N.1 OVERVIEW OF COMMENTS AND RESPONSES

1.1 INTRODUCTION

The public comment period provided an opportunity for government agencies, interest groups, and the general public to comment on the Draft Environmental Impact Statement (EIS). The Marine Corps advertised three methods to submit comments: (1) written or oral statements at the public open house meetings, (2) written comments mailed or hand-delivered to Naval Facilities Engineering Command (NAVFAC), and (3) written comments submitted to the Draft EIS comment page on the EIS public website. The public comment period began on 25 February 2011 and closed on 26 May 2011. Late comments that were received within a few days after the 26 May 2011 end date of the comment period were accepted and included in the review and response process.

This Appendix contains all comments received during the public comment period. All received comments were assessed and considered both individually and collectively during development of this Final EIS. Written responses were prepared for all comments and are also included in this Appendix. Certain substantive comments inspired additional data collection, impact analysis, and text changes or additions that were incorporated into this Final EIS.

1.2 SUMMARY OF DRAFT EIS PUBLIC COMMENTS

1.2.1 Official Comments Received During the Public Comment Period

A total of 21,585 comments were received via the three official comment submittal methods (during public meetings, via the website, and by mail or hand-delivery to NAVFAC). Table N-1 shows a breakdown of the number of comments received through each comment submittal method. A majority of the letters received by the Marine Corps were form letters. Of the 18,868 comments received by NAVFAC, 18,214 (97 percent) fall into this category and represent 28 distinct form letters. A small percentage of comments (less than 1 percent) were exact duplicates (e.g., the commentor submitted the same comment through the website and by mail to NAVFAC). A further summary of comments and major issues of concern is presented in Section 1.2.3 of this Appendix.

Table N-1. Summary of Comments Received During Public Review of the Draft EIS

Comment Submission Methods	Number of Comments Received
Public Meetings Written	358
Joshua Tree	*36*
Ontario	*137*
Victorville	*185*
Public Meetings Oral	46
Joshua Tree	*2*
Ontario	*35*
Victorville	*9*
Public Website	2,313
Via mail/hand delivered to NAVFAC	18,868
Total	**21,585**

1.2.2 Additional Comments Received During the Public Comment Period

Although not an advertised method of comment submittal, a number of comments were conveyed directly to the Marine Corps Air Ground Combat Center at Twentynine Palms, California (the "Combat Center")

either by mail, email, or phone message. All of these comments were collected and reviewed as described in Section 1.3 (*Comment Response Process*) of this Appendix and are discussed below, therefore, were not included in Section N.2 of this Appendix.

A total of 144 comments were received at the Combat Center (109 emails, 31 phone messages, 4 written letters), of which 94 comments (65 percent) requested an extension of the comment period based on a perceived mistake in the mailing address for comment submittal (see Section 1.2.3 below for issues and responses), 14 comments (10 percent) were submitted through more than one submittal method (e.g., public website, public meeting, or mailed to NAVFAC) and were considered duplicates, and 36 comments (25 percent) were categorized as original comments. In every case, the commentor was instructed (e.g., by recorded phone message, auto-generated email reply, etc.) to submit their comments by any of the three advertised "official" submittal methods.

Common themes among the "original" comments sent directly to the Combat Center included requests to consider an alternate location or change the Preferred Alternative to Alternative 3, concern over losing off-highway vehicle (OHV) land and potential cumulative impacts from overcrowding, questioning of the purpose of and need for the proposed action, concerns about impacts from noise, and concerns about impacts to socioeconomics and public health and safety from the proposed action. These comments repeated common concerns raised in many of the other comments received via the three advertised submittal methods, which are discussed more in-depth in Section 1.2.3 below.

1.2.3 Public Comment Themes and Responses

The following discussion summarizes the most common themes from comments received during the public comment period, and actions taken to address those common themes in the Final EIS. Every comment submitted during the 90-day public comment period (and for a few days afterward) was thoroughly reviewed. In response to comments, the Final EIS was either revised or the existing analysis/approach was reaffirmed. Where numerous similar concerns/comments were submitted, the Marine Corps prepared a common response to address those concerns/comments. As a result, many responses are repeated for similar comments in Section N.2 of this Appendix.

In general, the Marine Corps received a significant number of comments concerning recreation, noise, airspace, socioeconomics, safety, and general concerns that the Draft EIS did not meet the requirements of the National Environmental Policy Act (NEPA).

1.2.3.1 Impacts to Recreation

Issue: A major issue of public concern was the potential loss of public land traditionally used for recreation. Commenters were concerned with the loss of land used for recreation in Johnson Valley and overcrowding in other areas as a result. Many commenters were concerned that the loss of land in the Johnson Valley OHV area would lead to illegal riding in other areas, and there would be associated environmental consequences in those areas that were not being sufficiently represented.

Response (loss of Johnson Valley): The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Response (illegal OHV riding): As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on Bureau of Land Management (BLM), state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts.

As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted additional analysis on potential displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS.

Response (overcrowding on OHV land): The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause direct, indirect, and cumulative impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

***Updates from the Draft EIS to the Final EIS*:** A Displaced OHV Recreation Study (DORS) was conducted was conducted to support USFWS Section 7 consultation, and to address comments raised during public review of the Draft EIS. The primary objective of the DORS was to identify areas that would be likely to attract some of the displaced OHV recreation as a result of the elimination or restriction of public access to portions of Johnson Valley under the proposed action, and to identify any presenece of special-status species at or near those areas The secondary objective of the DORS was to estimate the extent of any increase in OHV recreation at the identified alternative sites due to displacement from the EIS study areas. The final objective of the DORS was to qualitatively evaluate the potential for environmental impacts to the desert tortoise and its habitat at the alternative OHV recreation sites. This study indicated that displaced OHV activities at some areas would impact desert tortoise habitat and population, but lacks sufficient data (including data that statistically correlates the relationship between OHV activity and desert tortoise habitat and population) to quantify such impacts with any degree of certainty. The DORS is included in the Final EIS as Appendix M, and references to the DORS were added to Sections 4.2 (*Recreation*), Section 4.4 (*Public Health and Safety*), and 4.10 (*Biological Resources*).

1.2.3.2 Socioeconomics Issues

Some commenters felt the socioeconomic analysis did not accurately evaluate socioeconomic impacts from lost recreational opportunities, specifically to local communities, and did not adequately discuss socioeconomic impact from acquisition of active mines.

Response (Socioeconomic impacts from lost recreational opportunities): The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

Response (Socioeconomic impacts to local communities): The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley. Furthermore, Sections 3.11 and 4.11 of the EIS have been updated as appropriate to address issues related to the Small Homestead Act.

Response (Socioeconomic impacts from lost mining): Access to mining and other land holdings would be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information). Additional research has been conducted into mining resources in the West study area. Please see Section 4.3 for updated information.

Updates from the Draft EIS to the Final EIS: Sections 4.3 and 5.4.3.3 of the EIS (*Socioeconomics*) were updated in response to comments and newly available information. New information pertaining to the direct employment impact from the Morris Lode Mine was added to Section 4.3, along with a detailed discussion of the potential indirect impact of mine acquisition on the local cement industry. Information gathered from a recently published Economic Impact Report on the potential Cadiz Inc. Groundwater Conservation, Recovery, and Imported Water Storage Project was added to Section 5.4.3.3; this information led to a revised assessment of significance to cumulative socioeconomic impacts. In response to comments, discussion of impacts related to the loss of lands for grazing was added to Section 4.3.

1.2.3.3 Noise Impacts

Issue: A number of commenters were concerned about noise and vibrations from the proposed action, specifically that the modeling was not conducted in a way that would accurately represent the impacts.

Response: The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS.

Updates from the Draft EIS to the Final EIS: Single event ordnance noise modeling was conducted for baseline and each action alternative. The results of the modeling allowed correlation to risk of noise complaints and an estimate of the probability of structural damage from ordnance events. Additional material has been added to Section 4.9 to address the analyses and results.

1.2.3.4 Airspace Impacts

Issue: A number of commenters were concerned about airspace acquisition and limitations under the proposed action. Comments were primarily received from local pilots and owners of airstrips in proximity to or underneath the proposed airspace acquisition.

Response: The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would result in a significant impact to airspace. As indicated in the EIS, no airspace decision has been or would be made before complete environmental review and consultation with the Federal Aviation Administration (FAA), other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA with regard to the proposed airspace. Airspace dimensions,

altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Updates from the Draft EIS to the Final EIS: In response to public concerns and ongoing consultations with the FAA and other aviation interests, the Marine Corps modified the Draft EIS airspace proposals, as described in Chapter 2, to better accommodate military, FAA, and general aviation airspace needs. The proposed Restricted Area R-XXXX is now divided into east and west sectors, the existing Turtle Military Operations Area (MOA)/Air Traffic Control Assigned Airspace (ATCAA) is subdivided both laterally and vertically into three segments, and the CAX MOA/ATCAA is stratified into low and high sectors that now exclude altitudes between 8,000 and 18,000 feet above mean sea level (MSL). Collectively, these modifications provide the Marine Corps with greater flexibility in scheduling and using only those sectors/altitudes required to meet specific mission needs while making more airspace available for non-military uses. These airspace proposal modifications would reduce potential impacts on all airspace users while the Marine Corps continues to consider other mitigations that would further minimize impacts.

1.2.3.5 Safety in the Restricted Public Access Area

Issue: Numerous commenters were concerned about public safety in the Restricted Public Access Area (RPAA). Common themes included: concerns with regard to ordnance use and the ability of the Marine Corps to remove hazards and make the land available for public use; lack of funding to conduct clearance operations on acquired land area, resulting in the land area being permanently closed to the public; and questions on who would provide emergency response during public recreation in the RPAA.

Response (Ordnance use and clearance operations in the RPAA): As outlined in Section 3.4, Combat Center Order P35.004H, *SOP for Range/Training Area and Airspace,* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures (such as use of non dud-producing ordnance, range sweep, and range clearance) that would be implemented under Alternative 4, 5, or 6 that would allow the RPAA to be available for public use (refer to Section 2.5 of the EIS). If acquired lands were transferred back to public domain, the Marine Corps would be required to comply with range closure procedures.

Response (Ability or funding to clear the RPAA for public use): The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy (DoN) and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Response (Emergency response in the RPAA): The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Impacts to emergency response are discussed in Section 4.4 of the EIS. As noted in the EIS, under the proposed action the Combat Center would add additional personnel to manage any acquired land areas in addition to existing mutual aid agreements.

1.2.3.6 Extension of the Public Comment Period

Issue: Numerous comments were received requesting additional time to review and comment on the Draft EIS. A common theme expressed was that the duration of time for public review of the Draft EIS was

insufficient for a meaningful review of a document the size of the Draft EIS. Other commenters cited a perceived mistake in the mailing address or difficulty uploading to the public comment website.

Response: The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified. All comments received by various methods to both NAVFAC and the Combat Center have been reviewed and incorporated into the Final EIS.

1.2.3.7 Purpose and Need

Issue: Many commenters questioned the purpose and need of the proposed action citing perceived adequacy of the existing Combat Center and the current political situation which may remove the training need.

Response: As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the Marine Expeditionary Brigade (MEB) level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a MEB composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

1.2.3.8 Proposed Action Alternatives

There were numerous comments that the Draft EIS did not rigorously and objectively explore a suitable range of alternatives. Many comments specifically questioned why the Marine Corps could not conduct operations at nearby Fort Irwin or suggested de-designating the Sheephole Wilderness and utilizing land east of the Combat Center.

Response (Other Alternatives): As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized Marine Air Ground Task Force [MAGTF] Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Response (Fort Irwin): As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment.

MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Response (De-designate Wilderness Areas): During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Updates from the Draft EIS to the Final EIS: The following text has been added to the subsection describing potential mitigation measures in Section 4.2 (*Recreation*). "The Marine Corps considered other potential mitigation measures but determined that none were feasible for the Marine Corps to implement unilaterally to compensate for the loss of recreational opportunities within the exclusive military use area (year round) and the RPAA during the 2 month period when MEB exercises are occurring. Numerous comments on the Draft EIS stated that the Marine Corps should designate or obtain other lands in the region to mitigate the loss of OHV area in the Johnson Valley. The Marine Corps does not have the jurisdiction or capability to designate or obtain other lands for OHV use and could not commit to such measures as part of the Record of Decision (ROD) for this action. The State of California has management jurisdiction over state lands. The BLM has management jurisdiction over public lands, which are designated for multiple use management. BLM determines appropriate uses for public lands through the land use planning process. The areas that are currently unavailable for motorized recreation were designated as unavailable through that process in order to protect other resources, or because they were otherwise unsuitable for motorized recreation. BLM has informed the Marine Corps that at this time there are no lands available to designate as a replacement OHV area."

In addition, an additional recreation mitigation measure (REC-2) would be included if Alternative 4, 5, or 6 were selected. As described in Section 4.2, under REC-2 a RPAA Management Group would be formed and would meet at least once a year to discuss the suitability of procedures to facilitate recreational use of the RPAA. Through adaptive management these procedures would be improved to balance Marine Corps training needs with recreational demand.

1.3 COMMENT RESPONSE PROCESS

Comments on the Draft EIS were generated through written correspondence and oral statements during the public comment period. The following process was used for reviewing and responding to these comments:

- All comment letters, website comments, and oral statements were reviewed carefully and assigned a unique number. This number was also assigned to the commentor.
- All comments were reviewed by the appropriate resource specialist and provided a response.

- Three guidelines were used for determining substantive comments that may require modification of the EIS:
    1. The comment questioned the proposed action, alternatives, or other components of the proposal.
    2. The methodology of the analysis or results was questioned.
    3. The use, adequacy, and/or accuracy of data were questioned.
- The EIS was modified to make corrections and improve or clarify the analysis as appropriate.

1.4 COMMENT DIRECTORY

The directory below (see Table N-2) provides a listing of commenters by last name or agency. After locating your name, note the letter and number in the third column. This unique coding was assigned to your comment document and is found in the upper left-hand corner of the comment. The page number your comment and response appears on is provided in the fourth column. In some instances, individuals asked that their name be withheld from the publication or no name was provided. In both cases, "Name Withheld By Request" or "No Name Provided" has been entered in the directory as appropriate.

The comments are printed in numerical order and are organized into eight sections: written comments received at the Joshua Tree public meeting (W-JT-001), written comments received at the Ontario public meeting (W-ON-001), written comments received at the Victorville public meeting (W-VV-001), oral comments received at the Joshua Tree public meeting (O-JT-001), oral comments received at the Ontario public meeting (O-ON-001), oral comments received at the Victorville public meeting (O-VV-001) comments received by NAVFAC through the mail (U.S. Postal Service) or hand delivered (N-00001), and comments received through the project website (001).

- [ ] Other

Concerns that Alternative 6 will impact most greatly the local economies due to lack of visitation from recreational visits. Alternative 3 may impact travel but overall impacts local economies to a much lesser extent. Additionally, Alternative 3 makes much less impact to the endangered tortoise as opposed to Alt. 6.

Permitting use in combined use areas will likely lead to nothing positive. It is hard enough to direct people as it is.

Response to Comment W-JT-001:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The EIS also evaluates biological resources, including the desert tortoise, under each of the action alternatives (refer to Section 4.10 of the EIS).

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

JOHNSON VALLEY OHV AREA IS THE LAST TRUE OPEN AREA IN OUR COUNTRY. ITS TOPOGRAPHY IS UNIQUE AND IS THE ONLY AREA TO OFFER TRUE OPEN DESERT AND ROCK CANYONS. THE TRUE WONDER OF JOHNSON VALLEY IS THE VASTNESS OF THE AREA. FURTHER CONSTRICTION OF OUR RIDING AREAS WILL LEAD TO INCREASED ILLEGAL RIDING ON PRIVATE OR WILDLIFE AREAS.

Response to Comment W-JT-003:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding (refer to Section 4.2). The proposed action includes implementation of several special conservation measures (refer to Section 4.2.2.1) designed to reduce these potentially significant impacts to a less than significant level. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

I just hope that this isn't another way to take another OHV park. I completly support and trust the armed forcess over any political reason at this time. I just pray they aren't involved in this now to close down the off road comunity and our freedom to use our land. I dont see a real reason you guys can't use the land to the east and north. I've heard a few reasons but I would say that would be a good training optical that you would have to deal with. Not to mention there's more land available and less of the civilian population to deal with.

Response to Comment W-JT-004:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I think this is a nice way to eventually take all the land based on your 1st proposal. There is alot of off road use and events that go on out there that draws alot of money and business to the surrounding area not just Yucca Valley and the Hi Desert all of Southern California would impacted. In my mind I don't see a legitament reason to close the OHV area and not go past.

Thanks,

Response to Comment W-JT-005:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

AS FAR AS AIR SPACE THE ONLE GOOD CHOICE I SEE IS NO ACTION ALTURNATIVE.

ACTUMNATIVE 6 SOUNDS LIKE THE CORE WORKED WELL WITH THE USER GROUPS HOWEVER, MAP APPEARS TO SHOW TOO NARROW OF A CONNECTION FROM THE OPEN OHV AREA TO THE RESTRICTED PUBLIC ACCESS AREA. ALSO I STILL FEEL THE SOUTH DIVISION CAN STILL BE MOVED NORTH OUT OF THE PROPOSED RESTRICTED ACCESS AREA ALL TO GETHER CLEARING THIS AREA OPEN FULL TIME FOR PUBLIC USE.

I would Prefer NO Alternative. I've lived in the area since 1969. I started riding in 1970 and have slowly seen all surrounding areas go away To Note: fringetoed Lizards, flowers, trees and flies. I could ride from Indio To San Bernardino all in Dirt, we could ride in At Least 20 motorcycle Parks in So Cal alone, Now we've Lost 10 Parks most of Pismo Beach, 3/4 of Glamis and all of Riverside County. I Think The recreation Community which includes Marines Has Taken its Share of Anches. I Know we need To Compromise and (5) seems the best. But now you no how I feel

Response to Comment W-JT-007:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

AS A SMALL BUSINESS OWNER IN PALM SPRINGS WHOSE BUSINESS RELIES ON OPEN OFF HIGHWAY VEHICLE RECREATION I AM AGAINST ANY PERMANENT CLOSURE OF THE JOHNSON VALLEY RECREATION AREA. I AM SURE THAT I WILL NOT BE THE ONLY BUSINESS AFFECTED BY THIS PLAN, AND I AM SURE THAT LIKE MYSELF MANY BUSINESSES LIKE MYSELF WILL BE FORCED TO CLOSE OR MOVE TO ANOTHER STATE. RIVERSIDE HAS ALREADY BEEN CLOSED TO OFF ROAD RIDING AND NOW WE ARE ASKED TO GIVE UP LAND THAT WE ALREADY PAY FOR WITH TAXES AND OFF HIGHWAY REGISTRATION FEES. PLEASE CONSIDER ALTERNATIVE 5 AS THIS WOULD ACCOMPLISH THE MILITARY OBJECTIVE AND KEEP JOHNSON VALLEY OPEN MOST OF THE YEAR.

① The RESTRICTIONS added TO PRIVATE and club AIRSTRIPS should be addressed To RAISE the MOA ceiling To 3000' AGL.
② the effect ON TRANSITIONAL Family RECREATION is NEGATIVE AND should be considered.
③ The displacement of OHV RECREATION on public land will effect LOCAL Residents AS OHV'S will USE these ROADS TO ACCESS Remaining legal OHV AREA'S.
④ How will you deal with INTERACTION of OHV'S & Residents and Loss of business to LOCAL BUSINESSES.

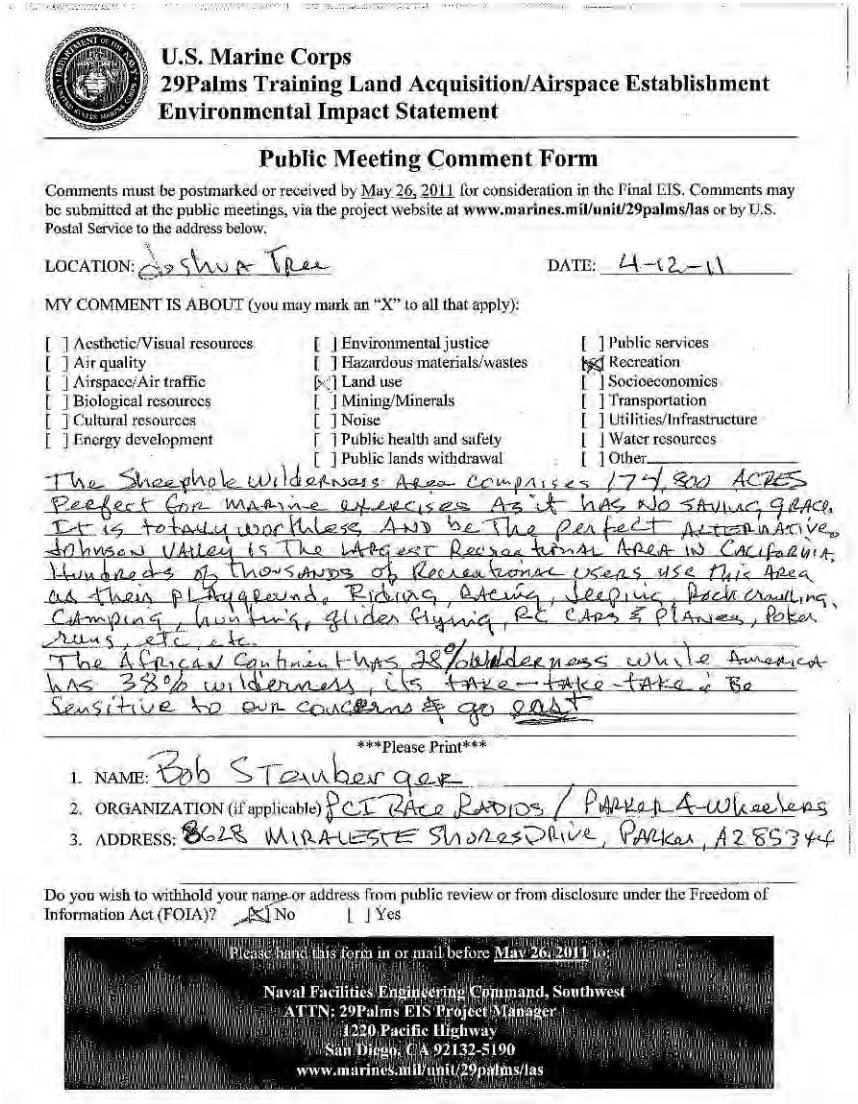
Response to Comment W-JT-009:



Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). The Sheephole Wilderness Area comprises 174,800 ACRES Perfect for MARINE exercises As it has NO SAVING, GRACE, It is totally worthless AND be The perfect ALTERNATIVE. Johnson Valley is The LARGEST Recreational AREA IN California. Hundreds of thousands of Recreational users use this Area as their playground. Riding, Racing, Jeeping, Rock crawling, Camping, hunting, glider flying, RC CARS & PLANES, Poker runs, etc, etc.
The African Continent has 28% wilderness while America has 38% wilderness, it's take-take-take. Be Sensitive to our concerns & go EAST

THE ALTERNATIVE THAT WOULD MOST BE BENEFICIAL FOR MYSELF AND OTHERS WOULD BE ALTERNATIVE 3. WITH ALTERNATIVE 3 MOVING EVERYTHING EAST WOULD MAKE IT SO THAT NO LAND IS TAKEN FROM EVERYDAY USE. ALTERNATIVE 3 WOULD NOT TAKE ANY BUSINESS FROM WHAT HAPPENS IN 29 PALMS. WHY WOULD LAND HAVE TO BE TAKEN IF THERE IS MORE LAND EAST THAT REALLY WOULDN'T BE AFFECTED? KEEPING EVERYTHING RUNNING SMOOTHLY FOR EVERYONE AND NOT JUST ONE GROUP IS WHAT EVERYONE SHOULD WANT. TAKING LAND AWAY FROM JOHNSON VALLEY WOULD BE TAKING 60 % OF BUSINESS THAT IS A LOT OF BUSINESS AND PEOPLE THAT WOULD BE LOSING A BIG CHUNK. [redacted] MYSELF AND OTHERS WOULD BE AT A HUGE RISK OF LOSING PRETTY MUCH EVERYTHING WE LIVE FOR NOWADAYS. ALTERNATIVE 3 IS THE MOST BENEFICIAL.

ACTION ALTERNATIVE 3 WILL NOT AFFECT LAND USE IN THE AREAS I AND THOUSANDS OF OTHERS USE FOR OFFROAD RECREATION. I AM IN FAVOR OF ALTERNATIVE 3. I AM IN THE OFFROAD MANUFACTURING BUSINESS AND 60% OF MY, AND MANY OTHERS, BUSINESS IS GENERATED BY THE USE OF THE LANDS IN QUESTION. CLOSING THIS LAND TO OFFROAD USE WOULD NOT ONLY AFFECT MY JOB AND THE JOBS OF PEOPLE WE DEAL WITH, BUT WOULD CLOSE THE LARGEST MOST LUCRITIVE AND ENJOYABLE "OPEN" DESERT OHV AREA NEAR L.A. & I WANT TO KEEP THIS LAND OPEN. LET'S WORK TOGETHER. THE MARINES CAN USE OTHER MOUNTAIN RANGES SUCH AS THE NORTHERN 3RD OF THE SHEEP HOLD MOUNTAINS. THANK YOU FOR HEARING US OUT.

	[X] Public lands withdrawal	[ ] Other

It would make more sense to go to the east in Alternative 3. I know that would be harder for the USMC except in the long run it would be best for the off road community. I hope that we could come to use the land together if we could. My children would only get to hear about the area and where we used to ride if they go with Alternative 6. To me alternative 4 or 5 would be the second best choice. As an offroader we have been forced to race in circles when we used to have point to point races as the military would like to practice. If the area is closed it would promote more illegal riding on private and public lands.

Response to Comment W-JT-014:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding (refer to Section 4.2). The proposed action includes implementation of several special conservation measures (refer to Section 4.2.2.1) designed to reduce these potentially significant impacts to a less than significant level. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I WORK FOR AN OFFROAD COMPANY. WE SELL PARTS FOR AN OFFROAD JEEP WHICH A BUNCH OF PEOPLE WORLDWIDE BUY PARTS FOR THEIR JEEPS TO GO ON TRAILS, TRY OUT NEW THINGS, HAVE A GREAT TIME. [redacted] KING OF THE HAMMERS IS A HUGE EVENT THAT PEOPLE COME TO [redacted] YEARLY. TAKING THAT LAND AWAY REALLY EFFECTS EVERYONE. I'M A HUGE VMT. PEOPLE COULD LOSE THEIR JOBS AND HOMES, ALTERNATIVE 3 WOULD MAKE IT MOST EASY WHICH WOULD BE BEST FOR MOSTLY EVERYONE

Response to Comment W-JT-015:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

We use this land for are well used Iconic, historic, like I would like to see this compromise be best for both parties. So I would like no action or Alternative 3. I feel that there is enough restricted area taken from us as there is. There is another option to (correct) go to Fort Irwin or go to Nevada or Arizona.
Why was there never a request to go to the Northern third Sheep hole mountains.

Response to Comment W-JT-018:

Thank you for your comment. The Marine Corps appreciates your suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. Ultimately, Congress will make the final decision about proceeding with the proposed action.

After reviewing The Alternatives I think (5) would work out for All. Ultimately I would like the 2 months of The Area to be closed be July & August as its the Least Busy for All Recreation in the Area. Most people no the military need to Practice, The Big Problem is everyone is afraid That once we give A Little Then we'll just Keep losing more and more.

Response to Comment W-JT-019:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

It seems that Alternatives 4 & 5 are most desirable for the public. I realize that these are more restrictive to Marine training and; therefore, less desirable to the Marines, but this area (the RPAA in Alternatives 4 & 5) is vital to OHV users and others. I am concerned; however, that the RPAAs will not really be available for public use 10 months out of the year. If we really can have guaranteed access 10 months a year (especially around Easter & Thanksgiving), I support these 2 alternatives.

I am involved in off-road racing. But it seems our community is the one being hit the hardest. To me, alternative V is the most viable proposal - we both share the Johnson Valley OHV area. No one is a complete loser - Alternative VI takes away two off-road courses that are gone permanently. Questions about a permit process to use the OHV area after Military use are still in the air. We need our room to recreate as well as the military does to train - Please put a high priority on alternative 5 - Lets share.

MY CONCERN IS ABOUT THE LOSS OF USE OF 108,530 ACRES IN THE PREFERRED ALTERNATIVE 6. THIS AREA CONTAINS BOTH PERMANENT OFF-ROAD RACE COURSES, AND MUCH OF THE LAND USED FOR DISTRICT 37 MOTORCYCLE RACING. IN ALTERNATIVE 5 THIS LAND COULD STILL BE PERMITTED FOR THESE TYPE OF ACTIVITIES AND THE ONLY IMPACT FOR THE MILITARY APPEARS TO BE THE DIRECTION OF FIRE AND STAGING AREAS THAT ARE NOT OPTIMAL. THE OHV COMMUNITY HAS LOST ENOUGH LAND IN CALIFORNIA, AND IF THE MILITARY CAN TRAIN WITHOUT TAKING THIS AND PERMANENTLY I BELIEVE THAT SHOULD BE THEIR OBJECTIVE.

In appinon I think alturnative 5 is the best. My biggest concern with this alturnitive is that what the permit cost would be, due to the fact the we already pay for the land use when we replenture our bikes, ect... And if its eventualy just going to close the area down permanatly over time. Just things that have been done before. What the time's would be that we would be able to use the land and if the time would grow. In that I think #3 would be best due to the fact that they would have to use small rounds in a sustaion area anyway on plan 5 or 3, and 3 has more realistic opstacls in it and doesn't take the OHV area.

Response to Comment W-JT-024:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. Exact timeframes will be determined and communicated to the public if Alternative 4, 5, or 6 is selected. Please see Section 2.5.4 of the EIS for a discussion of the proposed communication and notification procedures in regards to public access to the RPAA.

Response to Comment W-JT-025:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety. Please see Section 2.5.4 of the EIS for a discussion of the proposed communication and notification procedures in regards to public access to the RPAA.

THE MAIN QUESTION TO ME IS IF THE MARINE (BAE) OR ANY OTHER AIRCRAFT OR TANK UNIT WILL USE D.U. ROUNDS IN ITS TRAINING AT 29 PALMS. THERE IS RADIATION IN THE WATER SUPPLY NOW, CAUSED BY NUCLEAR TESTING IN 50's 60's. THERE WAS URANIUM MINING IN THE 60s. WITH ADDED DANGERS FROM A UNCONTROLLED NUCLEAR ACCIDENT IN PROGRESS IN JAPAN THIS IS A FAIR AND needed QUESTION. I WAS ADVISED THAT D.U. ROUNDS WON'T BE USED. I HOPE SO THANK YOU!!! Don WIECHERT

We have no problem sharing the land with the military but our concerns are about the permitting process, are there going to be an loop holes in the contract or bill that will allow the military to take full use of the land ~~forever~~ indefinitely. Alternative 6 does have Mean of some OHV areas open which is good. Will this affect race teams who's sole income is from racing? Will this be taking homes away from residence already living in the area? Will the restrictions on the land not allow any type of vehicle to enjoy the off-roading and desert experience? Are there any land on the outskirts of Proposed area shut down to OHV's due to BLM restrictions?

