The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Comment ID: O-VV-004 (Page 2 of 2)

If this goes in, as a dentist for the community of Apple Valley, I'll move back to Arizona where I came from in '05. That is how deeply I feel about it because this is part of my life. At my age I have, what, ten years left riding in the desert? At 80 I figure I'll take up golf. So anything more -- I'm glad to be able to express the seriousness of losing this segment of society's enjoyment, our planet earth. I sat and looked at a map and I say go east.

Comment: I'm not in the area right now that you're going for section 6 or whatever it is, but when I first heard a couple years ago about the expansion, I ended up looking for another place. I have a second place now, but I'm paying for the first place that is possibly in the Marine Corps expansion. I'm interested in not having it anymore. I want to be included on -- I'm a Marine, and I'm interested in selling. I'm paying $500 a month for it now. I would like not to have to do that. I'm not trying to make big money or anything. I think I would have a better chance of hanging on till the Marine Corps wants it. That would at least pay what I owe on it. That's it.

Response to Comment O-VV-005:

The Marine Corps appreciates your comment and participation in the NEPA process.

Meeting Location: Victorville

Meeting Date: April 14, 2011

Commenter's Name: Maxwell Britton

Comment: I had a chance to walk around and got to realizing that Alternatives 4, 5 and 6 seems to me like they're joint-use programs where the marines will come in and do some exercises, live-fire exercises, and then at a certain time come in and sweep four times. I had asked the specialist that would come in and sweep if he believed that he could guarantee a hundred percent that I wouldn't find any unexploded ordnances anywhere on the area that would be reopened to the public, and he guaranteed me a hundred percent that they wouldn't -- that I wouldn't find anything. My concern is this, with human error -- I mean, we have had recent news of more than a few traffic control folks falling asleep in the wee hours of the morning bringing in planes. Human error happens, and my concern is that I have got a three-year-old and a two-month-old and a wife and my own life to take care of. If I'm going to go somewhere and recreate, life has enough pressures as it is without going to a place where I have been recreating for decades and now have to worry about the fact that I may or my children may come across an unexploded ordnance. I don't care in the sense of the guy that is in charge of sweeping the area four times can't positively in my own common sense guarantee anything. Anything is possible. And I don't believe -- I'm not confident that I may not ever incur a problem there. I would probably not have my family recreate in the area in question. That is unfortunate. And as far as I'm concerned it's also unacceptable when there is another option for the Marines to go east into Sheep Hole Wilderness. They have the leverage -- if anybody does, they do – with the federal government to decommission that land.

Response to Comment O-VV-006 (Page 1 of 2):

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment ID: O-VV-006 (Page 2 of 2)

The other thing in reference to Proposal 4, 5 and six is I believe with joint-use is that history shows that once the powers that be come into use of said area to train, it leaves a door open that they can extend, postpone, delay or close from that point on that area in question because they're in charge. I no longer have the ability and it's no longer public land, therefore, I don't have the ability to have any voice heard at that time. I think it's important that my voice is heard now before this land takeover happens. From what I understand, there is also going to be sanctions. This will be government lands. I'll have to provide identification, get a permit and so on and so forth. I also believe that that is an unacceptable compromise for the public to use land that was originally given to them for public use. Again, the option of going east is what I encourage, and that would conclude my thoughts

Response to Comment O-VV-006 (Page 2 of 2):

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment: So finding out some more information in reference to Sheep Hole Wilderness and the re-designation of that land, it seems that it's going to be possibly a no go with that in that seems like it might be straight from DC. So there is another alternative that would be a compromise on the part of the Marines as well as the off-road enthusiasts and recreationalists alike, and that is that I'd like to propose that the Marines move north of the hammers, and it would be essentially through Epperson Valley and then sort of north towards Wilson Hills. And this would not be a multi-use area. The Marines would use that area essentially as theirs, and it would not be part-time use; therefore, it wouldn't pose a danger in any shape or form to the public and it would also keep a lot of the public lands open. Seems to me this would be a good compromise, and I would defiantly support that.

Response to Comment O-VV-007:

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Meeting Date: April 14, 2011

Commenter's Name: Dan Kiewicz

Comment: I'm proposing that if the Johnson Valley area is consumed, that there has to be other areas opened up to handle the riders that will be displaced. Obviously the hammers, which are the rock crawlers, are gone, but absorbing that large of an area means it's going to crowd others, which means it's going it be a very great safety impact. So some of the areas need to grow that are nearby, Stoddard Valley, et^cetera, to accommodate the larger crowd and provide safety for those folks.

Response to Comment O-VV-008:

Thank you for your comment. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Commenter's Name: Bill Tuck

Comment: My main concern -- Bill Tuck. I'm a member of the Society For the Conservation of Big Horn Sheep. I'm not speaking for our society, just as an individual, but from what I was told, there is going to be in Plan 6 two training cycles per year, possibly one in the spring and one in the fall for around 29 days. What I would like is for the Marines -- and I'm going to have our vice president who is an expert contact the Marines – to find out when the migration of the two-year-old rams takes place, which effects the gene pools. The females run the young rams off when they're about two years old, and they will migrate between mountain ranges, and there is a migration pattern through the base. But currently the pattern is being majorly disrupted by off-roaders so it would be a plus for the sheep, plan 6. I'm wondering if the Marines would consider contacting our organization -- I'm going to have our organization contact your biologist -- and see if we can coordinate on when this migration takes place. Maybe the Marines could possibly do it at a different time, or maybe it won't interfere with the migration at all, but I think it needs to be looked into by the Marines.

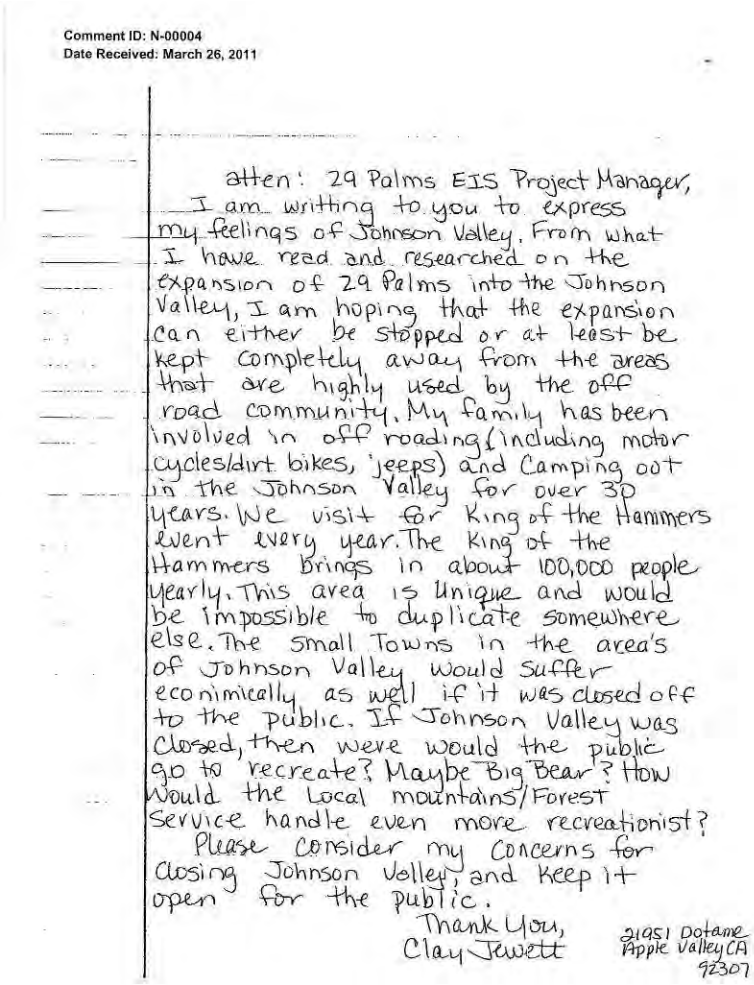
Dear 29 Palms EIS Project Mgr,
I have great concerns for your expansion into the Johnson Valley area. I understand how important it is for the military to have proper training, and I am not being disrespectful.
I am a property owner in Johnson Valley, my property is on Cuarte Rd & Green Rock Mine Rd. I have concerns on my property value, as well as my neighbors.
I am concerned about air traffic and noise from the training exercises. I also have concerns on the economic stress this will ~~cause~~ do to the local towns who depend on the visitor's money who recreate in the Johnson Valley area.
Lucerne Valley is one of the towns who need money created by the visitors who purchase gasoline, food items, camping supplies and frequent the local Restraunts.
Johnson Valley brings all types of sporting & hobbyist, including Rock Climbers, hikers, bicyclist, motorized motorcyclist, off Road Vehicles, the Movie

Response to Comment N-00003 (Page 1 of 2):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The EIS evaluates noise impacts in Section 4.9 and determined that they would be less than significant under each alternative. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: N-00003 (Page 2 of 2)



Industry also uses Johnson Valley. It would be very disheartening to have this area closed to the public. I really hope that your management team will please take my concerns into your decision. I really want Johnson Valley to remain open.

Thank you,
Ted Horbach

atten: 29 Palms EIS Project Manager,
I am writting to you to express my feelings of Johnson Valley. From what I have read and researched on the expansion of 29 Palms into the Johnson Valley, I am hoping that the expansion can either be stopped or at least be kept completely away from the areas that are highly used by the off road community. My family has been involved in off roading (including motor cycles/dirt bikes, jeeps) and Camping out in the Johnson Valley for over 30 years. We visit for King of the Hammers event every year. The King of the Hammers brings in about 100,000 people yearly. This area is Unique and would be impossible to duplicate somewhere else. The small Towns in the area's of Johnson Valley would suffer econimically as well if it was closed off to the public. If Johnson Valley was closed, then were would the public go to recreate? Maybe Big Bear? How would the Local mountains/Forest service handle even more recreationist?
Please consider my concerns for closing Johnson Valley, and keep it open for the public.
Thank You,
Clay Jewett
21951 Dolame
Apple Valley CA
92307

Response to Comment N-00004:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Gentlemen
This small area known as the Hammers or Johnson Valley is the only area in Southern California with these unique off-road challenges and is funded by our OHV Green Sticker program.

It would be a great loss to the OHV community and the surrounding business that cater to the OHV enthusiasts.

Please reconsider this areas closure.

Sincerely Yours
Ben Fakkeldy & Family

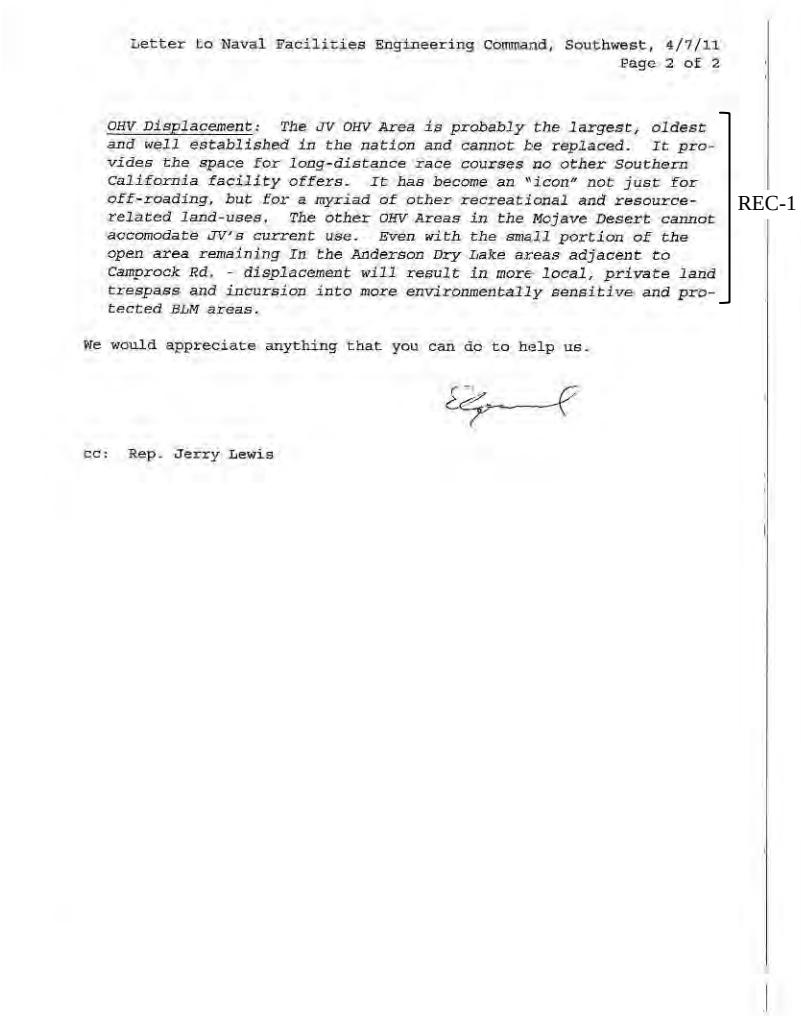
Subject: NOI - EIS ISSUES -
29 PALMS TRAINING LAND/AIRSPACE ACQUISITION PROJECT

Please expand the Marine Base eastward. It is vital to our survival in tis high desert area from Lucerne Valley and around to Homestead Valley. We understand that Sen. Feinstein's "Monument" to the East is dead in the water, so let's go East!

Since we were involved in writing the response to the Base expansion sent to Mr. Joe Ross, I will quote part of that communication as an important part of our reasons for objecting to your taking most of the Johnson Valley off-road recreational area to the West of your Base. (And joint use is an extremely poor option.)

Economics: If the JV OHV Area is shut down or substantially reduced, we would suffer a significant loss of revenue from OHV-related traffic - major filming/commercials - mining - general recreation - etc. for the Lucerne Valley Market/Hardware (shopping center) - 3 gas stations - our restaurants - a multitude of other businesses, etc. Most of the businesses in our town are here "because they want to be" - not because it is financially lucrative - in effect subsidizing us with goods and services well beyond what are normally available in other communities with our population and demographics. The "profit margin" for our businesses is already a "stay-open/break-even" situation. Loss of current weekend business - up to 10% of total revenue for some - would be the "straw on the camel's back" that would force them to shut down. Our survival is at stake.



SOC-1

Response to Comment N-00007 (Page 1 of 2):

SOC-1:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). Comment ID: N-00007 (Page 2 of 2)

Letter to Naval Facilities Engineering Command, Southwest, 4/7/11
Page 2 of 2

OHV Displacement: The JV OHV Area is probably the largest, oldest and well established in the nation and cannot be replaced. It provides the space for long-distance race courses no other Southern California facility offers. It has become an "icon" not just for off-roading, but for a myriad of other recreational and resource-related land-uses. The other OHV Areas in the Mojave Desert cannot accomodate JV's current use. Even with the small portion of the open area remaining In the Anderson Dry Lake areas adjacent to Camprock Rd. - displacement will result in more local, private land trespass and incursion into more environmentally sensitive and protected BLM areas.

REC-1

We would appreciate anything that you can do to help us.

cc: Rep. Jerry Lewis

Response to Comment N-00007 (Page 2 of 2):

April 11, 2011

Naval Facilities Engineering Command Southwest
Attention: 29 Palm EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

Dear Sir or Madam:

Thank you for the opportunity to comment on the Draft Environmental Impact Statement for the Land Acquisition and Airspace Establishment to Support Large-Scale Marine Air Ground Task Force Live Fire and Maneuver Training at the Marine Corps Air Ground Combat Center, Twentynine Palms, CA., dated February 2011. The portion of the acquisition area identified in the report as the West Study Area, and the preferred alternative for base expansion, includes iron mining deposits, both claims and patented lands, owned by the principals of Hahm International and Levand Steel and Supply Corporation and operated by Hahm International, a domestically owned mining company located in Apple Valley California.

The DEIS does not provide direction for submission of written comments via certified mail. After contacting the Marine Corp via the website we were given the address above and trust it meets comment protocol.

The owners or operators of the mines were never contacted by the document preparer regarding activities or impacts of the proposed action. To our knowledge neither was the cement industry. LU-1

The proposed base land acquisition will have a direct impact on existing, permitted iron mine operations at the Morris Mine, proposed iron mining at the Bessemer Mine and access to both mines.

Hahm International and its predecessor, KD Mining is a 41 year old mine owner operator located at P.O. Box 1323, Apple Valley, CA., 92307. Hahm currently operates the Silver Lake Iron Mine at Fort Irwin, CA. (referenced on page 3.12-9 of the DEIS) and the Morris Iron Mine within the proposed acquisition area (page 3.12-9 of the DEIS). They also own the Bessemer Mine located within the proposed acquisition area (page 3.12-9 of the DEIS) and are in the process of designing a mine operation and reclamation plan for consideration by San Bernardino County for anticipated submittal and consideration in 2011. As a correction to the DEIS summary of Iron Resources on Page 3.12-9 of the DEIS, permitted iron reserves at the Silver Lake Mine are 2.75 million tons (mt), permitted iron reserves at the Morris Mine are 18.8 mt and proven reserves at the Bessemer Mine are 2.65 mt. These three mines currently hold 24.2 million tons of recoverable iron ore. Present value of Morris and Bessemer mines is in excess of $600,000,000.00 dollars. The DEIS does not consider the impact of this loss of ore supply or revenue in its analysis.

Response to Comment N-00008 (Page 1 of 3):

LU-1:

Thank you for your comment. Property owners will be contacted once a decision is reached regarding the acquisition of any property. Section 4.3 (*Socioeconomics*) and Section 4.12 (*Geological Resources*) discuss the importance of the cement industry in regards to mines that would be purchased under the proposed action. As described in Section 2.6 of the EIS, under Alternatives 1, 2, and 6, Morris Lode and Bessemer mines would be acquired.

The DEIS used most updated available information on the amount of reserves, no change to text has been made.

LU—2 and SOC-1:

Section 4.12.2.2 (*Geological Resources*) states "relative to national or worldwide supplies of iron ore, the direct loss of active production to the ore deposits thought to exist at the Morris Lode or Bessemer Mines would be less than significant." Section 4.3.2.4 of the EIS discusses impacts from the loss of future mining potential. Contained within the section is a discussion of mill scale as an economically viable material to iron ore in the production of cement.

Comment ID: N-00008 (Page 2 of 3)

Iron mining is San Bernardino County historically has developed in support of the southern California cement industry. Six cement plants are situated in proximity to limestone deposits found in the San Bernardino, Victorville, Mojave and Tehachapi valleys. All require iron as an additive to their production process. Hahm International provides the majority of that iron from their iron deposits or as contract miners to those cement plants that own exclusive deposits. Hahm currently supplies iron ore to Mitsubishi, TXI, Cemex, Lehigh, National and occasionally Cal Portland cement companies. The next closest iron deposits are located outside of California in the states of Utah and Northern Nevada. Their locations and the cost of shipping iron by truck or rail to this southern California based market is financially prohibitive.

Shipping costs for iron ore dramatically increase the cost to the market. This is directly attributable to the cost of fuel and the proximity of the mine. Ore being shipped to the Victorville market from the Silver Lake Iron Mine, owned and operated by Hahm and Levand, is a 120 mile one way trip with an additional 30 miles to Lucerne Valley. The Morris and Bessemer Iron Mines are located 60 miles from Victorville and 30 miles from Lucerne Valley. Fuel cost, energy savings, and price for delivery are literally one half the cost of Silver Lake iron and one quarter for delivery to Lucerne Valley. This market proximity and cost savings has prompted Hahm and Levand to complete the regulatory process and commit the financial resources to open the Morris and Bessemer Iron Mines.

The DEIS describes the Morris and Bessemer Iron Mines in the document text (page 3.12-9 of the DEIS) and potential impacts to the mine(s) as less than significant (page 4.1-10 of the DEIS) due to acquisition through purchase and closure or joint operation and indicates that these iron reserves would not pose a significant impact on the availability of iron on a national scale. Also see disposition of mines, Section 2.6, page 2-95. Hahm and Levand strongly disagree with this conclusion.

LU-2

Hahm International is familiar with military base operations and joint use mining. The Silver Lake Mine in the Fort Irwin expansion area, owned and operated by Hahm, was considered for acquisition by the Department of Defense. Unable to provide a federal appraisal value that reflected the actual market value DOD elected to create a joint use agreement with Hahm which allows them access to the mine for operations and shipping that does not conflict with the military mission. They have successfully mined Silver Lake under that agreement since 2006 and will continue until 2022 at which time the access agreement may be renewed or dissolved. Hahm has proven their ability to operate in conjunction with military activities including ground combat training. The uncertainty of this long term access and proximity to market at Silver Lake encouraged Hahm and Levand to open the Morris and Bessemer Mines.

Closure of the Bessemer and Morris mines would result in a loss of two of the four available operating iron mines in the area, the largest permitted iron mine in the county (Morris) and 89 percent of Hahm and Levands' iron reserves. It will dramatically increase Hahm's delivery costs and will have an immediate and significant impact on the availability and cost of iron ore to the southern California cement industry.

SOC-1

Response to Comment N-00008 (Page 2 of 3):

Comment ID: N-00008 (Page 3 of 3)

Loss of reserves and investment capital including equipment, financing and permitting costs through base land acquisition would be significant to Hahm and Levand, both privately held corporations, potentially resulting in a taking of property, mineral rights, present and future business opportunities. The potential loss of iron ore to the cement industry in light of the remoteness of secondary sources is incalculable. SOC-1

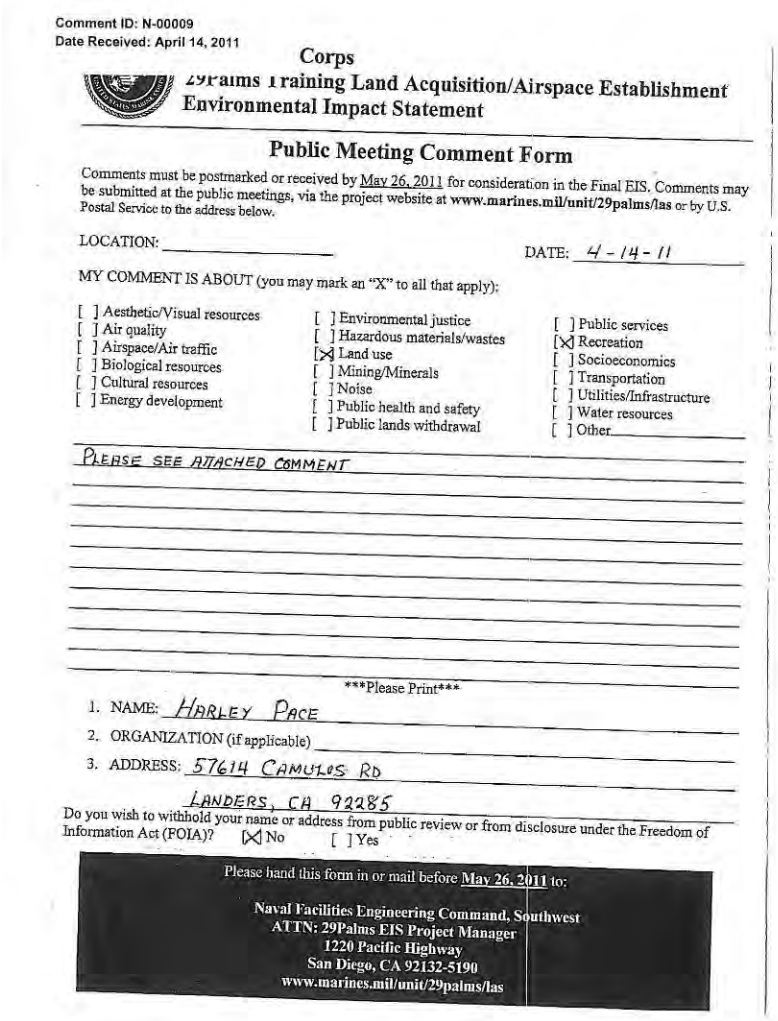
Acquisition of mines by the government at fair market value at best is uncertain. Conflicts with marine live fire training activities are expected by Hahm to be potentially great. Access closure and loss of mining opportunity is financially significant. The proposed action would in fact remove two of Hahm and Levands' three iron operations and 89 percent of their iron reserves potentially ending their market viability. Contrary to the findings of the DEIS, Hahm and Levand believe: SOC-2

- Impacts to iron mines within the land acquisition area are significant.
- Impacts to individual mine claim and patent land holders are significant.
- Impacts to iron ore supplies to the southern California cement market are significant both physically and economically.
- Loss of the west study area to iron mining will permanently alter the availability of economically viable iron reserves to southern California with significant financial impacts to the cost of iron and subsequent cost of cement.
- Loss of the Morris and Bessemer mines from Hahm and Levands' documented reserves will significantly challenge their ability to meet market demand and potentially close their business and take from them their property and livelihood.

Thank you for the opportunity to comment on this DEIS and being included in the administrative record. Hahm and Levand look forward to consideration of their concerns in the EIS process and a written response to this letter.

Sincerely,

Scott Descher
President,
Hahm International Inc.



Joe Cordner
President
Levand Steel and Supply Corporation

Response to Comment N-00008 (Page 3 of 3):

SOC-2:

As described in Section 2.6 of the EIS, under Alternatives 1, 2, and 6, Morris Lode and Bessemer mines would be acquired.

Response to Comment N-00009 (Page 1 of 2):

Thank you for your comment. During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and the potential for illegal riding. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

(*Comment response continued on next page)*

Comment ID: N-00009 (Page 2 of 2)

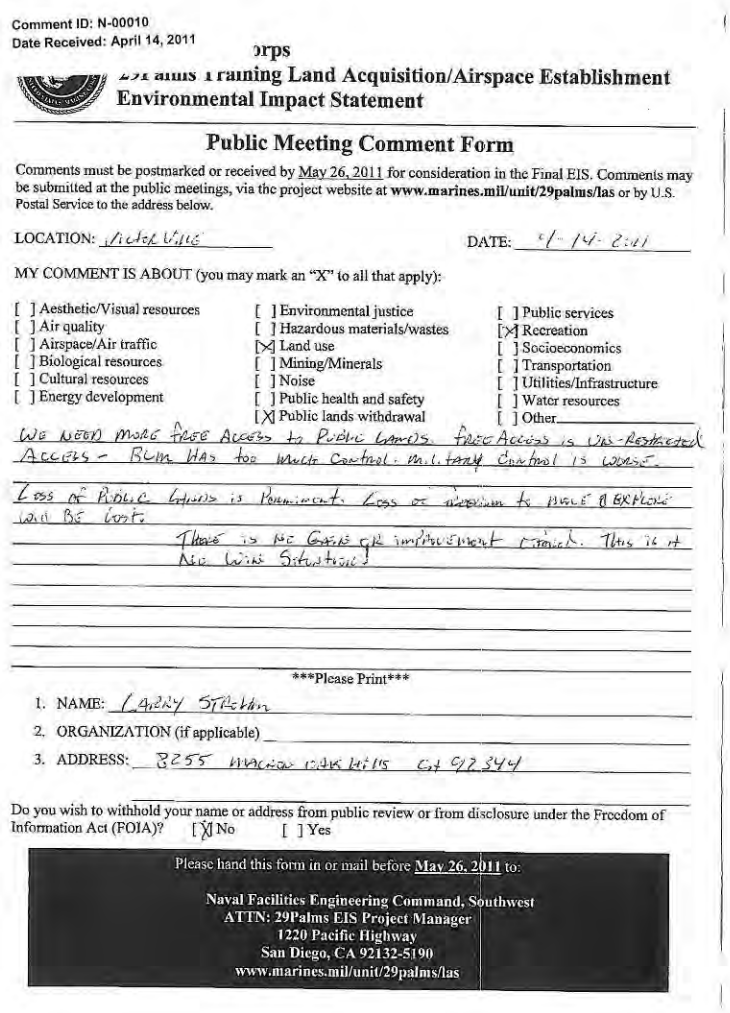
I believe that the land acquisition for the 29 Palms training facility should be the basic Alternative 3 with modified borders on the south to include some of the Sheephole Valley Wilderness area and the Cadiz Dunes Wilderness area. Expansion to the east would effect far fewer people than the Preferred Alternative 6 that you are proposing now. Why do we not use some of these Wilderness areas ? I can see 12 wilderness areas just in the map shown on your web site while I can see only 1 unrestricted OHV area. Alternative 3 does have the problem of 1 road running through it but since you only need this land for 2 months out of the year you could close the road for those 2 months, just as you have proposed closing the entire OHV area for those same 2 months with the Preferred Alternative 6. You can also require people using that 1 road for the other 10 months to buy a permit for it's use, just as you have proposed for people using only 44% of the OHV area with the Preferred Alternative 6. You can also notify the permitted users of the road when it will be closed by the same method you plan on using to notify the OHV area users of when the OHV area will be closed with the Preferred Alternative 6. It seems far easier to police illegal access to the road when it is closed since there have to be very few access points to that road whereas policing access into the OHV area, with the Preferred Alternative 6, when it is closed would be close to imposible since there have to be hundreds of access points into that area from all sides. Costs for policing illegal access for the road with Alternative 3 would have to be far less than the same policing costs using the preferred Alternative 6.

If the Preferred Alternative 6 land acquisition is implemented and the only legal unrestricted OHV area anywhere close is reduced by 66%, requires a permit to use, and is even closed for 2 months out of the year it will surly lead to a huge problem with illegal OHV use in all the surrounding communities. I do not believe that expansion to the east with the Alternative 3 plan would cause any of these problems. In all my years of living here I have yet to see any OHV activity in the Alternative 3 areas. Being a long time resident of Landers I have seen 1st hand what kind of problems illegal OHV use will cause if there is not a legal and unrestricted place for all of the OHV's to use. All the residents in the surrounding communities will be the ones to suffer the consequences.

If the Preferred Alternative 6 land acquisition is implemented and the only legal unrestricted OHV area anywhere close is reduced by 66%, requires a permit to use, and is even closed for 2 months out of the year it will greatly reduce the number of races that can be held in this area each year which will be devastating to California's ORV dealers and accessory industries. I am sure there would be far less financial loss for California's businesses if Alternative 3 is implemented.

For my family and myself the Johnson Valley OHV area is our major form of OHV recreation during the entire year. If the Preferred Alternative 6 land acquisition is implemented it will rob us of 66% of the places we can legally use our OHV's. We will be required to buy another damned permit which just looks like another tax we have to pay. Experience has shown us that the cost of the permit will, no doubt, go up year after year and end up being a financial burden for all of us. Use of the remaining 44% of the OHV area will be another nightmare trying to stay within the legal areas. Our past experience with poor signage and undetermined boundaries for the base have already shown us that we can expect to wonder off into restricted areas without even knowing that it happened which will lead us to costly citations and appearances in court.

I do not believe that the preferred Alternative 6 is a workable solution for all of us and I am asking that you use a modified version of Alternative 3 using some of the wilderness areas instead of taking our unrestricted OHV area.



Harley Pace

Response to Comment N-00009 (Page 2 of 2):

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Section 2.5 of the EIS outlines the measures that would be implemented under Alternative 4, 5, or 6. Included are a series of communication and notification procedures (modeled after BLM's management plan for Johnson Valley) that would be implemented to increase public awareness, as well as pre- and post-exercise range control and management procedures that would enhance public safety.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

We need more free Access to Public Lands. Free Access is Un-Restricted Access - BLM has too much Control. Military Control is worse.

Loss of Public Lands is Permanent. Loss of freedom to have Airplane will be lost.

There is no Gain or improvement either. This is a No Win Situation!

Response to Comment N-00010:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The Marine Corps also understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. WEDDLE INDUSTRIES

April 14, 2011

To Whom It May Concern:

As an avid off-roader and the owner of a small business involved in the off-road industry I am very concerned about the possible annexation of the Johnson Valley OHV area by the U.S. Marines. If this take over goes through it would be a huge blow to my family as well as my business. Motorcycle riding and Off-Road racing in the California deserts is a favorite pastime of my family and my customer's families. Losing Johnson Valley would be a severe blow to our recreational opportunities as well as our livelihood.

The users that frequent Johnson Valley are extremely varied, including racers, motorcyclists, 4WD drive enthusiasts, rock hounds, land sailors, and more. With over a million registered off highway vehicles statewide (which doesn't include street legal vehicles) desert enthusiasts are a growing population. The next generation in my extended family is just getting started. The problem is even as our numbers are growing the land open to us is shrinking. Environmental groups, critical habitat, clean energy, funding shortages, wilderness designation, and now the Marines are forcing us into smaller and smaller portions of our public land.

It could be said that Johnson Valley is to off-road enthusiasts as Yosemite National Park is to environmentalists. Why can't we get any protection for our treasured lands? If the Marines really need to expand they need to exercise Option 3, South and East. If Johnson Valley becomes part of 29 Palms Marine Base I hope there are discussions about opening more land to the same kind of multiple use, an acre open for every acre lost. Hopefully that discussion doesn't have to take place.

Sincerely,

Ronald D. Weddle
Weddle Industries

Response to Comment N-00012:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

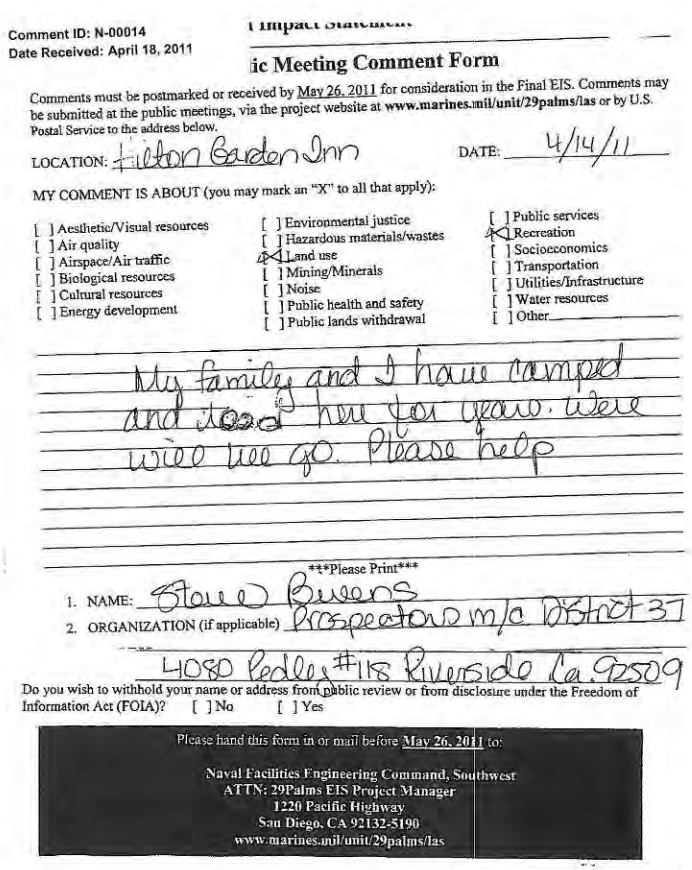
4/15/2011

Dear Sirs,

I understand the need to train our young men and women of the Marine Corp, but to take away the Johnson Valley OHV land is wrong. In these hard economic times people need to be able to enjoy the access to a place they can go and fell free. Johnson Valley is a wonderful place that we take our family to get away from the stress of everyday living. Do you realize how many American families go to Johnson Valley? We are not allowed to ride our ATV's on our own property do to new city codes. Now the government wants to take away our stress relieving Johnson Valley. I would beg of you, find land elsewhere. There seems to be a large amount of land out by the Yermo base. We pay all our taxes. We do everything we can to help and support our country. Taking away Johnson Valley seems to be something an enemy of this country would do.

Thank you for your time. I hope that you will reconsider taking away our access to Johnson Valley.

Sincerely,



THANK YOU, FOR YOUR DUTY TO OUR COUNTRY.

Response to Comment N-00013:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

YOU FLY YOUR HELICOPTERS OVER MY PROPERTY AT LOW ALTITUDE (1000 FT +) DAILY AND YOU EXPECT SUPPORT FOR EXPANSION? RIDICULOUS! I THINK MY TAX DOLLARS WOULD BE BETTER SPENT ELSEWHERE, THAN ALLOWING YOUR FURTHER PLAY IN OUR DESERT. IF YOU ARE SO DETERMINED TO KNOW RAGHEADS, GO TO IT AND LEAVE US CITIZENS OUT OF IT! GO PLAY WITH THE ARMY AT FORT IRWIN, LEAVE THE OFF-ROAD AREAS ALONE. YOU PEOPLE AREN'T PATRIOTS, YOU ARE A BUNCH OF UNEMPLOYABLE LOSERS THAT JOINED THE SERVICE FOR A PAYCHECK & HEALTH BENEFITS. GET OUT OF OUR COUNTRY AND DO WHAT YOU ARE BEING PAID FOR!

I believe that the military has enough land already for their operations. There is no need for more. We need more affordable housing for Veterans. Also can we the Land in foreign lands they are already fighting at. There is no need for more of our land for them.

Response to Comment N-00024:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I believe that the idea of this establishment is not a good idea because my family is not far from where this is going and I have children that have asthma and other health problems and believe that it will be environmentally unhealthy for this project to move forward. not to mention the fact that I'm also concerned about the extra traffic and population of men around our daughters. We have lived in Lucerne Valley for over 25 years So please take our concerns into consideration Thank you!

Lucerne Valley is one of few cities that still remains somewhat "pollution free" and Quiet! With the "Mining" plants, to which we have three of those already occuping our "non-public" lands We really dont need any more environmentally dangerous and Government Run Establishments in our "area!

To whom it may Concern
I would like to be on record in opposition to the proposed 29 Marine base expansion. Given the current budget situation it is unthinkable in my opinion for the Marine Corps to spend more money on this facility. I cannot see how the Country can possibly meet its obligations if the Military does not find a way to spend less.
Respectfully
Drew Belk

The expansion into the johnson valley area would be devastating to the local economy. Our country is in an economic crisis and this expansion would do nothing but make it worse. Not to mention, these are public lands And the bureau of land management, And the federal government should not have any say in the matters of taxpayer property. It should be the local and extended citizens of this country that make that call. Dont forget that everything owned by the government was bought with taxpayer money. This land is to be used for training. With your war training plans to just beat down

To Who it MAY CONCERN:

THIS IS IN REGARDS TO THE CLOSEING of Johnson Valley AREA. MY FAMILY AND I HAVE ENJOYED CAMPING IN THAT AREA FOR AS LONG AS I CAN REMEMBER. THE OHV LANDS HAVE BEEN A big PART of OUR RECREATION AS WELL AS MANY OTHER FOLK will AGREE. I UNDERSTAND MARINE TRAINING IS VERY IMPORTANT FOR THE TROOPS. I HOPE that the EXPANSION OF THE AREA would BE to the SOUTH to AVOID CLOSING THE ALREADY ESTABLISHED OHV AREA of J.V. THE STRUGGLE to HOLD ON to PUBLIC LANDS SEEMS to BE NEVER ENDING. It would BE DISSAPOINTING to LOOSE ACCESS to ANOTHER AREA. I HOPE you RECONSIDER and SAVE Johnson Valley.

Response to Comment N-00035

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I object to the Loss of Recreation Land use for a Large Segment of the Local population. Also There would be a Loss of business for the Local Stores, Restaurants and Gas stations. This is the only Large Area for off Roading in the Lucerne Valley Area. The Activities of the Marines would be getting closer to populated Areas.

There must be a better solution to the Marines needs

Response to Comment N-00036:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I am Requesting that the Johnson Valley Recreational O.H.V. Area Remain open to the Public without Military use. Thousands of people use this area every year & support hundreds of Calif. businesses as well as many out of State businesses. Closing this area would cause many small businesses to Shut down. This would affect our fragile economy as well as a Reduction of State & Federal taxes.

Please Leave this area open for public use!

I believe you're on the wrong track for acquiring additional land for the marine base. Land to the west of 29 Palms is a necessary recreational resource that would impact thousands of people if it is taken away. It has been an area where we have enjoyed the beauty and recreational opportunities for 50+ years. If lost to marine base expansion it would be a terrible loss to the thousands who recreate in this area each year, as well as a loss to the local economy.

Our family has owned property in Johnson Valley since 1954. Four generations of our family has enjoyed our desert haven. Please don't take our beloved land for Marine Training. Please move your Trainings to the EAST where the property does not affect so many people + families. Our son takes many Scouts to the desert to learn many skills. Our grandchildren love every minute at our Beautiful desert. Please don't let us down. Don't Take our desert homeland. Thank you,

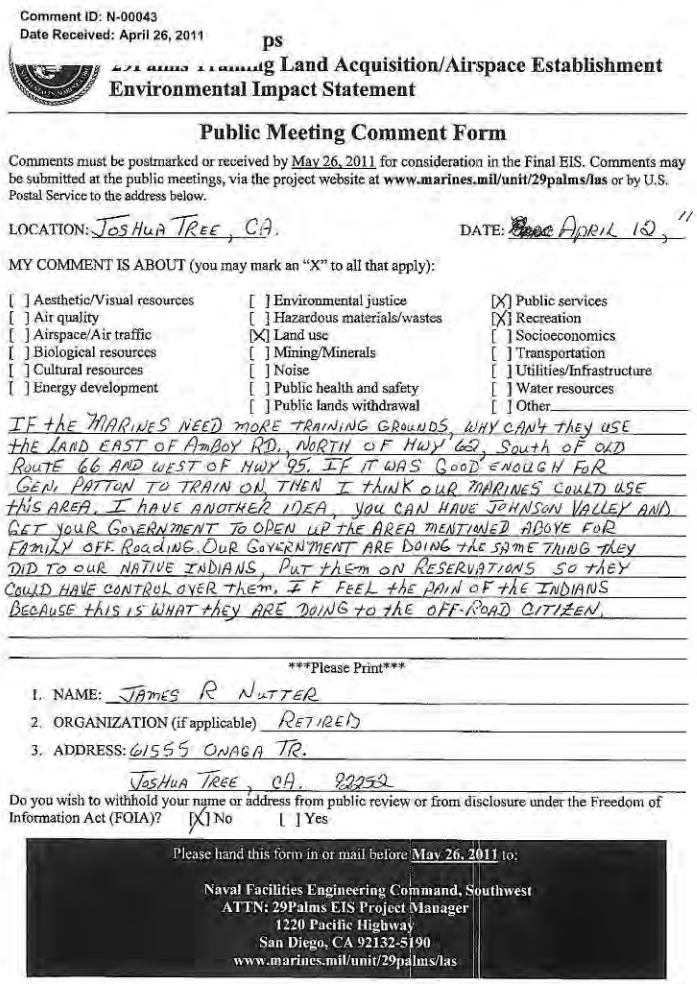
Dear Sirs,

I understand the need to train our young men and women of the Marine Corp, but to take away the Johnson Valley OHV land is wrong. In these hard economic times people need to be able to enjoy the access to a place they can go and feel free. Johnson Valley is a wonderful place that we take our family to get away from the stress of everyday living. Do you realize how many American families go to Johnson Valley? We are not allowed to ride our ATV's on our own property do to new city codes. Now the government wants to take away our stress relieving Johnson Valley. I would beg of you, find land elsewhere. There seems to be a large amount of land out by the Yermo base. We pay all our taxes. We do everything we can to help and support our country. Taking away Johnson Valley seems to be something an enemy of this country would do.

Thank you for your time. I hope that you will reconsider taking away our access to Johnson Valley.

Sincerely,



Paula Ann Lockard

IF THE MARINES NEED MORE TRAINING GROUNDS, WHY CAN'T THEY USE THE LAND EAST OF AMBOY RD., NORTH OF HWY 62, SOUTH OF OLD ROUTE 66 AND WEST OF HWY 95. IF IT WAS GOOD ENOUGH FOR GEN. PATTON TO TRAIN ON, THEN I THINK OUR MARINES COULD USE THIS AREA. I HAVE ANOTHER IDEA, YOU CAN HAVE JOHNSON VALLEY AND GET YOUR GOVERNMENT TO OPEN UP THE AREA MENTIONED ABOVE FOR FAMILY OFF-ROADING. OUR GOVERNMENT ARE DOING THE SAME THING THEY DID TO OUR NATIVE INDIANS, PUT THEM ON RESERVATIONS SO THEY COULD HAVE CONTROL OVER THEM. I FEEL THE PAIN OF THE INDIANS BECAUSE THIS IS WHAT THEY ARE DOING TO THE OFF-ROAD CITIZEN.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Response to Comment N-00045:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

4/20/2011

Dear Sirs,

I understand the need to train our young men and women of the Marine Corp, but to take away the Johnson Valley OHV land is wrong. In these hard economic times people need to be able to enjoy the access to a place they can go and feel free. Johnson Valley is a wonderful place that we take our family to get away from the stress of everyday living. Do you realize how many American families go to Johnson Valley? We are not allowed to ride our ATV's on our own property do to new city codes. Now the government wants to take away our stress relieving Johnson Valley. I would beg of you, find land elsewhere. There seems to be a large amount of land out by the Yermo base. We pay all our taxes. We do everything we can to help and support our country. Taking away Johnson Valley seems to be something an enemy of this country would do.

Thank you for your time. I hope that you will reconsider taking away our access to Johnson Valley.

Sincerely, Rose Marie Fortin

Response to Comment N-00046:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

RE: COMMENTS ON DRAFT ENVIRONMENTAL IMPACT STATEMENT FOR TRAINING LAND ACQUISITION AND AIRSPACE ESTABLISHMENT

Dear Sir/Madam:

I have a home and 15 acres in Wonder Valley located at 78858 Garden Road. When I reviewed the Draft Environmental Impact Statement ("DEIS") for the Training Land Acquisition and Airspace Establishment ("Project") at the Marine Corps Air Ground Combat Center in Twentynine Palms, California, I was troubled to find that most of the comments made by myself and my neighbors during the scoping period were ignored or inadequately addressed. Many of these comments were the result of a community base expansion scoping workshop and community meeting in Wonder Valley in January 2008.

I know that you received our letters because we requested and received confirmation through the U.S. mail.

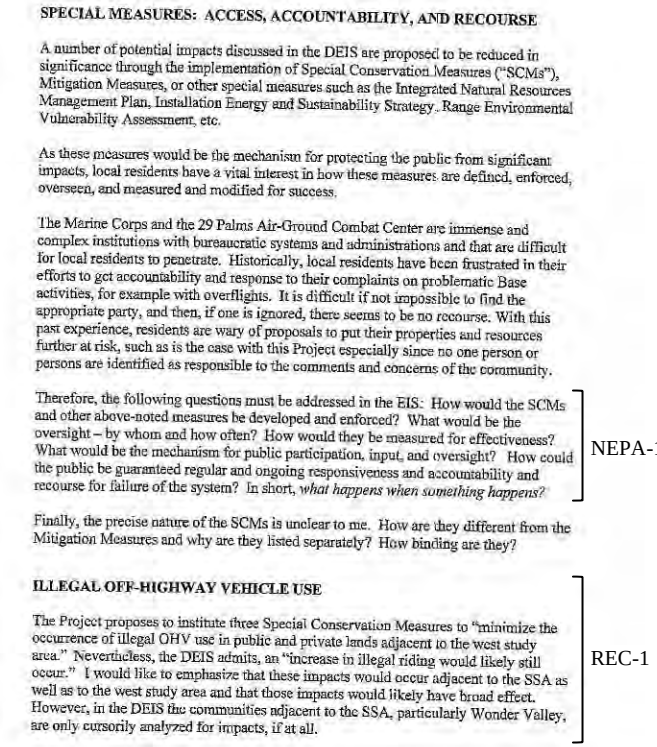
My main concerns are:

- Accountability, responsiveness, and recourse.
- Spillover effects of illegal off-highway vehicle ("OHV") use from the closure or partial closure of Johnson Valley OHV Area.
- Socioeconomic effects on the Wonder Valley area.
- Potential impacts to Cultural Resources in the form of a unique legacy community of the historic 1938 Small-Tract Homestead Act and the Poste Homestead Cultural and Historical Area.

Response to Comment N-00047 (Page 1 of 5):

NEPA-1:

Thank you for your comment. The proposed Special Conservation Measures (SCMs) outlined in Section 2.8 of the EIS would be included in the proposed action to avoid or minimize potential impacts under any alternative. Under certain alternatives, where impact avoidance is not feasible, appropriate resource-specific mitigation measures to minimize impacts are identified (see Chapter 4 of the EIS).



If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

In addition, there would be an opportunity for public review and comment on the NEPA documentation (e.g., EA) which would manage many of the biological SCMs and the process for public review and input in scheduling OHV activity in any RPAA established in Johnson Valley.

REC-1:

A Displaced OHV Recreation Study (DORS) has been added to the EIS to further evaluate impacts to legal and illegal recreation in other areas and subsequent impacts on other resource areas (see Appendix M of the EIS). Chapters 4 (*Environmental Consequences*) and 5 (*Cumulative Impacts*) of the EIS have been updated as appropriate.

Comment ID: N-00047 (Page 2 of 5)

SPECIAL MEASURES: ACCESS, ACCOUNTABILITY, AND RECOURSE

A number of potential impacts discussed in the DEIS are proposed to be reduced in significance through the implementation of Special Conservation Measures ("SCMs"), Mitigation Measures, or other special measures such as the Integrated Natural Resources Management Plan, Installation Energy and Sustainability Strategy, Range Environmental Vulnerability Assessment, etc.

As these measures would be the mechanism for protecting the public from significant impacts, local residents have a vital interest in how these measures are defined, enforced, overseen, and measured and modified for success.

The Marine Corps and the 29 Palms Air-Ground Combat Center are immense and complex institutions with bureaucratic systems and administrations and that are difficult for local residents to penetrate. Historically, local residents have been frustrated in their efforts to get accountability and response to their complaints on problematic Base activities, for example with overflights. It is difficult if not impossible to find the appropriate party, and then, if one is ignored, there seems to be no recourse. With this past experience, residents are wary of proposals to put their properties and resources further at risk, such as is the case with this Project especially since no one person or persons are identified as responsible to the comments and concerns of the community.

Therefore, the following questions must be addressed in the EIS: How would the SCMs and other above-noted measures be developed and enforced? What would be the oversight – by whom and how often? How would they be measured for effectiveness? What would be the mechanism for public participation, input, and oversight? How could the public be guaranteed regular and ongoing responsiveness and accountability and recourse for failure of the system? In short, *what happens when something happens?*

NEPA-1

Finally, the precise nature of the SCMs is unclear to me. How are they different from the Mitigation Measures and why are they listed separately? How binding are they?

ILLEGAL OFF-HIGHWAY VEHICLE USE

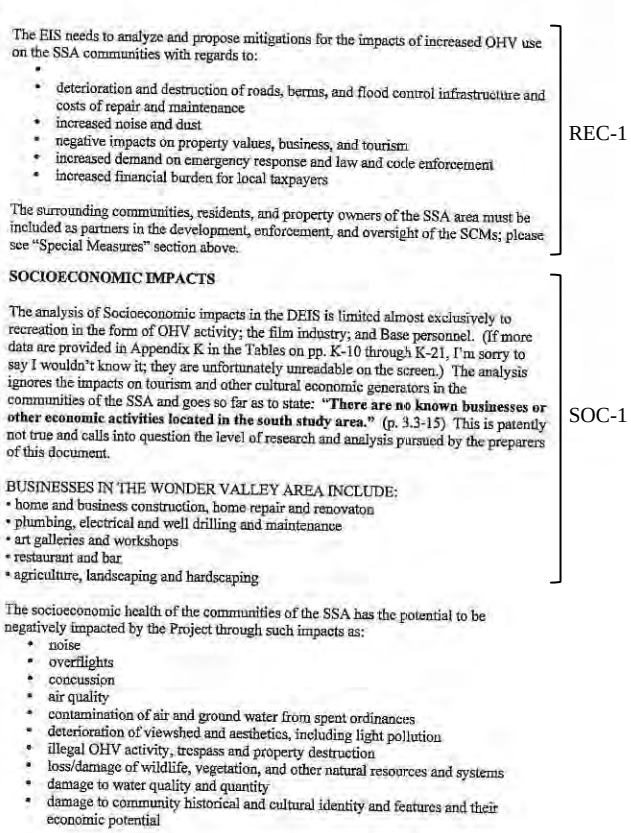
The Project proposes to institute three Special Conservation Measures to "minimize the occurrence of illegal OHV use in public and private lands adjacent to the west study area." Nevertheless, the DEIS admits, an "increase in illegal riding would likely still occur." I would like to emphasize that these impacts would occur adjacent to the SSA as well as to the west study area and that those impacts would likely have broad effect. However, in the DEIS the communities adjacent to the SSA, particularly Wonder Valley, are only cursorily analyzed for impacts, if at all.

REC-1

Response to Comment N-00047 (Page 2 of 5):

SOC-1:

Thank you for your comment. The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.



CR-1:

Sections 3.12 and 4.12 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable under the 1938 Small-Tract Homestead Act.

VIS-1:

Section 2.2 of the EIS has been updated to clarify the use of lighting during proposed training activities. Section 4.5, which discusses impacts to visual resources, has been updated appropriately.

Comment ID: N-00047 (Page 3 of 5)

The EIS needs to analyze and propose mitigations for the impacts of increased OHV use on the SSA communities with regards to:

- deterioration and destruction of roads, berms, and flood control infrastructure and costs of repair and maintenance
- increased noise and dust
- negative impacts on property values, business, and tourism
- increased demand on emergency response and law and code enforcement
- increased financial burden for local taxpayers

REC-1

The surrounding communities, residents, and property owners of the SSA area must be included as partners in the development, enforcement, and oversight of the SCMs; please see "Special Measures" section above.

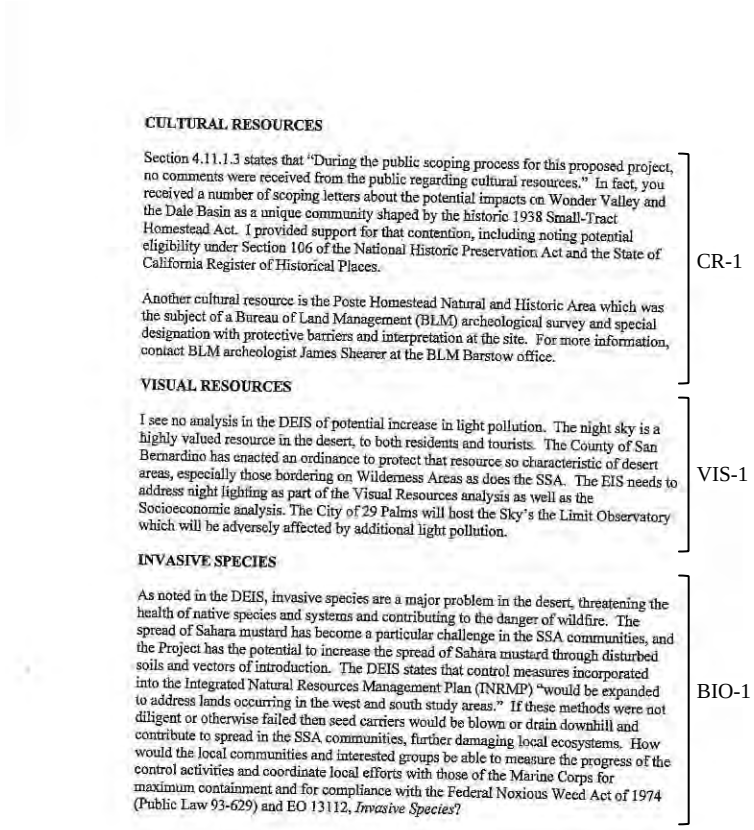
SOCIOECONOMIC IMPACTS

The analysis of Socioeconomic impacts in the DEIS is limited almost exclusively to recreation in the form of OHV activity; the film industry; and Base personnel. (If more data are provided in Appendix K in the Tables on pp. K-10 through K-21, I'm sorry to say I wouldn't know it; they are unfortunately unreadable on the screen.) The analysis ignores the impacts on tourism and other cultural economic generators in the communities of the SSA and goes so far as to state: **"There are no known businesses or other economic activities located in the south study area."** (p. 3.3-15) This is patently not true and calls into question the level of research and analysis pursued by the preparers of this document.

SOC-1

BUSINESSES IN THE WONDER VALLEY AREA INCLUDE:
- home and business construction, home repair and renovaton
- plumbing, electrical and well drilling and maintenance
- art galleries and workshops
- restaurant and bar
- agriculture, landscaping and hardscaping

The socioeconomic health of the communities of the SSA has the potential to be negatively impacted by the Project through such impacts as:



- noise
- overflights
- concussion
- air quality
- contamination of air and ground water from spent ordinances
- deterioration of viewshed and aesthetics, including light pollution
- illegal OHV activity, trespass and property destruction
- loss/damage of wildlife, vegetation, and other natural resources and systems
- damage to water quality and quantity
- damage to community historical and cultural identity and features and their economic potential

Response to Comment N-00047 (Page 3 of 5):

BIO-1:

The Marine Corps is highly committed to on-base monitoring and eradication of non-native species. However, under current agreements the Marine Corps cannot monitor non-native species outside the Combat Center. Periodic surveys on base that would indicate problem areas on base that might implicate invasions from off base (Agrichemical and Supply 2005). Increases on base could also suggest potential for increased effects off base. There is very little information available regarding non-native species present in the proposed expansion areas, and the survey and monitoring work that would be conducted by the Marine Corps if the project were approved would far exceed any such efforts to date. Further, the Marine Corps is dedicated to being a "good neighbor" to the surrounding communities and is open to cooperation and coordination with municipalities and organizations to improve control and eradication of non-native species.

Comment ID: N-00047 (Page 4 of 5)

CULTURAL RESOURCES

Section 4.11.1.3 states that "During the public scoping process for this proposed project, no comments were received from the public regarding cultural resources." In fact, you received a number of scoping letters about the potential impacts on Wonder Valley and the Dale Basin as a unique community shaped by the historic 1938 Small-Tract Homestead Act. I provided support for that contention, including noting potential eligibility under Section 106 of the National Historic Preservation Act and the State of California Register of Historical Places.

Another cultural resource is the Poste Homestead Natural and Historic Area which was the subject of a Bureau of Land Management (BLM) archeological survey and special designation with protective barriers and interpretation at the site. For more information, contact BLM archeologist James Shearer at the BLM Barstow office.

CR-1

VISUAL RESOURCES

I see no analysis in the DEIS of potential increase in light pollution. The night sky is a highly valued resource in the desert, to both residents and tourists. The County of San Bernardino has enacted an ordinance to protect that resource so characteristic of desert areas, especially those bordering on Wilderness Areas as does the SSA. The EIS needs to address night lighting as part of the Visual Resources analysis as well as the Socioeconomic analysis. The City of 29 Palms will host the Sky's the Limit Observatory which will be adversely affected by additional light pollution.

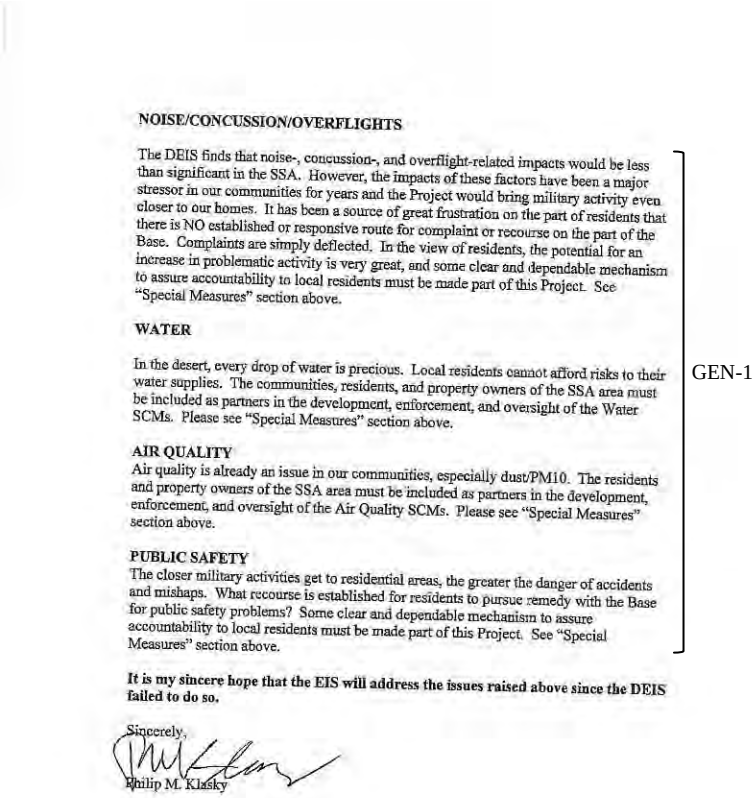
VIS-1

INVASIVE SPECIES

As noted in the DEIS, invasive species are a major problem in the desert, threatening the health of native species and systems and contributing to the danger of wildfire. The spread of Sahara mustard has become a particular challenge in the SSA communities, and the Project has the potential to increase the spread of Sahara mustard through disturbed soils and vectors of introduction. The DEIS states that control measures incorporated into the Integrated Natural Resources Management Plan (INRMP) "would be expanded to address lands occurring in the west and south study areas." If these methods were not diligent or otherwise failed then seed carriers would be blown or drain downhill and contribute to spread in the SSA communities, further damaging local ecosystems. How would the local communities and interested groups be able to measure the progress of the control activities and coordinate local efforts with those of the Marine Corps for maximum containment and for compliance with the Federal Noxious Weed Act of 1974 (Public Law 93-629) and EO 13112, *Invasive Species*?

