts of the proposal. The measures must include such things as design alternatives that would decrease pollution emissions, construction impacts, esthetic intrusion, as well as relocation assistance, possible land use controls that

Response to Comment N-18856 (Page 1 of 5):

NEPA-1:

Thank you for your comment. The EIS evaluates impacts to socioeconomics and cultural resources, and the interrelationship with the natural and physical environment potentially impacted by the proposed action. NEPA does not require consideration of social values, beliefs, principles, emotions and feelings.

NEPA-2:

In addition to the adoption of recreation SCMs (see Chapter 2 and Section 4.2.2.1), the Marine Corps considered potential mitigation measures but determined that none were feasible for impacts to Recreation. Numerous commenters on the Draft EIS stated that the Marine Corps should designate or obtain other lands in the region to mitigate the loss of OHV are in the Johnson Valley. The Marine Corps does not have the jurisdiction or capability to designate obtain other lands for OHV use and could not be committed to as part of the Record of Decision (ROD) for this action. The BLM has management jurisdiction over public lands. Designating lands for OHV use is a reasonable mitigation measure, therefore, the EIS has been updated to include text identifying designation of lands for recreation as a reasonable measure to alert BLM and encourage them to consider this during future development of Resource Management Plans (RMPs).

Comment ID: N-18856 (Page 2 of 5)

could be enacted, and other possible efforts. **Mitigation measures must be considered even for impacts that by themselves would not be considered "significant."** Once the proposal itself is considered as a whole to have significant effects, all of its specific effects on the environment (whether or not "significant") must be considered, and mitigation measures must be developed where it is feasible to do so. Sections 1502.14(f), 1502.16(h), 1508.14."

In addition, I wish to point out that even if the USMC does not have the legal authority, funding, permitting, or other Department of Navy approvals to perform or ensure the performance of mitigation, which does not absolve your responsibility to present and analyze all possible mitigation in an EIS. **You must analyze all mitigation, and then clarify which measures are within the legal authority of the Marine Corps or one of your federal cooperating agencies (BLM, FAA). You must lay them all out for the public, Congress and the President to see and consider.**

While the EIS is very deficient in this regard, your other informational materials say that the estimated cost for land acquisition will be "approximately \$50 million for the smallest acquisition alternative." In your "Frequently Asked Questions" handout, it is stated that "Estimates will be developed for the various alternatives that will be studied in accord with NEPA, and this number continues to be an accurate estimate." **Where is this information provided in the EIS?**

When asked "Where would the money come from for any land acquisition?," that same document states that "The money for land acquisition would come from Congressional appropriations through the regular military construction program." **The EIS must fully lay out how much money is need, as well as the chances of obtaining it.**

I reference this information from the Counsel for Environmental Quality:  
<http://ceq.hss.doc.gov/nepa/regs/40/11-19.HTM#19>

"19b. How should an EIS treat the subject of available mitigation measures that are (1) outside the jurisdiction of the lead or cooperating agencies, or (2) unlikely to be adopted or enforced by the responsible agency?"

**A. All relevant, reasonable mitigation measures that could improve the project are to be identified, even if they are outside the jurisdiction of the lead agency or the cooperating agencies, and thus would not be committed as part of the RODs of these agencies. Sections 1502.16(h), 1505.2(c). This will serve to [46 FR 18032] alert agencies or officials who can implement these extra measures, and will encourage them to do so. Because the EIS is the most comprehensive environmental document, it is an ideal vehicle in which to lay out not only the full range of environmental impacts but also the full spectrum of appropriate mitigation.**

However, to ensure that environmental effects of a proposed action are fairly assessed, the probability of the mitigation measures being implemented must also be discussed. Thus the EIS and the Record of Decision should indicate the likelihood that such measures will be adopted or enforced by the responsible agencies. Sections 1502.16(h), 1505.2. If there is a history of nonenforcement or opposition to such measures, the EIS and Record of Decision should acknowledge such opposition or nonenforcement. **If the necessary mitigation measures will not be ready for a long period of time, this fact, of course, should also be recognized."**

NEPA-2

NEPA-3

Response to Comment N-18856 (Page 2 of 5):

**NEPA-3:**

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

**NEPA-4:**

Text has been updated in Section 2.8 and in specific resource sections to reflect a more detailed discussion of implementation of mitigation measures (e.g., funds will be requested from Congress to execute identified mitigation measures).

**NEPA-5:**

The Marine Corps has fully considered public comments in the development of the EIS, including the formulation of reasonable alternatives and mitigation measures. Numerous commenters on the Draft EIS stated that the Marine Corps should designate or obtain other lands in the region to mitigate the loss of OHV are in the Johnson Valley. The Marine Corps does not have the jurisdiction or capability to designate obtain other lands for OHV use and could not be committed to as part of the Record of Decision (ROD) for this action. The BLM has management jurisdiction over public lands. Designating lands for OHV use is a reasonable mitigation measure, and it is identified here to alert BLM and encourage them to consider this during future development of Resource Management Plans (RMPs).

Comment ID: N-18856 (Page 3 of 5)

Furthermore, your EIS must fully describe measurable performance standards or expected results. To the extent that federal funding (approvals or resources) are required to implement the mitigation commitments, your EIS must analyze the likelihood of whether or not such funds are expected to be available throughout the life of the project.

NEPA-4

For several years, during the scoping period, and in your informational materials, you have consistently said that mitigation would be fully developed. Public suggestions included many possible mitigation measures. You must full explain why you have ignored public input and have not addressed the following items at a minimum. The EIS needs to be corrected so that these and other measures are considered:

- Purchase fee-owned properties in the proposed expansion areas. Clearly quantify the costs for doing this mitigation.
- Purchase reserved mineral interests in the proposed expansion areas. Clearly quantify the costs for doing this mitigation.
- Offer the numerous isolated properties owned by the BLM to those owners of private property who stand to lose their properties in the expansion effort.
- Identify specific replacement habitat to compensate for loss of wildlife and plant habitat.
- Permanently protect any identified significant biological resources with signing, fencing and other safeguards.
- Buy out the nearby Ord Mountain cattle allotment and the Stoddard and Shadow Valley sheep allotments so they can be permanently retired to mitigate for residual impacts to desert tortoise, bighorn sheep, and sensitive plants.
- Identify compensation for regulatory and processing fees for the relocation of utilities and other similar facilities.
- Provide for future access and underground mining of iron ore in the proposed expansion area.
- Purchase privately-owned property, in San Bernardino County and other surrounding counties, to compensate the OHV community for lost opportunity in Johnson Valley.
- Provide replacement wheeling areas at a ratio of 3 acres provided for every acre lost.
- Repeal the wilderness areas east of the USMC base so that expansion can be done in that direction.
- Analyze the potential mitigation of "Non-Wilderness Training Corridors" through the wilderness areas to facilitate the Marines accomplishing their training mission and objectives to the east of the base.
- Address and consider renewable energy development on military withdrawal lands. These are still "public" lands, and obstacles need to be identified and overcome. There are many disturbed areas on withdrawn lands, and your mitigation for withdrawing more public lands must identify which are suited for solar, wind and geothermal development. Develop an approach that allows the military to use revenue from the leases for base operations and maintenance. You (DoD) and Congress need to find ways to work

NEPA-5

Response to Comment N-18856 (Page 3 of 5):

Wildlife mitigation is being discussed in the ongoing Section 7 consultation. No utilities or other facilities are being relocated. No basis for the wheeling area replacement ratio suggested. Only Congress can de-designate a wilderness area, and it has not done so. De-designation also does not meet the selection criteria. Signing and boundary marking is addressed in the Land Use section.

Real estate transaction costs will not be fully known until negotiations with landowners are initiated, but that USMC has programmed funds in FY12 and FY14 to purchase non-federal land.

The Marine Corps does not have the authority to designate lands as mitigation for the proposed action.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Comment ID: N-18856 (Page 4 of 5)

with the Dept of Interior and Dept of Energy to make this happen. Your EIS for base expansion needs to identify this as potential mitigation for Congress to be aware of and consider. If you are going to close more public lands to energy development, you also need to mitigate that by laying out the opportunities on disturbed military lands for energy development.

\* Provide better signing and marking of the base boundary. Faded signs and a few barrels are not adequate. Due to the number of scrappers and trespassers onto the base, the Marine Corps has proven for the past 60-70 years that they do not have the resources or inclination to properly manage their installation boundary. You must disclose and analyze the magnitude of this issue in the EIS. You must indicate how much bigger of a problem it is going to become.

The identification of areas to handle the displacement of OHV wheelers and other recreators is critical. Again, in your "Frequently Asked Questions," you told us in response to the question: "9. Where would the off-roaders go if the Marine Corps acquires the land?" that "The Bureau of Land Management and other land-managing agencies would determine other, suitable locations in the region for off-road vehicle activity."

Just when and where is that going to be done? As a cooperating agency, the BLM must do it now. It is imperative that the information be fully disclosed and provided to the public now in the EIS.

As a result of your proposal for increased military airspace, civilian aircraft will need to be re-routed. The EIS must disclose how this will be accomplished. You must work with the FAA to do this now in your EIS. You cannot afford to wait until they go through their process later, after your decision is already made. A wise decision cannot be made at present until the information from the FAA is incorporated into your EIS.

As a result of these unresolved issues, I feel that your EIS is so inadequate that you cannot proceed to a Final EIS. Rather, you must do additional study and analysis of possible mitigation and then issue another Draft EIS for public comment. Allow for 90 days of comment on this next edition of the Draft EIS.

You must revise the EIS so the mitigation is complete and Congress can make the right decisions. Despite BLM's recommendations against wilderness east of the base, Congress designated Sheephole and Cadiz wilderness areas. Your EIS is the vehicle that must lay out all alternatives, impacts and mitigation to facilitate better decision-making this time around.

You must also document a comprehensive plan for monitoring the project's mitigation commitments. I would recommend that in an appendix to the EIS. I presume the Marine Corps, BLM and FAA will all be performing some aspect of mitigation. Therefore, all three are responsible for developing and implementing the monitoring program, drawing upon public input and informing the public of the results and progress of such monitoring where appropriate. The EIS must fully analyze all potential mitigation, disclose which commitments can be made at this time, and also outline which pending measures will require other funding or resources to implement or develop.

You must commit in writing to use monitoring results in future NEPA analyses, so as to avoid relying upon mitigation measures that have proven ineffective in the past. Take Fort Irwin's

NEPA-5

NEPA-6

AIR-1

NEPA-7

Response to Comment N-18856 (Page 4 of 5)

NEPA-6:

Numerous commenters on the Draft EIS stated that the Marine Corps should designate or obtain other lands in the region to mitigate the loss of OHV are in the Johnson Valley. The Marine Corps does not have the jurisdiction or capability to designate obtain other lands for OHV use and could not be committed to as part of the Record of Decision (ROD) for this action. The BLM has management jurisdiction over public lands. Designating lands for OHV use is a reasonable mitigation measure, and it is identified here to alert BLM and encourage them to consider this during future development of Resource Management Plans (RMPs). The Marine Corps would provide any assistance that BLM may require from USMC.

AIR-1:

Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Comment ID: N-18856 (Page 5 of 5)

expansion, for example. Their tortoise relocation efforts were ineffective. Their commitment to monitoring triggered a project shutdown until further NEPA analysis was undertaken.

Your EIS is also inadequate in its recognition of the new "NEPA Guidance on Consideration of the Effects of Climate Change and Greenhouse Gases." That is available in draft form and is expected to be finalized later this year. You can read the draft document at:

[http://ceq.hss.doe.gov/nepa/ceqs/Consideration\\_of\\_Effects\\_of\\_GHG\\_Draft\\_NEPA\\_Guidance\\_FINAL\\_02182010.pdf](http://ceq.hss.doe.gov/nepa/ceqs/Consideration_of_Effects_of_GHG_Draft_NEPA_Guidance_FINAL_02182010.pdf)

For proposed actions evaluated in the EIS, you must describe their consideration of the energy requirements of a proposed action and the conservation potential of its alternatives, 40 CFR 1502.16(e). Within this description of energy requirements and conservation opportunities, you must evaluate GHG emissions associated with energy use and mitigation opportunities and use this as a point of comparison between reasonable alternatives.