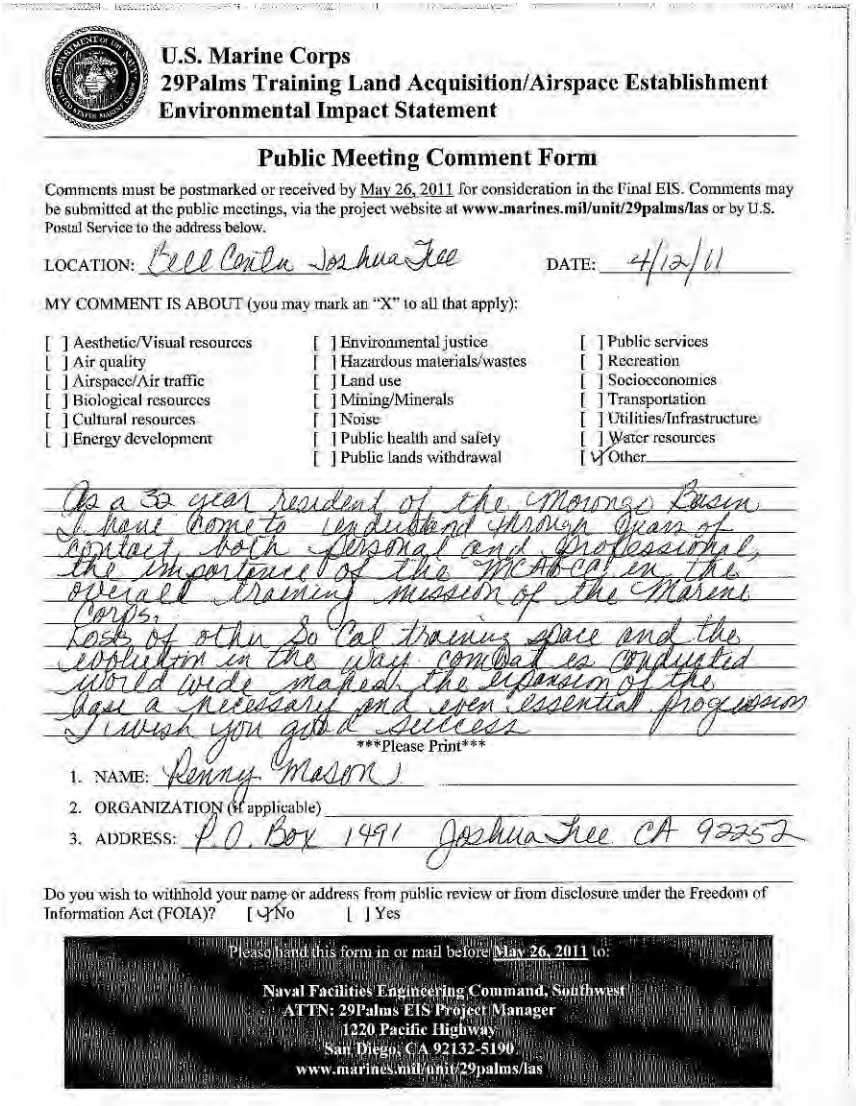
Response to Comment W-JT-027:



Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. As discussed in Section 4.1 of the EIS there would be minimal (i.e., less than 10) or no relocation of residential and non-residential properties representing a less than significant impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS).

As a 32 year resident of the Morongo Basin I have come to understand through years of contact, both personal and professional, the importance of the MCAGCC in the overall training mission of the Marine Corps. Lack of other So Cal training space and the evolution in the way combat is conducted world wide makes the expansion of the base a necessary and even essential progression. I wish you good success

I support the military use of this land. My property is next to (not included in the area to be incorporated into the Military Base) the area in questions. Possibly I could BENEFIT as the OHV Road users have utilized my property for years without my permission. As a veteran I also support the Marine Corp BASE expansion. Good luck.

My concerns with the closure is recreational and economic. I live in Lucerne Valley CA and our small town is affected greatly by the OHV area being closed down. On 3 day weekends the small businesses are greatfull for the business and welcome the offroaders. I also use the OHV for racing and playriding. Johnson Valley OHV is one of the largest and has a great amount of trail system. It is large enough for multiple groups to be using the area safely. I would hope we could come to a agreement to share the land or another area being given to use for OHV. The offroad community is being squeezed into smaller and smaller areas and the quality of the area is being taxed to the point where the trails are ruined. My concern if the open areas are taken away it would promote more illegal riding

Response to Comment W-JT-031:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. However, the Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding (see Section 4.2). The proposed action includes implementation of several special conservation measures (see Section 4.2.2.1) designed to reduce these potentially significant impacts to a less than significant level.

Response to Comment W-JT-032:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The reason why I am against the airspace/air traffic is because depending on what operations they do will limit our OHV Usages and will reflect on my job and recreation. land use is opposed because if they limit the amount of land that we already have its gonna be alot more damage to the terrain due to the small area that is allowed. Public health and safety is a "big issue" due to the ordinents or explosives that ~~would~~ would be placed. My alternative would be # 3 because they have plenty of space to move to the ~~least~~ east. This is because any of the others will take away from our business and could very well loose my job, and a place that I enjoy taking my family.

Response to Comment W-JT-033:

Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of pre- and post-exercise range control and management procedures that would enhance public safety.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

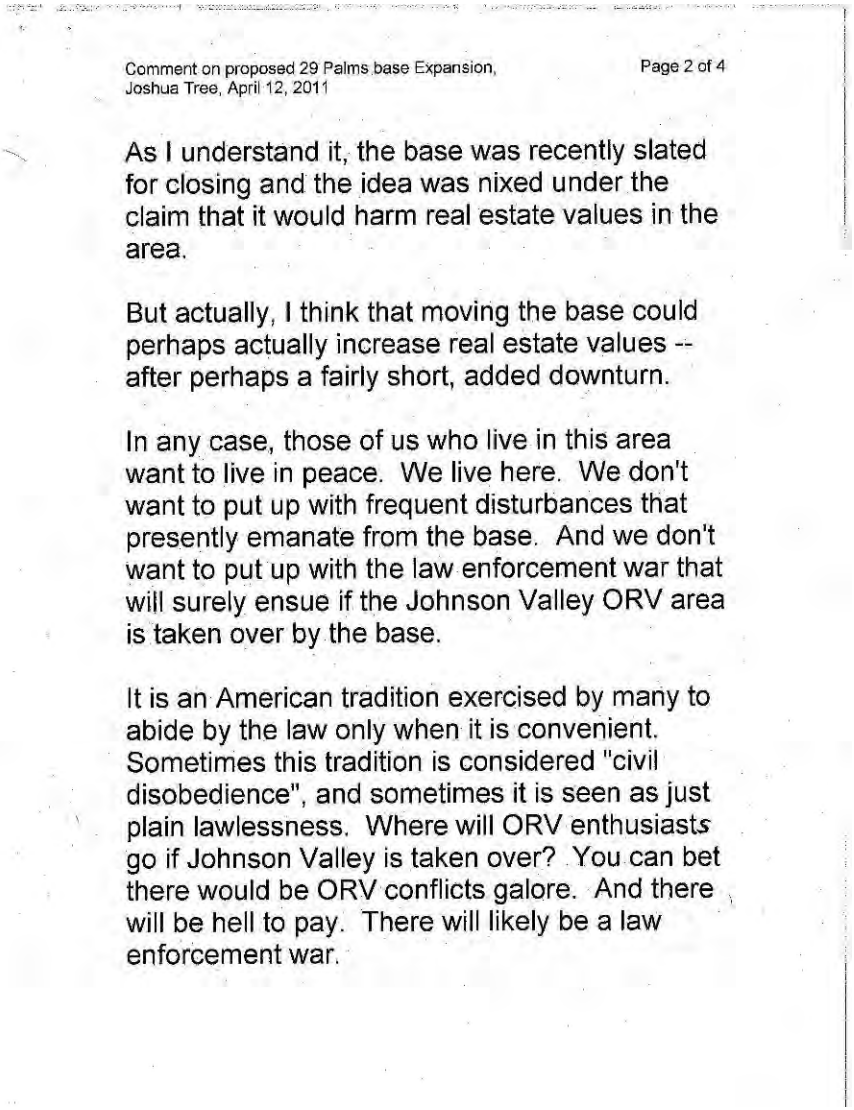
Comment on proposed 29 Palms base Expansion, Joshua Tree, April 12, 2011

Briefly stated, I believe that none of the proposed alternatives should be implemented except for the no-action alternative.

I also believe that at least one other alternative should be added for the final EIS. Such an alternative should involve entirely removing all the military training activities and helicopter traffic from the 29 Palms base to another location -- say to another or new base -- most likely adjacent to another military facility in order to facilitate cost-effective sharing of military resources. If that would require moving the entire base, including administrative functions, then so be it. Such an alternative would avoid the problem of wasteful shuttling of troops between military facilities.

Moreover, such a new location does not even need to be in California. It could be located in some other state, or perhaps even on some desert island far removed from civilian residential areas.



Response to Comment W-JT-035 (Page 1 of 4):

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As noted in the EIS, there is expected to be an increase in overflights and they would occur at lower altitudes than baseline conditions under each of the action alternatives.

Comment on proposed 29 Palms base Expansion, Joshua Tree, April 12, 2011 Page 2 of 4

As I understand it, the base was recently slated for closing and the idea was nixed under the claim that it would harm real estate values in the area.

But actually, I think that moving the base could perhaps actually increase real estate values -- after perhaps a fairly short, added downturn.

In any case, those of us who live in this area want to live in peace. We live here. We don't want to put up with frequent disturbances that presently emanate from the base. And we don't want to put up with the law enforcement war that will surely ensue if the Johnson Valley ORV area is taken over by the base.

It is an American tradition exercised by many to abide by the law only when it is convenient. Sometimes this tradition is considered "civil disobedience", and sometimes it is seen as just plain lawlessness. Where will ORV enthusiasts go if Johnson Valley is taken over? You can bet there would be ORV conflicts galore. And there will be hell to pay. There will likely be a law enforcement war.

Response to Comment W-JT-035 (Page 2 of 4):

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: W-JT-035 (Page 3 of 4)

In my opinion, living in genuinely peaceful conditions is far more important than maintaining real estate values. And moreover, real estate values might even be enhanced by a genuinely more peaceful environment.

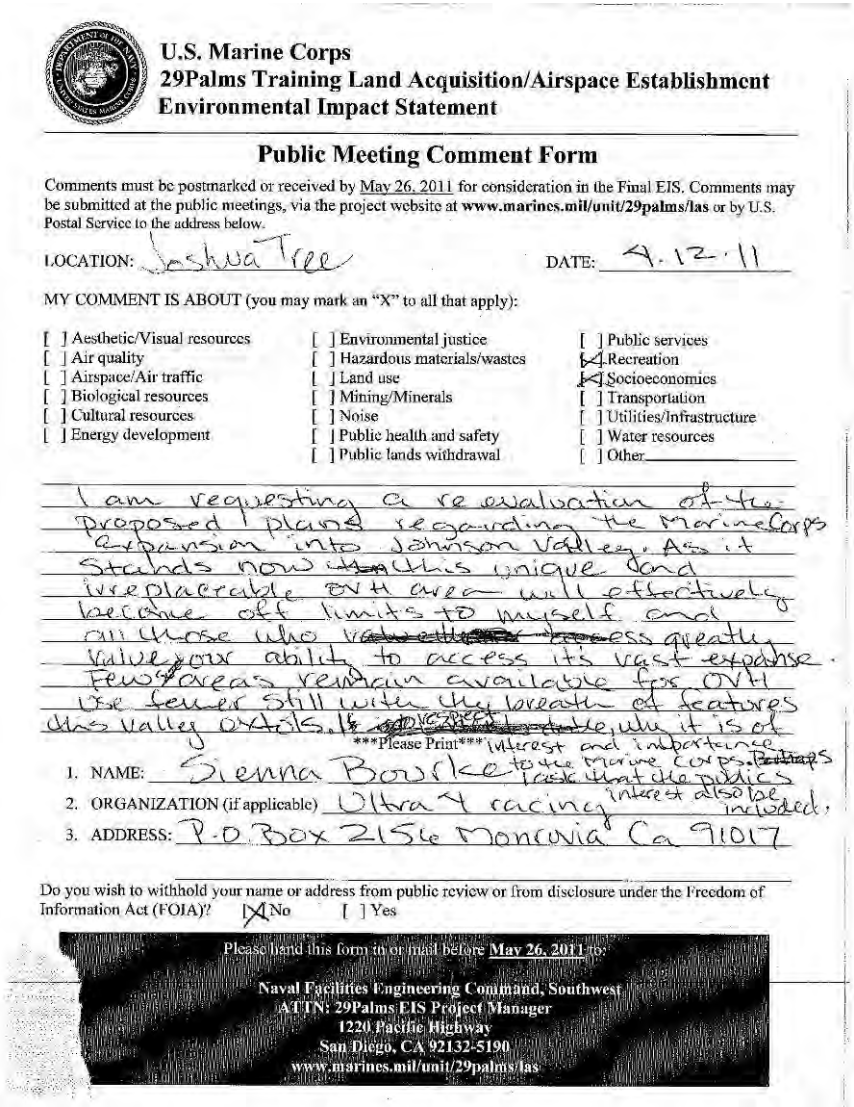
Let me be more specific as to how the issue affects me personally.

So far there is still extensive native wildlife in this area. I enjoy the sights and sounds of the native wildlife that visit my property.

But there is a problem. Heavy helicopter overflights are an extreme nuisance. Sometimes they make an extremely loud staccato sound like some mega-truck's engine brakes in action. (In some communities, are road signs that prohibit the use of engine brakes.) At other times the heavy helicopter noise seems to be more moderated. But in any case, the noise is still a major nuisance. The helicopter noise is so disturbing that I often have to stop what I am doing just to wait for the helicopters to pass. And when a whole platoon of heavy helicopters flies overhead, it sounds

Response to Comment W-JT-035 (Page 3 of 4):

Comment ID: W-JT-035 (Page 4 of 4)



like the end of Planet Earth -- it is genuinely depressing!!!

But that's not all. There is the very disturbing noise from munitions training explosions. After those explosions occur, I often have to ask myself, "Now where was I in my thoughts before that happened?" However, the effect is a deeper unsettling than simply an interruption of thought.

In brief, the military base frequently disturbs my peace of mind. And you can bet that I cannot enjoy the sights and sounds of native wildlife while these disturbances occur.

[ ] Cultural resources	[ ] Noise	[ ] Utilities/Infrastructure
[ ] Energy development	[ ] Public health and safety	[ ] Water resources
	[ ] Public lands withdrawal	[ ] Other

I am requesting a re evaluation of the proposed plans regarding the Marine Corps expansion into Johnson Valley. As it stands now this unique and irreplaceable OHV area will effectively become off limits to myself and all those who ~~value~~ access greatly value your ability to access it's vast expanse. Few areas remain available for OHV use fewer still with the breath of features this valley offers. It is important, why it is of interest and importance to the Marine Corps. Perhaps I ask that the public's interest also be included.

Response to Comment W-JT-036:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-ON-001:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Response to Comment W-ON-002:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. Response to Comment W-ON-003:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. I have been a long time desert goer and frequent Johnson valley and the surrounding offroad areas. Taking it away for future use will greatly hamper our racing, recreational and adventure areas! I would like to take my kids to the same places I went as a kid and share the wonders the desert has to offer.

I respect the Marines and their needs, but I also understand the needs of public access land in southern California.
For many people, including myself, this is an area that my family and I love to enjoy. In all of the plans I have seen proposed the areas we enjoy the most will be taken over. These are the places our races are held as well as irreplaceable family time.
This land offers the entire family, including young children, an opportunity to experience the desert and enjoy the sport of off-roading. I would love to see them majority →

Response to Comment W-ON-009:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I think that the desert should Remain open to all OHV vehicles during any season. That land was meant to be Romped like the good lord intended. As long as the people using that land are not abusing it, I see no Reason to have it Restricted.
Thank you for your time.
-Sam ♥

I HAVE BEEN AN OFF ROAD RACER FOR OVER 40 YEARS. OUR RACES ARE STAGED MOSTLY [redacted] IN THE JOHNSON VALLEY AREA. I SUPPORT THE NO ACTION ALTERNATIVE OR ALTERNATIVE #3. ALTHOUGH WE LOVE OUR MARINES, THE GENERAL PUBLIC NEED LAND TO RECREATE ON TOO! MY SPORT PROVIDES A PLACE TO GET AWAY FROM THE PRESSURE OF LIFE AND SUPPLIES MANY FAMILYS WITH A HEALTHY SPORT TO PARTICIPATE IN. IF WE CAN'T USE OUR PUBLIC LAND TO RECREATE ON, I HATE TO THINK HOW MANY LAW SUITS AGAINST THE GOVERNMENT WILL COME FROM IT! & THE PUBLIC WILL HAVE ONE LESS PLACE TO ESCAPE THE POSINS AND PRESSURES OF LIFE.

I AM A VIETNAM VETERAN (66/67) I NOT ONLY USE THE ROCK PILE AREA TO RACE, BUT I ~~USED~~ USE THIS AREA TO CAMP AND RECREATE WITH MY SONS AND GRANDSONS. MYSELF AND MY CLUB MEMBERS AND OUR PARENTS HAVE USED THIS AREA TO RACE MOTORCYCLES SINCE THE 1940S.
I RACE TO STAY IN SHAPE, I AM TOO LAZY TO WORK OUT SO I RIDE IN THE DESERT. I AM 65 YEARS OLD AND I AM STILL RACING IN DISTRICT 37. I WANT BE ABLE TO RACE THE LONGER DISTANCE RACES OR HARE + HOUNDS IF YOU CLOSE THIS AREA.

Keeping the land open to Public use is a must. There are Thousands of people that use this land for Recreation. I feel the use for a combat area would do more Damage than the off road use. NOT [redacted] the Marines To Deny the Marines the use for a combat area, BUT I feel you already have that.

Response to Comment W-ON-013:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Keeping the area affects public use which has a down stream impact on local business + economic recovery. Public use bring off-roaders to local business. Impacts the down stream business of motorhome, trailers, Camping Supplies, and all the other supplies necessary to do camp.

Response to Comment W-ON-015:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Access to mining and other land holding will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information). The Marine Corps is currently undergoing consultation with the USFWS in regards to impacts to the desert tortoise and other wildlife species.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Our family has used this area going on 35 years the government closes access to off-road activities and never offers property in exchange so the public users keep loosing locations over and over. I am involved in the environmental field and have worked at the former El Toro base, FT ORD base, and numerous other closed bases and the contamin ents on these sites are numerous and will be decades before these sites are cleaned, we can not afford to clean up these sites once the Government trashes them.

Response to Comment W-ON-017:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS). If acquired lands were transferred back to public domain, the Marine Corps would be required to comply with range closure procedures (USEPA 40 CFR Part 300), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Base Realignment and Closure Policies (BRAC), Reporting Hazardous Substance Activity When Selling or Transferring Federal Real Property (40 CFR Part 373), and Defense Environmental Restoration Program (DERP) (10 USC 2701).

I am concerned that losing Johnson Valley or parts of Johnson Valley will continue a tragic trend that is currently destroying the freedoms of the American people. These are the same freedoms that are currently being taken in order to train our troops to fight for the freedoms that have already been lost.

My compromise and suggestion: Alternate 7:

Put into effect Alternate 5 and open up the Mojave Preserve to full OHV use. Let's expand American freedoms and open more land to the citizens of this great country.

Response to Comment W-ON-018:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Any the expansion to the west
Allothe alternatives would impact us but alternative 3 would not take life style and way of life. If any alternative other than 3 would ruin our lifes an likely mine my family has grown up in Johnson Valley so it would ruin the future generation chans of following the same path and carry on the tradition. If any other alternatives chosen than 3 would ruin cuds and economy.
Alternative 3

I oppose the land acquisition of Johnson Valley. I fully support ALTERNATIVE #3, the east proposal.

Response to Comment W-ON-023:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-ON-027:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-ON-028:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action. More specific information on timeframes and other aspects of management of the RPAA will be determined if Alternative 4, 5, or 6 is selected. Please see Section 2.5.4 of the EIS for a discussion of the proposed communication and notification procedures in regards to public access to the RPAA. The Marine Corps appreciates your comment and involvement in the NEPA process.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-ON-030:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

ALT #3 IS THE BEST FOR OFF-ROADERS. ANY OTHERS WOULD IMPACT 100'S OF THOUSANDS OF PEOPLE, BOTH IN TERMS OF ECONOMICS AND RECREATION. THE AREA TO THE EAST WAS PREVIOUSLY USED FOR MILITARY TRAINING BY GEN. PATTON, SO IT SHOULD BE REACQUIRED FOR THAT USE.

Response to Comment W-ON-034:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

THE ALTERNATIVE MAPS 1-6 ARE GREAT, BUT THEY SHOULD HAVE BOUNDARIES, i.e. JOHNSON VALLEY OHV, TWENTY NINE PALMS etc... ALSO WHY ISN'T THE MILITARY CLOSING AT THE LAND TO THE EAST SOUTH OF 40 to THE COLORADO RIVER TO THE EAST? JOHNSON OHV IS THE LARGEST OHV LEFT IN THE USA. IT SEEMS THAT our GOVERNMENT IS CONSTANTLY CLOSING PUBLIC LAND OR POPULAR OHV AREAS. PLEASE LOOK EAST & LEAVE JOHNSON VALLEY TO US THE USER & TAX PAYER!

Response to Comment W-ON-035:

Thank you for your comment. The acquisition study area boundaries in regards to the Johnson Valley OHV Area boundaries are shown on figures in Section 3.2 of the EIS, and in regards to other landmarks in Section 3.1 of the EIS as well as throughout figures found in Chapter 3 of the EIS.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Response to Comment W-ON-037:

Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. I support the use of Action Alternative 3. Not only does it allow the use of all of Johnson Valley's Trails but it also allows the use of OHV areas as well. Stopping these hobbies will in my opinion infuriate the off roaders. I'm not saying that we will riot or anything but I feel that we have a say. These trails are our hobbies and our favorite pass times. We can't get the things that Johnson Valley has any where else. This is one of the few OHV areas that endures both Rock crawling and high speed Racing. Alternative 3 proposes the best way to keep both military personel and the off roaders.

First Option is #3. We have been 4 wheeling in that area for almost 30 years. That land was set aside for off road use. Now it is being taken away from us. They keep making the area for off road use smaller and smaller

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps also understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Any alternative would Impact land use and Recreational areas. Although Alternative 3 would Be the Best Alternative for people. I think that you should not take away people's life styles and some people work because it is not just a hobby to go out there It is a Lifestyle and Alternative 3 would be the best because there is Nothing over there and people don't use that for anything. Alternative 1,2,4,5, and 6 would greatly Impact the people's life. And peoples Business would die.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I am a concerned citizen that has been using this land for twenty years. My family and friends are avid offroaders that has dedicated our sport solely to this area. I understand the needs of our marines and support them fully, but our recreation areas are constantly being taken away and soon we will be left with nothing. I have a four year old son that I am passing down my sport to, but I am worried he won't be able to enjoy the same things I have. I support action alternative 3 since this will give each of use what we need. Alternative 5 is preffered by the marines but it takes too much area that we will never get back. I am supportive of sharing for certain times of the year as long as 100% of the area can still be used for the public. To take any of the area permanetly in action 6 would not be fair. If any land is used the environmental impact should be greatly considered. Thank you

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I would like to comment on the expansion to the west this move Alternate use 6 would Negatively Impact myself and my family I make my living Building Offroad Parts Specifically used In Rock crawling and Off-road use In the Johnson Valley Area I would Recommend that Alternate use 3 Be Adopted this would be less Impact on my Financial Situation and would Allow myself and my family to use the Johnson Valley for camping As we have Done for 2 Generations

These are my concerns How does this affect the communities and the surrounding riding places when you take away all of this Prime riding area where are the people going to ride. ~~going~~ Are they going to go to glamis or ocotilla wells that are already over populated as is and when places are over populated there is a higher percentages of deaths and then How does this affect the local gas stations Stores and community that what going to be affected. I think alternative 3 IS a great choise to go with There are NO organizations that use that part of land and you can use It for all 12 months Instead of 10 months

Response to Comment W-ON-045:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

ALTERNATE #3 HAS THE LEAST IMPACT ON EXISTING USE OF LAND. WE HAVE OWED PROPERTY IN J.V. FOR OVER 40 YEARS, TO RAISE OUR CHILDREN IN A SAFE, RESPONSIBLE ENJOYMENT OF OUR "PUBLIC" LAND. OUR PROPERTY HAS BEEN A POSITIVE INFLUENCE ON OVER 20 FAMILIES FOR THREE GENERATIONS, AND I HOPE FOR GENERATIONS TO COME. ALL OF CALIFORNIA HAS BEEN SQUEEZED INTO THIS SMALL OHV AREA, AND NOW IS THREATENED.

My Concern's about the Marine Base expansion, is the impact it will have on the econamy of Johnson Valley & Surrounding town's, The impact it will have on my properties in Johnson Valley & how it will effect my Recreation. Also the impact it will have on generations to Come. Also I Truly believe this is Very Unnecessary as There is Plenty of land to the EAST. So. property Valle - Recreation - and econamy

The main area that most people off road uses want to preserve is the hammer / Anderson / Rock pile, Soggy and Cougar buttes.

Use if we can preserve those areas at least and then keep those areas open year round. Then the rest of Johnson Valley can be shared 10 months for us 2 months for the marines.

I am an OFFid offroad recreation enthusiest. My Friends and I have enjoyed Johnson Valley OHV park For the past 30+ years. I Fully support the armed Forces For what they do For all of America and other Countries they support. I do not think the shared use will ~~not~~ work do to the liability of any and all ordinances or tank track left behind during exercises. I Feel the only alternative would be to go the east as in #3. Please take this into consideration when making your Final disition on this matter

Response to Comment W-ON-049:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I have been using Johnson Valley for approx. 15 years for trail riding and for off road driving and enjoy it as much now as I always have. Over the years of spending time in that area I have noticed that it has always been and still is a place where families spend time together doing an activity/hobby together which seems to be getting more & more scarce these days. For whatever it's worth, and with all due respect if this makes a difference I would like Johnson Valley ~~and~~ with Means Dry Lake to all remain open Year Round for Public use as it is now. My preference is that Alternative 3 would be used. Thank you for reading this and for considering it.

Response to Comment W-ON-051:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

I object to the Marines expanding into one of the last off-road recreation areas left in So. California. In 1994 over 7.2 million acres were designated wilderness in Southern Ca. leaving only a few open areas for off-road recreation. Nearly all of the competive off-road events are held in the Johnson Valley area and there is little left beyond this area. My company relies on off road recreation for its livelyhood, this expansion would have a devistating effect on both my income and my ability to recreate on public land.

BEST Option that will give the least impact to The OFFROAD Community would be to use option 3. THIS will give Least Johnson Valley to the OFFROAD Community.

Option 3 + 4 ~~on close~~ will be the 2nd Best option Because it will give ~~the~~ Johnson Valley ~~parks~~ back to OFFROAD community. But ~~what can guarantee that~~

The concern is that what guarantee to we have that the First person got hurt and sues that you will not shut shit every thing down.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

I prefer alternative 3 to protect the Socioeconomics of the Johnson Valley recreation area. Public lands should not be restricted from the public. I appreciate the effort put forth in alternative 6 but would only support it if the Southern boundary were raised above the "Hammers" area. My Club members and I spend several weekends per year recreating in Johnson Valley with our families. This recreation also contributes to the economy of Lucerne Valley, Johnson Valley and Landers. The area already depressed by current economic conditions. Without Johnson Valley, where else locally could we go without over use problems?

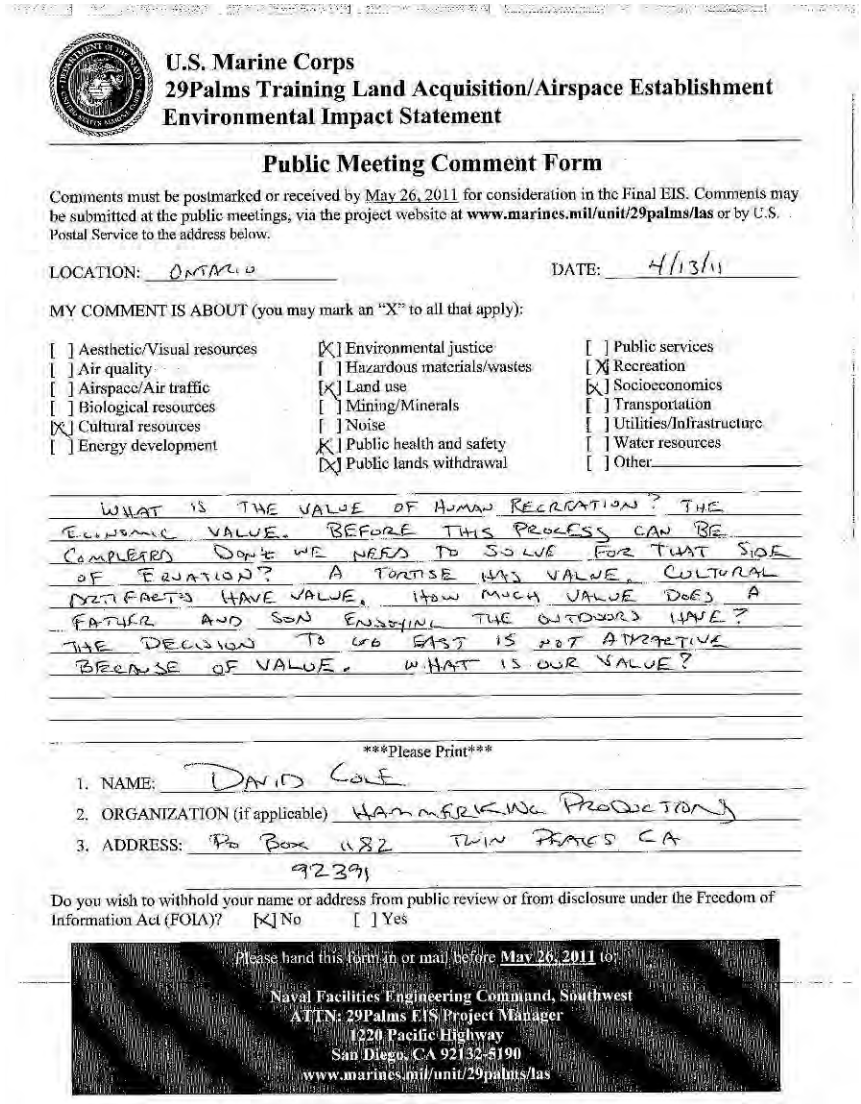
Response to Comment W-ON-055:



Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the importance of Johnson Valley for recreation. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS also evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

WHAT IS THE VALUE OF HUMAN RECREATION? THE ECONOMIC VALUE. BEFORE THIS PROCESS CAN BE COMPLETED DON'T WE NEED TO SOLVE FOR THAT SIDE OF EQUATION? A TORTISE HAS VALUE. CULTURAL ARTIFACTS HAVE VALUE. HOW MUCH VALUE DOES A FATHER AND SON ENJOYING THE OUTDOORS HAVE? THE DECISION TO GO FAST IS NOT ATTRACTIVE BECAUSE OF VALUE. WHAT IS OUR VALUE?

I like Alternative 4&5 where you use the land for 2 months of the year and we get to use it for rest of the 10 months. If we have to, Johnson Valley is very important to us. and would perfer this not to happen at all. I'm a motorcycle rider but I'm very Concerned about the WildLife. Out door Recreation is a great family pastime and that is some beautiful deseret and I would perfer that it wouldnt get tore all up.

Option 3 going east for training is the best, most reasonable option. It affects the fewest people overall. The land to the east was already used for training by General Patton.

WITH THE PROPOSED LAND AQUISITION OF JOHNSON VALLEY, I HAVE MANY CONCERNS.

IT IS MY FEELING THAT THE TRUE NUMBERS OF OHV USERS ARE NOT KNOWN. ON ANY GIVEN WEEKEND IN JOHNSON VALLEY, THERE ARE THOUSANDS OF FAMILIES LIKE MINE WHO CAMP, RIDE AND EXPLORE THE NATURAL BEAUTY OF THE REGION.

SHOULD WE LOSE THE RIGHT TO RECREATE ON OUR PUBLIC LANDS, WHERE ARE WE TO GO. OTHER OPEN AREAS ARE ALREADY TOO SMALL, AND TO PUT EVEN MORE PEOPLE IN AN ALREADY CRAMPED AREA WILL COMPROMISE THE HEALTH AND SAFETY OF ALL OF US

Response to Comment W-ON-062:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Loss of the use of the east portion of the Hawkeye under Alternate # 6 will impact our club. The government should replace the land we lose access to by giving us a wilderness area to off road in. Acre for acre.

I understand military's need for area to train troops, but I also feel OHV in California is extremely important.