BIO-1

Response to Comment N-00047 (Page 4 of 5):



GEN-1:

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Thank you for your comment in regards to water resources issues.

Comment ID: N-00047 (Page 5 of 5)

NOISE/CONCUSSION/OVERFLIGHTS

The DEIS finds that noise-, concussion-, and overflight-related impacts would be less than significant in the SSA. However, the impacts of these factors have been a major stressor in our communities for years and the Project would bring military activity even closer to our homes. It has been a source of great frustration on the part of residents that there is NO established or responsive route for complaint or recourse on the part of the Base. Complaints are simply deflected. In the view of residents, the potential for an increase in problematic activity is very great, and some clear and dependable mechanism to assure accountability to local residents must be made part of this Project. See "Special Measures" section above.

WATER

In the desert, every drop of water is precious. Local residents cannot afford risks to their water supplies. The communities, residents, and property owners of the SSA area must be included as partners in the development, enforcement, and oversight of the Water SCMs. Please see "Special Measures" section above.

GEN-1

AIR QUALITY

Air quality is already an issue in our communities, especially dust/PM10. The residents and property owners of the SSA area must be included as partners in the development, enforcement, and oversight of the Air Quality SCMs. Please see "Special Measures" section above.

PUBLIC SAFETY

The closer military activities get to residential areas, the greater the danger of accidents and mishaps. What recourse is established for residents to pursue remedy with the Base for public safety problems? Some clear and dependable mechanism to assure accountability to local residents must be made part of this Project. See "Special Measures" section above.

It is my sincere hope that the EIS will address the issues raised above since the DEIS failed to do so.

Sincerely,

Philip M. Klasky

Response to Comment N-00047 (Page 5 of 5):

GEN-1 Continued:

Regarding the potential for the proposed expansion of the Combat Center into the Johnson Valley OHV recreational area to lead to an increase in illegal ORV incursions onto private property and the associated fugitive dust impacts from these activities: It is difficult to predict how and where OHVs would be displaced as a result of the project alternatives that would expand into Johnson Valley. These vehicles could increase fugitive dust emissions on private lands compared to existing conditions. However, these vehicles would operate intermittently and at a level much lower in any one location than the scenario of equipment usage evaluated in the DEIS for ambient PM10 impacts. The DEIS analysis determined that maximum PM10 impacts on public lands would produce less than significant air quality impacts. Therefore, it is expected that impacts of fugitive dust from illegal ORV incursions onto private property also would produce less than significant PM10 impacts.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Dear Sir/Madam:

Subject: Support - Johnson Valley, California Off Highway Vehicle (OHV) Use

We understand that the United States Navy/Marine Corps is considering taking over Johnson Valley in the Southern Mojave Desert for training purposes. While we understand the military's desire for this area, we respectfully request that you consider an alternative location. Johnson Valley provides 188,000-acres of extreme OHV recreational area for "Jeepers" and "Rock Crawlers." The valley's close proximity to Los Angeles and the Inland Empire make its location especially convenient for OHV enthusiasts like us.

Across California, trails and other OHV routes are being closed largely at the behest of environmentalists who don't appreciate our sport. Johnson Valley represents a unique location where off highway two-wheel, three-wheel, and four-wheel drivers can enjoy rock climbing and off roading in an open setting year round. It would be dearly missed by individuals, groups, and organizations throughout the western United States if taken away. We trust that you will make the best decision for the good of the military and public at large.

Sincerely,

Deanna Schnabel

DMS:ds

Response to Comment N-00049:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The land for 4-wheel recreational vehicle use is getting very limited. If more land is withdrawn from use, offroad vehicles will no longer be purchased and more businesses will close causing this recession to continue. People may end up taking their ORV's to prohibited areas

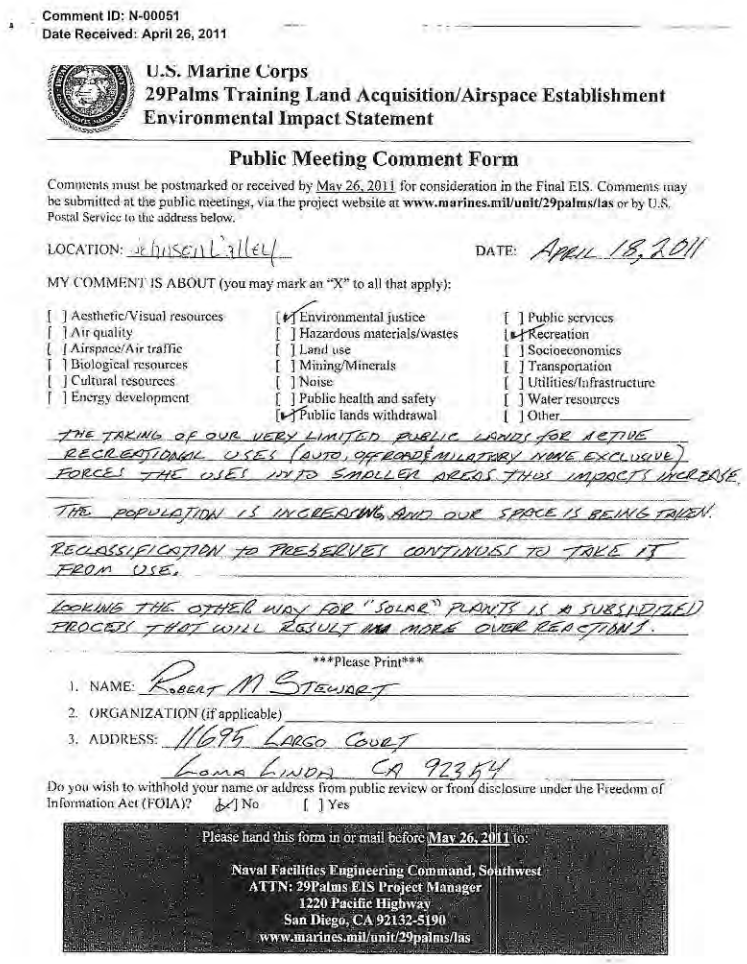
Response to Comment N-00050:



Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas.

The Marine Corps also understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Response to Comment N-00051:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. [ ] Energy development	[ ] Public health and safety	[ ] Water resources
	[ ] Public lands withdrawal	[ ] Other

Closure of proposed land designated for recreational use would be a huge loss to offroaders, campers and surrounding rural towns such as Lucerne Valley. The land is used by families, such as my own, without the ability to use the land we will lose family camping traditions as well as the ability to form new traditions with my children. These areas are also used for some amazing community events, including events that raise charitable funds. We are responsible campers and would enjoy the option of continued use of these areas, please consider all it will effect if these lands are lost. My opinion is no on expanded military use in these areas.

Response to Comment N-00052:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Don't close Johnson Valley. We have been and still are using this area as designated for my Family for 25 years. My business will be affected drastically. My kids closure Please reconsider this area to stay open for our use.
The economic impact will be devastating!!!

Response to Comment N-00053:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I camp and 4wheel at Johnson Valley at least twice all year and it is unfair to take the land proposed away from the public. If you must, at least make it as simple as possible for users to access the land during that time. Make available, PER YEAR, Permits and CLASSES take just efforts by greenies to help us off their lands, so they are forcing you to do this at threat of lawsuits. No permits or judges for access as this is public land and the Tortoise deal is silly science created by greenies to shut us out. It is known fact that this expansion is more about the politics of more land equals more money for the Marines. So the least you can do is make the land easily accessible most of the time.

Response to Comment N-00057:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-00061:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I want to make it very clear I respect the men + women in uniform but I have zero respect for military brass that gets its nuts whirs that in no way shape or form can be justified.
You bastard brass always want more more + even more isn't enough to satisfy your war monger mentality!
Why the Hell do you need to take air desert when 29 Palms MB is big as hell and are you forgetting Fort Irwin? you jerks + I don't give a damn if it's ARMY — Hell War monger jerks can share can't you? You moron brass can take your soldiers + go to IRWIN + play with those soldiers rather than shipping our people off to some GOD Forsaken place to die so you sons a bitches can save your jobs + rape the tax payers!

Go look in the mirror when you read this you Neanderthal parasite!

Response to Comment N-00062:

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Attn: 29 Palms EIS Project Manager
Re: National Environmental Policy Act

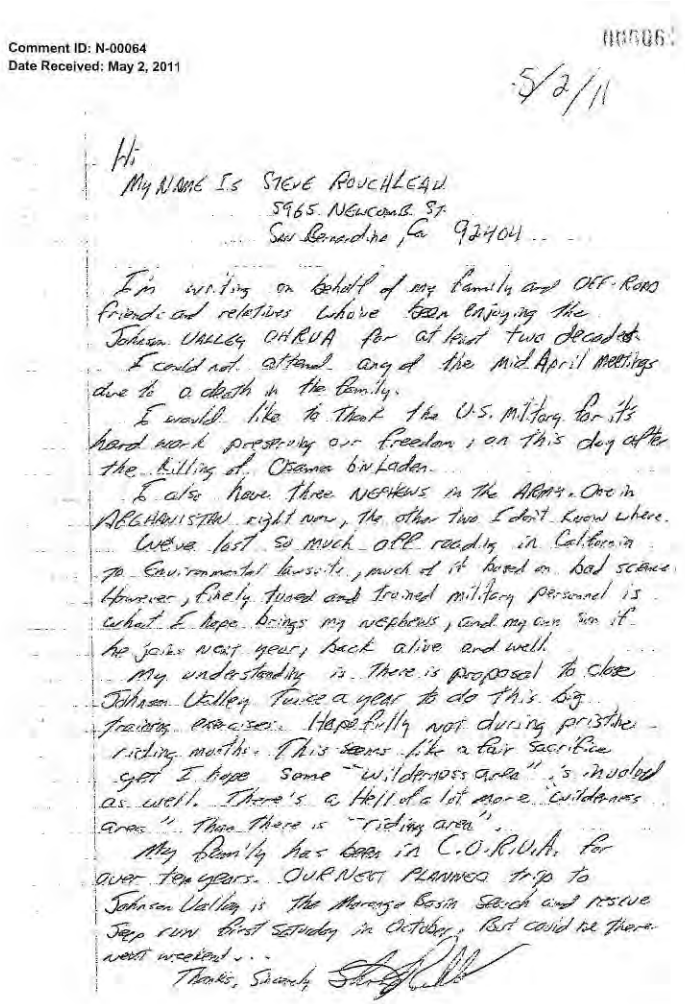
To whom it may concern:

My husband and I own 10 acres with our residence in Wonder Valley, California, at the intersection of Amboy Road and Steeg Road.

Due to the location of the planned site, we are opposed to it. We feel this will have a negative impact on the value of our home and property should we consider selling. We also feel it will have a negative impact on our environment.

If you have any questions, feel free to contact me. Thank you.

Sincerely,



LeeAnn Clarke

Response to Comment N-00063:

Thank you for your comment. The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not expected to decrease directly or indirectly from the proposed action. Please review other sections in Chapter 4 of the EIS for expected environmental impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

5/2/11

Hi
My Name Is STEVE ROUCHLEAU
5965 Newcomb St.
San Bernardino, Ca 92404

I'm writing on behalf of my family and Off-Road friends and relatives who've been enjoying the Johnson Valley OHRVA for at least two decades. I could not attend any of the mid April meetings due to a death in the family.

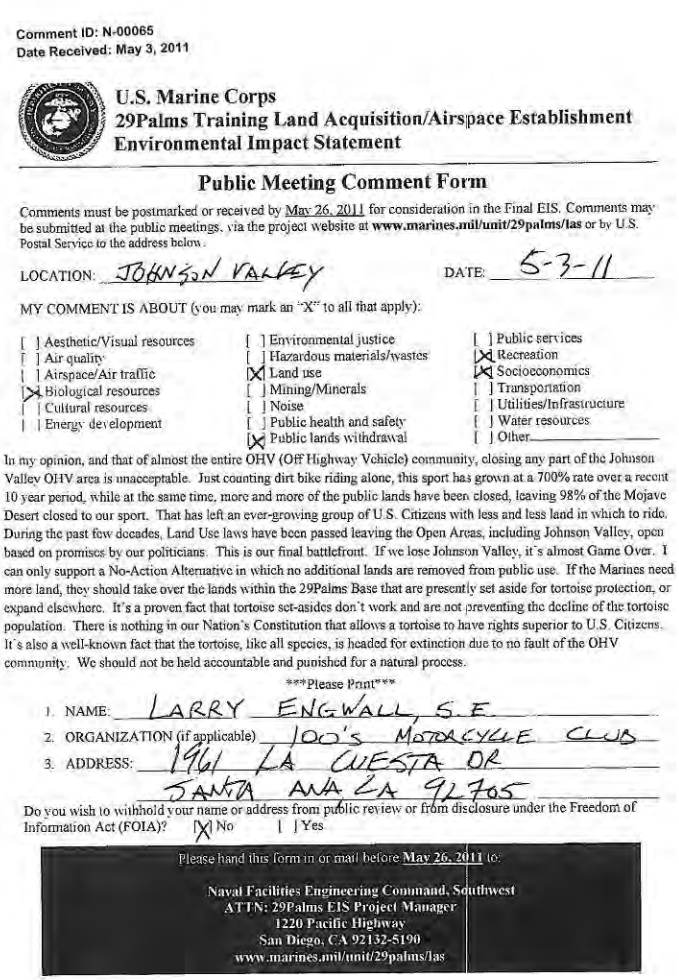
I would like to Thank the U.S. Military for it's hard work preserving our freedom; on this day after the killing of Osama bin Laden.

I also have three NEPHEWS in the ARMY. One in AFGHANISTAN right now, the other two I don't know where. We've lost so much OHV ready in California to Environmental lawsuits, much of it based on bad science. However, Finely tuned and trained military personnel is what I hope brings my nephews, and my son in law the jokes near yours, back alive and well.

My understanding is there is proposal to close Johnson Valley twice a year to do this big training exercise. Hopefully not during prime riding months. This seems like a fair sacrifice yet I hope some "wilderness area" is involved as well. There's a Hell of a lot more "wilderness areas" than there is "riding area".

My family has been in C.O.R.V.A. for over ten years. OUR NEXT PLANNED trip to Johnson Valley is the Mojave Basin Search and Rescue Jeep run first Saturday in October, But could be there next weekend...

Thanks, Sincerely, Steve



Response to Comment N-00064:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

[ ] Cultural resources	[ ] Noise	[ ] Utilities/Infrastructure
[ ] Energy development	[ ] Public health and safety	[ ] Water resources
	[X] Public lands withdrawal	[ ] Other_____

In my opinion, and that of almost the entire OHV (Off Highway Vehicle) community, closing any part of the Johnson Valley OHV area is unacceptable. Just counting dirt bike riding alone, this sport has grown at a 700% rate over a recent 10 year period, while at the same time, more and more of the public lands have been closed, leaving 98% of the Mojave Desert closed to our sport. That has left an ever-growing group of U.S. Citizens with less and less land in which to ride. During the past few decades, Land Use laws have been passed leaving the Open Areas, including Johnson Valley, open based on promises by our politicians. This is our final battlefront. If we lose Johnson Valley, it's almost Game Over. I can only support a No-Action Alternative in which no additional lands are removed from public use. If the Marines need more land, they should take over the lands within the 29Palms Base that are presently set aside for tortoise protection, or expand elsewhere. It's a proven fact that tortoise set-asides don't work and are not preventing the decline of the tortoise population. There is nothing in our Nation's Constitution that allows a tortoise to have rights superior to U.S. Citizens. It's also a well-known fact that the tortoise, like all species, is headed for extinction due to no fault of the OHV community. We should not be held accountable and punished for a natural process.

Response to Comment N-00065:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact (see Section 5.4.2 of the EIS).

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I object to the Plan to expand 29 Palms Base to the West Due to Economic impact on the town also the impact of noise from ordanance I also am an active OHV user in this Area Riding areas are being taken away Lands that were Set aside for this use. I have 7 grandchildren and we all enjoy camping - OHV in Johnson Valley I think expansion to the East is Better

Response to Comment N-00066:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study

EIS Project Manager:
I am writing to you today because my family recreates in the Johnson Valley OHV Area and the no action alternative is the only acceptable alternative. We spend quality family time together there away from all of the distractions of everyday life.

We visit Johnson Valley 12 times a year. When we are preparing for a trip we spend $ 150 on gas groceries, parts, etc... in our local area. Additionally we spend $ 100 in or around the Johnson Valley/Lucerne Valley/Victorville area during the time we are camping. We normally camp in the following areas of Johnson Valley. Jamboree Road, Bessemer Mine Road.

The no action alternative protects my family's recreation opportunity and the economic impact it has to Southern California.

Respectfully,

Name Brandi Robinson

Address 9695 Puffin Ave. Fountain Valley, CA 92708

We use this facility. We like to use it as a family. We enjoy spending time outside together. Without paying a fee. We enjoy the wide open space. We believe we should continue to have this land available to all for public use. We enjoy this land on a monthly basis and would like to see it continue to be available to others who enjoy outdoor activities

Government doesn't need to take the pressure land that fuels Lucerne Valley's economy majority of this towns income comes from the people that drive through here to go to all the offroad races they host in the desert. If you take all that away many people will have to move and others that don't live in Lucerne Valley will be upset as well. Some people make their living working in the desert. Alot of other people come out here for recreation. You will be disapointing tons of thousands of people If you take the land away

[ ] Energy development	[ ] Public health and safety	[ ] Water resources
	[X] Public lands withdrawal	[X] Other

The area in question is a very busy off-Highway vehicle area. The Numbers of RV'ers who use this area is directly related to local income at stores, gas stations, etc. Also to displace this many people to other areas will cause serious overcrowding and environmental damage to other areas.

This community has been over run by so called "Green Energy" projects and now we have to face this.

Response to Comment N-00075:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-00076:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

I THINK THAT THE HAZARDOUS WASTE THE MARINES WOULD LEAVE IN THE GROUND IS BAD FOR THE ENVIORMENT. THIS AREA IS USED AS A RECREATION CENTER FOR PEOPLE FROM LA & SOURROUNDING AREAS & THE CLOSEING OF THIS AREA WOULD CREAT HARDSHIPS ON THE LOCAL COMMUNITY, LUCERNE VALLEY.

I am a local resident of Lucerne Valley and quite often go off road riding in the "cougar buttes" area and as much as the government is closing places to do this recreation stuff it is becoming harder & harder to go and enjoy this type of activity. Eventually it will be only legal to ride in our own front yards and in my opinion that is just unacceptable, especially when they are "public use areas", I am starting to think otherwise.

We have always loved to camp and hike the Johnson Valley area. The government has already so much land. This area has always been a very popular public place that people enjoy. Creating a base here will destroy the natural beauty of the valley and will prohibit people from accessing this place.

JOHNSON VALLEY HAS ALWAYS BEEN A POPULAR PLACE FOR CAMPING, HIKING, And OFF ROAD TRAVEL. CREATING A BASE WILL TAKE AWAY THE PEOPLES RIGHTS TO ACCESS THIS BEAUTIFUL PLACE. IT WILL DESTROY ITS NATURAL BEAUTY AND PUT AN END TO MANY FUN OUTDOOR ACTIVITIES.

THE MOJAVE DESERT IS HUGE! WHY BACK UP A BASE TO A SMALL TOWN STRUGGLING AS IT IS WITH THE BAD ECONOMY - MOST OF THE BUSINESS IN LUCERNE VALLEY IS FROM OFF ROAD ENTHUSIASTS AND CAMPERS - THIS AREA HAS BEEN A GRANDFATHERED AREA FOR RECREATION FOR 60 YRS! UTILIZE SOME OTHER AREA OF THE DESERT FOR BASE EXPANSION THAT DOESN'T IMPACT THE LIVELYHOOD OF THESE SMALL TOWNS SITUATED FROM LUCERNE TO YUCCA VALLEY. BAD IDEA!!

Response to Comment N-00081:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

WAR IS NOT THE ANSWER!!! This is a terrible idea and a complete waste of taxpayers money. The Marines, The Airforce, The Army and the Navy should be forced to consolide into One group and then it should be reduced 75%. We do not need to be the police of the world. All these military people could be put to work fixing the infrastructure of our country or go into teaching or even health care. There's going to be plenty of people needing that.
The bombing will probably damage my well. As it is now I am always concerned whenever the cement plant blasts (over)

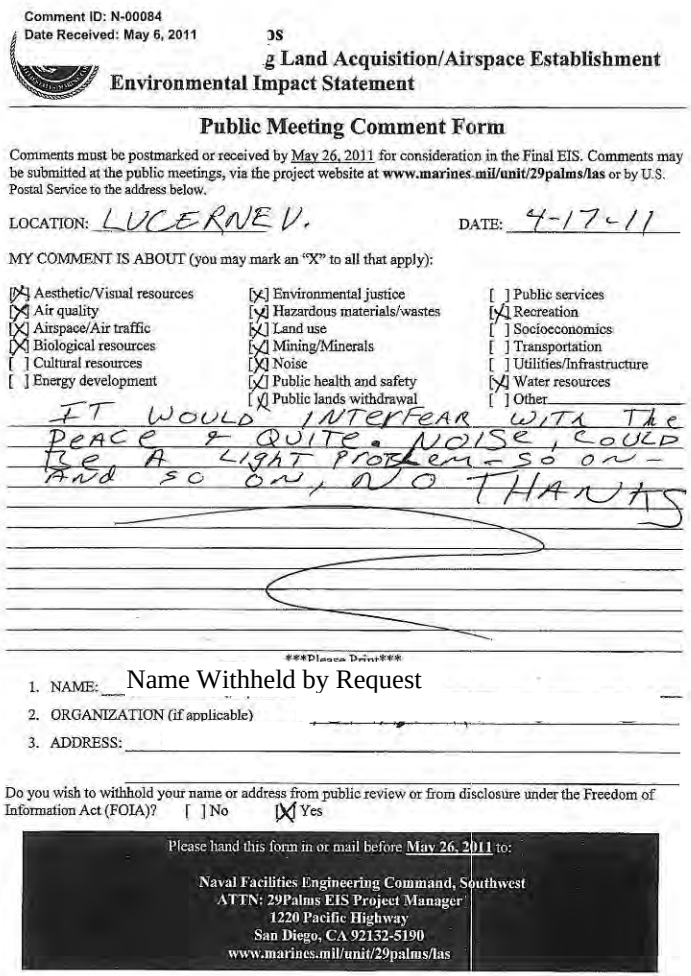
Response to Comment N-00083 (Page 1 of 2):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.



Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-00083 (Page 2 of 2)

This is bad for people, animals and our planet.
Please do not do this. There is NOT one positive
thing I can think of to say about this idea
Plus, we do not have the MONEY to pay
for any of it. No one needs any training
on how to fight. Thank-you for considering these
thoughts!

Response to Comment N-00084:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

www.marines.mil/unit/29palms/las

Response to Comment N-00085:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-00089:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates transportation and circulation impacts under each of the action alternatives (see Section 4.6). As noted in the EIS, no major public roads would be impacted and there is expected to be a marginal temporary traffic increase due to MEB mobilization that would not create significant impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study

EIS Project Manager:

I am writing to you today because my family recreates in the Johnson Valley OHV Area and the no action alternative is the only acceptable alternative. We spend quality family time together there away from all of the distractions of everyday life.

We visit Johnson Valley 20 times a year. When we are preparing for a trip we spend $400.00 on gas groceries, parts, etc… in our local area. Additionally we spend $200.00 in or around the Johnson Valley/Lucerne Valley/Victorville area during the time we are camping. We normally camp in the following areas of Johnson Valley – AREAS KNOWN AS ANDERSON DRY LAKE, NORTH ANDERSON, ROCKPILE OFF OF BESSEMER MINE Rd. & COUGAR BUTTES

The no action alternative protects my family's recreation opportunity and the economic impact it has to Southern California.

Respectfully,

Response to Comment N-00096 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Johnson Valley Draft Environmental Impact Statement (DEIS)

Please do not close down Johnson Valley. I can not support the DEIS report as it is inaccurate and puts in jeopardy the well-being of local businesses and off road enthusiasts state wide. I have been enjoying Johnson Valley for over twenty years with family and friends. We spend on average around $500 dollars every trip we make there. We spend on average, six 4 day trips throughout the year. We visit a variety of local businesses for food, supplies, parts and recreational enjoyment. We ride a variety of off road vehicles and shoot biodegradable clays for sport. The time spent at Johnson Valley OHV has been by far one of the most important activities that has bonded my family and provided for a strong moral upbringing for all those involved. If the land is removed from public access it will not only be bad for the local economy but also it will fracture the hearts and souls of the majority of us that visit and have a profound love for this recreational area. As written, the DEIS provides an inadequate and incomplete analysis of the project's potential impacts on the local economy. The analysis is based on unproven assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the significant disruptions of the local economy is misleading and speculative in nature. This part of the DEIS, among others, must be completely revised and until such action is taken I can only support the "No Action" alternative.

Thank you for taking the time to consider my comments on this important matter.

Regards,

Chris S. Holmes

Response to Comment N-00097:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). ALGAE BIO-DIESEL PROPOSAL
Morley Thompson, President CINCAL Ores Inc.

Page 1

The Wall Street Journal in their first page of Oct 19, 2009 devoted the whole page to technologies that could change everything. Of the changes they foresaw was primarily in the next generation of bio-fuels. They feel that the greatest opportunity is in a renewable source of transportation fuel and that means a new generation of bio-fuels made from non-food crops. The most promising next generation bio-fuel comes from algae. Algae grows fast (5% per day), consumes carbon dioxide, and can generate more that 5,000 gallons per year per acre of bio-fuels compared to 350 gallons a year based on corn base ethanol. Algae based fuel can be added directly to the existing refining and distribution systems. In theory the United States could produce enough to meet its needs for transportation. Dozens of companies have begun pilot projects of small scale production, but the production of algae bio-fuels in quantity means developing reliable sources of inexpensive nutriments found in iron ore of which we have very substantial deposits in the Lucerne Valley, California. Perhaps the most important move was the decision of Exxon to invest over a $160 million in producing bio-fuels from algae. This was done through a partnership with Exxon with Synthetic Genomics. Since the introduction of algae bio-diesel this time they have run repeated ads on television touting algae powered cars and introducing the business community to their scientists. The greatest interest to the U.S. Marine Corps is probably the genes that are being spliced into algae. While many parts of the industry seek a super algae that will be even more efficient in converting sunlight and carbon dioxide into lipids and oil so they can be sent to an existing refinery and made into diesel or jet fuel, there are two approaches one of which is we take a proven strains and to use it as feedstock or as a crop such as being done in India using Jatropha.

Response to Comment N-00098 (Page 2 of 5):

Comment ID: N-00098 (Page 3 of 5)

Our iron ore deposits using Section 12 & 13 in T.5 N.R. 4 E comprise approximately 370 acres and over 3 million tons of iron ore in Section 13 and 20 million tons in the Kaiser / Morris deposit Section 12. Section 12 is part of the Lucerne Valley whose iron content was verified by the Bureau of Mines in 1942. In addition to the iron ore which is used as the nutriment to increase the growth of the algae, our properties have access to very large supplies of water which is needed, sufficient area for drying pools to avoid the costly expensive mechanical drying, the location of nearby rail transportation. Our recommendation would be that we could develop very economically because we have already paid for the elements to provide a total controlled source for the Marine Corps similar to what the US Navy enjoyed in petroleum reserves Four in Alaska. This operation hopes to claim the title as being the lowest cost producer. A facility would be composed of four raceways to accelerate the growth of the algae and achieve remarkable growth besides the advantage of consuming 20% of its output in carbon and the avoidance of using iron on the beaches of California in a manner that may prove harmful for habitat for many fish.

CinCal Ores proposes to establish an algae driven bio-diesel facility in its existing property in San Bernadino County. This would be CinCal Ores' Section 13 of 200 acres. The 200 acres are more than enough to accommodate the facility outlined in the proposal done by Professor and Mrs. John E. Huguenin for the establishment of an algae facility. The size is establishes as one that would be capable of producing one thousand metric tons at commercial dry weight of algae per year. The facility itself will be able to develop ten times that much but the

Response to Comment N-00098 (Page 3 of 5):

Comment ID: N-00098 (Page 4 of 5)

Response to Comment N-00098 (Page 4 of 5):

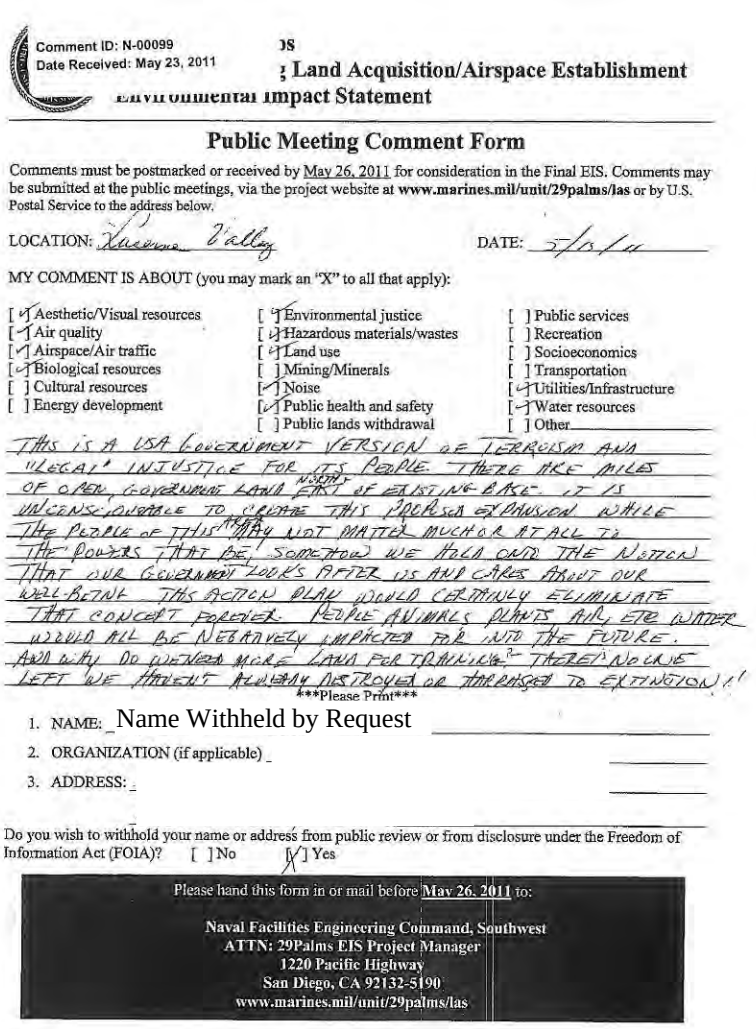
difference is the between wet and dry product. The facility is based on the equipment necessary to provide a very satisfactory bio-diesel facility which enjoys a 5% reproductive rate which dramatically improves the economics of the operation. CinCal Ores will be providing over one million tons of iron ore averaging about 35% Fe but can be increased to 60% by magnetic separation depending on the needs of a successful plankton nutriment.

CinCal Ores is also ready to provide the water in more than sufficient quantities to do the job. The feedstock provided will have to be adjusted to the plankton content of the water and will make adjustments during the early months of the project. In addition to the iron ore and water, the facility will be placed with the drainage ponds located as to take full advantage of the sunlight in the natural surroundings. Attached is the detail drawing showing the raceway, the compressor as well as the necessary grading and fencing to make use of the existing land. The estimates are made for the evaluation, course grading, concrete seating and the float as necessary. This provides for an outstanding financial return by the end of the second year and needs a year to a year-and-a-half to come into full production. It is most fortunate that we have a suitable successful plan to copy from Huguenin's facility of two years ago. The facility will be built in stages so that we don't miss the opportunities to make improvements or adjustments as called on. The runs, compressors, concrete work, etc. will require approximately $2.3 million of shared costs. If the Marine Corps decides to enter the company as a joint venture partner with us, they would be expected to put up a comparable amount to what we are advancing in iron ore, water, grading and excavation. The advantages of the Marine Corps participation is a bio-diesel source under their control, the ability to incorporate changes they desire immediately, and advantage of directing the operation toward the lowest

Comment ID: N-00098 (Page 5 of 5)

ALGAE BIO-DIESEL PROPOSAL
Morley Thompson, President CINCAL Ores Inc.

Page 4



cost. This is a very large market and all the production will be geared toward existing methods of distribution for petroleum products and will take advantage of all the excellent work that's been done in both in the United States and abroad. Algae can take full advantage of the large national distributions system setup for petroleum products. In a detail alignment that must be made in the construction of every part of such an algae program we propose adding engineers to take full advantage of lessons already learned by people in the business as well as the large purchases made by the U.S. Navy. We envision that if the US Marine Corps comes as a partner, they would enjoy all the benefits as well as the responsibilities and would use a Navy type contract of which we are all very familiar. This will assure the Marine Corps of a cost effective operation. Right now there is great emphasis on the feeder-stock to improve the output of the algae, but as the business progresses more attention will have to be given to the lowest cost of manufacturing facility which we propose to have because of our climate, location of the nutriment, and the efforts made to reduce the quantities of water. The cost are greatly lowered by the ownership that we have of the nutriment, water and the already purchased land which is immediately available. Our property should facilitate the US Marine Corp getting in the bio-diesel business in the fastest possible manner with the people that already have the property and experience, and can undertake this project in addition to the major improvements that you will be making on your training facility.

THIS IS A USA GOVERNMENT VERSION OF TERRORISM AND "LEGAL" INJUSTICE FOR ITS PEOPLE. THERE ARE MILES OF OPEN GOVERNMENT LAND (NOT PART OF EXISTING BASE). IT IS UNCONSCIONABLE TO CREATE THIS 200 SQ MI EXPANSION WHILE THE PEOPLE OF THIS AREA MAY NOT MATTER MUCH OR AT ALL TO THE "POWERS THAT BE". SOMEHOW WE HOLD ONTO THE NOTION THAT OUR GOVERNMENT LOOKS AFTER US AND CARES ABOUT OUR WELL-BEING. THIS ACTION PLAN WOULD CERTAINLY ELIMINATE THAT CONCEPT FOREVER. PEOPLE ANIMALS PLANTS AIR, ETC WATER WOULD ALL BE NEGATIVELY IMPACTED FAR INTO THE FUTURE. AND WHY DO WE NEED MORE LAND FOR TRAINING? THERE'S NO LINE LEFT WE HAVEN'T ALREADY DESTROYED OR THREATENED TO EXTINCTION!!

Response to Comment N-00099:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-00203:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

Public comments on the Draft EIS are an important part of the decision-making process. Johnson Valley needs to remain designated as OHV area and the Marines need to move eastward.

Response to Comment N-00208:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Johnson Valley not only holds some of the best Racing events ever but is a Great Recreational Area where Racing Families come together & friends make Same Common interests. I love the Marines, as much of my family has served, but Johnson Valley is not an area that can be duplicated. Please consider moving East instead of West so we can continue to enjoy our lands!

Thank you!

Re: Proposed land expansion of 29 Palms / Draft EIS

Sir / Maam:

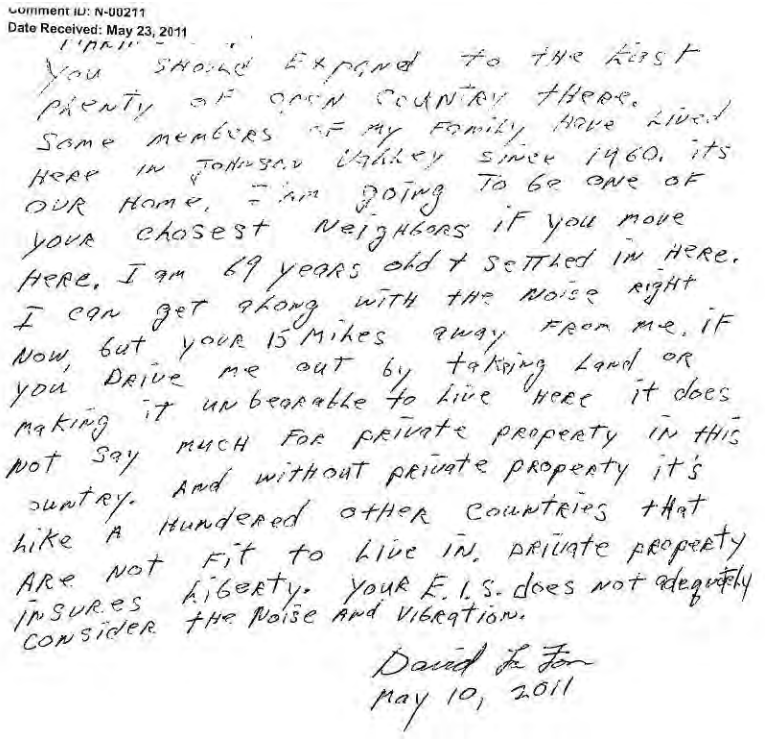
My name is David Lane and my wife's name is Kathleen; and we are both Off-Highway Vehicle users. We are writing you because we do indeed recreate in the Johnson Valley OHV area. We feel that this area, which by the way is the largest OHV area in the country, is very important to the OHV community and that its loss would severely (negatively) impact the OHV community. I'm sure you have received numerous letters from other OHV enthusiasts regarding the statistics of OHV ownership vs. OHV land availability. So I won't bother to quote those stats again. The Johnson Valley area is a premier off-roading area, no doubt. We feel that full or even the partial transfer of these lands to the Marine Corps would undoubtedly increase the usage of other local areas we also visit such as Stoddard Valley or El Mirage. The increase in usage of these areas will most likely also increase the cost of managing them. In addition, with the increase in usage of the remaining local areas, safety concerns would definitely rise as well. My family and other families like mine collectively spend in the millions of dollars each year to participate in this form of recreation. Adding up the dollar costs of all the items used in this activity would be astounding. Items such as motor-homes, travel trailers, ATVs, motorcycles and associated equipment are a big part of the California economy.

My family and I respectfully request that you encourage the Marine Corps to find a different area to fulfill their training requirements. If it is found that there are no other alternatives available to the Marine Corps, and that they must take all (or portion) of the Johnson Valley area, we urge you to request the BLM to demand an acre-for-acre mitigation with a location somewhere in the vicinity of Johnson Valley. This would assure a proper balance of public lands.

Sincerely,

David Lane

Kathleen Lane



Response to Comment N-00210:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action. Several alternative scenarios were considered and eliminated from detailed study because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS). The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The Draft EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

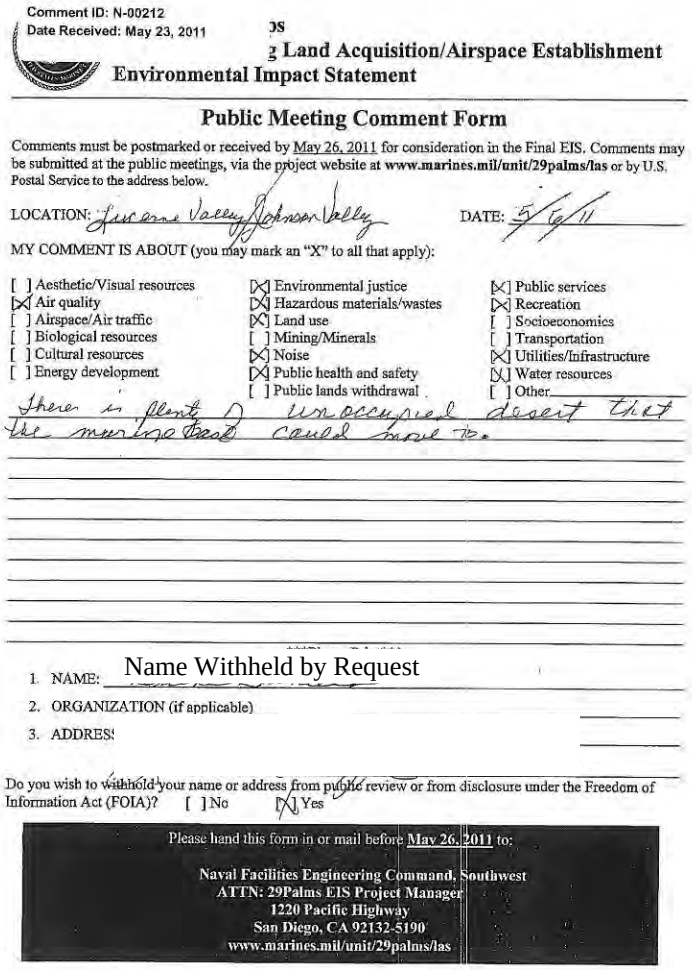
I think you should expand to the East plenty of open country there. Some members of my family have lived here in Johnson Valley since 1960. It's our home. I am going to be one of your closest neighbors if you move here. I am 69 years old & settled in here. I can get along with the noise right now, but your 15 Miles away from me. If you drive me out by taking land or making it unbearable to live here it does not say much for private property in this country. And without private property it's like a hundered other countries that are not fit to live in. private property insures liberty. Your E.I.S. does not adequately consider the noise and vibration.



David La Fon
May 10, 2011

Response to Comment N-00211:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-00212:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the Draft EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the Draft EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I am not a fan of off-road racing. I think the annual race is a travesty, and I wouldn't mind if the BLM closed the entire desert to motor vehicles, so the prospect of having the 600 species of plants and animals that are found NO WHERE ELSE ON EARTH further decerated and endangered by bombs and tank treds makes me want to scream. But at least the races are but once a year. They are not flying overhead dropping bombs. Ten years ago this might have made sense. Now not so much. The MAUS places to train and maneuver quite near. It's near enough. You don't need to despoil more of a unique ecosystem you don't value for war effort that ***Please Print*** will be withing [illegible] in July

Response to Comment N-00215:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

We go several times camping & Riding
to Johnson Valley, we are going this coming weekend
4/30/11. We spend anywhere from $100 - $300 a weekend
in Gas & Lodging & Food. If this area is to be closed
I would not be able to take my family for two weekends
& would have us Reno - to go to Victorville, Barstow / Hesperia / Yucca
& Johnson Valley. Keep it Open I been riding since I
was 10 & I am now 32 & take my kids with
like my father used to take me.

RE: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study

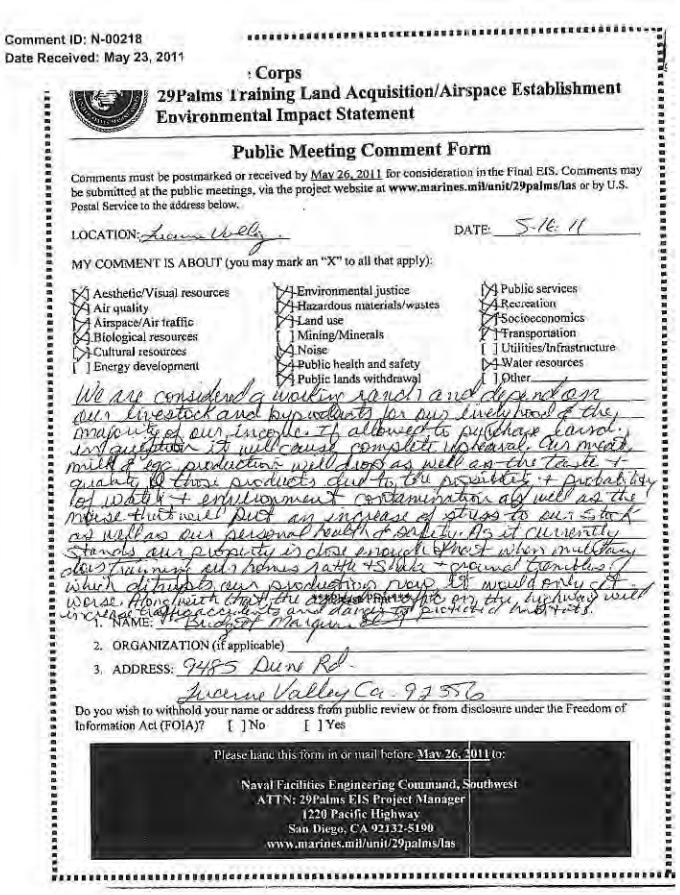
EIS Project Manager:

I am writing to you today because my family recreates in the Johnson Valley OHV Area and the no action alternative is the only acceptable alternative. We spend quality family time together there away from all of the distractions of everyday life.

We visit Johnson Valley 12 to 16 times per year. When we are preparing for a trip we spend $200 to $400on gas, groceries, parts, etc... in our local area. Additionally we spend $200 to $250 in or around the Johnson Valley/Lucerne Valley/Victorville area during the time we are camping. We normally camp in the Means Dry Lake, Bessimer Mine Area of Johnson. We travel all over the eastern area of Johnson VAley during our stays.

The no action alternative protects my family's recreation opportunity and the economic impact it has to Southern California.

Respectfully,



Greg McGrath

Response to Comment N-00217:

We are considered a working ranch and dependant on our livestock and byproducts for our livelyhood of the majority of our income. If allowed to purchase land. just outside it will cause complete withdrawal. Our meat, milk & egg production will drop as well as the taste + quality of those products due to the possible + probably of water + environment contamination as well as the noise that will. Not an increase of stress to our stock as well as our personal health & safety. As it currently stands our property is close enough that when military does Training our homes, cattle + personal families which ultimately our producing pays it would only get worse. Along with that the [illegible] on the highway will increase traffic accidents and danger to pedestrians and riders.

There are wild Joshua trees pursuant to this area to the east & south of this area. That is a danger to the area animals & people. The noise & air quality will totally disturb the functioning of these species. This will also affect the water quality. Yucca is also a protected area for the desert tortoise which may complete its extinction. In addition the increased traffic on Hwy 247 will be atrocious. It's a death trap, now & this can only make it worse.

Response to Comment N-00219:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts. The EIS evaluates impacts to air quality under each of the action alternatives (see Section 4.8). As noted in the EIS, alternatives that would involve the west acquisition study area would result in less than significant impacts from increased emissions for the proposed activities. The EIS evaluates impacts to water resources under each of the action alternatives (see Section 4.13). As noted in the EIS, there is not expected to be any impacts to groundwater quality from training operations. The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species. The EIS evaluates impacts to transportation under each of the action alternatives (see Section 4.6). As noted in the EIS, the marginal temporary traffic increase due to MEB mobilization would not create significant impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Dear Sir or Madam:

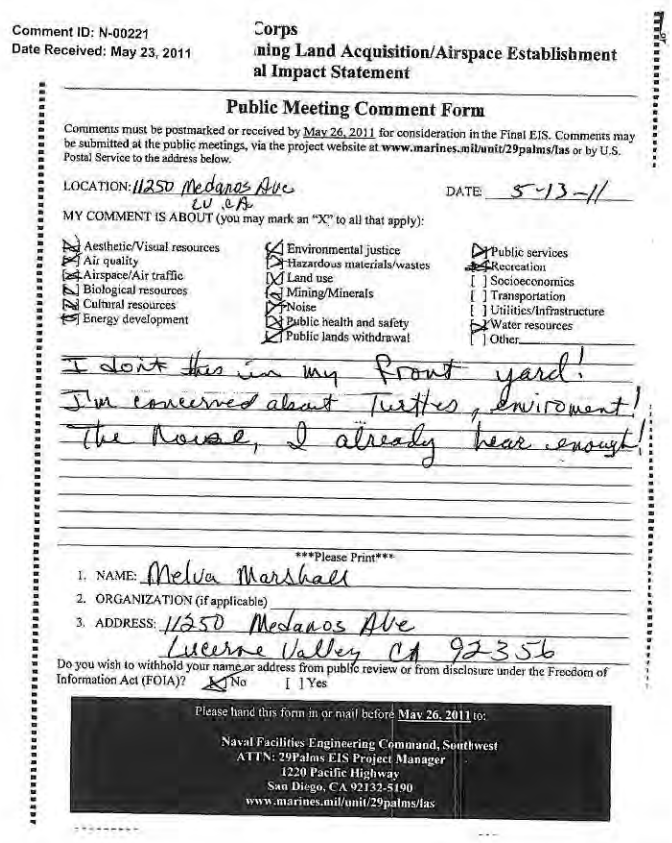
I would like to comment on the draft Environmental Impact Statement (dEIS) for the expansion of the Twentynine Palms Marine Corps Base. As the owner of Shield F Ranch and holder of the Ord Mountain Allotment, I would like to state that for as long as we have run cattle on the allotment, my family has been a good steward of the land. Our ranch as comprised today is a viable cattle ranch, raising organic range-fed beef. Throughout the years we have been ranching these lands, we have developed waters throughout the allotment that have benefited cattle and wildlife alike, including bighorn sheep and countless other species. I am convinced that it is because of our work on the allotment that Bighorn Sheep have returned in number to the Ord Mountains.

I received a letter from the Bureau of Land Management, dated May 30, 2011, indicating that up to 25,222 acres of the allotment could be withdrawn by the federal government for the base expansion. The letter informed me that while I could continue existing ranching operations as usual, I could not make new permanent improvements, like our proposed East Ord Well, in areas that may be withdrawn from the ranch by the base.

The prospect of withdrawing 25,222 acres from the allotment is of concern to me. Every acre of the allotment is important towards continuing our ability to keep a productive ranching operation. We are also opposed to the restriction by BLM to make additional permanent improvements, like developing the East Ord Well, that will enhance our ranching operations while the federal government makes its decision on expanding the Marine Base. Water is necessary for survival in the desert, not only for our cattle but also for the variety of wildlife that the ranch also supports.

In addition, it is my understanding that five of the six alternatives in the dEIS propose to withdraw lands from the allotment. Therefore, on behalf of my family, I request that the alternative that DOES NOT WITHDRAW allotment lands is selected for the expansion of the Twentynine Palms Marine Base.

Sincerely,



Irene Fisher

Irene Fisher

Response to Comment N-00222:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Dear Project Manager:

These comments concern the draft EIS on the expansion of the Twentynine Palms training center. I grew up in San Diego and I am retired from a career in the United States Air Force, which often took me to installations in the California Desert. A co-worker who participated in desert conservation efforts tells me you requested public comments.

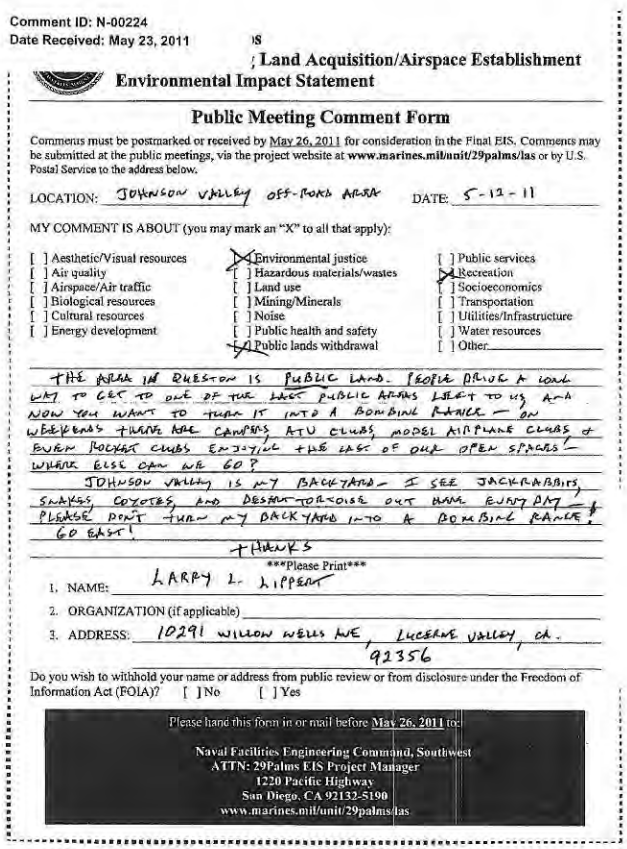
I reserve judgment on the base expansion project itself, but I have several concerns. The Marine Corps wisely has analyzed a reasonable range of six alternatives in the EIS. Appropriately the USMC has excluded designated conservation areas, as described in a criterion on page 2-12: "Avoid congressionally-designated wilderness areas, parks, wildlife refuges, designated critical habitat for threatened or endangered species, cities/towns, and interstate highways."

The Marine Corps is correct to rule out the ORV groups' proposal that the Marines take over 150,000 acres of the Sheephole Valley, Cleghorn Lakes and Cadiz Dunes Wilderness Areas, instead of public lands at Johnson Valley. In no way should wilderness areas be sacrificed for the benefit of ORV riders. The United States Congress designated them as wilderness in 1994 to protect their wild character. Converting them to a Marine training area is not a reasonable alternative.

ORV fans should be thankful that the USMC has proposed a shared-use option in Alternative 6, allowing continued ORV activities when the area is not in use for combat training. If that alternative is adopted, I urge that mitigation measures be added to prevent illegal ORV activities from damaging the lands and wildlife habitat at Johnson Valley.

Thank you for the opportunity to comment.

Sincerely,



R Larry Laffoon, SMSgt, Retired USAF

R. Larry Laffoon

Dear Sirs:
The house we live in, will be real close to the new line. Look like about 150 yard away. There is about a dozen home in this area. We are about a mile from the Base Property line right now. The way it is now, we have air traffic over the time. But when the line make it will much worse.
I can't see what benefit you will have making that move in the area of the Base.

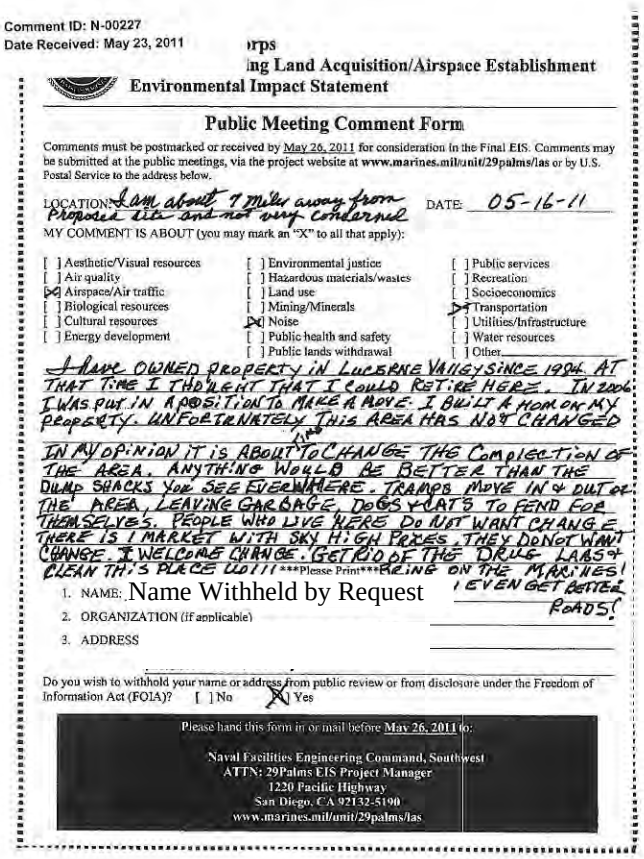
Response to Comment N-00226:



Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. I HAVE OWNED PROPERTY IN LUCERNE VALLEY SINCE 1994. AT THAT TIME I THOUGHT THAT I COULD RETIRE HERE. IN 2006 I WAS PUT IN A POSITION TO MAKE A MOVE. I BUILT A HOME ON MY PROPERTY. UNFORTUNATELY THIS AREA HAS NOT CHANGED IN MY OPINION IT IS ABOUT TO CHANGE THE COMPLECTION OF THE AREA. ANYTHING WOULD BE BETTER THAN THE DUMP SHACKS YOU SEE EVERYWHERE. TRAMPS MOVE IN & OUT OF THE AREA, LEAVING GARBAGE. DOGS & CATS TO FEND FOR THEMSELVES. PEOPLE WHO LIVE HERE DO NOT WANT CHANGE. THERE IS 1 MARKET WITH SKY HIGH PRICES. THEY DO NOT WANT CHANGE. I WELCOME CHANGE. GET RID OF THE DRUG LABS & CLEAN THIS PLACE UP!!! ***Please Print*** BEING ON THE MARINES! I EVEN GET BETTER ROADS!

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Response to Comment N-00233 (Page 1 of 2):

Thank you for your comment. As discussed in Section 2.7 of the Draft EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

U. S. MARINE CORPS
29 PALMS TRAINING
LAND ACQUISITION/AIRSPACE ESTABLISHMENT
ENVIRONMENTAL IMPACT STATEMENT

TO WHOM IT MAY CONCERN;

THE PEOPLE OF LUCERNE VALLEY AND JOHNSON VALLEY ARE THREATENRD WITH EXTINCTION IF THIS MOVE TO THE WEST GOES THROUGH BY THE MARINES. THERE ARE OTHER ALTERNATIVES TO YOUR NEED FOR DESSERT LAND. GO EAST. THE MOVE TO THE WEST WOULD HAVE A HUGH IMPACT ON THOUSANDS OF PEOPLE AND THREATEN THE LIVELY HOOD OF THE PEOPLE WHO LIVE IN THESE RURAL AREAS. THE ECONOMY OF OUR COMMUNITIES, THE SERVICES PROVIDED TO OFF ROADERS , TOURISTS, AND THE RESIDENTS FOR SURVIVAL WILL NOT BE THERE FOR THE PEOPLE.

JOHNSON AND LUCERNE VALLEY OFF HIGHWAY VEHICLE AREAS COVERS 188,000 ACRES. IT IS RICH WITH DRY LAKE BEDS, OPEN VALLEYS, SANDY WASHES, JETTING MOUNTAINS AND ROLLING HILLS THAT RANGE IN EVEVATION FROM 2,300 TO 4,600 FEET. JOSHUA TREES, WILD FLOWERS, SCRUBS AND EVEN SOME ANNUAL GRASSES DOT THE LANDSCAPE. IT HAS "EXPANSES OF EVERY TOPOGRAPHY IMAGINABLE". IT IS THE LARGEST OF "ONE OF FIVE (OHV RECREATION AREAS) IN THE FIELD OFFICE AREA OF BARSTOW.

THE AREA HAS AN "ENORMOUS DIVERSITY FOR OHV". OHV FREE PLAY CAN BE FOUND AROUND THE ANDERSON AND SOGGY DRY LAKE AREAS. RECREATIONAL OPPORTUNITIES ABOUND, INCLUDING PERMITTED COMPETIVE EVENTS THAT ARE SOMETIMES HELD THERE.

RED AND GREEN STICKER VEHICLE SPORTS ARE NOT THE ONLY USE YOU WILL FIND FOR THIS LAND. CAMPING, HIKING, ROCK SCRAMBLING AND ROCK HOUNDING ARE ALSO AVAILABLE. AS WELL AS BIRD, WILDLIFE AND PLANT WATCHING (INCLUDING A THREATENED SPECIES THE DESERT TORTOISE).

SO AS YOU CAN SEE FROM THE COMMENTS ABOVE IT IS IMPORTANT THAT YOU GO EAST AND DEFEND OUR RIGHT FOR THE SURVIVAL OF OUR RURAL COMMUNITIES AND THE PEOPLE WHO SUPPORTED YOU WHEN YOU NEEDED HELP. GOD BLESS AMERICA AND FREEDOM TO THE PEOPLE.

THANK YOU

Me and my family spend roughly 35 days a year camping in Johnson Valley. riding dirt bikes and 3D Quads we spend numerous weekends in the desert in our Jeep we have many friends that do the same and would be affected in a big way if this area was to be put off limits. The economy of Johnson Valley would really take a hit from a lack of outdoor travelers, rock crawlers etc. This is one of the most wonderful OHV areas around, a great place to teach children the wonders of the outdoors, how sad it would be to see it shut down. Go East, let us keep a wonderful recreational area.