[http://ceq.hss.doe.gov/current\\_developments/docs/Mitigation\\_and\\_Monitoring\\_Guidance\\_14Jan2011.pdf](http://ceq.hss.doe.gov/current_developments/docs/Mitigation_and_Monitoring_Guidance_14Jan2011.pdf)

IN CONCLUSION, your EIS is currently inadequate and must:

- 1) Fully disclose and analyze all potential mitigation measures
- 2) Identify mitigation for all impacts, not just significant ones
- 3) Identify which mitigation can be currently committed to, and which will require additional funding, resources, approvals, permitting to develop or implement
- 4) Provide clear information on the costs and likelihood for each identified mitigation measure
- 5) Provide a monitoring plan for mitigation development, implementation and effectiveness
- 6) Fully describe & quantify energy requirements & conservation opportunities for all alternatives
- 7) Evaluate and quantify Greenhouse Gas Emissions associated with energy use and mitigation opportunities
- 8) Provide an impact analysis on sociological values, quality of life, beliefs, emotions, feelings, and lifestyles
- 9) Incorporate all needed information from the BLM and FAA at this time
- 10) Issue another Draft EIS that would allow for full disclosure and comment on all these items
- 11) Provide another 90-day public comment period and hearings when you have issued an adequate EIS

Thank you very much. Please put me on your mailing list for the next Draft EIS when you have prepared an adequate one which addresses these and all the other issues identified by the public.

Warmest Regards,

Roland Weeks

NEPA-7

AQ-1

GEN-1

Response to Comment N-18856 (Page 5 of 5):

NEPA-7:

In accordance with the CEQ regulations for implementing NEPA at 40 CFR 1505.2(c) and the Marine Corps' NEPA procedures in MCO P5090.2A Chapter 12, mitigation measures that were identified and evaluated in the EIS will be identified and committed to in the DoN Record of Decision (ROD). A monitoring and enforcement program will be adopted for resources in which monitoring is important to ensure that implementation is successful.

AQ-1:

Page 3.8-10 of the DEIS discusses the draft CEQ NEPA guidance for GHGs that is mentioned in the comment. While the Marine Corps did consider this guidance in the evaluation of proposed GHGs in the DEIS, they are not bound by it, as the CEQ has yet to finalize its content.

The GHG emission estimates presented in the DEIS are based upon fuel and therefore energy usages associated with each project alternative. The difference in fuel (energy) usages and therefore GHG emissions between the six project alternatives is no more than three percent.

The DEIS concludes that GHGs from each project alternative would produce less than significant impacts. As stated on DEIS page 5-40, the Marine Corps proposes a special conservation measure (SCM) that would maximize the use of biodiesel, where feasible, in equipment and vehicles that take part in exercises at the Combat Center under each project alternative, in place of ultra-low sulfur diesel (ULSD) or aviation fuels. The CO2e emission factor for biodiesel is about 7 percent lower than for ULSD, which is the unmitigated fuel evaluated in the DEIS air quality/GHG analyses.

San Diego, CA 92132-519

Dear sir:

I have many comments of the Draft EIS due to your shortcomings in the Issues, Alternatives and Mitigations sections.

**ISSUES**

I have done a comparison of the issues brought up during scoping with those that you analyzed in the Draft EIS. Even if some issues are not relevant or applicable, you must acknowledge them in the EIS with an indication that you considered them and why they weren't further analyzed. Specifically,

**All Public Scoping Issues** – In each impact section, you typically state the public issues raised as "including but not limited to ...." Your EIS would be much better if you would acknowledge and list all the relevant issues that were raised by the public during scoping.

**Ground Movement** – You have failed to address this issue identified by the public. Your scoping report said you would study "potential impacts of ordnance to aquifers and geologic faults."

**DEIS Reclamation Plan** – You have failed to present a reclamation plan for all the areas that the Marines will be impacting due to erosion, vegetation destruction, etc. In addition, when you acquire contaminated lands, you must also present a plan (with costs) as part of your analysis. An example is on page 4.4-15 where you say "Land that would be acquired as part of Alternative 3 is known to have operations with the potential to contaminate the environment. An example is the America Mine, an open pit gold mine in the east study area that is no longer in use and could require cleanup." How do the Marines propose to do this. Cost?

**FAA Compliance** – You have failed to indicate how the FAA will reroute air traffic to comply with the greater amount of military airspace restrictions. In the scoping report you said you would study "Increased costs to the airline industry from flight corridor alteration and/or scheduling restrictions and conflicts." You have failed to do this.

**Airspace Issues** – On page 4.7-3, you only recognize the public scoping issues that were raised pertaining to airports and airfields. Please list all the relevant airspace issues that were raised in the 20,000 public comments received during scoping.

SCOP-1

GEO/WAT-1

SCOP-2

AIR-1

AIR-2

Response to Comment N-18857 (Page 1 of 11):

**SCOP-1:** Thank you for your comment. The Scoping Summary Report you reference states that the EIS team would “consider and address relevant scoping comments during preparation of the DEIS.” This has been done and the relevant ones were analyzed in the EIS.

**GEO/WAT-1:** Ordnance-related impacts to geologic faults and aquifers are addressed in EIS Sections 4.12 and 4.13, respectively.

**SCOP-2:** Reclamation plans and plans to clean up contaminated sites are not required to be part of the EIS. The EIS does acknowledge in several places that the Combat Center’s INRMP (Integrated Natural Resources Management Plan) and other applicable management plans would be extended to include and apply to any lands acquired under the Proposed Action. The EIS also states (Section 4.4) that cleanup of any contaminated sites would be completed as part of the real estate acquisition process and would be performed in compliance with all applicable laws and regulations (e.g., CERCLA).

**AIR-1:** As indicated in the DEIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process. The potential for increased costs to the airline industry is acknowledged in Section 4.3 as an indirect impact of the action, but it could not be quantified because the details of any FAA re-routing were not yet available.

**AIR-2:** As stated in Section 4.7, the only scoping comment noted in comments received pertaining to airspace was the potential impact to airports and airfields. Section 4.7 addresses to the extent possible all anticipated and relevant airspace-related impacts of the project, whether or not they were raised during the scoping process.

Comment ID: N-18857 (Page 2 of 11)

**Examine impacts of action on existing land use plans** – You have failed to address how the expansion would trigger the need for many amendments and updates to existing Federal, State and local land use plans.

LU-1

**Examine Safety Issues of new boundary** – Management for the “RPAA” is not clearly defined. You fail to lay out the measures needed to ensure clear marking of the boundaries and to ensure public safety. Despite what you said in the scoping report, you have failed to fully study and quantify “the increased costs with installing proper signage in limited use areas and implementing an education campaign regarding location of remaining OHV areas.” The costs could be great and better spent elsewhere. You have also failed to fully study and quantify the “increased law enforcement costs to federal, state, and local jurisdiction with respect to enforcing trespassing on private property and other areas where OHV travel is not allowed.” Are the local jurisdictions able to bear these increased costs? Will taxes be raised?

PHS-1

**Cumulative loss to OHV** – You have not presented any trend analysis showing the cumulative loss of OHV area over the past four decades. This past, coupled with future foreseeable loss of OHV playground, must be examined as cumulative impact.

REC-1

**Impacts of Scientific Research** – You need to read and reference such documents as “Impacts of Military Vehicle Training Activities on Vegetation: Bibliography With Abstracts ERDC/CERL Special Report 01-17” by J.S. Fehmi, Tyrone Farmer, and J.A. Zimmerman. The available literature on impacts of military vehicles on military lands was surveyed. The bibliography has been divided into two parts: (1) military references developed from military vehicles or military lands and representing primary observations or research, and (2) supporting references that were not developed from the military but which have applicability to training activities on military lands by military vehicles or are derivative from primary works on the military. This report contains 61 references with abstracts.

BIO-1

**Quality of Life** – You mention air, water and scenic quality, but you failed to analyze one of the most important of all overall qualities to desert residents – quality of life. You must assess the impacts of the project on the quality of life and loss of “desert outdoor experience” in the area.

SCOP-3

**Environment Justice** – On page 4.3-29 of the EIS, you say “There are no specific concentrations of minority or low-income populations in the vicinity of the proposed action as defined by Alternative 6 and all socioeconomic or environmental impacts that are attributable to Alternative 6 would apply equally to any affected persons, regardless of minority or income status.” This is not an accurate statement because many of the people who live in Lucerne Valley, Landers, and Johnson Valley are low income compared to other areas. To better understand this, just look at the average cost of living and real estate costs there.

SOC-1

**Transportation and Circulation** – On Page 4.6-2, you say “There were no transportation and circulation issues raised during the public scoping period for this

TRN-1

Response to Comment N-18857 (Page 2 of 11):

**LU-1:** Impacts associated with land use plans are addressed in Section 4.1 of the EIS.

**PHS-2:** The scoping summary report does not promise to “fully study and quantify” any particular issues raised by the public; it simply acknowledges those issues and states that relevant ones would be considered and addressed in the EIS. All of the issues cited in your comment have been acknowledged as potential impacts in the EIS, even if the costs could not be quantified at this time. Costs associated with implementing the proposed action would be addressed by DoD budget processes and congressional authorizations provided that Congress decides to proceed with the proposed action. Costs to implement the action are outside the scope of the EIS but will ultimately be a factor in final decision-making by DoD and Congress.

**REC-1:** A reduction of OHV lands in the region over time is acknowledged in the analysis in Section 5.4.2, which finds that cumulative impacts to recreation would be significant. A trend analysis to quantify the number of acres of loss over time was not required to support this finding.

**BIO-1:** Comment noted.

**SCOP-3:** Thank you for your comment. The EIS evaluates impacts to recreation, socioeconomics, and cultural resources, and the interrelationship with the natural and physical environment potentially impacted by the proposed action. NEPA does not require consideration of social values, experiences, beliefs, or quality of life.

**SOC-1:** The analysis of environmental justice impacts is consistent with the standards and requirements of the executive order.

**TRN-1:** Thank you for the comment. The text has been revised for the FEIS.

Comment ID: N-18857 (Page 3 of 11)

EIS.\* This is simply not true. In your own scoping report, you stated that the following (at a minimum) were brought up by the public for complete study and analysis: 1) Increased usage of utility and infrastructure may impact current systems (e.g., disruption to traffic circulation, impacts to existing communications and energy transmission lines and pipelines, damage to utilities/infrastructure from vehicle movements). 2) Potential impacts to Fire and Police Department times and their ability to provide coverage for acquired lands. 3) Increased waste disposal requirements and the potential for the requirements to be unfulfilled. 4) Impacts on roadways, railroads, and airspace from movement of equipment and personnel to/from the installation for training events. 5) Injuries or impacts from convoy crossings of public roads.

TRN-1

**Carbon Footprint** - On Page 4.8-4, you acknowledge that the public raised an issue regarding "increased carbon footprint." However, you never addressed "carbon footprint" again other than to reference increased levels of carbon monoxide.

AQ-1

**Noise Issues** - On page 4.9-5, you only recognize the public scoping issues that were raised pertaining to noise from additional training activities. Please list all the relevant noise issues that were raised in the 20,000 public comments received during scoping.

NOI-1

**Renewable Energy Opportunity Costs** - You fail to acknowledge, quantify or assess the impacts of the lost renewable energy development opportunities due to the land closure. Your scoping report said you would analyze "Possible prevention of other development opportunities (e.g., solar and wind energy generators as well as geothermal exploration) on the lands being studied."

LU-2

**Loss of Future Mining Opportunities** - You fail to acknowledge, quantify or assess the impacts of the lost mining development opportunities due to the land's long-term closure. It is unacceptable to say that there is a potential for indirect impacts of this type to occur, but then to conclude that "such impacts are speculative in nature and the level of any such impact cannot be estimated at this time." You must work with the BLM to more adequately present the mineral resources that would be locked up due to military base expansion. On page 4.12-13, you improperly say that "Loss of access to inactive mines and unworked mining claims would not restrict the overall availability of mineral resources (gold in the case of the Vulcan and America Mine sites), so there would be no indirect impacts to mineral resources due to purchase of claims that are unworked or are associated with inactive mines." Any loss of access would, of course, restrict availability.