I would like to see acre-for-acre mitigation. Loss of OHV in California will have a huge negative economic affect on businesses and may cause people to ride in illegal areas. Closing Johnson Valley will cause a large number of OHV to relocate in other areas already overcrowded (Ocotillo Wells, etc.) which is a danger to everyone involved.

Response to Comment W-ON-066:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

My thing about this whole process. Isn't Taking Land from a Region with Twenty to Thirty million people with and Two hundred mile. Doesn't make sense. As the population of California explanded. Area for Recreation was become greater. So it hard for me to see plus. the idea of sharing Johnson Lily with the military has never been done. Not sure that would work either. Wish I had an answer for all this.

Response to Comment W-ON-067:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Our family and club has been going to this area for years. My children have grown up recreating in this area. I hope that my kids get to use this area with their kids. We know that all the people use the restraunts and gas stations and the businesses would suffer. I really appreciate our military as I have 2 children currently serving. I realise trainning is of the most importance but the land that you want to take is important to the people like me, my club, & my family. And especially important ecconomicly to the people who use

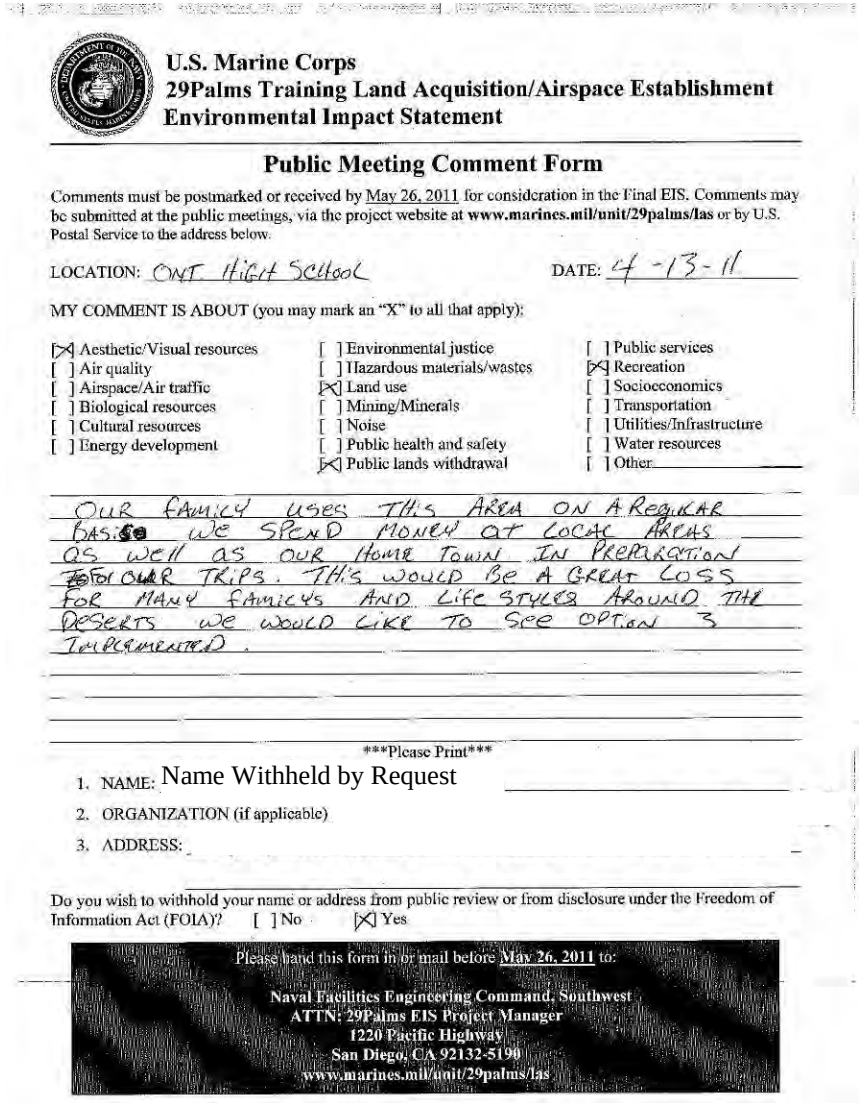
Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.



The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

THE OFFROAD COMMUNITY WOULD BE HIGHLY EFFECTED BY THE CLOSER OF JOHNSON VALLEY. EXPANDING TO THE EAST WOULD BE THE BEST. EVEN IF NOT FINACELLY THE BEST, THE COST TO NOT EFFECT JOHNSON VALLEY WOULD BE BEST.

MOST FIGHTING HAS BEEN DONE IN CLOSE QUARTERS (BUILDING TO BUILDING) I DONT SEE THE NEED FOR THE LIVE FIRE & BRIGADE EXERCISES AS A FORMER VETERAN I FELL THIS IS A WASTE

IF THIS TRAINING IS THAT IMPORTANT HAVE A BASE IN AFGANISTAN OR IRAQ SET UP FOR THIS TYPE OF TRAINING.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

My Concern as a Private Citizen is that I have no options other than the few OHV areas left If the military expands into Johnson Valley it will impact families, recreational use, racing organizations and the industries that support them. If military expansion is allowed Public use would decrease, which in turn, would bring less business to surrounding businesses and the possible economic impact of all surrounding areas. Having used these lands since I was very young, I feel there must be other options for military use. It would impact the families and racing organizations that have enjoyed this land for so many years. I respectfully ask that other military options be used and allow this land to stay open to the Public.

I HAVE RECREATED IN THE DESERT FOR OVER 40 YEARS AND HAVE SEEN MOST OF THE OPEN AREAS FOR MOTORIZED RECREATION TAKEN AWAY FOR ONE REASON OR ANOTHER. ENOUGH IS ENOUGH. IF THIS AREA IS SO IMPORTANT TO RE-CREATE THE BATTLEFIELD NEEDED THEN find AWAY TO GIVE SOMETHING BACK I fully support our TROOPS AND THE MISSION AT Hand. THE OHV community has given up millions of ACRES OF DESERT AND ARE NOW CRAMMED INTO A fraction of what WE had. THE OVERUSE of THESE AREAS IS NOW being used AS A WEAPON AGAINST US by THE ENVIRONMENTALIST. I hope you decide TO GO WITH "NO ACTION ALT" OR "ALT 3".

Response to Comment W-ON-074:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

There are many different alternatives for the Marines to train. They are giving the public choices that ruin time with family and friends. We are losing more and more area for recreation as a result of housing and government needs. When was there a time when we got more recreation area? I totally dissagree with what the marines are trying to do. I grew up going to the desert and I want to be able to the same with my kids in the future. My #1 choice is for the Non-action Alt but if not I would like alternative #3

Response to Comment W-ON-077:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Hello,

Taking this land away from the public would be detrimental in more ways now than first imagined several years ago when this plan was first announced. After the Mojave Desert Racing Accident on August 14, 2010, this land became even more crucial to not only those who live in the area, but to the entire Offroad community in Southern California. Removing this land from public use would be devastating to all those involved with the accident, by not letting them visit the location their friends, family, or loved ones tragically lost their lives.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Sections 3.2 and 4.2 of the EIS have been revised to acknowledge the California 200 Memorial site and impacts to access of the site. Access to mining and other land holding will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information).

Response to Comment W-ON-080:

Thank you for your comment. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Johnson Valley portion of this plan is what concerns me. It is the best extreme "off roading" play land anywhere. Our club spends a lot of weekends out there. Also if it is closed to wheeling, the other smaller areas will be overused and then subject to closure, as well.
SAVE THE HAMMERS!

Think Alternative three only. The other alternatives are Makings of a tragedy for the off-road community. Our sport is constantly under attack from many sides, from the BLM to Center for Bio Diversity and the forest service. The available land open to the public for off-road is shrinking exponentially. Johnson Valley is important because it offers not only the wild terrain that atv's & bikers want, it has rock climbs & canyons that are the most coveted in the area. No other place in So. Cal has what JV has.
Also, if option 4 + 5 gain traction, I noticed they dont give access to Outer Limits or Aftershock. These trails need to be included in the public use area.

I DO NOT UNDERSTAND WHY THERE IS NO EIR BEING RECOMMENDED FOR THIS PROJECT. THE DEIS STATES THAT THERE IS A POSSIBILITY THAT PERMITS, EASEMENTS, ACQUISITIONS MAY OCCUR. THESE WOULD TRIGGER CEQA IF THEY INVOLVE ISSUANCE OF PERMITS OR DISCRETIONARY ACTION ON THE PART OF STATE OR LOCAL AGENCIES

SO WHY NO CEQA COMPLIANCE ??

Response to Comment W-ON-083:

Thank you for your comment. In general, federal agencies are not required to comply with CEQA. The Marine Corps has met with the State of California to discuss CEQA requirements for state actions that could be undertaken following the project decision. State agencies are encouraged to use NEPA documents when such documents comply with CEQA. To the extent practicable, the EIS has incorporated CEQA requirements to allow state agencies to utilize the EIS analysis to support any future project-specific analyses that may be required by CEQA. The CEQA requirement, though, applies to State agencies, not federal agencies.

THE OFF ROADING COMMUNITY CONTINUES TO BE SQUEEZED INTO A SMALLER AREA EACH YEAR. MOST OF THE AREAS HAVE BECOME SO CROWDED DURING PEAK TIMES THAT THEY ARE NO LONGER ENJOYABLE. I THINK WE ALL AGREE THAT THE MILITARY NEEDS ADDITIONAL TRAINING AREA - IT IS UNFORTUNATE THAT WE ARE BOTH LOOKING FOR THE SAME TERRAIN. SHORT OF ALT 3, (WORST CHOICE) OR ALT 4/5 IF WE ARE GOING TO LOSE MORE PRIME WHEELING AREA IT WOULD BE NICE IF AN ALT. AREA COULD BE OPENED FOR THE OFFROAD COMMUNITY – ALT 6 WOULD NOT ONLY LIMIT THE AREA BUT I'M NOT SURE THE TRAILS WOULD NOT BE CHANGED (GRADING / BRUSHING) THAT THEY WOULD BE UNUSABLE FROM YEAR TO YEAR

Response to Comment W-ON-084:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As described in Section 4.12 of the EIS, the same programs and procedures that apply to current training activities to avoid and minimize impacts to soils at the Combat Center (e.g., tank traps, foxholes, trenches, and obstacles would be filled and graded when training exercises are completed) would be extended to any lands acquired under the proposed action. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 to prepare the Restricted Public Access Area for public use (refer to Section 2.5 of the EIS).

I am adimantly opposed to this grab of public land which is used by a cross section of American families & citizens. At a time when our children are inundated with crime, drugs, gangs, etc. Opportunities for families to engage in responsible, positive activities appreciating & enjoying our heritage & environment are getting fewer & fewer. If the military abuses their relationship with the American public by taking over Johnson Valley, they are abusing their mandate of public support.

This only leads the way for more unofficial land closures. Pushes more and more people onto closed or private lands which in turn creates other legal issues. There needs to be a place to recreate.

As a user of OHV grounds I would like the desert should stay open because I think it prevents quite a bit of crime because I know when I go out it makes it so im not doing illegal things. Also I think the offroad business brings a lot of money for the state because of all the racing however you might think its bad because of the desert goers trashing the desert but there is an organization called Clean Desert and they keep a lot of the desert space clean. I also think it helps kids growing up into things other than sitting at home because the will have a passion to go out and do something they love to do. I am clean I think the desert should stay open because it helps the state and the kids growing into offroad sports.
Sincerely, Sean Smith

Response to Comment W-ON-087:

Thank you for your comment. The EIS also evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. I AM AGAINST ALTS 1, 2 + 6 BECAUSE THEY WOULD TAKE AWAY RECREATION LAND.
IT IS UNCONSCIONABLE THAT THE MARINES WOULD TAKE AWAY THE OHV LANDS WHICH ARE CONVENIENTLY LOCATED WITHIN 2½ HOURS OF LA. THESE RECREATION LANDS ARE HEAVILY USED AND WILL ONLY BE MORE VALUABLE FOR RECREATION AS TIME GOES BY.

THE MARINES OUGHT TO EXPAND OUTSIDE OF THE OHV AREAS
I DON'T SUPPORT JOINT USE AS PROPOSED UNDER ALT 6 BECAUSE RECREATION + BOMBS DON'T MIX.
SOMEDAY THERE WILL BE A SERIOUS ACCIDENT WILL occur DUE TO HUMAN ERROR AND A TRAGEDY

Response to Comment W-ON-088:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

THE DRAFT EIS DOES NOT DISCUSS THE HOMESTEAD COMMUNITIES ADJACENT TO THE COMBAT CENTER JOHNSON VALLEY WAS FOUND UNDER THE SMALL HOMESTEAD ACT OF 1939 A CONGRESSIONAL ACTION - IT IS ELIGIBLE UNDER SECTION 106 OF THE NHPA THIS COMMUNITY WILL BE IMPACTED BY NOISE, VIBRATIONS, LIGHT AND AIR POLLUTION FROM THE COMBAT CENTER THE NOISE AND VIBRATION IMPACTS ARE CURRENTLY SIGNIFICANT WHEN PRACTICE MANUEVERS ARE OCCURRING AT THE EXISTING BASE. THE DEIS MIS-REPRESENTS NOISE LEVELS BECAUSE IT PRESENTS THEM AS A 24 HR AVERAGE. PEOPLE DO NOT AVERAGE NOISE & VIBRATIONS FROM BOMBS, THEY EXPERIENCE THEM AS AN INDIVIDUAL EVENT

Response to Comment W-ON-089:

Thank you for your comment. The EIS has been updated acknowledge specific communities such as Wonder Valley and Homestead Valley.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling and addition discussion of vibration impacts have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts. Section 4.8 of the EIS discusses air quality impacts under each of the action alternatives.

Taking Johnson valley away. IS taking away my favorite vacation spot away I frequent camp rock road and bessemer mine rd around six times a year and stay the weekend be it district 37 races, OR MDR races. and since the accident there goes off road races put on by M.D.R. and M.O.R.E. at least I can still go camp and off road my truck with friends trucks and ride my dirt bike. Thanks.

AT THIS TIME WE ARE BEING ASKED(?) TO RELEASE MORE DESERT AREA FOR THEIR NEEDS. WHAT ABOUT OUR NEEDS? BLM HAS ALREADY CLOSED MUCH OF THE AREA SURROUNDING THE BASE. ITSELF LEAVING LITTLE FOR US TO ENJOY IE HIKING, BIKING, DRIVING ON OPEN ROADS. I REALLY FEEL THEY HAVE ADEQUATE SPACE ON THEIR EXISTING SURROUNDINGS. IF WE THE PEOPLE HAVE TO SETTLE FOR A PLAN AT ALL - I BELIEVE I WOULD HAVE TO ENDORSE PLAN #5 AND ONLY THIS PLAN. FOR EVERY ACRE THAT IS SIZED FOR TRAINING USE OR BASE EXPANSION THERE SHOULD BE EQUAL LAND RELEASED BY THE STATE/BLM FOR RECREATIONAL PURPOSES.

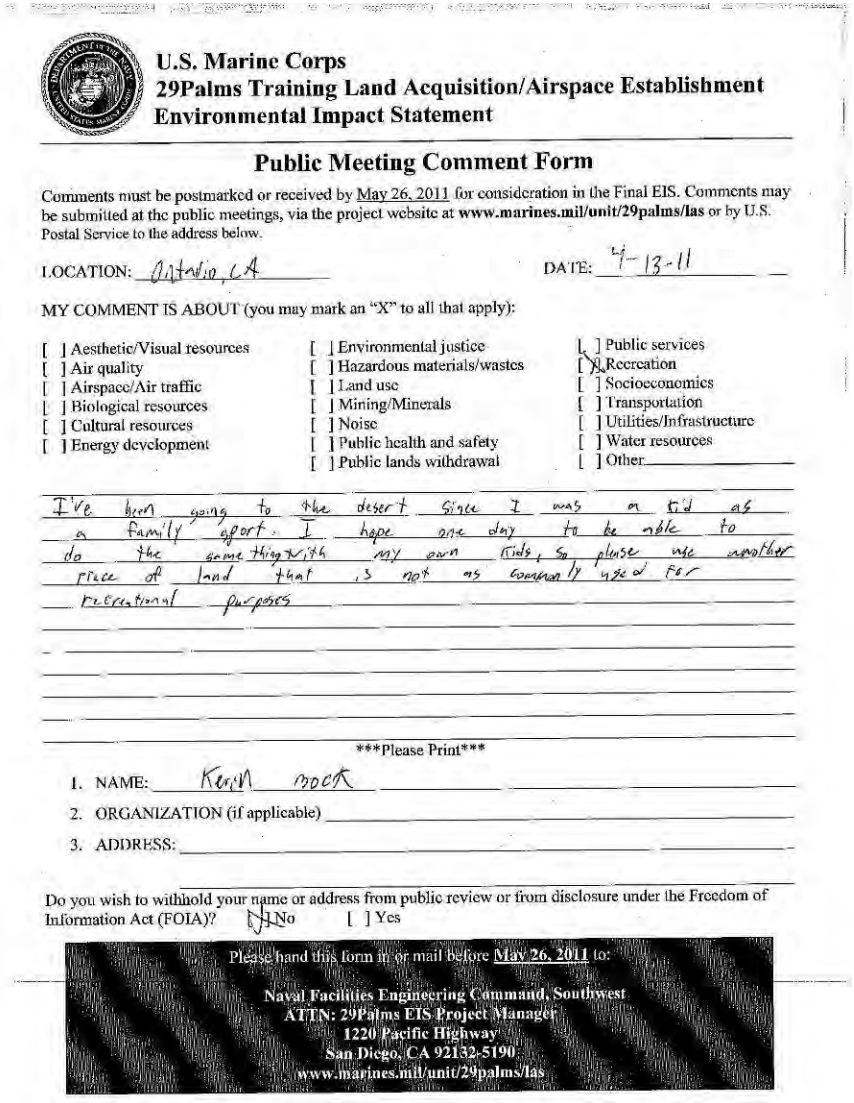
Response to Comment W-ON-091:



Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Alternative 5!
I understand the need for military training in the success for our freedom but I dont see why we fight for it while we have to fight for our freedom of land recreation. Im an offroad racer and have grown up around actively in the sport and have enjoyed many years in this desert you are trying to acquire. I share with the American people, take 2 months, and even open up the Mojave Reserve for our use so these 2 months will not be a negative.

I would like to see a new alternative like #6 But with "The Rockpile" Not in the Permanently closed section. That location has significant history to many offroaders people lost there life there doing what they love, offroad racing We have a memorial planned and to loose that would be a heart break to thousands of OHV users.

I believe the Marines should go east, loosing such historical OHV areas such as Rock pile, Big of the hammers and the lake beds will greatly impact the OHV community and the revenue produced by ourselves in the area. I also believe that if public lands are taken away from the general public that we should have land opened for us in other areas.

The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

I am saddened that it has come down to the point that we are going to have to give up what we have for family recreation to further expand our military training facilities. I find it hard to believe that there is no other solution to this problem. I understand the need for more training area but to take from the land in which we all use is not necessary. The "Alternatives" listed are not going to satisfy all the needs both of the people and communities in which they surround. Please reconsider another property that is not dependant upon visitors and recreationists. As it the hard economic times were not bad enough to take business from an already hurting community is not ethical!!

Response to Comment W-ON-097:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS also evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

I came tonight to voice my opinion to ANY AND ALL expansion of the U.S. Marine Corps Base @ 29Palms. At a time when our military spending is at an all-time high, having nearly doubled in size since 2001, I believe this is nothing but a premeditated land acquisition in light of expanding military presence in the Middle East. Why what better training area for the mountains of Afghanistan etc.. I refuse to allow my tax dollars, too much of which already goes to defense spending, to spoil the very lands they protect!! I want our public space to be kept as such for future generations, please —

Comments must be postmarked or received by May 26, 2011 for consideration in the Final EIS. Comments may be submitted at the public meetings, via the project website at **www.marines.mil/unit/29palms/las** or by U.S. Postal Service to the address below.

LOCATION: ONTARIO DATE: 4-12-11

MY COMMENT IS ABOUT (you may mark an "X" to all that apply):

[ ] Aesthetic/Visual resources	[ ] Environmental justice	[ ] Public services
[ ] Air quality	[ ] Hazardous materials/wastes	[X] Recreation
[X] Airspace/Air traffic	[X] Land use	[X] Socioeconomics
[ ] Biological resources	[ ] Mining/Minerals	[ ] Transportation
[ ] Cultural resources	[ ] Noise	[ ] Utilities/Infrastructure
[ ] Energy development	[ ] Public health and safety	[ ] Water resources
	[X] Public lands withdrawal	[ ] Other

Thanks for all the great help answering my questions!
Specifically, I am going to be affected by the restricted air-space over our air-strip ~~Rancho~~ 7CA1. We are outside the land boundries proposed but inside the restricted air-space by ~100 yards. Can that space boundry be moved NE 1-2 miles?
I SUGGEST: NO ACTION or OPTION 3!

Thanks

Response to Comment W-ON-099:

Thank you for your comment. The USMC is sensitive to the potential effects the airspace proposals could have on commercial, business, and general aviation activities and will seek means to accommodate those interests to the greatest extent possible while also striving to meet their flight training requirements. The airspace proposals will be examined in depth by the FAA and any measures required to mitigate impacts will be discussed with the USMC, airport operators, and other aviation interests, as appropriate. The FAA outlines procedures for public use airports within boundaries of restricted airspace, these procedures will be followed for all airspace proposals. USMC representatives will continue to maintain outreach programs to the civil aviation community to discuss their aviation requirements and those options that will best serve all interest in sharing use of the Combat Center airspace. The location of your particular airstrip will be taken into consideration for boundary revisions throughout the NEPA and FAA process.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

AS A OUTDOORSMAN / JEEPER I HAVE OBSERVED THAT WE ARE LOSING ACCESS TO OUR PUBLIC LANDS. I HAVE PERSONALLY LOST A LOT OF ACCESS. OPTION 3 WITH MITIGATION OF WILDERNESS AREAS IS A VIABLE OPTION AND WILL NOT TAKEAWAY MORE LAND. IT USES LAND THAT WE HAVE ALREADY BEEN DENIED.

THANK YOU
THOMAS K. BERGMAN

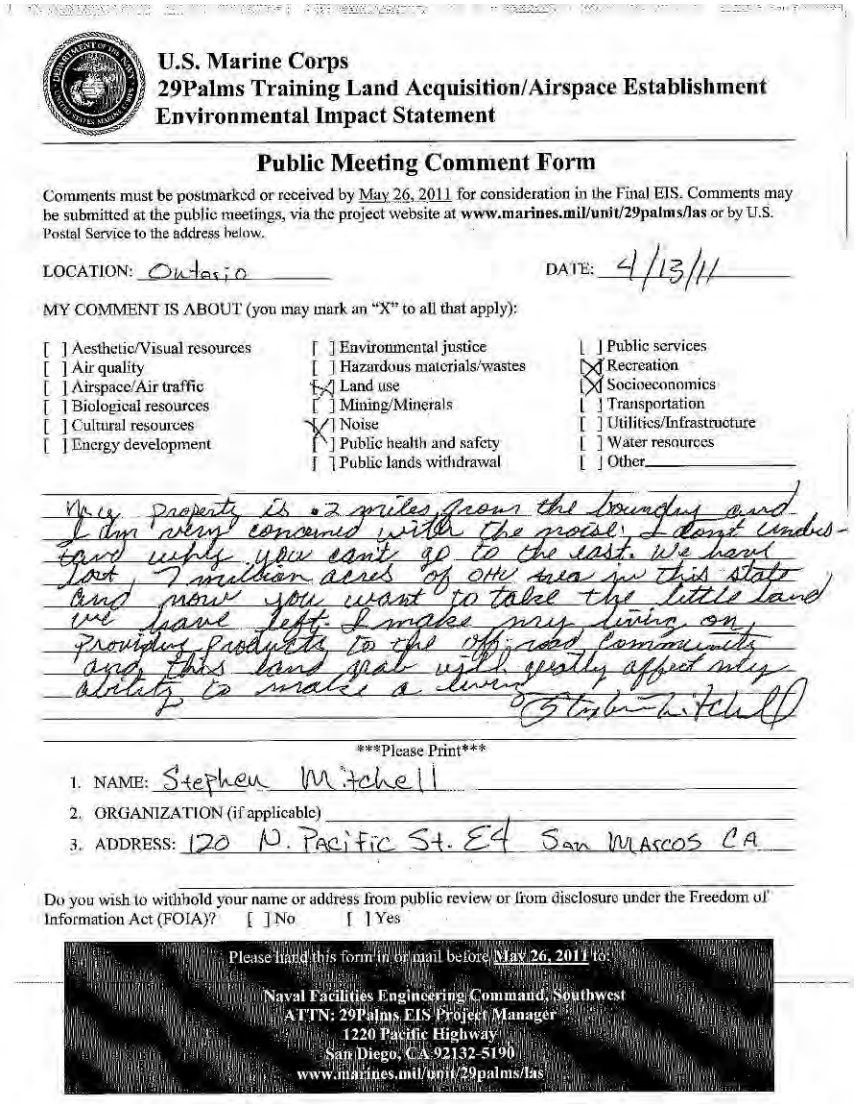
Response to Comment W-ON-100:



Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

My property is .2 miles from the boundary and I am very concerned with the noise, I don't understand why you can't go to the east. We have lost 7 million acres of OHV area in this state and now you want to take the little land we have left. I make my living on providing products to the off-road community and this land grab will greatly affect my ability to make a living. Stephen Mitchell

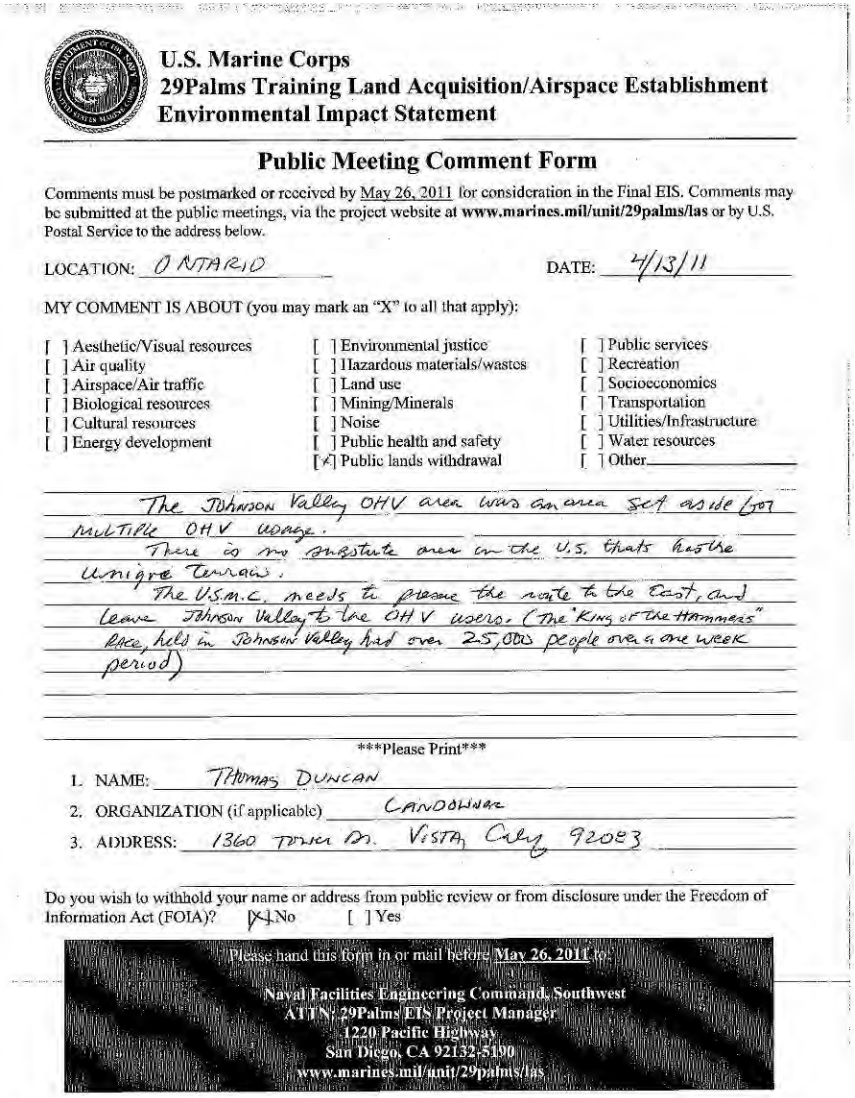
Response to Comment W-ON-101:



Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The Johnson Valley OHV area was an area set aside for MULTIPLE OHV usage.
There is no substitute area in the U.S. that has the Unique Terrain.
The U.S.M.C. needs to please the route to the East, and leave Johnson Valley to the OHV users. (The "King of the Hammers" race, held in Johnson Valley had over 25,000 people over a one week period)

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

With the ever shrinking amount of space for offroad recreation, any amount of loss of Johnson Valley would be a disaster. Crowding more people into less space is something that should not be done. In my opinion, alternative #3 is the only acceptable plan I see. Or, I was told option #7 would work as there would be no land grab. I'm aware the Marine need live fire training but I'm sure there are spots elsewhere that wouldn't affect the hopines of [redacted] hundreds of thousand of people.

Hello. I am writing this today to help protect the land as well as the surrounding communities that will be impacted. Don't take this the wrong way as I do support our military. I support the expansion to the east (Alternative 5) or Alternative 4 as a secondary option if Alternative 3 is not feasable. I go and drive as well as ride pretty much the entire area of Johnson Valley. From Anderson Dry lake through the two race courses that run by the Rock Pile to the Hammers on the east side. I am also concerned about the local economy. What will happen to all the business were we get food, gas & other supplies? What about any ordanance materials that get left behind from exercises? Thank's for taking the time to review my comments.

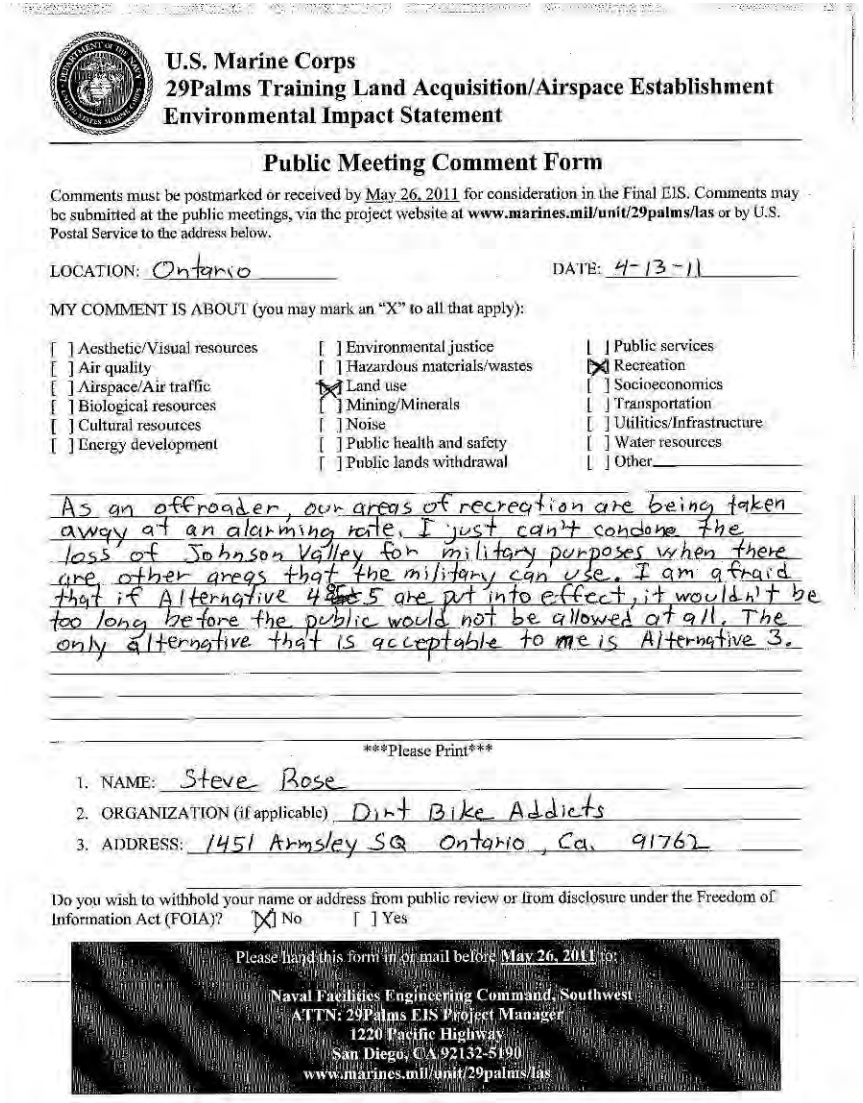
Response to Comment W-ON-108:



Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

As an offroader, our areas of recreation are being taken away at an alarming rate. I just can't condone the loss of Johnson Valley for military purposes when there are other areas that the military can use. I am afraid that if Alternative 4 & 5 are put into effect, it wouldn't be too long before the public would not be allowed at all. The only alternative that is acceptable to me is Alternative 3.