THOUSANDS OF PEOPLE COME TO ENJOY OFF ROAD RACING & CAMPING OUT IN THIS AREA. IT IS ENJOYED BY MANY FAMILIES FROM VARIOUS AREAS. THERE ARE VERY FEW LOCATIONS LEFT WHERE THIS CAN BE DONE. OUR TOWN BENEFITS FINANCIALLY DURING THESE EVENTS – AND WILL SUFFER GREATLY IF THIS AREA IS CLOSED OFF. IT SEEMS THAT IT WOULD MAKE MORE SENSE TO EXPAND THE 29 PALMS TRAINING AREA TOWARDS THE EAST WHICH WOULD NOT AFFECT AS MANY PEOPLE – OR LEAVE IT AS IT IS.

Our desert is home to many wild animals and plants (Big Horn sheep, desert tortises, etc, that would be driven out of their natural habitats. The government has enough land that has been given over for tactical maneuvers, bombing ranges etc. No More! We should be withdrawing our troops from Afganistan, etc. this year. Do not desecrate more of our natural habitat, some found no where else. Think!! Once done you cannot bring it back. Nature has suffered with man's misuse of its resources, the Marines have done enough damage we don't need the armed services to finish it off.

Response to Comment N-00238 (Page 1 of 2):

Thank you for your comment. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study

EIS Project Manager:

I am writing to you today because my family recreates in the Johnson Valley OHV Area and the no action alternative is the only acceptable alternative. We spend quality family time together there away from all of the distractions of everyday life.

We visit Johnson Valley twelve (12) times a year. When we are preparing for a trip we spend $275 on gas groceries, parts, etc… in our local area. Additionally we spend $125 in or around the Johnson Valley/Lucerne Valley/Victorville area during the time we are camping. We normally camp in the following areas of Johnson Valley; Means Dry Lake, adjacent to Bessemer Mine Road - north of the Rock Pile, Anderson Dry Lake and Cougar Buttes.

I have reviewed the DEIS and noticed several fatal flaws in the analysis.

- The Corps Failed to Analyze DOD Budget and National Deficit Impact on Project Viability.
- The EIS fails the "rule of reason" test. The "rule of reason" is essentially a reasonableness test that is comparable to the arbitrary and capricious standard.
- The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs
- The Corps has rigged "the purpose and need section" of this NEPA process to limit the range of alternatives.

Given the Alternatives presented, I strongly support the "No Action" alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. The "No Action" alternative protects my family's recreation opportunity and the economic impact it has to Southern California.

Respectfully,

5/14/2011

Peter Keresztes
5112 Torida Way
Yorba Linda, CA. 92886

Response to Comment N-00239:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

The expansion of the 29 Palms maine Traing Base will close the Bessmer iron mine and the B.L.M. own in Johnson Valley. The closer of these areas will have an economic impact on Lucerne Valley.

Response to Comment N-00240:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, access to mining and other land holding will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information).

Taking this area would substantially cut down on the available areas ~~available~~ for me to enjoy off-road activities with my family. The USES are closed many roads the the San Bernardino National Forest with hardly any areas left for ATV's. The influx of incred riders/drivers in smaller areas could also be unsafe. Please ~~be~~ consider Alternative 3 since this area can accomodate most of what the military needs to accomplish. I'm on Alternative 3, NO on Alternative 6.

Response to Comment N-00243:

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Sirs,
I like my peace and quite.
I like my gas stations, stores, resterants like they are the flow from outsiders keep all of those open. If you take Johnson Valley over We will loose income to gas stations, stores and resterants and hurt our small town. We have a lot of poor people here and need the people who pass thur and use our gas, stores ect, as they go to Johnson Valley.
Please take pity on our town dont take our recreation away from our poor peoples and people coming to Johnson Valley.
Thankyou

Response to Comment N-00245:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

	[ ] Public lands withdrawal	[ ] Other Stores

We are older people, we have quite a few older people and poor people in Victorville.

We really don't want the noise, plus you will take away our recreation area. That will effect our stores and restaurants, with all our years that I've been here we need the cash flow from people that use the area for camping & ect. They eat at our restaurants and use the stores and gas stations.

Response to Comment N-00247:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The marine expansion needs to move east. As a business owner in the off-road community, Johnson Valley OHV area has quickly became a major hotbed for recreational off-roading. Not only would the off-road community get hurt by it's closure, but so will the outlying areas that have become reliant upon the offroaders income.

As an honorably discharged veteran of the United States Marine Corps, this is a sensitive subject for me. While I fully understand the need for training areas that can incorporate all aspects of the MAGTF, I am also saddened by the diminishing [illegible] OHV areas that can be enjoyed by individuals, families, veterans, and civilians alike. I remember the multiple trips to the ranges, OLF's, and CAX areas that we took in order to deploy to OIF & OEF. However, I also remember the excitement I felt through the deployments, at the thought of getting to go back home and take my Jeep Wrangler (which I drove through Camp Lejeune Military Sites) out to the woods/mountains and enjoy my brief liberty. One of the reasons the recruitment rate is so much higher on the West coast, is that there are more activities for our Marines to enjoy. One of those activities happens to be responsible offroad recreation. While I know my letter may not mean much in the grand scale of things, I am just asking that instead of diminishing our already limited OHV areas, by expanding them, we try to expand the training area East. Please, just consider it.

Response to Comment N-00252:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I believe our military needs more room to train but, I'd hate to have anyone lose their homes or have any delay in Fire & Rescue Services due to road closures ie, Amboy Rd in Sheephole Pass. Also I fear for the relocation of our natural wild life. What ever comes about for our military to have the necessary areas for training, I'll stand behind

Response to Comment N-00253:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. Impacts to emergency response are discussed in Section 4.4 of the EIS. As noted in the EIS, under the proposed action there would be additional permanent personnel necessary to manage any acquired land areas in addition to existing mutual aid agreements.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-00255:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

May,09, 2011

Hi ,my name is Steve Rouchleau
5965 Newcomb St.
San Bernardino, Ca 92404

Last week I sent a hand written letter about sharing the Johnson Valley. When I wrote the letter I was under the impression the military would use twice a year and it would be open for public use the rest of the year. An article in the Press Enterprise, later last week prompted me to further investigate the proposals.

I have to say they all suck. Can't you guys come with a plan where you close what you need when you need it, safety check it and reopen it when you're done. Surely there's plenty of personnel not overseas or not returning overseas to accomplish this.

And aren't our battles winding down anyhow?

What about the businesses in Lucerne we won't visit any more. Gas stations, stores,occasional auto parts and sometimes a café for breakfast on our way home. Times the thousands of others who probably feel the same as us.

We like Johnson Valley for it's size and diversity, like the military. It's awesome for the long weekends. But if Camprock Rd. is our only option, then we won't waste the gas.

Thanks for your time…

Response to Comment N-00256:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. The analysis presented in Section 4.2 acknowledges and discusses the impacts that reduced access to recreational lands in Johnson Valley would have on increased usage in other areas and potential overcrowding. The public involvement process has led to the development of project alternatives (e.g., Alternatives 4, 5, and 6) that would enable the Marine Corps to meet the minimum live-fire and maneuver training requirements for a MEB while also providing public access to as much of the Johnson Valley area as possible for recreational use. Please refer to Sections 2.5 and 4.2 of the EIS.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

RE: Comments on 29 Palms Training Land Acquisition Project and Draft Environmental Impact Statement (EIS)

EIS Project Manager:

I am writing for two purposes: (1) to register my objection to the 29 Palms Training Land Acquisition Project, and (2) notify you that the EIS for the project is defective with respect to its analysis of project-related impacts on the local economy – impacts for which no meaningful mitigation is offered.

From our perspective, the only rational alternative is the "No Action" alternative. Given that the U.S. Government is dangerously burdened with debt, there is no way that we, as a nation, can responsibly pay for this project at this time. Further, only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels, which is absolutely critical to the survival of the local economy.

Let me explain what I mean. My family recreates in the Johnson Valley OHV area 6 times a year. Our favorite places to visit in Johnson Valley are Cougar Buttes, where we engage in such activities as play riding. When preparing for a trip, we spend $250 on gas groceries, vehicle parts, etc... in our local area. Then, we spend an additional $250 in the Johnson Valley/Lucerne Valley/Victorville area while we are camping. Over the years, we have patronized the following businesses, among others, in the Johnson Valley/Lucerne Valley/Victorville Area:_____.

If Johnson Valley, or any part of it, were to be closed due to the expansion of the 29 Palms Marine Corps Base, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site.

As written, the Draft EIS provides an inadequate and error-filled analysis of the project's potential impacts on the local economy. The analysis is based on unsupported assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the complete devastation of the local economy is misleading and pure fantasy. This part of the EIS, among others, must be redone.

Respectfully,

PROJECT: DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS) FOR THE 29PALMS TRAINING LAND ACQUISITION/AIRSPACE ESTABLISHMENT STUDY

Dear 29Palms EIS Project Manager:

The Mojave Desert Air Quality Management District (MDAQMD) has received the Draft Environmental Impact Statement (EIS) for the 29Palms Training Land Acquisition/Airspace Establishment Study. This Environmental Impact Statement (EIS) evaluates the potential environmental impacts associated with the proposed establishment of a large-scale training range facility at the Marine Corps Air Ground Combat Center at Twentynine Palms, California (the "Combat Center") that would accommodate sustained, combined-arms, live-fire, and maneuver training for all elements of a Marine Expeditionary Brigade (MEB). To implement the proposed action, the Marine Corps would acquire additional land adjacent to the Combat Center, establish and modify military Special Use Airspace (SUA) above the proposed MEB-sized training range, and conduct the specified MEB training.

The District has reviewed the DEIS, and concurs that the Special Conservation Measures for Air Quality will avoid or minimize potential impacts of fugitive dust emissions developed for the proposed project. The District has also reviewed the conformity determination for the project and has proposed to include VOC and NO_x increase emissions into the next ozone SIP revision for the Mojave Desert Air Basin (MDAB). AQ-1

Thank you for the opportunity to participate in the development of this planning document. If you have any questions regarding this letter, please contact me at (760) 245-1661, extension 6726, or Tracy Walters at extension 6122.

Sincerely,

Alan J. De Salvio

RE: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study

Dear EIS Project Manager:

These comments are submitted on behalf of the BlueRibbon Coalition (BRC), a national nonprofit trail-based recreation group, and are directed to the Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study. This document shall not supplant the rights of other BRC agents and organizational or individual members from submitting their own comments and the agency should consider and appropriately respond to all comments received to this EIS

BRC has reviewed the Draft EIS and continues in our strong opposition to the entire project including the proposed withdrawal.

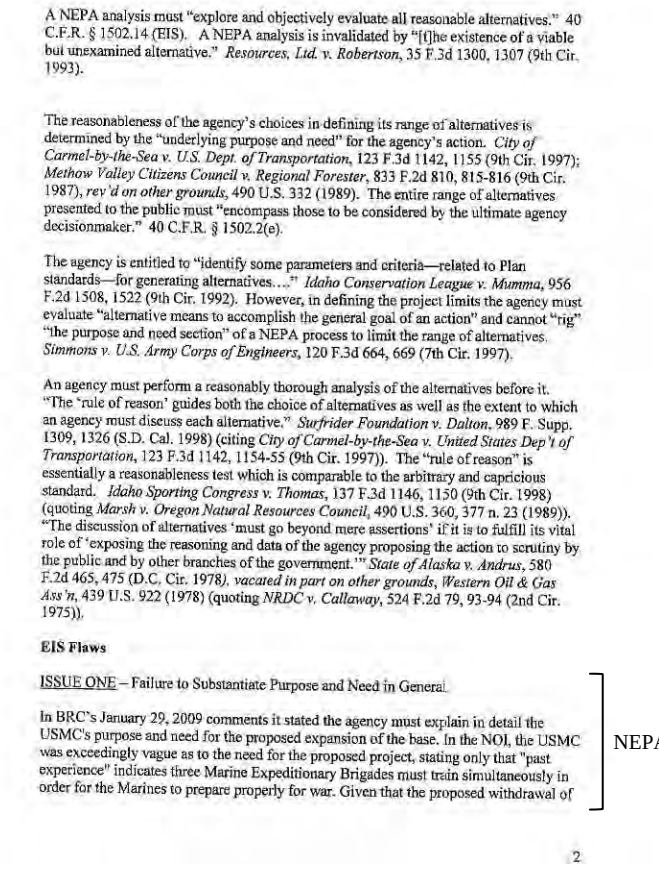
BRC believes all of the action alternatives (1-6) are basically "closure of Johnson Valley OHV area" alternatives. The action alternatives practically or functionally close the entire Johnson Valley OHV area to public use. If this project must move forward, BRC suggests that the "no-action" alternative be selected.

BRC believes the EIS is fatally flawed and is not in compliance with NEPA. Proper understanding of these flaws requires review of basic NEPA principles.

NEPA Review

NEPA imposes a mandatory procedural duty on federal agencies to consider a reasonable range of alternatives to proposed actions or preferred alternatives analyzed during a NEPA process. 40 C.F.R. § 1502.14; 40 C.F.R. § 1508.9. "[A]gencies shall rigorously explore and objectively evaluate all reasonable alternatives." 40 C.F.R. § 1502.14. The alternatives section is considered the "heart" of the NEPA document. *Id.* .

1



Response to Comment N-00261 (Page 1 of 6):

NEPA-1 and NEPA-2: Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

NEPA-3 and NEPA-4: As discussed in Section 2.7 of the Draft EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the Draft EIS).

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would interfere with the Army's ability to meet its own training requirements and be optimally prepared for deployment.

Comment ID: N-00261 (Page 2 of 6)

A NEPA analysis must "explore and objectively evaluate all reasonable alternatives." 40 C.F.R. § 1502.14 (EIS). A NEPA analysis is invalidated by "[t]he existence of a viable but unexamined alternative." *Resources, Ltd. v. Robertson*, 35 F.3d 1300, 1307 (9th Cir. 1993).

The reasonableness of the agency's choices in defining its range of alternatives is determined by the "underlying purpose and need" for the agency's action. *City of Carmel-by-the-Sea v. U.S. Dept. of Transportation*, 123 F.3d 1142, 1155 (9th Cir. 1997); *Methow Valley Citizens Council v. Regional Forester*, 833 F.2d 810, 815-816 (9th Cir. 1987), *rev'd on other grounds*, 490 U.S. 332 (1989). The entire range of alternatives presented to the public must "encompass those to be considered by the ultimate agency decisionmaker." 40 C.F.R. § 1502.2(e).

The agency is entitled to "identify some parameters and criteria—related to Plan standards—for generating alternatives…." *Idaho Conservation League v. Mumma*, 956 F.2d 1508, 1522 (9th Cir. 1992). However, in defining the project limits the agency must evaluate "alternative means to accomplish the general goal of an action" and cannot "rig" "the purpose and need section" of a NEPA process to limit the range of alternatives. *Simmons v. U.S. Army Corps of Engineers*, 120 F.3d 664, 669 (7th Cir. 1997).

An agency must perform a reasonably thorough analysis of the alternatives before it. "The 'rule of reason' guides both the choice of alternatives as well as the extent to which an agency must discuss each alternative." *Surfrider Foundation v. Dalton*, 989 F. Supp. 1309, 1326 (S.D. Cal. 1998) (citing *City of Carmel-by-the-Sea v. United States Dep't of Transportation*, 123 F.3d 1142, 1154-55 (9th Cir. 1997)). The "rule of reason" is essentially a reasonableness test which is comparable to the arbitrary and capricious standard. *Idaho Sporting Congress v. Thomas*, 137 F.3d 1146, 1150 (9th Cir. 1998) (quoting *Marsh v. Oregon Natural Resources Council*, 490 U.S. 360, 377 n. 23 (1989)). "The discussion of alternatives 'must go beyond mere assertions' if it is to fulfill its vital role of 'exposing the reasoning and data of the agency proposing the action to scrutiny by the public and by other branches of the government.'" *State of Alaska v. Andrus*, 580 F.2d 465, 475 (D.C. Cir. 1978), *vacated in part on other grounds*, *Western Oil & Gas Ass'n*, 439 U.S. 922 (1978) (quoting *NRDC v. Callaway*, 524 F.2d 79, 93-94 (2nd Cir. 1975)).

EIS Flaws

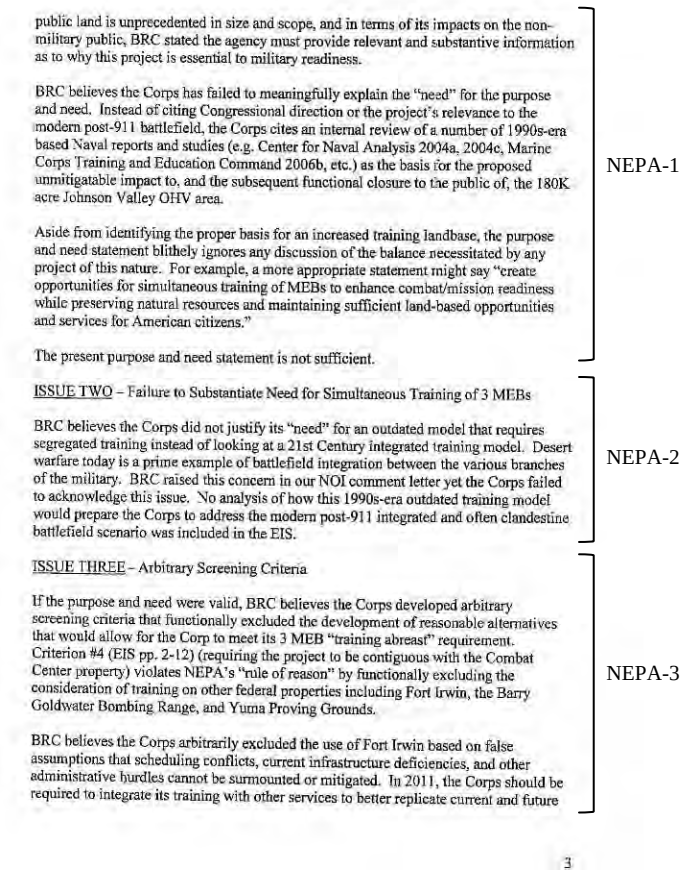
ISSUE ONE – Failure to Substantiate Purpose and Need in General

In BRC's January 29, 2009 comments it stated the agency must explain in detail the USMC's purpose and need for the proposed expansion of the base. In the NOI, the USMC was exceedingly vague as to the need for the proposed project, stating only that "past experience" indicates three Marine Expeditionary Brigades must train simultaneously in order for the Marines to prepare properly for war. Given that the proposed withdrawal of

NEPA-1

2

Response to Comment N-00261 (Page 2 of 6):



NEPA-5:

Public comments on the Draft EIS are an important part of the decision-making process. Public input becomes part of the Final EIS and will be considered by the Department of the Navy during its decision process. Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

BIO-1:

Comment noted. The Marine Corps used the best available information when preparing the Draft EIS. While the relative importance of various factors in the decline of the desert tortoise are still uncertain and the Draft EIS states this (page 3.10-22 – 3.10-23), the published literature that is available indicates that OHVs do adversely affect tortoises via habitat degradation and direct impacts (one such review is Ouren et al. 2007). Analysis of existing disturbance in the west study area from OHVs indicated a significant correlation between areas of high OHV disturbance and lower desert tortoise densities (refer to Appendix I of the Draft EIS). The Marine Corps has reviewed the referenced litigation (Center for Biological Diversity vs. BLM) and did not identify anything in the court's decision which contradicts the analysis in the Draft EIS. In that case the court's decision not to require consideration of studies like Ouren et al. (2007) were based strictly on the fact the route designation was linear and did not include OHV open areas.

Comment ID: N-00261 (Page 3 of 6)

public land is unprecedented in size and scope, and in terms of its impacts on the non-military public, BRC stated the agency must provide relevant and substantive information as to why this project is essential to military readiness.

BRC believes the Corps has failed to meaningfully explain the "need" for the purpose and need. Instead of citing Congressional direction or the project's relevance to the modern post-911 battlefield, the Corps cites an internal review of a number of 1990s-era based Naval reports and studies (e.g. Center for Naval Analysis 2004a, 2004c, Marine Corps Training and Education Command 2006b, etc.) as the basis for the proposed unmitigatable impact to, and the subsequent functional closure to the public of, the 180K acre Johnson Valley OHV area.

Aside from identifying the proper basis for an increased training landbase, the purpose and need statement blithely ignores any discussion of the balance necessitated by any project of this nature. For example, a more appropriate statement might say "create opportunities for simultaneous training of MEBs to enhance combat/mission readiness while preserving natural resources and maintaining sufficient land-based opportunities and services for American citizens."

The present purpose and need statement is not sufficient.

NEPA-1

ISSUE TWO – Failure to Substantiate Need for Simultaneous Training of 3 MEBs

BRC believes the Corps did not justify its "need" for an outdated model that requires segregated training instead of looking at a 21st Century integrated training model. Desert warfare today is a prime example of battlefield integration between the various branches of the military. BRC raised this concern in our NOI comment letter yet the Corps failed to acknowledge this issue. No analysis of how this 1990s-era outdated training model would prepare the Corps to address the modern post-911 integrated and often clandestine battlefield scenario was included in the EIS.

NEPA-2

ISSUE THREE – Arbitrary Screening Criteria

If the purpose and need were valid, BRC believes the Corps developed arbitrary screening criteria that functionally excluded the development of reasonable alternatives that would allow for the Corp to meet its 3 MEB "training abreast" requirement. Criterion #4 (EIS pp. 2-12) (requiring the project to be contiguous with the Combat Center property) violates NEPA's "rule of reason" by functionally excluding the consideration of training on other federal properties including Fort Irwin, the Barry Goldwater Bombing Range, and Yuma Proving Grounds.

BRC believes the Corps arbitrarily excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be surmounted or mitigated. In 2011, the Corps should be required to integrate its training with other services to better replicate current and future

NEPA-3

3

Response to Comment N-00261 (Page 3 of 6):

BIO-1 Continued:

Since the proposed action area currently includes an OHV open area and would continue to include an OHV open area after implementation of most alternatives, such studies are entirely relevant.

Additional conservation and mitigation measures, developed during the Endangered Species Act Section 7 consultation process with USFWS, have been included in the Final EIS (refer to Section 2.8.4). These include dedication of new Special Use Areas, expansion of monitoring and tortoise "headstarting" programs, and preparation of a detailed translocation plan to reduce the significant impacts to the desert tortoise.

GEN-1: As discussed in Section 2.7 of the Draft EIS, the Marine Corps considered these and other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the Draft EIS).

The Marine Corps appreciates your comment and participation in the NEPA process.

Comment ID: N-00261 (Page 4 of 6)

battlefield scenarios. Again, the proposed 1990s-era based "3 MEB training abreast" scenario is outdated.

The arbitrary and narrow scope of the screening criteria eliminated (EIS p 2-98) a number of viable proposals and alternatives brought forward by the public, which violates NEPA's "rule of reason."

NEPA-3

ISSUE FOUR - Corps Bias Against Integration

On March 26, 2011 Corps spokesman, Captain Nick Mannweiller, told the BLM's Desert Advisory Council that "*[w]hat makes the Marine Corps special is that we play really well with each other and not really very well with the other services.*"

BRC believes that statement is unfortunately ingrained in the current planning process. That inappropriate sentiment is conveyed throughout the document by the Corps decision-making in a vacuum that ignores the project's impact to local user groups, recreation businesses, and communities. In 2011, this operational tenet has tainted this planning process and jeopardized the project administratively and legally.

Even if encouraging the Corps' "lone wolf" mentality is not illegal, it is far from wise policy or good governance. The Corps itself should at least consider other options, and participants, other agencies, and public officials should encourage a more enlightened allocation of our public resources.

NEPA-4

ISSUE FIVE – Failure to Analyze DOD Budget and National Deficit on Project Viability

The EIS evaluates and attempts to disclose the cost of the proposed expansion, including the ongoing, perpetual costs of the contemplated training mission. The U.S. Government is operating at a dangerous deficit...one that will only grow in the next few years as the new economic stimulus packages are implemented. Defense spending, apart from being a disproportionately large part of the federal budget, is notoriously wasteful. The EIS fails to perform even the most basic economic analysis of the project to see if it is even viable given projected budget deficits and reductions in defense spending including the likelihood of another round of base closures and reduction in military equipment, men, and supplies.

NEPA-5

ISSUE SIX – Flawed Analysis of Impacts to Threatened and Endangered Species

Sadly, the EIS reflects a "holier than thou" ignorance as to the potential project-caused impacts to the ESA-listed Mojave Desert Tortoise while inappropriately shifting blame to recreational uses.

BIO-1

4

Response to Comment N-00261 (Page 4 of 6):

Comment ID: N-00261 (Page 5 of 6)

The EIS fails to support its claims that various recreational activities pose significant threats to tortoise. The studies cited are outdated and are not scientifically valid. At question is the methodology, sample size, and insufficient "control" groups. Recent

litigation targeting recreation-based impacts to tortoise has been resolved favorably for land managers and recreationists. *See, generally, Center for Biological Diversity v. U.S. BLM*, Case No. 3:06-CV-4884-SI (N.D. Cal.). The EIS fails to consider this information and properly evaluate best available science on tortoise status, cause/effect linkages and state-of-the-art management.

The EIS additionally fails to address mitigation for the loss of habitat for the desert tortoise and mitigation measures (including monitoring) that would be used to comply with raven predation measures on desert tortoise that are to be applied throughout the Mojave Desert region.

Again, the DEIS must be based on the best available scientific and commercial evidence. The EIS failed to satisfy this basic requirement. The best scientific evidence available shows that recreation in Johnson Valley does not pose a credible threat to the desert tortoise.

Finally, the EIS failed to analyze the impacts of intensive military training to the desert tortoise.

BIO-1

SUMMARY

BRC's position remains continued strong opposition to the entire project as proposed, including the proposed withdrawal and subsequent planning.

BRC believes the EIS/project should be withdrawn and shelved given its fatal flaws, public objection to the project, and national economic crisis.

BRC is not stubbornly opposed to reasonable efforts to achieve legitimate project goals. If the project goes forward, a modified EIS should contain the following elements:

1 – Develops an alternative that uses exiting military facilities for integrated training. This should be the **preferred alternative** since it utilizes existing federal facilities – such as Fort Irwin - that will save tax monies and allow for continued recreational use of Johnson Valley. It will have the least economic and environmental impact.

2 – Develops an alternative with the MCAGCC using other non-military public lands outside of Johnson Valley.

GEN-1

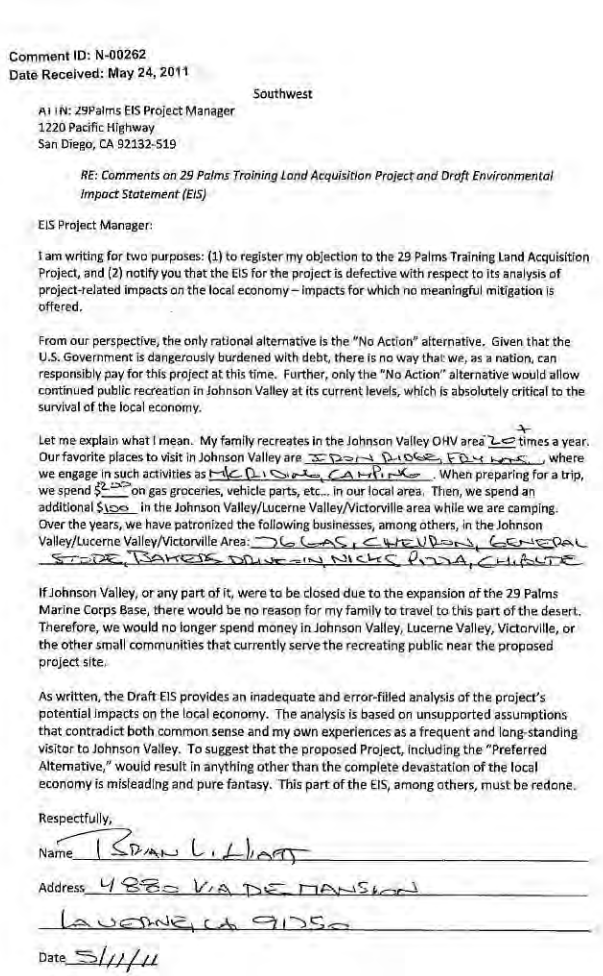
5

Response to Comment N-00261 (Page 5 of 6):

Comment ID: N-00261 (Page 6 of 6)

BRC appreciates this opportunity to comment on the EIS. BRC looks forward to working with the Corps so that it can fulfill its mission and the public may continue to use and enjoy the Johnson Valley OHV area.

Sincerely,



Don Amador

RE: Comments on 29 Palms Training Land Acquisition Project and Draft Environmental Impact Statement (EIS)

EIS Project Manager:

I am writing for two purposes: (1) to register my objection to the 29 Palms Training Land Acquisition Project, and (2) notify you that the EIS for the project is defective with respect to its analysis of project-related impacts on the local economy – impacts for which no meaningful mitigation is offered.

From our perspective, the only rational alternative is the "No Action" alternative. Given that the U.S. Government is dangerously burdened with debt, there is no way that we, as a nation, can responsibly pay for this project at this time. Further, only the "No Action" alternative would allow continued public recreation in Johnson Valley at its current levels, which is absolutely critical to the survival of the local economy.

Let me explain what I mean. My family recreates in the Johnson Valley OHV area 20+ times a year. Our favorite places to visit in Johnson Valley are EDDY RIDGE, FRY HILL, where we engage in such activities as MOTORCYCLE CAMPING. When preparing for a trip, we spend $200 on gas groceries, vehicle parts, etc... in our local area. Then, we spend an additional $100 in the Johnson Valley/Lucerne Valley/Victorville area while we are camping. Over the years, we have patronized the following businesses, among others, in the Johnson Valley/Lucerne Valley/Victorville Area: 76 GAS, CHEVRON, GENERAL STORE, RAMOS DRIVE-IN, NICKS PIZZA, CHALET

If Johnson Valley, or any part of it, were to be closed due to the expansion of the 29 Palms Marine Corps Base, there would be no reason for my family to travel to this part of the desert. Therefore, we would no longer spend money in Johnson Valley, Lucerne Valley, Victorville, or the other small communities that currently serve the recreating public near the proposed project site.

As written, the Draft EIS provides an inadequate and error-filled analysis of the project's potential impacts on the local economy. The analysis is based on unsupported assumptions that contradict both common sense and my own experiences as a frequent and long-standing visitor to Johnson Valley. To suggest that the proposed Project, including the "Preferred Alternative," would result in anything other than the complete devastation of the local economy is misleading and pure fantasy. This part of the EIS, among others, must be redone.

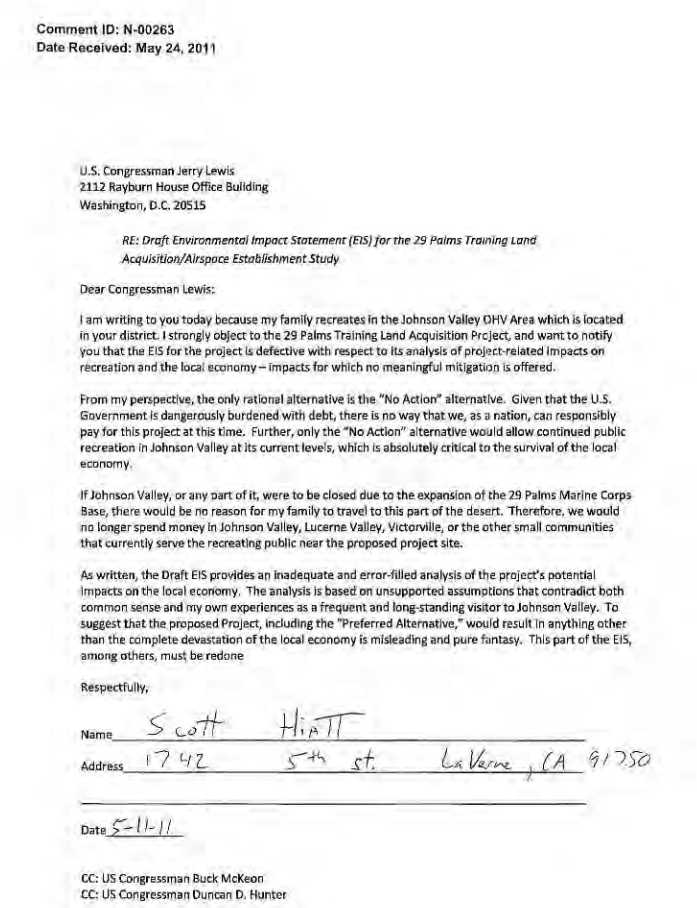
Respectfully,

Name BRIAN L. LLOYD

Address 4880 VIA DE MANSION

LAVERNE, CA 91750

Date 5/11/11



Response to Comment N-00262:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

May 19, 2011

For many decades my husband and I have gone to Johnson Valley to recreate with land yachts (landsailers) on Soggy Dry Lake. We raised our children to sail and ride motorcycles in Johnson Valley. Please keep all the land from the northern edge of the Hammer trails to the northern edge of the Rock Pile open year round for recreation. If you still need more land go north of the base. It is important to note also, Johnson Valley is a huge stimulus to the economy of southern California. People spend lots of money locally to recreate in Johnson Valley. Johnson Valley is such a gorgeous area, and a place to recreate in, not to be entirely bombed, killing everything from spring flowers, to using tortoises as traction for military tanks. You may feel you need more land, but you are seeking far too much land. Charles & Linda Hoover

Response to Comment N-00265:

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

	[ ] Public lands withdrawal	[ ] Other

Given the alternatives presented, I Strongly support only the No-Action Alternative. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

If the No-Action alternative cannot work, then I would like to encourage 29 Palms to expand East instead of West. This would give the Marines the extra area they need to train without closing one of the most popular OHV recreation areas in the world.

Re: Draft Environmental Impact Statement on 29 Palms Base expansion

Dear Sir:

The DEIS states:

Potential impacts from six action alternatives and the no-action Alternative have been analyzed.

Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twenty-nine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:

Less than Significant Impacts (LSI):

• Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.

• Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):

No impact anticipated from airspace establishment.

Similar judgments are made in this Table and elsewhere for the other Alternatives.

Response to Comment N-00267 (Page 1 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-00267 (Page 2 of 3)

Clifford J. Carlson
3433 Avalon Ave.
Yucca Valley CA 92284

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.

It is therefore, a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:

• Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries

• Devaluation of surrounding private property.

• Increased costs to federal, state and local jurisdictions for increased law enforcement. All would occur outside the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS overlooked this important aspect. The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is misleading because averages are used rather than noise levels from separate events such as explosions, live fire training,or helicopters. This is a misrepresentation and highly deceptive to readers who do not live in this area, or have not experienced this for themselves.. Noise and vibration extend well beyond the study area, and the DEIS must be corrected to include everywhere and everyone that is impacted.
-These homestead communities have coexisted with the Base for decades as the DEIS correctly

Response to Comment N-00267 (Page 2 of 3):

Comment ID: N-00267 (Page 3 of 3)

Clifford J. Carlson
3433 Avalon Ave.
Yucca Valley CA 92284

states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must address this argument, and the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

No perspective residents consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or over flown by helicopters particularly when their expectations are to enjoy the peace and tranquility of our desert oasis. Since the first announcement of the proposed base expansion, Realtors have been required to disclose this fact, and sales have been lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage in a Quasi combat zone.

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS failed, neglected and overlooked these issues.

Respectfully Submitted,,

Clifford Carlson

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

My husband's family homesteaded in Johnson Valley in 1954. The home they built there has been a retreat from the stress of city living for more than 50 years. Grandma Coutant lived in the home until she was 94. My husband and I currently spend at least a week or two at the homestead in Johnson Valley every month and plan to retire there. Our sons both enjoy visiting the area and would like to retire to the homestead when they are of age. I am deeply concerned that the true impact any expansion of the 29 Palms Marine Base will have on our family's historic homestead and the surrounding areas has not been correctly addressed in the DEIS.

The DEIS states:
Potential impacts from six action alternatives and the No-Action Alternative have been analyzed.
Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twenty-nine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:
Less than Significant Impacts (LSI):
• Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
• Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.
No Impacts (NI):
No impact anticipated from airspace establishment.

Response to Comment N-00268 (Page 1 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-00268 (Page 2 of 3)

Similar judgments are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.
It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:
• Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
• Devaluation of surrounding private property.
• Increased costs to federal, state and local jurisdictions for increased law enforcement.
All would occur outside the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities, which are neighbors to the Base, must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

-These homestead communities have co-existed with the Base for decades as the DEIS

Response to Comment N-00268 (Page 2 of 3):

Comment ID: N-00268 (Page 3 of 3)

correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflown by helicopters at any hour of the day or night, particularly when the want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbowroom and history are negated by the realities of living with startling noise, and fear of damage.

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

Sincerely,

Dixie Peyton Coutant

Re: Draft Environmental Impact Statement on 29Palms Base expansion

The Environmental Protection Agency's Toxic Release Inventory (TRI) is available at http://www.epa.gov/tri/. It totals toxic releases during the years 2007-2009, the latest report available.

A "TRI release" is defined as the amount of on-site toxic chemical releases to air, water, underground injection, landfills and other land disposal, and the amount transferred off-site for disposal. The top ten facilities with the most chemical releases in California included Marine Camp Pendleton at #10.

PBT Chemical releases are releases of Persistent, Bioaccumulative and Toxic Chemicals. Merriam-Webster defines "persistent" as "existing for a long or longer than usual time or continuously." It defines "bioaccumulation" as "the accumulation of a substance (such as a pesticide) in a living organism." It defines "toxic" as "poisonous." In other words, BPT means poisons that last a long time, and collect in the bodies of plants and animals and the animals that eat them.

Of the top 10 California release sites, numbers 6-10 were military, one Army and four Marine, all in Southern California. The Marine Corps Air Ground Combat Center 29-Palms is #7, with a little under half the PBT chemical releases that were measured at Camp Pendleton.

Though the trend shown in the Inventory is generally downward for the state, if live fire combat training increases in intensity and duration on the scale the DEIS describes, MCAGCC will obviously rise on the list.

Starting on Page 293, the Draft Environmental Impact Statement describes in detail the procedures used to comply with recording and reporting releases of TRI Chemicals. It addresses the Marines' methods for dealing with hazardous material spill abatement and cleanups, and contaminated soils.

"Munitions Constituents" (MC) from unexploded ordnance and other munitions, and their breakdown elements, are described and mapped for current and historical ranges. Potential migration into humans and animals is addressed with somewhat limited studies. Perchlorate is described as an indicator munitions constituent as it is a good example of PBT (see definitions above). Perchlorate recently came to public notice again as a constituent of the drinking water in Barstow, CA.

Databases on hazardous wastes from many sources and contaminated sites are described as not revealing any relevant sites. Formerly used defense sites are discussed. All are declared not relevant.

Response to Comment N-00269 (Page 1 of 2):

Thank you for your comment. Munitions constituents and toxic chemical release reporting requirements are described in Section 3.4 and 4.4 of the EIS. As described in the EIS the Combat Center complies with the Emergency Planning and Community Right-to-Know Act (EPCRA) Toxic Release Inventory (TRI) program, and all other federal, state, and local requirements regarding hazardous materials and wastes, and would continue to do so under the proposed action.

Comment ID: N-00269 (Page 2 of 2)

On Page 293, one paragraph describes a total of 50 accidental releases, in 2002, of toxic substances and what was done about them. Deliberate releases and munitions constituents are not itemized. The discussion of toxic wastes ends on Page 301 of the DEIS. Nowhere is the Environmental Protection Agency's Toxic Release Inventory mentioned, with its specific amounts, and the relative standing of military sites in general and MCAGCC in particular.

Therefore the DEIS must be amended to show not only the methodology for reporting toxic contaminants but also the kinds and quantities. It must also clearly state estimates for any increases in toxic releases for each Alternative course of action. It must also state this information was missing in the draft document.

On Page 295 is a map of munitions constituents loading areas on the existing Base. Maps must be added to the DEIS to show where planned MC loading areas would be in each Alternative course of action.

On Page 796 it is stated that use of munitions under Alternative One would be similar to existing use, and therefore potential impacts from the use of munitions would be minimal. Since ordnance use is planned to be more intensive and of longer duration, the DEIS must be corrected to reflect that fact and state the draft document was in error. This must also be done for all the other Alternatives.

Sincerely,

Dixie Peyton Coutant

Re: Draft Environmental Impact Statement on 29-Palms Base expansion

Dear Sir:

My husband and I will be soon retiring to a home his family has owned in Johnson Valley since 1954. Any 29-Palms Marine Base expansion will impact this area. The communities of Landers and Johnson Valley are in Postal Zip Code 92285. Landers borders the existing Marine Air Ground Combat Center 29-Palms; Johnson Valley is directly southwest of it, and due south of the proposed westward expansion area.

Environmental Justice provisions are addressed in the DEIS because Federal Projects are not supposed to have disproportionate impacts against any ethnic, demographic or socio-economic group.

IN POSTAL CODE 92285, CENSUS 2010 HAS STATED:
• The population is 2,181.
• The median age of the population is 49.5. 24.7% are 65 years and over. This is almost twice the percentage of people 65 and older in the US population (12.4%). These are very much senior citizen communities.
• Many residents are retired and on fixed incomes. 39% of our population 16 and over is in the labor force, as compared to 69% in the US.
• Families below poverty level: 20.8% In the US: 12.4%
• Individuals below poverty level: 24.9% In the US: 12.4%
• Disability status (population 5 years and over): 34.8% In the US: 19.3%
And for good measure:
• Civilian veterans (civilian population 18 years and over): 25.1% In the US 12.7% (and we know many are proud Marines)

http://factfinder.census.gov/servlet/SAFFFacts?_event=Search&geo_id=&_geoContext=&_street=&_county=92285&_cityTown=92285&_state=&_zip=92285&_lang=en&_sse=on&pctxt=fph&pgsl=010&show_2003_tab=&redirect=Y

The factors listed above indicate the project does raise issues of Environmental Justice for the residents of Landers and Johnson Valley.

The DEIS states that EO 12898 criteria for Environmental Justice say there must be one or more such affected populations within the DEIS area (Page 533). However, very few live WITHIN the EIS area, and it is therefore a contradiction to imply that residents outside the EIS area will not be impacted. The scoping issues (Item 4.3.1.3) listed on the same page include:
• Decrease of revenue and employment and associated tax revenue from tourism, recreational, and film industries

Response to Comment N-00270 (Page 1 of 3):

Thank you for your comment. As outlined in Section 4.3.1.2 of the EIS, three criteria are used to assess the significance of impacts to minority and low-income communities in the context of environmental justice (EO 12898, *Federal Actions to Address Environmental Justice in Minority and Low-Income Populations*): 1) there must be one or more such populations within the project area; 2) there must be adverse (or significant) impacts from the action; and 3) the environmental justice populations within the project area must bear a disproportionate burden of these adverse impacts. If any of these criteria are not met, then impacts with respect to environmental justice would not be significant. All environmental impacts that are attributable to the proposed action would apply equally to any affected persons, regardless of minority or income status; therefore no impacts would occur with respect to environmental justice.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). The best available information for employment was identified and used as the basis for the analysis. As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Landers, Wonder Valley, and Homestead Valley.

Comment ID: N-00270 (Page 2 of 3)

• Devaluation of surrounding private property,
• Increased costs to federal, state and local jurisdictions for increased law enforcement.

The contradiction is the DEIS states that the primary economic impacts would be from displacement of certain activities within the DEIS area causing financial and other hardships to surrounding areas. Therefore the DEIS must be revised to state the criteria for judging Environmental Justice are too narrow, and must state that these criteria also apply to populations outside the DEIS area. Anything less would be easily misunderstood by a less-than-careful reader. Landers and Johnson Valley are within the impact area of the DEIS because of activities that are associated with current activities emanating from the Marine Base, and proposed activities due to the expansion, are above, around and adjacent to Landers and Johnson Valley.

The statement on Page 537 that increase of jobs on the Base would offset jobs lost in the area is self-serving and must be modified, as it does not address the fact that our employed and employable population are outside the 30-minute commute time discussed. Their ability to handle the costs of a longer commute must be included in the DEIS. The 30-minute commute time is impossible to determine, given traffic and road conditions vary widely throughout the area. The Marines' establishment of the 30-minute commute time is arbitrary.

Landers and Johnson Valley and their airspace are already significantly impacted by noise, vibration, air pollution and light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income, to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

The noise modeling discussed on Page 540 and elsewhere is completely misleading. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

The fact that Landers and other communities have co-existed with the Base for decades is not germane to the discussion. Modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact.

In my personal judgment, most of the residents near the Base and expansion areas are patriots, who support the Marines' dedication to excellent training of the forces who are willing to be sent out to fight where we no longer can or maybe never could. But the nature of Environmental Justice is a direct outgrowth of the life, liberty and pursuit of happiness that they fight to uphold. The DEIS must take a second look at the Base neighbors and their dilemma.

The DEIS judgment is based on estimates and assumptions, therefore I may be allowed to assume that other neighboring communities will be impacted the same as Landers and Johnson Valley.

Response to Comment N-00270 (Page 2 of 3):

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Comment ID: N-00270 (Page 3 of 3)

Therefore, the DEIS conclusion under Item 4.3.2.5 and others must be changed and it must be stated for every Alternative action in the document:
Certain socio-economic groups, including, but not limited to, seniors, retirees on fixed incomes, families and individuals below the poverty level, the disabled, and veterans residing in neighboring communities in percentages far greater than in the nation at large, will bear a disproportionate burden if the planned training and area expansions are put into place.

THROUGHOUT THE DOCUMENT, The EO 12898 criteria for Environmental Justice must be added to and expanded to include populations outside the DEIS area, and that citing EO 12898 alone caused a potentially misleading contradiction in the draft document. It also must state, for each Alternative, that significant impacts will occur with respect to Environmental Justice.

The DEIS must state what steps have been taken in previous actions at other Bases to insure equity and fairness in regards to Environmental Justice. The repeated assertion in this DEIS that mitigation is not possible means nothing can be done to insure equity and fairness, and the DEIS must state that fact prominently, and state the draft document had omitted it.

Sincerely,

Dixie Peyton Coutant

[ ] Energy development	[ ] Public health and safety	[ ] Water resources
	[X] Public lands withdrawal	[ ] Other_____

I oppose the expansion of the 29 Palms U.S. Marine Corps base to the west, I oppose all of the proposed alternatives. If the Marine Base must be expanded it should be to the east. Our has already put too much desert land in National Parks and Wilderness Areas and National Preserves etc. making access difficult or impossible for the average citizen. This area contains several miles and probably undiscovered ~~rare earth~~ valuable mineral deposits that may be used in the Future. This area contains the Johnson Valley Off Road Vehicle (ORV) area and is a prime ORV area for millions of Southern California residents. Closing it would deprive millions of ORV recreation and will have a very negative impact on the businesses in Lucerne Valley and surrounding areas.

Response to Comment N-00271:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I OPPOSE THIS EXPANSION BECAUSE, THE FEDRAL GOVERNMENT HAS ALREADY TIED UP TOO MUCH LAND IN THE WEST, THAT MAY BE NEEDED FOR MINING, AGRICULTURE, ENERGY OR OTHER USES. IT IS VALUABLE LAND FOR RECREATIONAL USE. THAT CLOSURE WOULD HAVE AN IMPACT ON THE ECONOMY OF LUCERNE VALLEY AND SURROUNDING COMMUNITIES.

With so much available, underutilized land to 29 Palms Facility's East & South, it seems ridiculous & problematic to "move in the direction of existing residents & development + use.

More in OTHER directions!

Re: Comment Letter re Draft Environmental Impact Statement for Land Acquisition and Airspace Establishment for Proposed Expansion of Twenty-Nine Palms USMC Base

Dear Project Manager:

This firm represents EcoLogic Partners, Inc. ("EcoLogic"), a consortium of family-oriented recreation groups dedicated to preserving public access to outdoor recreational venues in California and throughout the American West. On behalf of EcoLogic and its members, we have reviewed the Draft Environmental Impact Statement ("EIS") for the Department of the Navy's "Land Acquisition and Airspace Establishment" project, which is the necessary antecedent to the proposed expansion of the United States Marine Corps base at Twenty-Nine Palms, California. For the reasons discussed below, EcoLogic objects to the proposed Project, including the Navy's preferred alternative (Alternative 6), and herein takes the position that the Project, while certainly providing some marginal benefit to the Marine Corps training mission, is not necessary to that mission nor justified in light of its cost. Further, EcoLogic finds the Draft EIS analytically deficient. Not only does the document fail to study key impacts, many of its conclusions rest on dubious, unsupported assumptions. Perhaps worst of all, the Draft EIS omits fundamental baseline information regarding the environmental resources that currently exist in the proposed expansion area, rendering an impact analysis impossible.

I. THE PROPOSED PROJECT IS TOO COSTLY

Although the training facilities currently available at Twenty-Nine Palms and other USMC bases have allowed the Marines to ably conduct military operations in Kuwait, Iraq, and Afghanistan, the Department of the Navy has now decided that it needs to expand the Twenty-

NEPA-1

Response to Comment N-00274 (Page 1 of 20):

NEPA-1 and NEPA-2:

Thank you for your comment. As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

NEPA-3:

Consideration of project cost, national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

GEN-1:

Chapter 3 of the EIS contains background information for each resource area, while impacts are analyzed in Chapter 4. All relevant technical studies and additional information are contained as appendices in Volume 2. References cited are included in the project Administrative Record.

Nine Palms facility by more than 200,000 acres to provide for "sustained, combined-arms, live-fire, and maneuver field training for MEB-sized Marine Air Ground Task Forces (MAGTFs), each consisting of three battalion task forces and associated command, aviation, and combat logistics support elements." (DEIS, ES-1) It is difficult to see how the recent wars in the Middle East, or any reasonably anticipated conflict elsewhere in the world, would require that an entire MEB be trained simultaneously at a single military installation. Increasingly, military experts and civilian decision-makers are beginning to question the strategic and tactical value of maintaining and training such large (and costly) forces.

A few recent comments demonstrate the point:

- George Will (*Washington Post* – May 3, 2011):
  - "[T]he enormous military footprint in Afghanistan, next door to bin Laden's Pakistan refuge, seems especially disproportionate in the wake of his elimination by a small cadre of specialists."
  - Jim Lacey of the Marine Corps War College notes that Gen. David Petraeus has said there are perhaps about 100 al-Qaida fighters in Afghanistan. 'Did anyone,' Lacey asks, do the math?' There are, he says, more than 140,000 coalition soldiers in Afghanistan, or 1,400 for every al-Qaida fighter. It costs about $1 million a year to deploy and support every soldier – or up to $140 billion, or close to $1.5 billion a year, for each al-Qaida fighter. 'In what universe do we find strategists to whom this makes sense?' he asked."
- Mark Thompson (*Time* – "How To Save A Trillion Dollars" – April 25, 2011):
  - "The U.S. continues to field and maintain a global force designed during an era of sky's-the-limit defense budgets."
  - "Across Washington, all sorts of people are starting to ask the unthinkable questions about long-sacred military budgets. Can the U.S. really afford more than 500 bases at home and around the world? Do the Air Force, Navy and Marines really need $400 billion in new jet fighters when their fleets of F-15x, F-16s and F-18s will give them vast air superiority for years to come? Does the Navy need 50 attack submarines when America's main enemy hides in caves?"
  - "It may seem strange to talk about defense cuts while the U.S. is waging one war in Afghanistan, is mopping up a second in Iraq and has just launched a half-war in Libya. But those conflicts have made it easy to forget the warning of Admiral

NEPA-1

Response to Comment N-00274 (Page 2 of 20):

NEPA-4:

As described in Section 1.3 of the Draft EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

NEPA-5:

Section 4.13 of the EIS addresses impacts to water resources. As described in the EIS, development of new groundwater sources in other basins for potable water supply would not occur under the proposed action. The analysis of water resources impacts is presented in Section 4.13 of the EIS. A long-term water study is not within the scope of this EIS. If one of the alternatives proposed in the EIS is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment ID: N-00274 (Page 3 of 20)

Mike Mullen, Chairman of the Joint Chiefs of Staff, that 'the single biggest threat to our national security is our debt.' Which points to an almost tragic irony of Washington's $700 billion annual appetite for military stores: we are borrowing cash from China to pay for weapons that we would presumably use against it. If the Chinese want to slay us, they don't need to attack us with their missiles. They just need to call in their loans."

- "Numbers alone tell much of the story: We are now spending 50% more (even excluding the wars in Afghanistan and Iraq) than we did on 9/11. We are spending more on the military than we did during the Cold War, when U.S. and NATO troops stared across Germany's Fulda Gap at a real superpower foe with real tanks and thousands of nuclear weapons aimed at U.S. cities. In fact, the U.S. spends about as much on its military as the rest of the world combined."
- "While the U.S.'s military spending has jumped from $1,500 per capita in 1998 to $2,700 in 2008, its NATO allies have been spending $500 per person over the same span. As long as the U.S. is overspending on its defense, it lets its allies skimp on theirs and instead pour the savings into infrastructure, education and health care. So even as U.S. taxpayers fret about their health care costs, their tax dollars are paying for a military that is subsidizing the health care of their European allies."
- "[R]evising America's defense budget will happen only if the U.S. takes a hard-eyed look at the dozens of military operations that are no longer vital or affordable."
- "$1 trillion in cuts wouldn't really be as drastic as it sounds – or as the military's no-surrender defenders insist. Such a trim would still leave the Pentagon fatter than it was before 9/11."
- "California Representative Howard McKeon, the Republican chairman of the Armed Services Committee, says, 'A defense budget in decline portends an America in decline.' Attitudes like that can bankrupt a nation, and the public senses its."
- "For too long, an uninterested and distracted citizenry has been content to leave the messy business of national defense to those with bottom-line reasons for force-feeding it like foie gras goose. It's long past time . . . for U.S. taxpayers to demand that its government spend what is needed to defend the country – not a penny more."

NEPA-1

Response to Comment N-00274 (Page 3 of 20):

NOI-1:

Noise exposure from existing/current conditions are provided in Chapter 3. Appendix H as four sections: H-1 through H-4. Sections H-1 through H-3 contain a wealth of technical data used in the noise modeling; Section H-4 is the noise primer.

As explained in Section 3.9.3, the aircraft and ordnance operations for the Baseline scenario was *initially* based on WR 02-13. However, all modeled operations from Wr 02-13 were updated and validated by the USMC to represent current activity. For example, the EAF and airspace operations were updated in 2009-2010 for the MV-22 West Coast Basing EIS as stated in Section 3.9.3.1. Furthermore, ordnance operations from WR 02-13 were doubled relative to the 2003 noise study to better represent current activity at the Combat Center as stated in Section 3.9.3.1.

Modeling for the EAF is consistent with the Navy AICUZ Instruction which recommends use of annual average daily operations. If annual average busy day operations were modeled, it is estimated CNEL would be only 3 dB greater than CNEL reported in the DEIS and exposure to airfield noise exposure greater than or equal to 65 dB would likely be fully contained within the Combat Center boundary.

- Robert Gates, United States Secretary of Defense
  - "Given America's difficult economic circumstances and perilous fiscal condition, military spending on things large and small can and should expect closer, harsher scrutiny. The gusher has been turned off, and will stay off for a good period of time." (CNN, May 9, 2010)
  - "The department must start setting priorities, making real trade-offs and separating appetites from real requirements." (Quoted in Huffington Post, August 9, 2010)
  - "We are not exempt from scrutiny and being asked to figure out what we are doing with less dollars." (Quoted in MSNBC.com, January 6, 2011.)
  - "The spigot of defense funding opened by 9/11 is closing."
  - "It is important to remember that every defense dollar spent to over-ensure against a remote or diminishing risk — or in effect to run up the score in a capability where the United States is already dominant — is a dollar not available to take care of our people, reset the force, win the wars we are in and improve capabilities in areas where we are underinvested and potentially vulnerable." (As quoted in Associated Press article, April 6, 2009).

These quotations demonstrate that well-informed commentators, military experts, and the Secretary of Defense himself believe it is time that the desires of the Army, Air Force, Marines, and Navy yield to the economic realities facing the United States. Former Secretary of State Colin Powell has also stated that the defense spending must be brought into line with prevailing economic conditions, stating "I don't think the defense budget can be made sacrosanct and it can't be touched."[1] Gregg Easterbrook, writing for *The New Republic*, describes the Pentagon's recent spending behavior as "unprecedented" and "irrational."[2] The problem, as Easterbrook points out, is that very few people question the military when it asks for more money: "[S]ecurity spending and military deployment are presented to the nation as virtually untouchable. If the Pentagon wants something, the logic goes, then it must be necessary. This is far from true."[3]

NEPA-1

Response to Comment N-00274 (Page 4 of 20):

NOI-1 Continued:

Airspace flight operations are assessed using the CNELmr metric consistent with Navy RAICUZ Instructions. This metric accounts for the sporadic nature of airspace activity as well as the "startle" effect caused by low-altitude high-speed flights (see Section 3.9.1). The Maximum Sound Level (Lmax) metric was not specifically designed to measure impulsive sounds and although Lmax provides supplemental noise exposure information, the correct noise metric for assessment of land use compatibility is CNEL (and its derivatives). In addition to the aforementioned high-altitude refueling activity, modeled operations included low-altitude high-speed flight operations characteristic of existing and proposed flight activity at the Combat Center (see Appendix H).

BIO-1:

Analysis of noise impacts to wildlife in the Draft EIS were based on the best available information. As noted in your comment, noise modeling conducted for the proposed project was focused on impacts to humans. The noise contours developed through the noise modeling effort were considered in the analysis of impacts to biological resources, and the noise metrics from those contours were considered important even though they are weighted toward frequencies important to humans. However, because peak sound levels (and the frequency of occurrence of those sound levels) are of greater concern in analysis of impacts to wildlife than the averaged metrics used in analysis of noise impacts to humans, the biological resources analysis focused more on the locations of ordnance explosion (represented by WDZs and SDZs) and paths of task force travel.

May 24, 2011
Page 5

The situation has become so bad that President Obama is calling for $400 billion in defense cuts over the next 12 years. This same sentiment is echoed in a letter signed by 57 members of Congress and submitted last October to the President's "National Commission on Fiscal Responsibility and Reform."[4] It is now clear that, to make a sizeable dent in the national debt, every branch of the military must scale back its wish list. Only those programs, weapon systems, force structures, and facilities projects with an established, well-documented need should be funded. All others must either be revamped to better address an actual military deficiency or be abandoned. Ironically, it is the nation's unwillingness or inability to curb defense spending – which has ***doubled*** since September 11, 2001 – that has made the United States so debt-ridden and vulnerable.[5]

NEPA-1

With respect to the proposed base expansion at Twenty-Nine Palms, the Project documents, including the Draft EIS, are remarkable in that they fail to explain why the current facilities, however small when compared to what the Marines want, are inadequate to meet the basic training needs of this branch of the military. Nowhere does the Marine Corp identify or describe any mission failure, large or small, that resulted from an inability to train an entire MEB simultaneously at the same site. In fact, in both Iraq and Afghanistan, the expeditionary portion of the Marine's mission was carried out with great success.[6] It has been the long-term occupation of these countries, and the forced, constant exposure to IEDs and similar low-tech weapons, that has caused the majority of casualties. So while the Marines certainly *desire* a larger base and could probably make productive use of the extra space, there is no evidence that they *need* more land or that their combat readiness will suffer markedly without it.

NEPA-2

The Draft EIS and other documents also fail to mention how much the proposed Project will cost. While the land may be transferred from the Bureau of Land Management to the Department of the Navy for next to nothing, and while the ongoing costs of maintaining the site may not be prohibitive, the expense of conducting the full-MEB training twice a year could be

[4] Klein, Ezra. "Barney Frank, Ron Paul and 55 others advocate for defense cuts." *Economic and Domestic Policy, and Lots of It.* October 13, 2010.
[5] Ratnesar, Romesh. "Military Spending Must Be Part of the Deficit Debate." *Time.* April 11, 2011. ["Though we can never be entirely safe from harm, our strategic advantages far exceed our vulnerabilities. In fact, the one clear and present threat to the American way of life is the size of the national debt."] Note that it is not enough to target "waste" in military procurement. "[S]imply going after Pentagon waste and abuse won't be enough. To conserve its power, the U.S. will need to reduce the size of its armed forces, curtail expensive missions and shrink America's military footprint around the world." *Ibid.*
[6] The Draft EIS admits this fact on page 1-23, stating, "Marine Corps successes in the first Gulf War in 1991, in leading the introduction of U.S. forces into Afghanistan in 2001, and again in Operation Iraqi Freedom in 2003, have validated the Marine Corps' doctrinal training philosophy of live-fire combined arms MAGTF integration through CAX."