LU-3

**Devaluation of surrounding private property** - Living near a military base and the resulting noise and safety issues WILL result in devaluation of property. Your analysis is incorrect to conclude, "If property values were to decline as an indirect impact, the reduction would likely be marginal and less than significant." Your scoping report said you would analyze "Decrease in property value of homes and land located near the expansion area." You have also failed to analyze the direct impact of devaluation on Wonder Valley properties.

SOC-2

Response to Comment N-18857 (Page 3 of 11):

**AQ-1:** Page 3.8-10 of the DEIS states that the potential effects of proposed GHG emissions are by nature global and cumulative impacts and that the impact of project-induced GHG emissions to global climate change is discussed in the context of cumulative impacts in Chapter 5 of the DEIS. Section 5.4.8 of the DEIS presents GHG emission estimates for each project alternative and an evaluation of their cumulative impacts. See also responses to comment SCOP-1 and PHS-2 above.

**NOI-1:** Text has been revised for the FEIS to include other relevant noise issues raised during scoping, as applicable.

**LU-2:** Thank you for your comment. The scoping summary report does not promise to address in the EIS any or all particular issues raised by the public; it simply acknowledges the issues raised and states that relevant ones would be considered and addressed in the EIS. This has been done and the relevant ones were analyzed in the EIS. Numerous renewable energy projects have been proposed in the vicinity of the project areas and these are addressed in Section 5.3.2. There is no basis for speculating that the proposed acquisition would necessarily preclude some hypothetical future energy project that could not be accommodated elsewhere in the desert region.

**LU-3:** Additional information about mining impacts has been added to the FEIS.

**SOC-2:** Per input from other commenters, information about Wonder Valley has been added to the FEIS. The EIS does analyze the property value issue, albeit qualitatively, and acknowledges that some impact would occur. The impact is not expected to be significant. Additional text has been added to further support this finding. DoN stands by the analysis of impacts to property values.

Comment ID: N-18857 (Page 4 of 11)

**Traditions / Archeological and Historical** – On page 4.11-2, you say “During the public scoping process for this proposed project, no comments were received from the public regarding cultural resources.” How can this be? Didn’t the Tribes present some issues? Also your own scoping report says these issues were raised: 1) Impacts to cultural resources of the region, including artifacts, historic cabins, and historic mining/freighting sites. 2) Potential destruction or elimination of significant archaeological and religious sites. 3) Violation of tribal concerns and rights, which includes the access to culturally significant sites and the compromise of culturally significant sites and their settings. 4) Possible destruction or elimination of historic structures and/or districts, including potentially historically important mines. 5) Potential impacts to various plant species historically used by Native Americans for subsistence. The impacts to all these items and more (like the historic values of Highway 242) need to be fully disclosed in the EIS.

**Access for Other Activities** – While you mention some activities like hiking, sightseeing and geocaching, you have failed to acknowledge the use of this land by so many others (scouts, model rocketry clubs, ultralite aviators, hang-glders, landsailers, rockhounds, equestrians etc.) The Partnership for Johnson Valley can fill you in on all the uses that take place out there.

**Accuracy/Adequacy of the Economic Analysis** - The Yucca Valley City Council has better economic data indicating an impact of at least \$5 million. The Johnson Valley Usage Survey that was done at the King of the Hammers shows \$1.6 million dollars spent in the area during the of the 2011 race week alone. Those survey results are very conservative. The economic impact for the communities along Hwy 18, 247 and 62 will be many times more than that \$1.6 million. The economic impact of the Marines going east would be minimal and maybe not even be negative. You need to correct that section in the EIS and also recognize that certain impacts (especially in the cities and towns of the high desert) will be significant as incomes and revenues decline, and businesses fail.

**More of a BLM lead even though it is a military EIS** – Even though BLM is a cooperater, the EIS is inadequate because it appears they have not provided you with information regarding lost energy development opportunities, mineral resource development opportunities, or areas that can be expanded or opened to wheeing as a result of the loss of Johnson Valley.

**Impacts to other current land uses** – You have failed to fully analyze the impacts on the railways, gas lines, SCE distribution lines and facilities, and especially all the impacts on rights-of-way, easements, and other land uses and authorizations/designations in all three study areas. Your scoping report said that you would do this.

**Costs** – You need to fully evaluate, quantify and disclose **ALL COSTS** for:  
a) enforcing OHV laws and dealing with illegal riding in other areas.  
b) signing and education campaigns.

CR-1

REC-2

SOC-3

NEPA-1

LU-4

NEPA-2

Response to Comment N-18857 (Page 4 of 11):

**CR-1:** The text has been revised in the FEIS to acknowledge cultural resource issues that were raised during scoping.

**REC-2:** All of those activities are acknowledged in the DEIS in Section 3.2.

**SOC-3:** Comment noted. The analysis and text of Section 4.3 has been revised for the FEIS.

**NEPA-1:** Comment noted.

**LU-4:** Comment noted. Please see response to comments SCOP-1 and LU-2 above.

**NEPA-2:** Cost/benefit analyses are not required to assess the environmental impacts of a proposed action. Decision-makers in the DoN and Congress will consider many different factors and sources of information in their decision-making, including costs, benefits, national priorities, etc. Such issues are outside the scope of the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the national deficit or debt is also outside the scope of this EIS analysis.

Comment ID: N-18857 (Page 5 of 11)

Response to Comment N-18857 (Page 5 of 11):

- c) real estate acquisition.
- d) mine acquisitions.
- e) hazardous material contamination reviews of lands and mines to be acquired.
- f) cleaning up all contaminated lands acquired.
- g) relocating utility lines.
- h) closing Amboy road under alternate 3.
- i) lost renewal energy development opportunities.
- j) lost mineral development opportunities.
- k) mitigating the lost Johnson Valley OHV lands with replacement lands for wheeling.
- l) grazing rights acquisitions.

NEPA-2 continued

How can a good decision be made without knowing the costs associated with each alternative? The government does not have an open checkbook. You must clearly show (in dollars and cents) the costs and benefits for each option.

**ALTERNATIVES**

During the scoping period, the public suggested various alternative actions the USMC could consider, as well as suggested modifications to the currently proposed scoping alternatives.

You have failed to analyze a full range of reasonable alternatives because you have not looked at alternatives to:

- 1) **Repeal the three wilderness areas near the base (Cleghorn, Sheephole, Cadiz).** Why wasn't the repeal of wilderness studied as an alternative? Explain this to the public in the EIS. Why doesn't an alternative analyze the opening of National Park or wilderness land for Marine training? Isn't it true that Congress made them so Congress can take them away? That would open up lots of land east of the base for Marine training. General Patton used that ground for tank training back in WWII days. It was good enough for him. Marines would have to shut down Amboy Road for a few days, but I can live with that. Ask them to analyze opening Sheephole, Cadiz, Cleghorn and even more wilderness. Why can't the Marines use those? In the 1500 pages of "legislative history" section for that law: [http://www.wilderness.net/NWPS/documents/legislativehistory/111\\_11\\_SH\\_0723\\_87.pdf](http://www.wilderness.net/NWPS/documents/legislativehistory/111_11_SH_0723_87.pdf) At page 862 a BLM COMMENT to some allegation say: "Several wilderness amendments in the 1981 and 1982 period were intended to be a further refinement of preliminary BLM decisions. The changes referred to were based on new data, reconsideration of existing data, and a public opinion. The changes and alternatives were analyzed in a draft and final environmental impact statement, and represent about a 10 percent decrease in the area recommended suitable (from 2.1 to 1.9 million acres). For each WSA the Record of Decision gives the rationale for the change.....The largest area dropped was Sheephole/Cadiz (WSA 305) which had been impacted by World War II military maneuvers and lacked wilderness qualities. The subsequent environmental impact statement

NEPA-3

**NEPA-3:** Sections 2.3 and 2.7 of the EIS explain the process of identifying reasonable alternatives that would at least minimally satisfy MEB training requirements and the alternatives selection criteria defined by the Marine Corps. During the NEPA process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Following the scoping process, the Marine Corps responded to public input by identifying Alternative 6 as a workable alternative that would satisfy training requirements while also making additional land available to the public approximately 10 months per year.

Comment ID: N-18857 (Page 6 of 11)

Response to Comment N-18857 (Page 6 of 11):

was neither protested or appealed." BLM NEVER RECOMMENDED THOSE AREAS AS WILDERNESS! THOSE AREAS SHOULD NEVER BEEN DESIGNATED IN THE FIRST PLACE! THEY NEED TO BE REPEALED NOW TO ALLOW FOR USMC TRAINING THERE!

- 2) Provide for "Non-Wilderness Training Corridors" through the wilderness areas. According to that link Mike sent, there was a ton of new wilderness areas created by California Desert Protection Act of 1994 - Public Law 103-433 (10/31/1994). <http://www.wilderness.net/index.cfm?..derness%20Laws> There is a special provision in that law for the Cleghorn Lakes Wilderness next to the base. See: [http://www.wilderness.net/index.cfm?..D=0&CID=0&key= \(13\)](http://www.wilderness.net/index.cfm?..D=0&CID=0&key= (13)) Certain lands in the California Desert Conservation Area, of the Bureau of Land Management, which comprise thirty-three thousand nine hundred and eighty acres, as generally depicted on a map entitled "Cleghorn Lakes Wilderness—Proposed", dated July 1993, and which shall be known as the Cleghorn Lakes Wilderness. The Secretary may, pursuant to an application filed by the Department of Defense, grant a right-of-way for, and authorize construction of, a road within the area depicted as "nonwilderness road corridor" on such map. Has this road has already been built for Marine training through the Cleghorn wilderness? If not, the Marines should build it now and train there. Even if they don't admit their mistake and repeal the wilderness designations, maybe congress can create more "nonwilderness corridors" in Cleghorn, Sheephole AND Cadiz Dunes to help the Marines better train east of the base? The EIS must consider this.
- 3) Only expand into the NORTH half of Johnson Valley. You studied an alternative (#2) that expanded into the east half of Johnson Valley. That one doesn't make much sense to me. The Marines should be more adaptable and able to accomplish all their training objectives north of Emerson Lake. Why can't the Marines leave the whole area in the south for us wheelers? Run that 3rd (southern) brigade from the base through the channel just south of Emerson Lake (north of Hartwell Hills, Los Padre and Blue Ribbon mines). Please see the attached map. The Marines would still get the necessary of training time. All 3 brigades would still be able to converge together at red map dot ("MEB objective") during their couple training exercises. This new alternative would only require Marines to expand into about 60,000 acres of Johnson Valley. It would leave over 120,000 acres for wheelers to continuing riding in. You must develop and fully study another alternative to consider this.