Response to Comment W-ON-109:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps understands the importance of Johnson Valley for recreation. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

I understand the need for training grounds for the military, but why is there only 1 option (OPTION 3) that has year round minimal adverse affect on one of the very few OHV areas left within a reasonable driving distance? Any of the options except 3 takes such a large chunk of Johnson Valley from our use that it would not only hurt the entire offroad community it would hurt the local economy. If you look over 80% of the major offroad companies are within 100 miles of Anaheim. I personally work for one of them King Shocks, and closing any land in Johnson Valley would hurt our our business and many like it. My ability to pay my bills, rent and put food on the table revolve around the offroad community. Are we really trying to take money from people whose only way of being able to survive such a nasty recession has been the people spending money STIMULATING THE Economy spending tens of thousands of dollars per yr doing what they LOVE? Johnson Valley is important to us all and What is the point of fighting and dying for this great land, if there is no great land left for us to use

Response to Comment W-ON-110:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

NO ACTION IS MY PREFERRED ALTERNATIVE, BUT ALTERNATIVE 3 IS MY 2ND CHOICE. THE MAIN CONCERN HERE IS KEEPING PUBLIC LAND ACCESSIBLE TO THE PUBLIC. ALSO, THE ECONOMIES OF ~~THE~~ JOHNSON VALLEY/LUCERNE ARE IMPACTED HEAVILY FUNDED BY RECREATIONAL OFFROAD USERS. MILLIONS OF DOLLARS WHICH COULD COME INTO THE LOCAL ECONOMIES WILL VANISH IF OFFROAD USERS ARE SHUT OUT OF THIS AREA. ALSO, THE DESERT TORTOISE, AN ENDANGERED SPECIES, CAN BE SEVERELY IMPACTED BY USE OF LIVE ORDINANCE AND HEAVY EQUIPMENT ON THE GROUND. OFFROAD ENTHUSIASTS IN GENERAL CARE ABOUT AND APPRECIATE THE FLORA & FAUNA OF THE DESERT ECOSYSTEM ~~WE~~ AND I DO NOT FORSEE A BRIGHT FUTURE FOR THE ENVIRONMENT AFFECTED BY MILITARY USE OF THIS LAND

I WOULD LIKE TO START OFF BY SAYING ANY EXPANSION OF THE BASE TOWARDS THE WEST WOULD TAKE AWAY NOT ONLY HUGE FAMILY TRADION BUT A LIFESTYLE THAT MY FAMILY HAS COME TO KNOW. WE ARE ON ARE THIRD GENERATION OF CAMPING & OFFROADING IN JOHNSON VALLEY. AS WELL AS THE ENJOYMENT IT HAS ALSO BECOME A LIVING AND FAMILY BUSSINESS. A EXPASION TO THE EAST, WOULD NOT IMPACT US OR MANY OTHER FAMILY THAT I HAVE TALKED TOO.

OF ALL OF YOUR PROPOSED ACTIONS, I CHOOSE "ALTERNATIVE 3". IT WILL HAVE THE SMALLEST IMPACT ON THE OHV COMMUNITY, WHICH IS SOMETHING THAT MEANS A LOT TO MY FAMILY AND FRIENDS. WE'RE AFRAID THAT IF YOU GUYS WERE TO TAKE-OVER THE LAND, IT WOULD/WILL BE LOST FOREVER, DESPITE WHAT YOU SAY, LETS SAY YOU GUYS TURN JOHNSON VALLEY INTO A "DUAL-USE" OR "SHARED" AREA, THE FIRST TIME YOU GUYS "LOSE" SOME ORDINANCE, WE'LL NEVER BE ALLOWED BACK INTO THAT AREA AGAIN, WHICH IS GREAT FOR THE MILITARY, BUT THE GENERAL PUBLIC WILL BE THE ONES THAT WILL LOSE. I'VE BEEN GOING TO JOHNSON VALLEY FOR AS LONG AS I REMEMBER, AND GOING OUT THERE HAS ALWAYS BEEN A SHARED FAMILY EXPERIENCE, I WOULD HATE TO NEVER BE ALLOWED OUT THERE AGAIN, MY FAMILY WOULD LOSE A PIECE OF OUR HISTORY.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Johnson Valley OHV area is an important piece of land for public recreation, as well as sanctioned racing organizations such as M.O.R.E and K.O.H. The use of this land for OHV purposes is incredibly important to the local economy as well as businesses associated w/ OHV use. For myself personally, if this land was no longer able to be used for racing events I would not be able to continue racing, In turn I would have no need to spend money in the local business of the area.
In reviewing the different Alternatives I find that any movement to the west would decimate the Johnson Valley OHV Area for All public use. If there must be an expansion it must move to the East.

AS USERS OF OHV/OPEN LAND IN THE STATE, THE LIMITED AMOUNT OF SPACE AVAILABLE FOR RECREATIONAL USE IS ALREADY LIMITED. CONVERTING EXISTING OHV LAND, SUCH AS LUCERNE VALLEY INTO A MARINE BASE ONLY FURTHER LIMIT THIS PIT OF SOLD I & THE MANY THOUSAND OTHER CALIFORNIANS ENJOY. WHILE OUTDOOR RECREATION CAN RANGE FROM SIMPLE CAMPING, OFF-ROAD USERS BRING MILLIONS OF DOLLARS INTO THE STATE, WHETHER ITS FOR LAND USE FEES OR TAXES. FURTHER DEPLETING OUR OPEN LAND RESOURCES AFFECTS THOSE OUR STATE & USERS BOTH ENVIRONMENTALLY & ECONOMICALLY.

Alternative THREE would have the least harmful impact on both land owners as well as recreational land users. Public lands are already in such short supply that a mass closure in the Johnson Valley area would be devistating to the off road Community.

The environmental impact on land owners would also be extensive from this's major take overs.

Alternative 4 and 5 are the next best Alternatives if Alternative 3 is not to be chosen.

Hi, my name is Adam and I am 13 years old, I myself enjoy riding dirtbikes, hiking, and just having fun out in the desert. And I have some questions. First, when your done using the land or will it be unusable because of hazardous ordinance. And also if the land is actually needed for combat training since so much of modern day combat is air and remote control based. Thanks for listening.

Response to Comment W-ON-119:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Take no action!

I am opposed to the expansion of the Marine Corps Base at 29 Palms for many reasons. First and foremost the land expansion is not necessary as the Department of Defense has recently expanded at Ft Irwin, less than 40 miles away and has unused areas that can be utilized. The land at Ft Irwin can also be used jointly with the U.S. Army for joint training exercises. The argument that we must "Train as we fight" should require joint training with the US Army as all branches of the military fight together. I would also point out that the expansion at Ft Irwin killed a majority of the Desert Tortoise that were "relocated" This will also happen in Johnson Valley. I believe the public land should remain open to the public.

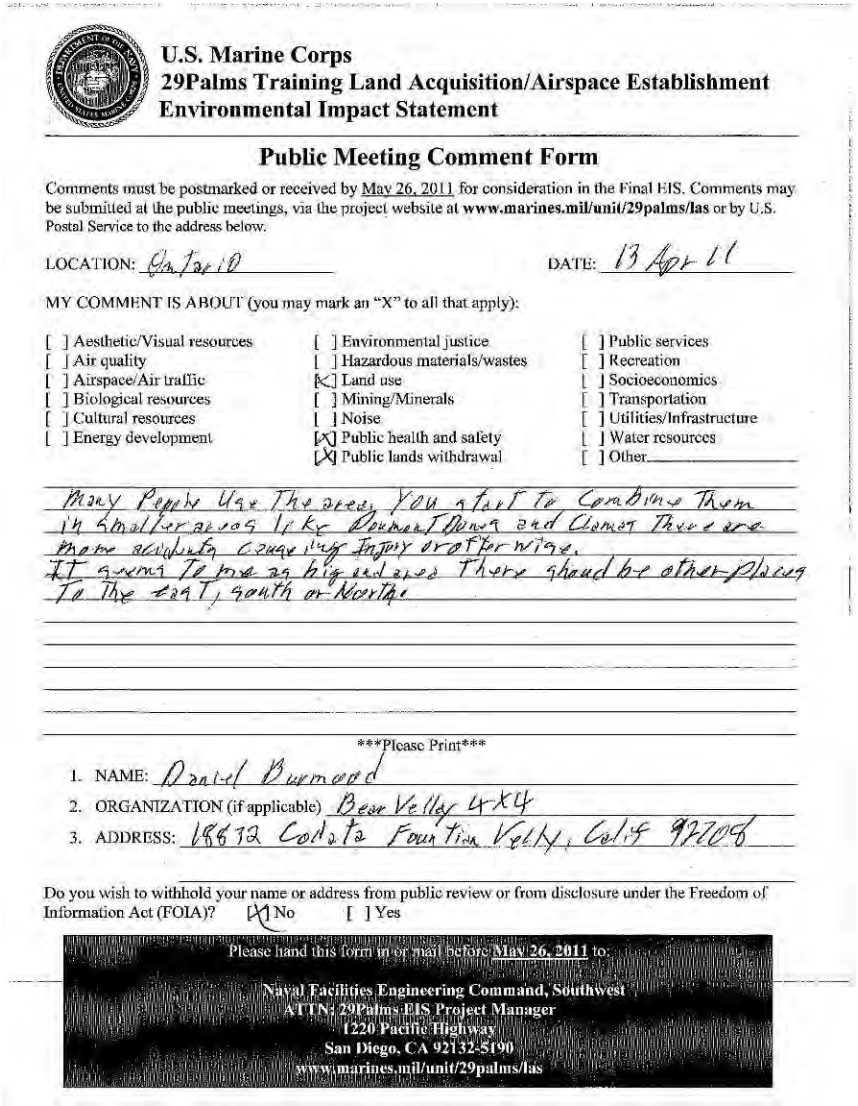
Response to Comment W-ON-120:



Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates biological resources, including the desert tortoise, under each of the action alternatives (refer to Section 4.10 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-ON-121:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I am a landowner on the Charles Road boundary area. My family has owned this property since 1969. The ability to ride off highway vehicles is what attracted us to this area. Alternate Six puts my property within 0.3 mile of the boundry. My concern, is that if you do not keep your mixed use time of 2 months military use and 10 months of recreational use, then my property values will be reduced. I would like to see more shared area for alternate 6 as it appears to be reduced by 2/3 of the current area. Perhaps a 50% split of the current area would be more equitable and help to ensure my property values. If you cannot keep you promise of shared use then I prefer to be bought out while there is still some value there.

Response to Comment W-ON-122:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

ALTERNATIVE 3 WOULD HAVE THE LEAST EFFECT ON RECREATION AND LANDOWNERS. THE MAJORITY OF RECREATIONAL ACTIVITIES OCCUR IN JOHNSON VALLEY. THERE ARE ALSO MORE PROPERTY OWNERS IN THIS AREA INCLUDING LANDOWNERS WHO HAVE RUNWAYS AND FLY INTO THEIR PROPERTY. THE ENVIRONMENTAL IMPACT UPON THESE PROPERTY OWNERS WOULD BE LESSENING. ALTERNATIVE 3 WOULD HAVE THE LEAST EFFECT

My concern is with Plan 6. From looking at all plans in Plan 6 we would be taking the rock pile away from the off road community. There is a memorial out there for a big race that happened in august. If we could have access to just this part of the race course. That and if we could have more of the land for communal use. The rock pile is a big part of the off-roading community now after the crash that had happened at this site.

Alternative 5 would seem to provide both the public and the Corps full access to Johnson Valley in a fairer arrangement than the other alternatives given the Corps stated need for a larger training area.

Alternative 6, unnecessarily closes a significant portion of the Johnson Valley Recreation Area by using explosive ordinance in the Valley.

[redacted]

We would like to work with the Marine Corps to help further develop the current alternatives for a mutually agreeable solution. Thanks for the opportunity to comment.

For years off road recreationist have put a lot of time effort and Money into the Johnson Valley Area to improve the ~~#~~ quality of off road recreation. Although I can sympathize with the Military's needs, It is again taking away from off roading, without giving anything in return.

An even swap Acre for Acre would be appropriate. We don't care where, Just don't shut us out.

Alternative 2- End the War, and the need disapears

Response to Comment W-ON-126:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Having used the Johnson Valley area for over 20 years I am really angry that the Marine Corp would take our dwindling open land from us. They should share the desert not take it. How about share Fort Erwin. Option 3 in the study gives the corp some logistic issues, but that also make for better training through obversity.

There are water shortages and rationing in the local desert region, we had the highway Patrol stopping water trucks because of permit issues, where will all the trash go? where will the water come from? How will the small highways hold up to the heavy traffic, what about all the turtles that died when Ft Irwin expansion happened will that be repeated, There is nothing good that can come from this expansion! The Marines cannot conduct business in the desert and conserve it, that is a flat out oxy moron!

THE DEIS MIS-REPRESENTS NOISE IMPACTS AND DOESN'T ADDRESS VIBRATIONS!! THE CNEL PARAMETER IS A 24 HR AVERAGE READING. THE EXPLOSIONS OF ORDNANCE WILL BE HEARD INDIVIDUALLY! SO LMAX PROJECTIONS SHOULD HAVE BEEN PRESENTED IN THE DEIS NOT CNEL

I HAVE BEEN AT MY CABIN WHEN WARGAMES ARE OCCURING IN THE EVENING AND THE NOISE AND VIBRATIONS ARE TERRIBLE RESIDENTS AROUND THE PERIMETER OF THE COMBAT CENTER WILL ALL BE TRAUMATIZED BY THE NOISE & VIBRATIONS THE DOCUMENT INDICATES 23% OF THE EXPLOSIONS WILL OCCUR FROM 7:00PM – 10:00PM. AND 11% WILL OCCUR ***Please Print*** 6:00PM UNTIL 7:00AM THIS IS CRAZY!!

Response to Comment W-ON-129:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

I think the mariens should not train in the tortoise area. tortoises should be left alone. Wild life is very important to earth. Possibly one day tortises could come endangered. we want to help Wildlife. they help us in many things. they even spare their lives for are food. Please help the tortoses and other wild life.

Response to Comment W-ON-130:

Thank you for your comment. The EIS evaluates biological resources, including the desert tortoise, under each of the action alternatives (refer to Section 4.10 of the EIS). The Marine Corps is currently undergoing consultation with the USFWS in regards to impacts to the desert tortoise and other wildlife species.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

My main concern for the purposed alternative 6 is that there is not enough land use for the King of the hammers race. Much of the land used during that race would be closed off for good. I am in favor of either alternitive 4, or 5. Also a safety concern is that during races some main roads to acess harder to reach areas of the course would be closed. This is a huge safety concern because if a driver is injured in a remote part of the trails and the main roads arent being able to be used it puts the driver in serious danger if they crash because it would take hours otherwise to reach the crushed driver and bring aid to him.

Response to Comment W-ON-131:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Impacts to emergency response are discussed in Section 4.4 of the EIS. As noted in the EIS, under the proposed action there would be additional permanent personnel necessary to manage any acquired land areas in addition to existing mutual aid agreements.

April 11, 2011

Naval Facilities Engineering Command Southwest
Attention: 29 Palm EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

Dear Sir or Madam:

Thank you for the opportunity to comment on the Draft Environmental Impact Statement for the Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training at the Marine Corps Air Ground Combat Center, Twentynine Palms, CA., dated February 2011. The portion of the acquisition area identified in the report as the West Study Area, and the preferred alternative for base expansion, includes iron mining deposits, both claims and patented lands, owned by the principals of Hahm International and Levand Steel and Supply Corporation and operated by Hahm International, a domestically owned mining company located in Apple Valley California.

The DEIS does not provide direction for submission of written comments via certified mail. After contacting the Marine Corp via the website we were given the address above and trust it meets comment protocol.

The owners or operators of the mines were never contacted by the document preparer regarding activities or impacts of the proposed action. To our knowledge neither was the cement industry.

The proposed base land acquisition will have a direct impact on existing, permitted iron mine operations at the Morris Mine, proposed iron mining at the Bessemer Mine and access to both mines.

Hahm International and its predecessor, KD Mining is a 41 year old mine owner operator located at P.O. Box 1323, Apple Valley, CA., 92307. Hahm currently operates the Silver Lake Iron Mine at Fort Irwin, CA. (referenced on page 3.12-9 of the DEIS) and the Morris Iron Mine within the proposed acquisition area (page 3.12-9 of the DEIS). They also own the Bessemer Mine located within the proposed acquisition area (page 3.12-9 of the DEIS) and are in the process of designing a mine operation and reclamation plan for consideration by San Bernardino County for anticipated submittal and consideration in 2011. As a correction to the DEIS summary of Iron Resources on Page 3.12-9 of the DEIS, permitted iron reserves at the Silver Lake Mine are 2.75 million tons (mt), permitted iron reserves at the Morris Mine are 18.8 mt and proven reserves at the Bessemer Mine are 2.65 mt. These three mines currently hold 24.2 million tons of recoverable iron ore. Present value of Morris and Bessemer mines is in excess of $600,000,000.00 dollars. The DEIS does not consider the impact of this loss of ore supply or revenue in its analysis.

Response to Comment W-ON-132 (Page 2 of 4):

Comment ID: W-ON-132 (Page 3 of 4)

S. Descher

Iron mining is San Bernardino County historically has developed in support of the southern California cement industry. Six cement plants are situated in proximity to limestone deposits found in the San Bernardino, Victorville, Mojave and Tehachapi valleys. All require iron as an additive to their production process. Hahm International provides the majority of that iron from their iron deposits or as contract miners to those cement plants that own exclusive deposits. Hahm currently supplies iron ore to Mitsubishi, TXI, Cemex, Lehigh, National and occasionally Cal Portland cement companies. The next closest iron deposits are located outside of California in the states of Utah and Northern Nevada. Their locations and the cost of shipping iron by truck or rail to this southern California based market is financially prohibitive.

Shipping costs for iron ore dramatically increase the cost to the market. This is directly attributable to the cost of fuel and the proximity of the mine. Ore being shipped to the Victorville market from the Silver Lake Iron Mine, owned and operated by Hahm and Levand, is a 120 mile one way trip with an additional 30 miles to Lucerne Valley. The Morris and Bessemer Iron Mines are located 60 miles from Victorville and 30 miles from Lucerne Valley. Fuel cost, energy savings, and price for delivery are literally one half the cost of Silver Lake iron and one quarter for delivery to Lucerne Valley. This market proximity and cost savings has prompted Hahm and Levand to complete the regulatory process and commit the financial resources to open the Morris and Bessemer Iron Mines.

The DEIS describes the Morris and Bessemer Iron Mines in the document text (page 3.12-9 of the DEIS) and potential impacts to the mine(s) as less than significant (page 4.1-10 of the DEIS) due to acquisition through purchase and closure or joint operation and indicates that these iron reserves would not pose a significant impact on the availability of iron on a national scale. Also see disposition of mines, Section 2.6, page 2-95. Hahm and Levand strongly disagree with this conclusion.

Hahm International is familiar with military base operations and joint use mining. The Silver Lake Mine in the Fort Irwin expansion area, owned and operated by Hahm, was considered for acquisition by the Department of Defense. Unable to provide a federal appraisal value that reflected the actual market value DOD elected to create a joint use agreement with Hahm which allows them access to the mine for operations and shipping that does not conflict with the military mission. They have successfully mined Silver Lake under that agreement since 2006 and will continue until 2022 at which time the access agreement may be renewed or dissolved. Hahm has proven their ability to operate in conjunction with military activities including ground combat training. The uncertainty of this long term access and proximity to market at Silver Lake encouraged Hahm and Levand to open the Morris and Bessemer Mines.

Closure of the Bessemer and Morris mines would result in a loss of two of the four available operating iron mines in the area, the largest permitted iron mine in the county (Morris) and 89 percent of Hahm and Levands' iron reserves. It will dramatically increase Hahm's delivery costs and will have an immediate and significant impact on the availability and cost of iron ore to the southern California cement industry.

Response to Comment W-ON-132 (Page 3 of 4):

Comment ID: W-ON-132 (Page 4 of 4)

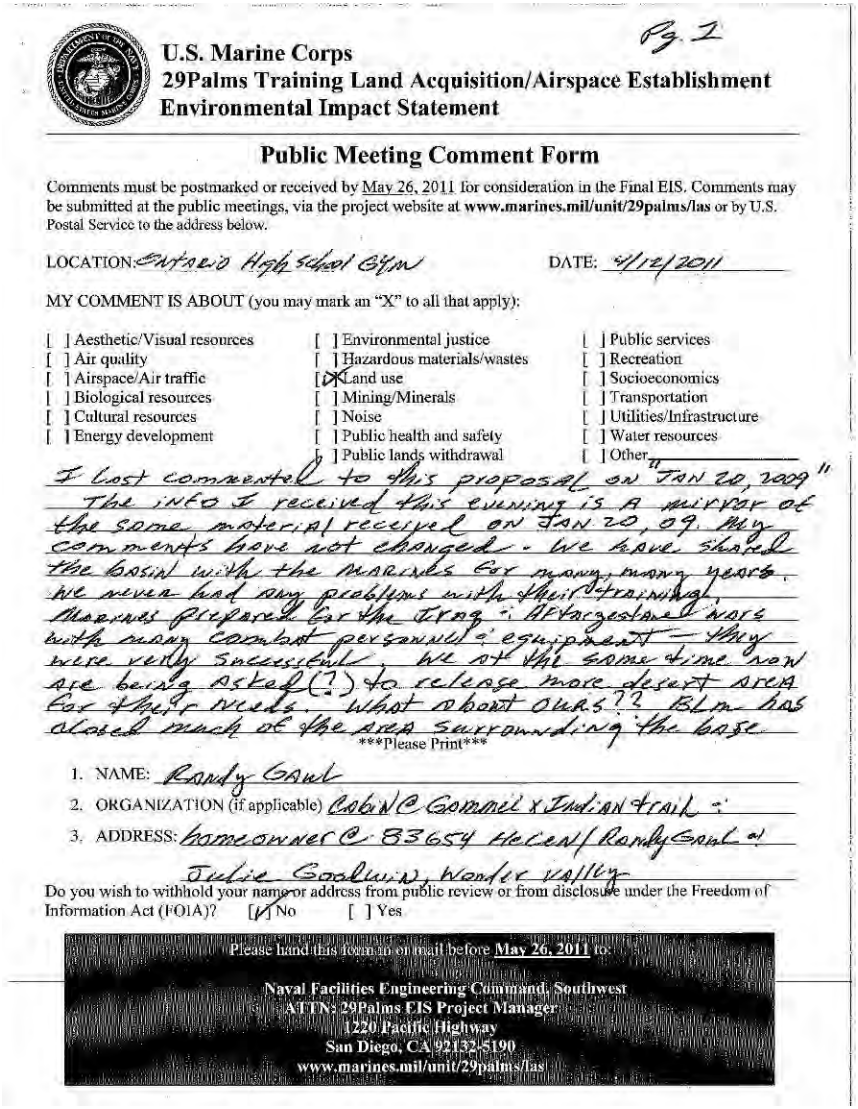
S. Descher

Loss of reserves and investment capital including equipment, financing and permitting costs through base land acquisition would be significant to Hahm and Levand, both privately held corporations, potentially resulting in a taking of property, mineral rights, present and future business opportunities. The potential loss of iron ore to the cement industry in light of the remoteness of secondary sources is incalculable.

Acquisition of mines by the government at fair market value at best is uncertain. Conflicts with marine live fire training activities are expected by Hahm to be potentially great. Access closure and loss of mining opportunity is financially significant. The proposed action would in fact remove two of Hahm and Levands' three iron operations and 89 percent of their iron reserves potentially ending their market viability. Contrary to the findings of the DEIS, Hahm and Levand believe:

- Impacts to iron mines within the land acquisition area are significant.
- Impacts to individual mine claim and patent land holders are significant.
- Impacts to iron ore supplies to the southern California cement market are significant both physically and economically.
- Loss of the west study area to iron mining will permanently alter the availability of economically viable iron reserves to southern California with significant financial impacts to the cost of iron and subsequent cost of cement.
- Loss of the Morris and Bessemer mines from Hahm and Levands' documented reserves will significantly challenge their ability to meet market demand and potentially close their business and take from them their property and livelihood.

Thank you for the opportunity to comment on this DEIS and being included in the administrative record. Hahm and Levand look forward to consideration of their concerns in the EIS process and a written response to this letter.



Sincerely,

Scott Descher
President,
Hahm International Inc.

Joe Cordner
President
Levand Steel and Supply Corporation

I lost comments to this proposal on JAN 20, 2009 " The info I received this evening is a mirror of the same material received on JAN 20, 09. My comments have not changed. We have shared the BASIN with the MARINES for many, many years. We never had any problems with their training. Marines prepared for the Iraq & Afghanistan wars with many combat personnel & equipment — they were very successful. We at the same time now are being asked (?) to release more desert area for their needs. What about ours?? BLM has closed much of the area surrounding the base.

Response to Comment W-ON-133 (Page 2 of 2):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

It is my opinion that none of the alternatives are acceptable. In our current economic situation, additional spending is not a viable use of our limited resources. The economic impact on the local communities, businesses, and organizations that depend on the use of this land would be devastating. My family's whole life centers around the use of Johnson Valley, and has for 25 years. We race, camp, and hike throughout Johnson Valley. I fear any shared use would reduce the safety of the public exponentially. If any alternatives are taken, ESPECIALLY Alternative C, my mine and many others way of life would be changed forever. Not to mention the danger imposed from tank tracks, inability to gain access for emergency purposes

Response to Comment W-ON-135 (Page 1 of 3):

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Comment ID: W-ON-135 (Page 2 of 3)

live ordinance use, and destruction of the landscape for future use. Decades of precedance have been set in the use of this land as a common all purpose recreation area for all to use. I support the Marines and value their service to my country, but I cannot see the benefit gained from the use of Johnson Valley as an addition to what is already one of the largest combat training centers in the United States today.

An alternative I would propose is land use mitigation, acre for acre. Open the land west of Johnson Valley currently [redacted] appropriated as wilderness land to OHV and general public use, if no other alternative can be found to taking Johnson Valley.

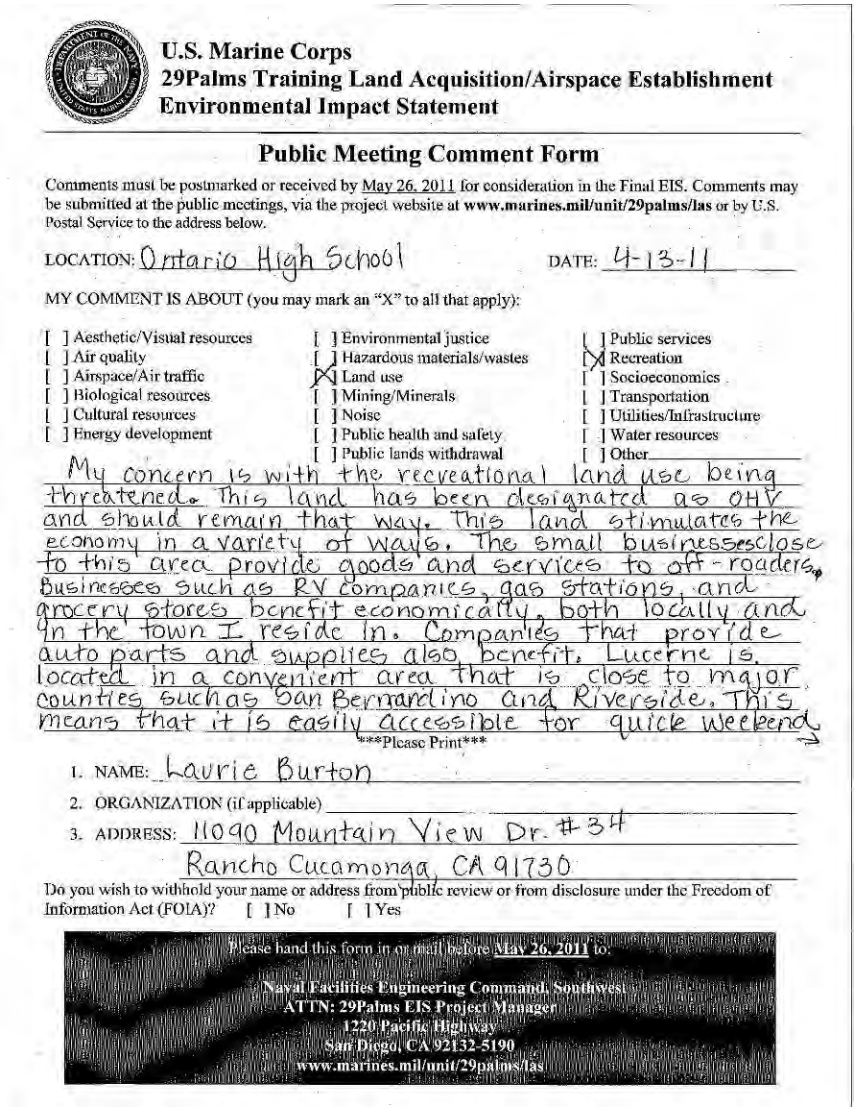
The closure of Johnson Valley, the destruction of an entire socio-economical regions way of life is not acceptable. there must be another solution for the Marines training needs, one that will not impact our way of life. I fear that any live fire use cannot and will not be able to controlled entirely. Once live fire use has commenced the areas open for public use will be deemed hazardous areas and closed to public access. the [redacted] areas left open also will have no access from the public's areas either. Although some land will be open it will be inaccessable, therefor useless for us. this also throws off the acreage cant know that has been provided. Please take into consideration how many people who aren't aware of these proposed closures as well. If land that has been open for decades is suddenly closed, if even one person mistakenly entered newly closed live fire land and were hurt, the results would be catastrophic and deemed an unnecessary casualty [redacted].

John Miller

John Miller
1005 MC, D37

Response to Comment W-ON-135 (Page 2 of 3):

Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).