Response to Comment N-00274 (Page 5 of 20):

BIO-1 Continued:

Discussion is included throughout the EIR noting the proximity of known populations to these WDZs, SDZs, and task force routes. In addition to this discussion throughout the text, potential noise effects are discussed for discussed for Nelson's bighorn sheep (page 4.10-14 and others) and the desert tortoise (page 4.10-11).

BIO-2:

Section D, Paragraphs 1-3: The Draft EIS contains the best available information on the occurrence and -distribution of special status and other status animal and plant species in the west study area. The BLM is a cooperating agency in the preparation of the EIS, and was unable to provide any wildlife or plant inventory information. As a result, the detailed surveys conducted for the EIS, which include surveys for: 1) tortoise abundance and density; 2) abundance of the Mojave fringe-toed lizard, burrowing owl, Mojave ground squirrel, and chuckwalla; 3) distribution and abundance of all sensitive plant species; 4) occurrence of special status aquatic invertebrate species; represent the best available information.

Section D, Paragraph 4: The Marine Corps is committed to protection of the public and the environment. Section 4.4.2.3 of the EIS discusses the management of hazardous materials and wastes under the proposed action. Under any land acquisition scenario, current procedures for spill prevention, containment, cleanup, and management of hazardous wastes (including expended ordnance) would be implemented as outlined in Combat Center Order 5090.1D and environmental Standard Operating Procedures.

Comment ID: N-00274 (Page 6 of 20)

May 24, 2011
Page 6

huge, running to the tens of millions of dollars per annum. Again, no one can be sure how expensive this will be, because the Marines did not bother to calculate the cost (or if they did calculate it, they did not feel compelled to disclose the figures.) This is precisely the kind of budgetary arrogance that typifies military spending requests.[7] Without accurate estimates regarding the cost of the proposed project, there is no means to weigh its purported benefits against its fiscal, environmental, and socio-economic impacts.

NEPA-3

II. THE DRAFT EIS IS INADEQUATE

A. Failure to Provide Basic, Necessary Studies

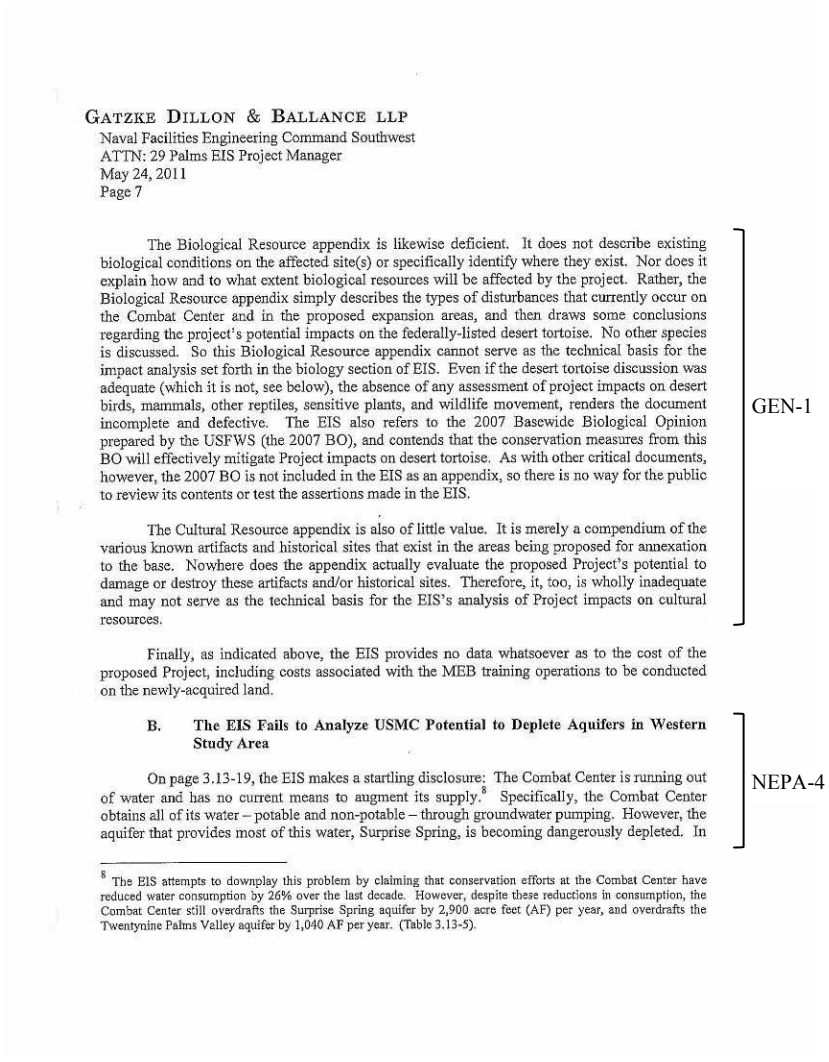
Before identifying the specific defects of the EIS on a topic-by-topic basis, it is important first to examine a systemic flaw that plagues the entire EIS – the failure to provide the technical studies that purportedly support the document's impact analyses.

Data set forth in the EIS indicate that the proposed base expansion and the training activities contemplated on the newly-acquired land could adversely affect air quality, ambient sound/noise levels, biological resources, recreational activities, cultural resources, and socio-economic conditions. Other data from the EIS suggests that the project could also result in adverse impacts on hazardous materials, airspace management, water supply, water quality, and greenhouse gas emissions. As to each of these impact categories, the EIS concludes that the project's potential effects are either (a) not significant, or (b) significant and unavoidable. However, in most cases, the EIS fails to include the technical studies necessary to support such conclusions.

For example, the EIS fails to provide a water supply study, a water quality study, or an inventory of potential greenhouse gas sources and emissions. The EIS *does* provide a technical appendix for noise, but it is not a study *per se* of the project's potential impacts on the existing ambient environment. Instead, it is merely a primer on noise metrics – very helpful in terms of understanding noise measurements, but not helpful at all in terms of determining the actual noise impacts of the project.

GEN-1

[7] In a detailed letter to President Obama's special "Commission on Fiscal Responsibility and Reform," Senator Tom A. Coburn, M.D. (R., Okla.) states that part of the problem is that "the Pentagon doesn't know how it spends its money." According to Senator Coburn, who is a trained CPA, "This incomprehensible condition has been documented in hundreds of reports over three decades from both the Government Accountability Office (GAO) and the Department's own Inspector General (DOD IG)." In fact, the DOD Inspector General issued a report which concluded that DOD's financial management systems do not facilitate but actually "prevent DOD from collecting and reporting financial information . . . that is accurate, reliable, and timely." *Id.* While the accounting nightmares at the Pentagon may *explain* why the Marines have not disclosed the cost of the proposed Project over its lifetime, it does not *excuse* their unwillingness to develop this information and present to the public.



Response to Comment N-00274 (Page 6 of 20):

BIO-2 Continued:

Section D, Paragraphs 5: The Draft EIS presents a discussion of impacts to all sensitive plant and wildlife species known to be present in the proposed action area. Impacts to the desert tortoise are given appropriate prominence in the impact analysis, as it is the only resident species listed under the Federal ESA.

Section D, Paragraphs 6-7: While it is true that survey methods have changed and continue to change, it is not true that these changes invalidate previous estimates of tortoise density or abundance. The surveys conducted in 1997/1999 (Woodman et al. 2001) represent the best available information for tortoise density on the Combat Center. Tortoise surveys are currently being conducted at the Combat Center as directed under the Integrated Natural Resources Management Plan and the Basewide Biological Opinion; however, the results of these surveys will not be available until 2012 and thus could not be included in the EIS. Surveys conducted for the study areas (Karl 2010) used both the accepted USFWS protocol and the TRED model survey. Calculations of abundance and density for were performed for both methods for the preferred alternative (Alternative 6) as part of the Section 7 consultation process with USFWS. The values generated by these two methods were similar, with the TRED model survey providing a smaller confidence interval and greater precision than the USFWS. Therefore, the TRED model survey was presented in the EIS as the most accurate and detailed model. The conclusion drawn in your comment regarding the comparison of tortoise densities on the Combat Center and the west study area (Section D, paragraph 7) is inaccurate.

Comment ID: N-00274 (Page 7 of 20)

GATZKE DILLON & BALLANCE LLP
Naval Facilities Engineering Command Southwest
ATTN: 29 Palms EIS Project Manager
May 24, 2011
Page 7

The Biological Resource appendix is likewise deficient. It does not describe existing biological conditions on the affected site(s) or specifically identify where they exist. Nor does it explain how and to what extent biological resources will be affected by the project. Rather, the Biological Resource appendix simply describes the types of disturbances that currently occur on the Combat Center and in the proposed expansion areas, and then draws some conclusions regarding the project's potential impacts on the federally-listed desert tortoise. No other species is discussed. So this Biological Resource appendix cannot serve as the technical basis for the impact analysis set forth in the biology section of EIS. Even if the desert tortoise discussion was adequate (which it is not, see below), the absence of any assessment of project impacts on desert birds, mammals, other reptiles, sensitive plants, and wildlife movement, renders the document incomplete and defective. The EIS also refers to the 2007 Basewide Biological Opinion prepared by the USFWS (the 2007 BO), and contends that the conservation measures from this BO will effectively mitigate Project impacts on desert tortoise. As with other critical documents, however, the 2007 BO is not included in the EIS as an appendix, so there is no way for the public to review its contents or test the assertions made in the EIS.

GEN-1

The Cultural Resource appendix is also of little value. It is merely a compendium of the various known artifacts and historical sites that exist in the areas being proposed for annexation to the base. Nowhere does the appendix actually evaluate the proposed Project's potential to damage or destroy these artifacts and/or historical sites. Therefore, it, too, is wholly inadequate and may not serve as the technical basis for the EIS's analysis of Project impacts on cultural resources.

Finally, as indicated above, the EIS provides no data whatsoever as to the cost of the proposed Project, including costs associated with the MEB training operations to be conducted on the newly-acquired land.

B. The EIS Fails to Analyze USMC Potential to Deplete Aquifers in Western Study Area

On page 3.13-19, the EIS makes a startling disclosure: The Combat Center is running out of water and has no current means to augment its supply.[8] Specifically, the Combat Center obtains all of its water – potable and non-potable – through groundwater pumping. However, the aquifer that provides most of this water, Surprise Spring, is becoming dangerously depleted. In

NEPA-4

[8] The EIS attempts to downplay this problem by claiming that conservation efforts at the Combat Center have reduced water consumption by 26% over the last decade. However, despite these reductions in consumption, the Combat Center still overdrafts the Surprise Spring aquifer by 2,900 acre feet (AF) per year, and overdrafts the Twentynine Palms Valley aquifer by 1,040 AF per year. (Table 3.13-5).

Response to Comment N-00274 (Page 7 of 20):

BIO-2 Continued:

Information from one survey cannot be used to identify a trend – the USFWS requires more than 10 years of surveys across their monitoring strata to even begin to identify population trends (USFWS 2010). Further, mountainous areas not suitable for desert tortoises compose a much larger portion of the Combat Center than in the west study area, thus leading to large areas of low desert tortoise density on the Combat Center. Taking into account the different density categories used in the Combat Center desert tortoise density surveys as compared to the west study area surveys, as well as the topography, the densities observed on the Combat Center after decades of military training are roughly comparable to those observed in the west study area – large areas of low densities with pockets of moderate density where habitat is most suitable and disturbance is lower.

Section D, Paragraph 8: The estimates of take presented in the Draft EIS include a large range only when including potential impacts on the existing Combat Center. Estimates of take in the lands to be acquired have much less spread due to survey data with a greater number of density "categories". As noted in your comment, the Marine Corps consulted with the USFWS under Section 7 of the Endangered Species Act to formally identify an estimate of "take" under the preferred alternative, as well as appropriate conservation measures to minimize or offset potential impacts to tortoises and tortoise habitat. The outcome of this consultation is detailed in the USFWS Biological Opinion (see Appendix O of the Final EIS). The Draft EIS does not state that the project would have "no significant effects" on biological resources, as your comment suggests.

Comment ID: N-00274 (Page 8 of 20)

GATZKE DILLON & BALLANCE LLP
Naval Facilities Engineering Command Southwest
ATTN: 29 Palms EIS Project Manager
May 24, 2011
Page 8

fact, the Marine's have so overdrafted the aquifer that groundwater levels have dropped by as much as 190 feet. (EIS, 3.13-19) Worse, Surprise Spring is an ancient aquifer that does not recharge readily, which means that it "is not a renewable resource." (EIS, 3.13-19) In short, the Combat Center's primary source of water is rapidly disappearing and the Marines desperately need to find another one.[9]

The Western Study Area ("WSA"), by contrast, overlies a different groundwater subbasin – one with a substantial supply of water. (EIS, 3.13-20; Table 3.13-5) It would appear, then, that the Marine Corps, apart from wanting the WSA for military training operations, may also be looking to acquire access to the groundwater resources beneath it. Although the groundwater from the Johnson Valley and Means Valley aquifers is high in Total Dissolved Solids (TDS), it can either be treated for potable uses, or "blended" with higher-quality water for a variety of potable and non-potable uses. The EIS never acknowledges that the Marines plan to use WSA groundwater to supplement existing supplies. Indeed, the EIS does not even discuss this very plausible scenario, and for this reason alone is defective. Nevertheless, the EIS does mention that the Marines are "evaluating plans to 'blend' groundwater from the Surprise Spring subbasin with those [sic] from another aquifer(s)." (EIS, 3.13-19) These blending scenarios were apparently modeled by the USGS in 2008. (*Ibid.*) However, the details of this modeling effort are not provided.

Nevertheless, the water resource data set forth in the EIS, while cryptic, suggest strongly that the Marine Corps, once it secures possession of the WSA, will begin pumping groundwater from the Johnson Valley and Means Valley aquifers to blend with water derived from Surprise Spring. The EIS, however, fails to assess whether and to what extent this effort to temporarily address the Combat Center's water shortage will deplete the aquifers in Johnson Valley and Means Valley. In fact, the EIS does not even disclose how much water the proposed Project will require. As a result, the EIS is deficient as a matter of law.

In short, the Combat Center's undisclosed desire to acquire the water beneath the WSA reminds one of the following dialogue from the movie *Chinatown*:

> Noah Cross: "You see Mr. Gittes. Either you bring the water to L.A. – or your bring L.A. to the water."
>
> Jake Gittes: "How do you do that?"

[9] The Combat Center also draws groundwater from the Twentynine Palms Valley subbasin, which is also depleted and functions at a recharge deficit. (Table 3.13-5)

NEPA-5

Response to Comment N-00274 (Page 8 of 20):

BIO-2 Continued:

In several locations (e.g., Table ES-2, page 4.10-11, Table 4.10-14), it is clearly stated that impacts to the desert tortoise would be significant. Finally, a suite of mitigation measures being developed with USFWS, such as a translocation plan, designation of new Special Use Areas, etc. are described in more detail in the Final EIS and would be expected to reduce the take of tortoises, though not to a level of less than significant.

REC-1:

Section 4.2.1, Approach to Analysis for Recreation, acknowledges incomplete or unavailable information, therefore, in accordance with CEQ regulations the Marine Corps conducted interviews with BLM and other key recreation organizations and stakeholders to obtain reliable data and assumptions on annual visitor-days of use. The Marine Corps worked closely with BLM to develop reasonable assumptions for estimated loss of visitor-days of use from Johnson Valley as described under each action alternative. These assumptions were approved by BLM staff knowledgeable about and responsible for recreation management of the Johnson Valley OHV Area.

As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a Displaced OHV Recreation Study (DORS) to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS.

NEPA-5

C. The EIS Noise Analysis is Inadequate

As indicated above, the EIS does not actually provide a Noise Study as a technical appendix. Instead, Appendix H is simply a primer on noise modeling and does not provide any data on the existing sound environment or the Project's impact on that environment. Likewise, the EIS itself fails to describe ambient sound levels in and adjacent to the three study areas – i.e., the WSA, the Eastern Study Area ("ESA"), or the Southern Study Area ("SSA"). Without existing sound level data, there is no way to measure the extent to which the Project will alter the current sound environment. Nor is there any way to determine whether the Project's net impact on noise is significant.

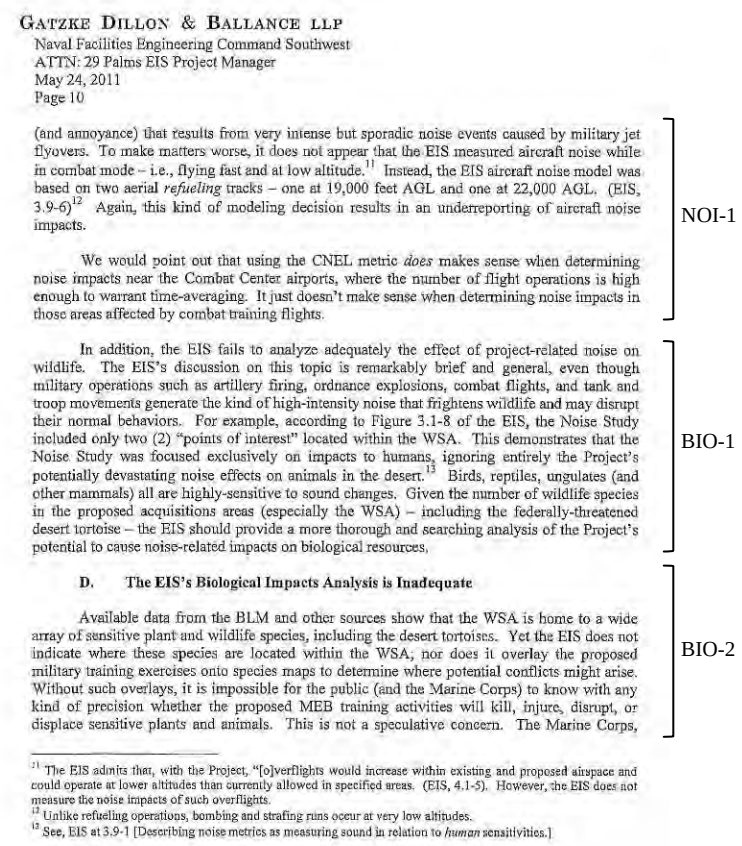
Even the baseline used for "existing" noise conditions at the *Combat Center* defies logic. Rather than measure *current* aircraft noise (i.e., from 2008 or 2009), the EIS uses a 2003 noise study – WR 02-13 – that is based on airfield operations that took place in 2001. Not only is such information 10 years old, it fails to account for the significant increase in flight operations that has occurred since the "War on Terror" began. It appears that the Marines, in an effort to trim costs and/or save time, simply pulled an old noise study off the shelf rather than perform a new one. NEPA does not permit this kind of sloppy work, especially since there is nothing preventing the Marines from conducting a fully updated noise study at the Combat Center. There is also no explanation for altering the noise model to reflect "annual average daily operations" instead of "annual average *busy* day operations." (See, EIS, 3.9-4) This change results in an underreporting of potential noise effects.

NOI-1

The EIS noise analysis also uses the wrong metric for determining the significance of project-related noise events. For example, the MEB training contemplated by the proposed Project entails low-altitude strafing and bombing runs by fixed and non-fixed wing aircraft.[10] Flight operations such as these create high-intensity noise of very short duration, resulting in substantial annoyance to any person living or working nearby. Rather than assess this impact using the Lmax noise metric, which is specifically designed to measure impulsive sound, the EIS uses the Community Noise Equivalent Level (CNEL) metric, which averages noise levels over a certain period of time, usually 24 hours. Obviously, this metric will not fully capture the noise

[10] According to the EIS, combat training flights will be conducted at altitudes as low as 500 feet above ground level (AGL). (EIS, 3.7-9)

Response to Comment N-00274 (Page 9 of 20):



REC-1 Continued:

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

AQ-1:

Comment noted. Table 5-3 in the FEIS has been revised to include the 2009 GHG emissions for the Combat Center. Climate change is a global effect or impact. As stated on DEIS page 5-33, currently, there are no formally adopted or published NEPA thresholds of significance for GHG emissions. The Marine Corps chooses to use the U.S. GHG inventory as an indicator of the baseline for global GHG emissions on which to compare proposed GHG emissions. This comparison is deemed adequate to determine the significance of proposed GHG emissions for NEPA purposes. The fact that the Marine Corps utilized one of the approved methods for demonstrating conformity that resulted in a commitment from the MDAQMD to account for criteria emissions in their next attainment planning budget bears no legal nexus to what standards should be used to determine the significance of project GHG emissions.

Comment ID: N-00274 (Page 10 of 20)

Page 10

(and annoyance) that results from very intense but sporadic noise events caused by military jet flyovers. To make matters worse, it does not appear that the EIS measured aircraft noise while in combat mode – i.e., flying fast and at low altitude.[11] Instead, the EIS aircraft noise model was based on two aerial *refueling* tracks – one at 19,000 feet AGL and one at 22,000 AGL. (EIS, 3.9-6)[12] Again, this kind of modeling decision results in an underreporting of aircraft noise impacts.

NOI-1

We would point out that using the CNEL metric *does* makes sense when determining noise impacts near the Combat Center airports, where the number of flight operations is high enough to warrant time-averaging. It just doesn't make sense when determining noise impacts in those areas affected by combat training flights.

In addition, the EIS fails to analyze adequately the effect of project-related noise on wildlife. The EIS's discussion on this topic is remarkably brief and general, even though military operations such as artillery firing, ordnance explosions, combat flights, and tank and troop movements generate the kind of high-intensity noise that frightens wildlife and may disrupt their normal behaviors. For example, according to Figure 3.1-8 of the EIS, the Noise Study included only two (2) "points of interest" located within the WSA. This demonstrates that the Noise Study was focused exclusively on impacts to humans, ignoring entirely the Project's potentially devastating noise effects on animals in the desert.[13] Birds, reptiles, ungulates (and other mammals) all are highly-sensitive to sound changes. Given the number of wildlife species in the proposed acquisitions areas (especially the WSA) – including the federally-threatened desert tortoise – the EIS should provide a more thorough and searching analysis of the Project's potential to cause noise-related impacts on biological resources.

BIO-1

D. The EIS's Biological Impacts Analysis is Inadequate

Available data from the BLM and other sources show that the WSA is home to a wide array of sensitive plant and wildlife species, including the desert tortoises. Yet the EIS does not indicate where these species are located within the WSA; nor does it overlay the proposed military training exercises onto species maps to determine where potential conflicts might arise. Without such overlays, it is impossible for the public (and the Marine Corps) to know with any kind of precision whether the proposed MEB training activities will kill, injure, disrupt, or displace sensitive plants and animals. This is not a speculative concern. The Marine Corps,

BIO-2

[11] The EIS admits that, with the Project, "[o]verflights would increase within existing and proposed airspace and could operate at lower altitudes than currently allowed in specified areas. (EIS, 4.1-5). However, the EIS does not measure the noise impacts of such overflights.
[12] Unlike refueling operations, bombing and strafing runs occur at very low altitudes.
[13] See, EIS at 3.9-1 [Describing noise metrics as measuring sound in relation to *human* sensitivities.]

Response to Comment N-00274 (Page 10 of 20):

SOC-1:

The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

WAT-1:

Section 3.13.1 of the EIS states that all naturally occurring, surface water features are ephemeral and contain water only during and after infrequent rain events. The EIS also states that no information is available on existing water quality conditions associated with intermittent wet areas (washes and playas) at the Combat Center. It is likely that water quality for intermittent flows is influenced by the amounts of suspended sediment and/or dissolved salts, which are expected to vary for different substrate types, such as bedrock, alluvial fans, and playa surfaces.

Page 11

during the planned MEB exercises, intends to activate 15,000 to 20,000 troops, backed by tanks and other vehicles, and engage in live-fire combat training. This will involve hundreds of thousands of rounds of small arms ammunition, artillery rounds, tank rounds, and missiles delivered from aircraft. The exercise areas will effectively be transformed into highly-violent war zones. In such a situation, there is no question that existing wildlife will be killed or injured or, at the very least, displaced. However, the EIS provides very little information on this subject.

Perhaps the Marine Corps is assuming the Section 7 Biological Opinion will cover these issues. If so, the assumption is unfounded. First, the Biological Opinion, when completed, will only address potential impacts on federally-listed species – i.e., the desert tortoise. No other species will be covered. Second, the Biological Opinion is required under the Endangered Species Act; it does not satisfy the Marine Corps' separate and independent obligation under NEPA to disclose impacts to biological resources.

BIO-2

Part of the problem is that the Marines, in preparing the EIS, conducted very few wildlife studies of the 180,000-acre WSA. According to Table 3.10-1 of the EIS, the Marines performed the following biological resource surveys in the WSA: (1) one survey for special status plants in 2008, (2) one survey for reptiles and burrowing owl in 2008, and (3) one survey for Mojave ground squirrel in 2008. No bird surveys (other than for burrowing owl) were conducted. No mammal surveys (other than for Mojave ground squirrel) were conducted. There was no attempt to identify and locate bat roosts. Insects were not surveyed at all. As a result, the EIS does not provide a complete or reliable inventory of the various plant and wildlife species that exist in the WSA, even though the BLM possesses much of this information.[14]

The EIS also fails to discuss the potential for lead and other chemicals from expended ordnance to enter the water supply used by wildlife or to accumulate in the plant materials eaten by wildlife.

Another shortcoming of the EIS biological impacts analysis is that it tends to focus myopically on the desert tortoise and pays scant attention to the other sensitive species in the

[14] Although Figure 3.10-5 of the EIS purports to depict the vegetation communities of the West, East, and South studies areas, the vegetative mapping for the WSA so coarse as to be worthless. The EIS itself admits that "[u]nlike the Combat Center and the other two acquisition study areas, plant communities have not been mapped to a high level of detail within the entirety of the west study area." (EIS, 3.10-34) In fact, only 57% of the WSA has been subjected to high-quality mapping. With respect to where in the WSA certain wildlife species reside, Table 3.10-7 provides only the most general information. For example, when discussing the desert tortoise, the table indicates that the species "[o]ccurs in suitable habitat throughout the west study area." As to the Mojave fringe-toad lizard, the table states that this species "[o]ccurs in the southern portion of the west study area." For purposes of determining whether the military activities contemplated under the proposed Project will affect these species and their habitat, such vague statements have almost no value.

Response to Comment N-00274 (Page 11 of 20):

WAT-1 Continued:

The impacts to ephemeral streams or intermittent washes are discussed on page 4.13-5 in section 4.13.2.1. The EIS mentions that exercises avoid playas to the extent possible. Specifically, "Combat Center Order 5090.1D (MAGTF Training Command 2006) provides general guidance for avoiding impacts to natural resources, as well as specific guidance for avoiding disturbance of playas or other sensitive areas. The existing INRMP and compliance under Combat Center Order 5090.1D applies to existing and continued use in the Combat Center and would be expanded to cover the acquisition areas."

AQ-2:

The use of the 2002 baseline data provides for a more conservative analysis than using the higher 2009 baseline, thus ultimately providing a more accurate calculation of change in emissions since the higher 2009 levels would not be representative of emissions levels in future years.

Comment ID: N-00274 (Page 12 of 20)

affected areas. This is not to say that impacts on the tortoise are unimportant. On the contrary, they are critically important, and this Project has the potential to "take" scores of tortoises annually, possibly upsetting the fragile state of the species' recovery. However, the tortoise is *not* an umbrella species for all or even most of the other wildlife in the study areas. Therefore, the EIS must give a full accounting of potential impacts on all sensitive birds, mammals (including bats), reptiles, amphibians, and insects that use or reside in these parts of the Mojave Desert.

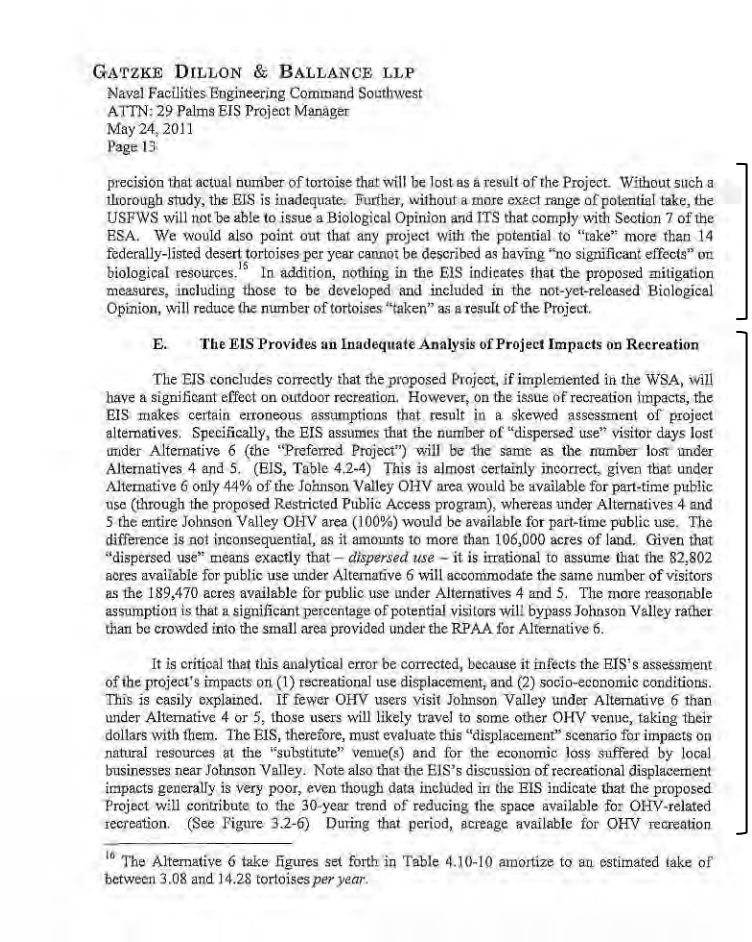
With respect to Project impacts on the desert tortoise, the EIS has major baseline data problems. In recent years, tortoise experts and statisticians have realized that survey methods used in the 1980s and 1990s, including the manner in which transects were run, produced unreliable results. In fact, data from surveys conducted prior to 2005 are largely unusable; and they certainly cannot be mixed with or compared to data from surveys conducted from 2005 onward. However, this is exactly the error that the EIS makes in its tortoise analysis. For tortoise densities on the *Combat Center*, the EIS relies on strip transect surveys conducted in 1997 and 1999. (EIS, 3.10-24) For tortoise densities in the *WSA*, the EIS relies on tortoise sign surveys conducted in 2009. (EIS, 3.10-41) The EIS then tries to compare these two data sets, which any tortoise expert knows is a dubious exercise.

About the only meaningful conclusion to be drawn from the tortoise data derived from surveys of the Combat Center is that base operations have resulted in significant reductions in tortoise density, at least compared to similar habitat areas adjacent to the base – e.g., those in WSA. In light of this, the proposed Project, if implemented in the WSA, may cause similar tortoise declines in the expansion area. The EIS does not really tackle this issue. Instead, it suggests that there will be no net change in threats to the tortoise, since the Project would displace existing OHV activities. However, this is an oversimplified and inaccurate analysis. There is no data indicating that OHV use in the WSA (Johnson Valley) has resulted in perceptible declines in tortoise populations. In fact, tortoise densities in Johnson Valley have been and remain significantly higher than tortoise densities on the Combat Center (allowing, of course, for discrepancies in the survey methods and data).

Finally, on the matter of the Project's anticipated "take" of tortoises, the EIS states that under Alternative 6 (Preferred Alternative), the Project, over its 50-year life, would result in the take of between 154 and 714 tortoises at the base. (Table 4.10-10)[15] This is quite a large range. Although the Biological Opinion for this Project has not yet been released, it would be unusual for the USFWS to issue an Incidental Take Statement ("ITS") where the "take" range is so wide. The Marines must conduct a more thorough study of potential "take" to predict with greater

[15] These figures include "take" of tortoises in the Combat Center as well as the proposed acquisition areas. (See Table 4.10-10)

BIO-2



Response to Comment N-00274 (Page 12 of 20):

AQ-3:

The method utilized by the Marine Corps to demonstrate conformity in this case is specifically prescribed by MDAQMD Rule 2002(H)(1)(e). The SIP revision method for demonstrating conformity was not pre-decisional because, at the time that the conformity analysis was submitted to the MDAQMD, no irreversible or irretrievable commitments of resources had been dedicated to any of the project alternatives. Moreover, the similarity of the air impacts associated with each alternative and the flexibility of the consultation process ensures that no particular institutional bias supported the preferred alternative or any other alternative. In short, both the Marine Corps and the State of California were free to disapprove the preferred alternative and to consider air impacts associated with other alternatives. That flexibility remains to this day.

The following discussion illustrates the 9th Circuit's approach to timing of NEPA analysis: "As provided in the regulations promulgated to implement NEPA, 'agencies shall integrate the NEPA process with other planning *at the earliest possible time* to insure that planning and decisions reflect environmental values, to avoid delays later in the process, and to head off potential conflicts.' 40 C.F.R. § 1501.2 (emphasis added); *see also id.* § 1502.5 ('An agency shall commence preparation of an [EIS] as close as possible to the time the agency is developing or is presented with a proposal....').

Page 13

precision that actual number of tortoise that will be lost as a result of the Project. Without such a thorough study, the EIS is inadequate. Further, without a more exact range of potential take, the USFWS will not be able to issue a Biological Opinion and ITS that comply with Section 7 of the ESA. We would also point out that any project with the potential to "take" more than 14 federally-listed desert tortoises per year cannot be described as having "no significant effects" on biological resources.[15] In addition, nothing in the EIS indicates that the proposed mitigation measures, including those to be developed and included in the not-yet-released Biological Opinion, will reduce the number of tortoises "taken" as a result of the Project.

BIO-2

E. The EIS Provides an Inadequate Analysis of Project Impacts on Recreation

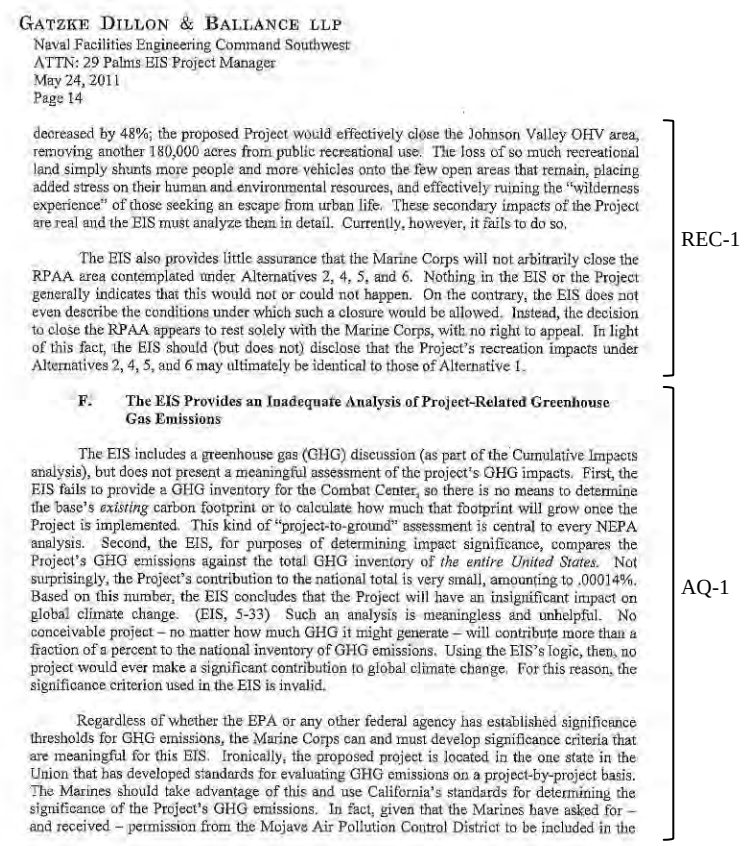
The EIS concludes correctly that the proposed Project, if implemented in the WSA, will have a significant effect on outdoor recreation. However, on the issue of recreation impacts, the EIS makes certain erroneous assumptions that result in a skewed assessment of project alternatives. Specifically, the EIS assumes that the number of "dispersed use" visitor days lost under Alternative 6 (the "Preferred Project") will be the same as the number lost under Alternatives 4 and 5. (EIS, Table 4.2-4) This is almost certainly incorrect, given that under Alternative 6 only 44% of the Johnson Valley OHV area would be available for part-time public use (through the proposed Restricted Public Access program), whereas under Alternatives 4 and 5 the entire Johnson Valley OHV area (100%) would be available for part-time public use. The difference is not inconsequential, as it amounts to more than 106,000 acres of land. Given that "dispersed use" means exactly that – *dispersed use* – it is irrational to assume that the 82,802 acres available for public use under Alternative 6 will accommodate the same number of visitors as the 189,470 acres available for public use under Alternatives 4 and 5. The more reasonable assumption is that a significant percentage of potential visitors will bypass Johnson Valley rather than be crowded into the small area provided under the RPAA for Alternative 6.

REC-1

It is critical that this analytical error be corrected, because it infects the EIS's assessment of the project's impacts on (1) recreational use displacement, and (2) socio-economic conditions. This is easily explained. If fewer OHV users visit Johnson Valley under Alternative 6 than under Alternative 4 or 5, those users will likely travel to some other OHV venue, taking their dollars with them. The EIS, therefore, must evaluate this "displacement" scenario for impacts on natural resources at the "substitute" venue(s) and for the economic loss suffered by local businesses near Johnson Valley. Note also that the EIS's discussion of recreational displacement impacts generally is very poor, even though data included in the EIS indicate that the proposed Project will contribute to the 30-year trend of reducing the space available for OHV-related recreation. (See Figure 3.2-6) During that period, acreage available for OHV recreation

[16] The Alternative 6 take figures set forth in Table 4.10-10 amortize to an estimated take of between 3.08 and 14.28 tortoises *per year*.

Response to Comment N-00274 (Page 13 of 20):



AQ-3 Continued:

Furthermore, (the Ninth Circuit) has interpreted these regulations as requiring agencies to prepare NEPA documents, such as an EA or an EIS, 'before any irreversible and irretrievable commitment of resources.' *Conner v. Burford*, 848 F.2d 1441, 1446 (9th Cir. 1988); *see also EDF v. Andrus*, 596 F.2d 848, 852 (9th Cir. 1979)." Metcalf v. Daley, 214 F.3d 1135, 1143 (9th Cir. 2001).

In this case, only the emissions associated with the approved alternative were submitted to the air quality experts for their review and approval. However, any of the six alternatives could be subjected to the same or similar analysis if it were chosen, even still to this day. Only one alternative was submitted in order to maintain administrative efficiency and avoid unnecessary work requests to the State agencies. No irreversible or irretrievable commitments of resources were (or are) dedicated to the preferred alternative when the conformity analyses were submitted to the State and Federal air quality experts.

Neither MDAQMD Rule 2002 nor Part 93 of Title 40 of the CFR requires the EPA to formally approve the conformity analysis for this project. The Marine Corps provided EPA Region IX with its conformity analysis along with all other required recipients discussed in Rule 2002(E)&(F). This included publishing notice of the availability of the conformity analysis in locally published newspapers.

Comment ID: N-00274 (Page 14 of 20)

GATZKE DILLON & BALLANCE LLP
Naval Facilities Engineering Command Southwest
ATTN: 29 Palms EIS Project Manager
May 24, 2011
Page 14

decreased by 48%; the proposed Project would effectively close the Johnson Valley OHV area, removing another 180,000 acres from public recreational use. The loss of so much recreational land simply shunts more people and more vehicles onto the few open areas that remain, placing added stress on their human and environmental resources, and effectively ruining the "wilderness experience" of those seeking an escape from urban life. These secondary impacts of the Project are real and the EIS must analyze them in detail. Currently, however, it fails to do so.

The EIS also provides little assurance that the Marine Corps will not arbitrarily close the RPAA area contemplated under Alternatives 2, 4, 5, and 6. Nothing in the EIS or the Project generally indicates that this would not or could not happen. On the contrary, the EIS does not even describe the conditions under which such a closure would be allowed. Instead, the decision to close the RPAA appears to rest solely with the Marine Corps, with no right to appeal. In light of this fact, the EIS should (but does not) disclose that the Project's recreation impacts under Alternatives 2, 4, 5, and 6 may ultimately be identical to those of Alternative 1.

REC-1

F. The EIS Provides an Inadequate Analysis of Project-Related Greenhouse Gas Emissions

The EIS includes a greenhouse gas (GHG) discussion (as part of the Cumulative Impacts analysis), but does not present a meaningful assessment of the project's GHG impacts. First, the EIS fails to provide a GHG inventory for the Combat Center, so there is no means to determine the base's *existing* carbon footprint or to calculate how much that footprint will grow once the Project is implemented. This kind of "project-to-ground" assessment is central to every NEPA analysis. Second, the EIS, for purposes of determining impact significance, compares the Project's GHG emissions against the total GHG inventory of *the entire United States.* Not surprisingly, the Project's contribution to the national total is very small, amounting to .00014%. Based on this number, the EIS concludes that the Project will have an insignificant impact on global climate change. (EIS, 5-33) Such an analysis is meaningless and unhelpful. No conceivable project – no matter how much GHG it might generate – will contribute more than a fraction of a percent to the national inventory of GHG emissions. Using the EIS's logic, then, no project would ever make a significant contribution to global climate change. For this reason, the significance criterion used in the EIS is invalid.

Regardless of whether the EPA or any other federal agency has established significance thresholds for GHG emissions, the Marine Corps can and must develop significance criteria that are meaningful for this EIS. Ironically, the proposed project is located in the one state in the Union that has developed standards for evaluating GHG emissions on a project-by-project basis. The Marines should take advantage of this and use California's standards for determining the significance of the Project's GHG emissions. In fact, given that the Marines have asked for – and received – permission from the Mojave Air Pollution Control District to be included in the

AQ-1

Response to Comment N-00274 (Page 14 of 20):

AQ-3 Continued:

Section I, Last Paragraph: Although there have been informal suggestions that particulate matter (PM) could play a role in Upper Respiratory Tract Disease, there is no published literature that demonstrates a linkage. Therefore, inclusion of such a statement would be speculative. However, please note that text in the Final EIS has been revised to mention the potential for impacts to tortoises and other animals due to reduced plant productivity associated with dust deposition on leaf surfaces (see Wildlife, Desert Tortoise impact discussions). Note that the author of the studies on productivity and dust deposition noted that the summer rainstorms typical of the west Mojave ameliorate much of the dust impact (Sharifi 1999).

AQ-4:

Compliance with ambient air quality standards is determined by estimating the impacts of proposed emissions to "public lands" and not within the "facility" that contains these emissions. In the case of the DEIS PM_{10} dispersion modeling analyses, the "facility" is defined as any location within the Combat Center boundaries proposed by each project alternative. Any location outside of these boundaries is considered to be "public lands". The focus of the dispersion modeling analysis is to identify the maximum project PM_{10} impact on public lands, which would occur immediately outside of these boundaries. This is the case, as due to the nature of atmospheric dispersion, "PM_{10} disperses quickly over distance", as acknowledged by the commenter. Therefore, the DEIS and project PM_{10} conformity determination did not under-report modeled PM_{10} impacts.

Page 15

District's portion of the California State Implementation Plan, GGH emissions from the Combat Center and the proposed Project should be assessed using California's standards. AQ-1

G. The EIS Provides a Skewed Assessment of the Project's Adverse Impacts on the Local Economy

The EIS contends that the Project will add 70 personnel to the existing population at the Combat Center, and that these 70 individuals will generate, collectively, $4.5 million in county-wide spending, thus off-setting the economic losses caused by shutting down the Johnson Valley OHV area. This claim is hard to square with the fact that, according to the EIS, Johnson Valley OHV area experiences approximately 300,000 visitor days per year. (See, EIS, Table 3.2-9)[17] For the EIS's claim to be valid, each visitor would have to spend less than $15 per day. This contradicts Table 3.3-8 of the EIS, which indicates that the average person spends more than $31.00 per visitor use day.

The $4.5 million attributed to new base employee spending, while not inconsequential, cannot compete with the $338.8 million (in 2003 dollars) generated by recreational visitation, including OHV-related recreation, in the Mojave Desert Region. (See EIS Table 3.3-7, citing Economic Benefits study conducted by California Department of Parks and Recreation.) SOC-1

More important, however, is the fact that the Project will have a disproportionate and devastating economic impact on those communities closest to, and most dependent on, the Johnson Valley OHV area – e.g., Lucerne Valley. (See, Table 4.3-13)[18] The EIS speculates that these businesses will be able to make up the difference by serving non-OHV visitors on their way to Big Bear Lake. (EIS, 4.3-9) However, there is no evidence to support this contention. The EIS also argues that because Lucerne Valley has historically experienced a 20% turnover rate in its businesses, the community is accustomed to economic fluctuations and will adjust to the new reality occasioned by the project. (EIS, 4.3-9) Based on this rather flip analysis, the EIS concludes that the Project will not have a significant impact on Lucerne Valley or other local economies. Such a conclusion reflects both insensitivity to and ignorance of the economic

[17] We believe the 300,000 annual visitor use day figure used is low by a factor of at least two. The figure is comes from the BLM, which historically underreports visitor numbers. Further, as pointed out in the EIS, Johnson Valley has a number of entry and exit points, most of which are not monitored by BLM. As a result, many visitors are never counted and the durations of their visits are not determined.

[18] According to Table 4.3-13, the Project, under Alternative 6 (the Preferred Project), would reduce recreational and film spending in the local community by 24.6% and local tax revenues by 24.7%. Given the small profit margins of most small businesses, this kind of drop in revenues would be devastating.

Response to Comment N-00274 (Page 15 of 20):

NEPA-6:

The proposed action and alternatives, including the No-Action Alternative are described in Chapter 2 of the EIS. Although the No-Action Alternative does not meet the purpose of and need for the proposed action, it has been carried forward for analysis in the EIS as described in Chapter 4 under each resource area. Ultimately, Congress will make the final decision about proceeding with the proposed action.

NEPA-7:

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

NEPA-8:

In accordance with NEPA, the EIS discloses and analyzes the environmental consequences of the proposed action and alternatives under each resource area, as described in Chapter 4 of the EIS.

AQ-5:

Comment noted. The FEIS includes definitions of sensitive receptors and qualitatively discusses how proposed air emissions would impact these receptors.

Comment ID: N-00274 (Page 16 of 20)

Response to Comment N-00274 (Page 16 of 20):

realities facing the business owners (and employees) of Lucerne Valley and the other towns that rely on OHV-related revenues. SOC-1

H. The EIS Provides an Inadequate Analysis of the Project's Impacts on Water Quality

As shown in Figure 3.13-1 of the EIS, the WSA is laced with washes, rivulets, and dry lake beds that receive and/or convey water during rain events. In addition, much of the WSA overlies groundwater aquifers. These water sources are critical to the vegetation and wildlife in the WSA. The EIS, however, does not describe the existing water quality conditions at these water sources. Nor does it provide anything more than a superficial analysis of the proposed Project's potential to contaminate these water sources with munitions constituents (MC) and hydrocarbons from fuel discharges. WAT-1

I. The EIS Provides an Inadequate Analysis of the Project's Impacts on Air Quality

1. Baseline Emissions.

The method used to perform the Air Quality impacts analysis is highly-suspect. For example, when establishing baseline pollutant levels (including those for PM_{10}), the EIS uses emissions levels from the Combat Center as measured in 2002, even though emissions data from 2009 are available. Of course, the 2009 emissions are substantially higher. The EIS discounts these, however, claiming that "the high levels of existing training exercises at the Combat Center would revert back to pre-war levels (before 2003)." (EIS, 4.8-2) There is no evidence offered in support of this assumption; and for purposes of NEPA, baseline conditions are those which exist at the time the EIS is being prepared, not those that existed at some arbitrary point in the past. AQ-2

2. Ozone.

The EIS acknowledges that the proposed Project will generate ozone (O_3) in quantities that exceed National Ambient Air Quality Standards (NAAQS), thereby requiring that the Marines subject the Project to a "conformity analysis." (EIS, 4.8-6) In this case, however, the Marines did not perform a conformity analysis at all. Instead, they requested that the Mojave Desert Air Quality Management District ("MDAQMD") and the California Air Resources Board ("CARB") "include these emissions from Alternative 6 into the next O_3 SIP revision for the MDAB (MDAQMD 2010a and ARB 2011)." (*Ibid.*)[19] According to the EIS, this will ensure AQ-3

[19] See also EIS, 4.8-18.

Comment ID: N-00274 (Page 17 of 20)

Response to Comment N-00274 (Page 17 of 20):

that Alternative 6 conforms to the SIP, thereby eliminating the "significance" of the Project's ozone impacts.

There are two problems with this analysis. First, it was "pre-decisional" and therefore unlawful for the Marines to request that the MDAQMD and/or CARB include the ozone emissions from Alternative 6 (or *any* alternative) in the revised SIP. By making such a request, the Marines have signaled that they intend to adopt Alternative 6, regardless of the NEPA process. In other words, the current NEPA process is a sham and a charade. The die is already cast and the Marines will not be diverted from Alternative 6, no matter what the environmental analysis might show.

Second, any SIP revision – including the one requested by the Marines for this Project – must be approved by the U.S. EPA; and there is no evidence that this has occurred. Note, too, that EPA approval, especially with respect to local changes to SIPs, is never guaranteed. As the Imperial County Air Quality District recently discovered, EPA is more than willing to disapprove any portion of a SIP revision with which it disagrees. In light of these facts, it is incorrect to assume that the Project – i.e., Alternative 6 – conforms to the SIP for ozone.

AQ-3

3. Particulate Matter.

The EIS also acknowledges that the Project will generate more PM_{10} than the NAAQSs allow. (EIS, 4.8-6; 4.8-18) To address this impact, the EIS purports to conduct a conformity analysis pursuant to MDAQMD Rule 2202(H)(1)(d)(i). (EIS, 4.8-18) In this analysis, the EIS concludes that, under Project conditions, PM_{10} concentrations at the boundary separating the WSA and the Combat Center would be 97 µg/m3. When these emissions are added to background concentrations of 52 µg/m3, the cumulative total concentration of PM_{10} is 149 µg/m3, just under the 24-hour PM_{10} NAAQS of 150 µg/m3.

What makes this conclusion dubious, however, is that the Project's PM_{10} emissions, while measured at the WSA boundary, do not actually occur at that location or reach their highest concentration there. According to the EIS, emissions will be highest during the so-called "Final Exercise," which will take place "in close proximity to the boundary of the Combat Center." (EIS, 4.8-19) The EIS does not define "close proximity," but it is safe to assume that it means the exercise will not take place on the boundary itself, which is where the air quality model makes its measurements. Because PM_{10} disperses quickly over distance, the actual emissions generated by the Final Exercise will not be fully captured if measured or modeled at

AQ-4

Comment ID: N-00274 (Page 18 of 20)

Response to Comment N-00274 (Page 18 of 20):

the WSA/Combat Center boundary line.[20] As a result, the PM_{10} concentrations described in the EIS are underreported. This, of course, directly affects the conformity determination, because if the Project's PM_{10} emissions were measured/modeled at the source – i.e., at the Final Exercise ground location – rather than at the WSA/Combat Center boundary, total PM_{10} concentrations would surely exceed the NAAQS threshold of 150 µg/m3. Therefore, the EIS conclusion regarding the "insignificance" of the Project's PM_{10} is in error.

Then there is the matter of dust and PM_{10} impacts on biological resources, especially the desert tortoise. As acknowledged in the EIS, the desert tortoises in the Mojave are susceptible to upper respiratory tract disease (URTD), which can be fatal. The EIS, however, fails to assess the extent to which dust and PM_{10} from the Project could make tortoises more vulnerable to URTD or other diseases. In addition, the EIS includes data demonstrating that project-related dust could substantially disrupt photosynthesis of desert plants, thus reducing their productivity. (EIS, 4.10-5) What the EIS fails to evaluate, however, is whether the dust impacts on plant productivity will have secondary adverse effects on available forage and shelter for desert tortoises. This issue must be addressed in the Final EIS.

AQ-4

J. The EIS Provides an Inadequate Discussion of the No-Action Alternative

The EIS fails to provide an adequate description of the No-Action Alternative; nor does it explain why the No-Action Alternative would frustrate the basic mission of the Marines. In fact, the EIS is largely dismissive of this alternative, even though NEPA *requires* that it be analyzed and considered. Worse, because the EIS does not provide a clear description of the No-Action Alternative and its effects, it is difficult to compare the other alternatives to it. Finally, the EIS should explore the possibility of improving MEB training within the confines of the No-Action Alternative. For reasons not explained in the document, this concept was not analyzed in the EIS. Note that this analysis must include a cost-benefit component.

NEPA-6

K. The EIS Fails to Recommend Feasible Mitigation Measures to Offset Significant Impacts; EIS Findings of "Infeasibility" are Not Supported by Sufficient Evidence

The EIS identifies a multitude of significant impacts that will result from the proposed Project. Only in the rarest of cases, however, does the EIS recommend mitigation measures to reduce or avoid those impacts. In all other instances (and most notably in the discussion of impacts to OHV recreation), the EIS simply concludes, without evidence or analysis, that the

NEPA-7

[20] The EIS itself admits that "PM_{10} concentrations quickly decrease with distance from the Combat Center boundary." (EIS, 4.8-20)

Comment ID: N-00274 (Page 19 of 20)

Response to Comment N-00274 (Page 19 of 20):

GATZKE DILLON & BALLANCE LLP
Naval Facilities Engineering Command Southwest
ATTN: 29 Palms EIS Project Manager
May 24, 2011
Page 19

Marine Corps could not identify feasible mitigation measures and therefore does not intend to implement any. NEPA does not allow federal agencies, even the military, to sidestep their mitigation obligations so easily. For each significant impact of the proposed Project, the Marines must develop mitigation measures or demonstrate – *with evidence* – that such measures cannot be reasonable undertaken. The Draft EIS, as currently written, does not meet this standard.

With respect to the Project significant effects on OHV recreation, the EIS cannot credibly argue that no feasible mitigation measures exist to offset these impacts. On the contrary, mitigation for such impacts is not only feasible, it's easy: The Marines can simply provide money to BLM and/or the OHV Division of the California Department of Parks and Recreation ("DPR") to purchase land near Johnson Valley for use as an OHV recreation area. Not only is the western Mojave Desert dotted with private in-holdings that could be acquired for this purpose, the OHV Division of State Parks has an actual program for purchasing such properties and turning them into OHV parks. So the EIS is incorrect is stating that there is no feasible means to mitigate the Project's impacts on recreation.

NEPA-7

L. The EIS Provides an Inadequate Description of the Project

The EIS does not quantify the extent to which the proposed Project will increase military training operations when compared to existing conditions. That is, the EIS fails to calculate and disclose the net increase in flight operations, tank miles traveled, troop exercises, ordnance expended, etc. resulting from the proposed Project. For this reason, it is impossible to fully comprehend the Project's potential impacts on the environment.

NEPA-8

M. The EIS Fails to Assess Project Impacts on Sensitive Receptors Within the Combat Center

The Combat Center at Twenty-nine Palms supports more than just combat troops conducting training exercises. It is a comprehensive military installation with on-base housing, on-base shopping centers and restaurants, and on-base civilians. Nevertheless, the EIS fails to address the Project's potential impacts on (1) Combat Center civilians, and (2) Combat Center troops not engaged in Project-related training exercises. Given that the Project will generate substantial noise and air pollution at the Combat Center, this is a major omission that must be corrected.

AQ-5

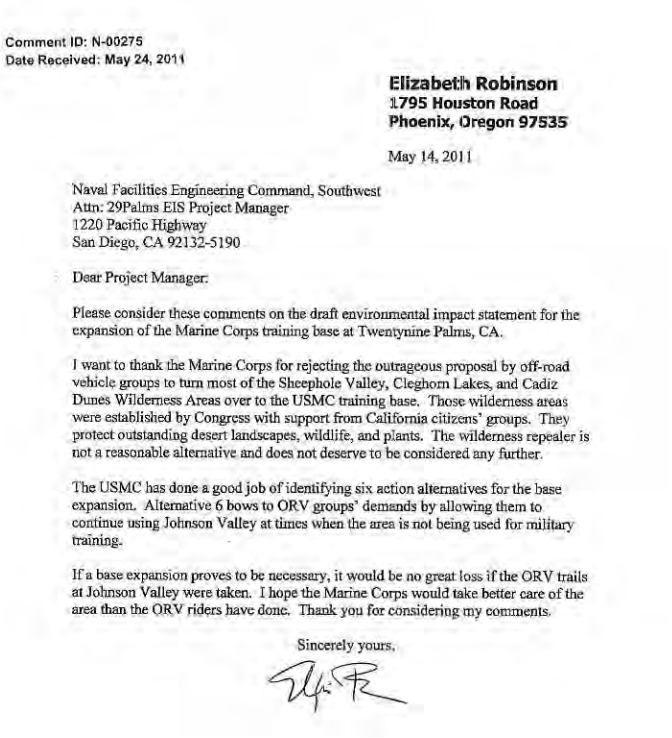
CONCLUSION

As discussed above, the proposed Project cannot be justified in terms of military necessity or cost. And the EIS prepared in support of the Project simply does not meet the minimum analytical standards established under NEPA and controlling case law. In light of

Comment ID: N-00274 (Page 20 of 20)

these facts, EcoLogic hereby registers its opposition to the Project and request that the Marine Corps scale back substantially its desire to expand the base at Twenty-Nine Palms.

Thank you for the opportunity to comment on this Project and the Draft EIS. If you have any questions concerning the content of this letter, please contact me at the address or phone number listed above.



Very truly yours,

David P Hubbard

San Diego, CA 92132-5190

Dear Project Manager:

Please consider these comments on the draft environmental impact statement for the expansion of the Marine Corps training base at Twentynine Palms, CA.

I want to thank the Marine Corps for rejecting the outrageous proposal by off-road vehicle groups to turn most of the Sheephole Valley, Cleghorn Lakes, and Cadiz Dunes Wilderness Areas over to the USMC training base. Those wilderness areas were established by Congress with support from California citizens' groups. They protect outstanding desert landscapes, wildlife, and plants. The wilderness repealer is not a reasonable alternative and does not deserve to be considered any further.

The USMC has done a good job of identifying six action alternatives for the base expansion. Alternative 6 bows to ORV groups' demands by allowing them to continue using Johnson Valley at times when the area is not being used for military training.

If a base expansion proves to be necessary, it would be no great loss if the ORV trails at Johnson Valley were taken. I hope the Marine Corps would take better care of the area than the ORV riders have done. Thank you for considering my comments.

Sincerely yours,

Response to Comment N-00275:

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

San Diego, CA 92132-5190

Dear Major General Jackson:

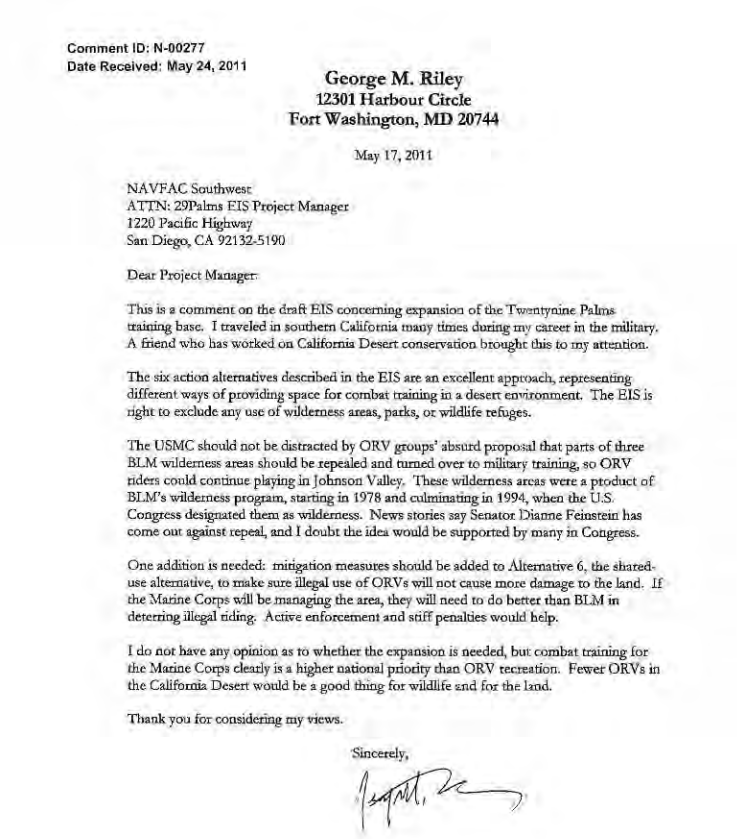
Thank you for the opportunity to comment on the 29 Palms Training Land Acquisition and Airspace Establishment Draft Environmental Impact Statement (EIS). Please note our ability to perform a detailed analysis of the EIS is limited by the absence of an accompanying Draft Aeronautical Proposal for Special Use Airspace (SUA). Development and submittal of a Draft Aeronautical Proposal initiates an aeronautical study by the FAA on impacts to the National Airspace System (NAS), which can influence the ultimate configuration of the proposed airspace.