NEPA-3  
continued

ADDITIONAL COMMENTS/QUESTIONS

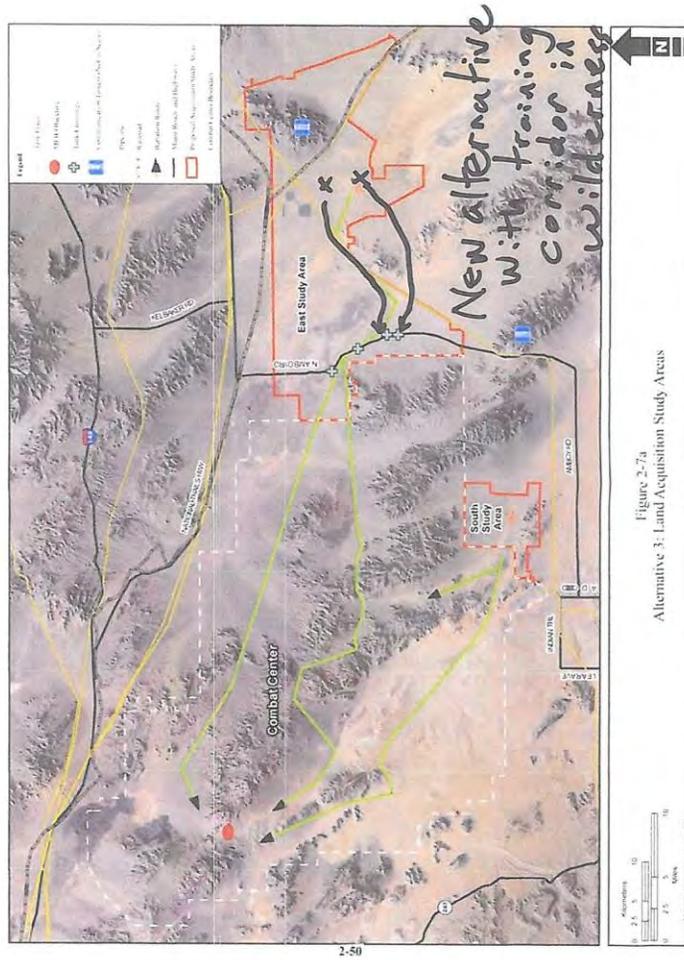

1) How much is it going to cost to buy 100+ private properties? At the public meetings, I was told that land acquisition cost alone would be about \$50 million for the smallest acquisition alternative. You FAQ document on-line also says that "Estimates will be developed for the various alternatives that will be studied in accord with NEPA, and this

NEPA-4

**NEPA-4:** Cost/benefit analyses are not required to assess the environmental impacts of a proposed action. Decision-makers in the DoN and Congress will consider many different factors and sources of information in their decision-making, including costs, benefits, national priorities, etc. Such issues are outside the scope of the EIS. Consideration of indirect effects of the Proposed Action on the DoD budget and the national deficit or debt is also outside the scope of this EIS analysis.

Comment ID: N-18857 (Page 7 of 11)

Response to Comment N-18857 (Page 7 of 11):

Comment ID: N-18857 (Page 8 of 11)

Response to Comment N-18857 (Page 8 of 11):

Comment ID: N-18857 (Page 9 of 11)

number continues to be an accurate estimate." This has not been done and needs to be ASAP.

NEPA-4 continued

2) I just can't understand why you guys say the economic impacts are "less than significant." The expansion takes over 100 private properties, closes mines, reduces sales & tax revenue, results in some business going under. Lucerne Valley could become a ghost town if they lose \$1.5 million or -25% compared to baseline due to reduced recreational and film industry spending. Why is it "significant" in the EIS to take 154-714 desert tortoises but "less than significant" to take that many private properties, mines, businesses? People are endangered species too. Taking one private property or closing one business is definitely significant in my book.

SOC-4

3) How much is it going to cost to buy out the miners?

NEPA-5

4) Why wouldn't the noise from the tanks, bombs, aircraft, and artillery be significant?

NOI-2

5) How did the EIS come up with just 300,000 visitors in Johnson Valley? You failed to recognize many other uses there.

REC-3

6) How do the airlines feel about more restricted airspace over the desert?

AIR-3

7) Your 1500+ page EIS treatise was not written for clear public understanding and discourse. You are not in compliance with the NEPA law. Instead, your EIS was development specifically with the goal of baffling the public with complex, technical, rambling and redundant bureaucratic obfuscation and gobbledygook. Your use of acronyms and insider military jargon is atrocious. For one example, what do these significant impacts (from the Executive Summary section) mean? They are even more difficult to understand in the airspace section. Explain these (and all the impacts) in terms that the public can understand: "Minimal to moderate impacts on Victor airway and moderate to significant impacts on jet route IFR air traffic within or adjacent to new and modified SUA. □ Minimal to moderate impacts on routes used by general aviation VFR aircraft. □ Minimal to moderate impacts on public airports and instrument approach procedures within close proximity to SUA. □ Minimal to moderate impacts on private airfields within, beneath, or bordering SUA."

NEPA-6

8) The EIS must study the location of OHV areas that can be expanded or created, to make up for acreage loss in Johnson Valley. The EIS must address and propose possible mitigation for the public values lost. If recreation use is simply displaced without providing alternative areas for use within the same travel parameters, then the EIS must address the costs to both BLM and local law enforcement agencies to deal with trespass and resource damage that would likely occur.

REC-4

9) The EIS must study the possibility of BLM selling some surplus land and then use the income to buy land for wheeling.

Response to Comment N-18857 (Page 9 of 11):

**SOC-4:** Comment noted. The rationale used to analyze socioeconomic impacts is described in Section 4.3 of the EIS.

**NEPA-5:** Please see the response to comment NEPA-4 above.

**NOI-2:** The rationale used in the analysis and modeling of noise impacts is described in Section 4.9 of the EIS.

**REC-3:** Section 4.2.1 of the EIS acknowledges incomplete or unavailable information; therefore, in accordance with CEQ regulations the Marine Corps conducted interviews with BLM and other key recreation organizations and stakeholders to obtain reliable data and assumptions on annual visitor-days of use. The Marine Corps worked closely with BLM to develop reasonable assumptions for estimated visitor-days of use in Johnson Valley as described under each action alternative. These assumptions were approved by BLM staff knowledgeable about and responsible for recreation management of the Johnson Valley OHV Area.

**AIR-3:** Please see the response to comment AIR-1 above.

**NEPA-6:** Comment noted. The proposed action is complex and has many components. To characterize the affected environment and potential impacts, sufficient detail needed to be included in the EIS. The EIS was developed with the intent to balance readability with sufficient technical information. The Executive Summary provides a brief overview of the project alternatives and the general types of impacts. It is not intended to stand on its own without the rest of the EIS.

**REC-4:** The Marine Corps has fully considered public comments in the development of the EIS, including the formulation of reasonable alternatives and mitigation measures. Numerous commenters on the Draft EIS stated that the Marine Corps should designate or obtain other lands in the region to mitigate the loss of OHV are in the Johnson Valley. The Marine Corps does not have the jurisdiction or capability to designate or otherwise obtain lands for OHV use and could not be committed to such an effort as part of the Record of Decision (ROD) for this action. The BLM has management jurisdiction over public lands. Designating lands for OHV use is a reasonable mitigation measure, and it is identified here to alert BLM and encourage them to consider this during future development of Resource Management Plans (RMPs).

Comment ID: N-18857 (Page 10 of 11)

- 10) For mitigation, the EIS must identify the possibility of Congress creating a \$10-20M/year (or more) appropriation for OHV land purchase, management of dual-use area, law enforcement, education and outreach programs to prevent illegal riding etc.
- 11) The EIS must include a full justification for the expansion. Much of the justification that the County and public have seen to-date in preliminary presentations involves the need for large units and large-scale ground maneuver training. The Department of the Navy should assess the warfare situations that may likely face Marines in the next 25 years and whether the more likely future scenarios will be similar to the current engagements of small units in semi-urban settings.
- 12) DEIS says the expansion will have no visual impacts to the residents of the area. The glaring lights of Baghdad City and newly installed beacons are already an impact, and they are on the existing base. New beacons and desert maneuvers will light up our dark skies even more, and this needs to be addressed.
- 13) There will also be lack of restriction from the airspace above our homes. Low flying helicopters are already terrible. The EIS must address this.
- 14) As far as the escalating noise is concerned, the EIS projects doubling ordnance activity including dropping bombs from aircraft. There is no mention of vibrations in the EIS. You must study and quantify: 1) broken windows miles from the explosions, 2) empty tortoise shells near the border, 3) an increase in anxiety levels among the neighbors.
- 15) Under Cultural Resources, the EIS does not mention the historic eligibility of Johnson Valley or other neighboring homestead communities, and the impact of the light, noise and vibration on them. The recent 150 mph wind dramatizes the likelihood of disruption of training schedules. Accuracy hitting the targets can be questioned with unpredictable high winds. The last bombardment right near the border with Johnson Valley makes this idea even scarier.
- 16) How will the taking of private land, grazing rights and mining claims be compensated for?
- 17) How is 29 Palms planning to deal with the liability risk at events?
- 18) What restrictions will be placed on people trying to hold events on this "dual use" land?
- 19) What will the BLM role be, if any, in permitting & managing events in the dual use area?
- 20) Illegal OHV use on private land will increase. What will 29 Palms and BLM do (if anything at all) to help curtail this activity?

- REC-4 continued

- NEPA-8
- NEPA-9
- NEPA-10
- NEPA-11
- NEPA-12

Response to Comment N-18857 (Page 10 of 11):

**NEPA-7:** The purpose and need for the proposed action are described in Section 1.3 of the EIS. Decision-makers in the DoN and Congress will consider many different factors and sources of information in their decision-making, perhaps including national defense priorities and future requirements. Such issues are outside the scope of this EIS.

**VIS-1:** Section 2.2 of the EIS has been updated to clarify the use of lighting during proposed training activities. Section 4.5, which discusses impacts to visual resources, has been updated as appropriate.

**AIR-4:** Comment requires clarification. Airspace-related impacts are addressed in Section 4.7.

**NOI-3:** Additional analysis and text have been added to the FEIS to address vibrations from noise.

**CR-2:** Text has been added to Sections 3.11 and 4.11 to address homestead properties as a potential cultural resource.

**NEPA-8:** Any acquired properties would be paid fair market value.

**NEPA-9:** As described in Section 2.5, the Marine Corps proposes a variety of safety measures and management procedures under Alternatives 4, 5, or 6 to focus on the safety of visitors to any restricted public access area (RPAA). For any permitted race events that may occur within an RPAA, the Marine Corps would manage the area similarly to how the BLM manages races currently; i.e., with permits, insurance requirements, etc., that require race promoters to assume the liability for the safety of people attending their events.

**NEPA-10:** Some preliminary restrictions have been proposed in Section 2.5 of the EIS, but the Marine Corps would develop appropriate use restrictions in consultation with affected stakeholders should Alternatives 4, 5, or 6 be implemented.

**NEPA-11:** At this time any potential role for the BLM is undefined.

**NEPA-12:** As a result of public and agency comments received on the DEIS, the Marine Corps conducted a Displaced OHV Recreation Study (DORS) to further evaluate displaced OHV use (legal and illegal OHV activity). Results of this study are referenced in the Final EIS, along with any recommended mitigation strategies.

Comment ID: N-18857 (Page 11 of 11)

Response to Comment N-18857 (Page 11 of 11):

21) Why can't some wilderness be opened for OHVs? If they just have to train in Johnson Valley, get rid of the wilderness but then open it for wheeling. Open 3 acres of wilderness to wheelers for every acre lost in Johnson Valley. There's already way too much wilderness. Hardly anyone goes there. They are not accessible. How many people hike, camp or ride horses in them? The EIS must develop mitigation of opening wilderness areas. Analyze the current wilderness use that would be lost, as well as the OHV use to be gained by opening them to wheeling.

22) Where can current OHV areas be expanded? There might be a way to expand Stoddard, Razor and others. 29 Palms and BLM need to study this.

23) Where can new OHV territory be created? A 3:1 ratio was suggested at BLM advisory committee meeting (3 new acres opened, for every acre closed). The law requires they look at mitigation. Where does the EIS talk about expanding or creating new areas for riding? If 150,000 acres are lost in Johnson Valley, the EIS should suggest congressional designation for 450,000 acres OHV area. Some ideas are: Expand Stoddard to south. Expand Razor to west. Designate Dumont Dunes, Dove Springs, Jawbone Canyon, Keysville, Spangler Hills, El Mirage, Glamis, Imperial Dunes etc. What other areas can be designated? What areas have been closed in the past that can now be re-opened? There are a million acres to consider nationwide. Lawmakers can pick 450,000 acres from that.

24) Please go east or don't expand at all.

25) Please address these comments in the next draft of the EIS.

26) Please add me to your mailing list for a copy of the Final EIS.

Sincerely,  
Ronald Siddert  
39553 Hawthorne St  
Palmdale, CA 93551

Comment ID: N-18858  
Date Received: May 31, 2011

May 20, 2011  
38167 Desert Hawk Dr  
Palmdale, CA 93552

Naval Facilities Engineering Command, Southwest  
ATTN: 29Palms EIS Project Manager  
1220 Pacific Highway  
San Diego, CA 92132-519

To whom it may concern:

As an advocate for responsible off-highway vehicle recreation and the Marine Corps also, I feel that there is room to the east of 29 Palms and think the Marines should expand there.