As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Comment ID: W-ON-135 (Page 3 of 3)

Response to Comment W-ON-135 (Page 3 of 3):

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

My concern is with the recreational land use being threatened. This land has been designated as OHV and should remain that way. This land stimulates the economy in a variety of ways. The small businessesclose to this area provide goods and services to off-roaders. Businesses such as RV companies, gas stations, and grocery stores benefit economically, both locally and in the town I reside in. Companies that provide auto parts and supplies also benefit. Lucerne is located in a convenient area that is close to major counties such as San Bernardino and Riverside. This means that it is easily accessible for quick weekend

Response to Comment W-ON-136 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

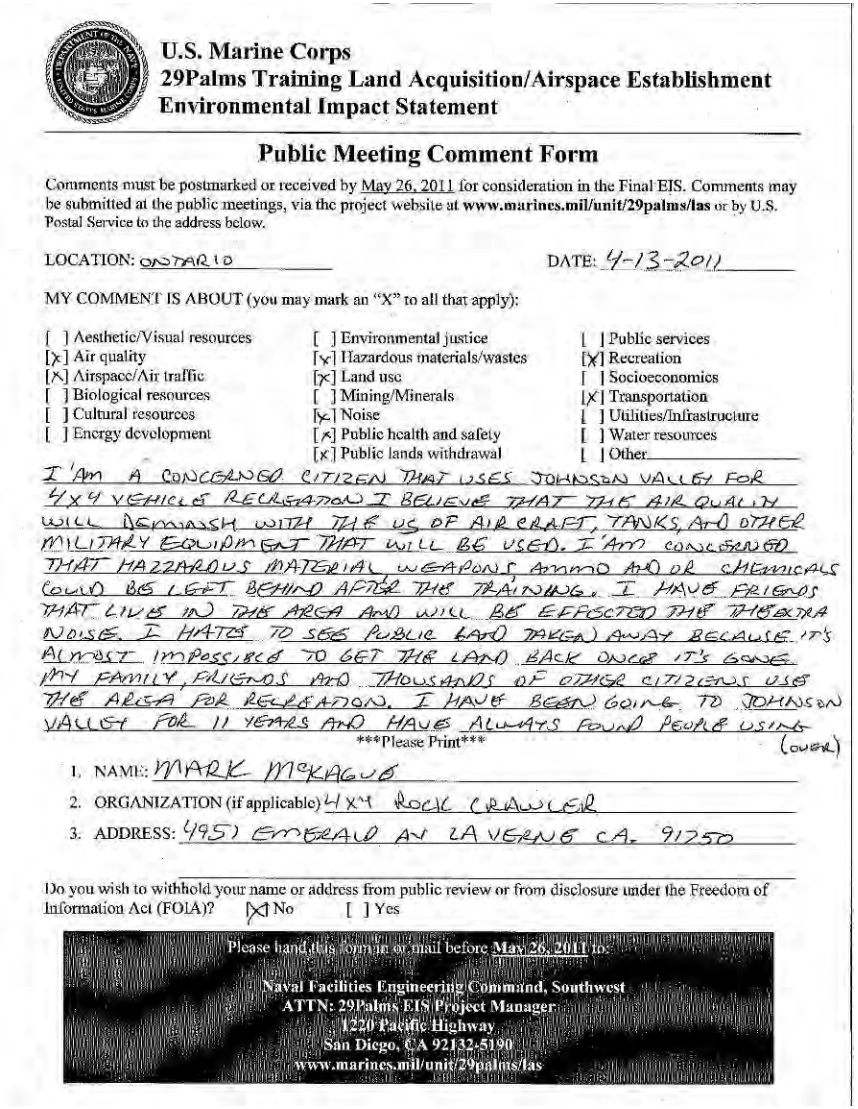
L. Burton

and day trips.

From a military point of view (future son-in-law) I know for a fact that the Marines have plenty of land at their current bases that goes unused. The land they have is so vast, many Marines have only used a small percentage for training.

My recommendation is to use land that is vacant, not land that has already been designated for another purpose.



Another recommendation would be to combine military branches for training. Soldiers training for combat usually train in isolation from other military, yet when in combat they need to coordinate with other brances of military. Instead of acquiring new land, it would be more feasible to train together, sharing bases of other branches. But then, that would make sense.

Response to Comment W-ON-136 (Page 2 of 2):

As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would interfere with the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

I AM A CONCERNED CITIZEN THAT USES JOHNSON VALLEY FOR 4X4 VEHICLE RECREATION. I BELIEVE THAT THE AIR QUALITY WILL DEMINISH WITH THE US OF AIRCRAFT, TANKS, AND OTHER MILITARY EQUIPMENT THAT WILL BE USED. I AM CONCERNED THAT HAZZARDOUS MATERIAL WEAPONS AMMO AND OR CHEMICALS COULD BE LEFT BEHIND AFTER THE TRAINING. I HAVE FRIENDS THAT LIVE IN THE AREA AND WILL BE EFFECTED THE THE EXTRA NOISE. I HATE TO SEE PUBLIC LAND TAKEN AWAY BECAUSE IT'S ALMOST IMPOSSIBLE TO GET THE LAND BACK ONCE IT'S GONE. MY FAMILY, FRIENDS AND THOUSANDS OF OTHER CITIZENS USE THE AREA FOR RECREATION. I HAVE BEEN GOING TO JOHNSON VALLEY FOR 11 YEARS AND HAVE ALWAYS FOUND PEOPLE USING (over)

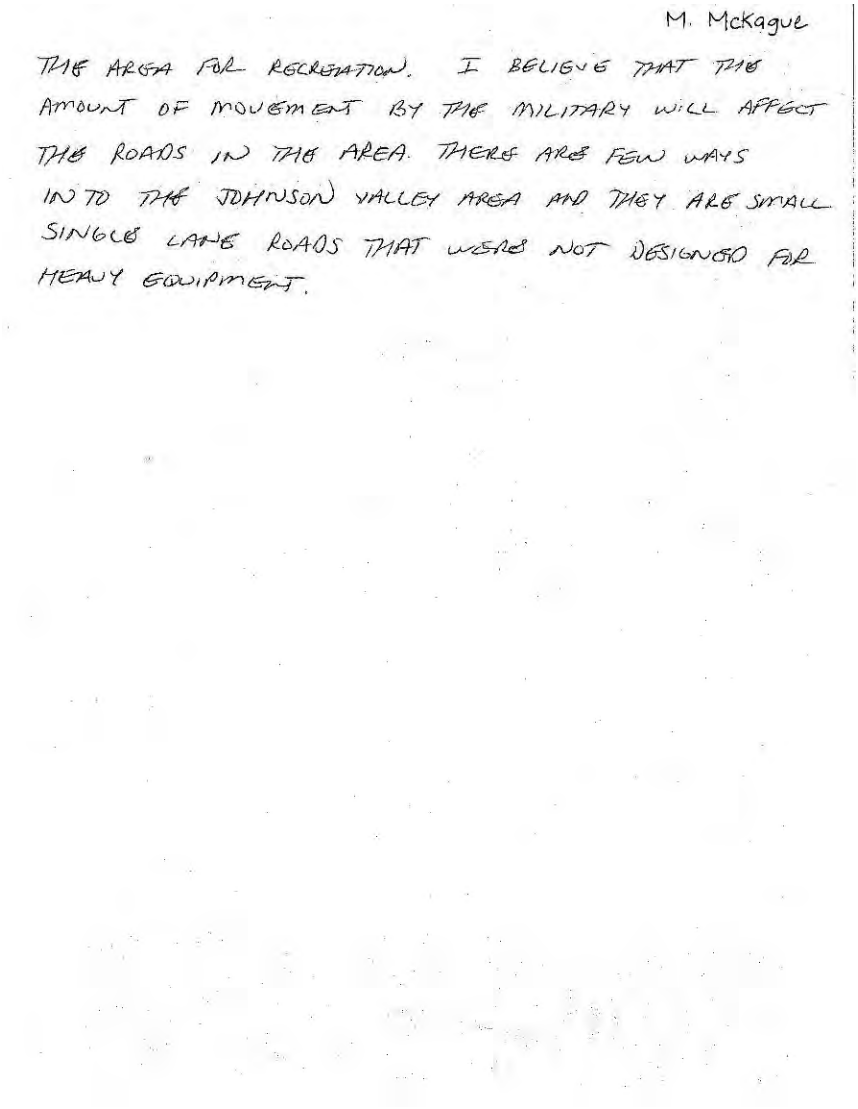
Response to Comment W-ON-137 (Page 1 of 2):



Thank you for your comment. The EIS evaluates air quality under each of the action alternatives (see Sections 4.8). As noted in the EIS, there would be less than significant impacts to air quality under any of the action alternatives with the exception of Alternative 3. Alternative 3 would result in a significant impact to air quality due to an increase in operational emissions of PM_{10}.

The Marine Corps is committed to protection of the public and the environment. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including motor oil, gear fluid, etc.) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

ALT # 3 IS THE BEST ALT. LESS IMPACT TO LOCAL BUSINESS OWNERS. LESS IMPACT TO RECREATION. LESS POPULATED. THE AREA HAS BEEN USED IN THE PAST FOR MILITARY EXERCISES. OFF ROADERS THAT GET PUSHED INTO SMALLER & SMALLER AREAS GET INJURED MORE. SMALLER RIDING AREAS ENCOURAGE ILLEGAL TRAIL TO BE MADE. LEAVE JOHNSON VALLEY ALONE. DE-DESIGNATE WILDERNESS TO MAKE MORE ROOM FOR TRAINING

Response to Comment W-VV-003:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps also understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding and illegal riding in other areas, as well as related impacts to other environmental resources.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Johnson Valley is an important part of the lives of my family. We camp there, we 4-wheel there and we spend time together as a family there.

Also, our 4-wheel drive club Victor Valley 4 Wheelers, has an annual run out there as well. We created the trails there years ago.

Please don't take this away from our family, our club or our community!

Although your EIS claims protection for diverse cultural & biological resources. It does not speak to the loss of those to the public, putting up a resource is not protection but rather keeping it hidden for a "priveledged few" to see when the USMC feels like letting them in.

We in California have had 4/5th of our Public land withdrawn from our access so this point the Federal Govt needs to use what they have "Already withdrawn" rather than take more from Californians.
The Need for a Targeting area is totally false The NTC is 30 miles North on the Largest Military reservation in the free world the Marines, have to go to war with the Army they should train with the Army.

Response to Comment W-VV-009:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

The Johnson Valley OHV area - is one if not "the" last open space left to recreate in competition type vechicles we currently have motorcycle/ohv and rzr type racks in the OHV AREA, Where do you propose we go? The rest of the mojave is closed to us and CONGRESS set aside Johnson Valley as an OHV area to lessen the impact on other areas. If it is closed we will soon be forced to recreate in other states hurting our businesses and $ with us.

Response to Comment W-VV-011:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps also understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. I own 80 acres in the center of the alternative (6) restricted use area.

I am a proponent of the preferred plan (6) being purchased and approved by Congress.

This property will not be of any value to my family if it is not purchased by the military / due to environmental hazards, noise, ground, & air contamination.

Johnson Valley is the best Off-Road area in the U.S. thousands of families like mine get together with our friends for clean, decent activities in the desert, promoting good family values and a get-a-way from hustle & bustle of City Life. We are in a high income bracket + pay lots of Federal & State Taxes – I want the land to enjoy left alone for me and my family.

Response to Comment W-VV-019:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. I oppose Alt 4-5-or 6 as it impacts an area where myself and my family have Recreated for approx. 40 years If Necessary to secure any of the Alternatives I Recommend Alt. #3 to the east of the existing training area this not only impacts land designated for public use but also is an impact financially for both Lucerne Valley & Yucca Valley businesses. Area 456 in the Johnson Valley there are many archeology sites along with a lot of History of mining and Geological importance to public use. It is my opion being a combat Veteran that we should Get out of the middle east then there would be No need to secure any of the above alternatives.

	[ ] Public lands withdrawal	[ ] Other

I have been riding in that area for 8 years now and I believe that there is plenty of training area already. There is no need to expand more training and it will also effect the local economy in Lucerne Valley. Including Gas Stations, Convent Stores, Grocery Stores and Restaurants. Alternative 3 would be the only option if any

Response to Comment W-VV-021:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

20 miles from 140 off the beaten path where one can find some solice and Carry Now we will have aviation assets / motors heavy Machine Guns on armored vechicles - Do we have to tack one of the last quet places presently accesobe by the public and turn it into a trng area - I think not. The Congress and the USMC both know this is simply another land Grab by a FEDERAL AGENCY!

Although I realize the USMC has prepared an EIS details are sparse. As a former Mechanized Infantry soldier 21 yrs (Ret) I have first hand knowledge of the impact ordinance and equipment has on a training area.
Presently if one were to travel East of the Harwell hills area Emerson dry lake they will find abandoned 55 gal drums/5 gal drums and other "Maintenance" waste. This is how we know we are venturing into the present post.
Will the New acquisition be treated the same?

Response to Comment W-VV-023:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

ANOTHER LAND GRAB BY THE GOVERNMENT. OUT OF THE MILLIONS OF ACRES AVAILABLE TO THE MILITARY THEY CHOSE AN AREA THAT'S IN A POPULATED AREA TO DO LARGE SCALE MILITARY OPERATIONS WITH LIVE FIRE. THAT MAKES NO SENSE THE REAL REASON THIS AREA WAS CHOSEN, IT'S A SOFT TARGET! IF THE AREA WAS DEEMED WILDERNESS IT WOULD BE DEEMED UNTOUCHABLE AND TO HARD TO TAKE OVER. THAT SEEMS TO BE THE REAL REASON THIS AREA WAS CHOSEN. BEHIND THE AMOUNT OF MONEY THAT IS BROUGHT TO THIS AREA FROM THE OFF ROAD COMMUNITY. HOW ABOUT THE AMOUNT OF INCOME THAT IS GENERATED IN MY ON COMMUNITY AND HUNDREDS OF OTHERS. THE BROKE GOVERNMENT NEEDS TO STOP SPENDING MY + OTHERS MONEY FOR THINGS THAT STOP OTHER PEOPLE FROM MAKING A LIVING.

Response to Comment W-VV-025:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Alternative 6 proposes a limited use area however the boundary is far too vague. I understand there is a "Road" however I know it is simply a 2 track and 2 sand washes. If one were moving fast in a competition vechicle or M/C a simple rut in the desert would not be noticed. If your signage is to be as it now exists East of Emerson Dry Lake it will also be woefully inadequate seen only if one is moving very slow or "happens" to come right up to one.
If joint use is a "plan" absolute boundaries must be maintained. Fence it & or Create a very highly visable scar along the boundary.

Response to Comment W-VV-026:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Alternative 6 IS problematic to those of us who compete in OFF HIGHWAY RACING.
1. The joint use area is far too small for safe racing. The number of competitors/speed and support personell currently using this area. Cannot safely conduct a ~~quality~~ event. We have vechicles that can travel in excess of 120mph on mixed terrain competing alongside M/C's an slower vechicles. Currently we start them in stages by class fastest to slowest to spread out the field. Clumping them into a small course will guarantee mishaps.

alternatives that require a "permit" for limited public access?
Why does the public need a permit 10 months of the year while the USMC using the area only 2 months a year have unlimited access and the recurring permit process per event.
Currently any race promoter must go thru a lengthy process to secure a permit for EACH event. The USMC should not be able to bypass this process imperpetuity on public land.!

Why take up area when the Marine's have so much unused land. By taking Johnson Valley it would cause everyone to use a smaller area.

This is our recreation, in our own backyards. With the cost of fuel, it's more economical to have the Valleys. We have our hobby, by taking this land you are depriving families from camping, riding and just enjoying the outdoors.

Please do not take away our choice of sport!

Response to Comment W-VV-030:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I NEED TO INSPECT THE VAST AMOUNT OF DESSERT AROUND 29 PALMS & TO THE EAST, LOTS OF ARRA NOT BEING USED & THE NEED TO TAKE OUR PUBLIC LANDS FOR MORE TRAINING OF MARINES IS OUTRAGEOUS, TRAIN IN A ARRA ALREADY SET ASIDE FOR IT, TO TAKE, TAKE, TAKE IS OUR U.S. GOV. METHOD. MORE PEOPLE NEED TO STAND UP FOR OUR RIGHTS AND NOT JUST BE COMPLACENT, DO NOT TAKE JTHNSON VALLEY

Response to Comment W-VV-032:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I AM VERY MUCH AGAINST THE OPTIONS WHICH RESTRICT USE OF JOHNSON VALLEY FOR RECREATION, WHICH IS ALL OPTIONS EXCEPT OPTION 3 AND 7. OPTION 6 IS TOTALLY UNACCEPTABLE.
OPTIONS WITH MIXED USE MAY BE WORKABLE, BUT THERE ARE CONCERNS WITH THE PERMITTING PROCESS. RECENT EXPERIENCE AT THE KING OF THE HAMMERS RACE SHOW THAT THE MILITARY CULTURE CAN LEAD TO UNREASONABLE ENFORCEMENT OF BORDERS & PERMITS/AREAS. EXPERIENCE WITH THE FOREST SERVICE SHOW THE SMALLEST LEGAL OR BUDGET PROBLEM LEADS TO TOTAL CLOSURE.

Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

TO WHOM IT MAY CONCERN

I HAVE TWO CONCERNS ABOUT USING JOHNSON VALLEY - WEST SIDE OF 29 PALMS - LIVE ORDINANCE AND PERMITTING. THE LIVE ORDINANCE, IF FOUND WOULD SHUT DOWN THE AREA, OR CAUSE INJURY AND THAT WOULD CLOSE ~~##~~ THE AREA DOWN. I WOULD LIKE TO SEE THE BASE EXPAND TO THE EAST, PLAN NUMBER #3.

Response to Comment W-VV-034:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Johnson Valley is home to alot of off-road races and organizers family trips and 4x4 expdoring. I believe it would be a huge impact not only to recreational riders but riders/racers/families also the companies that make off-road products. We pay big fees to BLM and the state and federal for use of this land. that is being taken away. I strongly disagree with the westward expansion

I strongly feel that the expansion will have a negative effect on off roaders / race organizers / family trips / and races the help the world, like the powder puff race which raises money for Breast Cancer. I feel like if this land is taken we shall get some other land to "fill the void" that this will leave.

Response to Comment W-VV-036:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

AS A FREQUENT OFFROAD ENTHUSIAST, I CANNOT COMPREHEND WHY THE GOVERNMENT WOULD WANT TO GO THROUGH WITH EXPANSION. LUCERNE/JOHNSON VALLEY IS THE LARGEST RECREATIONAL AREA FOR OFFROAD RACING, MOTORCYCLE RACING, AND FOR THE NORMAL FAMILY DESERT TRIPS. THERE ARE MANY INVESTORS INVOLVED WITH OFFROAD RACING, FROM OFFROAD RACE TEAMS, LARGE CORPORATIONS AND PLENTY OF OTHER SMALL BUSINESS. IF THIS REALLY WOULD EXPANSION WERE THROUGH IT WOULD CAUSE A DRAMATIC IMPACT ON THESE, IN WHICH CASE WOULD NOT BE HELPING OUT DURING THIS RECESSION. DO EVERYONE THIS FAVOR, AND DO NOT GO THROUGH WITH THIS EXPANSION!!!

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

ALTERNATIVE THREE IS THE MOST FAVORABLE PROPOSAL
ALTERNATIVE SIX WOULD RESTRICT ACCESS TO A MUCH LARGER AREA
YEAR ROUND & ELIMINATE RESCUE RESPONSE ROUTES EAST TO
WEST DURING OFF RACES. DELAYING EMERGENCY RESPONDERS.
IF ALTERNATIVE SIX IS IMPLETED THEN MOVE THE MARINE ONLY
AREA ALONG ~~VICTOR~~ & EAST OF VICTOR PASS AREA. THE MORE
AREA THATS CLOSED YEAR ROUND THE MORE PRESSURE WILL
BE PUT ON SURROUNDING AREAS. WHICH WILL CAUSE MORE
CLOSURE DO TO OVER PRESSURED AREAS. THE ~~REAT~~ OFF ROAD
COMMUNITY GROWS YEAR BY YEAR & OPEN AREAS ARE BEING
CLOSED YEAR BY YEAR. THE AREA TO BE OPEN ID WAS A YEAR SHOULD
BE OPEN WITHOUT NEED OF A AREA PASS OR PERMIT AS IT IS TODAY
THANKS FOR YOUR TIME ***Please Print***

Response to Comment W-VV-040:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Impacts to emergency response are discussed in Section 4.4 of the EIS. As noted in the EIS, under the proposed action there would be additional permanent personnel necessary to manage any acquired land areas in addition to existing mutual aid agreements.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

AS AN OFFROADER THE NEED I FEEL THAT OPTION 3 IS THE BEST FOR THE AREA. THE JOHNSON VALLEY OHV IS WHAT MY FAMILY LOOKS FORWARD TO FOR CAMPING AND TRAIL HIKING/RIDING. THE TRAFFIC TO AND FROM THE AREA SUPPORTS LOCAL BUSSINESS. IF 3 IS UNDETERMINED BUT 5 IS ALSO GOOD FOR THE REGION.

This would be a huge negative impact on the off roading community and the companies/sponsors who help to put events on in the desert. As a taxpayer and "OHV" registration payer I strongly disagree with our fees just being doubled I mean quadrupled that the most active riding area will be taken away.

Response to Comment W-VV-043:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The proposed alternatives, except for alternative 3, use land that is valued by so many people for recreation. on land that is being taken for federal uses is much other land in other local areas. In the world today, life is so stressful and people need time for recreation to unwind after dealing with the worries of everyday life. Alternative 3 is the most logical alternative and allows for the training center to be expanding without taking land that is used for recreation Where families can spend time together.

IN VIEWING THE NUMEROUS PLANS IT IS OBVIOUS THAT THE MARINES COULD MEET THEIR OBJECTIVES BY USING OTHER THAN THOSE LISTED. ECONOMIC IMPACT SHOULD BE STUDIED TO INCLUDE AREAS OUTSIDE LUCERNE VALLEY. THERE ARE MANUFACTURERS PRODUCING PARTS FOR THE OFFROAD COMMUNITY. THERE WILL BE AN ECONOMIC IMPACT OUTSIDE THE AREA

Response to Comment W-VV-045:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

We need these lands to stay public for our enjoyment. After smog, grid lock, gas prices and a recession this place is all we have left. Think about the hundreds of thousands of enthusiasts for once and please keep the valley free.

I have riden My motorcycles at Johnson valley for as long as I could remember. I've never thought that it being gone so now that it is It really bummed me out. I love Johnson valley. The actions that they use it to bomb in there won't be motorcycle racing because noone likes to ride in holes. In the Summer months out there because it's too hot and that's more like a afganistan. I would like it if thought you guys no changes and went. Some were else, Bottem line Using Johnson valley as military training is taking away racing there therefore taking away what I love.

Response to Comment W-VV-049:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

My first concern is mitigation in the event an alternative is choosen other than no action. In the event Johnson Valley is either closed or reduced it will impact all the towns + cities in the area, businesses that focus on offroading, businesses that we support for wounded soldiers. I feel the towns in the proximity of J.V. will dry up + property values within 20 to 40 miles. This will impact not only the offroad community but all those use J.V. Look in expanding the Marine Corps training schedules and train more often more times of the year instead of two short training exercises to cover your needs of 15K troops to be ready for deployment

Response to Comment W-VV-050:

Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. Why is there no alternative for "no action"? I feel misled as my only alternative is 1-6 it leads me to believe that "no action" is not an alternative

Why can't the objective target be moved 1-mile north so it wont effect the Hammers and camp rock road

How can we afford to pay for this expansion when we are already borrowing money we don't have.

How will this effect the businesses that provide recreational equipment to the public that uses Johnson Valley

Response to Comment W-VV-051:

Thank you for your comment. The No-Action Alternative, as described in the EIS (see Section 2.4.7), would not meet the purpose of or need for the proposed action, but is carried forward for analysis in the EIS as a baseline from which to compare the impacts of the proposed action and alternatives.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

You will destroy the desert.
Don't take the land, but if you do take it all because leaving us with a small piece is almost worse!
I grew up in the desert "Racing and hanging with family. It makes good people. Think of the KIDS!!
And my grandpa can already hear the bombs going off now it'll be even closer.

Response to Comment W-VV-054:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

My family recreates in Johnson valley and has for over 20 years If the land is needed for military training why can't we be mitigated for this loss.

I'm tired of hearing the military say mitigation is not in their Scoping.

Acre for Acre mitigation or something close.

Response to Comment W-VV-057:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

My name is Luke James and I am 10 years old. I really don't want Johnson Valley to close because it means a lot to me. I learned how to ride a motorcycle in Johnson Valley and I hope to teach my kids how to ride one there too. I can't do that if they close it though. I really like going out there and watching the events and participating in them with my Dad.

Response to Comment W-VV-059:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Why not use existing bases for this - When at war we fight as one country why not use the existing bases that have live weapons training sights that Exist. The OHV land has been taken for years. My thoughts are leave it like it is.

use the existing bases - nellis or china Lake

Response to Comment W-VV-060:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-VV-063:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Although I am not in support of any of the proposed changes to the land use, if I had to choose an alternative I would go with option b as an off-road enthusiast and a frequent visitor of the Johnson Valley OHV area, I feel that alternative b would be the most fair option. However I would like to propose re-opening the Stockpile Valley OHV area since the majority of Johnson Valley will be restricted to Marine use only.

As far as requiring a "permit" I would like to suggest doing a similar system as a "green sticker" to show proof of a permit, rather than carrying paperwork.

I would like to propose coming up with another alternative which would include the option of re-opening a portion of Stoddard Valley OHV area, and opening a path that would allow OHV traffic from Johnson Valley through Stoddard Valley.

Response to Comment W-VV-065:

Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I would like to start my comments by thanking the US Marine Corps for providing an information and open discussion regarding the Johnson Valley OHV Recreation Area. I am an OHV enthusiast and the Johnson Valley area is very important to me and my family. My major concern with the acquisition and the proposed alternative is the conflict between the two areas, and the safety and interaction of recreational users. The Johnson Valley is used by recreationists from around the country and to be able to notify people on what space would be used to manage, [illegible] which would create a safety issue for all involved and eventually lead to more closures for the OHV community. The expansion to the east would retract the OHV community and would avoid the potential and **Please Print** safety issues the other alternate possess.

Response to Comment W-VV-066:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps also understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-VV-067:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

option 3 is our ONLY Protected option! use the land already there. The other options will take away more public lands, we won't get back. WE have 25 plus years invested in the area. option 4,5,6 NOT good because how can we assure that the area will remain safe for My family after training is over. option 3 is a great option since it will keep our current public lands for Public use. NOT part time use. we shouldn't have to worry if our families will come across live AMO or other safety issues left behind. also we make our living from the area, can't lose!

Response to Comment W-VV-068:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-VV-070:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

* I believe that the Gov't doesn't have the money to purchase this land. - Neither do the tax payers (
* will put people out of homes
* The land is used for off-roading, homes and other recreational uses and should stay w/ the people

- The government is already broke enough and is unable to afford paying the military for these expenses.
- This will put people living in the area in danger from the bomb training.
- The land is better off being used for recreational purposes.

Response to Comment W-VV-073:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As described in Chapter 2 of the EIS, each of the alternatives would provide for at least 3,280 feet (1,000 meters) of buffer area between live-fire areas (including SDZs and WDZs) and any proposed or existing installation boundary in accordance with the established Combat Center safety policy (Combat Center Order P3500.4h).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. I ENCOURAGE PROPOSAL #3. I WOULD ENCOURAGE A SAFE TRAINING GROUND FOR THE MARINES, AND REALIZE THEY REQUIRE SPACE.

EXPAND THE BASE TO THE EAST WHERE THE SMALLEST NUMBER OF PEOPLE WILL BE AFFECTED.

FURTHEMORE, CHANGE THE CLASSIFICATION OF SHEEPHOLE WILDERNESS AND EXPAND PROPOSAL #3 TO THE SOUTH TO HWY 62, TO ALLOW [redacted] SPACE FOR MEB TRAINING.

Response to Comment W-VV-074:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

- AS A PUBLIC ACCESS ADVOCATE I CAN NOT AFFORD TO LOSE LAND SO CLOSE TO MY HOME IN LOS ANGELES COUNTY. NO NEW LANDS ARE BEING OPENED UP TO THE PUBLIC WHILE LARGE AREAS ARE BEING CLOSED. ONCE CLOSED THEY ARE RARELY REOPENED. ESPECIALLY IF THERE IS DANGER OF LIVE AMMO.
- I WOULD LIKE ARMED FORCES FACILITIES TO BE AVAILABLE FOR SISTER AGENCIES.
- FOR THIS REASON I'D PREFER OPTION 3 OF THE PROPOSED ALTERNATIVES. THOUGH IT MAY NOT BE PRACTICAL, I'M OPEN TO SHARING PUBLIC LAND WITH THE MARINES AS LONG AS PUBLIC ACCESS IS MAINTAINED.
- SHOULD THIS GO TO CONGRESS, I WOULD ADVOCATE OPENING UP WILDERNESS.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

MY COMMENT IS ABOUT (you may mark an "X" to all that apply):

[ ] Aesthetic/Visual resources	[ ] Environmental justice	[ ] Public services
[ ] Air quality	[ ] Hazardous materials/wastes	[X] Recreation
[ ] Airspace/Air traffic	[ ] Land use	[ ] Socioeconomics
[ ] Biological resources	[ ] Mining/Minerals	[ ] Transportation
[ ] Cultural resources	[ ] Noise	[ ] Utilities/Infrastructure
[ ] Energy development	[ ] Public health and safety	[ ] Water resources
	[X] Public lands withdrawal	[ ] Other

I think option 3 is the best plan cis that has least impact to public use. All other options do not give us enough information to make an informed decision as well takes the most desired area in Johnson Valley. Option 3 may not be ideal from a military view but still need their requirements & would please the public. Please do not take our public land to the West as that is held dear to many people. I've been to several weddings out there and it would be devastating to lose it.

OPTION 3 IS PREFERRED UNLESS WE CAN HAVE OPTION 7 (NO ACTION)

THE CURRENT WESTERN BOUNDARIES ARE CURRENTLY NEAR IMPOSSIBLE TO SEE AND HARD FOR YOU TO ENFORCE

IF YOU EXPAND TO THE WEST HOW DO YOU PLAN TO MARK AND ENFORCE YOUR BOUNDRIES

IF WE END UP WITH "SHARED USE" WHAT INSURANCE DOES HAVE THAT THE MARINES WONT SUE THE PUBLIC OUT OUT TO CONVINIENCE

Response to Comment W-VV-077:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Option # 3 is the best fit for recreational users.

Our concern is how the borders would be enforced.

If you are considering use permits, they would need to be available locally - such as markets in Lucerne and [redacted] should be free of charge

I would Encourage use Sheephole wilderness Area, A road cross or Bridge built is also Knowledge For learning.

As A citizen of the United States of America I need to see Further options that will not Impact Johnson Valley OHV Area / BLM Land.

I would like to propose A modified VIEW of #3 and use BLM's Land from the Sheephole Wilderness Area.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Alternative # 3 moving these proposal toward lesser populated area is a more thought out idea. Land limits for legal OH riding is already extremely limited. Marine Corp use of the proposed area brings up great concern with water resources, air quality Noise pollution, hazardous waste, not to mention public health and safety issues. Closing the Johnson Valley area will have a great impact on economy - it will cost jobs, and businesses to be lost. Restricting down the size of public lands for recreation will only raise more safety issues, not to mention increased citizens breaking the law. being forced to use land that is not authorized.

It seems to me that the American public has given up enough of our natural resources and recreation areas during the recession with the closure of state parks and beaches. This is the only vacation spot my family can afford.

Please don't shut down the land or destroy the area by turning it into a bombing range. The land is such a pivotal area for the offroading community.

Response to Comment W-VV-088:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I would like to start off by Saying that you have at least 7 plans / alternatives. My family only has 1 which is means Dry Lake. This is not just a hobby but a life STYLE & Business so any Alt Plan other then Alt Plan #3 is going to have a major impact on my family Structure as well as our finances. So if you must expand please expand to the EAST / ALT. PLAN #3

Response to Comment W-VV-100:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I WOULD LIKE TO SEE THE MILITARY USE ALTERNATIVE #3. IN THE FEDERAL LAND POLICY AND MANAGEMENT ACT OF 1976 CONGRESS SPECIFICALLY RECOGNIZES OHV RECREATION AS ONE OF THE MULTIPLE USES OF PUBLIC LAND IN CALIFORNIA. SECTION 601 OF THIS ACT PROVIDES THAT MANAGEMENT OF THE CALIFORNIA DESERT SHOULD ALLOW OPPORTUNITIES FOR OFF-ROAD RECREATIONAL VEHICLES. JOHNSON VALLEY IS THE BIGGEST AREA WE HAVE FOR THIS TYPE OF RECREATION IN THE HIGH DESERT. MY FAMILY HAS BEEN ENJOYING THIS LAND AS LONG AS I HAVE BEEN ALIVE (39 YRS NOW) AND I WANT TO PRESERVE THIS LAND FOR MY FOUR CHILDREN, AND MY GRANDCHILDREN IN THE YEARS TO COME. THE AREA OFFERS UNIQUE DESERT WILDERNESS THAT IS NOT FOUND IN OTHER OHV AREAS IN CALIFORNIA AND IT WOULD BE A SHAME TO LOSE IT FOR FUTURE GENERATIONS.