SUA proposals are subject to both environmental and aeronautical processing requirements. Although they are distinct and separate actions, they require closely coordinated efforts. The aeronautical study can significantly impact the environmental study, leading to unnecessary costs and delays. Similarly, the environmental study can significantly impact the aeronautical study.

We highly encourage your team to continue development of a Draft Aeronautical Proposal in coordination with the Los Angeles Air Route Traffic Control Center, as our preliminary observation of the airspace proposed in the six alternatives of the EIS indicate some possible complications with existing uses of the NAS. A coordinated approach will lead to a mutually acceptable airspace agreement that will enable the USMC to accomplish their mission while minimizing the impact to other airspace users.

The FAA agreed to be a cooperating agency on the Land Acquisition and Airspace Establishment Environmental Impact Statement (EIS) on December 4, 2008. It is important to note the FAA's participation as a cooperating agency in the SUA proposal only applies to the environmental study; it does not obligate the FAA to create or modify SUA. The FAA will not make a final decision on the SUA proposal until both the aeronautical and environmental proposals are submitted and processed in accordance with applicable policy and regulations. There may be a significant delay without compliance to these requirements.

We look forward to continuing the positive and long lasting relationship the FAA has with all of your facilities.



Sincerely,

Ronald G. Beckerdite
Director, Western Service Center

San Diego, CA 92132-5190

Dear Project Manager:

This is a comment on the draft EIS concerning expansion of the Twentynine Palms training base. I traveled in southern California many times during my career in the military. A friend who has worked on California Desert conservation brought this to my attention.

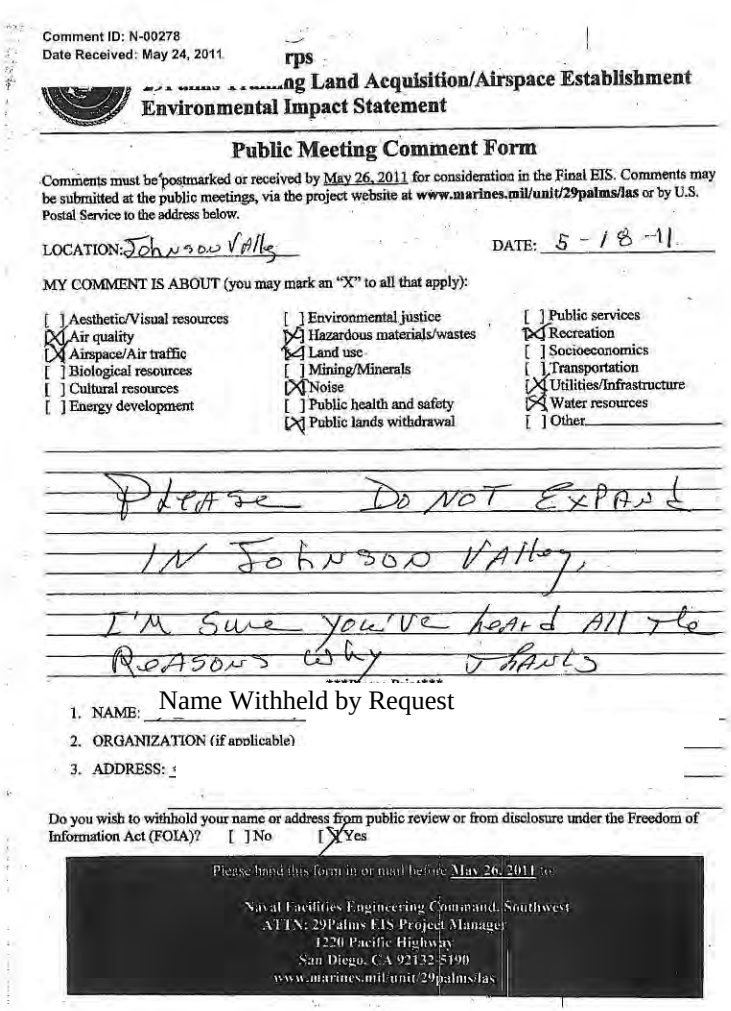
The six action alternatives described in the EIS are an excellent approach, representing different ways of providing space for combat training in a desert environment. The EIS is right to exclude any use of wilderness areas, parks, or wildlife refuges.

The USMC should not be distracted by ORV groups' absurd proposal that parts of three BLM wilderness areas should be repealed and turned over to military training, so ORV riders could continue playing in Johnson Valley. These wilderness areas were a product of BLM's wilderness program, starting in 1978 and culminating in 1994, when the U.S. Congress designated them as wilderness. News stories say Senator Dianne Feinstein has come out against repeal, and I doubt the idea would be supported by many in Congress.

One addition is needed: mitigation measures should be added to Alternative 6, the shared-use alternative, to make sure illegal use of ORVs will not cause more damage to the land. If the Marine Corps will be managing the area, they will need to do better than BLM in deterring illegal riding. Active enforcement and stiff penalties would help.

I do not have any opinion as to whether the expansion is needed, but combat training for the Marine Corps clearly is a higher national priority than ORV recreation. Fewer ORVs in the California Desert would be a good thing for wildlife and for the land.

Thank you for considering my views.



Sincerely,

Response to Comment N-00277:

Thank you for your comment. As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding (refer to Section 4.2). The proposed action includes implementation of several special conservation measures (refer to Section 4.2.2.1) designed to reduce these potentially significant impacts to a less than significant level. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

While I feel our military is vital to our strength & security as a Nation I also feel we NEED to Absorb so much land to do what's already being done without this acquisition. These areas are prime recreational areas for public use at this time. We can't put "fighting" at the top of our priority list OR we might as well rename our country U.S.S.R NOT U.S.A. Please consider that these recreational uses contributes to the local economy tremendously. I don't see Bombing shooting & such to do the same and a town that's basely hanging on will disappear. Thanks Kent Ross

Response to Comment N-00279:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

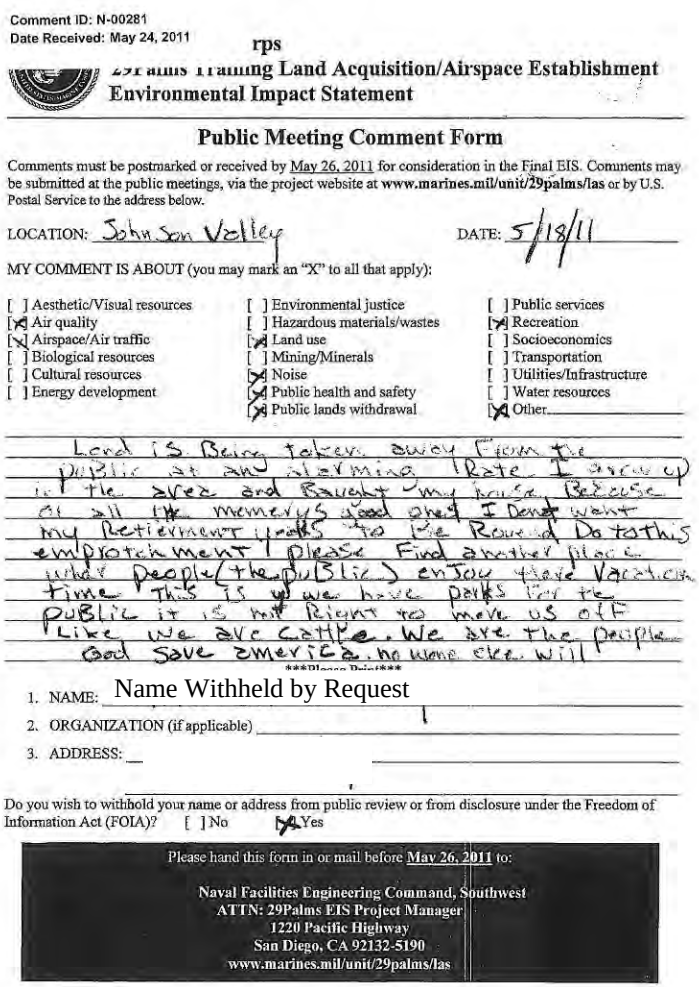
Dear NAVFAC Southwest:

I write to submit comments on the draft environmental impact statement about the proposed expansion of the Twentynine Palms Marine Corps training base. A friend who participated in the BLM wilderness studies brought this to my attention.

I want to commend the Navy Department on this draft EIS. It analyzes a reasonable range of alternatives. Alternative 6, the preferred alternative, responds constructively to the interest of off-road vehicle riders by proposing shared use of the Johnson Valley area. In the final decision, ORV recreation obviously must be a far lower priority than the training of Marine Corps combat units.

Please reject the suggestion from ORV riders that wilderness status should be repealed on parts of the Sheephole Valley, Cleghorn Lakes, and Cadiz Dunes Wilderness Areas so those lands could be added to the training center instead of Johnson Valley. In 1994 the United States Congress designated those areas as wilderness after almost 20 years of study and consideration. They should never be considered trading stock for any ORV area. Senator Dianne Feinstein has already opposed the concept. The EIS is correct to exclude any invasion of wilderness areas.

Please remember there is national interest in these three wilderness areas. Thank you for the opportunity to submit these comments.



Sincerely yours,

Lynn Hague

I Have Lived + Worked in Lucerne Valley on Since 1965. Have Lived on Camp Rock Rd since 1965 where I own 5Ac. with 2 homes ORchard Etc. on it. My oldest Son + Sister-in-law also live There. My Brother-in-law/wife + Great Grandchildren also live in This Area. We often hear Heavy Gun/Bomb fire set of as present Base approx 20-25 miles Away. Also see Flashes from There & Fires at night. Also Sometimes Vibrations. This expansion would put them Less Than 7-8 miles From my home. This would Destroy the Value of my home That I have worked a life time for. So Go East not West ***Please Print*** So Do not Pass This Expansion!

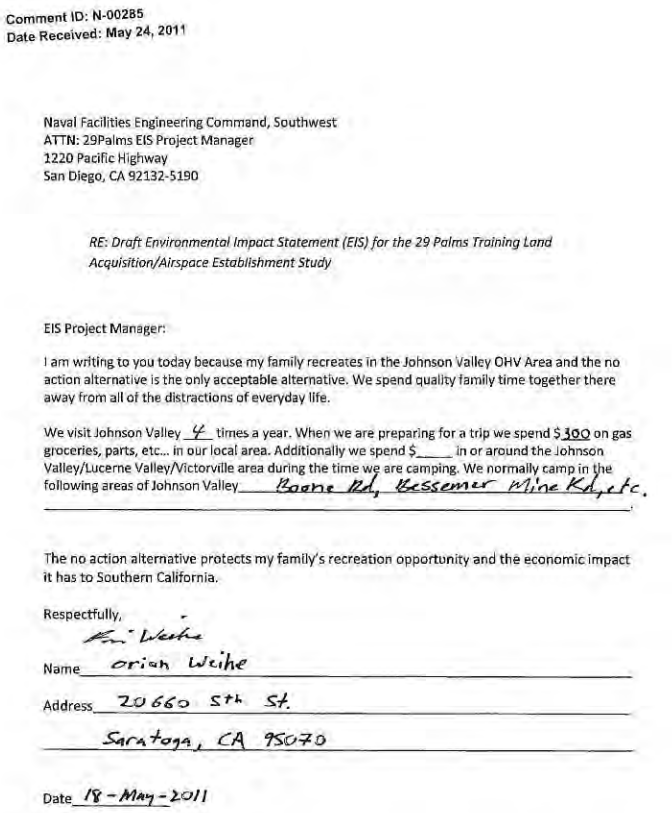
Is This a Map Of Type Operations? Or Just Dirty Streets?



Response to Comment N-00284:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

RE: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study

EIS Project Manager:

I am writing to you today because my family recreates in the Johnson Valley OHV Area and the no action alternative is the only acceptable alternative. We spend quality family time together there away from all of the distractions of everyday life.

We visit Johnson Valley 4 times a year. When we are preparing for a trip we spend $ 300 on gas groceries, parts, etc... in our local area. Additionally we spend $____ in or around the Johnson Valley/Lucerne Valley/Victorville area during the time we are camping. We normally camp in the following areas of Johnson Valley Boone Rd, Bessemer Mine Rd, etc.

The no action alternative protects my family's recreation opportunity and the economic impact it has to Southern California.

Respectfully,

Eric Weihe

Name Orian Weihe

Address 20660 5th St.

Saratoga, CA 95070

Date 18-May-2011

Response to Comment N-00285:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

I ask that please reconsider extending your Marine base land. We have a family property in Landers and have been going there for over 25yrs. We enjoy getting away from the city life and spending quality time with our children in our desert home. The children particularly like it out there to explore the natural wonders of the desert on trails. Please do reconsider expanding your land and consider how and when it will impact. Thank you for your time

Response to Comment N-00288:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

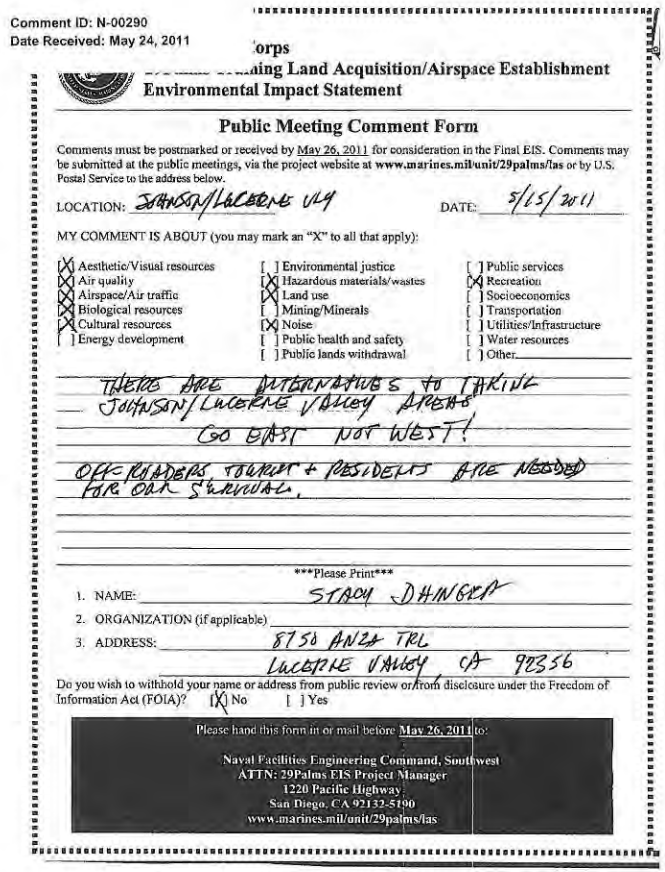
Dear Project Team,

The following are my comments are on the draft environmental impact statement for the expansion of the Marine Corps training center. One of my friends has experience with BLM lands in the California Desert over a period of 30 years.

I compliment the Marine Corps on the draft EIS. The six action alternatives represent a reasonable range of options for meeting military training needs. I favor your Criterion No. 5, used in designing the alternatives: "Avoid congressionally-designated wilderness areas, parks, wildlife refuges, designated critical habitat for threatened or endangered species, cities/towns, and interstate highways."

I oppose the suggestion by off-road vehicle riders that lands should be removed from three wilderness areas and used for military training, so ORVs could keep riding in Johnson Valley. The notion of undoing the wilderness designation should be repugnant to the Marine Corps and to everyone who worked to get those areas protected. Repealing wilderness is not worthy of further consideration. ORVs are adequately provided for in Alternative 6, which allows shared use by the Marines and ORV recreation.

Thank you for considering my views.



Sincerely,

C. Robert Wells

This letter is being written to make you aware of the devastating news that we, in the Lucerne Valley/Johnson Valley areas have become aware of, concerning the 29 Palms Training Land Acquisition/Airspace Establishment. All of this information and this letter has been written and provided by Mr. and Ms. Stanley Hunter, [Mr. Hunter is a retired Naval Officer] ANY DECISIONS TO USE ANY OF THE LANDMASSES AND AIRSPACE HERE, WILL VERY ADVERSELY AFFECT ANY OR ALL OF THE CITIZENS HERE, AND WOULD WITHOUT ANY DOUBTS HAVE A VERY REAL DEVASTATING AND DAMAGING EFFECT ON EACH AND EVERY CITIZEN'S RIGHTS; TO BE ABLE TO CONTINUE TO EXERCISE THEIR CONSTITUTIONAL RIGHTS OF LIFE, LIBERTY, AND THE PURSUIT OF HAPPINESS.

IN POINT OF FACTS: ALL OF THE FOLLOWING WOULD BE AFFECTED:

1. It will decrease the value of any and all of our Real Estate that is located here, be it Residential or Businesses.

2. It would interfere with the raising of our livestock, because of the increased noise levels.

3. We have already been subjected to tremendous and deafening noise levels that have effected our hearing and also shook various items inside of our residences and businesses.

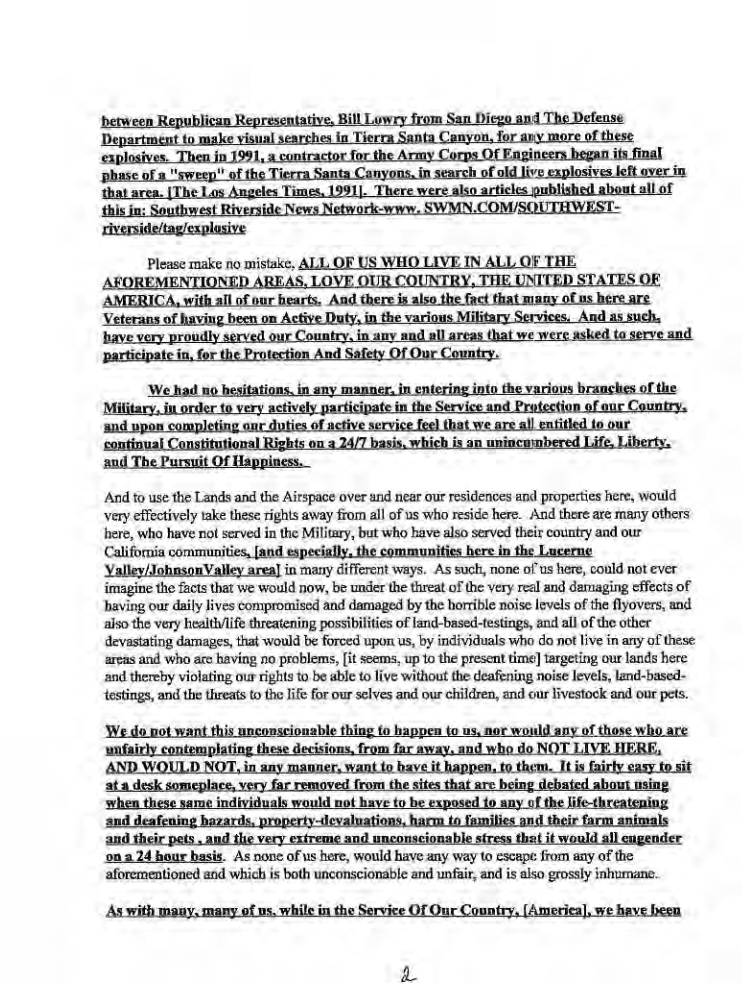
4. There is also the real possibility of the contamination of our ground water.

5. It would affect the raising of contamination free crops and other vegetation.

6. And also the very real and devastating possibility of contracting various health issues related to the training/testings that would be going on, over all of us, here.

7. One clear example of this type of devastation was: the training/testings that were done, in an area of San Diego County, [Tierra Santa- and which location was a World War II, (era) Marine Corps., Base] where there were unexploded bombs that had been dropped from the air and then just left there, with absolutely no regards for any of the citizenry. AND MANY, MANY YEARS LATER, TWO YOUNG BOYS, PLAYING, IN ONE OF THESE MILITARY TRAINING AREAS, [in 1985] WERE KILLED BY SOME OF THESE SHELL BLASTS, and [it was said] that others had been hurt by accidentally stumbling upon these dangerous hazards. AFTER THESE TWO PRECIOUS LITTLE BOYS WERE KILLED BY THE UNEXPLODED BOMBS, there was an agreement struck

Response to Comment N-00291 (Page 2 of 5):



Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates impacts to water resources under each of the action alternatives (see Section 4.13). As noted in the EIS, there is not expected to be any impacts to groundwater quality from training operations.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Comment ID: N-00291 (Page 3 of 5)

between Republican Representative, Bill Lowry from San Diego and The Defense Department to make visual searches in Tierra Santa Canyon, for any more of these explosives. Then in 1991, a contractor for the Army Corps Of Engineers began its final phase of a "sweep" of the Tierra Santa Canyons, in search of old live explosives left over in that area. [The Los Angeles Times, 1991]. There were also articles published about all of this in: Southwest Riverside News Network-www. SWMN.COM/SOUTHWEST-riverside/tag/explosive

Please make no mistake, ALL OF US WHO LIVE IN ALL OF THE AFOREMENTIONED AREAS, LOVE OUR COUNTRY, THE UNITED STATES OF AMERICA, with all of our hearts. And there is also the fact that many of us here are Veterans of having been on Active Duty, in the various Military Services. And as such, have very proudly served our Country, in any and all areas that we were asked to serve and participate in, for the Protection And Safety Of Our Country.

We had no hesitations, in any manner, in entering into the various branches of the Military, in order to very actively participate in the Service and Protection of our Country, and upon completing our duties of active service feel that we are all entitled to our continual Constitutional Rights on a 24/7 basis, which is an unincumbered Life, Liberty, and The Pursuit Of Happiness.

And to use the Lands and the Airspace over and near our residences and properties here, would very effectively take these rights away from all of us who reside here. And there are many others here, who have not served in the Military, but who have also served their country and our California communities, [and especially, the communities here in the Lucerne Valley/JohnsonValley area] in many different ways. As such, none of us here, could not ever imagine the facts that we would now, be under the threat of the very real and damaging effects of having our daily lives compromised and damaged by the horrible noise levels of the flyovers, and also the very health/life threatening possibilities of land-based-testings, and all of the other devastating damages, that would be forced upon us, by individuals who do not live in any of these areas and who are having no problems, [it seems, up to the present time] targeting our lands here and thereby violating our rights to be able to live without the deafening noise levels, land-based-testings, and the threats to the life for our selves and our children, and our livestock and our pets.

We do not want this unconscionable thing to happen to us, nor would any of those who are unfairly contemplating these decisions, from far away, and who do NOT LIVE HERE, AND WOULD NOT, in any manner, want to have it happen, to them. It is fairly easy to sit at a desk someplace, very far removed from the sites that are being debated about using when these same individuals would not have to be exposed to any of the life-threatening and deafening hazards, property-devaluations, harm to families and their farm animals and their pets , and the very extreme and unconscionable stress that it would all engender on a 24 hour basis. As none of us here, would have any way to escape from any of the aforementioned and which is both unconscionable and unfair, and is also grossly inhumane.

As with many, many of us, while in the Service Of Our Country, [America], we have been

2

Response to Comment N-00291 (Page 3 of 5):

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Comment ID: N-00291 (Page 4 of 5)

exposed to many hazardous and devastating and life-threatening hazards such as: Agent Orange, Asbestos, Mortar Attacks, having been wounded, or coming back home with Post Traumatic Syndrome [such as having seen some of our fellow comrades blown up and permanently away], or of many of us having been terribly and debilitatingly wounded. And as such: many of us have come back home with arms and legs missing or portions of our heads missing.

As such: it is **UNCONSCIONABLE**, in light of all of these facts, to now contemplate piling even more injurious things onto us, by invading our properties, be it our lands, homes, and/or businesses, and thereby forcing us, into enduring very extreme and further harm and devastation.

As a result of all of the aforementioned, when our times of service to our Country [the U.S.A.], has come to a close, **and this also includes all of those who have served our Country, be it on active duty or retired, or by just being Good Solid Citizens; and in other capacities such as: Policemen, Firemen, Teachers, Merchants, and Mothers and Fathers, we all need to be given the utmost consideration and respect for all of our service and thereby any thoughts being entertained as to invading our living areas should be IMMEDIATELY DISCONTINUED, AND SOME OTHER SITES FOUND, WHERE THERE ARE NO PEOPLE RESIDING.**

As we all deserve much better treatment than this. As coming home to our homes and surroundings lands, is one of the best ways to heal from any of the aforementioned traumas that any of us have suffered. This will also compromise any and all of our children being able to play on their own lands and properties without being unconscionably exposed to any or all of the aforementioned hazards.

And, as this is very strictly the case, why would it even be any type of a consideration that you would so Unconscionably And Unfairly, And Forcefully Invade Our Lands, Homes, Property Sites and also Our Airspace with such Hazardous, Noisy and Health-Threatening activities. As Southern California is a very vast area, that still has many, many sites that would be much more suitable, than here, as you are threatening the health and daily living of all of us who reside in all of these aforementioned areas. **And such, would not be the case, if you conduct all of your contemplated maneuvers on UNINHABITED AREAS, WHERE THERE WOULD ABSOLUTELY BE NO HARDSHIPS OR THREATS TO EITHER HEALTH OR DAILY LIFE, TO ANY OF OUR CITIZENS, AND ALSO LOWERING OUR PROPERTY VALUES AND HARM TO ALL OF US AS ADULTS, OUR CHILDREN, OUR FARM ANIMALS, AND ALSO IMPORTANTLY, OUR PETS.**

We are all taxpaying and upstanding citizens and as such, we deserve much better and more Humane Treatment than this. And also an APPRECIATION of all of OUR SERVICE TO OUR COUNTRY SHOULD BE HONORED, AND THEREBY EACH AND EVERYONE OF US HERE, NEED TO BE PROTECTED AND ACKNOWLEDGED AS VALUABLE CITIZENS and as such: NO ONE SHOULD EVER BE ABLE TO TAKE AWAY ANY OF OUR RIGHTS TO LIFE, LIBERTY, AND THE PURSUIT OF HAPPINESS [AND WHICH RIGHTS HAVE BEEN, VERY EXPRESSLY GIVEN TO US

3

Response to Comment N-00291 (Page 4 of 5):

Re: Draft Environmental Impact Statement on 29Palms Base expansion

The Environmental Protection Agency's Toxic Release Inventory (TRI) is available at http://www.epa.gov/tri/. It totals toxic releases during the years 2007-2009, the latest report available.

A "TRI release" is defined as the amount of on-site toxic chemical releases to air, water, underground injection, landfills and other land disposal, and the amount transferred off-site for disposal. The top ten facilities with the most chemical releases in California included Marine Camp Pendleton at #10.

PBT Chemical releases are releases of Persistent, Bioaccumulative and Toxic Chemicals. Merriam-Webster defines "persistent" as "existing for a long or longer than usual time or continuously." It defines "bioaccumulation" as "the accumulation of a substance (such as a pesticide) in a living organism." It defines "toxic" as "poisonous." In other words, BPT means poisons that last a long time, and collect in the bodies of plants and animals and the animals that eat them.

Of the top 10 California release sites, numbers 6-10 were military, one Army and four Marine, all in Southern California. The Marine Corps Air Ground Combat Center 29-Palms is #7, with a little under half the PBT chemical releases that were measured at Camp Pendleton.

Though the trend shown in the Inventory is generally downward for the state, if live fire combat training increases in intensity and duration on the scale the DEIS describes, MCAGCC will obviously rise on the list.

Starting on Page 293, the Draft Environmental Impact Statement describes in detail the procedures used to comply with recording and reporting releases of TRI Chemicals. It addresses the Marines' methods for dealing with hazardous material spill abatement and cleanups, and contaminated soils.

"Munitions Constituents" (MC) from unexploded ordnance and other munitions, and their breakdown elements, are described and mapped for current and historical ranges. Potential migration into humans and animals is addressed with somewhat limited studies. Perchlorate is described as an indicator munitions constituent as it is a good example of PBT (see definitions above). Perchlorate recently came to public notice again as a constituent of the drinking water in Barstow, CA.

Databases on hazardous wastes from many sources and contaminated sites are described as not revealing any relevant sites. Formerly used defense sites are discussed. All are declared not relevant.

Response to Comment N-00292 (Page 1 of 2):

Thank you for your comment. Munitions constituents and toxic chemical release reporting requirements are described in Section 3.4 and 4.4 of the EIS. As described in the EIS the Combat Center complies with the Emergency Planning and Community Right-to-Know Act (EPCRA) Toxic Release Inventory (TRI) program, and all other federal, state, and local requirements regarding hazardous materials and wastes, and would continue to do so under the proposed action.

Comment ID: N-00292 (Page 2 of 2)

On Page 293, one paragraph describes a total of 50 accidental releases, in 2002, of toxic substances and what was done about them. Deliberate releases and munitions constituents are not itemized. The discussion of toxic wastes ends on Page 301 of the DEIS. Nowhere is the Environmental Protection Agency's Toxic Release Inventory mentioned, with its specific amounts, and the relative standing of military sites in general and MCAGCC in particular.

Therefore the DEIS must be amended to show not only the methodology for reporting toxic contaminants but also the kinds and quantities. It must also clearly state estimates for any increases in toxic releases for each Alternative course of action. It must also state this information was missing in the draft document.

On Page 295 is a map of munitions constituents loading areas on the existing Base. Maps must be added to the DEIS to show where planned MC loading areas would be in each Alternative course of action.

On Page 796 it is stated that use of munitions under Alternative One would be similar to existing use, and therefore potential impacts from the use of munitions would be minimal. Since ordnance use is planned to be more intensive and of longer duration, the DEIS must be corrected to reflect that fact and state the draft document was in error. This must also be done for all the other Alternatives.

Sincerely,

Stanley O Coutant

Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

My family homesteaded land in Johnson Valley in 1954. I have a website that shows the history of our homestead and the surrounding area in Johnson Valley at:
http://www.coutant.org/mminternet/saga/index.html
My mother retired to Johnson Valley and lived in our house there until she was 94. I plan to follow in her footsteps and retire there, as do my sons. Our Johnson Valley home is more than a building; it is our family and its history, our pride and joy, our vision for tomorrow. I am deeply concerned that the true impact any expansion of the 29 Palms Marine Base will have on my family's historic homestead and the surrounding areas has not been correctly addressed in the DEIS.

The DEIS states:
Potential impacts from six action alternatives and the No-Action Alternative have been analyzed.
Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twenty-nine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:
Less than Significant Impacts (LSI):
• Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
• Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.
No Impacts (NI):
No impact anticipated from airspace establishment.

Response to Comment N-00293 (Page 1 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-00293 (Page 2 of 3)

Similar judgments are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.
It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:
• Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
• Devaluation of surrounding private property.
• Increased costs to federal, state and local jurisdictions for increased law enforcement
All would occur outside the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities, which are neighbors to the Base, must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

Response to Comment N-00293 (Page 2 of 3):

Comment ID: N-00293 (Page 3 of 3)

-These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflown by helicopters at any hour of the day or night, particularly when the want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbowroom and history are negated by the realities of living with startling noise, and fear of damage.

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

Sincerely,

Stanley O Coutant

Re: Draft Environmental Impact Statement on 29-Palms Base expansion

Dear Sir:

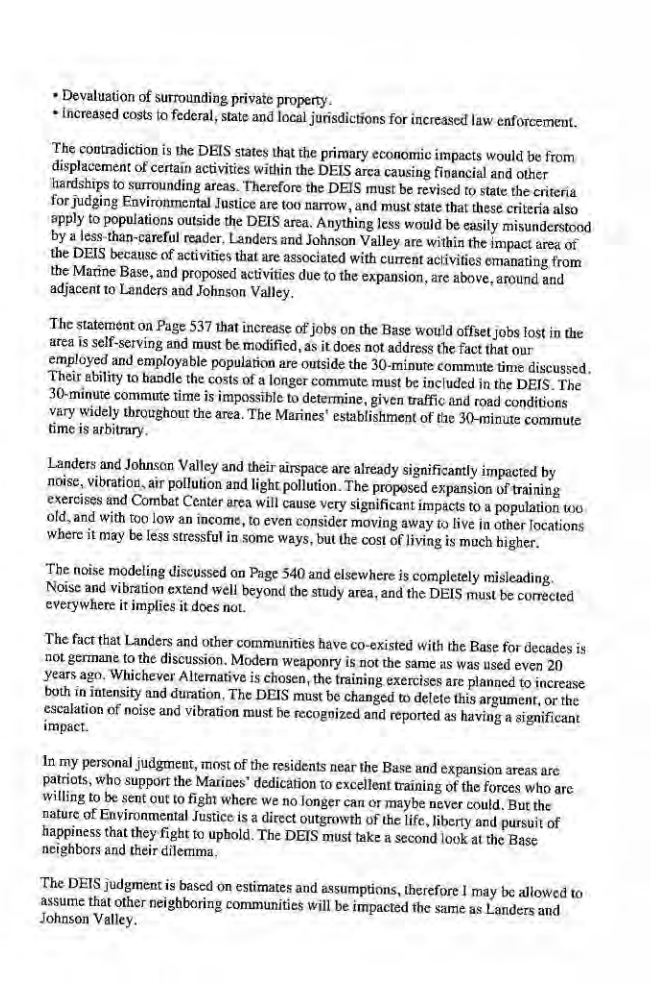
I will be soon retiring to a home my family has owned in Johnson Valley since 1954. Any 29-Palms Marine Base expansion will impact this area. The communities of Landers and Johnson Valley are in Postal Zip Code 92285. Landers borders the existing Marine Air Ground Combat Center 29-Palms; Johnson Valley is directly southwest of it, and due south of the proposed westward expansion area.

Environmental Justice provisions are addressed in the DEIS because Federal Projects are not supposed to have disproportionate impacts against any ethnic, demographic or socio-economic group.

IN POSTAL CODE 92285, CENSUS 2010 HAS STATED:
• The population is 2,181.
• The median age of the population is 49.5. 24.7% are 65 years and over. This is almost twice the percentage of people 65 and older in the US population (12.4%). These are very much senior citizen communities.
• Many residents are retired and on fixed incomes. 39% of our population 16 and over is in the labor force, as compared to 69% in the US.
• Families below poverty level: 20.8% In the US: 12.4%
• Individuals below poverty level: 24.9% In the US: 12.4%
• Disability status (population 5 years and over): 34.8% In the US: 19.3%
And for good measure:
• Civilian veterans (civilian population 18 years and over): 25.1% In the US 12.7% (and we know many are proud Marines)

http://factfinder.census.gov/servlet/SAFFFacts?_event=Search&geo_id=&_geoContext=&_street=&_county=92285&_cityTown=92285&_state=&_zip=92285&_lang=en&_sse=on&pctxt=fph&pgsl=010&show_2003_tab=&redirect=Y

The factors listed above indicate the project does raise issues of Environmental Justice for the residents of Landers and Johnson Valley.



The DEIS states that EO 12898 criteria for Environmental Justice say there must be one or more such affected populations within the DEIS area (Page 533). However, very few live WITHIN the EIS area, and it is therefore a contradiction to imply that residents outside the EIS area will not be impacted. The scoping issues (Item 4.3.1.3) listed on the same page include:
• Decrease of revenue and employment and associated tax revenue from tourism, recreational, and film industries

Response to Comment N-00294 (Page 1 of 3):

Thank you for your comment. As outlined in Section 4.3.1.2 of the EIS, three criteria are used to assess the significance of impacts to minority and low-income communities in the context of environmental justice (EO 12898, *Federal Actions to Address Environmental Justice in Minority and Low-Income Populations*): 1) there must be one or more such populations within the project area; 2) there must be adverse (or significant) impacts from the action; and 3) the environmental justice populations within the project area must bear a disproportionate burden of these adverse impacts. If any of these criteria are not met, then impacts with respect to environmental justice would not be significant. All environmental impacts that are attributable to the proposed action would apply equally to any affected persons, regardless of minority or income status; therefore no impacts would occur with respect to environmental justice.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). The best available information for employment was identified and used as the basis for the analysis. As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Landers, Wonder Valley, and Homestead Valley.

Comment ID: N-00294 (Page 2 of 3)

- Devaluation of surrounding private property.
- Increased costs to federal, state and local jurisdictions for increased law enforcement.

The contradiction is the DEIS states that the primary economic impacts would be from displacement of certain activities within the DEIS area causing financial and other hardships to surrounding areas. Therefore the DEIS must be revised to state the criteria for judging Environmental Justice are too narrow, and must state that these criteria also apply to populations outside the DEIS area. Anything less would be easily misunderstood by a less-than-careful reader. Landers and Johnson Valley are within the impact area of the DEIS because of activities that are associated with current activities emanating from the Marine Base, and proposed activities due to the expansion, are above, around and adjacent to Landers and Johnson Valley.

The statement on Page 537 that increase of jobs on the Base would offset jobs lost in the area is self-serving and must be modified, as it does not address the fact that our employed and employable population are outside the 30-minute commute time discussed. Their ability to handle the costs of a longer commute must be included in the DEIS. The 30-minute commute time is impossible to determine, given traffic and road conditions vary widely throughout the area. The Marines' establishment of the 30-minute commute time is arbitrary.

Landers and Johnson Valley and their airspace are already significantly impacted by noise, vibration, air pollution and light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income, to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

The noise modeling discussed on Page 540 and elsewhere is completely misleading. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

The fact that Landers and other communities have co-existed with the Base for decades is not germane to the discussion. Modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact.

In my personal judgment, most of the residents near the Base and expansion areas are patriots, who support the Marines' dedication to excellent training of the forces who are willing to be sent out to fight where we no longer can or maybe never could. But the nature of Environmental Justice is a direct outgrowth of the life, liberty and pursuit of happiness that they fight to uphold. The DEIS must take a second look at the Base neighbors and their dilemma.

The DEIS judgment is based on estimates and assumptions, therefore I may be allowed to assume that other neighboring communities will be impacted the same as Landers and Johnson Valley.

Response to Comment N-00294 (Page 2 of 3):

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Comment ID: N-00294 (Page 3 of 3)

Therefore, the DEIS conclusion under Item 4.3.2.5 and others must be changed and it must be stated for every Alternative action in the document:
Certain socio-economic groups, including, but not limited to, seniors, retirees on fixed incomes, families and individuals below the poverty level, the disabled, and veterans residing in neighboring communities in percentages far greater than in the nation at large, will bear a disproportionate burden if the planned training and area expansions are put into place.

THROUGHOUT THE DOCUMENT, The EO 12898 criteria for Environmental Justice must be added to and expanded to include populations outside the DEIS area, and that citing EO 12898 alone caused a potentially misleading contradiction in the draft document. It also must state, for each Alternative, that significant impacts will occur with respect to Environmental Justice.

The DEIS must state what steps have been taken in previous actions at other Bases to insure equity and fairness in regards to Environmental Justice. The repeated assertion in this DEIS that mitigation is not possible means nothing can be done to insure equity and fairness, and the DEIS must state that fact prominently, and state the draft document had omitted it.

Sincerely,

Stanley O Coutant

Twenty nine Palms base is the largest base in Calif. and the back of it is practically uselrss because of unexploded ordinance. Not a very good use of the Space. Expanding Toward the west would impact many more lives Than going east. The locals (many more than To the east) would lose revinue due To loss of income from The off roaders, shooTers, hikers and campers. This income is needed To Keep Lucerne Valley alive.
Please move east not west.

I LIVE IN Johnson Valley FOR Peace And Quiet which is essential For my health. The Encroachment of the MILITARY will NOT only disturb the recreational use of the Area here IN Johnson Valley but will have An economic impact And Lower Property Values. Even now AT the distance of the base To J.V., when the bombs Are dropping AT All hours, our windows RATTLE AS IF They Are going To Break. Further I don't see why The MILITARY HAS TO move so close TO An ESTABLISHED COMMUNITY. IF you MUST expand, Expand in An Area where NO there Are NO residents

U.S. Marine Corps 29 Palms Training Land Acquisition / Airspace

E.I.S. Public Comment, Continued

As I write this I can't help but believe, that my feelings and concerns, as well the concerns of many other stake holders will be ultimately be disregarded. I truly hope I am wrong. I love my country; I love and respect our military and all who serve. I want our troops to have the very best in equipment and training. I truly feel that most of the families who share my love for the great outdoors and enjoy OHV recreation, feel as I do. I don't believe that certain members of congress and their small group of special friends feel the same. They don't seem to be that concerned for the safety and proper training of our troops and they don't believe in the sharing of PUBLIC LANDS by all potential users. For many years now there has been a "Land Grab" going on, and it continues on today. It's the desire of some of these "elected" officials to lock down as much public land as possible and to deem it such titles as Wilderness or Wild Lands, National Parks, etc. This action all but prohibits any visiting or use of that land, except to those who are able to enter on foot. In the desert areas that encompass the Cleghorn Wilderness and the Sheephole Valley Wilderness, I doubt there are many, if any visitors hiking around.

From what I have been able to find, it appears that just the BLM managed Wilderness designated land in California, totals approx. 3,890,196 acres. In spite of that, the land grab continues. Please don't misunderstand me, I am a proponent of multi use sharing of our lands and I love our National Parks, Monuments, etc. I do believe that some Wilderness designations are good, but how much is too much. When do the actions of congress start to impede the Life, Liberty and the pursuit of happiness of the majority? My experience has been that the OHV community in particular has had a steady track record of loosing recreation opportunities over the years. In spite of that fact, we continue to pay our taxes, (some of the nation's highest) and we pay our OHV fees (which are currently being looted from our OHV trust fund, by our elected State officials). What do we receive in return, Land closures, complaints from environmentalists, more restrictions as to what trails can be used, more users being crammed into smaller areas, restrictions on the types of vehicles and equipment, heavier enforcement of the newest laws. Can you see why the largest remaining open OHV area in the western United States (Johnson Valley OHV), is so important to us and probably many retired and off duty military personnel?

I know this isn't the first time you have heard this, but the voices of the citizens who live in, have businesses in and recreate in the Johnson Valley area need to be heard. It's our local economy that's at stake, not some congress person in Washington DC or in Northern California. Those folks are apparently a little confused, they can't even remember what their jobs are or who the work for. This issue is about us, THE PEOPLE, (the majority) in the USA and our fighting men and women. Many of our elected officials don't care about any of our needs, our concerns or our rights; they only care about staying in good graces with their small group of friends who helped them get elected.

I attended a couple of events regarding the Johnson Valley Land Acquisition by the Marine Corps. It was very clear to me after speaking with several Marine officers and civilian contractors that not all options were being offered to the Marines and therefore not all were options were being presented to the American people (real stakeholders). I asked everyone I could, about a request to the BLM and

Response to Comment N-00298 (Page 1 of 4):

Thank you for your comment. The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

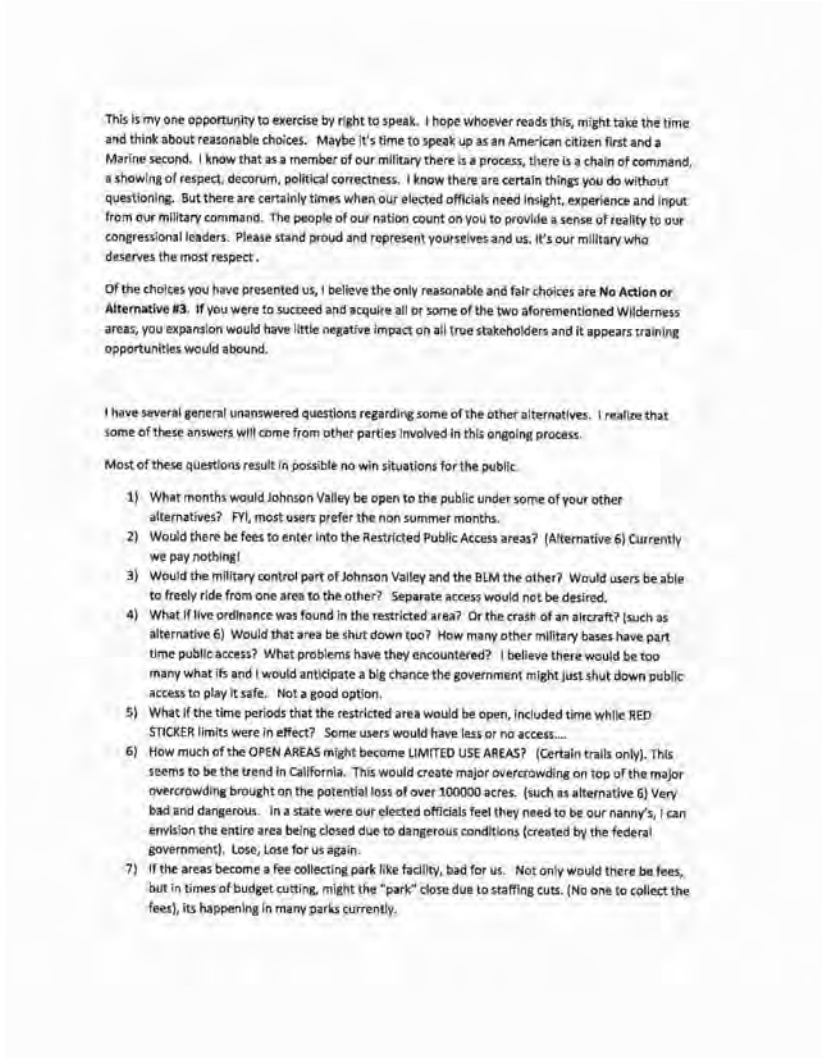
Comment ID: N-00298 (Page 2 of 4)

Congress to withdraw the Cleghorn Wilderness and Sheephole Valley Wilderness and to convert that area to the 29 Palms Training base. I was repeatedly told it wasn't going to happen. That they were told don't even bring that up. Hummm, someone high up in the Marine Corps must have thought the area was viable and suited their needs. Someone in the Marine Corps may have thought it seemed like a reasonable use for such unremarkable land. Land that most likely didn't fit the true criteria of a "Wilderness" designation. Anyone whom has driven by that area can see that it is massive. I believe the two Wilderness areas total approx. 226,600 + acres that are in addition to the areas east of the current base and north of the Wilderness areas (see Alternative #3). Someone in the Marine Corps must have looked at that and thought that just might suit the needs of the Corps. Someone in the Marine Corps must have thought about how few people, how few businesses and how little the economy would be affected if they could just expand there. It's open and empty. Now if you had to expand to the west, that would probably disrupt thousands of property owners, business owners, the economies of several small communities, that might not even survive without the weekly migration recreationists who spend money in their stores, gas stations, motels, etc. What about the larger communities like Oak Hills, Victorville, Apple Valley, Hesperia, Adelanto, Yucca Valley, 29 Palms and more? Anyone who has driven down Hwy 18 or Bear Valley, to the west or on the 247 from the north or east on any weekend, has seen hundreds of trucks, trailers, toy haulers, jeeps, quads, rock crawlers, motorcycles, sail carts, experimental vehicles, race cars, etc. These folks shop and spend money and pay sales tax in our communities. What about the larger economic picture. Look at what they have spent and been taxed on, to enjoy their rigs, tools and toys needed for their chosen form of recreation. Certainly some ranking officials in the Marine Corps must have made these same observations.

I've been riding in Johnson Valley when military aircraft have soared overhead. Surly they have looked down and seen large amounts of people utilizing the Johnson Valley OHV area. It's estimated that over 800,000 people recreate in Johnson Valley each year. I cannot imagine any high ranking member of the Department of the Navy or the Marine Corps not giving the above information some consideration. Anyone who thought for more than a second would most certainly ask about taking over the Wilderness areas. Wouldn't they? To change the status from a Wilderness to a military base should be a similar process to changing a BLM managed OHV area to a military base. Congress as it would seem, would decide if the military truly had a need and take appropriate action. It further would seem that a Congress of the people would or should decide on the action that would have the LEAST NEGATIVE effect on its people and do the right thing. Is it just me or does this make sense?

Why was this option not on the table? In the best country in the world, are the personal desires of a few non-stakeholders, more important than our military? Are they more important than actual, real, local stakeholders? The top brass in our military are way too smart, way too dedicated to their fellow citizens way too passionate about their goal and objectives, not to have least asked about that unused land to the east. I bet the if truth be known, we would discover that some poor high ranking military person got smacked down by some very "important" and equally disrespectful elected official who demanded that suggestion never come up again.

How shameful is that?



Response to Comment N-00298 (Page 2 of 4):

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The specific details on management of the RPAA in regards to permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies.

Comment ID: N-00298 (Page 3 of 4)

This is my one opportunity to exercise by right to speak. I hope whoever reads this, might take the time and think about reasonable choices. Maybe it's time to speak up as an American citizen first and a Marine second. I know that as a member of our military there is a process, there is a chain of command, a showing of respect, decorum, political correctness. I know there are certain things you do without questioning. But there are certainly times when our elected officials need insight, experience and input from our military command. The people of our nation count on you to provide a sense of reality to our congressional leaders. Please stand proud and represent yourselves and us. It's our military who deserves the most respect.

Of the choices you have presented us, I believe the only reasonable and fair choices are **No Action or Alternative #3**. If you were to succeed and acquire all or some of the two aforementioned Wilderness areas, you expansion would have little negative impact on all true stakeholders and it appears training opportunities would abound.

I have several general unanswered questions regarding some of the other alternatives. I realize that some of these answers will come from other parties involved in this ongoing process.

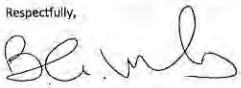
Most of these questions result in possible no win situations for the public.

1) What months would Johnson Valley be open to the public under some of your other alternatives? FYI, most users prefer the non summer months.
2) Would there be fees to enter into the Restricted Public Access areas? (Alternative 6) Currently we pay nothing!
3) Would the military control part of Johnson Valley and the BLM the other? Would users be able to freely ride from one area to the other? Separate access would not be desired.
4) What if live ordinance was found in the restricted area? Or the crash of an aircraft? (such as alternative 6) Would that area be shut down too? How many other military bases have part time public access? What problems have they encountered? I believe there would be too many what ifs and I would anticipate a big chance the government might just shut down public access to play it safe. Not a good option.
5) What if the time periods that the restricted area would be open, included time while RED STICKER limits were in effect? Some users would have less or no access....
6) How much of the OPEN AREAS might become LIMITED USE AREAS? (Certain trails only). This seems to be the trend in California. This would create major overcrowding on top of the major overcrowding brought on the potential loss of over 100000 acres. (such as alternative 6) Very bad and dangerous. In a state were our elected officials feel they need to be our nanny's, I can envision the entire area being closed due to dangerous conditions (created by the federal government). Lose, Lose for us again.
7) If the areas become a fee collecting park like facility, bad for us. Not only would there be fees, but in times of budget cutting, might the "park" close due to staffing cuts. (No one to collect the fees), its happening in many parks currently.

Response to Comment N-00298 (Page 3 of 4):

Comment ID: N-00298 (Page 4 of 4)

8) In looking at some of the maps showing different alternatives, (i.e. Alternative 6), it appears the "still open" and "restricted access" areas are quite close to private property. The areas that would be permanently taken over are further from private land. Would the military or the BLM buy out and take over the private land? If so, it's bad for everyone. What would that cost the tax payers?
9) It appears that some alternative energy companies are already eyeing some of the remaining areas in alternative 6. How many more acres would we lose?
10) If Johnson Valley were to be taken over, (such as alternative 6) what other rules would apply? Colored vests? EPA inspections? Insurance? Etc?
11) Would races and other forms of competitive events still be allowed? What new rules and restrictions would be introduced? How hard would the permit process be? What new costs? Insurance? Etc?



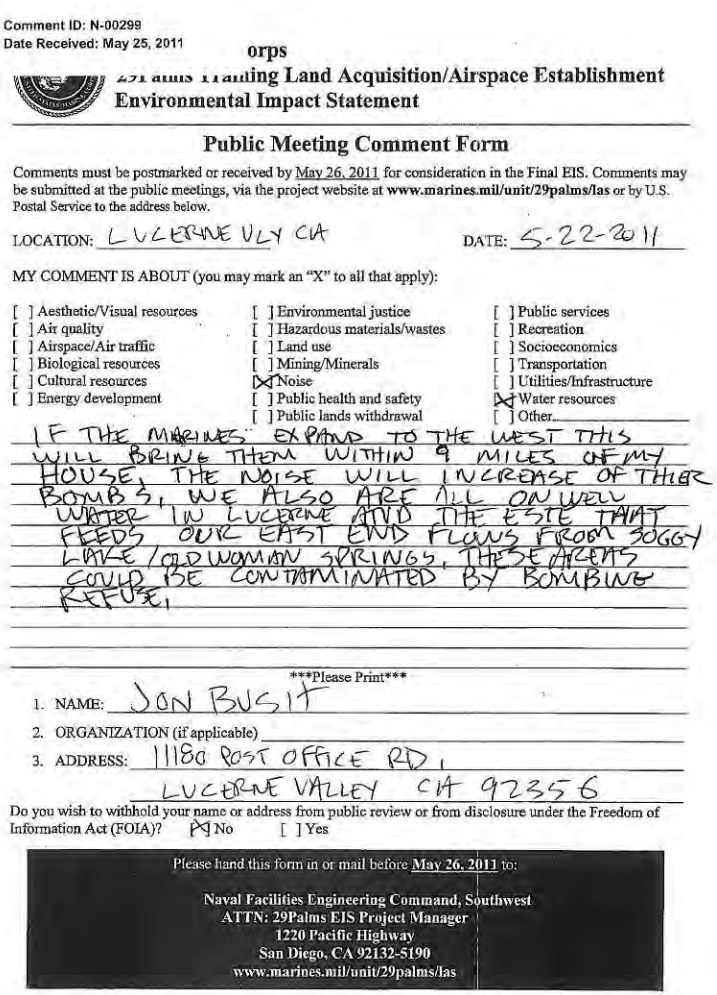
The longer I consider this issue the more questions and concerns I have. I know I'm not alone.

The Johnson Valley area has been used for recreation for over 50 years. It was at one time much larger. We the public aren't asking to for more recreation land, only to keep what we still have.

Please do consider the comments and concerns from the public. This is a much larger issue than just taking over a playground.

Thanks for your time and consideration.

Respectfully,



Bruce Niles and Family

Apple Valley, Ca.

Response to Comment N-00299:

Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates impacts to water resources under each of the action alternatives (see Section 4.13). As noted in the EIS, there is not expected to be any impacts to groundwater quality from training operations.

Response to Comment N-00300:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

For the town of Lucerne Valley which I live in and surrounding areas, I beleive this expansion of military land would be devastating economically speaking because our main flow of traffic through town would no longer happen. Most of the people stopping for gas & groceries are atv/motorcycle/buggy riders out for the weekend.

Personally, as an atv/motorcycle rider, I would be very upset to have such a large part of my riding area become off limit.

The People of the United States may be about to lose total access to two-thirds of Johnson Valley OHV Area, permanently. If so, this two-thirds will go to the 29 Palms Marine Training Area, permanently, with no access or use for any civilian purpose, ever again. This is unacceptable. Our OHV funds have been taken and used for purposes other than intended and now our largest single OHV area in Southern California is being threatened.

If this happens, Johnson Valleys OHV area would be reduced to a size too small to use for our most popular organized racing events. These hugely popular events plus the access to this unique landscape all year around, bring together tourists, businesses, OHV enthusiasts and more from California and many other states far and wide in record numbers year after year. This important tourism supports our local economy here in the High Desert with this OHV area acting as a pressure valve of sorts for the overcrowded residents of L.A. and in surrounding counties who use this space regularly.

There is plenty of uninhabited land to the east. Could you not expand towards the river? If this unwelcome expansion westward must be, can we get an off set? Can another area be opened or an adjacent area expanded? Can part of Kelso Dunes be added to the Rasor OHV Area off I-15 near Soda Lake, for example? What will the State receive in payment for the Marines use of this proposed training area? Will any of this be available for local projects? Will the Desert Tortoise be relocated? How did the relocation from the expansion on Fort Irwin fare with the tortoise population? Finally, the Airline path over Lucerne Valley is within 10 miles of the proposed Marine Border. Is this a potential 'accidental' target?

I have lived in Lucerne Valley for 22 years, blessed by the fact that it is dark at night and quiet. It is my hope that the destructive, invasive and disturbing rumblings of artillery will not be moving 19 miles closer to my home.

Response to Comment N-00302:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Subject: Draft Environmental Impact Statement (EIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study

Dear EIS Project Manager:

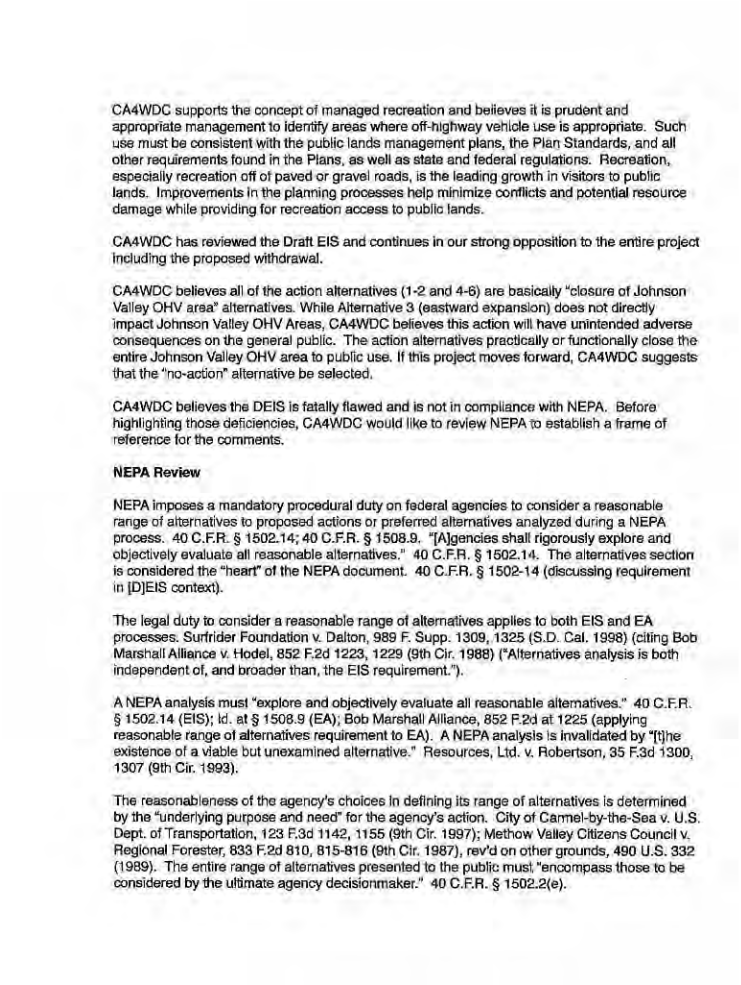
These comments are submitted on behalf of the California Association of 4 Wheel Drive Clubs (CA4WDC) and its membership. CA4WDC represents clubs and individuals within the State of California that are part of the community of four-wheel drive enthusiasts. These comments are directed to the Draft Environmental Impact Statement (DEIS) for the 29 Palms Training Land Acquisition/Airspace Establishment Study. This document shall not supplant the rights of other CA4WDC agents and organizational or individual members from submitting their own comments and the agency should consider and appropriately respond to all comments received to this DEIS

While the main focus of CA4WDC is to protect, promote, and provide for motorized recreation opportunities on public and private lands, many of our members participate in multiple forms of recreation; including but not limited to hunting, fishing, camping, hiking, horseback riding, bicycle riding, and gem and mineral collection.

We recognize the positive health and social benefits that can be achieved through outdoor activities. We also recognize that motorized recreation provides the small business owners in the local communities a significant financial stimulus. And, our members are directly affected by management decisions concerning public land use.

Our members subscribe to the concepts of: 1) public access to public lands for their children and grandchildren; 2) condition and safety of the environment; and 3) sharing our natural heritage. The general public desires access to public lands now and for future generations. Limiting access today deprives our children the opportunity to view the many natural wonders of public lands. The general public is deeply concerned about the condition of the environment and personal safety. They desire wildlife available for viewing and scenic vistas to enjoy. They also want to feel safe while enjoying these natural wonders. Lastly, the public desires to share the natural heritage with friends and family today as well as in the future. How can our children learn and appreciate our natural heritage when native species are allowed to deteriorate and historic routes are routinely blocked or eradicated from existence?