As far as your Draft EIS, I have some serious concerns about the validity of many of your assumptions used in the analysis:

Chapter 1, page 24 and Chapter 2, page 1: It is assumed in this EIS that by the time the proposed action were implemented (approximately 2015), requirements for EMV iterations would likely be reduced to align with pre-war CAX levels of about 4-5 EMV-equivalent exercises annually. This expected reduction would be offset by the increase in MEB Building Block training (see Section 2.1), such that the overall training throughput of tenant and transient units up to a single battalion in size would approximate 2010 levels.

COMMENT – This is not a valid assumption as the Marine Corps' 2015 budget will be nothing like their 2010 budget. Assumptions must be clearly tied to reasonable budget projections. As the Defense Department seeks additional cost cuts to support President Barack Obama's deficit-reduction efforts, weapons systems, major procurement programs, acquisitions, and contracted goods and services will all be on the table to find ways to increase buying power. Revise this assumption to more accurately correlate to the Marine Corps' expected budget downsizing in 2015.

Page 2-35: The vehicle mileage assumed during Building Block training is encompassed in the Air Quality baseline modeling (see Appendix G).

COMMENT – This is not a valid assumption as the Marine Corps' 2015 budget will be reduced. Combined with the increasing costs of gas, you need to assume less vehicle use as a part of overall cost-cutting and energy-savings measures that are sure to be implemented by the Marine Corps. Revise this assumption to more accurately correlate to the Marine Corps' expected budget downsizing, as well as less vehicle and energy use.

3.2-1: "event-related" visits are assumed to include those participants and spectators of organized OHV races or other similar events that visit exclusively because of a scheduled event (and would not visit if the event were not being held);

Dispersed use visitors are also assumed to include a proportion of race spectators that would come to the project area anyway, even if race events did not occur.

GEN-1

SOC-1

Response to Comment N-18858 (Page 1 of 8):

GEN-1:

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

SOC-1:

Please see Appendix K of the Final EIS for information on Socioeconomics modeling assumptions for displaced event-related and dispersed visitor use. All visitor use information is based on the best available data as provided by the BLM.

Comment ID: N-18858 (Page 2 of 8)

COMMENT – Please explain why a proportion of race spectators would still come to the area, even if race events did not occur. What proportion are you referring to?

3.2-25: For the purposes of providing an estimated number of visitors for this event alone [KOH], it was assumed that the 15,146 visitors estimated for 2010, visited Johnson Valley for an average of 3 days; therefore, the total visitor-days of use for this event in 2010 was estimated to be 45,438 visitor-days of use.

COMMENT – This is not a valid assumption as it's not consistent with the BLM's use data for this one event. The event promoter is required to accurately submit visitor use data, and then pay a fee. Rather than make up a number based on an unvalidated assumption, reference the event promoter's official submission to BLM. If you use something different, then you are also publicly showing that the BLM is not doing an adequate, proper job in their permitting process in monitoring events, visitor use, and collect appropriate fees.

3.2-26: The visitor-days of use for the King of the Hammers event was estimated separately (45,438 visitor-days). To estimate the visitor-days of use of activity related to other organized events throughout the year, 50% of remaining event visitors were assumed to recreate in Johnson Valley for 2 days and the other 50% of event visitors was estimated to recreate in Johnson Valley for 3 days (BLM 2009).

COMMENT – This is not a valid assumption as it does not take into consideration the many people who camp out and recreate in Johnson Valley for extended periods of time (greater than just 2 or 3 days.) You should also reference the information that organized event promoters submit to BLM. That is supposed to be accurate and is monitored by BLM to ensure that proper event fees are paid.

3.9-8: The projected baseline level of ordnance activity within the Combat Center range complex at the time the proposed action would be implemented (approximately 2014 or 2015) is assumed to be approximately double (2x) the baseline ordnance use modeled in the 2003 noise study, WR 03-11 (Wyle 2003b). An assumed doubling of the ordnance use since 2002 represents the estimated change that has occurred due to higher wartime training requirements and deployments in recent years, and that is expected to continue.

COMMENT – This is not a valid assumption as the Marine Corps' 2015 budget will be reduced. Combined with the increasing costs of gas, you need to assume less ordnance activity as a part of overall cost-cutting and energy-savings measures that are sure to be implemented by the Marine Corps. Revise this assumption to more accurately correlate to the Marine Corps' expected budget downsizing, as well as less ordnance use.

3.10-60: Areas that might potentially be affected by new airspace are assumed to be limited to those where new low altitude (e.g., to 1,500 feet [457 meters] above ground surface or lower) limits are established. Aircraft operations at higher altitudes are not likely to affect biological resources because noise levels would be lower and operation would be above the flight altitude of migratory birds.

COMMENT – This is not a valid assumption as it has been clearly documented that many kinds of birds fly at altitudes higher than 1,500 feet. Please see the attachment entitled "Migratory Bird Altitude" put out by the USGS.

SOC-1

NOI-1

AIR-1

Response to Comment N-18858 (Page 2 of 8):

NOI-1:

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

AIR-1:

The Final EIS has been modified for clarification.

Comment ID: N-18858 (Page 3 of 8)

4.1-3: For the purposes of the land use impact analysis, it is assumed that all applicable federal statutes, regulations, and programs related to property acquisition, acquisition of existing rights-of-way, surface and subsurface mining rights, and other property rights and ownership, would apply. For example, this includes purchase of private property at fair market value and, as appropriate, applicable relocation assistance.

COMMENT – This is not a valid assumption because there are no cost estimates in the EIS of how much these things will cost for each of the alternatives. This information must be openly disclosed to the public, as well as factored into the EIS analysis. The Marine Corps does not have an open checkbook. I was told at the public meetings that it would cost about \$50-100 million. This is an unreasonable assumption, especially in light of the efforts to reduce the Dept of Defense's budget.

4.2-1: Specifically, a Year 2015 baseline estimate of 337,000 average annual visitor-days was assumed in this analysis, based on 2010 visitor data estimated by BLM and the agency's projections for growth in visitors to the area over the next few years.

COMMENT – This is not a valid assumption because you have not factored in the rising cost of gas. Recreation growth is going to decline if it gets too expensive for people to travel long distances to the desert and then feed there gas-guzzlers once there.

4.2-1: For purposes of this analysis, a level of 800 visitor-days per year was assumed for the south study area and 500 visitor-days per year was assumed for the east area.

COMMENT – This is not a valid assumption because if Johnson Valley and the south areas are closed then you can expect more people to recreate in the east area instead.

4.2-6: Notes: 1 Assumes that 90% of dispersed use visitor-days under each alternative from Table 4.2-3, would be displaced to other recreation and OHV areas within San Bernardino County. Assumes that none of the event-related visitor-days would be accommodated at regional OHV areas.

COMMENT – I find it hard to believe that NONE of the events could be accommodated at other regional OHV areas. There are a number of motorcycle races, for example, that could use Reddard Valley instead. This is not a valid assumption.

4.2-11: As mentioned above, it is reasonable to assume that roughly 60% of existing racing events, including car and truck races that currently occur within the Johnson Valley OHV Area, would be displaced or eliminated.

COMMENT – This is not clear. How much of the 60% would be displaced vs. eliminated? The statement is also inconsistent with the footnote on page 4.2-6 that says you assumed that "none of the event-related visitor-days would be accommodated at regional OHV areas" for that alternative.

4.2-20: As mentioned above, it is reasonable to assume that roughly half of the existing racing events, including car and truck races that currently occur within the Johnson Valley OHV Area, would be displaced or eliminated.

GEN-2

REC-1

Response to Comment N-18858 (Page 3 of 8):

GEN-2:

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

REC-1:

All visitor use information is based on the best available data as provided by the BLM. Please see Appendix K for more information on displaced visitor assumptions. Appendix K explains that some race events may be able to proceed in a reduced or truncated form, or be held elsewhere as a weekday event, but for the sake of a conservative analysis, it is assumed that no current Johnson Valley race events would be held anywhere in the county.

Estimates for visitor days in the East and South study areas are baseline estimates meaning they represent data prior to the implementation of the proposed action.

Comment ID: N-18858 (Page 4 of 8)

COMMENT – This is not clear. How much of the 60% would be displaced vs. eliminated? The statement is also inconsistent with the footnote on page 4.2-6 that says you assumed that “more of the event-related visitor-days would be accommodated at regional OHV areas” for that alternative.

REC-1

4.3-2: for Johnson Valley only, the spending pattern differences based on visitor origin (e.g., “local” visitors are assumed to spend all of the daily amount within the local area, while visitors from outside the county are expected to spend some proportion in their home county before they leave, some on the way, and the rest in the local area during their visit);

COMMENT – This is not clear. Clarify how much is spent at home, on the way, & in the local area.

4.3-5: Specifically, a Year 2015 baseline estimate of 337,000 average annual visitor-days was assumed in this analysis, based on 2010 visitor data estimated by BLM and the agency’s projections for growth in visitors to the area over the next few years.

COMMENT – This is not a valid assumption because you have not factored in the rising cost of gas. Recreation growth is going to decline if it gets too expensive for people to travel long distances to the desert and then find there gas-guzzlers once there.

Recreational visits to Johnson Valley include a mix of single-day and multi-day trips (the analysis assumed a mix of 20% single-day and 80% multi-day).

For purposes of this analysis, a level of 800 visitor-days per year was assumed for the south study area and 500 visitor-days per year was assumed for the east area: all visits were assumed to be single day instead of multi-day visits and all by local area residents only. See Appendix K for a complete description of modeling assumptions and results.

SOC-2

COMMENT – This is not a valid assumption because if Johnson Valley and the south areas are closed then you can expect more people to recreate in the east area instead.

The assumed baseline level of film industry spending in the project area is approximately \$1.6 million per year, based on the total level of such spending in the Johnson Valley area between 2001 and 2008 (Inland Empire Film Commission 2010a). All benefits of this film industry spending was assumed to accrue to the “local” area within 50 miles (80 km) of Johnson Valley. Half of film industry expenditures were assumed to be taxable at a 10% rate (average transient occupancy tax rate for the area).

COMMENT – This is not a valid assumption because rising gas costs will keep the film industry closer to home. I would expect the majority of films requiring desert scenes to be shot in the Mojave as close to Hollywood as possible. I expect greater movie filming use in the Palmdale and Lancaster areas.

As shown in Table 4.3-1, the total estimated direct county-wide expenditures (2015 baseline conditions) related to recreational use of all three acquisition study areas and film industry use of Johnson Valley (including sales tax) is approximately \$8.7 million per year (expressed in 2015 dollars). Approximately \$6 million of this amount is assumed to be spent in the area within 50 miles (80 km) of Johnson Valley. Almost \$7.5 million in additional trip spending is assumed to occur outside the county as visitors travel to Johnson Valley from other counties and states.

Response to Comment N-18858 (Page 4 of 8):

SOC-2:

Please see Appendix K for more information on visitor spending patterns.

All visitor use information is based on the best available data as provided by the BLM.

Estimates for visitor days in the East study area are baseline estimates meaning they represent data prior to the implementation of the proposed action.

Please see Appendix K for information on assumptions related to film industry spending.

Under Alternative 1, less than 100% of the entire area would be for exclusive military use. The EIS states on page 4.3-6 that some dispersed use is assumed to continue because a few popular areas within the Johnson Valley OHV would remain open to the public.

Assumptions on where military personnel would live are based on current percentages. Clarifying text has been added to the Final EIS.

Table 4.2-5 shows that 90% of displaced OHV use would be expected to continue to use OHV areas within San Bernardino County.

Please see Appendix M of the Final EIS for more information on displaced OHV use and some environmental impacts that might be expected.

4.3-6: Alternative 1. In addition, the analysis assumed that 100% of organized race events would be displaced (along with all visitor-days of use associated with such events) and 75% of the visitor-days categorized as dispersed use would not occur.

COMMENT – This is not a valid assumption because if the entire area is exclusive military use then dispersed use should also decrease by 100% there. Also, if 100% of the organized events are “displaced,” then you need to state where they will be displaced to and analyze the impacts of that. If you actually meant that a percentage would be “eliminated,” then state and analyze that. My guess is that some will be displaced and some will be eliminated.