We have a family of 4 boys, and we use the land in the Johnson Valley OHV area. Our family has been going to races there for over 30 years. My 3 am 5 year olds, since they were born. We camp there, and teach them about the desert there. We also race as a family there, as do so many others who may not realize what may happen.... It is like an extension of our home. This area should continue to be protected for our public use. It never occurred to me that someday it may not be available, to my family. It will be a sad day when my boys can no longer enjoy the area, the way we do at this time. They reminisce about their daddy's races (our older boys, now 10 and 12). The Johnson area also provides quick, life saving access to emergency personnel. When there's daddy is racing, as a mom of 4 boys, it is comforting to know that medical help can be had by way of Bessemer Mine Road. Etc. PLEASE use alternative 3.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Impacts to emergency response are discussed in Section 4.4 of the EIS. As noted in the EIS, under the proposed action there would be additional permanent personnel necessary to manage any acquired land areas in addition to existing mutual aid agreements.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

THIS IS ONE OF FEW RECREATION AREAS LEFT TO US OFFROAD ENTHUSIAST'S. TAKING THIS LAND WOULD CAUSE EVEN MORE OVER CROWDING OF OTHER AREA'S WHICH WILL RESULT IN ACCIDENTS. THIS AREA HAS BEEN A PLACE OF MEMORIES FOR US FOR YEARS NOW. IT WOULD BE A SHAME TO TELL MY FUTURE CHILDREN STORIES INSTEAD OF SHOWING THEM. PLEASE ALLOW US TO USE OUR LAND DURING OUR SEASON. DONT TAKE IT!

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RECREATION ALWAYS GETS THE SHORT END OF THE STICK, ALT. # 3 IS THE ONLY ALT. THAT MAKES SENSE TO ME - OFF ROAD RECREATION + ACCESS HAS BEEN UNDER ATTACK FOR DECADES. WE HAVE ALREADY LOST MILLIONS OF ACRES OF LAND TO WILDERNESS, EPA RESTRICTIONS ETC. NOW THE MILITARY WANTS TO TAKE THE BEST ROCK TRAILS IN THE COUNTRY TO TRAIN, THEY SAY FOR ONLY 2 MONTHS A YEAR. YEAH RIGHT, WHAT GUARANTEE DO WE HAVE THAT A PERMIT WILL BE ISSUED? I KNOW THE MARINES HAVE INNOVATIVE PEOPLE. FIND A WAY TO MAKE ALT #3. WORK AND LEAVE JOHNSON VALLEY OPEN YEAR AROUND

Johnson Valley is an offroad Recreation Area without equal in California & the U.S. Once you start chipping away at the land it never comes back to the Americans & Served to Protect and you have pledged an oath to Protect.
History teaches us that fighting to keep something is much more effective than Trying to fight to get it back.
Option 6 is not feasable because your ability to 'clean' an area has proven to be less than effective. The Fine Marines here have told me that when they Clear an ordinance they know where it goes. The French embass Personal would disagree with you.
Please leave what little land we have left alone!

Response to Comment W-VV-108:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Where will we ride? There is limited space where we are able to ride now, and most of the best District 37 races are in Johnson Valley and I find it highly unfair that you are taking the places we enjoy riding the most if you take the land atleast give us the same amount of land you are taking for us to enjoy and ride on. I came here with hope and I left highly disappointed in all the land you are taking and "smashing" you. no I'm begging you please don't do this.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

I AM THANKFUL TO BE AN AMERICAN AND ALSO PROUD OF OUR ARMED FORCES. I AM 100% AGAINST ANY MORE PUBLIC LAND BEING TAKEN WEST OF THE EXISTING MCAGCC PROPERTY. TIME TO STOP EXPANSIONS. 1000 SQUARE MILES ALREADY. 1 MILLION ACRES + AT CALIMA LAKE. 1000 + SQUARE MILES AT FT IRWIN. STOP! THIS A VERY UNIQUE AND VITAL RECREATION AREA. MANY HISTORIC SITES. OLD MINES WILL BE LOST. WHAT ARE THE DUST CONTROL MEASURES PROPOSED. WHAT IS THE DISTANCE OF BOMBING TO J.V. RESIDENTS. PLEASE GO EAST AND TAKE OVER WILDERNESS AREAS THAT HAVE ALREADY BE TAKEN FROM THE PUBLIC. THIS WILL BASICALLY RUIN LUCERNE VALLEY

Response to Comment W-VV-110:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS acknowledges that the proposed training exercises will generate substantial amounts of fugitive dust (see Section 4.8). The EIS proposes to control fugitive dust emissions from proposed construction activities.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

I love to go four wheeling. my dad, brothers, & uncles all have jeeps or trucks. we like to go out as a family to have a good time. I got to go to the King of the Hammers this year & it was so much fun. I had family apart of the pit crew for Tony Pellegrino from Generight off Road. He finished second in the race! I got to even take a picture in his race car. please dont take away Johnson valley. this was one of the best family vacations I've had & I even learned how to ride a dirtbike.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: W-VV-114

Dear Sirs,

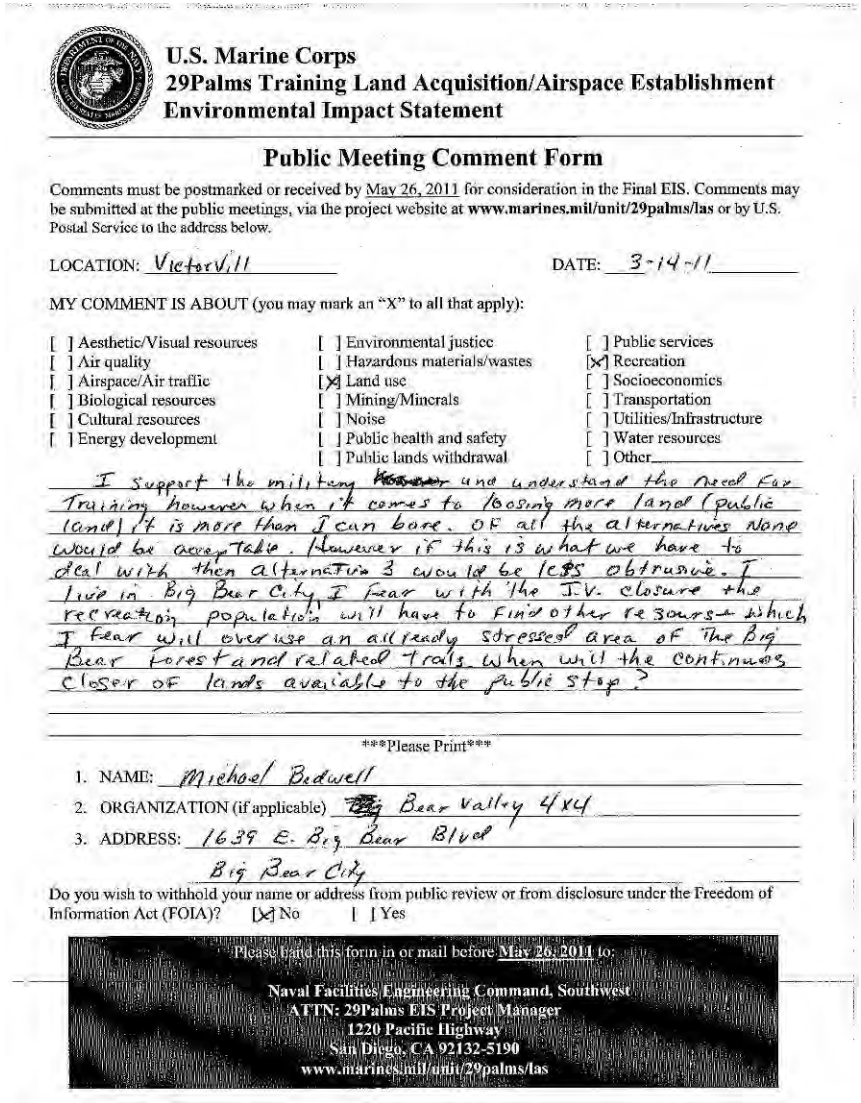
The People of the United States may be about to lose total access to two-thirds of Johnson Valley OHV Area, permanently. If so, this two-thirds will go to the 29 Palms Marine Training Area, permanently, with no access or use for any civilian purpose, ever again. This is unacceptable. Our OHV funds have been taken and used for purposes other than intended and now our largest single OHV area in Southern California is being threatened.

If this happens, Johnson Valleys OHV area would be reduced to a size too small to use for our most popular organized racing events. These hugely popular events plus the access to this unique landscape all year around, bring together tourists, businesses, OHV enthusiasts and more from California and many other states far and wide in record numbers year after year. This important tourism supports our local economy here in the High Desert with this OHV area acting as a pressure valve of sorts for the overcrowded residents of L.A. and in surrounding counties who use this space regularly.

There is plenty of uninhabited land to the east. Could you not expand towards the river? If this unwelcome expansion westward must be, can we get an off set? Can another area be opened or an adjacent area expanded? Can part of Kelso Dunes be added to the Rasor OHV Area off I-15 near Soda Lake, for example? What will the State receive in payment for the Marines use of this proposed training area? Will any of this be available for local projects? Will the Desert Tortoise be relocated? How did the relocation from the expansion on Fort Irwin fare with the tortoise population? Finally, the Airline path over Lucerne Valley is within 10 miles of the proposed Marine Border. Is this a potential 'accidental' target?

I have lived in Lucerne Valley for 22 years, blessed by the fact that it is dark at night and quiet. It is my hope that the destructive, invasive and disturbing rumblings of artillery will not be moving 19 miles closer to my home.

Sincerely,



Jon Bush

Response to Comment W-VV-114:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending (see Section 4.3). The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

I support the military ~~[illegible]~~ and understand the need for Training however when it comes to loosing more land (public land) it is more than I can bare. Of all the alternatives None would be acceptable. However if this is what we have to deal with then alternative 3 would be less obtrusive. I live in Big Bear City I fear with the J.V. closure the recreation population will have to find other resources which I fear will overuse an already stressed area of the Big Bear forest and related trails. When will the continues closer of lands available to the public stop?

Response to Comment W-VV-115:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Johnson Valley is a great place to get away or escape from reality and let loose. It's also a great way to reform your sanity. The public has produced $1B mil just for land use which is also the lands yearly income. Everyone is entitled to a hobby. We dont ask to run our races into or thru your base or land. So dont try to take the publics

Either don't expand, Or expand east toward Danby. Thousands of people live west of the existing base. Noise levels near the base are not compatible with residents. The economy of Lucerne Valley is dependant on the OHV traffic in the Johnson Valley off-road open area. 10 to 20% of our existing business will be lost. Plus, the JV open area is full of historical sites and is an off-road camping heaven. Can't be shared use, because as soon as unexploded ordnance comes up missing. The Marines will shut out the public citing safety concerns.

Response to Comment W-VV-118:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts. As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending (see Section 4.3). As noted in the EIS, Special Conservation Measures would be implemented to avoid or reduce impacts to cultural resources found in the action area (see Section 4.11).

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area.

I myself, family and everyone I know has enjoyed Johnson Valley OHV area for many years, I also own & operate an off highway vehicle orientated business locally in the hi desert area. I believe taking this land away from the public is unfair and will be cheating generations to come out of there right to use public land for recreation. I also believe the impact to local business's such as gas stations, grocery stores etc will be affected tremendously, each weekend brings a stimulus to the local economy from people out of town spending money on accomodations / fuel for there weekend trips.

Response to Comment W-VV-120:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I am a military veteran, and I understand the importance of training for our Military. Yet when I look at an airspace sectional map for the area covering California and Nevada, I see quite a bit of land designated for the military. We have Fort Irwin NTC, Edwards AFB, Yuma, etc. Why can't our military train together and not deprive us of our public lands. I was told tonight by a Marine that they need the land specified in alternatives 4, 5, & 6 because it most resembles Afghanistan. This is a weak argument as this war will probably be over by the time this land acquisition has been completed. With this said, I propose that no additional land is taken and that the military share land. If a choice must be made, use Alt 3 to the East.

Response to Comment W-VV-121:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. Although the different military branches often serve side-by-side and sometimes execute similar missions, they have very different training requirements. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

While I understand the need for our military to have a place to train, I am getting frustrated by the fact that our public lands are continuously being taken from us (military, BLM etc.). At the Open House Public Meeting I was told by a Marine that the area in Alternative 6 most resembles the terrain in Afghanistan. From what I've heard, we should be pulling out of the middle East by the time this Land Acquisition takes place. So the land resemblance is a moot point. With this in mind then if a choice has to be made, I will only support Alternative 3, as it expands to the East and allows those of us who currently use and enjoy our lands to continue to do so. Thank you.

The base should look carefully if they require more space. The loss of more designated OHV areas would push more OHV's into ever shrinking areas. This will create more accidents and a negative impact to the already struggling economy would be devistating.

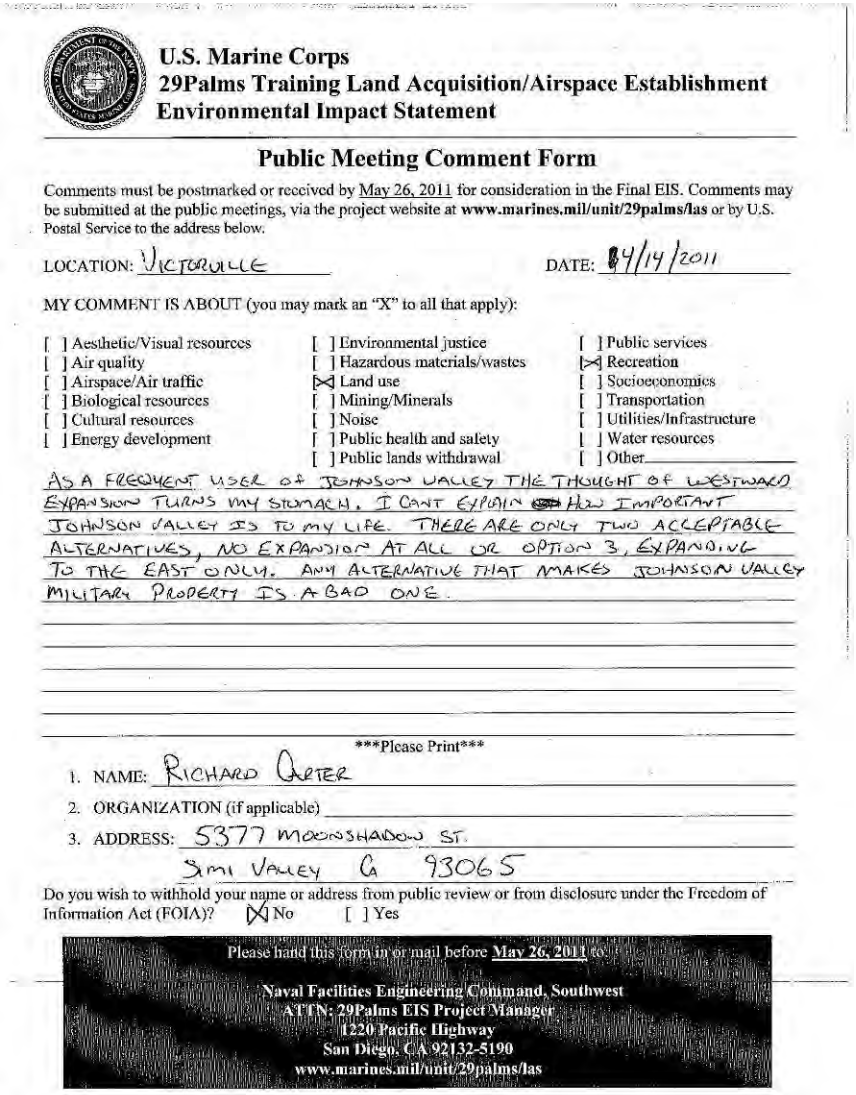
Response to Comment W-VV-124:



Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. AS A FREQUENT USER OF JOHNSON VALLEY THE THOUGHT OF WESTWARD EXPANSION TURNS MY STOMACH. I CANT EXPLAIN HOW IMPORTANT JOHNSON VALLEY IS TO MY LIFE. THERE ARE ONLY TWO ACCEPTABLE ALTERNATIVES, NO EXPANSION AT ALL OR OPTION 3, EXPANDING TO THE EAST ONLY. ANY ALTERNATIVE THAT MAKES JOHNSON VALLEY MILITARY PROPERTY IS A BAD ONE.

Johnson Valley is a huge part of my and my family's + friends lives. We enjoy camping, 4-Wheeling, hiking and exploring. This land, trails, mines and land in general is important to not just my generation but my kids and future kids. We as a offroad community has lost a lot of land over the years and taking more is going to push the 4-wheel community out of state. It could also possibly cause the industry and local communities to close down and or go broke. I understand that the military needs to train and fight for our freedom but I also know there are other areas they can go to and achieve the same goal. Thanks for your time.

Ochecked out each of the alternatives
AREA 6 - seems like the one that would be useful, Both the marines & the public would be able to monitor the restricted areas again not so Big
AREA 4+5 - Go large area to monitor for both the Marines & the public. Public people are not apt to be kept informed on proper procedures
AREA 3 - Do the best for the public because they don't use the area as much & easiest to monitor

The marine base should look eastward if they require more space. The loss of more designated OHV areas would push more OHV's into ever shrinking areas. Thus, this could cause more accidents and the impact to the already struggling economy would be devistating. If the large off-roading community is packed into smaller areas, this will increase the possibilities of accidents.

I think that the US Marine Corps should consider taking land to the east instead of the west because it would have a lesser impact on a lot of lives. Many families use Johnson Valley as a recreational location for their family to have good times and meet lots of new friends. Plus if they take Johnson Valley, that will be even less land for us citizens to enjoy. If the marines are supposed to be serving the country and are for the people of the country, then why are they going to take more land from us?

As a former U.S. Army infantry soldier I respect & understand what the Marine Corps is trying to do for our country. We are fighting a never ending war that will claim many more american citizens. That being said, enlarging your base to the west will affect the freedom of your fellow americans. We only have so much land to enjoy a past time that we learned from our fathers. Please do not take Johnson Valley.

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment W-VV-131:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding and illegal riding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

This Base Expansion Is Not Necessary. The military has most of the Mojave Desert They can "share" Fort Irwin, Barstow MTS and any one of several other bases. This is simply a land Grab To Take Public lands.

How Long Do they Want To Continue The War In Afganistan?

Response to Comment W-VV-132:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Any Decrease in Open Recreation will Mean overlaod only be wearing Locations this will Result in Excess Illegal Riding in the Wilderness. The Noise will be harmful to Lucern Valley No figures showing other. The Southern California will Economy will be more Harmed By this. Large loss of tax Income For State and Local Government Due to Loss of Jobs. This will be one more Nail in the Coffin of Coasting People more TO other states. Taxes This is Bad FOR California Bad FOR People. The Military Should Share other Bases.

Response to Comment W-VV-133:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding and illegal riding in other areas, as well as related impacts to other environmental resources.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

S.O.S. = Save our SPACE
There are days & fewer available riding areas for responsible off-roaders. Reducing public access will promote irresponsible off roading. I am PRO-MILITARY, HOO-RAH! Let the military expand EAST - GO FOR ALTERNATIVE 3. NO, ALTERNATIVE 6. NO WESTWARD EXPANSION, as Lucerne Valley needs our space. I respect the need for military training. Fortunately, with our all our American allies there must be numerous exemplary training areas available. Best off roaders cannot go overseas. Off-roaders are facing enough decreased public access. If the Marines absolutely MUST expand, then please provide ADEQUATE, COMPARABLE riding area in exchange, with close proximity.

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding and illegal riding in other areas, as well as related impacts to other environmental resources.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Although I see the need for expansion of the 29 Palms Marine training facility, I have a concern regarding the constant removal or closure of public lands for recreational use. BLM and the USFS have made several closures throughout the Western United States that have generally impacted the available areas for OHV use. I feel that between all the Alternatives that were displayed, Alternative 3 would accomodate the needs of the USMC and OHV users. It was explained to me that Alternative 3 would meet the minimum requirements for practice deployment/war games for the USMC. I support Alternative 3 and strongly oppose Alternative 6.

I am a resident of Big Bear City and enjoy using the forest and forest roads for recreation. I also am involved with a race Team at KOH. If J.V. is closed because of military use it will overuse the big bear area because of the normal recreational use of the Big Bear Area and then the over flow of people from J.V.- Public lands should remain public I support the military however areas not so conducive to public use should be used, not areas so heavily used by tens of thousands of public users. Why do I have to fight all the time to keep the land we have to remain open - will my grandchildren have the same privileges have had? I certainly fought it. That is the shame of it.

Response to Comment W-VV-139:

Thank you for your comment. The EIS acknowledges that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative (refer to Section 4.8 of the EIS). The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM_{10} levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM_{10}.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The Impact of the Marine Corps Land Acquisition directly Affects the livelihood and Recreational Activities that My Family is dependent upon. The Takeover of these lands would greatly make it difficult to Partake in activities that have fostered An Environment that I hold closely with my Family. I would be forced to travel a Farther Area to Recreate which would most likely be over Crowded and a Safety Concern.

I Feel it is unjust to Take Recreational land that has been enjoyed by many without giving back any Additional Recreational lands

Response to Comment W-VV-141:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

I am against an eastward expansion of the MCAGCC. This is/would be an intrusion on a pristine portion of the California desert.

I specifically oppose lands being taken away from the public. Both 29 Palms and Fort Irwin enjoy huge tracts of land. To me and my family it is time to say no more!

Response to Comment W-VV-144:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

1. The economics of the local communities in close proximity to Upper and lower Johnson Valley (Barstow, Victorville, Hesperia, Apple Valley, Lucerne Valley, Johnson Valley & Yucca Valley will be severely impacted. The E.I.S. does not properly address this impact.
2. The EIS, nor the Marines or DOD seem to be willing to care to, or feel responsible enough to address the issue of taking recreational lands from the public with out offering like or replacements lands. Seem it is not their problem, or job to minimize impacts to the public at large.
3. OPT E is the most desirable of the 4. Thx for your consideration.

Response to Comment W-VV-145:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities not currently specified in the EIS.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Marine Corp Land Acquisition Johnson Valley

Public Comments

Victorville, CA

Comments:

My family, friends and business partners have been involved with Off-Road Racing in Barstow, CA and Lucerne Valley, CA sanctioned by MORE (Mojave Off-Road Racing Enthusiast) from 2007 to current.

Each time we come to the race we spend money in the area on services, food, fuel and entertainment. The hobby that we enjoy also provides income to many high desert automotive service providers.

Johnson Valley is California's largest public recreational area and is used by hundreds of thousands of recreationalists each year.

My recommendation is to open the Sheep Hole Wilderness area so the USMC combat center can expand eastward away from the Johnson Valley and the general public. Amboy and the public road that crosses could easily be used with little or no issue.

I also question why cannot the existing facilities at Ft. Irwin be somehow be used. They expanded and it reported to be hardly used.

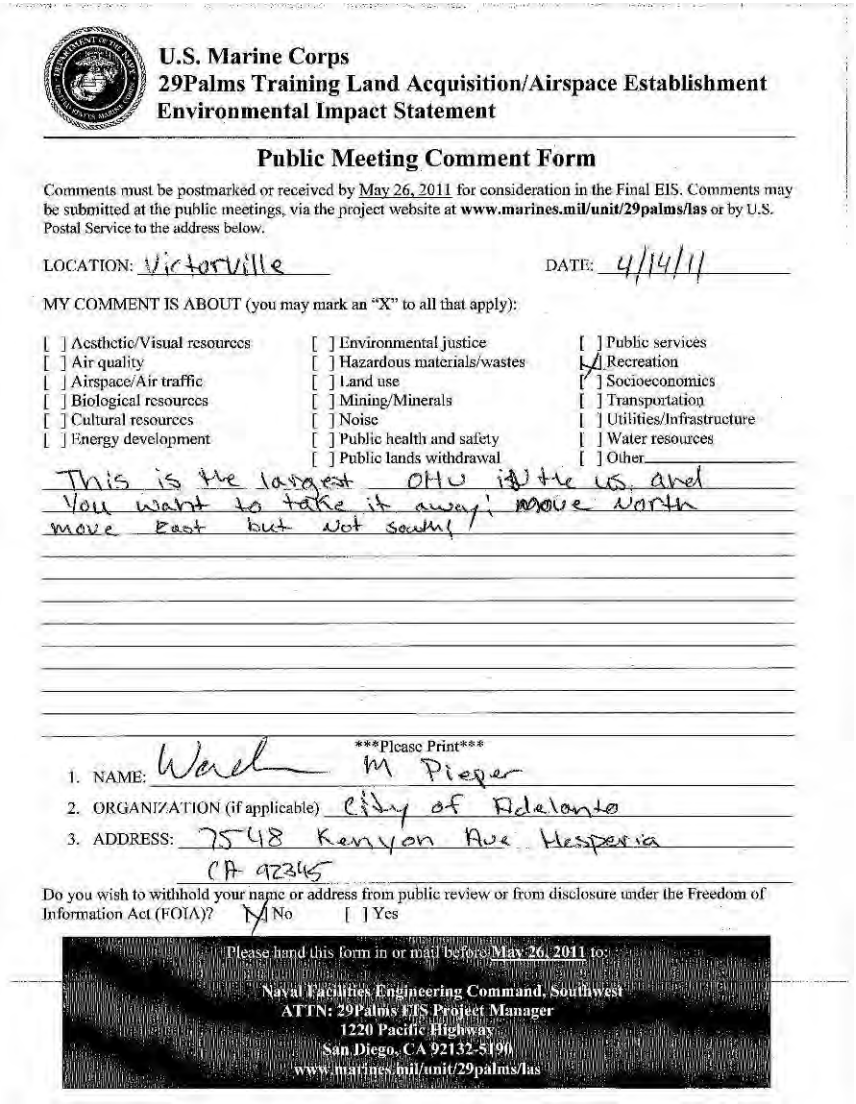
Keep Johnson Valley accessible to the public.

Thank you,

Dave Bolles

PO Box 429

Apple Valley, CA 92307



Response to Comment W-VV-147:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would interfere with the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Our family has enjoyed Johnson Valley for many years. We appreciate the off-roading and the contact with nature. Its close enough so we can decide in a moments notice to go for the day, or longer. We've camped off Boone Road and watched the migrating turkey vultures rest for the night. Watching them spiral off in the morning is fascinating. Our military has so very much prime California land already (Pendleton beach and Vandenberg beach) – Ft. Irwin has already cut into off-road Americans. Don't add Johnson Valley to your list. OHV Areas are becoming extinct !!

While I understand the Marine Corps need to have areas to prepare for war I think that Alternative 3 is a much better option for the public. The trails and events in the Johnson Valley area are unique and there is NOT another area that can replace it. Also with a reduced area for public use it will be more crowded and more dangerous for recreation. With Alternative 3 there would be no impact for the public who recreates in Johnson Valley and the military would still have the area they need for their training exercises. If Alternative 3 is not acceptable I would opt for Alternatives 4 or 5 so the public would have access to a larger area for recreation.

ALTERNATIVE 3 WOULD BE THE LEAST INTRUSIVE. I BELONG TO A MOTORCYCLE CLUB THAT PUTS ON ONE RACE A YEAR - IN MARCH. OTHER AMA CLUBS PUT ON THEIR EVENTS TO MAKE UP A SERIES, THROUGH OUT THE YEAR.
OVER THE YEARS ALMOST ALL MOTORIZED RECREATION HAS BEEN ELIMINATED FROM THE STATE - NOT JUST THE DESERT. WE CANNOT AFFORD TO LOSE ANYMORE LAND. MOTORIZED RECREATION BRINGS MILLIONS OF DOLLARS TO LOCAL, STATE & FEDERAL POCKETS.
IF LAND IS TO BE TAKEN, OTHER LAND NEEDS TO BE OPENED UP TO REPLACE IT!

I believe that we can Compromise and Share the land within reason my Concern is that if they are bombing and driving Heavy or light armed wheeled and tract Vehicals through our dezerts that we already try to maintain Cleanlyness and Environmental Care. What happends to the desert After the military Has Put there foot print on it. We as Facers do our best to take part in Annual and everyday Clean up And Environmental Agreaculteral And Archiological Wellbeing. Every year We Are Asked told or Forced to give more. Weather it be land, Insurance, Clean up and So on. And We do it With out contest. So Im Asking that you take your time And think about all the lives that will be Affected By This. Not to mention the offroad, camping, Recreational Economy.

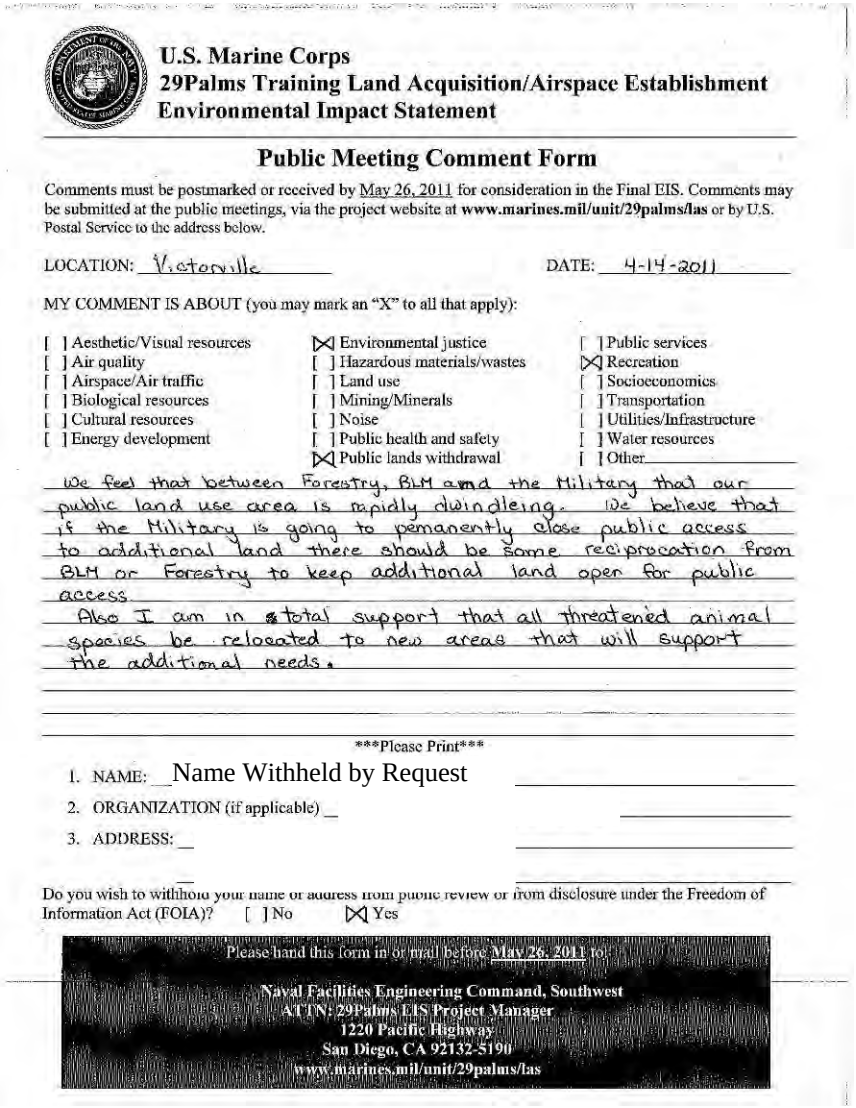
Response to Comment W-VV-152:



Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

	[X] Public lands withdrawal	[ ] Other

We feel that between Forestry, BLM and the Military that our public land use area is rapidly dwindling. We believe that if the Military is going to permanently close public access to additional land there should be some reciprocation from BLM or Forestry to keep additional land open for public access.

Also I am in total support that all threatened animal species be relocated to new areas that will support the additional needs.