Response to Comment N-00303 (Page 1 of 8):



NEPA-1:

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

NEPA-2:

As described in Section 2.3 of the EIS, screening criteria were used to systematically identify the range of reasonable alternatives carried forward in the EIS. Some of these criteria are exclusionary in nature, representing conditions that must be true for an alternative to be considered reasonable. Other criteria were evaluated relative to the threshold and objective MEB requirements (see Section 2.2 of the EIS). With the exception of the No-Action Alternative, only alternatives that would satisfy these criteria were considered reasonable and carried forward for detailed evaluation in the EIS. Proposed action alternatives that would not fulfill the proposed MEB training mission were rejected from detailed analysis in the EIS. Rejected alternatives would not be meaningful to the decision-maker since they would not meet the purpose of and need for the proposed action and would not be a viable alternative.

Comment ID: N-00303 (Page 2 of 8)

CA4WDC supports the concept of managed recreation and believes it is prudent and appropriate management to identify areas where off-highway vehicle use is appropriate. Such use must be consistent with the public lands management plans, the Plan Standards, and all other requirements found in the Plans, as well as state and federal regulations. Recreation, especially recreation off of paved or gravel roads, is the leading growth in visitors to public lands. Improvements in the planning processes help minimize conflicts and potential resource damage while providing for recreation access to public lands.

CA4WDC has reviewed the Draft EIS and continues in our strong opposition to the entire project including the proposed withdrawal.

CA4WDC believes all of the action alternatives (1-2 and 4-6) are basically "closure of Johnson Valley OHV area" alternatives. While Alternative 3 (eastward expansion) does not directly impact Johnson Valley OHV Areas, CA4WDC believes this action will have unintended adverse consequences on the general public. The action alternatives practically or functionally close the entire Johnson Valley OHV area to public use. If this project moves forward, CA4WDC suggests that the "no-action" alternative be selected.

CA4WDC believes the DEIS is fatally flawed and is not in compliance with NEPA. Before highlighting those deficiencies, CA4WDC would like to review NEPA to establish a frame of reference for the comments.

NEPA Review

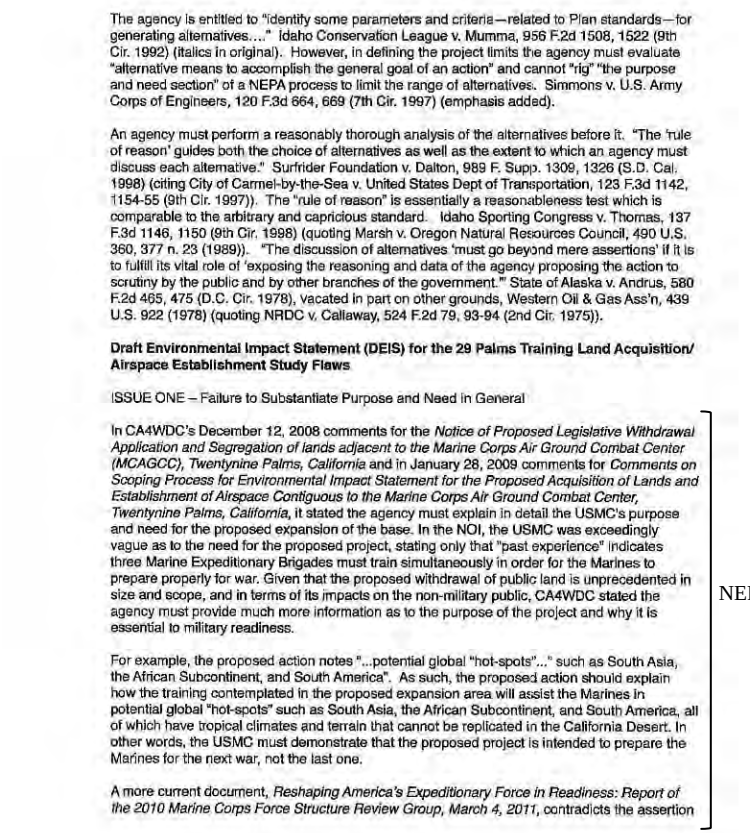
NEPA imposes a mandatory procedural duty on federal agencies to consider a reasonable range of alternatives to proposed actions or preferred alternatives analyzed during a NEPA process. 40 C.F.R. § 1502.14; 40 C.F.R. § 1508.9. "[A]gencies shall rigorously explore and objectively evaluate all reasonable alternatives." 40 C.F.R. § 1502.14. The alternatives section is considered the "heart" of the NEPA document. 40 C.F.R. § 1502-14 (discussing requirement in [D]EIS context).

The legal duty to consider a reasonable range of alternatives applies to both EIS and EA processes. Surfrider Foundation v. Dalton, 989 F. Supp. 1309, 1325 (S.D. Cal. 1998) (citing Bob Marshall Alliance v. Hodel, 852 F.2d 1223, 1229 (9th Cir. 1988) ("Alternatives analysis is both independent of, and broader than, the EIS requirement.").

A NEPA analysis must "explore and objectively evaluate all reasonable alternatives." 40 C.F.R. § 1502.14 (EIS); Id. at § 1508.9 (EA); Bob Marshall Alliance, 852 F.2d at 1225 (applying reasonable range of alternatives requirement to EA). A NEPA analysis is invalidated by "[t]he existence of a viable but unexamined alternative." Resources, Ltd. v. Robertson, 35 F.3d 1300, 1307 (9th Cir. 1993).

The reasonableness of the agency's choices in defining its range of alternatives is determined by the "underlying purpose and need" for the agency's action. City of Carmel-by-the-Sea v. U.S. Dept. of Transportation, 123 F.3d 1142, 1155 (9th Cir. 1997); Methow Valley Citizens Council v. Regional Forester, 833 F.2d 810, 815-816 (9th Cir. 1987), rev'd on other grounds, 490 U.S. 332 (1989). The entire range of alternatives presented to the public must "encompass those to be considered by the ultimate agency decisionmaker." 40 C.F.R. § 1502.2(e).

Response to Comment N-00303 (Page 2 of 8):



NEPA-2 Continued:

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would interfere with the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

NEPA-3 and NEPA-4:

As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Comment ID: N-00303 (Page 3 of 8)

The agency is entitled to "identify some parameters and criteria—related to Plan standards—for generating alternatives…." Idaho Conservation League v. Mumma, 956 F.2d 1508, 1522 (9th Cir. 1992) (italics in original). However, in defining the project limits the agency must evaluate "alternative means to accomplish the general goal of an action" and cannot "rig" "the purpose and need section" of a NEPA process to limit the range of alternatives. Simmons v. U.S. Army Corps of Engineers, 120 F.3d 664, 669 (7th Cir. 1997) (emphasis added).

An agency must perform a reasonably thorough analysis of the alternatives before it. "The 'rule of reason' guides both the choice of alternatives as well as the extent to which an agency must discuss each alternative." Surfrider Foundation v. Dalton, 989 F. Supp. 1309, 1326 (S.D. Cal. 1998) (citing City of Carmel-by-the-Sea v. United States Dept of Transportation, 123 F.3d 1142, 1154-55 (9th Cir. 1997)). The "rule of reason" is essentially a reasonableness test which is comparable to the arbitrary and capricious standard. Idaho Sporting Congress v. Thomas, 137 F.3d 1146, 1150 (9th Cir. 1998) (quoting Marsh v. Oregon Natural Resources Council, 490 U.S. 360, 377 n. 23 (1989)). "The discussion of alternatives 'must go beyond mere assertions' if it is to fulfill its vital role of 'exposing the reasoning and data of the agency proposing the action to scrutiny by the public and by other branches of the government.'" State of Alaska v. Andrus, 580 F.2d 465, 475 (D.C. Cir. 1978), vacated in part on other grounds, Western Oil & Gas Ass'n, 439 U.S. 922 (1978) (quoting NRDC v. Callaway, 524 F.2d 79, 93-94 (2nd Cir. 1975)).

Draft Environmental Impact Statement (DEIS) for the 29 Palms Training Land Acquisition/ Airspace Establishment Study Flaws

ISSUE ONE – Failure to Substantiate Purpose and Need in General

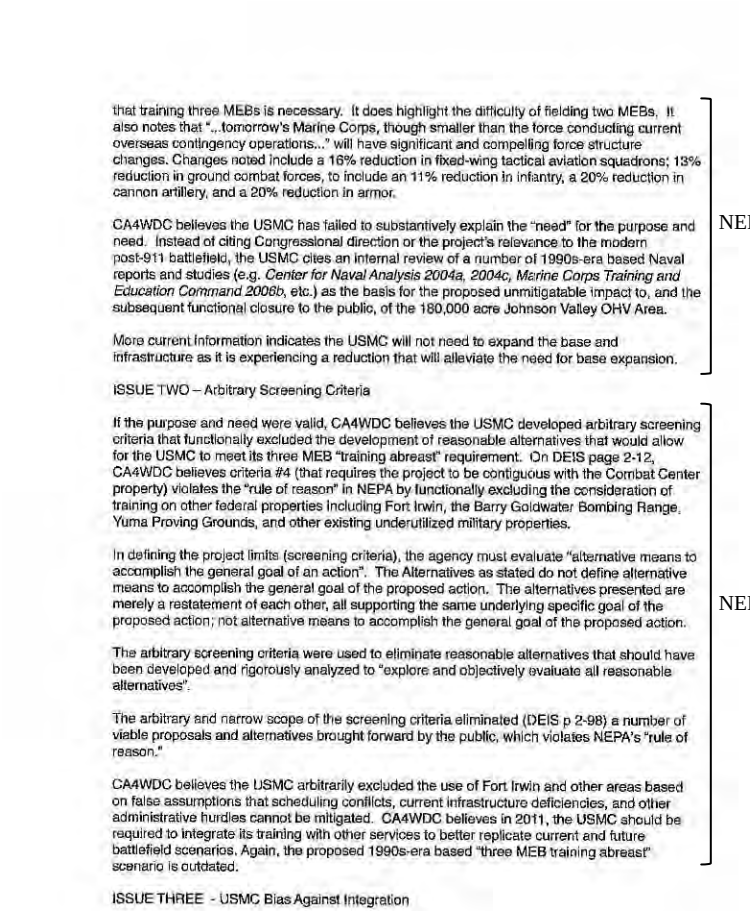
In CA4WDC's December 12, 2008 comments for the *Notice of Proposed Legislative Withdrawal Application and Segregation of lands adjacent to the Marine Corps Air Ground Combat Center (MCAGCC), Twentynine Palms, California* and in January 28, 2009 comments for *Comments on Scoping Process for Environmental Impact Statement for the Proposed Acquisition of Lands and Establishment of Airspace Contiguous to the Marine Corps Air Ground Combat Center, Twentynine Palms, California*, it stated the agency must explain in detail the USMC's purpose and need for the proposed expansion of the base. In the NOI, the USMC was exceedingly vague as to the need for the proposed project, stating only that "past experience" indicates three Marine Expeditionary Brigades must train simultaneously in order for the Marines to prepare properly for war. Given that the proposed withdrawal of public land is unprecedented in size and scope, and in terms of its impacts on the non-military public, CA4WDC stated the agency must provide much more information as to the purpose of the project and why it is essential to military readiness.

For example, the proposed action notes "...potential global "hot-spots"..." such as South Asia, the African Subcontinent, and South America". As such, the proposed action should explain how the training contemplated in the proposed expansion area will assist the Marines in potential global "hot-spots" such as South Asia, the African Subcontinent, and South America, all of which have tropical climates and terrain that cannot be replicated in the California Desert. In other words, the USMC must demonstrate that the proposed project is intended to prepare the Marines for the next war, not the last one.

A more current document, *Reshaping America's Expeditionary Force in Readiness: Report of the 2010 Marine Corps Force Structure Review Group, March 4, 2011*, contradicts the assertion

NEPA-1

Response to Comment N-00303 (Page 3 of 8):



NEPA-3 and NEPA-4 Continued:

Consideration of national budget and other similar issues is outside the scope of a NEPA analysis. The EIS findings are one of many types of information that decision-makers will consider. Ultimately, Congress will make the final decision about proceeding with the proposed action.

BIO-1:

The analysis of impacts to biological resources in the Draft EIS utilizes the best available scientific evidence. The relative importance of various factors in the decline of the desert tortoise are still uncertain and the Draft EIS states this (page 3.10-22 – 3.10-23), while emphasizing the importance of habitat loss, predation and potentially disease. As you state in your comment, no published studies to date have attempted to identify a causal link between recreational OHV use in Johnson Valley and the observed decline in tortoise densities. However, the published literature that is available indicates that OHVs do adversely affect tortoises via habitat degradation and direct impacts (one such review is Ouren *et al.* 2007). Analysis of existing disturbance in the west study area from OHVs indicated a significant correlation between areas of high OHV disturbance and lower desert tortoise densities (refer to Appendix I of the Draft EIS). The Draft EIS identifies a significant impact to desert tortoises from military training, and provides a very conservative (high) estimate of take. Although text is included that mentions possible beneficial effects of restricting recreational access, these possible beneficial effects were not used in any way to quantitatively reduce estimates of take and the Marine Corps obligation to mitigate impacts.

Comment ID: N-00303 (Page 4 of 8)

that training three MEBs is necessary. It does highlight the difficulty of fielding two MEBs. It also notes that "...tomorrow's Marine Corps, though smaller than the force conducting current overseas contingency operations..." will have significant and compelling force structure changes. Changes noted include a 16% reduction in fixed-wing tactical aviation squadrons; 13% reduction in ground combat forces, to include an 11% reduction in infantry, a 20% reduction in cannon artillery, and a 20% reduction in armor.

CA4WDC believes the USMC has failed to substantively explain the "need" for the purpose and need. Instead of citing Congressional direction or the project's relevance to the modern post-911 battlefield, the USMC cites an internal review of a number of 1990s-era based Naval reports and studies (e.g. *Center for Naval Analysis 2004a, 2004c, Marine Corps Training and Education Command 2006b*, etc.) as the basis for the proposed unmitigatable impact to, and the subsequent functional closure to the public, of the 180,000 acre Johnson Valley OHV Area.

More current information indicates the USMC will not need to expand the base and infrastructure as it is experiencing a reduction that will alleviate the need for base expansion.

NEPA-1

ISSUE TWO – Arbitrary Screening Criteria

If the purpose and need were valid, CA4WDC believes the USMC developed arbitrary screening criteria that functionally excluded the development of reasonable alternatives that would allow for the USMC to meet its three MEB "training abreast" requirement. On DEIS page 2-12, CA4WDC believes criteria #4 (that requires the project to be contiguous with the Combat Center property) violates the "rule of reason" in NEPA by functionally excluding the consideration of training on other federal properties including Fort Irwin, the Barry Goldwater Bombing Range, Yuma Proving Grounds, and other existing underutilized military properties.

In defining the project limits (screening criteria), the agency must evaluate "alternative means to accomplish the general goal of an action". The Alternatives as stated do not define alternative means to accomplish the general goal of the proposed action. The alternatives presented are merely a restatement of each other, all supporting the same underlying specific goal of the proposed action; not alternative means to accomplish the general goal of the proposed action.

The arbitrary screening criteria were used to eliminate reasonable alternatives that should have been developed and rigorously analyzed to "explore and objectively evaluate all reasonable alternatives".

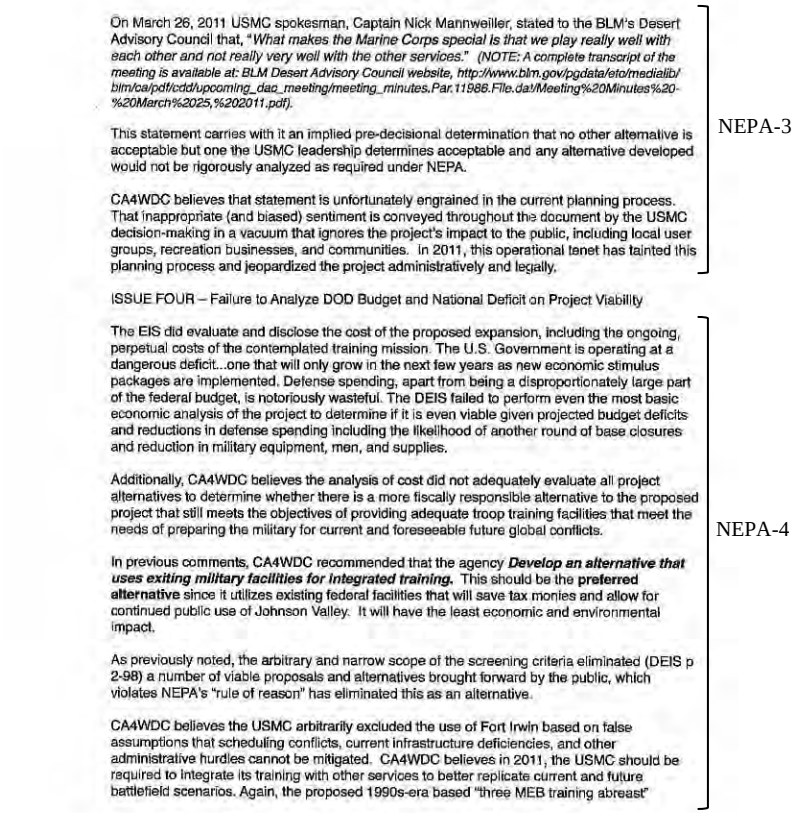
The arbitrary and narrow scope of the screening criteria eliminated (DEIS p 2-98) a number of viable proposals and alternatives brought forward by the public, which violates NEPA's "rule of reason."

CA4WDC believes the USMC arbitrarily excluded the use of Fort Irwin and other areas based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. CA4WDC believes in 2011, the USMC should be required to integrate its training with other services to better replicate current and future battlefield scenarios. Again, the proposed 1990s-era based "three MEB training abreast" scenario is outdated.

NEPA-2

ISSUE THREE - USMC Bias Against Integration

Response to Comment N-00303 (Page 4 of 8):



BIO-1 Continued:

Please refer to response to comment letter N-18713, Comment number BIO-2 regarding the surveys utilized in the Draft EIS. Additional mitigation measures, developed during the Endangered Species Act Section 7 consultation process with USFWS, have been included in the Final EIS. These include dedication of new Special Use Areas, expansion of monitoring and tortoise "headstarting" programs, and preparation of a detailed translocation plan to reduce the significant impacts to the desert tortoise.

CI-1:

Chapter 5 of the EIS addresses cumulative impacts of the proposed action and other past, present, and reasonable foreseeable future actions. A Displaced OHV Recreation Study (DORS) has been added to the EIS to further evaluate impacts to legal and illegal recreation in other areas and subsequent impacts on other resource areas (see Appendix M of the EIS). Chapters 4 (*Environmental Consequences*) and 5 (*Cumulative Impacts*) of the EIS have been updated as appropriate.

Comment ID: N-00303 (Page 5 of 8)

On March 26, 2011 USMC spokesman, Captain Nick Mannweiller, stated to the BLM's Desert Advisory Council that, "*What makes the Marine Corps special is that we play really well with each other and not really very well with the other services.*" *(NOTE: A complete transcript of the meeting is available at: BLM Desert Advisory Council website, http://www.blm.gov/pgdata/etc/medialib/blm/ca/pdf/cdd/upcoming_dac_meeting/meeting_minutes.Par.11986.File.dat/Meeting%20Minutes%20-%20March%2025,%202011.pdf).*

This statement carries with it an implied pre-decisional determination that no other alternative is acceptable but one the USMC leadership determines acceptable and any alternative developed would not be rigorously analyzed as required under NEPA.

CA4WDC believes that statement is unfortunately engrained in the current planning process. That inappropriate (and biased) sentiment is conveyed throughout the document by the USMC decision-making in a vacuum that ignores the project's impact to the public, including local user groups, recreation businesses, and communities. In 2011, this operational tenet has tainted this planning process and jeopardized the project administratively and legally.

NEPA-3

ISSUE FOUR – Failure to Analyze DOD Budget and National Deficit on Project Viability

The EIS did evaluate and disclose the cost of the proposed expansion, including the ongoing, perpetual costs of the contemplated training mission. The U.S. Government is operating at a dangerous deficit...one that will only grow in the next few years as new economic stimulus packages are implemented. Defense spending, apart from being a disproportionately large part of the federal budget, is notoriously wasteful. The DEIS failed to perform even the most basic economic analysis of the project to determine if it is even viable given projected budget deficits and reductions in defense spending including the likelihood of another round of base closures and reduction in military equipment, men, and supplies.

Additionally, CA4WDC believes the analysis of cost did not adequately evaluate all project alternatives to determine whether there is a more fiscally responsible alternative to the proposed project that still meets the objectives of providing adequate troop training facilities that meet the needs of preparing the military for current and foreseeable future global conflicts.

NEPA-4

In previous comments, CA4WDC recommended that the agency ***Develop an alternative that uses exiting military facilities for integrated training.*** This should be the **preferred alternative** since it utilizes existing federal facilities that will save tax monies and allow for continued public use of Johnson Valley. It will have the least economic and environmental impact.

As previously noted, the arbitrary and narrow scope of the screening criteria eliminated (DEIS p 2-98) a number of viable proposals and alternatives brought forward by the public, which violates NEPA's "rule of reason" has eliminated this as an alternative.

CA4WDC believes the USMC arbitrarily excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated. CA4WDC believes in 2011, the USMC should be required to integrate its training with other services to better replicate current and future battlefield scenarios. Again, the proposed 1990s-era based "three MEB training abreast"

Response to Comment N-00303 (Page 5 of 8):

PHS-1:

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS). If acquired lands were transferred back to public domain, the Marine Corps would be required to comply with range closure procedures (USEPA 40 CFR Part 300), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Base Realignment and Closure Policies (BRAC), Reporting Hazardous Substance Activity When Selling or Transferring Federal Real Property (40 CFR Part 373), and Defense Environmental Restoration Program (DERP) (10 USC 2701). .

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Comment ID: N-00303 (Page 6 of 8)

scenario is not only outdated, it is exceedingly expensive to maintain in an era of budget deficits and on-going reductions in military equipment and manpower.

NEPA-4

ISSUE FIVE - Failure to analyze ESA Impacts and provide for required mitigation

In reviewing the DEIS prepared by USMC, CA4WDC finds it defective in its analysis of alleged recreation impacts on threatened and endangered species and lack of adherence to species mitigation as required for Desert Tortoise recovery and raven predation control.

Specifically, the DEIS fails to support its claims that various recreational activities pose significant threats to the ESA listed species Mojave Desert Tortoise. Nor does the DEIS adequately represent how the proposed action will (or will not) adversely impact the Desert Tortoise. Such claims of impact and their level of significance are highly speculative and based on little or no reliable data. The studies cited in support of these claims, such as they are, were conducted many years ago and are outdated. Worse, those same studies either fail to stand for the statements attributed to them, or they violate basic rules of scientific analysis. As such, they (1) are biased in their methodology, (2) draw conclusions based on inadequate sample size, (3) were conducted without sufficient "control" groups, (4) cannot be verified or repeated, and/or (5) are too small or localized to support the area-wide or population-wide extrapolations set forth in the subject document.

A review of the DEIS and its underlying technical data reveals three things: First, no study so far conducted has established a causal connection between recreation activities and any perceived declines in the population of any threatened or endangered species known to reside in Johnson Valley region. At most, the technical data show that some recreational activities, in some areas, have the potential to displace some species on a very local level. This, however cannot establish that recreational activities pose a substantial threat to an entire population or sub-population of a particular plant or animal. This is particularly the case here, where recreation is permitted in only a small portion of Johnson Valley. Of the Johnson Valley total acreage, only a small amount will be open to recreational activities, leaving large, unbroken swaths of habitat for the for use by military training activities without adequate protection or mitigation to benefit and protection of the species at issue.

BIO-1

Second, the document and technical data display a pronounced institutional bias against public recreation while turning a blind eye towards the potential impact of military training which is expected to be more intense with the use of live-fire rounds. Though lacking adequate scientific evidence, those who prepared these reports nevertheless jump to conclusions regarding the effects of recreation on threatened and endangered species and the lack of impact by military activities regarding the effects of on threatened and endangered species. In stark contrast, these same "scientists" and land managers are reluctant – almost to the point of silence – to identify the other threats (e.g., disease, predation) confronting those species. This is especially troubling where the scientific literature (much of it neglected in the subject document) points to these "other" threats as the primary cause of species decline. Given the document's obvious and unjustified bias against public recreation, few of its conclusions can be accepted without suspicion and doubt.

Third, the document is silent on mitigation for the loss of habitat for the desert tortoise. And, the document is silent on mitigation measures (including monitoring) that would be allowed (or

Response to Comment N-00303 (Page 6 of 8):

Comment ID: N-00303 (Page 7 of 8)

Response to Comment N-00303 (Page 7 of 8):

employed) in order to comply with raven predation measures on desert tortoise that are to be applied throughout the Mojave Desert region.

Ultimately, the agency's decision to adopt the DEIS must be based on the best available scientific and commercial evidence. Here, USMC has failed to satisfy this basic requirement. The best scientific evidence available does not demonstrate that recreation in Johnson Valley poses a credible threat to desert tortoise or otherwise "jeopardize" their continued existence. Nor does the USMC demonstrate that intensive military training activities do not "jeopardize" the continued existence of desert tortoise. Indeed, the best scientific evidence does not even show that recreational activities impede recovery efforts for those species. For these reasons, and for the reasons explained more fully below, the subject document is inadequate and should not be adopted until it is substantially altered and recirculated for public review and comment. BIO-1

ISSUE SIX -- Cumulative Impacts

In previous comments, CA4WDC noted that while the loss of access to Johnson Valley for recreation opportunity is a direct loss, there are also indirect impacts that would result should this withdrawal be approved and implemented causing displacement of recreational activities. Those cost include, but are not limited to: (1) the increased enforcement required at other sites when displaced recreational users seek out other areas that may be poorly identified as wildlife preserves or other resource-rich areas; (2) the loss of biological resources or habitat at other sites that displaced recreational users may utilize ; (3) the loss of nature education, (4) the loss of outdoor recreation opportunities, (5) the loss of outdoor access and experiences for children in the community; (6) the loss of familial traditions, custom, and culture of recreational and nature-oriented activities in the region; and (7) the loss of the region's history and traditions, specifically with respect to mining and recreational activities. CI-1

There are competing pressures for use of public lands. The proposed action is one of several that cumulatively have a negative impact on the public's ability to partake in recreational opportunities on public lands. The DEIS failed to adequately evaluate and mitigate the cumulative losses of land for recreational opportunities, including but not limited to cumulative closures or limitations on desert lands managed by BLM and on forest lands managed by the U.S. Forest Service.

ISSUE SEVEN -- Failure to Provide a "Reclamation Plan"

The DEIS failed to include a "reclamation plan" for eventual return of Johnson Valley region to public use. That is, the DEIS must include a plan for the Department of Navy to rehabilitate the project area after military training operation cease.

The DEIS noted that live-fire exercises will be conducted; however, it failed to adequately include discussion and analysis of the project's potential to create hazardous conditions and impact on public safety, including, but not limited to: (1) the potential for unexploded ordinance on- and off-site left during training exercise, both in the short term future and in terms of future reclamation of the area; (2) potential safety impacts on residential areas located near live fire exercises; and (3) potential for aircraft collision or malfunction in or near neighboring residential or commercial areas (including on- and off-base military housing). PHS-1

Comment ID: N-00303 (Page 8 of 8)

Historically, the U.S. Military has used desert areas for training; from General Patton's efforts during World War II to current Navy, Marine, Army, and Air Force training activities. Impacts have arisen from these activities that have a significant impact on the public lands and the health and safety of the general public. The military training actions have left the desert region littered with discarded material and unexploded ordinance. This action has rendered many areas of the desert off-limits due to the potential danger to the public long after the military use has ended. This project proposal fails to address the clean-up and reclamation of the project site for future non-military use. PHS-1

SUMMARY

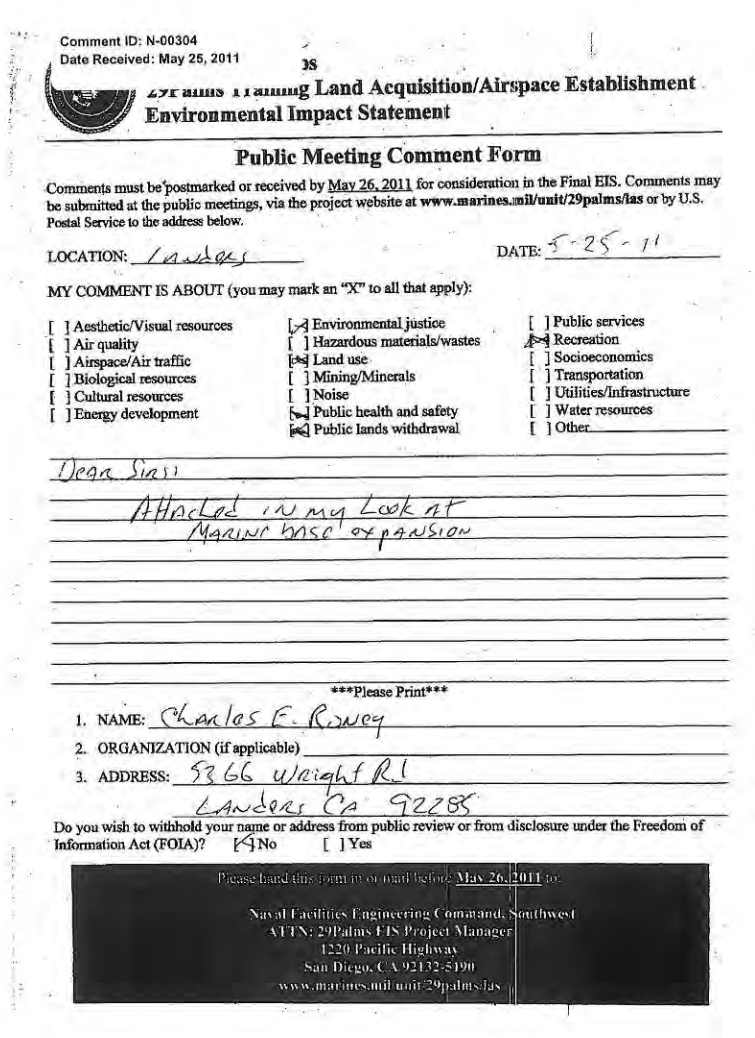
CA4WDC's position at this point is to continue our strong opposition to the entire project including the proposed withdrawal and subsequent planning.

CA4WDC believes the DEIS/project should be withdrawn and shelved given its fatal flaws, public objection to the project, and national economic crisis.

Because all of the action alternatives (1-6) are basically "closure of Johnson Valley OHV area" alternatives or have significant unintended adverse consequences on the general public, and if this project moves forward, CA4WDC suggests that the "no-action" alternative be selected. Also, should a modified DEIS be reissued it must address the aforementioned deficiencies. A modified DEIS should contain the following preferences.

1 – **Develop an alternative that uses exiting military facilities for integrated training**. This should be the **preferred alternative** since it utilizes existing federal facilities – such as Fort Irwin - that will save tax monies and allow for continued recreational use of Johnson Valley. It will have the least economic and environmental impact.

2 – **Develop an alternative with the MCAGCC using other non-military public lands outside of Johnson Valley.**



CA4WDC thanks your office for this opportunity to comment on the DEIS. CA4WDC looks forward to working with the USMC so that it can fulfill its mission and the public may continue to use and enjoy the Johnson Valley OHV area.

Sincerely,

John Stewart
Natural Resources Consultant
California Association of 4 Wheel Drive Clubs

Response to Comment N-00304 (Page 1 of 2):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-00304 (Page 2 of 2)

May 23.2011

Sirs:

– I do not understand what all the controversy is about. I understand that the Marines need more room to maneuver. I have flown over both the east and west areas under consideration. I cannot see any difference in terrain of the two and if there is, why are they both being considered? The big difference I see is to the west you would be affecting the lives of thousands of people. The off-roaders are being labeled as the villains in this scenario, but they are only a fraction of the people that use the westward area. Hikers, campers, rock –hounds, the movie industry, land sailors, gliding clubs and the list goes on and on. Closing the west to this type of tourism would drastically affect the economy of every small business along the highway, totally destroy the smaller towns are put a big dent in the intake of several businesses in the larger cities. Now let's discuss the move to the east. Nobody there, no homes, no businesses, nothing affected. The Marines have the space they need, problem solved. I love the desert, I am an off-roader. For thirteen years I never missed a weekend to come out here and enjoy. I never once loaded the truck up with supplies and carted them all the way out here from the San Gabriel Valley. I came out and purchased my supplies here locally. The first morning our ritual was for our crowd to ride over to a local café and have a family breakfast. My family and friends still continue this practice. If the expansion come to the west, this is all ended. I have attended several of the meetings held and could not get any discussion about the economics of the different plans, just the need for expansion. I do not buy the plan they are trying to get to share a small portion of the land to the west with us. They know, you know and I know that THE FIRST TIME THEY FIRE A LIVE ROUND IN THAT AREA, IT WILL BE CLOSED TO ANY OUTSIDER AS "UN-SAFE". Also I do not buy the reasoning given about the problem of going east is affected by Amboy road. Camp Pendleton has held exercises on the beach for years with The Coast Highway between the main base and the beach. (Coast highway -- hundreds of cars an hour == Amboy road – few cars a day.) , Also the salt, mining on the north east side, move the north-east side of the expansion a few miles to the south and you have a free run almost to the Colorado river. Next they will bring up a couple of protected areas to the east. What better way to protect them than surrounding them with Marines: I wonder how many times our troops while in combat have had to say, " Hold it! We cannot have combat over there where you are at because of (any reason). You will have to come over here miles away so we can continue this exercise" I am just an old farm boy and cannot understand why we have to spend boatloads of money to do studies (I know it is required – still do not understand it) on the environmental impact on the lands. A piece of desert near my home is exactly like a piece 50 miles east of me. They have turtles, we have turtles. Now, studies on the environmental impact on the people involved is another story. People to the east – very few, people to the west – thousands and thousands, Like I stated, I understand the need for expansion but I hope they listen to the majority and "Go east young men, go east"

Charles C. Roney

Response to Comment N-00304 (Page 2 of 2):

Thank you for your comment and suggestions for project alternatives. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

RE: DRAFT ENVIRONMENTAL IMPACT STATEMENT FOR TRAINING LAND ACQUISITION AND AIRSPACE ESTABLISHMENT

Dear Sir/Madam:

I thank you for the opportunity to comment on the Draft Environmental Impact Statement ("DEIS") for the Training Land Acquisition and Airspace Establishment ("Project") at the Marine Corps Air Ground Combat Center in Twentynine Palms, California.

I have been a full-time resident of the Twentynine Palms area for almost 20 years and specifically in Wonder Valley since 1995. I own and pay taxes on five acres, a well, a home, and an art studio in a vintage cabin on Mesa between Godwin and Gammel, three miles south of the boundary of the Project southern study area ("SSA"). I work both as an artist and as a medical transcriptionist, telecommuting from my home.

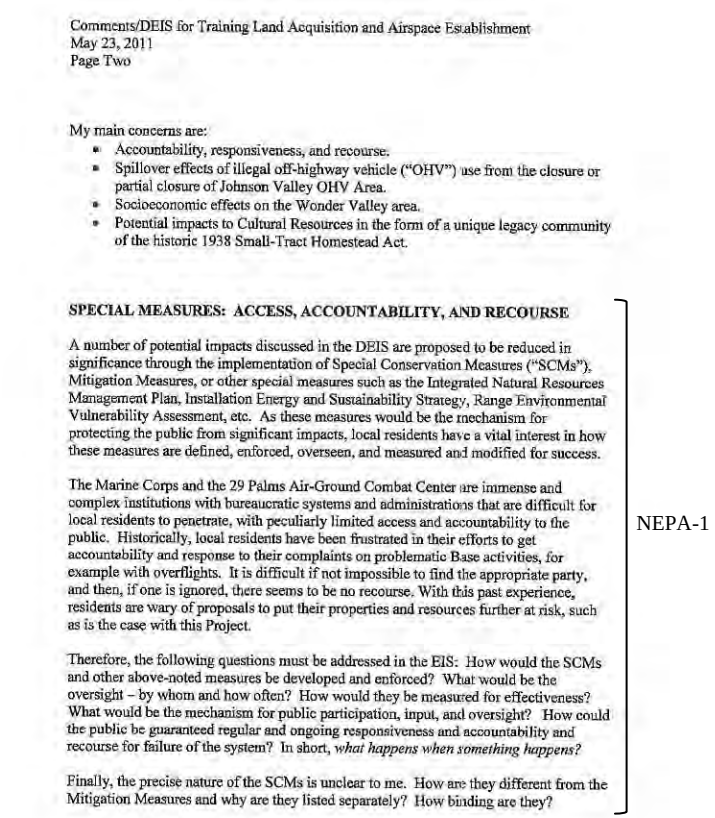
My comments focus mainly on the SSA and potential effects on my community by the inclusion of the SSA as part of the Project. I am surprised and concerned to see that potential effects of the Project on Wonder Valley are almost absent from the DEIS. There are Wonder Valley residences almost on the border of the SSA, and the community as a whole would likely be very affected if the Project goes forward.

I am also surprised and concerned that a number of specific issues I raised in my Scoping letter of January 29, 2009, as well as those raised in numerous scoping letters submitted by other Wonder Valley residents, are not addressed in the DEIS. I know my letter was received by the Project managers as I have the receipt for it, but I am nonetheless appending a copy of it for your reference; **the issues raised therein still apply and need to be addressed and I hereby incorporate them into my comments on the DEIS.**

P.O. Box 935, Twentynine Palms, CA 92277 magicgroove@gmail.com 760-361-0505 www.magicgroove.net

Response to Comment N-00305 (Page 1 of 15):

NEPA-1:



Thank you for your comment. The proposed Special Conservation Measures (SCMs) outlined in Section 2.8 of the EIS would be included in the proposed action to avoid or minimize potential impacts under any alternative. Under certain alternatives, where impact avoidance is not feasible, appropriate resource-specific mitigation measures to minimize impacts are identified (see Chapter 4 of the EIS).

If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

REC-1:

A Displaced OHV Recreation Study (DORS) has been added to the EIS to further evaluate impacts to legal and illegal recreation in other areas and subsequent impacts on other resource areas (see Appendix M of the EIS). Chapters 4 (*Environmental Consequences*) and 5 (*Cumulative Impacts*) of the EIS have been updated as appropriate.

Comment ID: N-00305 (Page 2 of 15)

Comments/DEIS for Training Land Acquisition and Airspace Establishment
May 23, 2011
Page Two

My main concerns are:

- Accountability, responsiveness, and recourse.
- Spillover effects of illegal off-highway vehicle ("OHV") use from the closure or partial closure of Johnson Valley OHV Area.
- Socioeconomic effects on the Wonder Valley area.
- Potential impacts to Cultural Resources in the form of a unique legacy community of the historic 1938 Small-Tract Homestead Act.

SPECIAL MEASURES: ACCESS, ACCOUNTABILITY, AND RECOURSE

A number of potential impacts discussed in the DEIS are proposed to be reduced in significance through the implementation of Special Conservation Measures ("SCMs"), Mitigation Measures, or other special measures such as the Integrated Natural Resources Management Plan, Installation Energy and Sustainability Strategy, Range Environmental Vulnerability Assessment, etc. As these measures would be the mechanism for protecting the public from significant impacts, local residents have a vital interest in how these measures are defined, enforced, overseen, and measured and modified for success.

The Marine Corps and the 29 Palms Air-Ground Combat Center are immense and complex institutions with bureaucratic systems and administrations that are difficult for local residents to penetrate, with peculiarly limited access and accountability to the public. Historically, local residents have been frustrated in their efforts to get accountability and response to their complaints on problematic Base activities, for example with overflights. It is difficult if not impossible to find the appropriate party, and then, if one is ignored, there seems to be no recourse. With this past experience, residents are wary of proposals to put their properties and resources further at risk, such as is the case with this Project.

Therefore, the following questions must be addressed in the EIS: How would the SCMs and other above-noted measures be developed and enforced? What would be the oversight – by whom and how often? How would they be measured for effectiveness? What would be the mechanism for public participation, input, and oversight? How could the public be guaranteed regular and ongoing responsiveness and accountability and recourse for failure of the system? In short, *what happens when something happens?*

Finally, the precise nature of the SCMs is unclear to me. How are they different from the Mitigation Measures and why are they listed separately? How binding are they?

NEPA-1

Response to Comment N-00305 (Page 2 of 15):

SOC-1:

Thank you for your comment. The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

CR-1:

Sections 3.12 and 4.12 of the EIS identify and discuss impacts to Cultural Resources, respectively. The EIS has been updated as appropriate to acknowledge communities that may be applicable under the 1938 Small-Tract Homestead Act.

VIS-1:

Section 2.2 of the EIS has been updated to clarify the use of lighting during proposed training activities. Section 4.5, which discusses impacts to visual resources, has been updated appropriately.

Comment ID: N-00305 (Page 3 of 15)

ILLEGAL OFF-HIGHWAY VEHICLE USE

The Project proposes to institute three Special Conservation Measures to "minimize the occurrence of illegal OHV use in public and private lands adjacent to the west study area." Nevertheless, the DEIS admits, an "increase in illegal riding would likely still occur." I would like to emphasize that these impacts would occur adjacent to the SSA as well as to the west study area and that those impacts would likely have broad effect. However, in the DEIS the communities adjacent to the SSA, particularly Wonder Valley, are only cursorily analyzed for impacts, if at all. The EIS needs to analyze the impacts of increased OHV use on the SSA communities with regards to:

- deterioration and destruction of roads, berms, and flood control infrastructure and costs of repair and maintenance
- increased noise and dust
- negative impacts on property values, business, and tourism
- increased demand on emergency response and law and code enforcement
- costs to local taxpayers

As well, the communities, residents, and property owners of the SSA area must be included as partners in the development, enforcement, and oversight of the SCMs; please see "Special Measures" section above.

REC-1

SOCIOECONOMIC IMPACTS

The analysis of Socioeconomic impacts in the DEIS is limited almost exclusively to recreation in the form of OHV activity; the film industry; and Base personnel. (If more data are provided in Appendix K in the Tables on pp. K-10 through K-21, I'm sorry to say I wouldn't know it; they are unfortunately unreadable on the screen.) The analysis ignores the impacts on tourism and other cultural economic generators in the communities of the SSA and goes so far as to state: **"There are no known businesses or other economic activities located in the south study area."** (p. 3.3-15) This is patently not true and calls into question the level of research and analysis pursued by the preparers of this document.

I quote from my Scoping letter of January 29, 2009 (attached):

> Deterioration of desert viewshed and open space and other natural resources would means loss of both identity and livelihood for the residents of Wonder Valley and the Dale Basin. The area depends economically on location- and

SOC-1

Response to Comment N-00305 (Page 3 of 15):

BIO-1:

The Marine Corps is highly committed to on-base monitoring and eradication of non-native species. However, under current agreements the Marine Corps cannot monitor non-native species outside the Combat Center. Periodic surveys on base that would indicate problem areas on base that might implicate invasions from off base (Agrichemical and Supply 2005). Increases on base could also suggest potential for increased effects off base. There is very little information available regarding non-native species present in the proposed expansion areas, and the survey and monitoring work that would be conducted by the Marine Corps if the project were approved would far exceed any such efforts to date. Further, the Marine Corps is dedicated to being a "good neighbor" to the surrounding communities and is open to cooperation and coordination with municipalities and organizations to improve control and eradication of non-native species.

Comment ID: N-00305 (Page 4 of 15)

resource-reliant industries such as mining and farming; tourism; vacation rentals; location shooting for film, television, and advertising; recreation, both motorized and nonmotorized; and other cultural activities such as art, historical, and spiritual tours and retreats. The area also relies on the aesthetic and environmental quality of its setting to attract today's increasingly mobile workforce, which has become less geographically tethered and can choose where they live. (I myself was able to choose Wonder Valley because of the geographic independence offered by my digital-based trade.) Retirees are also a significant part of our community who can choose where they live based on natural amenities and appeal. Therefore, the area's property values depend on these amenities and that appeal. A diminishment in the quality of the desert setting and resources means jobs and income directly lost and future potential thrown away for the Southern Study Area. The EIS must analyze potential socioeconomic impacts to the area that might be caused by deterioration of the quality of the setting and other effects of the Project. SOC-1

Further, my letter references the Beauty Bubble Salon and Beauty Museum and the Palms Restaurant and Bar, as well as other economic and cultural activity in Wonder Valley, all well within socioeconomic impact distance of the SSA for the reasons stated in my quote, above.

The socioeconomic health of the communities of the SSA has the potential to be negatively impacted by the Project through such impacts as:

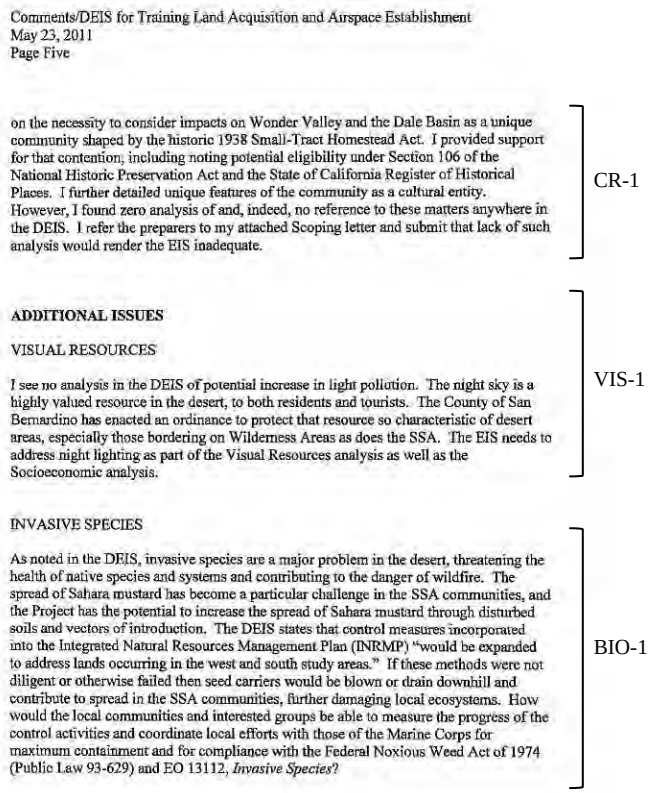
- noise
- overflights
- concussion
- air quality
- deterioration of viewshed and aesthetics, including through light pollution
- Illegal OHV activity
- loss/damage of wildlife, vegetation, and other natural resources and systems
- damage to water quality and quantity
- damage to community historical and cultural identity and features and their economic potential

CULTURAL RESOURCES

Perplexingly, Section 4.11.1.3 states that "During the public scoping process for this proposed project, no comments were received from the public regarding cultural resources." In fact, in my Scoping letter of January 29, 2009, I commented extensively CR-1

Response to Comment N-00305 (Page 4 of 15):

NOI-1:



The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

WAT-1:

Thank you for your comment.

Comment ID: N-00305 (Page 5 of 15)

Comments/DEIS for Training Land Acquisition and Airspace Establishment
May 23, 2011
Page Five

on the necessity to consider impacts on Wonder Valley and the Dale Basin as a unique community shaped by the historic 1938 Small-Tract Homestead Act. I provided support for that contention; including noting potential eligibility under Section 106 of the National Historic Preservation Act and the State of California Register of Historical Places. I further detailed unique features of the community as a cultural entity. However, I found zero analysis of and, indeed, no reference to these matters anywhere in the DEIS. I refer the preparers to my attached Scoping letter and submit that lack of such analysis would render the EIS inadequate. CR-1

ADDITIONAL ISSUES

VISUAL RESOURCES

I see no analysis in the DEIS of potential increase in light pollution. The night sky is a highly valued resource in the desert, to both residents and tourists. The County of San Bernardino has enacted an ordinance to protect that resource so characteristic of desert areas, especially those bordering on Wilderness Areas as does the SSA. The EIS needs to address night lighting as part of the Visual Resources analysis as well as the Socioeconomic analysis. VIS-1

INVASIVE SPECIES

As noted in the DEIS, invasive species are a major problem in the desert, threatening the health of native species and systems and contributing to the danger of wildfire. The spread of Sahara mustard has become a particular challenge in the SSA communities, and the Project has the potential to increase the spread of Sahara mustard through disturbed soils and vectors of introduction. The DEIS states that control measures incorporated into the Integrated Natural Resources Management Plan (INRMP) "would be expanded to address lands occurring in the west and south study areas." If these methods were not diligent or otherwise failed then seed carriers would be blown or drain downhill and contribute to spread in the SSA communities, further damaging local ecosystems. How would the local communities and interested groups be able to measure the progress of the control activities and coordinate local efforts with those of the Marine Corps for maximum containment and for compliance with the Federal Noxious Weed Act of 1974 (Public Law 93-629) and EO 13112, *Invasive Species*? BIO-1

Response to Comment N-00305 (Page 5 of 15):

AQ-1:

Regarding the potential for the proposed expansion of the Combat Center into the Johnson Valley OHV recreational area to lead to an increase in illegal ORV incursions onto private property and the associated fugitive dust impacts from these activities: It is difficult to predict how and where OHVs would be displaced as a result of the project alternatives that would expand into Johnson Valley. These vehicles could increase fugitive dust emissions on private lands compared to existing conditions. However, these vehicles would operate intermittently and at a level much lower in any one location than the scenario of equipment usage evaluated in the DEIS for ambient PM10 impacts. The DEIS analysis determined that maximum PM10 impacts on public lands would produce less than significant air quality impacts. Therefore, it is expected that impacts of fugitive dust from illegal ORV incursions onto private property also would produce less than significant PM10 impacts.

PHS-1:

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Response to Comment N-00305 (Page 6 of 15):

Comments/DEIS for Training Land Acquisition and Airspace Establishment
May 23, 2011
Page Six

NOISE/CONCUSSION/OVERFLIGHTS

The DEIS finds that noise-, concussion-, and overflight-related impacts would be less than significant in the SSA. However, the impacts of these factors have been a major stressor in our communities for years and the Project would bring military activity even closer to our homes. It has been a source of great frustration on the part of residents that there is NO established or responsive route for complaint or recourse on the part of the Base. Complaints are simply deflected. In the view of residents, the potential for an increase in problematic activity is very great, and some clear and dependable mechanism to assure accountability to local residents must be made part of this Project. See "Special Measures" section above.

NOI-1

WATER

In the desert, every drop of water is precious. Local residents cannot afford risks to their water supplies. The communities, residents, and property owners of the SSA area must be included as partners in the development, enforcement, and oversight of the Water SCMs. Please see "Special Measures" section above.

WAT-1

AIR QUALITY

Air quality is already an issue in our communities, especially dust/PM10. The residents and property owners of the SSA area must be included as partners in the development, enforcement, and oversight of the Air Quality SCMs. Please see "Special Measures" section above.

AQ-1

PUBLIC SAFETY

The closer military activities get to residential areas, the greater the danger of accidents and mishaps. What recourse is established for residents to pursue remedy with the Base for public safety problems? Some clear and dependable mechanism to assure accountability to local residents must be made part of this Project. See "Special Measures" section above.

RE: 29 Palms Proposed Training Land/Air Acquisition Project

Dear Mr. Ross,

Thank you for the opportunity to provide Scoping comments on the 29 Palms Proposed Training Land/Air Acquisition Project (Project). I am a 16-year full-time resident of Wonder Valley and own five acres, a well, a home, an art studio in a vintage cabin on Mesa between Godwin and Gammel, two miles south of Poleline Road and the boundary of the Southern Study area. I work both as an artist and as a medical transcriptionist, telecommuting from my home.

INTRODUCTION

There are many issues of concern raised by the Project, but I will address specifically Cultural Resources, Aesthetics/Visual Resources, Socioeconomics, and Environmental Justice as these topics are inextricably tied within the unique communities of the Southern Study Area.

The community of Wonder Valley and the Dale Basin was formed in intimate relationship with its desert setting. The area is a sort of tidal zone, where the residential interfaces with wilderness at the edge of civilization. The setting and its natural resources, including the broad expanse and its peace, quiet, and visual aesthetics, are intrinsic to the history, identity, and cultural and socioeconomic character and well-being of this community and its residents. Deterioration of or encroachment upon these resources would remove the meaning, heart, and viability of a unique community that has survived in the margins and continues to make a unique contribution to the larger culture of California and the world.

Comment ID: N-00305 (Page 9 of 15)

POTENTIAL IPMACTS

The Project Environmental Impact Statement (EIS) must thoroughly analyze potential economic, material, and nonmaterial impacts on the Southern Study Area and its community.

I am concerned about increased noise, dust and other air-borne pollutants, light pollution, and loss of quality viewshed on the quality of life for our residents and quality of experience for the visitors, guests, and clients who come to the Dale Basin for a unique experience of beauty and peace and upon whom many of our residents depend for income. These effects must be measured in the analysis.

Deterioration of desert viewshed and open space and other natural resources would means loss of both identity and livelihood for the residents of Wonder Valley and the Dale Basin. The area depends economically on location- and resource-reliant industries such as mining and farming; tourism; vacation rentals; location shooting for film, television, and advertising; recreation, both motorized and nonmotorized; and other cultural activities such as art, historical, and spiritual tours and retreats. The area also relies on the aesthetic and environmental quality of its setting to attract today's increasingly mobile workforce, which has become less geographically tethered and can choose where they live. (I myself was able to choose Wonder Valley because of the geographic independence offered by my digital-based trade.) Retirees are also a significant part of our community who can choose where they live based on natural amenities and appeal. Therefore, the area's property values depend on these amenities and that appeal. A diminishment in the quality of the desert setting and resources means jobs and income directly lost and future potential thrown away for the Southern Study Area. The EIS must analyze potential socioeconomic impacts to the area that might be caused by deterioration of the quality of the setting and other effects of the Project.

I am also concerned about concussion effects from ordinance to our homes, properties, and historic and cultural resources such as the homestead cabins and the early adobes. These effects must be measured in the analysis.

The EIS further must include a thorough survey of culturally and historically significant resources and sites as well as mining/freighting and archaeological/tribal routes and sites and analyze potential impacts. Wonder Valley and the Dale Basin were roamed by the Serrano, Chemehuevi, and Cahuilla peoples, and its early American history is connected to the Oasis of Mara and Twentynine Palms, mining and ranching activities, and the early homesteading movement of wounded World War I veterans. In 1888 two freight lines run by muleskinners such as Sabathy crossed the area serving the robust mining industry, and the Dale-Amboy

Response to Comment N-00305 (Page 9 of 15):

Comment ID: N-00305 (Page 10 of 15)

Response to Comment N-00305 (Page 10 of 15):

Stageline was used in the early 1900s. There is still much to be learned about the early history of this fascinating area, and its important that resources not be destroyed before they can be surveyed and preserved for future generations.

AN EXCEPTIONAL RESOURCE: THE SMALL-TRACT HOMESTEADS

The EIS must include a thorough analysis of potential impacts on Wonder Valley and the Dale Basin as a unique community shaped by the historic 1938 Small-Tract Homestead Act.

Contemporary Wonder Valley and the Dale Basin are visually characterized by two prominent features: The immensity of the natural desert landscape, and the presence of numerous scattered small homestead cabins, in varying states of repair. The cabins are a source of constant curiosity on the part of passers-through, who frequently stop by the Fire Station to ask a version of the perennial query, "What are all those old shacks out there?"

Wonder Valley developed as part of the Small-Tract Homestead Act of 1938, an attempt by the Federal Government to bring residents into the Mojave Desert in which five-acre parcels of land were given to individuals who agreed to build a small residential structure and meet other minor requirements. It is those small structures, whether whole, refurbished, or in ghostly disrepair, that provoke such curiosity and attention today and form the nuclear framework of the community.

Wonder Valley is largely intact as a Small-Tract homestead community. The role of the homestead heritage in shaping the community cannot be overstated, and the cultural and historical significance of this heritage is only recently becoming recognized. Little has changed since the following appeared as one of numerous passages on the movement in various issues of *The Desert Magazine* (1954):

> Passage of the Small Tract Act has opened vast areas of land, not for profit or exploitation, but for folks who like to build with their own hands, and who are thrilled by the challenge of creating a home of their own...These homesteads are for people who delight in watching the moon rise over purpled hills, for those who would call the stars by name, and who love the peace that is found only in remote places.

The appeal remains. Today, the five-acre homesteads have become the basis of a special edge-culture built upon a combination of resourcefulness, creativity, determination, and diversity that is increasingly rare in the monotonous suburban landscapes of California. The population spans a remarkable spectrum of class and interests. Whether as recreational cabins used by generations, showcases refurbished by artists, retreats for spiritual seekers, resorts for frazzled

Comment ID: N-00305 (Page 11 of 15)

urbanites, or refuges for the invalid or the person on fixed income, the homestead cabins have bound together a remarkably diverse population. The historically low real estate prices have continued to allow many of the less-privileged to attain their "little bit of heaven", or at least an affordable roof over their head, an opportunity for home-ownership that essentially cannot be duplicated elsewhere in California. The variety of the population and the economic, social, and civic systems its members have devised to survive are a unique expression of modern American culture and a living face of history.

It is critical to keep in mind that the glue that binds this community is the combination of the homestead heritage and the natural desert expanse within which it sits. Both are fundamental for its survival as an identifiable entity. Therefore, the Project must be analyzed as an Environmental Justice issue, with a unique, irreplaceable, lower-income population at risk.

The cabins have architectural significance as a class, with the characteristic "jackrabbit" cabin tailored to meet government requirements and put up almost overnight by such landmark enterprises as Homestead Builders, as well as by many local independent contractors. As well, many cabins were and continue to be unique personal creations of the original homesteaders and their followers, including a notable number of single women as documented in contemporaneous issues of *The Desert Magazine*.

Potential Project impacts also need to be evaluated in light of clear eligibility on the part of both individual homesteads and the entire Wonder Valley community under Section 106 of the National Historic Preservation Act:

- It is associated with an historic event.
- It includes historic structures, the homestead cabins, that were created as a result of this historic act and which remain for the most part architecturally intact.
- The entire community may be eligible as historic under Section 106 as there has been very little alteration to its architectural, physical, and historic integrity since it was founded as a Homestead Community.

As well, the community meets several criteria for consideration for the State of California Regsister of Historical Places:

- Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States (Criterion 1).
- Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values (Criterion 3).

Response to Comment N-00305 (Page 11 of 15):

Comment ID: N-00305 (Page 12 of 15)

Response to Comment N-00305 (Page 12 of 15):

- Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation (Criterion 4).

RESOURCES AT RISK

The artists, homesteads, and cultural traditions, products, and events of Wonder Valley and the Dale Basin have been featured in a variety of publications, including locally such as *The Sunrunner* and nationally such as the *Los Angeles Times* and the *New York Times*. Despite this repeated exposure, there is a persistent public and institutional view that there is "nothing" in the desert, including in the Study Areas.

Contrary to that view, below are some of the resources, events, and traditions that are an intrinsic part of the fabric of the Dale Basin communities, all elements that are intimately tied to and dependent upon the natural resources of their desert setting and, at the same time, are economic generators for the area. These elements contribute to the cultural, visual resource, and socioeconomic life and health of the community and would all potentially be adversely affected by the effects of the Project. They must be considered within the EIS analysis of impacts.

- The Poste Homestead Historical and Natural Area (Chadwick south of Amboy) contains the adobe ruins of a 1923 homestead occupied by local historic figures David and Anna Poste, owners and operators of the Virginia Dale Mine.
- The historic Neugebauer Adobe on Blower north of Amboy, dating from 1939 and still occupied by the original family.
- The Fire Station on Amboy Road, long a center of community life, was originally a State of California Agricultural Inspection Station built in 1960. There are currently plans to create a historical mural on the wall of the Station featuring famed muleskinner Sabathy, who ran a freight line in Wonder Valley servicing Dale Mine a hundred years ago.
- The innovative local "tinkerbell" telephone system that connected the far-flung homesteads with buried wire that can still be found.
- The Desert Electric Cooperative, Inc. (Amboy at Gammel). This original power provider was a critical factor in the development of the Small-Tract communities across the Basin. The Midcentury-style building still stands as a landmark and is currently used as a retreat center.
- "Jackrabbit Homestead: Tracing the Small Tract Act in the Southern California Landscape, 1938-2008", by Kim Stringfellow. Included: A book of fine-art photographs and text on the homestead history of Wonder Valley, to be published in 2009 by Center for American Places as third in the series, "Center Books on the American West." Also, a "Web-based multimedia presentation featuring a downloadable car audio tour exploring the cultural legacy of the Small Tract Act. Stories from this underrepresented regional

Comment ID: N-00305 (Page 13 of 15)

history will be told through the voices of local residents, historians, and area artists–many of whom reside in reclaimed historic cabins and use the structures as inspiration for their creative work"; sponsored by the Twentynine Palms Historical Society Museum and supported by a Stories grant from the California Council of the Humanities.