4.3-7: New military personnel were assumed to be distributed 25% living on the installation and 75% living in surrounding communities. It was also assumed that 70% of all new positions would be filled by people migrating from outside the county.

COMMENT – Is this assumption similar to the current distribution of military personnel on base vs. off base? Provide the current distribution and your rationale for assuming something different. Are 70% of new positions currently filled with people moving in from outside the County? Describe the current percentage and your rationale for assuming something different.

4.3-8: Based on their locations relative to the two main routes used to travel to Johnson Valley, it could be assumed that Lucerne Valley and Yucca Valley together benefit from the majority of the “local” spending from Johnson Valley visits.

COMMENT – This is not a valid assumption because I’m sure that many wheelers come to the area along I-10 and I-40, through Barstow and Palm Springs. There will also be impacts to those communities.

4.3-9: As indicated in the analysis described above and in Appendix K, it is conservatively assumed that at least 25% of the total dispersed use OHV activity (which represents 83% of total visitor-days) would continue to occur after implementation of Alternative 1.

COMMENT – How could 25% of the dispersed use continue to occur if the area becomes exclusive for military use?

4.3-14: The socioeconomic analysis assumed that 60% of organized race events would be displaced (along with all visitor-days associated with such use) and 25% of the dispersed use would no longer occur. Based on input from the BLM, the analysis also assumed that 90% of the total annual visitor-days displaced by Alternative 2 in the “local” area (within 50 miles [80 km] of Johnson Valley) would be transferred to the other designated OHV areas and recreational opportunities in the county. Other assumptions used in the analysis are described in Appendix K.

COMMENT – If 60% of the organized events are “displaced,” then you need to state where they will be displaced to and analyze the impacts of that. If you actually meant that a percentage would be “eliminated,” then state and analyze that. My guess is that some will be displaced and some will be eliminated.

SOC-2

Comment ID: N-18858 (Page 6 of 8)

4.3-21: For purposes of this analysis, it was assumed that the average annual visitor-days of use would be reduced by 15% for both organized events and multi-day dispersed use. Single-day dispersed use visits were assumed to decline by 30%.

COMMENT - How much will be displaced? How much will be totally eliminated? If 30% of the organized events are "displaced," then you need to state where they will be displaced to, and analyze the impacts of that. If you actually meant that a percentage would be "eliminated," then state and analyze that. My guess is that some will be displaced and some will be eliminated.

4.6-5: For the purpose of this analysis, a worst-case scenario is assumed, whereby all 8,000 Marines would arrive by bus on the same day (though this would never likely be the case). This would equate to roughly 200 buses (40 passengers per bus) arriving at the Combat Center on the same day. The greatest percent increase in traffic volume would therefore occur on Lear Avenue (an approximate 6% increase in traffic volume [3,461 vehicles per day to 3,661 vehicles per day]). Such an increase would not meet the threshold of significance (12%) as described in Section 4.6.1.2, and therefore, would not substantiate a significant shift in LOS.

COMMENT - This is not a valid assumption because there is no likelihood that all 8000 Marines would arrive by bus on the same day. While that would be a great reason for a parade in the high desert, please use an assumption for analysis that has more credibility. The EIS itself admits that "this would never likely be the case." Thus, it shouldn't even be presented as a worst-case scenario.

4.7-2: The number of sortie-operations was assumed to be equally accounted for in multiple SUA areas since the proposed SUA would allow all sortie operations to be more widely dispersed throughout the entire airspace complex.

COMMENT - This is not a valid assumption because MEB exercises don't call for equal dispersment of sorties. If the batralions are moving east to west, then there would be a different dispersment of aircraft in comparison to when they move west to east. Analyze the differences accurately by alternative rather than assume equal dispersment through entire airspace complex.

4.7-7: Many of the ongoing Combat Center operations are staged out of the Expeditionary Airfield (EAF), as described in Section 3.7.3.1, and it is assumed MEB Exercise aircraft would also operate from this airfield.

COMMENT - This isn't valid assumption because that airfield isn't equipped to handle F-35s, etc.

4.8-5: All emissions are assumed to occur in calendar year 2013.

COMMENT - This is not a valid assumption because emissions will occur over multiple years. The MEB exercises aren't even scheduled to begin until 2015.

4.9-2: For each of the action alternatives, it was generally assumed that each airspace sortie would generate an arrival and departure at the EAF and no run-ups. The exception would include F-35B aircraft because the EAF matting surface is currently not designed to withstand the temperatures caused by an F-35B performing a rolling vertical landing or a purely vertical landing. No F-35 flight or run-up operations

SOC-2

TRANS-1

AIR-2

AQ-1

NOI-2

Response to Comment N-18858 (Page 6 of 8):

**TRANS-1:**

The assumption that all 8,000 Marines would arrive on the same day is made in order to provide a worst case scenario, which is required under NEPA.

**AIR-2:**

Please see Appendix D for information on estimated percentage of sortie time that various aircraft types would normally operate within each airspace area while performing MEB Exercise mission activities.

Comment noted.

**AQ-1:**

The statement referred to in your comment is presented as a note to Table 4.8-2, which refers to the construction phase that would take place prior to any MEB operations.

**NOI-2:**

Comment noted.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: N-18858 (Page 7 of 8)

were modeled at the EAF for any alternative. This is consistent with the F-35B West Coast Basing EIS (DoN 2010).

COMMENT – The Draft EIS indicates a variety of other aircraft also. Historical data most likely shows much aircraft used in training missions there as coming from Yuma or other places. It doesn't seem valid to assume all but the F-35 would generate an arrival and departure at the EAF.

4.9-4: Ordnance operations were assumed to be distributed uniformly across all firing/target locations.

COMMENT – This is not a valid assumption because MEB exercises don't call for equal dispersment of ordnance. If the battalions are moving east to west, then there would be a different dispersment of ordnance in comparison to when they move west to east. Analyze the differences accurately by alternative rather than assume uniform dispersment across all firing/target locations. The company objectives and final MEB objective should also receive more ordnance, wouldn't they?

4.9-23: One of the 52 POIs would have CNEL greater than or equal to 62 dBC. The residentially-zoned west study area site would have a CNEL of 64 dBC. However, it is assumed that the west study area site would not have occupied housing.

COMMENT – This is not a valid assumption because there is occupied housing within close proximity in Johnson Valley.

4.10-1: The quantitative estimates of disturbance are totals over the project lifetime, which is assumed to be approximately 50 years; however, direct impacts would be greatest when military training under the proposed action begins.

COMMENT – Why wouldn't the project lifetime correlate with the term of the military (and withdrawal) that is being proposed? Isn't that only 70 or 75 years and would be subject to approval by Congress?

4.10-3: The same basemap was used with GIS analysis to estimate the number of tortoises located within the disturbance footprint, and a presumed amount of take was derived (assumed to be 50% in high-intensity disturbance areas and 10% in medium-intensity disturbance areas). These impact quantifications were limited to anticipated areas of high- and medium-intensity disturbance.

Modeling also assumes that densities would remain constant over the lifetime of the project, does not account for movement of tortoises into or out of disturbed areas, and does not account for recovery of disturbed areas (which would not be expected due to ongoing disturbance and long recovery times). The wide range reported for potential take of desert tortoises is related to the uncertainty in estimating desert tortoise density (Karl 2010). Refer to Appendix I for detailed assumptions and methodology used in assessment of impacts to tortoise habitat and take of tortoises.

COMMENT – How can you assume a 50% take with all the conservation measures and mitigation that being proposed for tortoises? That seems awfully high. Don't the Marines try to avoid high-density tortoise areas whenever possible?

NOI-2

BIO-1

Response to Comment N-18858 (Page 7 of 8):

BIO-1:

Thank you for your comment.

As noted in the EIS, a wide range is provided due to the uncertainty in estimating desert tortoise density.

**Comment ID: N-18858 (Page 8 of 8)**

4.12-6: This assumes that the two known alternative sources of local iron ore (Baxter Quarry and Silver Lake Mine) would continue to be in production until at least 2020 and 2022, respectively, as per their current SMARA permits (see discussion in Section 3.12.3.2).

COMMENT – This is not a valid assumption because MEB exercises within exclusive mining use areas would not be compatible with producing mines. Please explain how those uses, diagnostic and clashing uses can jointly occur. Better yet, assume both will have to be closed or brought out by 2015 when the training exercises begin and analyze that in terms of costs and impacts to mining.

4.13-1: The impact analysis assumed that no additional water infrastructure would be developed to supply water for the training exercises. Instead, it was assumed that all water required to support the training exercises would be supported by existing groundwater supplies at the Combat Center (i.e., the Surprise-Spring subbasin), and none of the project alternatives would extract groundwater from the proposed west, south, or east study areas. The analysis also assumed that two or three communication towers (depending on the alternative) would be constructed, with no other permanent structures constructed.

COMMENT – How long can the existing water supplies last? The visual impacts of communications towers have not been adequately analyzed in the EIS.

Please keep me informed of all progress on this project.

GEO-1

GEN-3

Sincerely,

  
Tammy Blackwell

**Response to Comment N-18858 (Page 8 of 8):**

**GEO-1:**

Please see Section 2.6 of the EIS. Section 2.6 explains that mining claim owners would be offered fair market value for their claims or be offered reasonable access to their claims. These decisions as to which would be offered would be made on a case-by-case basis.

**GEN-3:**

Thank you for your comments. Please see Section 4.13 of the EIS for information on Water Resources and Section 4.5 of the EIS for information on Visual Resources.

Northern Prairie Wildlife Research Center

## Migration of Birds

### *Migratory Flight Altitude*

While factors regulating the heights at which birds migrate are not clear, there are many obvious reasons why flying at higher altitudes may be advantageous. High-altitude flight may be used to locate familiar landmarks, fly over fog or clouds, surmount physical barriers, gain advantage of a following wind, or maintain a better thermoregulatory balance.

In general, estimates of bird heights based on direct observation are quite unreliable except under special conditions. A Eurasian Sparrowhawk could be distinguished at 800 feet but disappeared from site at 2,800 feet. A Rook (a European member of the crow family) could be recognized at 1,000 feet but disappeared from sight at 3,300 feet. An interesting experiment with an inflated model of a vulture painted black with a wing span of 7 feet 10 inches illustrated similar limitations. When released from an airplane at 4,700 feet, it was barely visible and invisible without binoculars at 5,800 feet. At 7,000 feet it was not picked up even when 12 power binoculars were used. Radar studies have demonstrated more accurately than human vision that 95 percent of the migratory movements occur at less than 10,000 feet, the bulk of the movements occurring under 3,000 feet.

Yet birds do fly at higher altitudes. Bird flight at 20,000 feet, where less than half the oxygen is present than at sea level, is impressive if only because the work is achieved by living muscle tissue. A Himalayan mountain climber at 16,000 feet was rather amazed when a flock of geese flew northward about two miles over his head honking as they went. At 20,000 feet a man has a hard time talking while running, but those geese were probably flying at 27,000 feet and even calling while they traveled at this tremendous height. Numerous other observations have come from the Himalayas. Observers at 14,000 feet recorded storks and cranes flying so high that they could be seen only through field glasses. In the same area large vultures were seen soaring at 25,000 feet and an eagle carcass was found at 26,000 feet. The expedition to Mt. Everest in 1952 found skeletons of a Northern Pintail and a Black-tailed Godwit at 16,400 feet on Khumbu Glacier. Bar-headed Geese have been observed flying over the highest peaks (29,000+ feet) even though a 10,000-foot pass was nearby. Probably at least 30 species regularly cross these high passes. Other accurate records on altitude of migratory flights are scanty, although altimeter observations from airplanes and radar are becoming more frequent in the literature. For example, a Mallard was struck by a commercial airliner at 21,000 feet over the Nevada desert. Radar observations have revealed that birds on long-distance flights fly at higher altitudes than short-distance migrants. It has been hypothesized that advantageous tail winds of greater velocity are found higher up and that the cooler air minimizes the demand for evaporative water loss to regulate body temperature under the exertion of flight. Radar studies also have shown that nocturnal migrants fly at different altitudes at different times during the night. Birds generally take off shortly after sundown and rapidly gain maximum altitude. This peak is maintained until around midnight, then the travelers gradually descend until daylight. Thus, there is considerable variation, but for most small

4/20/2011

Thank you for your comment.