Response to Comment W-VV-153:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the importance of Johnson Valley for recreation. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

My concerns ~~are~~ is the land being taken from OHV, there is plenty of it in different directions. Even with the use of it 10 months out of the year a permit would be needed which raises the question of what the requirements would be to obtain one and how often. Also concerns with business owners if OHV 's land is being taken away that means less business for a town that survived off it's off-roaders.

Response to Comment W-VV-154:

Thank you for your comment. The specific details on management of the RPAA in regards to permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

I understand the need to expand the existing training site But I Believe that the Alternatives to the west would be more of a Burden for the residence to that area. There is more Land to the east that would accomodate everyones needs. I also understand that there is a possibility that the land can be used 10 months out of the year for recreation. my main Concern is what 10 months would the Corps use the other 2 months Solid or Sporadicly throughout the year. and on top of the Several other permits required to enjoy the lands, we would need to have yet another permit in order to use them for 10 posbie 10 months.

My place of work is in Lucerne Valley. We are a small business who gets hit with enough government regulation. We need the business of off roaders to stay afloat. There is plenty land to the north & East of the already existing Marine base that could be taken with no endangerment to the public or their business. I have close family that would live within miles of where the marine base wants to expand - Gun fire - bombs wouldn't be what they [illegible] need to hear. And an RPAA permit - Don't we get hit with enough taxes & permits already?

Response to Comment W-VV-156:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Why can't the public be given an equal amount of land in another location For OHV the is being taken away. There is plenty of land (federal) to allow OHV and the Military to co-exsist at the same time. There is no need to take and not give.

Not only does this infinge on the largest OHV recreational area for many desert loving, off road enthusiasts, but it will no doubt heavily damage the area's local economy. It would be like restricting all the beaches in Hawaii and expecting their local resorts to survive, this OHV area for us is what the beaches are for Hawaii

I live in Lucerne Valley. King of the Hammers was in Johnson Valley in February this year. In Lucerne Valley we were all shocked by the amount of bombing we heard overnight during that time. I have a very hard time sleeping and any noises will keep me awake. Please do not have any exercises in Johnson Valley, move to the east.

Response to Comment W-VV-164:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Our town and community enjoy our land. We have a small town that profits off of events held. These events attract people to come out, and gives all of us something to do, and enjoy. The people in our community moved here to play here and enjoy time with their children. Our children who are raised to enjoy these kinds of things, do not have much else to do out here recreationally. Our sports could possibly be taken away so do not take our land. Find somewhere else to go. Theres plenty of land that is never used for anything so please go there!!!

Response to Comment W-VV-165:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I have lived in Lucerne Valley for 23 years. I enjoy the surrounding deserts and go exploring, rockhounding, hunt wildflowers and other things to photograph. Please do not take any land in Lucerne and Johnson Valleys. Move the base to the east of your present location.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I work at Lucerne Valley Market & Hardware and our store depends on the extra income generated by the weekenders that come through Lucerne Valley to the Johnson Valley Offroad area. If the base were to move into the Johnson Valley area even parttime the decrease in sales would at least cost jobs if not the closing of local stores. If a family were to come out to go offroading and found the area closed, they likely would not come out again. Please stop Senator Feinstein's land grab to the east and expand there instead.

I live in Lucerne Valley + enjoy the surrounding deserts. I make my living at a store that relies on the out of towners that come here to enjoy the desert. Our marines should be protecting our homes + our livelihoods not taking them away. If the marines need to expand – expand to the east where there are hundred of miles of desert that belong to "the government". DON'T take the land that still belongs to "the people".

I ATTENDED THE DAC MEETING HERE A COUPLE OF WEEKS. I MADE COMMENTS REGARDING THE SRP AND STATED TO HERE THE 29 PALMS EXPANSION SUMMARY. I WALKED OUT SHORTLY AFTER CHRIS PRODOEHL'S (SP?) SAYING "THEY DON'T PLAN WELL WITH OTHERS"!! THIS COMMENT WAS SPECIFICALLY REGARDING AIR SUPPORT. HE CONTINUED HIS PRESENTATION IN A VERY ARROGANT MANNER, GIVING THE IMPRESSION ALT #6 IS A DONE DEAL. WRONG!! WE WILL CONTINUE TO FIGHT TO KEEP ALL OF IV OPEN TO THE PUBLIC.

Plain & simple I think Johnson Valley should be left how it is. We have our Marine base & our Hammertown. Ring of the Hammers brings out 20,000+ people every year. If we eliminate some of the land apart of Johnson Valley that is going to not only devastate the off road industry but what about all the expenses that go into building all the vehicles for the Ring of the Hammers? What about the local town where people will need to stop & get fuel, food, or even a place to stay? Everyone goes out to have a good time & enjoy ourselves. We have people

Response to Comment W-VV-179 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Subject: NOI - EIS ISSUES -
29 PALMS TRAINING LAND/AIRSPACE ACQUISITION PROJECT

Please expand the Marine Base eastward. It is vital to our survival in tis high desert area from Lucerne Valley and around to Homestead Valley. We understand that Sen. Feinstein's "Monument" to the East is dead in the water, so let's go East!

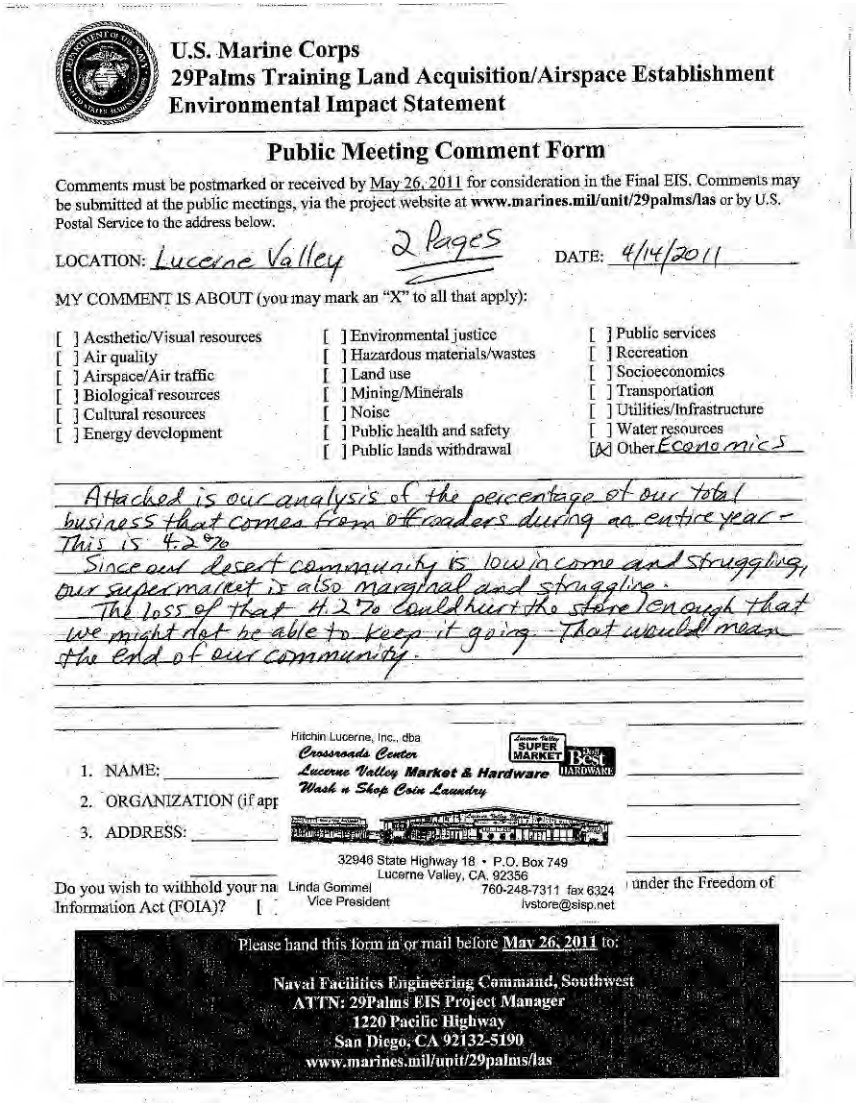
Since we were involved in writing the response to the Base expansion sent to Mr. Joe Ross, I will quote part of that communication as an important part of our reasons for objecting to your taking most of the Johnson Valley off-road recreational area to the West of your Base. (And joint use is an extremely poor option.)

Economics: If the JV OHV Area is shut down or substantially reduced, we would suffer a significant loss of revenue from OHV-related traffic - major filming/commercials - mining - general recreation - etc. for the Lucerne Valley Market/Hardware (shopping center) - 3 gas stations - our restaurants - a multitude of other businesses, etc. Most of the businesses in our town are here "because they want to be" - not because it is financially lucrative - in effect subsidizing us with goods and services well beyond what are normally available in other communities with our population and demographics. The "profit margin" for our businesses is already a "stay-open/break-even" situation. Loss of current weekend business - up to 10% of total revenue for some - would be the "straw on the camel's back" that would force them to shut down. Our survival is at stake.

Response to Comment W-VV-180 (Page 1 of 2):

Thank you for your comment. This letter is a duplicate to Comment ID: N-00007. Please see response provided for that comment.

Comment ID: W-VV-180 (Page 2 of 2)



OHV Displacement: The JV OHV Area is probably the largest, oldest and well established in the nation and cannot be replaced. It provides the space for long-distance race courses no other Southern California facility offers. It has become an "icon" not just for off-roading, but for a myriad of other recreational and resource-related land-uses. The other OHV Areas in the Mojave Desert cannot accomodate JV's current use. Even with the small portion of the open area remaining In the Anderson Dry Lake areas adjacent to Camprock Rd. - displacement will result in more local, private land trespass and incursion into more environmentally sensitive and protected BLM areas.

We would appreciate anything that you can do to help us.

cc: Rep. Jerry Lewis

Attached is our analysis of the percentage of our total business that comes from offroaders during an entire year - This is 4.2%
Since our desert community is low income and struggling, our supermarket is also marginal and struggling.
The loss of that 4.2% could hurt the store enough that we might not be able to keep it going. That would mean the end of our community.

I don't believe the Marine Corps should take this Johnson Valley area from the public. People come to use this area from all over the United States to use this area and there is no way they will be able to control using the area without people still coming in some how because they didnt know. forcing the OHV into a smaller area, or for certain times of the year will only encourage more illegal off Roading. Moving to the East is a better solution although in their point of view may be harder to maneuver in and out of their area. But you also have to think of the public and forcing us into a smaller area will make it harder for us. The Marine Corps is supposed to be providing there for the public and not against us. There is already so many areas that are closed to us. This has always been my favorite area.

Response to Comment W-VV-182 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

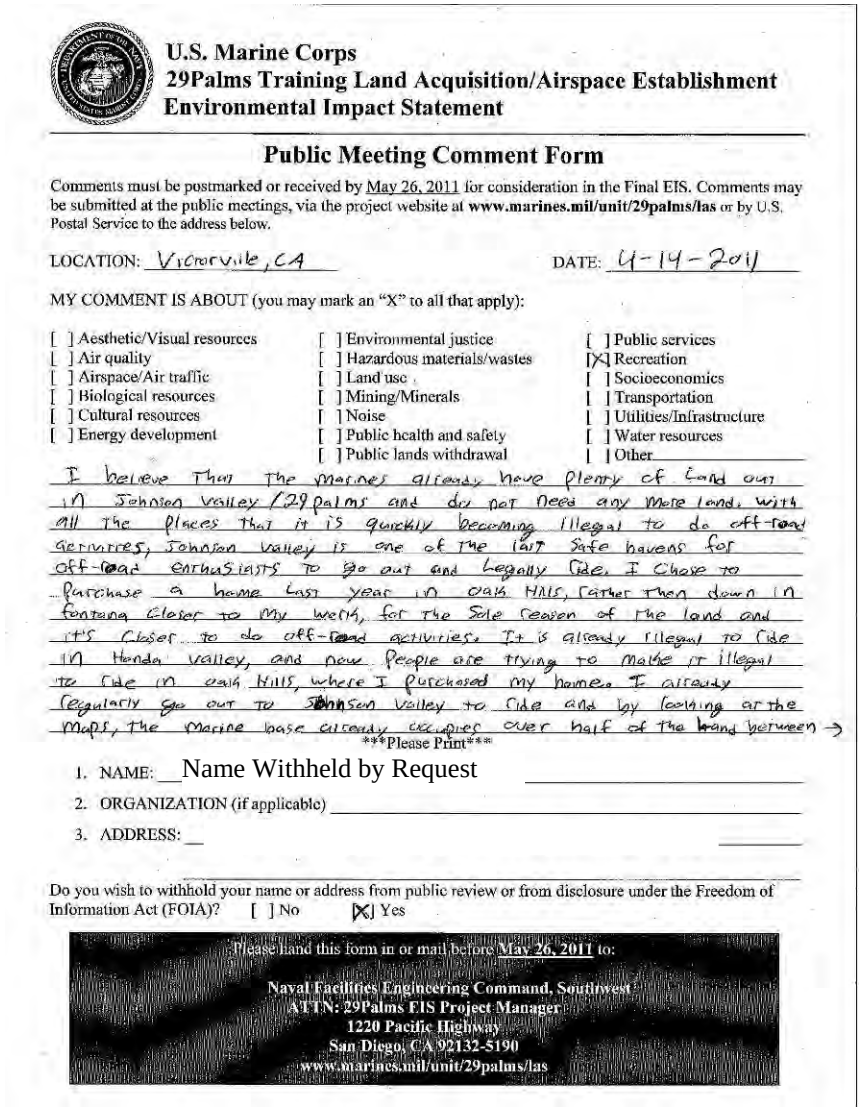
The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding and illegal riding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Comment ID: W-VV-182 (Page 2 of 2)

The Johnson Valley is a very great place for all different events. Dirtbike races, off road races, Rock crawling, and just to go out for fun on the weekends. Closing this area even if its just for awhile out of the year, will greatly effect all of these events. The Marine Corps can cooperate with us and go with Alternative 3. Using this land for even so many months out of the year like the other alternatives propose, will only leave more chance for accidents. Even after their clean sweeps. You know they will still miss some things and its going to take someone getting hurt in order to realize what they have done to the off road community and the public that enjoys this area so much. This is such a great family area, and families for generations have been going here for weekends and holidays. The Marine Corps should be there supporting families and their favorite areas of use; not taking it from us.

S. Eisele



Response to Comment W-VV-182 (Page 2 of 2):

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I believe That the marines already have plenty of land out in Johnson valley / 29palms and do not need any more land. with all the places that it is quickly becoming illegal to do off-road activities, Johnson valley is one of the last safe havens for off-road enthusiasts to go out and legally ride. I chose to purchase a home last year in oak Hills, rather than down in fontana closer to my work, for the sole reason of the land and it's closer to do off-road activities. It is already illegal to ride in Hondo valley, and now people are trying to make it illegal to ride in oak Hills, where I purchased my home. I already regularly go out to Johnson valley to ride and by looking at the maps, the marine base already occupies over half of the land between →

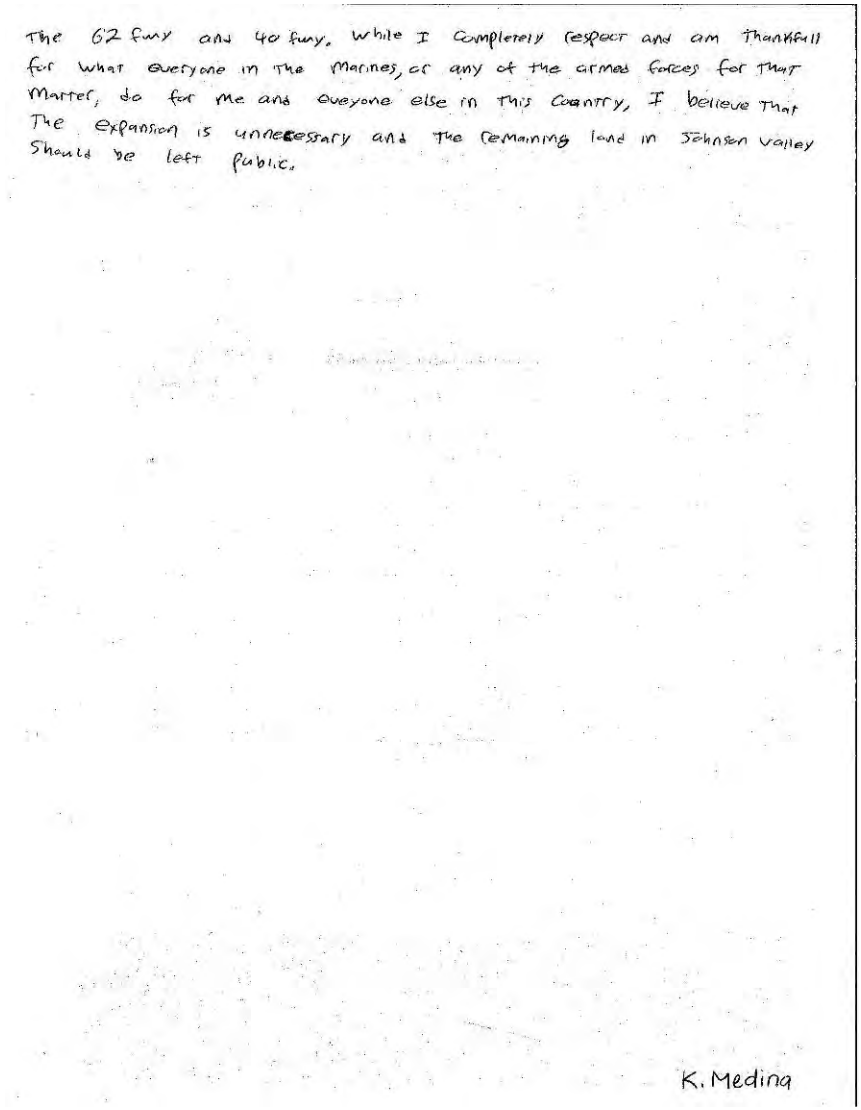
Response to Comment W-VV-183 (Page 1 of 2):



Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The 62 fury and 40 fury. While I completely respect and am thankfull for what everyone in the Marines, or any of the armed forces for that matter, do for me and everyone else in this country, I believe that the expansion is unnecessary and the remaining land in Johnson Valley should be left public.

K. Medina

AS A LOCAL SOUTHERN CA RESIDENT, I OPPOSE ANY LOSS OF LAND AWAY FROM COMPLETELY OPEN, all ACCESS, USE, JOHNSON Valley WAS DESIGNATED AS A BF GOODRICH OUTSTANDING TRAIL IN 2010. IT HOUSES UNIQUE & AMAZING TRAILS AND LAND USED BY 100'S OF THOUSANDS OF PEOPLE EACH YEAR. THE 2 WEEK TIME PERIOD SURROUNDING KING OF THE Hammers IN 2011 BROUGHT $1.8 MILLION to the LOCAL ECONOMY. THESE TOWNS CAN'T SURVIVE WITHOUT the RECREATION the JV AREA attracts. OUR RACING TEAM (RACE PREP RACING) - a SELF-FUNDED team - SPENT $10K ON KOH 2011. ONLY $1100.00 WAS SPENT IN THE LOCAL AREA WHICH MEANS the OTHER $8900.00 WAS SPENT IN OTHER AREAS OF CA. NEITHER THE LOCAL (OVER)

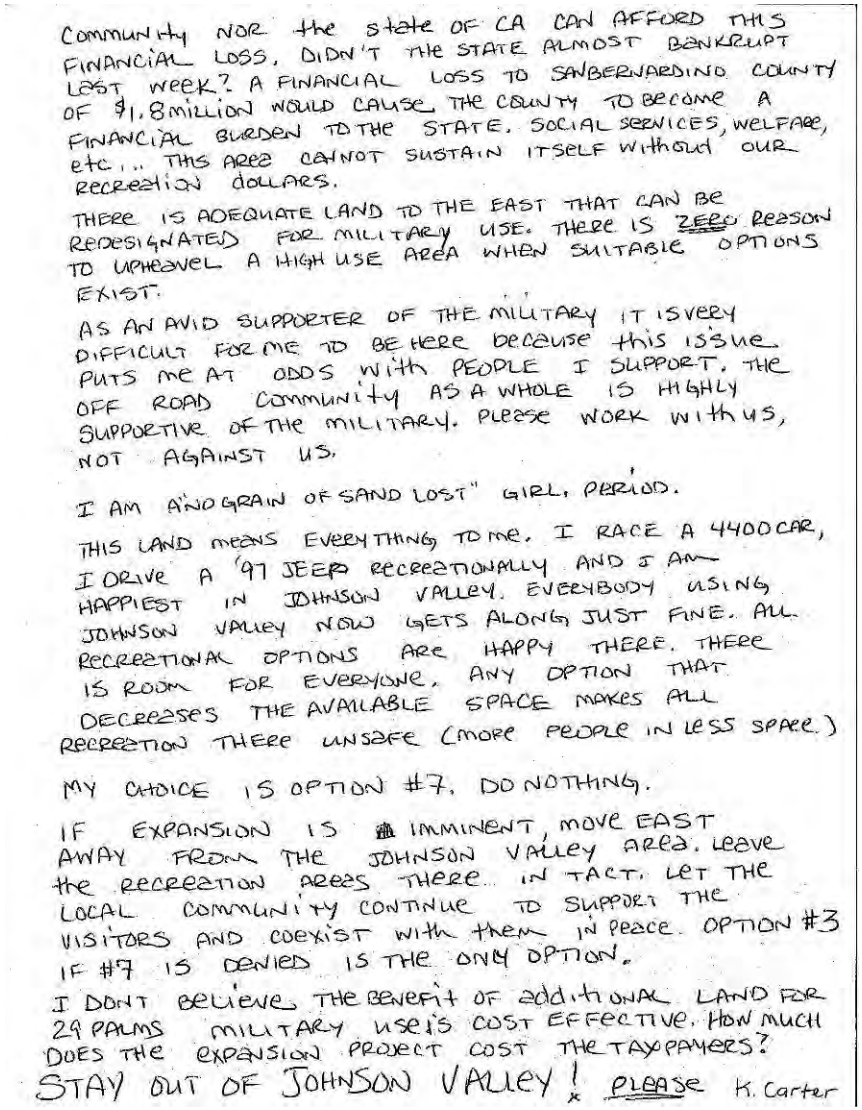
Response W-VV-184 (Page 1 of 2):



Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. Comment ID: W-VV-184 (Page 2 of 2)

Community NOR the state OF CA CAN AFFORD THIS FINANCIAL LOSS, DIDN'T THE STATE ALMOST BANKRUPT LAST WEEK? A FINANCIAL LOSS TO SANBERNARDINO COUNTY OF $1.8 MILLION WOULD CAUSE THE COUNTY TO BECOME A FINANCIAL BURDEN TO THE STATE. SOCIAL SERVICES, WELFARE, etc... THIS AREA CANNOT SUSTAIN ITSELF WITHOUT OUR RECREATION DOLLARS.

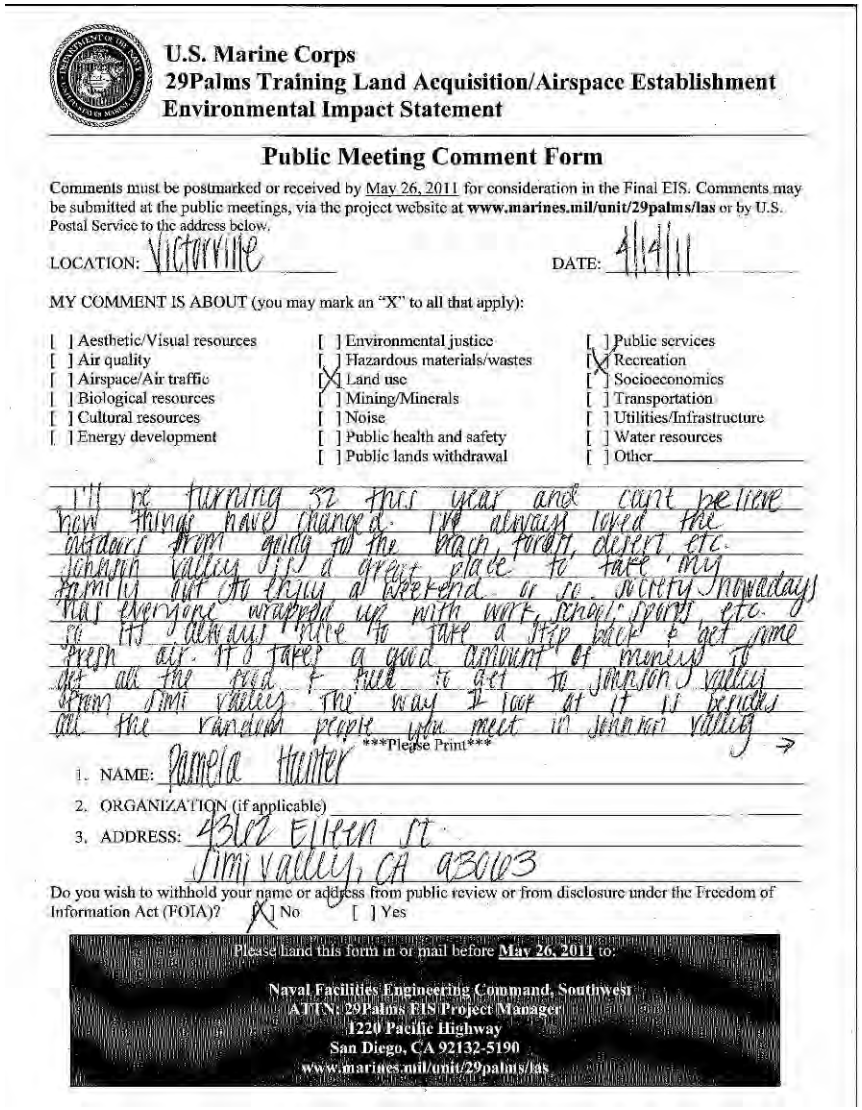
THERE IS ADEQUATE LAND TO THE EAST THAT CAN BE REDESIGNATED FOR MILITARY USE. THERE IS ZERO REASON TO UPHEAVEL A HIGH USE AREA WHEN SUITABLE OPTIONS EXIST.

AS AN AVID SUPPORTER OF THE MILITARY IT IS VERY DIFFICULT FOR ME TO BE HERE BECAUSE this ISSUE PUTS ME AT ODDS WITH PEOPLE I SUPPORT. THE OFF ROAD COMMUNITY AS A WHOLE IS HIGHLY SUPPORTIVE OF THE MILITARY. PLEASE WORK WITH US, NOT AGAINST US.

I AM A "NO GRAIN OF SAND LOST" GIRL, PERIOD.

THIS LAND MEANS EVERYTHING TO ME. I RACE A 4400 CAR, I DRIVE A '97 JEEP RECREATIONALLY AND I AM HAPPIEST IN JOHNSON VALLEY. EVERYBODY USING JOHNSON VALLEY NOW GETS ALONG JUST FINE. ALL RECREATIONAL OPTIONS ARE HAPPY THERE. THERE IS ROOM FOR EVERYONE, ANY OPTION THAT DECREASES THE AVAILABLE SPACE MAKES ALL RECREATION THERE UNSAFE (MORE PEOPLE IN LESS SPACE.)

MY CHOICE IS OPTION #7, DO NOTHING.



IF EXPANSION IS IMMINENT, MOVE EAST AWAY FROM THE JOHNSON VALLEY AREA. LEAVE the RECREATION AREAS THERE IN TACT. LET THE LOCAL COMMUNITY CONTINUE TO SUPPORT THE VISITORS AND COEXIST WITH THEM IN PEACE. OPTION #3 IF #7 IS DENIED IS THE ONLY OPTION.

I DON'T BELIEVE THE BENEFIT OF ADDITIONAL LAND FOR 29 PALMS MILITARY USE IS COST EFFECTIVE. HOW MUCH DOES THE EXPANSION PROJECT COST THE TAXPAYERS?

STAY OUT OF JOHNSON VALLEY! PLEASE K. Carter

I'll be turning 32 this year and can't believe how things have changed. I've always loved the outdoors from going to the beach, forth, desert, etc. Johnson Valley is a great place to take my family out to enjoy a weekend or so. Society nowadays has everyone wrapped up with work, school, sports, etc. so it's always nice to take a trip back & get some fresh air. It does take a good amount of money to get all the gear & fuel to get to Johnson Valley from Simi Valley the way I look at it is besides all the random people you meet in Johnson Valley →

Commenter's Name: Charles Roney

Comment: I'm here because I'm concerned about the Marines wanting to take the west end of the area that we use now for off-roading. I just can't understand why they're even look at that. If they go east they're not affecting lives, homes, businesses. Over on the west side there are homes in the area they want. I don't know how to explain myself. Educated people are supposed to be running this program. Why are we even here? If they look at it they should realize that the east way would be the way to go. That is my opinion. I don't know as much as they do but that's what I think.

Response to Comment O-JT-001:

Meeting Location: Joshua Tree

Meeting Date: April 12, 2011

Commenter's Name: Michael P. Hawkins

Comment: I want to tell the Marines I would like them to go east. I think that would be a lot better for everybody because the people out east could use the business, and people on the west side it will hurt their business. The loss of the recreation area will devastate the Lucerne Valley and it won't be any good for Yucca or any of the other communities that are on that side of the base.

Response to Comment O-JT-002:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). Comment ID: O-ON-001

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: George Green

Comment: I'm a member of District 37 of the American Motorcyclist Association. I'm a desert racer. I'm also a part-time volunteer. I volunteer twice a year with Rescue 3, which is a search-and-rescue group in Barstow, California. They support the District 37 off-road desert racers. My comment would be on Alternative 6. I noticed that Bessemer Mine Road, we no longer have access to Bessemer Mine Road and the north power line road, and those are key routes for our search and rescue. I feel that by closing those routes and the access that we have from those routes to the west would jeopardize the safety of racers and also recreationists in the area. I can't speak for the Sheriff's Department or the BLM, but I know that it would limit the routes, wheeled routes necessary for rescue in those areas for injured riders or lost hikers. That is my comment at this time. I hope that Alternative Number 6 is not used and that we can regain some of the land between Bessemer Mine and Camp Rock Road. Thank you.

Response to Comment O-ON-001:

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Impacts to emergency response are discussed in Section 4.4 of the EIS. As noted in the EIS, under the proposed action there would be additional permanent personnel necessary to manage any acquired land areas, in addition to existing mutual aid agreements.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Meeting Date: April 13, 2011

Commenter's Name: Doug Guimond

Comment: I was at the scoping meetings in 2008 and I made the same comment then and I'll make the same comment now. I am disappointed that the Sheephole Wilderness and Cleghorn Wilderness were not considered alternatives I don't understand why nobody looked at those areas and why they were not alternatives. That's all I have to say.

Response to Comment O-ON-002:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: O-ON-003

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: Dale Martin

Comment: My name is Dale Martin, and I have been an off-roading enthusiast and have been for many years, and as an off-roader we have acquired recreational property such as Johnson Valley by utilizing the green sticker fees, which we pay for out of our pockets, not any government entity that generates that money. We have acquired land such as Johnson Valley and others through a great deal of effort on the part of our constituents, and we feel that that effort should be rewarded by allowing us to keep that, or if that property is actually an absolute necessity for the military, we feel there should be a land swap. That land should be exchanged for another piece of property that has like terrain advantages and area, and that should be with the approval of the various off-road organizations. And if that possible, I think it would be something that would help to overcome the objections that very many people who are off-roaders would have. In any event, the best outcome from our point of view would be to retain Johnson Valley in its entirety. It's a bit ironic that the Marine Corps, an entity that we as citizens have paid for to protect us, protect our freedom, would actually be an instrument to take this off-road freedom away from us. Thank you very much for considering this in view of what I have just mentioned. Thank you.