- Wonder Valley Institute of Contemporary Art, located in a vintage cabin on Amboy Road at Sheephole Pass, had its inaugural exhibition in fall 2008 as part of the California Biennial and "seeks to nurture creativity across a range of disciplines by sponsoring imaginative projects on site and throughout the desert area. The tranquil, remote location provides for a fertile home where established and emerging artists can discover new creative paths expanding beyond the confines of the studio and gallery walls.... WVICA will eventually serve as a multi-functional space including a library, exhibition gallery and performance space."
- Wonder Valley Arts/Fi-Lox-See Gallery, exhibiting the work of Wonder Valley artists.
- Wonder Valley is a highly popular destination during the annual Open Studio Art Tours, sponsored by the Morongo Basin Cultural Arts Council and providing a major source of income for area artists.
- The Beauty Bubble Hair and Beauty Museum (Godwin south of Amboy), a unique venue and collection as featured in major publications such as the *New York Times*.
- Poplight, an ongoing project involving regular nighttime abstract video projection on a semi-abandoned cabin off the salt flats near Amboy, by Wonder Valley artist Helena Bongartz.
- High Desert Test Sites, acclaimed annual site-specific experimental art event organized by prominent designer Andrea Zittel and numerous volunteers and including both local and internationally known artists.
- The Palms, a family-owned restaurant and bar that is a local tradition for music and other community cultural events, including Ben Vaughn's Wonder Valley Music Festival series and the popular open-mic nights (see *Press Enterprise* http://www.pe.com/lifestyles/stories/PE_Fea_Daily_D_bootenanny03.24906ce.html# or attachment to print version of these Comments). The Palms is a regular stop on international motorcycle tours and has been used as a location for numerous film, video, and fashion shoots.
- The 2008 Wonder Valley Homestead Cabin Festival, which explored through the arts the legacy of the Small-Tract Homestead Act in two exhibitions and related events. Featured were visual and performing artists who have made the homestead cabins a major subject of their work, as well as a "Show 'n Tell" that was open to anyone and brought together a sharing across the diverse popluation over the feature they most share in common, their homesteads and their homestead way of life. The Festival and the cabins as a cultural force are documented at http://homesteadcabin.wordpress.com/. As well, the Festival was featured in the Dune Magazine (Palm Springs) Architectural issue, which postioned the article (see

Response to Comment N-00305 (Page 13 of 15):

Comment ID: N-00305 (Page 14 of 15)

http://www.jackadandy.net/magicgroove/magicgroove/DuneMagazineFeb08.htm or attachment to print version of these Comments) opposite its centerpiece on iconic architectural photographer Julius Shulman, the man who put Mid Century Modern architecture on the cultural map:

> "It's with a sense of aesthetic-historic juxtaposition, and a bit of mischief, that we've placed our story about the cabins adjacent to writer Lydia Kremer's beautifully illustrated feature on renowned architectural photographer Julius Shulman. The subjects of these two articles aren't so mutually exclusive: Both are observing 70-year anniversaries, and they've contributed substantially in their respective ways to local culture. It's worth noting that some folks have taken to remodeling their old High Desert homesteads in the Mid-Century Modern style exalted by Shulman's brilliant Palm Springs record. The desert may be a study in contrasts, but its underlying interrelationships and shared influences keep it fascinating."
> - *Dean Lamanna, Executive Editor, Dune Magazine*

- "The Road to Wonder Valley", a film series by Massif Pictures currently in production and profiling artists of Wonder Valley's robust and diverse community as intrinsic parts of their desert setting.
- The uniqueness of area qualities and amenities continues to make it a popular location for film and advertising. Past films range all the way from commercial B-grade thriller "Route 666" with Lou Diamond Phillips; to "Palms" by German artist John Bock, supported by REDCAT/CalArts, The Andy Warhol Foundation for the Visual Arts, and The Nimoy Foundation.

OTHER ISSUES

To touch briefly on two other issues: First, the outreach done by the Project in the Eastern and Southern Study Areas does not meet the requirements for Scoping as described in NEPA. Affected residents were not notified, and there was no attempt to do outreach into the community. Therefore, I request a 90-day extension of the Scoping period in an attempt to allow residents to become informed and have meaningful input into the process.

Second, the potential impacts to Dale Basin water resources would appear to trigger the California Environmental Quality Act. Why has a CEQA analysis not been undertaken?

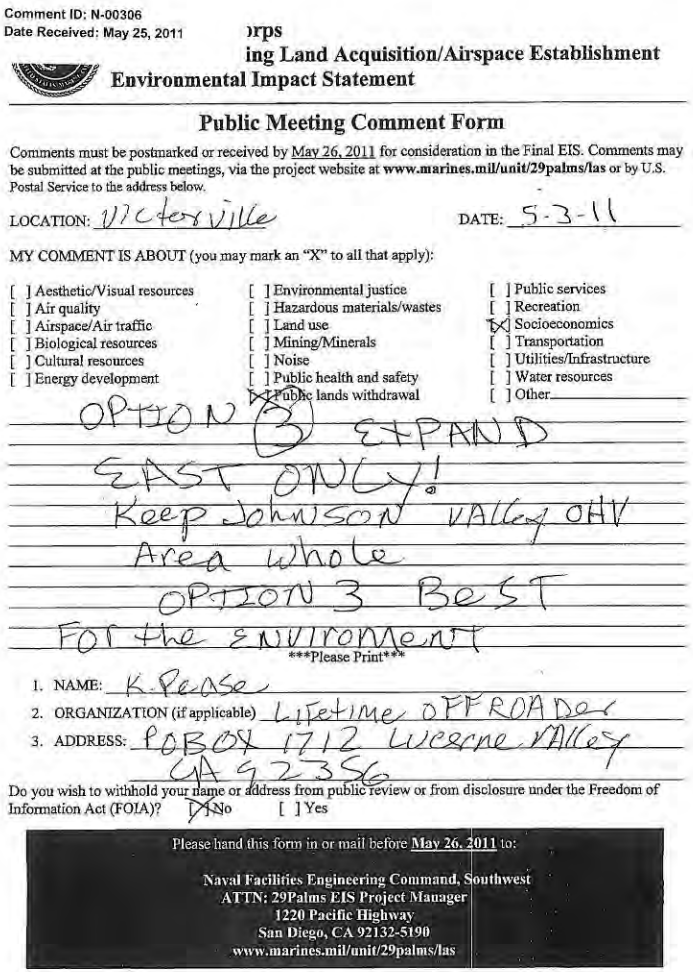
Response to Comment N-00305 (Page 14 of 15):

Comment ID: N-00305 (Page 15 of 15)

CONCLUSION

The community of Wonder Valley and the Dale Basin is a special culture based in an interaction with a wild world, where little infrastructure is provided, independence and resourcefulness are prized, and support systems have been devised unique to the area and its geographical and built circumstances. This culture has made and is continuing to make unique contributions to our world. The Project has the potential to destroy this culture as well as the local economy and therefore the community, most especially because of its potential to adversely impact the desert setting upon which the culture and economy depends, and the Project must be evaluated in this light.

As an artist who has both specifically sought out and whose creative work is inspired and enabled by this desert setting, and as a transcriptionist who needs QUIET in order to work, my living is dependent upon the specific qualities of this desert setting. The deterioration of those qualities would have an ultimately terminal effect on my ability to live and work in my home and studio in the Southern Study Area.



Thank you again for the opportunity to comment. I am submitting these comments via both the Project Website and also via U.S. Mail. The attachments referenced are included in the postal version only. Please include me on the mailing list for all future communications regarding the Project. Postal communication may be sent to the above street address and electronic communication to magicgroove@gmail.com. If disk copies of documents are made available I request an opportunity to receive those rather than being left to depend on Website access, as like many in this rural area I am restricted to dial-up service.

Sincerely,

Don't close Johnson Valley. We have been and still are using this area as recreation for my family for 25 years. My business will be affected drastically by this closure. Please reconsider this area to stay open for our use.

The economic impact will be devastating!!!

Response to Comment N-00324:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Don't close Johnson Valley. We have been and still are using this area as a recreation. For my family for 25 years. My business will be affected drastically by this closure. Please reconsider this area to stay open for our use.

The economic impact will be devastating!!!

Response to Comment N-00334:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Response to Comment N-00345:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Don't close Johnson Valley. We have been and still are using this area as recreation for my family for 25 years. My business will be affected drastically by this closure. Please reconsider this area to stay open for our use.

The economic impact will be devastating!!!

Response to Comment N-00357:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Don't close Johnson Valley. We have been and still are using this area as designed for my family for 25 years. My business will be affected drastically by this closure. Please reconsider this area to stay open for our use.
The economic impact will be devastating!!!

Response to Comment N-00369:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Response to Comment N-00380:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

	[ ] Public lands withdrawal	[ ] Other

I have lived in Lucerne Valley for 21 years and work at one of the largest businesses in town, Lucerne Valley Market. Lucerne Valley's economy is very dependant on the off-road people who come out to this area. The area designated for the Marine Base is one of the most popular areas. This will turn our town into another Amboy.

I live here for the quiet, small town atmosphere and I bought my home when I moved here. The Marine Base center would still be in 29 Palms – we will just get the noise in our backyards. Desert air carries noise very effectively. My property will be worth less than it is now, and I will have to move because my husband has post-traumatic stress syndrome.

Please expand where people live nearby.

Please Print do not live nearby.

Response to Comment N-00391:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

AS A PROUD AMERICAN CITIZEN, IN THE ROUGHEST ECONOMIC TIMES IN MODERN HISTORY, I AND THE PEOPLE OF THIS AREA (PRIVATE CITIZENS) HAVE WORKED HARD TO HOLD ON THROUGH THE WARS, UN-EMPLOYMENT, AND THE OVER ALL HARDSHIPS. ALL OF US DEPEND ON THESE BLM (PUBLIC LANDS) FOR OUR LEGAL PERSONAL USE, RECREATION, AND MAINLY THE FUNDS VISITORS BRING TO THIS AREA!!

I RECOMEND AND STRONGLY FEEL, THERE IS A BETTER SOLUTION. THE AREA OF LAND YOU ARE TRYING TO ACQUIRE FOR "TRAINING" CAN BE FOUND "AND MORE" ON THE EAST SIDE OF YOUR 29 PALMS BASE!! "GO EAST" OR IS THERE A HIDDEN REASON WHY YOU WANT MY OHV AREA??

Response to Comment N-00392:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I disagree with this expansion, it would hurt our Small Town's economy, and cause some of our people to move out.

Response to Comment N-00393:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps appreciates your comment and participation in the NEPA process.

The government has our country in debt far enough. We the people do not expect the govt. to expand into more territory and cost the people more money.
Our Air quality is poor already from chemtrails
Our Air Traffic is noisy already
Our Cultural resources are disappearing.
Hazardous Materials are already a problem here
Land use must be preserved for a growing population

Response to Comment N-00396:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The people of our town have used this land for recreation, family fun and living for years. I dont think its fair to tear our town apart because them want to expand. There is plenty of space already being used and plenty more space that isnt already occupied by our towns people.

THE DESERT HAS MANY BEAUTIFUL PLANTS THAT WOULD BE DESTROYED. WE ALREADY HAVE LOW FLYING PLANES THAT CAN'T BE GOOD FOR THE AIR QUALITY. WE ALREADY HEAR BOMBS, SOMETIMES ALL DAY. WE ALSO SURVIVE ON TOURISM ALOT. WE MOVED OUT HERE FOR PEACE AND QUIET. PROPERTY VALUES ARE BAD ENOUGH WITHOUT HAVING WAR GAMES NEXT DOOR. I KNOW THE MARINES NEED TO PRACTICE, BUT WHY SO CLOSE TO OUR VALLEY?

I am concerned because we already have planes and helicopters flying over us, what will it be like in the future? If you take away our Public lands we will have no where to go for recreational use that benefits the businesses in the town and also ourselves when we want to camp or Ride bikes and what about the desert tortise which is almost extinct, how can you protect them & other animals?

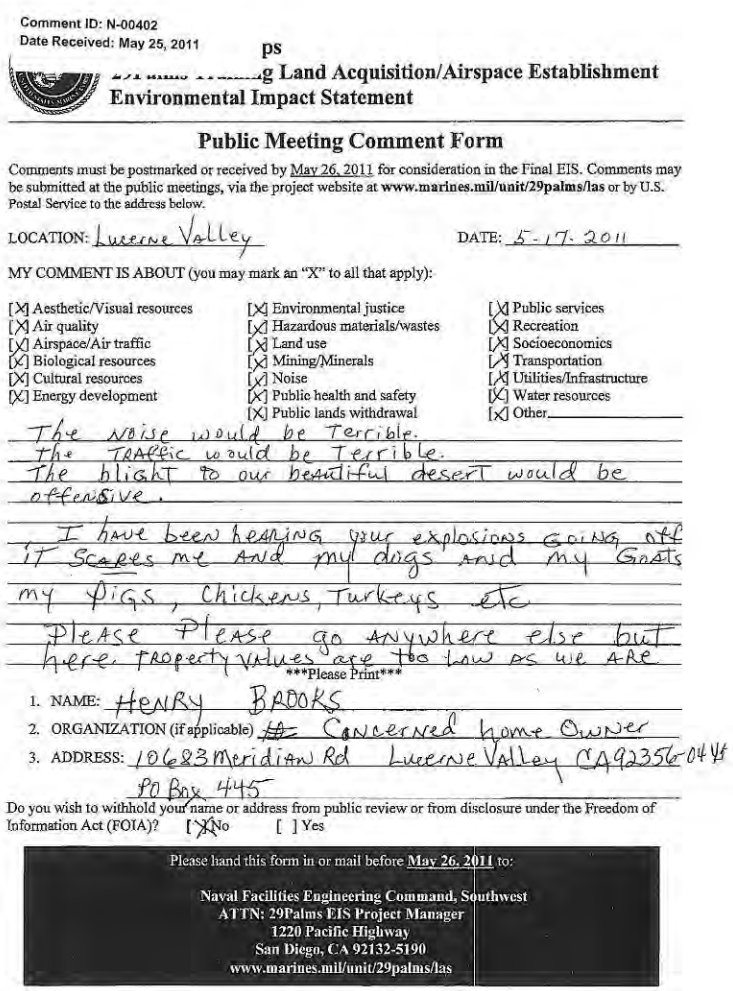
Response to Comment N-00401:



Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates impacts to biological resources under each of the action alternatives (see Section 4.10). The EIS proposes several measures to reduce project impacts to biological resource (see Section 2.8.4), as well as additional mitigation measures under certain alternatives (see Section 4.10). The Marine Corps is currently undergoing consultation with the USFWS service in regards to impacts to the desert tortoise and other wildlife species.

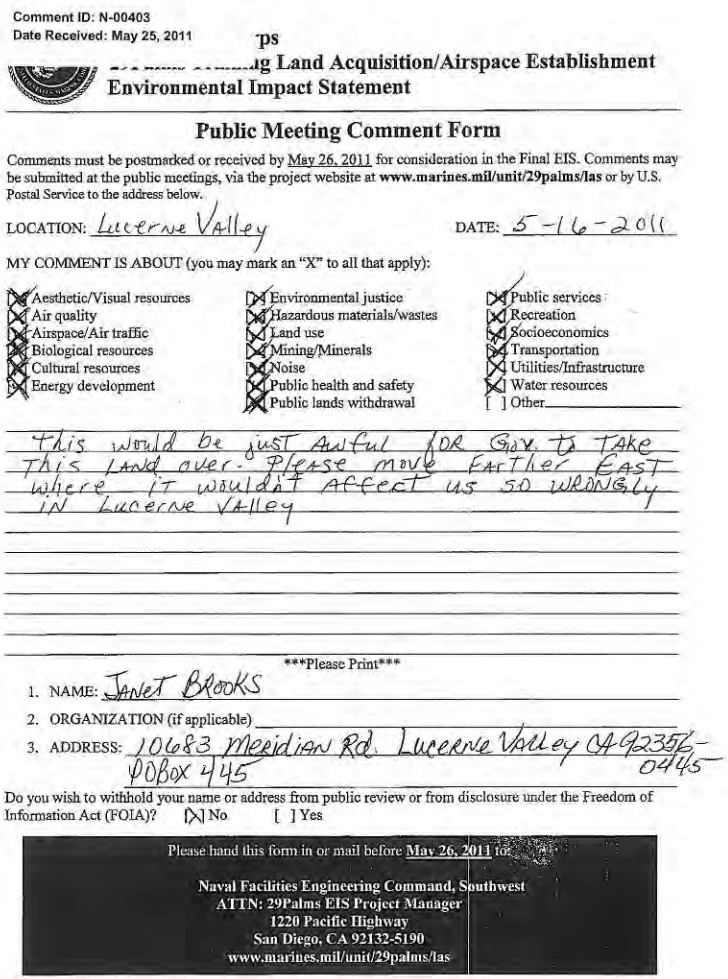
Response to Comment N-00402:



Thank you for your comment. The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates impacts to transportation under each of the action alternatives (see Section 4.6). As noted in the EIS, the marginal temporary traffic increase due to MEB mobilization would not create significant impacts.

The EIS evaluates visual impacts under each of the action alternatives (refer to Section 4.5 of the EIS) and acknowledges the impact to viewsheds in the Johnson Valley OHV area. As noted in the EIS, there would be less than significant impacts to visual resources for any alternative selected.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, property values are not anticipated to decrease directly or indirectly from impacts of the proposed action. However, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The land used for the 29 Palms training site is BLM. It is now primarily for use of weekenders who enjoy it for motorcross races and such. These week enders are ~~if not~~ the major source of income for establishments in my town. If these lands were cut off for public use the entire town would suffer economically. For Myself I don't ride motor cycles but do enjoy the lands for thier scenery and beauty to be found.

Response to Comment N-00406:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Re: Draft Environmental Impact Statement on 29 Palms Base expansion

Dear Sir:

The DEIS states:
Potential impacts from six action alternatives and the No-Action Alternative have been analyzed.
Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:
Less than Significant Impacts (LSI):
• Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
• Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.
No Impacts (NI):
No impact anticipated from airspace establishment.

Similar judgements are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.
It is therefore a contradiction to imply that residents and Cultural Resources outside the

Response to Comment N-00408 (Page 1 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-00408 (Page 2 of 3)

EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:
• Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
• Devaluation of surrounding private property.
• Increased costs to federal, state and local jurisdictions for increased law enforcement.
All would occur outside the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

-These homestead communities have co-existed with the Base for decades as the DEIS

Response to Comment N-00408 (Page 2 of 3):

Comment ID: N-00408 (Page 3 of 3)

correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflown by helicopters at any hour of the day or night, particularly when the want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.

"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision."
–Desert Magazine 1944

The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves. The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant.
http://www.coutant.org/mminternet/saga/index.html

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

RESPECTFULLY SUBMITTED,

DALE A. BUZZA

Subject: County of San Bernardino Department of Airports Comments on Draft EIS for the Twentynine Palms U.S. Marine Corps Air Ground Combat Center (MCAGCC) Training Land Acquisition/Airspace Establishment

Attn. 29 Palms EIS Project Manager:

The Department of Airports appreciates the opportunity to comment on the Draft Environmental Impact Statement (EIS) for the Twentynine Palms U.S. Marine Corps Air Ground Combat Center (MCAGCC) Training Land Acquisition/Airspace Establishment project. The Department of Airports operates six (6) general aviation airports for the County of San Bernardino. The County-operated airports are: Twentynine Palms, Barstow/Daggett, Apple Valley, Baker, Chino and Needles. Each airport supports general aviation, and countywide over 273,000 operations per year utilize the County's airports. Certain of the airports support military operations as well, most notably the Barstow/Daggett Airport, where approximately half of its 36,500 operations are military. The Department of Airports is committed to support the aviation needs of the U.S. military, while retaining the greatest possible opportunities for general aviation users.

The Marine Corps has been studying alternatives for proposed training-land acquisition and accompanying Special Use Airspace for three battalions (approx. 15,000 Marines) to simultaneously maneuver in close coordination using combined-arms (e.g., air/ground) live fire for a 48-72 hour training period. Land surrounding the MCAGCC was considered and 6 alternatives were developed and studied in the Draft EIS. The Draft EIS was published for a public review and comment period of February 25, 2011 to May 26, 2011.

The Draft EIS identifies Alternative No. 6 as the "preferred" alternative that will be carried forward for approval. This alternative includes 146,667 acres to the west of the MCAGCC, and 21,304 acres to the south. It allows public use of the Johnson Valley Off-Highway Vehicle recreational areas during periods when there are no training maneuvers, so that for approximately 10 months of the year, the recreational areas will be available.

Response to Comment N-00409 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of the affected airspace with respect to the local aviation community and the EIS concludes that the acquisition of airspace proposed for each alternative would cause a significant impact to airspace. As indicated in the Draft EIS, no airspace decision has been or would be made before complete environmental review and consultation with the FAA, other stakeholders, and the public. The Marine Corps is currently undergoing consultation with the FAA in regards to the proposed airspace. Airspace dimensions, altitudes, and times required may change as this cooperative effort is conducted. Please refer to Section 1.5.3.2 for information on the FAA airspace proposal process.

Your contact information has been added to the project mailing list as requested.

Comment ID: N-00409 (Page 2 of 2)

Page Two
Comments on Draft EIS for Twentynine Palms MCAGCC Training Land Acquisition/Airspace Establishment
May 20, 2011

In terms of airspace and potential effects on County airports, expanded Special Use Airspace (SUA) corridors are proposed. In particular, the "CAX Corridor" would be near the County-operated Twentynine Palms Airport, and would begin at 1,500 feet above ground level (AGL) and go up to 40,000 AGL. Due to the nature of activities taking place within the SUA, varying restrictions are placed on non-military aircraft. MCAGCC Range Control will manage the SUA corridors, and altitudes above the SUA corridors are managed by the Los Angeles Air Traffic Control Center.

Impacts to airspace are not fully detailed in the Draft EIS, and will require further coordination with the FAA. The Draft EIS notes that final determinations will be made by the Federal Aviation Administration (FAA) working with the USMC after the Final EIS is published. AIR-1

Please keep us on the mailing list for the Final EIS. We look forward to working with the USMC to support your mission, while retaining the greatest possible opportunities for general aviation users.

Sincerely,

Carrie Hyke

Reference: Twenty-nine Palms Marine Base Proposed Expansion

Dear Mr. Proudfoot

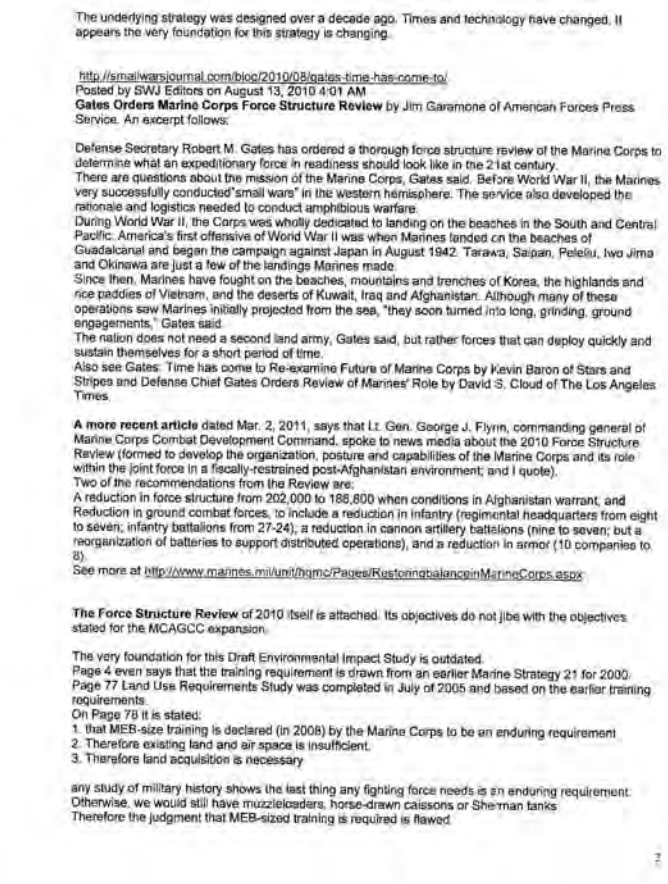
Listed below is just another factual request in either fixing the DEIS or start over again. It seems that all of the meetings the importance was placed on "We need this expansion so we can train our solders" then it was followed up with the tragic event of 130 marines that where lost and trying to put a guilt trip on us the public that if we do not approve this taking of land, it will be the cause of more deaths. It is comments like this from the military that makes you realize that you are not listening to the public. This DEIS is being written to accommodate the wishes of "who in the Marines" As you will note below the wars we fight today are totally different than those in the past., The days you need to move all these battalions is long over. Today we are fighting door to door; we are fighting a hidden enemy that changes clothes to look like our partners in battle. This type of war does not need to take Johnson Valley to train In other words it is outdated strategy and because of this we request that this entire DEIS properly reflect this change of Strategy, not the one that was set 3 or more years ago. This document has to deal with real time, not old data.

Please give careful consideration to below comments by Betty Munson

OUTDATED STRATEGY

This is a comment on defects of the Draft Environmental Impact Statement (DEIS) based on the long lag time between the original training plans and the time the proposed base expension was presented to the public, and the years since.

The argument is that the plans are outdated, therefore the DEIS is fatally flawed in its entirety. There is backup evidence included (thanks to John Hack of Oceanside for the leads) There is a request that the DEIS be changed, and specifics as to what must be changed and how it should read. We are not asking why are they doing anything, we are telling them where the DEIS is wrong.



The Executive Summary on Page 4 explains why the USMC is proposing the establishment of a large-scale training facility at MCAGCC 29Palms. It says the Marine Corps has a requirement to provide sustained, combined-arms, live-fire, and maneuver training for a Marine Expeditionary Brigade (MEB)-sized Air Ground Task Force, and the existing facilities are inadequate

Response to Comment N-00410 (Page 1 of 3):

Thank you for your comment. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-00410 (Page 2 of 3)

The underlying strategy was designed over a decade ago. Times and technology have changed. It appears the very foundation for this strategy is changing.

http://smallwarsjournal.com/blog/2010/08/gates-time-has-come-to/
Posted by SWJ Editors on August 13, 2010 4:01 AM
Gates Orders Marine Corps Force Structure Review by Jim Garamone of American Forces Press Service. An excerpt follows:

Defense Secretary Robert M. Gates has ordered a thorough force structure review of the Marine Corps to determine what an expeditionary force in readiness should look like in the 21st century.
There are questions about the mission of the Marine Corps, Gates said. Before World War II, the Marines very successfully conducted "small wars" in the western hemisphere. The service also developed the rationale and logistics needed to conduct amphibious warfare.
During World War II, the Corps was wholly dedicated to landing on the beaches in the South and Central Pacific. America's first offensive of World War II was when Marines landed on the beaches of Guadalcanal and began the campaign against Japan in August 1942. Tarawa, Saipan, Peleliu, Iwo Jima and Okinawa are just a few of the landings Marines made.
Since then, Marines have fought on the beaches, mountains and trenches of Korea, the highlands and rice paddies of Vietnam, and the deserts of Kuwait, Iraq and Afghanistan. Although many of these operations saw Marines initially projected from the sea, "they soon turned into long, grinding, ground engagements," Gates said.
The nation does not need a second land army, Gates said, but rather forces that can deploy quickly and sustain themselves for a short period of time.
Also see Gates: Time has come to Re-examine Future of Marine Corps by Kevin Baron of Stars and Stripes and Defense Chief Gates Orders Review of Marines' Role by David S. Cloud of The Los Angeles Times.

A more recent article dated Mar. 2, 2011, says that Lt. Gen. George J. Flynn, commanding general of Marine Corps Combat Development Command, spoke to news media about the 2010 Force Structure Review (formed to develop the organization, posture and capabilities of the Marine Corps and its role within the joint force in a fiscally-restrained post-Afghanistan environment; and I quote).
Two of the recommendations from the Review are:
A reduction in force structure from 202,000 to 186,800 when conditions in Afghanistan warrant, and Reduction in ground combat forces, to include a reduction in infantry (regimental headquarters from eight to seven; infantry battalions from 27-24), a reduction in cannon artillery battalions (nine to seven; but a reorganization of batteries to support distributed operations), and a reduction in armor (10 companies to 8).
See more at http://www.marines.mil/unit/hqmc/Pages/RestoringbalanceinMarineCorps.aspx

The Force Structure Review of 2010 itself is attached. Its objectives do not jibe with the objectives stated for the MCAGCC expansion.

The very foundation for this Draft Environmental Impact Study is outdated.
Page 4 even says that the training requirement is drawn from an earlier Marine Strategy 21 for 2000.
Page 77 Land Use Requirements Study was completed in July of 2005 and based on the earlier training requirements.
On Page 78 it is stated:
1. that MEB-size training is declared (in 2008) by the Marine Corps to be an enduring requirement
2. Therefore existing land and air space is insufficient.
3. Therefore land acquisition is necessary

any study of military history shows the last thing any fighting force needs is an enduring requirement. Otherwise, we would still have muzzleloaders, horse-drawn caissons or Sherman tanks.
Therefore the judgment that MEB-sized training is required is flawed.

7

Response to Comment N-00410 (Page 2 of 3):

Comment ID: N-00410 (Page 3 of 3)

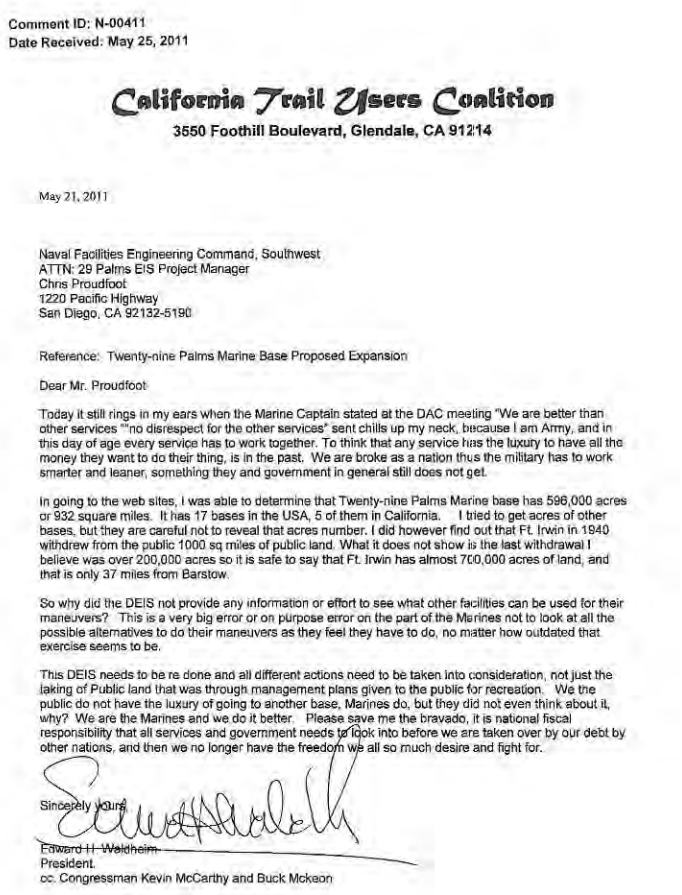
Therefore the judgment that existing land and air space is insufficient is called into question.
Therefore the judgment that land acquisition is necessary is flawed.

Because the Marines state they must train as they fight, it does not mean they are not already doing so, or that they cannot make quick judgments based on today's conditions for training requirements for tomorrow. Because so much time has been put into this outdated plan does not mean it must roll downhill without taking another look.

The document must be reviewed and anywhere outdated requirements are defined for MEB-sized training, and the existing facilities are declared inadequate, they must be justified to today's needs. Everywhere ideal range requirements are mentioned they must be justified to today's needs. Everywhere airspace requirements are defined they must be justified to today's needs.

The statement on Page 192 that the No-Action Alternative would not meet the needs for the proposed action must be reconsidered in this light also.

Otherwise the entire document must be discarded as it is based on outdated decisions and information.



Sincerely yours,

Edward H. Waldheim
President.

Reference: Twenty-nine Palms Marine Base Proposed Expansion

Dear Mr. Proudfoot

Today it still rings in my ears when the Marine Captain stated at the DAC meeting "We are better than other services ""no disrespect for the other services" sent chills up my neck, because I am Army, and in this day of age every service has to work together. To think that any service has the luxury to have all the money they want to do their thing, is in the past. We are broke as a nation thus the military has to work smarter and leaner, something they and government in general still does not get.

In going to the web sites, I was able to determine that Twenty-nine Palms Marine base has 596,000 acres or 932 square miles. It has 17 bases in the USA, 5 of them in California. I tried to get acres of other bases, but they are careful not to reveal that acres number. I did however find out that Ft. Irwin in 1940 withdrew from the public 1000 sq miles of public land. What it does not show is the last withdrawal I believe was over 200,000 acres so it is safe to say that Ft. Irwin has almost 700,000 acres of land, and that is only 37 miles from Barstow.

So why did the DEIS not provide any information or effort to see what other facilities can be used for their maneuvers? This is a very big error or on purpose error on the part of the Marines not to look at all the possible alternatives to do their maneuvers as they feel they have to do, no matter how outdated that exercise seems to be.

This DEIS needs to be re done and all different actions need to be taken into consideration, not just the taking of Public land that was through management plans given to the public for recreation. We the public do not have the luxury of going to another base, Marines do, but they did not even think about it, why? We are the Marines and we do it better. Please save me the bravado, it is national fiscal responsibility that all services and government needs to look into before we are taken over by our debt by other nations, and then we no longer have the freedom we all so much desire and fight for.

Sincerely Yours,

Edward H. Waldheim
President
cc. Congressman Kevin McCarthy and Buck Mckeon

Response to Comment N-00411:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment and employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment.

Dear Mr. Proudfoot

In your document, I was not able find anything that deals with the cost of this proposal on the federal Government general fund.

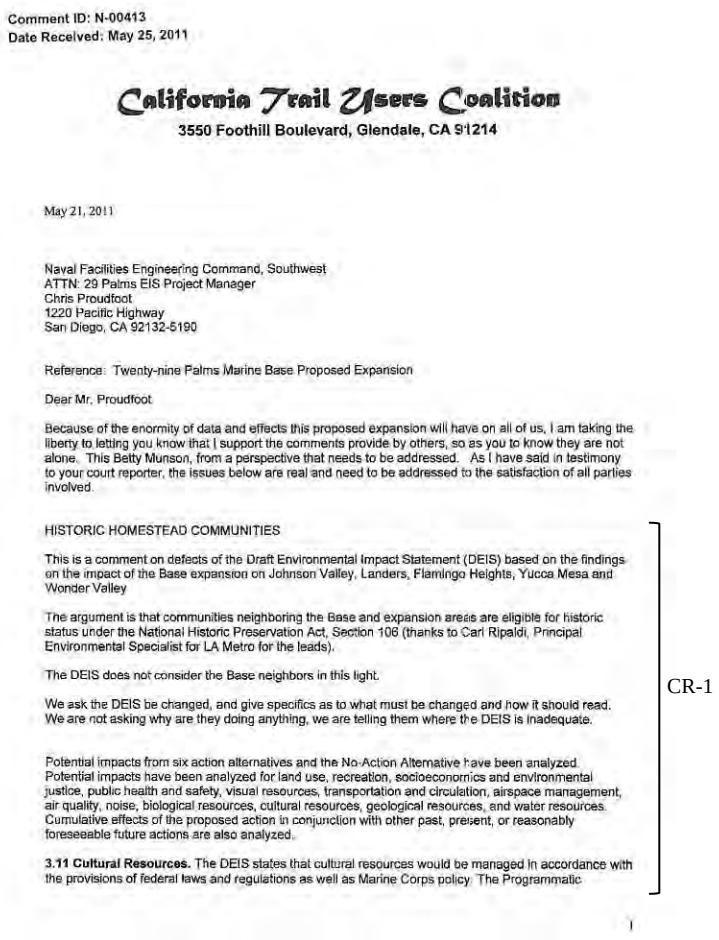
The US Government is spending 3.5 trillion in outlays for FY 2010. Of this Non-Defense (Discretionary) is $660 billion dollars, and Defense (discretionary) is $692 billion dollars.

Because of the crisis that the US Government is in. I find it incredulous that the Marines would not acknowledge the tremendous burden this new addition would place on the budget.

In testimony at meeting you stated, we will not add buildings, but that is about the only thing you will not add, you will develop a security system around the proposed taking of the public land to accomplish your mission.

This DEIS has to show the financial implications on the federal Budget.

Sincerely yours,



Edward H. Waldheim
President

Cc Congressman Kevin McCarthy
Congressman Buck McKeon

Response to Comment N-00412:

Thank you for your comment. Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Dear Mr. Proudfoot

Because of the enormity of data and effects this proposed expansion will have on all of us, I am taking the liberty to letting you know that I support the comments provide by others, so as you to know they are not alone. This Betty Munson, from a perspective that needs to be addressed. As I have said in testimony to your court reporter, the issues below are real and need to be addressed to the satisfaction of all parties involved.

HISTORIC HOMESTEAD COMMUNITIES

This is a comment on defects of the Draft Environmental Impact Statement (DEIS) based on the findings on the impact of the Base expansion on Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley

The argument is that communities neighboring the Base and expansion areas are eligible for historic status under the National Historic Preservation Act, Section 106 (thanks to Carl Ripaldi, Principal Environmental Specialist for LA Metro for the leads).

The DEIS does not consider the Base neighbors in this light.

We ask the DEIS be changed, and give specifics as to what must be changed and how it should read. We are not asking why are they doing anything, we are telling them where the DEIS is inadequate.

Potential impacts from six action alternatives and the No-Action Alternative have been analyzed. Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic

CR-1

Response to Comment N-00413 (Page 1 of 3):

CR-1:

Thank you for your comment. Effects to all resources eligible under Section 106 of the National Historic Preservation Act are addressed in the Cultural Resources section. Community effects are addressed in other sections such as Land Use, Socioeconomics, and Noise.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

NOI-1:

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use and aircraft operations under the proposed action may be periodically detected by residents and other members of the public, and may sometimes be an annoyance. In addition to the Community Noise Equivalent Level (CNEL) time-averaged analysis conducted in the Draft EIS, single-event noise modeling has been conducted and the results added to Section 4.9 of the Final EIS.

Comment ID: N-00413 (Page 2 of 3)

Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twenty-nine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:
Less than Significant Impacts (LSI):
- Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
- Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):
No impact anticipated from airspace establishment.

Similar judgments are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.
It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:
- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
- Devaluation of surrounding private property.
- Increased costs to federal, state and local jurisdictions for increased law enforcement.

All would occur outside the acquisition study boundaries.

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this.

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

CR-1

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other

NOI-1

2

Response to Comment N-00413 (Page 2 of 3):

Comment ID: N-00413 (Page 3 of 3)

with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

-These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or over flown by helicopters at any hour of the day or night, particularly when they want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.

"Folks with the blood of pioneers—or of poets—running strong in their veins will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision."
--Desert Magazine 1944

the following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves. The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant.
http://www.coutant.org/mminternet/saga/index.html

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

Sincerely yours

Edward H. Waldheim
President

Dear Mr. Proudfoot

The cumulative effect of the taking of Johnson Valley from the public has not adequately been considered in the follow areas.

1. Fuel consumption of the displaced public will increase dramatically because of distances they will have to drive to find alternative recreational areas if they can even find it.
2. The impact of traffic to public highways having to travel further distances. i.e. Compet with the Las Vegas traffic on I-15
3. The Carbon foot print of pollutants for these extra travel miles has not been analyzed
4. The alternative for the recreation public has not been analyzed. You displace 1.5 million people, where are they going to go? This document does not even address that.
5. If you even find alternatives, have you analyzed the impact they will have i.e. on San Bernardino Forest, on El Mirage?

All these issues need to be analyzed in this DEIS, and absent of this it needs to be re –done and cover all aspects of impact as required by law.

Sincerely yours,

Edward H. Waldheim
President.

Response to Comment N-00414:

Thank you for your comment. The EIS finds that the reduction in availability of OHV land would cause significant impacts to recreation under the proposed action as well as a significant cumulative impact. The analyses presented in the EIS acknowledge and discuss the impacts that reduced recreational lands in Johnson Valley would have on increased usage and potential overcrowding in other areas, as well as related impacts to other environmental resources.

As a result of public and agency comments received on the Draft EIS, the Marine Corps conducted a Displaced OHV Recreation Study (DORS) to further evaluate displaced OHV use (legal and illegal OHV activity) to support the development of the EIS. Results of this study are referenced in the Final EIS and various resource sections have been update as appropriate.

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Reference: Twenty-nine Palms Marine Base Proposed Expansion

Dear Mr. Proudfoot

Alternative 6 has some blaring miss statements that have no fact to prove that whoever wrote this even has the data to back it up. For example

Biological Resources: Potential take of 154 to 714 adult desert tortoises (121 to 189 in the acquisition study areas) Public access to the RPAA would reduce the potential benefit offset from cessation of OHV recreation. . This is a blatant lie because study after study shows that OHV is not a threat to the Tortoise, it is Ravens, other animals including domestic animals, and respiratory decease that creates the mortality of tortoise. To put this as a benefit, the taking of the land from the public is wrong. BIO-1

It goes on to state Protected – Federal Threatened or endangered Species, affect 128,386 acres of tortoise habitat may experience LSI. , again offset by reducing OHV recreation.

This has to be the biggest joke of the year. You want to take your battalions, equipment, increase of vehicles, live fire and you are now saying you will be better than OHV.

I know we are not supposed to get emotional in these comments, but this goes over the top.

For the DEIS to state that the Marines are better Stewarts of the land than OHV, shows you how desperate this DEIS is to make the case for the marines and public is out, public is of no consequence in this entire DEIS. GEN-1

This entire DEIS needs to be re done and put fact in it and not someone's bias against OHV recreation. This DEIS is nothing more than the taking of Recreational Federal Land give to the public through the California Desert Conservation Act, and now without firing one shot, the military wants to take it away.

Sincerely yours,

Edward H. Waldheim
President

Response to Comment N-00415:

BIO-1:

Comment noted. However, the statement that "study after study shows that OHV is not a threat to the tortoise" is not supported with any references. The DoN is not aware of any studies to support this statement. Please provide the EIS Project Manager with references to science-based studies that support this statement. While the relative importance of various factors in the decline of the desert tortoise are still uncertain, as discussed on pages 3.10-22 and 3.10-23, the published literature indicates that OHVs adversely affect the tortoise directly (Ouren *et al.* 2007) and via habitat degradation. Thus, there is a potential benefit to desert tortoise from the cessation of OHV use in these areas. Analysis of existing disturbance in the west study area from OHVs indicated a significant correlation between areas of high OHV disturbance and lower desert tortoise densities (refer to Appendix I of the Draft EIS).

GEN-1:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process.

Request for 60 day extension of the comment period

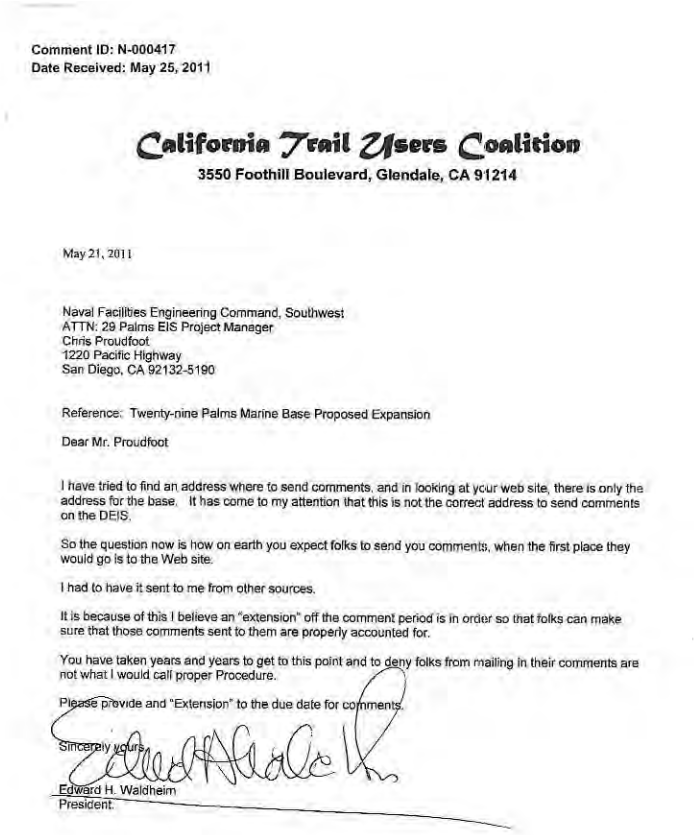
Dear Mr. Proudfoot

In trying to find out where to mail my comments on your web site, only to hit zero, I also noticed that you do not have proper address for the mailing of the comments by the public on the following documents

1. The Project Briefing Paper
2. The Project Overview
3. The public Info brief
4. The threefold Brochure
5. The frequently asked questions (FAQ)
6. The contact
7. The Public comment link on the home page

Because of this we respectfully request that you extend the comment period of no less than 60 days and that you make every effort to correct all these documents on your web site to properly reflect where public is to send comments.

I attempted to make call you your office but all I got was a recording.



Sincerely yours,

Edward H. Waldheim
President

Response to Comment N-00416:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified. All comments that have been submitted to NAVFAC or MCAGCC have been included in the FEIS.

Dear Mr. Proudfoot

I have tried to find an address where to send comments, and in looking at your web site, there is only the address for the base. It has come to my attention that this is not the correct address to send comments on the DEIS.

So the question now is how on earth you expect folks to send you comments, when the first place they would go is to the Web site.

I had to have it sent to me from other sources.

It is because of this I believe an "extension" off the comment period is in order so that folks can make sure that those comments sent to them are properly accounted for.

You have taken years and years to get to this point and to deny folks from mailing in their comments are not what I would call proper Procedure.

Please provide and "Extension" to the due date for comments.

Sincerely yours,

Edward H. Waldheim
President

Dear Mr. Proudfoot

Perspective by Richard Crowe. Now here is a good one for the Marine to pounder. Mr. Crow worked for the BLM as long as I have been around since 1978 for me, and he worked with all of us on all our plans to properly and fairly manage our public lands.

After you read this, you tell me if you still think it is fair what the Maries want to do, your DEIS never even covered what this article brings out, and that is the taking of public lands without firing a shot.

There are plenty of other military basis that are very large you can do your training on, but it seems this DEIS wants to take the easy way out why? Because "we are better than other services" as the captain told the last DAC meeting. That is hardly an excuse to do what you are trying to do.

Sincerely yours,

Edward H. Waldheim
President

Response to Comment N-00418 (Page 1 of 5):

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment and employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. THE PRESS-ENTERPRISE

PERSPECTIVE

SECTION A

SUNDAY
MAY 15, 2011

Government tramples on citizens as it seizes desert

BY RICHARD CROWE

For decades, the Sierra Club and environmental groups like it have successfully eliminated many uses they have perceived as inappropriate in the California desert by pushing for preservation in the halls of Congress. The advocacy and resulting congressional designations are arrogant and bad public policy.

Certainly, 50 years ago the desert needed new, science-based management to address burgeoning motorcycle use.

However, the cumulative effects of congressional designations, along with environmentalist-sponsored lawsuits and species listings under the Endangered Species Act, have decimated many desert uses, gutted the Bureau of Land Management's 1980 California Desert Conservation Area plan and make a mockery of congressional mandates that the bureau wisely manage public lands for an array of uses and protection of natural resources.

Users of public lands were unfairly and unnecessarily hurt, livestock grazing and mining being the worst hit, and the economic values lost are sorely missed in these tough economic times.

And, to top it off, Sen. Dianne Feinstein introduced her California Desert Protection Act earlier this year ("Desert protections sought," Jan. 26). This leads me to wonder: How much protection is enough?

Perspective is needed to better appreciate this question. I offer the following analysis, which reviews 80 years of desert use history.

For this purpose, the area of the desert is the 1976 congressionally-designated California Desert Conservation Area, 25 million acres in size.

It is essentially the entire California desert excluding the Owens Valley.

By 1930, 25 percent of the desert had become private land, mostly towns and farms in the Antelope, Apple, Coachella, Mojave River, Palo Verde and Imperial valleys. The remaining 75 percent, mostly federal public lands, was little used and essentially had no management or use restrictions.

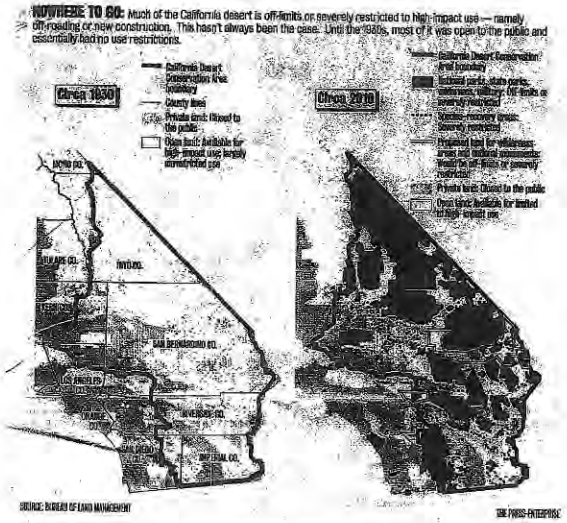
The Bureau of Land Management's did not even exist then. It did not come into existence until 1946.

By 1976, 25 percent of the desert was still private and 25 percent was now restricted to military use or designated as state and national park lands. This left 50 percent remaining for limited public use.

When Congress established the California Desert Conservation Area, it directed the Bureau of Land Management to develop a management plan for this remaining 50 percent.

After an exhaustive effort involving the public, as well as local, state, and federal agencies and science groups, the Bureau of Land Management completed the 1980 California Desert Conservation Area plan, which placed this land into four management zones. These zones designated the degree to which the land could be used and the protections that would be required.

The most restrictive zone it designated as wilderness. Wilderness zones made development off-limits, and, with a few exceptions, basically limited use to foot traffic.



So out of the remaining 50 percent of land for public use, 2.1 million acres, or 8 percent, was set aside as wilderness. This left 42 percent for other uses.

The Bureau of Land Management began enacting its plan, though due to legal reasons, it had to get congressional backing for its designation of the

SEE LAND/D3

Response to Comment N-00418 (Page 2 of 5):

Comment ID: N-00418 (Page 3 of 5)

NOWHERE TO GO: Much of the California desert is off-limits or severely restricted to high-impact use — namely off-roading or new construction. This hasn't always been the case. Until the 1980s, most of it was open to the public and essentially had no use restrictions.

Circa 1930

Circa 2010

SOURCE: BUREAU OF LAND MANAGEMENT

SBE PRESS-ENTERPRISE

LAND

CONTINUED FROM A27

wilderness zones.

But, believing the amount of proposed wilderness to be too small, and having disdain for science-based multiple-use management, environmental groups pushed for more restrictions, lobbying Congress to make more desert off-limits.

In 1994, Congress passed legislation, the California Desert Protection Act. In it, Congress drastically increased the amount of land in the wilderness-zone category.

When everything shook out, 25 percent was now designated as wilderness and 25 percent designated for other uses.

By 2007, the bureau was forced to make ~~made~~ a set of amendments to the California Desert Conservation Area Plan due to expanded endangered-species listings and lawsuits.

Now, species-protection areas were placed within the remaining 25 percent still open to public use. These species-protection areas severely limited use, and, in essence, cut this remaining 25 percent in half to 12.5 percent.

Today, that 12.5 percent is under threat of further restrictions. The still-churning environmental groups are ironically not happy with recent solar and wind proposals for the desert and has urged more land be placed off-limits.

NEW LEGISLATION

They are pinning their hopes on Feinstein's legislation, which would designate that 1 million more acres be named a national monument, 250,000 acres be placed in a wilderness zone and 74,000 acres be added to our state's national parks.

If this bill passes, the 12.5 percent of land open for limited public use would shrink to 10 percent.

As you can see, through the years, the bureau's original multiple-use management mandate to the desert has been emasculated by an environmental agenda and Congress, and yet the assault on our right to use our lands continues.

So, back to the introductory question: Will there ever be enough land preserved in the minds of environmental groups? Likely not.

As long as uses proposed are not to their liking, there will never be enough.

Richard Crowe, who is a resident of Beaumont, worked for the Bureau of Land Management for 33 years, 25 of them within the California Desert Conservation Area, dealing with a wide range of multiple-use management issues.

Through the years, the Bureau of Land Management's original mandate in the desert has been emasculated by an environmental agenda and Congress, and yet the assault on our right to use our lands continues to be assaulted.

Response to Comment N-00418 (Page 3 of 5):

THE PRESS-ENTERPRISE

PERSPECTIVE

SECTION A

SUNDAY MAY 13, 2001

Government tramples on citizens as it seizes desert

BY RICHARD CROWE

For decades, the Sierra Club and environmental groups like it have successfully eliminated many uses they have perceived as inappropriate in the California desert by pushing for preservation in the halls of Congress. The advocacy and resulting congressional designations are arrogant and bad public policy.

Certainly, 50 years ago the desert needed new, science-based management to address burgeoning motorcycle use.

However, the cumulative effects of congressional designations, along with environmentalist-sponsored lawsuits and species listings under the Endangered Species Act, have decimated many desert uses, gutted the Bureau of Land Management's 1980 California Desert Conservation Area plan and make a mockery of congressional mandates that the bureau wisely manage public lands for an array of uses and protection of natural resources.

Users of public lands were unfairly and unnecessarily hurt, livestock grazing and mining being the worst hit, and the economic values lost are sorely missed in these tough economic times.

And, to top it off, Sen. Dianne Feinstein introduced her California Desert Protection Act earlier this year ("Desert protections sought," Jan. 26). This leads me to wonder: How much protection is enough?

Perspective is needed to better appreciate this question. I offer the following analysis, which reviews 80 years of desert use history.

For this purpose, the area of the desert is the 1976 congressionally designated California Desert Conservation Area, 25 million acres in size.

It is essentially the entire California desert excluding the Owens Valley.

By 1980, 25 percent of the desert had become private land, mostly towns and farms in the Antelope, Apple, Coachella, Mojave River, Palo Verde and Imperial valleys. The remaining 75 percent, mostly federal public lands, was little used and essentially had no management or use restrictions.

The Bureau of Land Management's did not even exist then. It did not come into existence until 1946.

By 1976, 25 percent of the desert was still private and 25 percent was now restricted to military use or designated as state and national park lands. This left 50 percent remaining for limited public use.

When Congress established the California Desert Conservation Area, it directed the Bureau of Land Management to develop a management plan for this remaining 50 percent.

After an exhaustive effort involving the public, as well as local, state, and federal agencies and science groups, the Bureau of Land Management completed the 1980 California Desert Conservation Area plan, which placed this land into four management zones. These zones designated the degree to which the land could be used and the protections that would be required.

The most restrictive zone it designated as wilderness. Wilderness zones made development off-limits, and, with a few exceptions, basically limited use to foot traffic.

So out of the remaining 50 percent of land for public use, 2.1 million acres, or 8 percent, was set aside as wilderness. This left 42 percent for other uses.

The Bureau of Land Management began enacting its plan, though due to legal reasons, it had to get congressional backing for its designation of the

Response to Comment N-00418 (Page 4 of 5):

Comment ID: N-00418 (Page 5 of 5)

NOWHERE TO GO: Much of the California desert is off-limits or severely restricted to high-impact use — namely off-roading or new construction. This hasn't always been the case. Until the 1930s, most of it was open to the public and essentially had no use restrictions.

SOURCE: BUREAU OF LAND MANAGEMENT

THE PRESS-ENTERPRISE

LAND

CONTINUED FROM A21

wilderness zones.

But, believing the amount of proposed wilderness to be too small, and having disdain for science-based multiple-use management, environmental groups pushed for more restrictions, lobbying Congress to make more desert off-limits.

In 1994, Congress passed legislation, the California Desert Protection Act. In it, Congress drastically increased the amount of land in the wilderness-zone category.

When everything shook out, 25 percent was now designated as wilderness and 25 percent designated for other uses.

By 2007, the bureau was forced to make made a set of amendments to the California Desert Conservation Area Plan due to expanded endangered-species listings and lawsuits.

Now, species-protection areas were placed within the remaining 23 percent still open to public use. These species-protection areas severely limited use, and, in essence, cut this remaining 25 percent in half to 12.5 percent.

Today, this 12.5 percent is under threat of further restrictions. The still-churning environmental groups are ironically not happy with recent solar and wind proposals for the desert and has urged more land be placed off-limits.

NEW LEGISLATION

They are pinning their hopes on Feinstein's legislation, which would designate that 1 million more acres be named a national monument, 250,000 acres be placed in a wilderness zone and 74,000 acres be added to our state's national parks.

If this bill passes, the 12.5 percent of land open for limited public use would shrink to 10 percent.

As you can see, through the years, the bureau's original multiple-use management mandate in the desert has been emasculated by an environmental agenda and Congress, and yet the assault on our right to use our lands continues.

So, back to the introductory question: Will there ever be enough land preserved in the minds of environmental groups? Likely not.

As long as uses proposed are not to their liking, there will never be enough.

Richard Crowe, who is a resident of Beaumont, worked for the Bureau of Land Management for 35 years, 23 of them within the California Desert Conservation Area, dealing with a wide range of multiple-use management issues.

Through the years, the Bureau of Land Management's original mandate in the desert has been emasculated by an environmental agenda and Congress, and yet the assault on our right to use our lands continues to be assaulted.

Reference: Twenty-nine Palms Marine Base Proposed Expansion

Dear Mr. Proudfoot

The comments period and workshops you have held did very little to answer the actual questions and short falls of your DEIS as written. Please find enclosed an example of what was found to be deficient, as written by Marie Brasher and I agree with her 100%. You just have not taken into account anything of meaningful analysis on the effect on everyone else about this proposed Expansion. Thus your document is very deficient in areas listed below.

The SPCW has been in existence since 1972 and incorporated in California in March of 1977. While our first effort was to restore the Tule Elk and this has been successful; the SPCW has also been involved in the desert, with Water for Wildlife projects, since its inception.

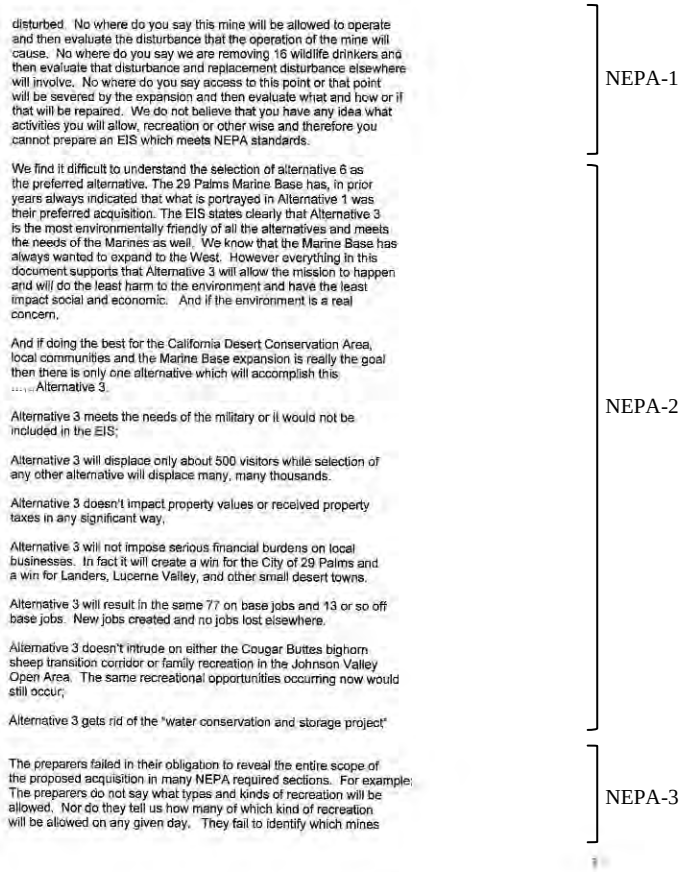
We are grateful for the opportunity to comment on the 29 Palms Marine Base proposed expansion EIS.