**Comment ID: N-18859 (Page 2 of 2)**

**Response to Comment N-18859 (Page 2 of 2):**

NPWRC -- MIGRATION OF BIRDS

Page 2 of 2

birds the favored altitude appears to be between 500 and 1,000 feet. Some nocturnal migrants (probably shorebirds) fly over the ocean at 15,000 or even 20,000 feet. Nocturnal migrants also fly slightly higher than diurnal migrants. Observations made from lighthouses and other vantage points indicate that certain migrants commonly travel at altitudes of very few feet to a few hundred feet above sea or land. Sandpipers, Red-necked Phalaropes, and various sea ducks have been seen flying so low they were visible only as they topped a wave. Observers stationed at lighthouses and lightships off the English coast have similarly recorded the passage of landbirds flying just above the surface of the water and rarely rising above 200 feet over the waves.

**RE: NEPA - NOTICE OF A DRAFT ENVIRONMENTAL IMPACT STATEMENT (DEIS) FOR THE 29 PALMS TRAINING LAND ACQUISITION AND AIRSPACE ESTABLISHMENT PROJECT**

Thank you for giving the San Bernardino County Department of Public Works (Department) the opportunity to comment on the above-referenced project. The environmental document was circulated to other Divisions within our Department and the following are their comments:

**Traffic Division (Ed Petre, P.E., (909) 387-8186):**

1. Please have the Marine Corps submit a traffic study to us for review and comment, showing the impacts on the County Maintained Road System by the proposed base expansion.
2. Question: who would maintain any of the current County maintained roadways which fall within the proposed base expansion?
3. FYI-one of the proposals would close North Amboy Road for a period of two (2) days per year.

TRN-1

**Environmental Management Division (Milo Rivera, Ecologist Resource Specialist, (909) 387-7971):**

Expansion of 29 Palms base would lead to further degradation and fragmentation of habitat for Desert Tortoise and with a good population already present on base, this has potential to lead tortoises to being extirpated from base lands. As Fort Irwin expansion has shown, efforts to relocate Desert Tortoise have been unsuccessful.

Response to Comment N-18860:

**TRN-1:**

Impacts to transportation and circulation under each of the action alternatives is contained in Section 4.6 of the EIS. Under the proposed action, the Marine Corps would not acquire any County-maintained roadway; therefore, maintenance of roadways would be performed as it is currently.

As described in the EIS in Section 4.6, mitigation measure TRAN-1 would be implemented to lessen impacts. TRAN-1 specifies that the Marine Corps would coordinate with the City of Twentynine Palms, the County of San Bernardino, and other local authorities to provide as much advance notice as possible for the two day per year that North Amboy Road would be closed. In addition, notices would be provided to city and county transportation officials and proper signage and warnings would be placed along nearby travel corridors.

**BIO-1:**

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The EIS concludes that there would be a significant impact to desert tortoise under each of the action alternatives. The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

RE: Draft Environmental Impact Statement (EIS) for Land Acquisition and Airspace Establishment at the Marine Corps Air Ground Combat Center (Combat Center) in Twentynine Palms, Calif.

Dear Project Manager:

Golden State Water Company (GSWC) appreciates the opportunity to provide the U.S. Department of the Navy (Navy) in cooperation with the Bureau of Land Management and the Federal Aviation Administration with comments on the Draft Environmental Impact Statement (DEIS) evaluating the proposal to expand the Marine Corps Air Ground Combat Center in Twentynine Palms, California (29 Palms Base). As described in the DEIS, the purpose of the expansion is to fulfill the Marine Corps requirement to provide sustained, combined-arms, live-fire, and maneuver field training for three Marine Expeditionary Brigade (MEB) sized Marine Air Ground Task Forces (MAGTFs) and associated command, aviation, and combat logistics support elements. Existing training facilities, ranges, and live-fire ground and air maneuver areas are inadequate to support the requirement for MEB-sized training exercises. GSWC's comments are being submitted to help ensure compliance with the National Environmental Policy Act (42 U.S.C. § 4321 et seq.), as well as other federal laws. This letter joins in the comments previously submitted on the project by Cadiz, Inc. and Santa Margarita Water District (SMWD).

**i. About GSWC**

GSWC is a California public utility company engaged principally in the purchase, production and distribution of water in 75 communities in 10 counties in the State of California. GSWC is regulated by the California Public Utilities Commission (CPUC). It was incorporated as a California corporation on December 31, 1929. GSWC is organized into nine water and one electric rate-making areas. The nine water rate-making areas are divided into three regions for rate filing purposes. Region I consists of 7 rate-making and customer service areas in northern and central California. Region II consists of one rate-making area servicing 4 customer service areas located in Los Angeles County. Region III consists of one rate-making area servicing 10 customer service areas in eastern Los Angeles County, and in Orange, San Bernardino and Imperial counties. GSWC also provides electric service to the City of Big Bear Lake and surrounding areas in San Bernardino County through its Bear Valley Electric Service (BVES) division.

**ii. GSWC's Participation in SMWD's Water Project Planned for the Cadiz Property**

GSWC's interest in the proposed 29-Palms Base expansion relates to its participation in SMWD's water project on the Cadiz, Inc. property which is within the eastern expansion area included as part of Alternative 3 in the DEIS. SMWD is the lead agency for the Cadiz Valley Water Conservation, Recovery and Storage Project (Water Project) under the California Environmental Quality Act (CEQA) review process. GSWC has an option agreement to participate in this project.

WAT-1

Response to Comment N-18861 (Page 1 of 3):

WAT-1 and WAT-2:

Section 5.4.13.3 of the EIS acknowledges that Alternative 3 would have a” regionally significant impact because it would inhibit Cadiz from instituting their Conservation and Storage Project.” The EIS also states that the Cadiz project was uncertain and undergoing environmental review process. The EIS has been revised to update the Cadiz project description for the Final EIS using the information provided by comment letters from Cadiz Inc. and others. These revisions are not likely to alter the significance of cumulative impacts from Alternative 3.

WAT-3:

Section 4.13.4.1 addresses the potential impacts from Alternative 3 to groundwater quality, and concludes “because of the ongoing management and minimization of MC residues at the Combat Center and implementation of management and minimization of MC residues in the east acquisition area, impacts to surface water quality from Alternative 3 MCs would be less than significant.” The low precipitation rate, intermittent receiving surface water bodies, and deep groundwater, limits the migration of MC residues and thus the potential impacts of use of munitions.

Chapter 2 has been revised to include a detailed description of the current range clearance operations. In addition, the Navy would conduct periodic groundwater sampling of the eastern expansion area should Alternative 3 be selected for implementation.

Page 2

The Water Project is a potential new water source from a large, renewable aquifer located in the eastern Mojave Desert east of the existing military base. It is designed to manage the aquifer and conserve water from nearby watersheds otherwise being lost to evaporation in local dry lakes. Conserved water would be collected and delivered to SMWD as well as GSWC, and other participating water agencies. There would also be an option for carry-over water storage in the Cadiz Aquifer. The Project will diversify GSWC's water portfolio and help drought-proof GSWC to ensure its water demands are met regardless of the state's supply.

WAT-1

Alternative 3 being considered in the DEIS for the base expansion would severely negatively affect the Water Project because it includes condemning large portions of the Cadiz property needed for SMWD's project. Therefore, any action including proposed Alternative 3 is of serious concern. To help Navy understand the extent of resources presently committed to the Water Project, please see SMWD's website, available at <http://www.suwd.com/operations/the-cadiz-valley-project.html>.

III. Concerns with Alternative 3 and It's Potential Adverse Significant Impacts

NEPA compels federal agencies to consider the consequences of their proposed activities on the human environment. 42 U.S.C. § 4331. The statute requires federal agencies to produce a DEIS when proposing to engage in any 'major Federal actions' that will significantly affect the human environment. 42 U.S.C. § 4332(2)(C). See *Natural Res. Def. Council, Inc. v. Grant* (E.D.N.C. 1972) 341 F.Supp. 356, 365-67. A significance determination requires agencies to consider the context of an action and the intensity of its impacts. See *Environmental Protection Information Center v. Blackwell* (N.D. Cal. 2004) 389 F.Supp.2d 1174.

GSWC has the following concerns relating to the NEPA review and DEIS for the expansion project, particularly including its consideration of the eastern expansion in Alternative 3:

1. Water Supply: Impacts on Southern California's water supply: Selection of Alternative 3 would impact Southern California's water supply because it may prevent implementation of the Water Project. The Water Project which will improve water supply reliability by conserving the average annual sustainable yield of the local watersheds, and is critical for supply reliability for Southern California water providers. It will also reduce dependence on imported water by utilizing a source of water that is not dependent upon the California State Water Project (SWP), the Colorado River, or the Sacramento-San Joaquin Delta (Bay-Delta). Therefore, and because of the nature of the base expansion including live-fire maneuver training for three battalion task forces, we disagree with the DEIS's findings that the Project may co-exist with expansion under Alternative 3, and request that further analysis be commenced under the FEIS to evaluate the impacts it may cause. See DEIS, 2-95-96.

WAT-2

2. Water Quality: Impacts on groundwater water quality: Alternative 3 would negatively impact the local groundwater quality because it creates potential for groundwater contamination from ammunition, bombs, fuel, hazardous chemicals that are used in military exercises on land that overlies the Cadiz Valley aquifer system within the proposed expansion area. These impacts were not adequately assessed in the DEIS and should be considered.

WAT-3

3. Impacts to Cadiz Operations and the Local Community: SMWD shares the concerns expressed by Cadiz that Alternative 3 may have on Cadiz, its operations, and the local community; impacts on energy production; impacts on agriculture; local socioeconomic impacts; economic impacts of land acquisition on the federal budget; transportation impacts; and impacts to biological resources. Please contact GSWC if you would like further explanation regarding these additional concerns.

GEN-1

IV. Conclusion

GSWC appreciates the opportunity to comment on the proposed 29 Palms Base and Environmental Impact Statement, and requests that the FEIS evaluate the concerns described above.

GEN-2

Response to Comment N-18861 (Page 2 of 3):

GEN-1:

Impacts to various resource areas from implementation of Alternative 3 are discussed in Chapter 4 and 5, including the specific impacts mentioned.

GEN-2:

Thank you for your comment. The contact information provided has been added to the project mailing list.

Comment ID: N-18861 (Page 3 of 3)

Response to Comment N-18861 (Page 3 of 3):

Naval Facilities Engineering Command, Southwest  
June 1, 2011  
Page 3

Specifically, GSWC respectfully requests consideration of the following: 1) elimination of Alternative 3 from consideration and/or additional reasonable alternatives, 2) conducting further study and evaluation of impacts, 3) further discussion of appropriate mitigation measures, and take whatever further actions necessary to develop an DEIS in compliance with NEPA which can serve as the basis for informed decision-making and public scrutiny.

We request to be notified of any and all future actions regarding this DEIS, preparation of additional studies, as well as preparation of the FEIS. Please add Dr. Toby B. Moore, GSWC Water Resources Manager, to your list of persons receiving notice of this project. You may contact him at [TobyMoore@gswater.com](mailto:TobyMoore@gswater.com).