Response to Comment O-ON-003:

This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Comment ID: O-ON-004 (Page 1 of 2)

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: Carl Ripaldi

Comment: Name is Karl Ripaldi and I have a vacation property in Johnson Valley California, and by training and my profession I'm an environmental scientist. I work for the Los Angeles County Metro Transit Agency where I handle noise issues, I handle resource issues, things like that, and I want to express my opposition to the expansion of the base under Alternatives 1, 2 and 6, which would all result in a taking of public lands that have been dedicated for recreation. Citizens, people in the state of California have been given this land for recreation purposes. It's conveniently located within two and a half hours of almost any part of the Los Angeles metropolitan area, so close enough for people to get away for a weekend and enjoy recreation. I think it's just unconscionable for the Department of Defense and the Marines to be considering confiscation of these recreation lands. I'm also against Alternative 6, which would be a shared alternative in which the base would be using the area for two months a year, because I don't think that recreation and explosions and ordnance mix. I think that at some point there is going to be a tragedy. Somebody is going to come into the area and be hurt or killed as a result of ordnance left there, and I don't care what kind of guarantees and policies and procedures they plan to put into effect. They're all subject to human error. We know friendly fire kills our troops all the time. We are setting ourselves up for a tragedy of some sort when somebody who would-a, could-a, should-a won't, and because of miscommunication or something there is going to be a tragedy. I'm against Alternative 6 for this purpose. I also want to state that the noise analysis done for the project is flawed and misrepresents the noise impacts from ordnance explosions and from area-to-ground missile firings. The parameters that were used are

Response to Comment O-ON-004 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates biological resources, including the desert tortoise, under each of the action alternatives (refer to Section 4.10 of the EIS). As noted in the EIS, there is expected to be potential take and decline in desert tortoise habitat from the proposed action.

Comment ID: O-ON-004 (Page 2 of 2)

So, again, it's a travesty in terms of impact. There is going to be noise impact and vibration impact, light impacts. There is going to be air quality impact to all these historic communities, and it's not even addressed. It's side-stepped entirely. So that pretty much summarizes my criticisms.

Oh, the other thing is it's going to end up killing more of the desert tortoises. I don't think we should be doing that. We should be trying to preserve as much habitat as we can. Thank you very much.

Response to Comment O-ON-004 (Page 2 of 2):

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: O-ON-005

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: Dale Shuttlewarth

Comment: I'm Dale Shuttlewarth and I represent the Shamrocks Motorcycle Club, a District 37 sanctioned off-road organization, and we are as a club and myself as an individual are interested in what we would consider option zero, which is a no action alternative, and we are also interested in Alternative 3, which is the east boundary as opposed to the west boundary. I represent three generations of off-road motorcyclists and recreational users that participate in AME District 37 events. My entire family is involved in it, my children, wife, father, grandparents. This is a family organize, family sport, and a family environment we have been participating in for over 40 years. As opposed to our children playing video games and watching television, we choose to recreate as a family in the Johnson Valley area in the California desert. We think it would be a shame and a loss to the off-road community and tax payers and citizens in general who choose to use this area to recreate in responsibly. We would like the marines to consider their options to the west versus to the east. Actually, I guess it's to the east versus the west that we want them to go. We understand operational readiness of our armed forces. We support the military; however, we feel that options further to the west versus -- further to the west to let us have what little recreating land we have to operate in responsibly would be a benefit to both the Marines and the tax paying citizens that choose to recreate in that area. Thank you.

Response to Comment O-ON-005:

Comment ID: O-ON-006

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: Chris Kallen

Comment: I'm a member of Desert MC Motorcycle Club. I have been an off-roading enthusiast and off-road racer in the Southern California desert for over 40 years. I like the fact that our organizations police themselves, are responsible, leave absolutely no trash in the area. We respect the environment out there. We run our events efficiently and legally permitted by the BLM and try to make the best use of the land available to us that is still legal. My main concern is that with the Marine base wanting to move into the entire area that we have our off-road events on, that it's going to literally cut that area in half. And seeing how Johnson Valley is our largest area to conduct off-road competitive events, it's going to leave us with very little land to do that with. So we are in favor of no action alternative and Alternative 3 to keep our basically hundred and ninety thousand acres intact to allow responsible families to continue an age-old sport and traditions. It's not only great for the kids, but great for the adults to, and I would appreciate any correspondence regarding this matter to be sent to the e-mail I put on the application or whatever.

Response to Comment O-ON-006:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: O-ON-007 (Page 1 of 2)

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: Ed Waldheim

Comment: My name is Ed Waldheim, president of the California Trail Users Coalition, president of Friends of Jawbone, president of Friends of El Mirage, former commissioner of the state of California, and I have been working on this project since day one when it was first announced that they wanted to study this. I have had meetings with the parties involved in developing this project, and now fast forward three year to today, and I am very upset that the original mission of taking Johnson Valley has not changed. They still want to take Johnson Valley, and they throw in a couple of crumbs to us, the hammers and the possible joint use of the facility for ten months out of the year; however, the caveat was that you have to get a permit. So basically it's a taking of a hundred and eighty thousand acres without firing a single shot. Taking away from the American public the use of public lands for recreational purposes which help the health and the mental stability of the citizens who would go out and recreate it. It could be Boy Scouts, it could be rock hounds, rocket shooters, motorcyclists, four-wheel drives. It could be any public that utilizes these lands could be denied using the public land which we have used for years. The Bureau of Land Management designated this area as an open area so that we can use it in perpetuity. The only problem is that we did not have congress designate that as a perpetuity, thus we are in trouble because of the oversight of the Bureau of Land Management letting the military withdrawal these lands. We made it very clear to the military that they do not need this property to train their soldiers. They can use their existing land. The Marines never have had a problem training their people to combat the wars that we have now in the rest of the world.

Response to Comment O-ON-007 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: O-ON-007 (Page 2 of 2)

Financially it would be a travesty that when we are on the verge of bankruptcy as a country where we cannot pay our soldiers because we may have a shutdown of the federal government that we would even think about trying to add on another bunch of land that would cost millions to develop and deny the local citizens from using it. I strongly oppose the taking of this land. They should work going east, work with the congressmen and tell them that they need to get rid of that little wilderness area. If they can't get rid of the wilderness, go around the wilderness area. There are options they can do that nobody uses, but to utilize this is like taking over a country without firing a single shot, and the American citizens are the losers. That is the sad part. Our own military is taking land from our legitimate United States citizens.

Response to Comment O-ON-007 (Page 2 of 2):

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: O-ON-008

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: Paul Lipert

Comment: A disadvantage that I see for the competition clubs within District 37 AMA is that the land may not necessarily be available for competition use after it has been utilized by the Marine Corps, which causes a financial hardship for the racing organizations. Monies are presented to organizations such as the Bureau of Land Management and the American Motorcyclist Association for a given weekend for up to two years in advance. If the motorcycle event is postponed or not able to be performed, the motorcycle clubs that put on the racing organizations lose all of that money that they put up front to have the race events. That's it.

Response to Comment O-ON-008:

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: O-ON-009

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: Susan Lipert

Comment: We are a family that competes in the Johnson Valley area. We Jeep and do exploring and geo-cashing. We go to the petroglyphs and hike out there, so reducing the amount of land that we have takes away many aspects of what our family enjoys doing. We are protectors of the land. We donate money to make sure that the tortoises are safe and that the land is preserved, and I just feel that by having the Marines come in and during bomb practicing that it destroys everything that we have been regulated to be responsible for. And safety, the more land they close, the more people have to be in a smaller area, which makes it more unsafe to recreate in.

Response to Comment O-ON-009:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment: I am a Vietnam Veteran. I think it's important not to close the desert because I'm 65 years old, retired and it's important for me to ride my dirt bike. Keeps me in shape. It keeps my wife happy. It's very healthy for me. If you close the desert, myself and the club that I ride with, Desert MC, a lot of us will not be able to race Hare and Hounds, which is a 90-mile two-loop race, because there is not enough area in other places in Southern California for us to race. I love the Marines. I love the United States, and I think it's a shame that they're trying to take this land that we have been using to race bikes in since the 30's. I am very much impressed with what the Marines are doing here at this event.

Response to Comment O-ON-010:

Comment: I would like to express my concern about the proposed Marine base expansion in the Johnson Valley off-road area. I have been going to Johnson Valley for 43 of my 50 years. I have enjoyed it with my grandfather, my father, my mom, my kids, and we are very limited on the amount of open areas that we have to recreate in the desert, both for just camping, motorcycle racing, car racing. There is no better place in the desert in Southern California to be able to go due to the fact that most every summer we have the monsoon come through there and it remakes the desert all new again. The sand washes and makes different trails and whoop-te-dos get all made new again, and by the spring time it looks like we have never even been out there. That is the only place that is like that in Southern California to be able to recreate. It is also very close in proximity to the greater Los Angeles area to be able to go there and not have to spend five hours to go somewhere else. And I understand that the Marines need a place to train, and I want them to be the best trained in the world, but I hope they will be able to do their training by expanding the base to the east of the Johnson Valley off-road area. There is much less populous out there. I understand there is some corridors they have to deal with, but for those people to be inconvenienced for a small amount of time out of the area through those corridors seems much better than wiping out the whole off-road community and taking what little land we have left to recreate in the desert. Thank you.

Response to Comment O-ON-012:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. Comment: Can they arrange the months that they are going to use it to not affect the months that they have the King of the Hammer's race? Since they're going to take several months, the thousands, the tens of thousands of people that are there would appreciate that they take that time that they have designated for that race. Appreciate it if they didn't take those couple of months that they need to prepare for the race and have their event. That's it.

Response to Comment O-ON-013:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The proposed two months of usage have not been determined at this time; however it is expected that that training would occur in the spring and fall. Exact timeframes will be determined and communicated to the public if Alternative 4, 5, or 6 is selected. The Marine Corps appreciates your comment and involvement in the NEPA process.

Commenter's Name: Rick Nuss

Comment: Okay. First of all, my ultimate goal would be no action alternative to begin with, but realizing that the Marine Corps does need training areas, I will be more apt for Alternative 3. As a family of recreationists in the desert, in this particular desert since the 1950's, I am the 5th generation. I would hate to see us lose this land forever. And as an additional alternative, I would like to see us being able to acquire other land out of the other BLM land outside of the Johnson Valley, maybe a trade. And certainly under Alternative 6 would create havoc in the desert. It will actually be more of an environmental disaster. You will put too many people into a postage-stamp size area. Understanding that in Alternative 3 on the east side there is wilderness area and pipeline and other environmental concerns, so in lieu of 3, if Alternative 3 can't go through, then I would like to see Alternative 4. Definitely not Alternative 6, and not Alternative 1. I appreciate your time.

Response to Comment O-ON-014:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Commenter's Name: Keith Olson

Comment: I think the Alternative 3 would be the best choice besides the no action. The no-action alternative would be ideal. It would be better to go somewhere else that is less populated by the riding area, less populated by the off-roading. Trying to get less populated areas wouldn't be more suitable for the military use and more convenient for the off-roading use. I'm totally for the military and what they are doing, and I'm United States pride all the way, but I think there is other places where the military use can be held in a way to keep off-roading open. I like alternatives -- how they have different only certain months out of the area, but that is not a guarantee, and ideally keeping the Lucerne Valley area open would be the best. But of any of them, Alternative 3 or the no-action alternative would be ideal. That's it.

Response to Comment O-ON-015:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Comment: I would prefer the first alternative of do nothing, but I realize that probably won't happen so I would actually like Alternative 3. Of most of what is left that would give us places to go recreating during any time of the year that we had available instead of at someone else's convenience. And if something other than that were to occur, one of the other alternatives, I would like our land replaced acre for acre with comparable land that we can all agree on, however many acres that ends up being. My family and I have recreated out there for the last 30 years, and it will be devastating basically to my children if they don't have a place that is somewhere close to home to recreate. And I know it will impact many, many businesses in the area, because we know a lot of the business people on a first-name basis from all the areas of going out. We spend our money there. We help them survive too. So basically I just want some mitigation of some kind, land replaced so we have a place to recreate still whichever alternative it ends up being. That's it. Thank you.

Response to Comment O-ON-016:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Meeting Date: April 13, 2011

Commenter's Name: Scott Powell

Comment: My name is Scott Powell. I have been riding 30 years out there. I am now taking my children out there. I would like to keep a hundred percent open. I think for the last 50, 60 years they had done just fine without taking over this area. We have the number one military in the world. Why do they need it now? There are many different places out there to sightsee, for day use, weekend use that a lot of people like environmentalists and military may not know. I would like to show things to my friends and family and continue. Thank you.

Response to Comment O-ON-018:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Meeting Date: April 13, 2011

Commenter's Name: Roy Coon

Comment: I would like Number 3. I think I have a great respect for our military, and I believe there is other means, other land they can take besides what we use for off-roading. Our government already grabbed enough of our public lands from us, and kind of squeezing us all into little spaces is making it so we can't even access our lands anymore. So hopefully we can work this out and, you know, save our lands for recreational use. Thank you.

Response to Comment O-ON-019:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Comment ID: O-ON-020 (Page 1 of 2)

Meeting Location: Ontario

Meeting Date: April 13, 2011

Commenter's Name: Maurice Dorris

Comment: My first comment is about Alternatives 4, 5, 6 and the boundaries. The boundaries include this area that is called the "rock pile", and for the motorcycle riders, which I am, that area is what we refer to as Disneyland. It's the funnest[sic] place on earth. Without that the entire area almost becomes unusable. It takes away the whole attraction. So to take that area away and leave everything else kind of makes it meaningless. They need to hopefully find a way to include that in the area that is to be accessible. Next comment is Johnson Valley has a unique landscape. It's like no place in the country. I have been all over the country riding, doing off-road stuff. I am concerned that, one, running and rolling the heavy equipment over it will damage the area. Although it is accessible, it's going to remove the beauty of it and there will be no point in going there. Next comment is I want to know is it possible for the Marines to share part of the land of the existing base that they're not using, that they can't use for certain reasons. Although not good enough for heavy equipment, it's good enough for recreational use. And if they're going to give areas to share, you know, share some of the land they already have that they're not really using. A lot of the maps that have the restricted use area don't allow for full tour of the area. Part of the attraction of going to it and doing motorized recreation is that you can do a full tour of the area, meaning you can go for 80, 90, 100 miles without seeing the same area twice, and the boundaries don't allow that so it would be nice to have better adjoining corridors to the north, the south and the west to fully enjoy the area. Next comment I have concerns about the Marines ability to clean the area like they say they can. For the area that would be shared this is a process that is new.

Response to Comment O-ON-020 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Comment ID: O-ON-020 (Page 2 of 2)

It is unproven, untested and that process does not work. Then that area has basically become an off-limits area because that process doesn't work. It is too risky to even try that. It really needs to be tested before it's tried. That is it.

Response to Comment O-ON-020 (Page 2 of 2):

As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment: As a member of the AMA District 37 I do realize we're in smaller numbers compared to the U.S.M.C. We're proud Americans. I back my troops completely with all of my heart. I feel in Alternative Number 3 allows our district to continue with the loved tradition that has been around for decades by also gives the Marines a place and time for training and their air space establishment. I have grown up in the Johnson Valley area, and it is more than a recreational place for me. It is my home. Alternative 3 might seem like the ultimate decision right now, but in the long run I feel the rough terrain would oppose training conditions for the U.S. Marine Corps.

Response to Comment O-ON-021:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. Commenter's Name: Renee Coon

Comment: There are many reasons why Johnson Valley should be kept open for off-road use. I strongly believe in the U.S. military and honor them, but in this instance there should be only be two alternatives. The first and most desirable alternative would be the non action. In a situation that no other options would be possible, Alternative 3 would be the most acceptable. This acquisition would be great in the sense that the riding area I grew up in and love would be still be intact and open to the public. I hope this proposal helps. Make your decision wisely.

Response to Comment O-ON-022:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Commenter's Name: Jeff Cepielik

Comment: I'm a family of off-roaders. We have approximately 30 people involved in our off-road effort comprised of family and friend. We have been enjoying recreating and racing in Johnson Valley for 28 years between motorcycles and off-road vehicles. We oppose as a group the Marines expansion and encroachment into the Johnson Valley OHV area based on the premise of the original multiple-use land act. We feel there are options for the Marines to move east and north and be able to satisfy their needs while allowing the BLM to still administer to the needs of the citizens of California. The impact in addition to that of the use of the area by the off-road community will be far reaching economically in the state of California. This will affect not only the communities that surround it such as Lucerne, 29 palms, Victorville, Apple Valley and Hesperia, but those shock waves will be felt throughout the off-road community, motorcycle and recreational industries, gas stations, fast food establishments, parts stores, and various other support industries of the off-road industry will be effected and the financial devastation will reach throughout California and effect the state in a negative way. I encourage the military and BLM to look at options that don't encroach into Johnson Valley off-road area and find the solution that will allow all of us access to the areas that we need. The off-road community has been over the last 25 years moved into smaller and smaller areas, and we have no options for use. Our areas have been restricted, and our ability as citizens in the state of California have been restricted as far as open-use access so greatly that we have no options; thus, the taking away of Johnson Valley is something that is just -- it's not acceptable as for as the community goes. That's it.

Response to Comment O-ON-025:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Commenter's Name: Steve Swinburne

Comment: I guess basically what I would like to say is that the ultimate goal we would like to have no action at all and to keep the land open. I've been going out there since the 70's with the family, and I was brought up out there. My daughters are being brought up out there, and now I have grand kids being brought up out there. I would like to be able to keep it going throughout the family and generations to come. If we have to do anything, I guess the other thing would be Alternative 3, which would leave our, you know, area open. Looking at the Alternative 6, which they say is the preferred, I think that is preferred by the military, not us as recreational people. We would just like to, you know, keep it as much open for the family to be able to go out and friends and family and generations to come to keep it going.

Response to Comment O-ON-026:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment: I would like no action taken would be my first choice, but Alternative 3 where it doesn't affect us is appealing. I would like to try to keep the lands open that aren't too far to drive to have available to use. Alternative 4 and 5 could be a good comprise if they didn't ultimately end up taking it over 12 months of the year, but my first choice would be no action at all, but I doubt that is going to happen.

Response to Comment O-ON-027:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment: I just don't understand where they're going to go if they start going to the west. They're going to be taking most of the open desert where they have all the races and MDR and events, and it kind of seems like they're try to go stick you down south where there is no way you can operate something like that or run it safely without putting people's lives in danger. It's too much of a race course you're going to stick down there, and there is going to be regular campers that come out with mom and dad and the family at the same time. You can't even do that because it's too small of an area. And then I think by going more over on the east side it's kind of an area that nobody uses, not really off-road vehicles or anything so that is kind of like I think the best way to go. I guess that is about it.

Response to Comment O-ON-028:

Thank you for your comment. Comment: I'm against any of the closure of the off-road area. It's been a family tradition for four generations. Been camping and using this Johnson Valley since the 60's. It's the equivalent of going to Yellowstone for our family, and it's that important that it remains available for public use. I think other alternatives need to be explored as far as expanding to the east. Alternative 3 seems to be the preferential alternative. If there is any closures for the off-road that effects the off-road industry, it should be mitigated with additional land made available of similar type. The BLM even considers and identifies this as a world-class riding area. It needs to be protected for future generations. Off-roading as a sport is expanding and fewer opportunities are available for us to recreate. It's a lifestyle by parents that have limited mobility and are able to enjoy this type of recreation on public lands along with their grandchildren equally. The military needs to readdress the potential to expand into the wilderness by asking permission to study the wilderness area for its capability to meet the needs of the military. I don't think that was adequately looked at or looked at at all. If they need congressional permission, then it should be done and this process should be postponed until that can be addressed. I'm interesting to see where the funding is coming from for the base expansion period and what the economic impact if it was taken into account the revenue that is going to be lost for the city and county surrounding this area. This will have a devastating impact on the local businesses. Alternative 6 has closures for two months of the area with limited access for ten months out of the area, but a comment was made at the last meeting from a Marine Corps representative that the Marine Corps does not play well with others.

Response to Comment O-ON-029 (Page 1 of 2):

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment ID: O-ON-029 (Page 2 of 2)

That it's unlikely that that will be accepted. That is not a feasible alternative. I think that is a poor attitude reflected on the Marine Corps, if that is their opinion. I question the need to expand for these additional exercises. What have they been doing prior to this expansion proposal? Unfortunately at this meeting I asked for maps for the different alternatives and there were none provided, which is disappointing considering the impact that this is going to have to the off-road community. Without adequate maps, the public is unable to adequately review the information and make an informed decision on what impact it's going to have on the off-road community. I feel that the planning process needs to be extended until everybody has the proper opportunity to express their opinion on the effect it will have. For these reasons I feel Alternative 3 is the only practical solution to properly address all the concerns.

Response to Comment O-ON-029 (Page 2 of 2):

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period, and encouraging the public to comment on the Draft EIS. Maps of the different alternatives were provided in the Draft EIS and were available for review at the public meetings. The Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA, and took additional steps to make the document publicly accessible for review and comment.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Comment: I have been riding motorcycles in the California desert since 1972. I have been riding in Johnson valley. I understand the needs and concerns of training for the U.S. Marine Corp. I feel Johnson Valley being one of the only two places we have to race motorcycles, we should keep it as it is, open for us. Or if you guys must take it for training, mitigation might be a good option. Give us acre for acre. Trade us land. The Marine Corp can keep the land they need, i.e. Johnson Valley, and we'll have acreage to ride motorcycles on as well. That's it. Thank you.

Response to Comment O-ON-030:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment: I'm here to make comments that as an avid off-roader family man that I have been going to the Lucerne, Johnson Valley off-road area for my whole entire life, and my dad is going there before me and took me there and my six-week old I plan on taking out there. And my opinion on the closure is that it needs to be public land that is open to the public. I would hope that the BLM would not take public land away from the public and restrict access to petroglyphs that are in the area, other formations and just general public land use. I also want to learn from history of, you know, failures in the past and the Army. Fort Irwin base did an expansion with the same public comments, same post cards, same pretty boards to educate the public that went through, and it's my understanding that the tortoise relocation program had a 25 percent survival rate of tortoises, and that seems unacceptable to me that they would jeopardize the tortoises in that area. The other part of this is that the Army is not using the land they have, not using this land. I don't want to see the same thing happen to public lands that get used by thousands and thousands of enthusiasts and stewards to the desert. Another problem that I have is with our Marines and Army and Navy for all that matters not having a synergy to work together and train together. They fight together, but they cannot train together? Fort Irwin base they could train there if they needed to, and there is no reason they shouldn't be able to train together and make their forces stronger by training together and not without taking public land from the public who pay their OHV renewals and are also the people that are in the desert and enjoy the desert and as I said before are the stewards of the desert.

Response to Comment O-ON-031 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates biological resources, including the desert tortoise, under each of the action alternatives (refer to Section 4.10 of the EIS). The Marine Corps is currently undergoing consultation with the USFWS in regards to impacts to the desert tortoise and other wildlife species.

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would interfere with the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: O-ON-031 (Page 2 of 2)

So as a public land user I do use the designated courses during closed course events, the A and B course that are in the Johnson Valley between Camp Rock and Bessemer Mine Road. I hope to keep these areas open and open unrestricted forever.

Comment: Same kind of thing. As the wife of someone and as a desert off-roader for 30 years plus we want to keep it family oriented and keep it open for the public. My concern is if we do give the Marines a little portion of the land, supposedly considered little portions, what is going to happen in the next five years when they decide they're going to need a little more and every year after that. And they need to find some other place that isn't useable for the public. That current area is as my husband stated has petroglyphs and a lot of high activity for off-road use and the desert tortoises, environmentally sound plant formations. We just want to continue keeping the public area public and that's it. Open to the public. Keep it open.

Response to Comment O-ON-032:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates biological resources (see Section 4.10), including the desert tortoise and plant communities, and cultural resources (see Section 4.11) under each of the action alternatives.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Commenter's Name: Tim Nowak

Comment: I think a viable alternative that has not been looked at is to study potential to de-designate the northern part of the wilderness area to accomplish expansion to the east so that we eliminate the west expansion or study what percent of an east expansion could be accomplished with a much smaller west expansion to accommodate the military for their maneuvers.

Response to Comment O-ON-034:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Comment: I think in a nutshell I would like to ask the Marines to go with their proposed Option 3. Stay to the east or little to no change to how it is now, because they're going to impact the OHV community very seriously. Some of their other proposals, Options 4, 5 where it's partial use or shared usage, that is great. It's a nice idea, but, I mean, I don't see -- in the beginning I can see them saying, okay, we're only going to use it for two months, but right now we have a lot of other stuff going on in other countries so this year it's going to be ten months, and in ten years it's going to be, we need it for 12 months out of the year and you're out of luck. Their option Number 6, which they're saying preferred, is going to eliminate the majority of the land that myself, friends, family all use. I would really like to not see that one go through just because it's going to take up a large majority of the area that we all go to every couple months as a family and have fun. So as far as the impact on Lucerne Valley itself, the town of Lucerne, you know, I honestly don't know how much of their business is derived from the OHV. I know between the rock crawling crowd and desert there is a lot of traffic and people that go through that town. I would hope they at least look to see how they're going to impact them. Some people might depend on that money coming through the town. Other than that, I ask they please go east or do nothing to keep it the way it is now so we're all happy.

Response to Comment O-ON-035:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment: In reference to the Johnson Valley Marine Corps expansion, I just wanted to say that I'm a member of MyJeepRocks.com. I'm also a local resident. I strongly support the military and think that the U.S.M.C. should have the ample land for training purposes; however, John Valley is a very important area to many organized recreational groups and especially to the OHV community. The area in question pertains to the hammer trail system, which is considered an oasis for OHV enthusiasts. The characteristic that define the hammer trails in Johnson Valley exist nor else in the country. For over two decades, years of volunteer effort has painstakingly been given to design the perfect off-road trail system on our own public land. We have been perfect land stewards in that we plan and attend major desert cleanup efforts multiple times a year. Hundreds of off-roaders, their families and advocates of off-roading show true virtue and dedication by simply picking up trash and keeping the lands clean. If the OHV community lost the hammer trail system, it would be like a ship without the Marines, like a garment without buttons. That was a quote by Admiral David G. Vargin in 1862. Johnson Valley is also used by a huge variety of public recreationalists and film companies. Other than the OHV public, an expansion of 29 Palms westward will effectively shut these people out of this area and would have a huge effect on the local economy. The film industry spends millions of dollars a year on locations and county permits within Johnson Valley to have a 360-degree unobstructed view unlike anywhere else in the country. In addition, the film industry supports the locate economy and consistently creates jobs by bringing an entire crew and hiring locally. I know firsthand because I work in the film industry. I have

Response to Comment O-VV-002 (Page 1 of 3):

Thank you for your comment. However, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Comment ID: O-VV-002 (Page 2 of 3)

worked as a set dresser a couple years ago on the movie Valkyrie starring Tom Cruise, which was shot on location in Cougar Buttes. A few years ago I also worked on H2O water commercial also shot on location in Johnson Valley. So it would be a substantial monetary loss for the local towns, county and state. There will be an inevitable loss of filming in our own county due to the foreseeable lack of picturesque geography. The film commission stated there are more film project days in one year than there are days in the year in Johnson Valley alone due to the popularity of the location and overlapping of projects. My family has been attending the hammer trail events and other areas in Johnson Valley for years. We actually moved from Los Angeles about four years ago to be closer to Johnson Valley. If we lost access, we would be extremely heartbroken to say the least, and I want my three-year-old daughter and my two-month-old son to be able to experience the trails and the outdoor life that is second to none in the Johnson Valley. While I completely support our military and the U.S.M.C., please consider this land withdrawal and urge the Marine Corps to go east to a less vital area for their training. Expansion to the east would only required de-designation of a small portion of Sheep Hole Valley wilderness. They would have to deal with the federal government, but I think that they have enough leverage being the Marines to do so. Although political leaders have shown resistance to the idea, military training is a benefit to the entire nation and the responsibility should be shared equally among all Americans, not just off-road enthusiasts. The number of designated wilderness trails and areas far outnumber the designated OHV areas in the Mojave desert.

Response to Comment O-VV-002 (Page 2 of 3):

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: O-VV-002 (Page 3 of 3)

Furthermore, this project will conflict with and will have adverse effect on every concept of the recently adopted San Bernardino County general plan, such as infrastructure, housing, conservation, open space, safety, land use and economic concerns. Similar projects have historically caused an immediate and dramatic drop in local residents' property values and local business revenues due to the 24-hour live-fire exercises, noise, ground shake and reduction of the area's overall appeal. The closure would negatively impact remaining OHV areas both in regards to environment and as well as personal safety as a result of increase in heavily concentrated use. Injury and death will likely increase from over population of other BLM enforced service managed lands in the future should the base extend to Johnson Valley. Increased use of federal, state and local public lands will put will put additional pressure on land managers, resulting in greater restrictions to motorized recreation. The result of concentrated use will create increased environmental concerns, likely leading to further closures in the future, thus, compounding the problem. In order to see just how important this area is to this group, I ask that you read these testimonials which were posted during a four-hour virtual online rally at www.pirate4x4.com/jv. I ask that you fine men and women go east. William Wordsworth stated, "Men are we and must grieve when even the shade of that which was once great has passed away." Thank you.

Response to Comment O-VV-002 (Page 3 of 3):

The Land Use section of the EIS (see Section 4.1) discusses consistencies of the proposed action with plans and policies. As noted in the EIS local plans and policies and development controls would no longer apply to private lands acquired by the Department of the Navy for training use; and future amendments would designate these lands for military use.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: O-VV-003

Meeting Location: Victorville

Meeting Date: April 14, 2011

Commenter's Name: Roger Peterson

Comment: First I would like to state that I support the United States Marine Corps in their mission to protect America. As part of a group of off-roaders known as MyJeepRocks.com we have submitted a proposal with which is now I guess Alternative 3 -- similar to Alternative 3. I hereby request that the Marine Corps take another hard look at three to see if they could make that work. I'm concerned about Alternative 6, which is the their preferred plan, and there is many reasons. One of them is dust mitigation. They stated in their proposal that they would use water trucks to mitigate the dust. There is two things that make that not possible. One, there would not be enough water trucks in San Bernardino county to cover an exercise with that many soldiers and all their equipment. Also, there wouldn't be a water source anywhere near that area where they could obtain water to do this. Again, I urge the Marine Corps to look at Alternative 3 as opposed to Alternative 6. Thank you very much.

Response to Comment O-VV-003:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

The EIS acknowledges that the proposed training exercises will generate substantial amounts of fugitive dust, as shown in the EIS tables that present estimations of air emissions for each project alternative (refer to Section 4.8 of the EIS). The EIS dispersion modeling analyses determined that fugitive dust emissions would produce less than significant impacts to ambient PM_{10} levels for Alternatives 1, 2, and 4-6. However, Alternative 3 would contribute to an exceedance of the national ambient air quality standard for PM_{10}. The EIS only proposes to control fugitive dust emissions from proposed construction activities, as it would be infeasible to control fugitive dust generated from the proposed training exercises.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Meeting Location: Victorville

Meeting Date: April 14, 2011

Commenter's Name: Don Christie

Comment: I'm 70 years old. I have been riding dirt bikes in competition since '64 and moving around the country being a dentist. The goal has been where I have riding areas, and I moved here in '05 and it's very large disappointment to see this area being taken away. So it's with grievous feelings that I see this developing. If there is any kind of a comment that I can make, I would like to -- my problem is I can't see why they can't go east, to move this land purchase east of where they are and leave this economic enjoyment play land for L.A. people. I'm a dentist in Apple Valley. I'm there to have one foot in the desert to use. But as you scrunch this land down, it just gets over used, and then you have environmentalists that are critical of what is left. It's been taken away where I lived in Eastern Washington, around the tri-cities, the Juniper Forest, the Northern Idaho and a lot more. These are all area that's have been taken away. As you get older you have more areas that are gone and it's sad to see it go away. It's hard for me to see that. Is it really that essential to take this, which has a big economic impact? My office is right on 18. I see the traffic every day going to and using the desert. You have people enjoying RVs, toy haulers, vehicles themselves, dirt bikes, quads, and all of this being restricted and where do people go? We have losing so many of our – what freedoms, land, enjoyments. My father -- I grew up with my father that was paralyzed so he could never go out into the wilderness areas. I needed to see wilderness being developed because people to walk -- he couldn't walk or use it so it's a deduction. The privileged few that can have the time to walk is the only thing that is left to use the wilderness. This is not wilderness. I understand that, but it equated to the same thing. That is it.

Response to Comment O-VV-004 (Page 1 of 2):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.