GEN-2

Sincerely,

Denise L. Kruger  
Senior Vice President, Regulated Utilities  
Golden State Water Company

San Diego, CA 92132

Dear sir:

The whole basis for your EIS is predicated upon old outdated information. Your training mission is no longer relevant. Your purpose and need must be re-examined based on new information. I enter the following into the record:

- 1). The President is now calling for \$400 billion in reductions. This is a welcome shift in thinking. Weapons and programs have gone over budget. Even when weapons underperformed or were designed for a cold war that no longer exists, the DoD continued to soak the taxpayers. The 29 Palms expansion EIS does not identify the project cost, but I think scrapping this ill-conceived plan will save at least \$1 billion.
- 2). Defense spending has doubled to \$553 billion since 9-11-2011. That doesn't include costs of the wars our nation is currently fighting on three fronts. Those will add about another \$200 billion this year. You can save \$1 billion by cancelling the 29 Palms expansion.
- 3). Earlier this year Sec Robert Gates proposed finding \$178 billion in Defense savings over the next 5 years. He eliminated several costly programs and weapons. He put more pressure on contractors. He has directed all the services to find ways to cut costs. The Marine Corp should start by better using the 600,000 acres they already have for training at 29 Palms, CA.
- 4). Read the attached article "It's Just Too Easy To Launch An Attack" by Charles Pena. He says "military intervention has become too easy." The Cold War is long since over. There is a sprawling global military footprint. There is also a sprawling national military footprint, and Southern California is a case in point. I support using the military for humanitarian missions or defending our nation. We don't need to train for large-scale force-on-force nuclear war that will leave the Earth in ruins.
- 5). Our military shouldn't be used to solve the world's problems. Train them as a "blunt instrument intended to destroy

**Response to Comment N-18862 (Page 1 of 9):**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Comment ID: N-18862 (Page 2 of 9)

Response to Comment N-18862 (Page 2 of 9):

or kill" and it will become too easy to use them in situations where they shouldn't even be. Sec of State Madeleine Albright once argued to Gen Collin Powell, "What's the point of having this superb military you're always talking about, if we can't use it?" That is the WRONG approach. The Marines should train their MEBS for what we see on the horizon. We don't need to contain the Soviet Union as we did during the Cold War. What successor rival powers are driving the base expansion at 29 Palms? Do you think we'll be taking on China, North Korea, or Iran anytime soon? That would be a BIG mistake.

And even if we do militarily engage Iran, we aren't going to invade. If we go to war with them, the U.S. military role would be air strikes, drones and special operations missions, NOT a large-scale invasion by American Soldiers and Marines.

6). Training Marines for "Large-Scale Air Ground Task Forces" will simply make it too easy and tempting to then use them for that purpose. That is simply wrong! If anything, we should be training for humanitarian missions, curb presence overseas, rationalize our missions, support our friendly regional powers.

Please read the attached article from April 25, 2011 issue of Time Magazine - "How To Save A Trillion Dollars" by Mark Thompson. He says Washington must "recalibrate its rusty risk meter." The EIS needs to provide information on risks we face. Recalibrate your obsolete thinking. Once you do, no expansion will be needed at 29 Palms. Your 2003-4 studies are out of date.

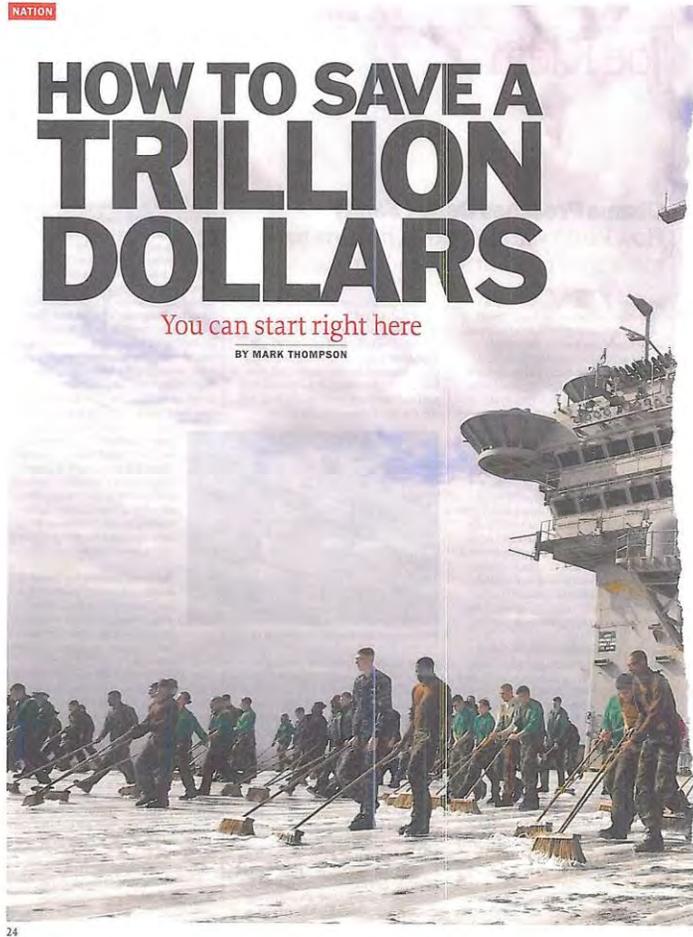

Forget your "Damn the Torpedoes" approach to base expansion. Instead, adopt a "Tighten the Belt" approach. The U.S. spends nearly as much as the rest of the world combined on defense. According to the Time article, the U.S. spent \$379 billion on defense in 2001. Now we spend \$687 billion. Yes, Congress is a big part of the problem.

If nothing more, read the last two columns in the Time article entitled "WHAT'S THE MISSION?" That is where your EIS is very deficient. You haven't defined the mission. Sure, we might need broad capabilities with maximum flexibility across the widest spectrum of conflict. BUT, as a U.S. taxpayer, I demand that we get Defense spending under control. Start by scrapping the base expansion at 29 Palms. The government should spend only what's needed to DEFEND the COUNTRY - NOT A PENNY MORE.

Yours Truly,  
Michael J. Stafford

Response to Comment N-18862 (Page 3 of 9):

**A Military Built for The 21st Century**

*The U.S. continues to field and maintain a global force designed during an era of sky's-the-limit defense budgets*

**Use more unmanned aircraft**

*The nation is spending nearly \$400 billion on manned F-35 fighters. Greater use of cheaper, unmanned drones and cutting other programs could reduce the bottom line*

**TOTAL PROCUREMENT SAVINGS  
\$500 BILLION**

**O**N A DAMP, GRAY MORNING IN late February, Navy admirals, U.S. Congress members and top officials of the nation's biggest shipyard gathered in Norfolk, Va., to watch a computerized torch carve bevels into a slab of steel as thick as your fist.

The occasion: the ceremonial cutting of the first piece of a \$15 billion aircraft carrier slated to weigh anchor in 2020. That ship—still unnamed—will follow the just-as-costly *Gerald R. Ford*, now 20% built and due to set sail in 2015.

Meanwhile, on the other side of the world, China is putting the final touches on a new class of DF-21 missiles expressly designed to sink the *Ford* and its sister ship as well as their 5,000-person crews. China's missiles, which will likely cost about \$10 million each, could keep the Navy's carriers so far away from Taiwan that the short-range aircraft they bear would be useless in any conflict over the tiny island's fate.

Aircraft carriers, born in the years before World War II, are increasingly obsolete platforms of war. They feature expensive manned aircraft in an age when budgets are being squeezed and less expensive drones are taking over. While the U.S. and its allies flew hundreds of attack missions against targets in coastal Libya last month, cruise missiles delivered much of the punch, and U.S. carriers were notable only for their absence. Yet the Navy,

backed by the Pentagon and Congress, continues to churn them out as if it were still 1942.

"It's just tradition, the industrial base and some other old and musty arguments" that keep the shipyards building them, says Thomas Barnett, a former Pentagon deep thinker and now chief strategist at Wikistrat, a geopolitical-analysis firm. "We should scale back our carrier design to something much cheaper and simpler. Think of mother ships launching waves of cheap drones—that would actually be more frightening and intimidating." Even Defense Secretary Robert Gates warned last year of "the growing antiship capabilities of adversaries" before asking what in Navy circles had long been the unaskable question. "Do we really need 11 carrier strike groups for another 30 years when no other country has more than one?"

Across Washington, all sorts of people are starting to ask the unthinkable questions about long-sacred military budgets. Can the U.S. really afford more than 500 bases at home and around the world? Do the Air Force, Navy and Marines really need \$400 billion in new jet fighters when their fleets of F-15s, F-16s and F-18s will give them vast air superiority for years to come? Does the Navy need 50 attack submarines when America's main enemy hides in caves? Does the Army still need 80,000 troops in Europe 66 years after the defeat of Adolf Hitler?

It may seem strange to talk about de-

fense cuts while the U.S. is waging one war in Afghanistan, is mopping up a second in Iraq and has just launched a half war in Libya. But those conflicts have made it easy to forget the warning of Admiral Mike Mullen, Chairman of the Joint Chiefs of Staff, that "the single biggest threat to our national security is our debt." Which points to an almost tragic irony of Washington's \$700 billion annual appetite for military stores: we are borrowing cash from China to pay for weapons that we would presumably use against it. If the Chinese want to slay us, they don't need to attack us with their missiles. They just have to call in their loans.

**Diminishing Returns**

**NUMBERS ALONE TELL MUCH OF THE STORY:** We are now spending 50% more (even excluding the wars in Afghanistan and Iraq) than we did on 9/11. We are spending more on the military than we did during the Cold War, when U.S. and NATO troops stared across Germany's Fulda Gap at a real superpower foe with real tanks and thousands of nuclear weapons aimed at U.S. cities. In fact, the U.S. spends about as much on its military as the rest of the world combined.

And yet we feel less secure. We've waged war nonstop for nearly a decade in Afghanistan—at a cost of nearly a half-trillion dollars—against a foe with no army, no navy and no air force. Back home, we are more hunkered down and buttoned up than ever as political figures (and eager

Comment ID: N-18862 (Page 6 of 9)

Response to Comment N-18862 (Page 6 of 9):

**Shrink missile defense**  
*The threat doesn't warrant a national system like the one we're now paying to research, develop and deploy*  
**SAVINGS**  
**\$60 BILLION**

**Reduce global presence**  
*Cut U.S. troop strength, including forces stationed in Asia and Europe, and warn those nations off Pentagon protection*  
**SAVINGS**  
**\$287 BILLION**

**Trim spy spending**

Source: Cato Institute

defense contractors) have sounded a theme of constant vigilance against terrorists who have successfully struck only once. Partly as a consequence, we are an increasingly muscle-bound nation: we send \$1 billion destroyers, with crews of 300 each, to handle five Somali pirates in a fiberglass skiff.

While the U.S.'s military spending has jumped from \$1,500 per capita in 1998 to \$2,700 in 2008, its NATO allies have been spending \$500 per person over the same span. As long as the U.S. is overspending on its defense, it lets its allies skimp on theirs and instead pour the savings into infrastructure, education and health care. So even as U.S. taxpayers fret about their health care costs, their tax dollars are paying for a military that is subsidizing the health care of their European allies.

In January, Gates proposed cutting \$78 billion from Pentagon accounts over five years. President Obama trumpeted that April 13, calling for \$400 billion in cuts by 2023. He offered no specifics beyond saying he and Gates would lead a "fundamental review of America's missions, capabilities and our role in a changing world." Even some Republicans have begun to acknowledge that the Pentagon needs to do its part in the war on debt. "I served in two administrations that practiced and validated the policy of peace through strength," said Indiana Governor Mitch Daniels in February. "But if our nation goes over a financial Niagara, we won't have much strength, and eventually, we won't have peace."

Congress can't make the numbers work by focusing on waste, fraud and abuse, though lawmakers rarely admit this. Both hawks and doves love declaring their determination to root out inefficiencies, but doing so won't solve the problem. Bigger changes are required, and they are long overdue. Among a half-dozen serious studies about how best to reduce defense spending by up to \$1 trillion over the next decade, an emerging consensus is easy to spot: Weapons purchases must be trimmed, and personnel costs must be reduced. And both of those require a new kind of political will to stop treating military spending as pork, a regional and local entitlement that can go on forever. Finally, revising America's defense budget will happen only if the U.S. takes a hard-eyed look at the dozens of military missions that are no longer vital or affordable.

**Damn the Torpedoes**  
 GATES, A COLD WARRIOR GOING BACK TO the 1960s, recently pressed the military services to tighten their belts. The Air Force pledged to cut its fuel bill by \$500 million

**Public spending on defense jumped from \$1,500 per person in 1998 to \$2,700 in 2008**

over the next five years, while the Army said better e-mail systems would save it the same amount. This gives you some idea about the limits of civilian control of the military. On March 14, Gates issued a memo detailing "efficiencies" he is ordering, including a paltry \$12,000 in savings by closing down an outreach program and \$5,000 in combat galleys. "It's important not to repeat the mistakes of the past by making drastic and ill-conceived cuts to the overall defense budget," he says.