We believe the entire document fails as an EIS in as much as the preparers minimized those few impacts they managed to review; cumulative and otherwise, while attempting to maximize the idea that there will be significant opportunities; which they also don't evaluate, for recreation with the shared utilization of the preferred alternative. Thus the EIS fails to accurately present the issues and evaluate impacts from these proposed alternatives and does not meet NEPA requirements.

In the EIS the preparers tell us what the Marines are going to do ,run 100 tanks here and there, shoot x caliber of munitions, fly over where ever, fire hell fire missiles, use 108,530 new acres to do it. Nowhere in the EIS do you evaluate the impacts of what doing all this stuff will do. You say your hell fire missile will disturb so many acres and create so many decibels of noise. No where do you say family camping will be allowed and therefore 108,530 acres will be

NEPA-1

Response to Comment N-00419 (Page 1 of 7):



NEPA-1:

Thank you for your comment. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The specific details on management of the RPAA in regards to permitted activities, permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). Regardless, the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas.

NEPA-2:

As described in Section 2.4.8, Alternative 6 is the Marine Corps' Preferred Alternative based on the training value afforded by Alternative 6 and the amount of land area that would still be available and accessible to the public for recreational purposes (subject to the restrictions identified in Section 2.5 of the EIS).

Comment ID: N-00419 (Page 2 of 7)

disturbed. No where do you say this mine will be allowed to operate and then evaluate the disturbance that the operation of the mine will cause. No where do you say we are removing 16 wildlife drinkers and then evaluate that disturbance and replacement disturbance elsewhere will involve. No where do you say access to this point or that point will be severed by the expansion and then evaluate what and how or if that will be repaired. We do not believe that you have any idea what activities you will allow, recreation or other wise and therefore you cannot prepare an EIS which meets NEPA standards.

We find it difficult to understand the selection of alternative 6 as the preferred alternative. The 29 Palms Marine Base has, in prior years always indicated that what is portrayed in Alternative 1 was their preferred acquisition. The EIS states clearly that Alternative 3 is the most environmentally friendly of all the alternatives and meets the needs of the Marines as well. We know that the Marine Base has always wanted to expand to the West. However everything in this document supports that Alternative 3 will allow the mission to happen and will do the least harm to the environment and have the least impact social and economic. And if the environment is a real concern,

And if doing the best for the California Desert Conservation Area, local communities and the Marine Base expansion is really the goal then there is only one alternative which will accomplish this ..... Alternative 3.

Alternative 3 meets the needs of the military or it would not be included in the EIS;

Alternative 3 will displace only about 500 visitors while selection of any other alternative will displace many, many thousands.

Alternative 3 doesn't impact property values or received property taxes in any significant way,

Alternative 3 will not impose serious financial burdens on local businesses. In fact it will create a win for the City of 29 Palms and a win for Landers, Lucerne Valley, and other small desert towns.

Alternative 3 will result in the same 77 on base jobs and 13 or so off base jobs. New jobs created and no jobs lost elsewhere.

Alternative 3 doesn't intrude on either the Cougar Buttes bighorn sheep transition corridor or family recreation in the Johnson Valley Open Area. The same recreational opportunities occurring now would still occur;

Alternative 3 gets rid of the "water conservation and storage project"

The preparers failed in their obligation to reveal the entire scope of the proposed acquisition in many NEPA required sections. For example: The preparers do not say what typas and kinds of recreation will be allowed. Nor do they tell us how many of which kind of recreation will be allowed on any given day. They fail to identify which mines

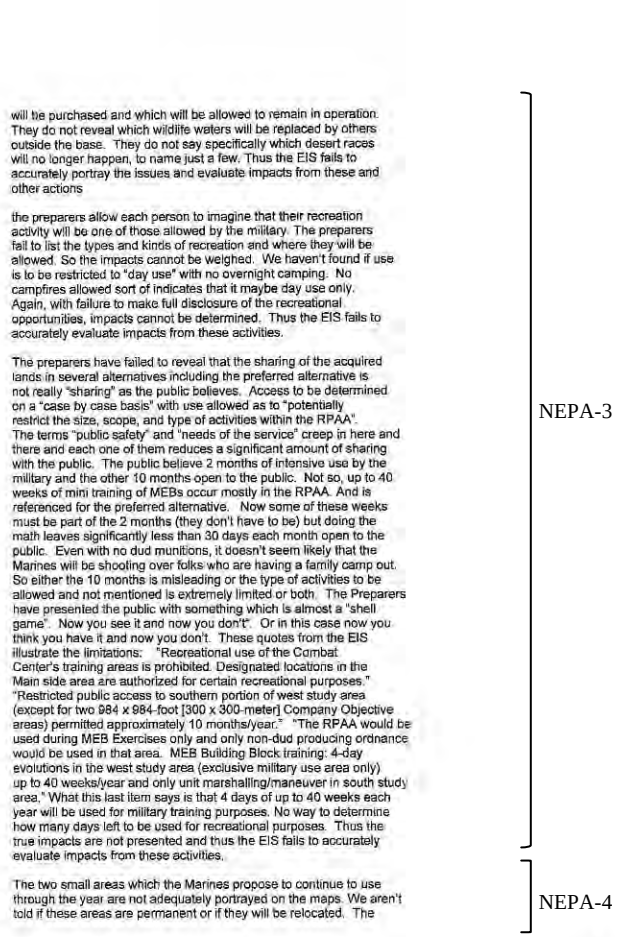
NEPA-1

NEPA-2

NEPA-3

Response to Comment N-00419 (Page 2 of 7):

NEPA-3:



Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The specific details on management of the RPAA in regards to permitted activities, permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). Regardless, the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas.

As indicated in the EIS, access to mining and other land holdings will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information). The analysis in Section 4.12 discusses the impacts if mining and other land holdings were acquired under a specific alternative, as well as the impact if access were still available to the public.

Section 2.5.5 discusses restrictions that have been identified at this time for permitted uses in the RPAA.

Table 2.3 in the EIS clearly summarizes each action alternative in terms of proposed land acquisition, proposed airspace establishment, and proposed expansion of training.

Comment ID: N-00419 (Page 3 of 7)

will be purchased and which will be allowed to remain in operation. They do not reveal which wildlife waters will be replaced by others outside the base. They do not say specifically which desert races will no longer happen, to name just a few. Thus the EIS fails to accurately portray the issues and evaluate impacts from these and other actions

the preparers allow each person to imagine that their recreation activity will be one of those allowed by the military. The preparers fail to list the types and kinds of recreation and where they will be allowed. So the impacts cannot be weighed. We haven't found if use is to be restricted to "day use" with no overnight camping. No campfires allowed sort of indicates that it maybe day use only. Again, with failure to make full disclosure of the recreational opportunities, impacts cannot be determined. Thus the EIS fails to accurately evaluate impacts from these activities.

The preparers have failed to reveal that the sharing of the acquired lands in several alternatives including the preferred alternative is not really "sharing" as the public believes. Access to be determined on a "case by case basis" with use allowed as to "potentially restrict the size, scope, and type of activities within the RPAA". The terms "public safety" and "needs of the service" creep in here and there and each one of them reduces a significant amount of sharing with the public. The public believe 2 months of intensive use by the military and the other 10 months open to the public. Not so, up to 40 weeks of mini training of MEBs occur mostly in the RPAA. And is referenced for the preferred alternative. Now some of these weeks must be part of the 2 months (they don't have to be) but doing the math leaves significantly less than 30 days each month open to the public. Even with no dud munitions, it doesn't seem likely that the Marines will be shooting over folks who are having a family camp out. So either the 10 months is misleading or the type of activities to be allowed and not mentioned is extremely limited or both. The Preparers have presented the public with something which is almost a "shell game". Now you see it and now you don't". Or in this case now you think you have it and now you don't. These quotes from the EIS illustrate the limitations: "Recreational use of the Combat Center's training areas is prohibited. Designated locations in the Main side area are authorized for certain recreational purposes." "Restricted public access to southern portion of west study area (except for two 984 x 984-foot [300 x 300-meter] Company Objective areas) permitted approximately 10 months/year." "The RPAA would be used during MEB Exercises only and only non-dud producing ordnance would be used in that area. MEB Building Block training: 4-day evolutions in the west study area (exclusive military use area only) up to 40 weeks/year and only unit marshalling/maneuver in south study area." What this last item says is that 4 days of up to 40 weeks each year will be used for military training purposes. No way to determine how many days left to be used for recreational purposes. Thus the true impacts are not presented and thus the EIS fails to accurately evaluate impacts from these activities.

The two small areas which the Marines propose to continue to use through the year are not adequately portrayed on the maps. We aren't told if these areas are permanent or if they will be relocated. The

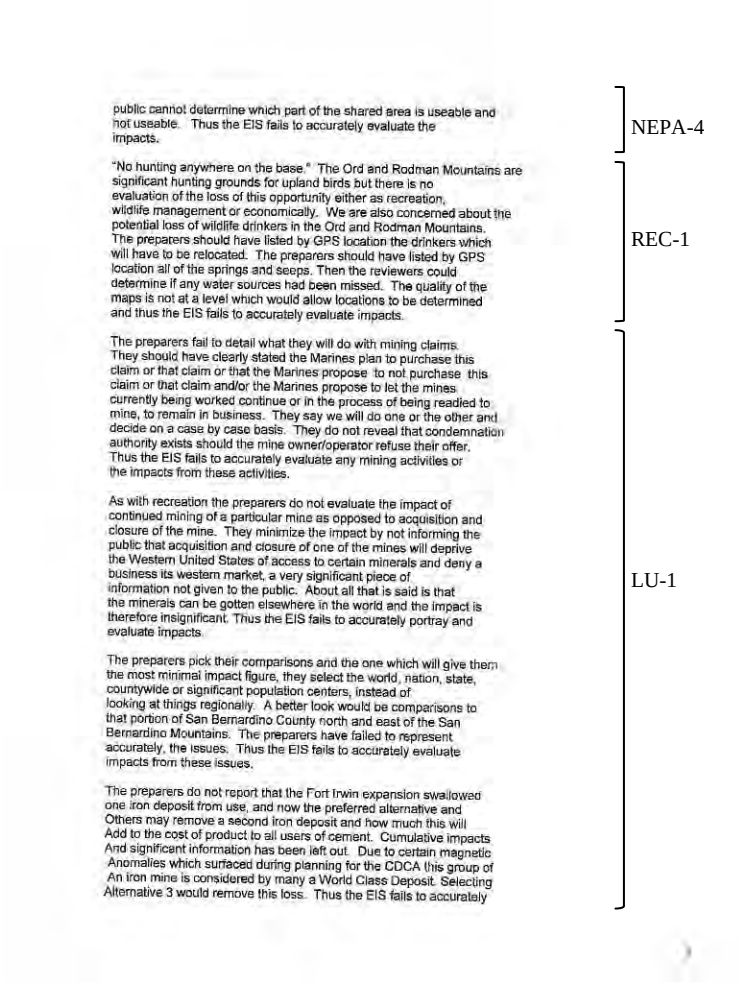
NEPA-3

NEPA-4

Response to Comment N-00419 (Page 3 of 7):

NEPA-4:

Section 2.5.1.2 describes the two Company Objective areas and Figure 2-11 shows their location within the RPAA. The impacts of the two Company Objective areas have been discussed as appropriate within each resource section in Chapter 4 of the EIS.



REC-1:

The Ord and Rodman Mountain are northeast and north of the Johnson Valley OHV area, respectively, and would not be impacted by the proposed action under any action alternative

LU-1:

As indicated in the EIS, access to mining and other land holdings will be determined on a case-by-case basis once an action alternative is selected (see Section 2.6 of the EIS for more information). The analysis in Section 4.12 discusses the impacts if mining and other land holdings were acquired under a specific alternative, as well as the impact if access were still available to the public. The socioeconomics section of the EIS (Section 4.3) has been updated to include additional analysis on socioeconomic impacts from potential acquisiton of mines.

Comment ID: N-00419 (Page 4 of 7)

public cannot determine which part of the shared area is useable and not useable. Thus the EIS fails to accurately evaluate the impacts.

"No hunting anywhere on the base." The Ord and Rodman Mountains are significant hunting grounds for upland birds but there is no evaluation of the loss of this opportunity either as recreation, wildlife management or economically. We are also concerned about the potential loss of wildlife drinkers in the Ord and Rodman Mountains. The preparers should have listed by GPS location the drinkers which will have to be relocated. The preparers should have listed by GPS location all of the springs and seeps. Then the reviewers could determine if any water sources had been missed. The quality of the maps is not at a level which would allow locations to be determined and thus the EIS fails to accurately evaluate impacts.

The preparers fail to detail what they will do with mining claims. They should have clearly stated the Marines plan to purchase this claim or that claim or that the Marines propose to not purchase this claim or that claim and/or the Marines propose to let the mines currently being worked continue or in the process of being readied to mine, to remain in business. They say we will do one or the other and decide on a case by case basis. They do not reveal that condemnation authority exists should the mine owner/operator refuse their offer. Thus the EIS fails to accurately evaluate any mining activities or the impacts from these activities.

As with recreation the preparers do not evaluate the impact of continued mining of a particular mine as opposed to acquisition and closure of the mine. They minimize the impact by not informing the public that acquisition and closure of one of the mines will deprive the Western United States of access to certain minerals and deny a business its western market, a very significant piece of information not given to the public. About all that is said is that the minerals can be gotten elsewhere in the world and the impact is therefore insignificant. Thus the EIS fails to accurately portray and evaluate impacts.

The preparers pick their comparisons and the one which will give them the most minimal impact figure, they select the world, nation, state, countywide or significant population centers, instead of looking at things regionally. A better look would be comparisons to that portion of San Bernardino County north and east of the San Bernardino Mountains. The preparers have failed to represent accurately, the issues. Thus the EIS fails to accurately evaluate impacts from these issues.

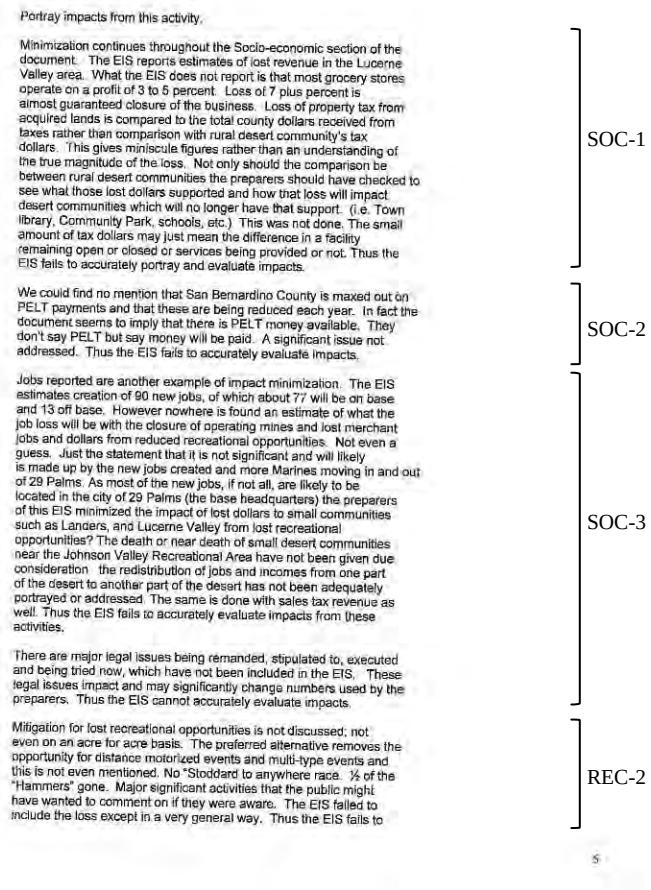
The preparers do not report that the Fort Irwin expansion swallowed one iron deposit from use, and now the preferred alternative and Others may remove a second iron deposit and how much this will Add to the cost of product to all users of cement. Cumulative impacts And significant information has been left out. Due to certain magnetic Anomalies which surfaced during planning for the CDCA this group of An iron mine is considered by many a World Class Deposit. Selecting Alternative 3 would remove this loss. Thus the EIS fails to accurately

NEPA-4

REC-1

LU-1

Response to Comment N-00419 (Page 4 of 7):



SOC-1:

The Draft EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the Draft EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The best available information for OHV recreational spending patterns was identified and used as the basis for the analysis. The Kroeger and Manalo 2007 study provided information for Southern California OHV recreational spending. The dollar amounts were adjusted to 2015 dollars.

SOC-2:

Consideration of indirect effects of the Proposed Action on the DoD budget, the National Deficit, and other funding sources are outside the scope of this EIS analysis. Ultimately, Congress will make the final decision about proceeding with the proposed action.

Comment ID: N-00419 (Page 5 of 7)

Portray impacts from this activity.

Minimization continues throughout the Socio-economic section of the document. The EIS reports estimates of lost revenue in the Lucerne Valley area. What the EIS does not report is that most grocery stores operate on a profit of 3 to 5 percent. Loss of 7 plus percent is almost guaranteed closure of the business. Loss of property tax from acquired lands is compared to the total county dollars received from taxes rather than comparison with rural desert community's tax dollars. This gives miniscule figures rather than an understanding of the true magnitude of the loss. Not only should the comparison be between rural desert communities the preparers should have checked to see what those lost dollars supported and how that loss will impact desert communities which will no longer have that support. (i.e. Town library, Community Park, schools, etc.) This was not done. The small amount of tax dollars may just mean the difference in a facility remaining open or closed or services being provided or not. Thus the EIS fails to accurately portray and evaluate impacts.

SOC-1

We could find no mention that San Bernardino County is maxed out on PELT payments and that these are being reduced each year. In fact the document seems to imply that there is PELT money available. They don't say PELT but say money will be paid. A significant issue not addressed. Thus the EIS fails to accurately evaluate impacts.

SOC-2

Jobs reported are another example of impact minimization. The EIS estimates creation of 90 new jobs, of which about 77 will be on base and 13 off base. However nowhere is found an estimate of what the job loss will be with the closure of operating mines and lost merchant jobs and dollars from reduced recreational opportunities. Not even a guess. Just the statement that it is not significant and will likely is made up by the new jobs created and more Marines moving in and out of 29 Palms. As most of the new jobs, if not all, are likely to be located in the city of 29 Palms (the base headquarters) the preparers of this EIS minimized the impact of lost dollars to small communities such as Landers, and Lucerne Valley from lost recreational opportunities? The death or near death of small desert communities near the Johnson Valley Recreational Area have not been given due consideration the redistribution of jobs and incomes from one part of the desert to another part of the desert has not been adequately portrayed or addressed. The same is done with sales tax revenue as well. Thus the EIS fails to accurately evaluate impacts from these activities.

SOC-3

There are major legal issues being remanded, stipulated to, executed and being tried now, which have not been included in the EIS. These legal issues impact and may significantly change numbers used by the preparers. Thus the EIS cannot accurately evaluate impacts.

Mitigation for lost recreational opportunities is not discussed; not even on an acre for acre basis. The preferred alternative removes the opportunity for distance motorized events and multi-type events and this is not even mentioned. No "Stoddard to anywhere race. ½ of the "Hammers" gone. Major significant activities that the public might have wanted to comment on if they were aware. The EIS failed to include the loss except in a very general way. Thus the EIS fails to

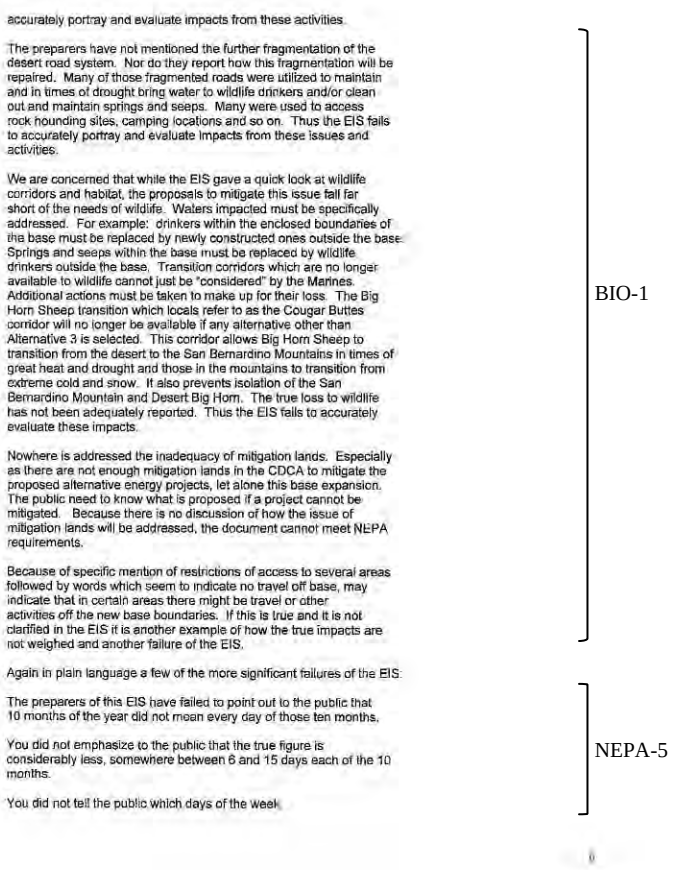
REC-2

5

Response to Comment N-00419 (Page 5 of 7):

SOC-3:

Section 4.3.1.1 of the EIS discussed the methodology for the socioeconomic analysis presented in the EIS. A number of assumptions were used based on best available data and are provided in Appendix K of the EIS.



REC-2 and BIO-1:

The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

The proposed action is not expected to impact "guzzlers" or "wildlife drinkers" that have been installed within the study areas. The Combat Center currently has several "guzzlers" installed for the benefit of wildlife, and these features coexist with the military training mission. Maintenance of springs and seeps, if necessary, would be conducted by NREA biologists and resource specialists under the guidance of the Combat Center's INRMP.

As stated in the EIS, the proposed action would not substantially increase barriers to movement for wildlife across the acquired lands. Fencing would be limited to two 400-square-foot Company Objective areas under Alternatives 4, 5, and 6, and roads would typically be at-grade dirt roads similar to existing conditions. Therefore, the analysis of impacts to wildlife corridors in the Draft EIS is adequate and is based on the best available information.

Comment ID: N-00419 (Page 6 of 7)

accurately portray and evaluate impacts from these activities.

The preparers have not mentioned the further fragmentation of the desert road system. Nor do they report how this fragmentation will be repaired. Many of those fragmented roads were utilized to maintain and in times of drought bring water to wildlife drinkers and/or clean out and maintain springs and seeps. Many were used to access rock hounding sites, camping locations and so on. Thus the EIS fails to accurately portray and evaluate impacts from these issues and activities.

We are concerned that while the EIS gave a quick look at wildlife corridors and habitat, the proposals to mitigate this issue fall far short of the needs of wildlife. Waters impacted must be specifically addressed. For example: drinkers within the enclosed boundaries of the base must be replaced by newly constructed ones outside the base. Springs and seeps within the base must be replaced by wildlife drinkers outside the base. Transition corridors which are no longer available to wildlife cannot just be "considered" by the Marines. Additional actions must be taken to make up for their loss. The Big Horn Sheep transition which locals refer to as the Cougar Buttes corridor will no longer be available if any alternative other than Alternative 3 is selected. This corridor allows Big Horn Sheep to transition from the desert to the San Bernardino Mountains in times of great heat and drought and those in the mountains to transition from extreme cold and snow. It also prevents isolation of the San Bernardino Mountain and Desert Big Horn. The true loss to wildlife has not been adequately reported. Thus the EIS fails to accurately evaluate these impacts.

Nowhere is addressed the inadequacy of mitigation lands. Especially as there are not enough mitigation lands in the CDCA to mitigate the proposed alternative energy projects, let alone this base expansion. The public need to know what is proposed if a project cannot be mitigated. Because there is no discussion of how the issue of mitigation lands will be addressed, the document cannot meet NEPA requirements.

Because of specific mention of restrictions of access to several areas followed by words which seem to indicate no travel off base, may indicate that in certain areas there might be travel or other activities off the new base boundaries. If this is true and it is not clarified in the EIS it is another example of how the true impacts are not weighed and another failure of the EIS.

Again in plain language a few of the more significant failures of the EIS:

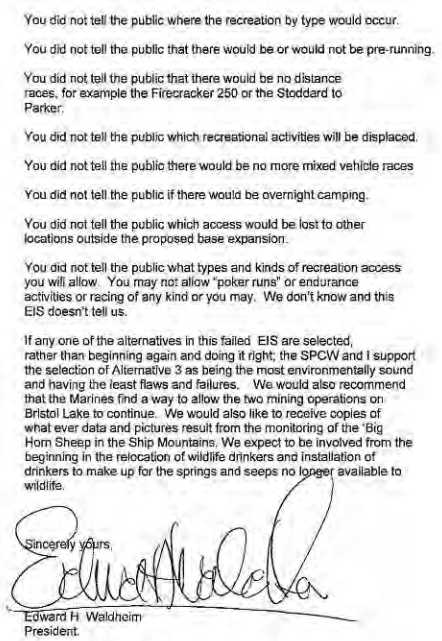
The preparers of this EIS have failed to point out to the public that 10 months of the year did not mean every day of those ten months.

You did not emphasize to the public that the true figure is considerably less, somewhere between 6 and 15 days each of the 10 months.

You did not tell the public which days of the week.

BIO-1

NEPA-5



Response to Comment N-00419 (Page 6 of 7):

NEPA-5:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The specific details on management of the RPAA in regards to permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). While preparing the Recreation Management Plan, the Marine Corps would solicit input from the public, BLM, and other agencies. Section 2.5.4 of the EIS discusses the proposed communication and notification procedures for the public. Section 2.5.5 of the EIS discusses restrictions that have been identified at this time for permitted uses in the RPAA.

Comment ID: N-00419 (Page 7 of 7)

You did not tell the public where the recreation by type would occur.

You did not tell the public that there would be or would not be pre-running.

You did not tell the public that there would be no distance races, for example the Firecracker 250 or the Stoddard to Parker.

You did not tell the public which recreational activities will be displaced.

You did not tell the public there would be no more mixed vehicle races

You did not tell the public if there would be overnight camping.

You did not tell the public which access would be lost to other locations outside the proposed base expansion.

You did not tell the public what types and kinds of recreation access you will allow. You may not allow "poker runs" or endurance activities or racing of any kind or you may. We don't know and this EIS doesn't tell us.

If any one of the alternatives in this failed EIS are selected, rather than beginning again and doing it right; the SPCW and I support the selection of Alternative 3 as being the most environmentally sound and having the least flaws and failures. We would also recommend that the Marines find a way to allow the two mining operations on Bristol Lake to continue. We would also like to receive copies of what ever data and pictures result from the monitoring of the 'Big Horn Sheep in the Ship Mountains. We expect to be involved from the beginning in the relocation of wildlife drinkers and installation of drinkers to make up for the springs and seeps no longer available to wildlife.

Sincerely yours,

Edward H Waldheim
President.

So many people have devoted time to establish our off road recreation. We moved to Lucerne Valley after we spent many weekends Dirt Bike Riding. This was my husbands dream to live out here, clean air - Dragging our entire family for wonderful healthy fun. We weep at the that that after Live Ammunitions is used on this property it's closed forever for public use.

Response to Comment N-00420:

Thank you for your comment. The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise. The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

Response to Comment N-00421:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Response to Comment N-00422:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. Re: Draft Environmental Impact Statement on 29Palms Base expansion

Dear Sir:

The DEIS states:
Potential impacts from six action alternatives and the No-Action Alternative have been analyzed.
Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:
Less than Significant Impacts (LSI):
- Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
- Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.

No Impacts (NI):
No impact anticipated from airspace establishment.

Similar judgements are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.
It is therefore a contradiction to imply that residents and Cultural Resources outside the EIS area will not be impacted, when the public scoping issues (4.3.1.3) include:
- Decrease of revenue and employment and associated tax revenue from tourism recreational and film industries
- Devaluation of surrounding private property.
- Increased costs to federal, state and local jurisdictions for increased law enforcement.

Tuesday, May 24, 2011 America Online: DOMMES

Response to Comment N-00423 (Page 1 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-00423 (Page 2 of 3)

All would occur outside the acquisition study boundaries

Therefore this contradiction must be corrected, and these and other communities which are neighbors to the Base must be included in all analyses, and in particular under Cultural Resources. It must also be stated that the DEIS did not do this

The communities of Johnson Valley, Landers, Flamingo Heights, Yucca Mesa and Wonder Valley border the existing base and the planned expansion areas.

They were founded under the Small Homestead Act of 1939 (also known as the Jackrabbit Homestead Act), an Act of Congress in which the Federal Government, in order to spur growth and utilization of our desert lands, provided individuals with 5-acre parcels of land under the condition that they would build a residence on the property within two years of award. The idea was to stimulate recreational use and settlement of the vast desert lands.

The National Historic Preservation Act, Section 106 establishes historic eligibility under various criteria including: Association with Historic Events.

Because of the history of these homestead communities linking their founding to the Small Homestead Act, they have historic eligibility status since they were created under that historic Act (as is the case with the original Homestead Act of 1862), and should be included in the DEIS for study as cultural resources.

Johnson Valley, Landers, Flamingo Heights and Wonder Valley and their airspace are already significantly impacted by noise, vibration, air pollution and/or light pollution. The proposed expansion of training exercises and Combat Center area will cause very significant impacts to a population too old, and with too low an income to even consider moving away to live in other locations where it may be less stressful in some ways, but the cost of living is much higher.

-The noise modeling discussed on Page 540 and elsewhere is completely misleading because averages are used rather than noise levels from separate events such as explosions or helicopters. This is a complete misrepresentation and highly deceptive to readers who do not live near this Base, or any other with live fire training, and have not experienced this for themselves. Noise and vibration extend well beyond the study area, and the DEIS must be corrected everywhere it implies it does not.

-These homestead communities have co-existed with the Base for decades as the DEIS correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflown by helicopters at any hour of the day or night, particularly when the want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into

Response to Comment N-00423 (Page 2 of 3):

Comment ID: N-00423 (Page 3 of 3)

question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.

"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision."
–Desert Magazine 1944

The following is a link to the story of a homesteading family in Johnson Valley, who still own the place and are historians themselves. The photo attached is taken looking northeast toward the existing Base, courtesy Stan Coutant.
http://www.coutant.org/mininternet/saga/index.html

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

AS A RESIDENT OF LUCERNE Valley CA, I PROTEST TO THE EXPANSION OF THE 29 PALMS/ US MARINE BASE TO OUR TOWN, IT WOULD BE DEVASTATING TO OUR ECONOMY, WHICH IS STRUGGLING ALREADY DUE TO THE RECESSION. THIS TOWN NEEDS THE WEEKEND RECREATION VISITORS THAT USE THAT SAME LAND TO CAMP + USE RECREATIONAL VEHICLES. THE WEEKENDERS USE OUR ONLY MARKET FOR SUPPLIES + THE COMMERCE SUPPORTS OUR COMMUNITY. I AM ALSO CONCERNED ABOUT THE NOISE, AIR QUALITY, HAZARDOUS MATERIALS/ WASTE ISSUES THAT MAY RESULT IMPACTING MY COMMUNITY. PLEASE CONSIDER USEING THE BARRON LAND SOMEWHERE ELSE BESIDES HERE. THANK YOU.

www.marines.mil/unit/29palms/las

Response to Comment N-00425 (Page 1 of 2):

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

The EIS evaluates impacts to air quality under each of the action alternatives (see Section 4.8). As noted in the EIS, alternatives that would involve the west acquisition study area would result in less than significant impacts from increased emissions for the proposed activities.

Comment ID: N-00425 (Page 2 of 2)

Response to Comment N-00425 (Page 2 of 2):

The Marine Corps understands the public's concern in regards to safety on lands used by the Marine Corps for training purposes. As outlined in Section 3.4, Combat Center Order 3500.4h *SOP for Range/Training Area and Airspace* provides guidance for training range operations, which includes routine range sweeps to remove safety hazards and range clearance operations following every major exercise.

The Marine Corps would continue these same procedures on any acquired land area. In addition, the Marine Corps proposed several measures that would be implemented under Alternative 4, 5, or 6 that would allow the Restricted Public Access Area to be available for public use (refer to Section 2.5 of the EIS).

Gentlemen:

I am submitting these comments on the Draft EIS for the Marine Base Expansion in 29 Palms.

I am a property owner in Johnson Valley. I have a renovated Homestead Cabin which I use on weekends and also rent out to desert vacationers.

I have reviewed the document and have the following comments:

CEQA:

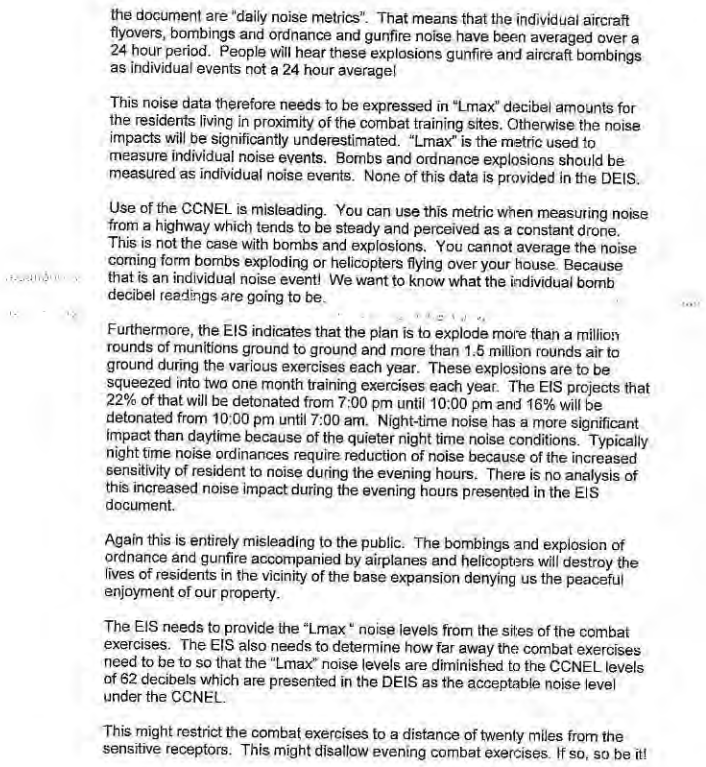
I question why there is no explanation in the document as to why there is no Environmental Impact Review under CEQA for the project. There is mention in the document of acquisition of private and state lands. There is mention of the need to build new roads and install gates at existing roads into the OHV areas. There is mention that the construction of the Communications Towers may require that "authorities acquire easements, lease, permit or…to construct the communications tower". The OHV lands that will be confiscated for the expansion are currently under the supervision of the California Department of Parks and Recreation/Off Highway Motor Vehicle Recreation Division. There must be agreements between State Parks and BLM regarding the use and oversight of these lands. If surrender of these lands involves alteration or suspension of these agreements, that might constitute an action on the part of a State Agency that triggers CEQA.

If any of these required actions are on the part of State or County agencies, then that means that a CEQA review of the project would be necessary.

Why then is there no mention of CEQA in the EIS document? This needs to be addressed.

NOISE:

The noise sections are most misleading and gravely flawed. The models used evaluate and predict averaged noise projections for the aircraft and ordnance explosions. The Community Noise Equivalent Level (CCNEL) metrics used in



Response to Comment N-00426 (Page 1 of 4):

Thank you for your comment. The Marine Corps has met with the State of California to discuss CEQA requirements for state actions that could be undertaken following the project decision. State agencies are encouraged to use NEPA documents when such documents comply with CEQA. To the extent practicable, the EIS will incorporate CEQA requirements to allow state agencies to utilize the EIS analysis to support any future project-specific analyses that may be required by CEQA.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

As noted, the EIS clearly describes significant impacts to the desert tortoise resulting from military training under the proposed action. Stress on tortoises and potential related physiological effects such as dehydration are described on page 4.10-11 and elsewhere in the document. Tortoise responses to noise are also described on page 4.10-11. The Marine Corps is working with the USFWS to identify suitable mitigation measures to partially offset the proposed action's impacts to the desert tortoise. These measures are described in detail in the USFWS Biological Opinion (BO) for the project, and are summarized in the FEIS on in Section 4.10. Compliance with USFWS terms and conditions from this BO will satisfy the requirements of the Endangered Species Act.

Comment ID: N-00426 (Page 2 of 4)

the document are "daily noise metrics". That means that the individual aircraft flyovers, bombings and ordnance and gunfire noise have been averaged over a 24 hour period. People will hear these explosions gunfire and aircraft bombings as individual events not a 24 hour average!

This noise data therefore needs to be expressed in "Lmax" decibel amounts for the residents living in proximity of the combat training sites. Otherwise the noise impacts will be significantly underestimated. "Lmax" is the metric used to measure individual noise events. Bombs and ordnance explosions should be measured as individual noise events. None of this data is provided in the DEIS.

Use of the CCNEL is misleading. You can use this metric when measuring noise from a highway which tends to be steady and perceived as a constant drone. This is not the case with bombs and explosions. You cannot average the noise coming form bombs exploding or helicopters flying over your house. Because that is an individual noise event! We want to know what the individual bomb decibel readings are going to be.

Furthermore, the EIS indicates that the plan is to explode more than a million rounds of munitions ground to ground and more than 1.5 million rounds air to ground during the various exercises each year. These explosions are to be squeezed into two one month training exercises each year. The EIS projects that 22% of that will be detonated from 7:00 pm until 10:00 pm and 16% will be detonated from 10:00 pm until 7:00 am. Night-time noise has a more significant impact than daytime because of the quieter night time noise conditions. Typically night time noise ordinances require reduction of noise because of the increased sensitivity of resident to noise during the evening hours. There is no analysis of this increased noise impact during the evening hours presented in the EIS document.

Again this is entirely misleading to the public. The bombings and explosion of ordnance and gunfire accompanied by airplanes and helicopters will destroy the lives of residents in the vicinity of the base expansion denying us the peaceful enjoyment of our property.

The EIS needs to provide the "Lmax" noise levels from the sites of the combat exercises. The EIS also needs to determine how far away the combat exercises need to be to so that the "Lmax" noise levels are diminished to the CCNEL levels of 62 decibels which are presented in the DEIS as the acceptable noise level under the CCNEL.

This might restrict the combat exercises to a distance of twenty miles from the sensitive receptors. This might disallow evening combat exercises. If so, so be it!

Response to Comment N-00426 (Page 2 of 4):

The EIS evaluates cultural resources impacts under each of the action alternatives (see Section 4.11). The section has been updated to discuss potential homestead communities that may be impacted by the proposed action.

Comment ID: N-00426 (Page 3 of 4)

VIBRATIONS:

The draft EIS makes no mention of vibration impacts!

Ground born vibrations will be generated by the combat activities of bombs, ordnance explosions and gunfire. Currently, I can feel the vibrations from combat training activities at the existing marine base which is more than 20 miles away. The EIS needs to present what the vibration levels will be coming from the planned base expansion combat training activities.

The vibration impacts are likely to be significant and extremely annoying. They will feel like earthquake tremors and may pose risk to residential structures. Also a significant portion of the vibration impacts will be experienced in the evening combat exercises. The EIS needs to address this issue with a detailed analysis and modeled projections of vibration impacts on the community.

BIOLOGICAL IMPACTS:

The EIS clearly states that it will significantly impact Desert Tortoise. Tortoises will be bombed, and run over and their habitat destroyed. The EIS does not address the trauma that the tortoises will experience form the noise and vibrations resulting from the bombing of ordnance and gunfire during the combat training exercises. This needs to be addressed. The trauma might prevent the tortoise from mating or nesting and have a further deleterious impact on their dwindling population. This should not be allowed.

Why are the regulations written to protect endangered species being over-ridden by the Marines expansion objectives? How is this justified?

SECTION 106:

There is no discussion of the Homestead Valley Communities in the EIS. Johnson Valley and the other Homestead Communities were founded under the Jack Rabbit Homestead Act or Small Homestead Act of 1939. As such they can be considered eligible for historic status under Section 106 of the National Historic Preservation Act since their creation is associated with an Act of Congress. There should be a discussion of this. Note that these communities do not need to be determined to be Historic in order for the reviews to be required under Section 106. Mere eligibility qualifies them for consideration under Section 106.

There should be discussion and analysis of the impacts of highway and traffic development, light, noise, vibrations and air quality degradation that will impact these communities. All these impacts to the Homestead Communities might be significant and need to be addressed. Keep in mind that the noise section of the DEIS is flawed and cannot be applied as presented to a Section 106 analysis.

Response to Comment N-00427:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered other alternatives for the proposed action, including suggestions offered by members of the public during the public scoping period in late 2008. Several alternative scenarios were considered and eliminated from detailed study (including conducting the proposed MEB-sized MAGTF Training at other military bases in the U.S.) because they did not meet the purpose of and need for the proposed action or did not satisfy the minimum screening criteria for identifying suitable lands for acquisition (as described in Section 2.3 of the EIS).

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Re: Draft Environmental Impact Statement on 29 Palms Base expansion

Dear Sir:

The DEIS states:
Potential impacts from six action alternatives and the No-Action Alternative have been analyzed.
Potential impacts have been analyzed for land use, recreation, socioeconomics and environmental justice, public health and safety, visual resources, transportation and circulation, airspace management, air quality, noise, biological resources, cultural resources, geological resources, and water resources. Cumulative effects of the proposed action in conjunction with other past, present, or reasonably foreseeable future actions are also analyzed.

3.11 Cultural Resources. The DEIS states that cultural resources would be managed in accordance with the provisions of federal laws and regulations as well as Marine Corps policy. The Programmatic Agreement (PA) Between the United States Marine Corps and the California State Historic Preservation Officer Regarding Operation, Maintenance, Training and Construction at the United States Marine Air Ground Task Force Training Command, Marine Corps Air Ground Combat Center, Twentynine Palms, California, would be amended to include any lands acquired as a consequence of the proposed action alternative.

The Table on Page 29 states under Alternative 1, Cultural Resources:
Less than Significant Impacts (LSI):
• Direct and indirect impacts may result from weapons fire, MEB operations, group and individual traffic, battalion movements, aviation Weapons Danger Zone, and construction.
• Special Conservation Measures and other measures would be implemented to avoid or reduce impacts to resources.
No Impacts (NI):
No impact anticipated from airspace establishment.

Similar judgements are made in this Table and elsewhere for the other Alternatives.

However, the DEIS only analyzes all these things within the areas being studied for acquisition, where there are few if any residents.
It is therefore a contradiction to imply that residents and Cultural Resources outside the

Response to Comment N-00428 (Page 2 of 3):

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending. The section has been updated to acknowledge specific communities such as Wonder Valley and Homestead Valley.

The EIS evaluates noise impacts under each of the action alternatives (see Section 4.9). As discussed in Section 4.4 of the EIS, some noise and vibrations associated with ordnance use under the proposed action may be periodically detected by residents and other members of the public from a distance, and may sometimes be an annoyance. The results of additional single-event noise modeling have been added to Section 4.9 of the EIS to contribute to the evaluation of noise impacts.

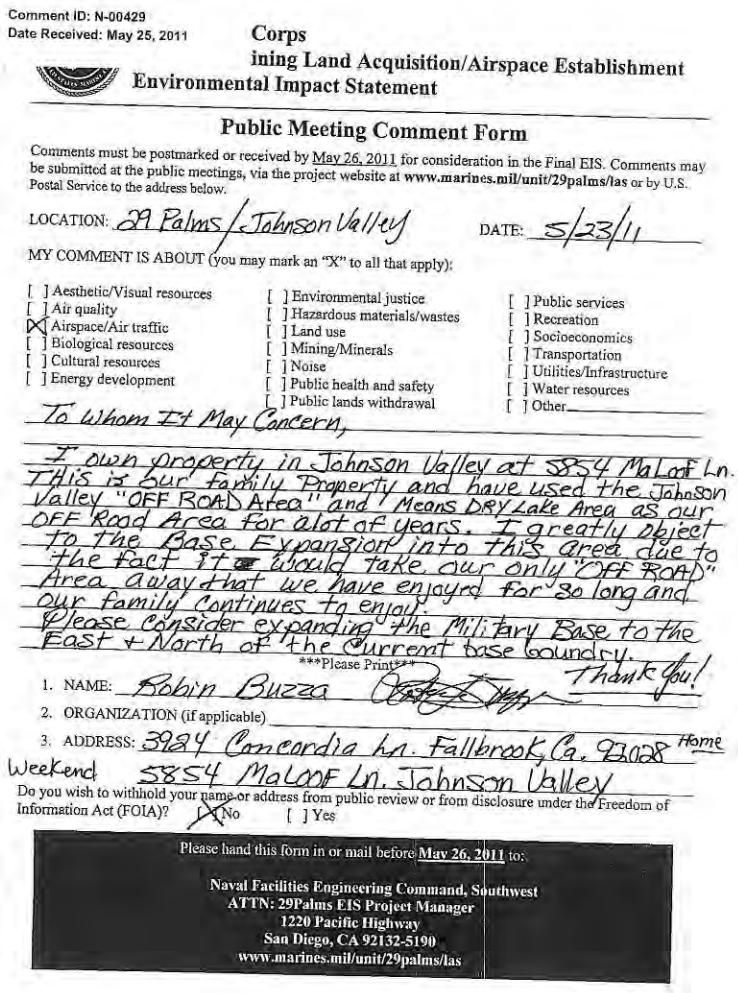
Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Comment ID: N-00428 (Page 3 of 3)

correctly states. However, modern weaponry is not the same as was used even 20 years ago. Whichever Alternative is chosen, the training exercises are planned to increase both in intensity and duration. The DEIS must be changed to delete this argument, or the escalation of noise and vibration must be recognized and reported as having a significant impact on the surrounding homestead communities, which must be considered as Cultural Resources.

-Very few people consider it desirable to move to a home that will be shaken by noise and shock waves at any hour of the day or night, or overflown by helicopters at any hour of the day or night, particularly when the want to move to a rural community with expectations of enjoying more peace and quiet than can be found in urban areas. Since the first announcement of the proposed base expansion, realtors have been required to disclose it, and sales are lost, which is a financial impact on the historic communities and brings into question their very survival.

The attractions of elbow room and history are negated by the realities of living with startling noise, and fear of damage.



"Folks with the blood of pioneers—or of poets—running strong in their veins, will regard the task as a grand adventure. I know Los Angeles people who spent most of their weekends for months building a stone cabin on their claim. And what fun they had doing it! Two days every week they drove out and mixed mortar and hauled rocks, and stone by stone the little cabin took form. It isn't a perfect construction job—but it is theirs. They planned it themselves and built it with their own hands—and in terms of spiritual values it is worth more than a mansion in a ritzy subdivision."
–Desert Magazine 1944

http://www.coutant.org/mminternet/saga/index.html

The DEIS must be changed to address the impacts on these communities as historic cultural resources, with unique attractions for historic studies and recreation. The findings of less than significant impacts and no impacts under all Alternatives must be reworded to state there will be significant impacts to these communities, and that the DEIS overlooked this issue.

To Whom It May Concern,

I own property in Johnson Valley at 5854 MaLoof Ln. THis is our family Property and have used the Johnson Valley "OFF ROAD Area" and Means DRY Lake Area as our OFF Road Area for alot of years. I greatly object to the Base Expansion into this area due to the fact it would take our only "OFF ROAD" Area away that we have enjoyed for so long and our family continues to enjoy.
Please consider expanding the Military Base to the East + North of the Current base boundry.
Thank you!

Response to Comment N-00430 (Page 1 of 3):

Thank you for your comment. Impacts related to mining have been updated in the EIS; see Section 4.3 (*Socioeconomics*) and Section 4.12 *(Geological Resources*).

The EIS has been updated with the amount of reserves cited in the attached comment letter.

Comment ID: N-00430 (Page 2 of 3)

Response to Land Acquisition and Airspace Establishment, Air Combat Center, Twenty Nine Palms, CA
DEIS dated February 2011

On behalf of Hahm International and Levand Steel and Supply, owners of the Morris and Bessemer Mines in the west study area of the DEIS, I am providing the following comments to the DEIS.

Both mines are domestically owned, Southern California companies. Hahm is the mine operator. They also own and operate the Silver Lake Iron Mine at Fort Irwin. They are the principal suppliers of iron ore utilized by the six cement plants located in Southern California. Iron is a cement additive. Approximately 250,000 tons is used by the local cement industry in a normal production year.

The DEIS does identify iron deposits in the expansion study area including the Bessemer and Morris Mines. It indicates that expansion could result in access or closure but that impacts would be less than significant due to

Continued access,

Purchase and closure at market value,

Additional availability of iron ore from secondary sources.

We would like to respond to those findings.

Access:

There are four (4) iron mines in the region.

Silver Lake	2.75 million tons
Morris	18.8 million tons
Bessemer	2.65 million tons
Baxter	1.0 million tons (estimated)

Hahm owns and operates the Silver Lake, Morris and Bessemer mines and has contract mined the Baxter Mine which is owned by California Portland Cement Company. To our knowledge there are no other permitted sources of iron in the region.

Iron is very sensitive to shipping cost, the farther away the source the more expensive the ore. Hahm opened the Morris Mine specifically to increase permitted reserves and reduce customer cost. In comparison to the Silver Lake Mine, the Morris will save 1.2 million freight miles per year, 240,000 gallons of fuel per year and will reduce the cost of iron by $10.00 per ton of ore delivered. Silver Lake is expected to provide at least 2.75 million tons of iron after which Morris and Bessemer will become the

Response to Comment N-00430 (Page 2 of 3):

Comment ID: N-00430 (Page 3 of 3)

principal sources of iron ore for the region. Loss of access to these two mines would eliminate 89% of Hahm's reserves. It would also eliminate the best and closest source of iron to the cement industry. The next available source for raw iron is Utah. The potential impact of loss of access to the cement industry is significant from a physical and economic standpoint.

Purchase:

Federal appraised market value and actual appraised market value are two very different processes. Hahm currently operates Silver Lake Mine on a military facility under a joint use agreement. This occurred because the federal appraised value of the mine was barely 10 percent of the actual value of the mine and the Army was unable to negotiate acquisition. The Army suggested joint use which has worked very well for both parties to date. However assuming purchase at federal market value is mitigation to a level of less than significant is unrealistic. The present value of Morris and Bessemer is in excess of $600,000,000.00.

Secondary Sources:

Bessemer and Morris	21.45 million tons	60 miles from market.
Baxter	1 million tons (est.)	100 miles from market.
Silver Lake	2.75 million tons	120 miles from market.
Cedar City, Utah	quantity unknown	356 miles from market.
Salt Lake City, Utah	quantity unknown	606 miles from market.

Cost of shipping is $2.15 per mile. The Morris Mine currently saves over 240,000 gallons of fuel over competing sources. The impact of replacement ore from other sources to the cement industry will be significant in terms of energy demand, air emissions, greenhouse gas and cost of resources. The cost of iron to the cement industry will significantly increase.

None of these issues or their potential impacts are addressed in the DEIS. It would also appear that the cement industry was not consulted. We hope you will consider these concerns in evaluating the proposed expansion. We look forward to working with you as you proceed in your NEPA compliance process.

Sincerely

Stephen T. Lilburn

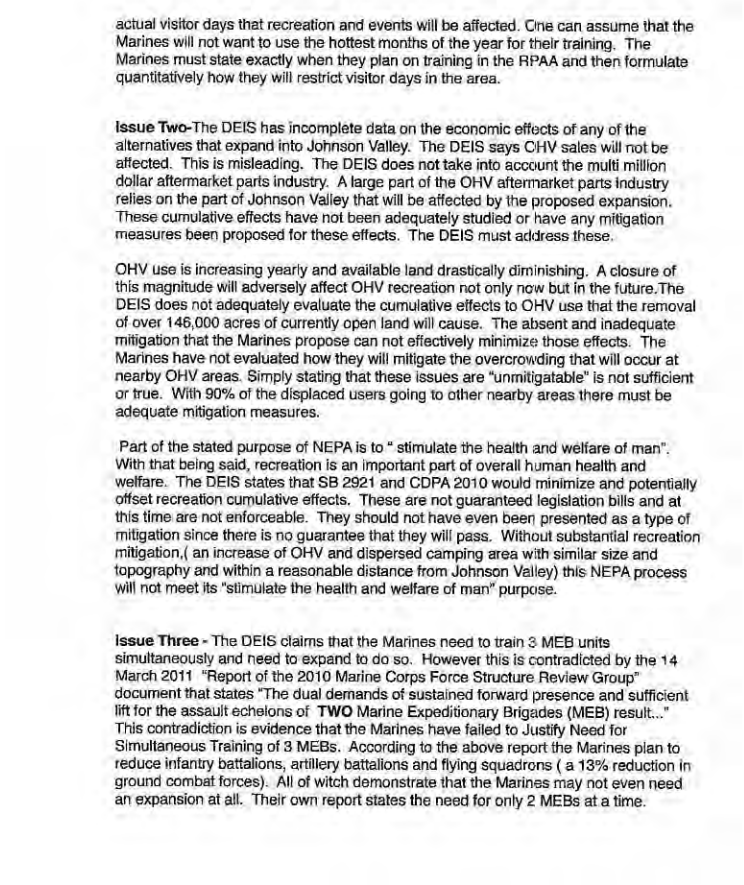
Re: Comments on 29Palms Training Land Acquisition/Airspace Establishment DEIS

Dear Project Manager:

Thank you for the opportunity to comment on the 29Palms land withdrawal DEIS. These comments are being submitted by me as an individual. However I am a member of several OHV organizations, a frequent visitor to Johnson Valley OHV area and have been for over 30 years. My family and I enjoy camping, rock crawling, motorcycle riding and spectating racing events in Johnson Valley. Most of our activities take place in the eastern portion that will be greatly affected by all the proposed alternatives except alternative #3 and the no action alternative.

The DEIS as submitted is flawed, contains inaccuracies and is incomplete. The DEIS:

- Is misleading when it states that a portion of the west study area will be open 10 months a year.
- Underestimates the cumulative impacts of Alternative 6.
- The marines failed to justify the need for simultaneous training of 3 MEBs.
- Inadequately evaluates the cost of an expansion of this magnitude.



Issue One- The marines are misleading the OHV community when they state that the RPAA land in Alternative 6 will be open for 10 months a year. In the DEIS there is no quantitative analysis on how much recreation will actually be able to be had in the RPAA. For example the DEIS states that the busiest months are March, April and May and the least are July and August. This data needs to be quantitative with its respect to

Response to Comment N-00431 (Page 1 of 3):

Thank you for your comment. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year. The specific details on management of the RPAA in regards to permitted activities, permitting process, permits and fees for events in the RPAA, etc. have not been formalized at this time. If the alternative selected is one that would involve an RPAA a Recreation Management Plan would be developed that would address these details (see Section 4.2.5.4). Regardless, the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact. The Marine Corps does not have the authority to designate recreation lands as mitigation for the proposed action. The discussion of SB 2921 and the California Desert Protection Act of 2010 was discussed in the context of cumulative projects and is not presented as mitigation to the proposed action. The EIS determined that impacts to Recreation (under all action alternatives) would be significant and that no mitigation measures would fully reduce the impacts to below a level of significance.

Comment ID: N-00431 (Page 2 of 3)

actual visitor days that recreation and events will be affected. One can assume that the Marines will not want to use the hottest months of the year for their training. The Marines must state exactly when they plan on training in the RPAA and then formulate quantitatively how they will restrict visitor days in the area.

Issue Two-The DEIS has incomplete data on the economic effects of any of the alternatives that expand into Johnson Valley. The DEIS says OHV sales will not be affected. This is misleading. The DEIS does not take into account the multi million dollar aftermarket parts industry. A large part of the OHV aftermarket parts industry relies on the part of Johnson Valley that will be affected by the proposed expansion. These cumulative effects have not been adequately studied or have any mitigation measures been proposed for these effects. The DEIS must address these.

OHV use is increasing yearly and available land drastically diminishing. A closure of this magnitude will adversely affect OHV recreation not only now but in the future.The DEIS does not adequately evaluate the cumulative effects to OHV use that the removal of over 146,000 acres of currently open land will cause. The absent and inadequate mitigation that the Marines propose can not effectively minimize those effects. The Marines have not evaluated how they will mitigate the overcrowding that will occur at nearby OHV areas. Simply stating that these issues are "unmitigatable" is not sufficient or true. With 90% of the displaced users going to other nearby areas there must be adequate mitigation measures.

Part of the stated purpose of NEPA is to " stimulate the health and welfare of man". With that being said, recreation is an important part of overall human health and welfare. The DEIS states that SB 2921 and CDPA 2010 would minimize and potentially offset recreation cumulative effects. These are not guaranteed legislation bills and at this time are not enforceable. They should not have even been presented as a type of mitigation since there is no guarantee that they will pass. Without substantial recreation mitigation,(an increase of OHV and dispersed camping area with similar size and topography and within a reasonable distance from Johnson Valley) this NEPA process will not meet its "stimulate the health and welfare of man" purpose.

Issue Three - The DEIS claims that the Marines need to train 3 MEB units simultaneously and need to expand to do so. However this is contradicted by the 14 March 2011 "Report of the 2010 Marine Corps Force Structure Review Group" document that states "The dual demands of sustained forward presence and sufficient lift for the assault echelons of **TWO** Marine Expeditionary Brigades (MEB) result..." This contradiction is evidence that the Marines have failed to Justify Need for Simultaneous Training of 3 MEBs. According to the above report the Marines plan to reduce infantry battalions, artillery battalions and flying squadrons (a 13% reduction in ground combat forces). All of witch demonstrate that the Marines may not even need an expansion at all. Their own report states the need for only 2 MEBs at a time.

Response to Comment N-00431 (Page 2 of 3):

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

Consideration of indirect effects of the Proposed Action on the DoD budget and the National Deficit are outside the scope of this EIS analysis.

As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study.

Comment ID: N-00431 (Page 3 of 3)

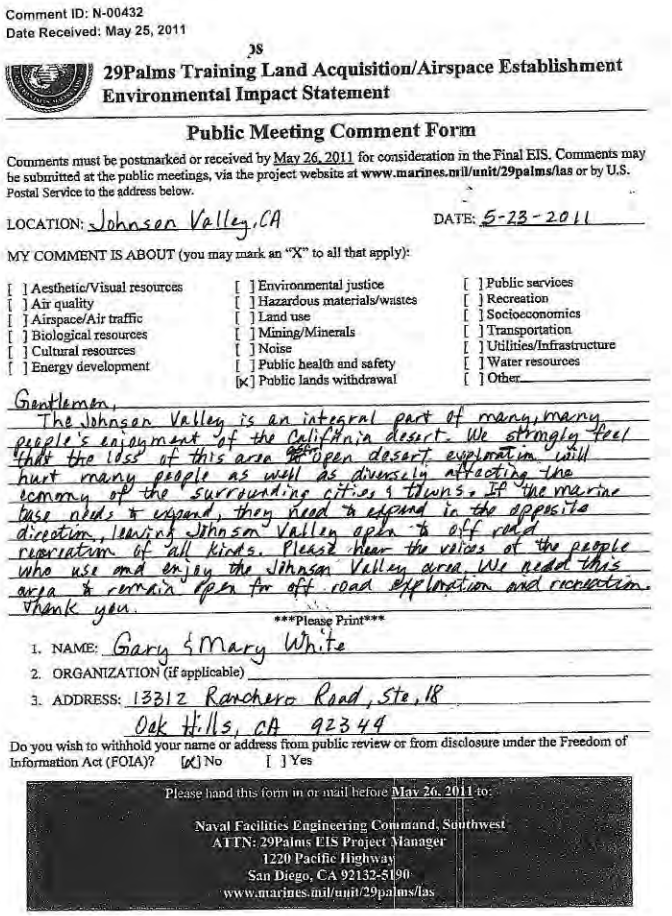
Issue Four - The Marines expect to see a "mini Quadrennial Defense Review" (QDR) in the upcoming months. This upcoming review is seen as far more consequential than an actual QDR because it may conclude that the nation cannot afford to have the military keep doing everything that it does today. This illustrate that the Marines may simply want to expand in order to justify their current funding or even perhaps to justify asking congress for an increase in funding. None of this is addressed in the DEIS.

At this time our country is facing the biggest deficit ever. The Marines should find a way to meet their training goals without adding to the trillion dollar deficit. Cost numbers stated in the DEIS are vague at best. The Marines must try to be fiscally responsible in these tough economic times. The Marines must rethink the need to expand the 29Palms base and or reconsider working with the Army at Fort Irwin or use one of their other bases on the Mid-Atlantic coast or the Gulf of Mexico coast that will not require expensive land and airspace expansion.

In summary, I want to again state my strong opposition to any Marine expansion into Johnson Valley and to the entire project as it is presented in the DEIS. I would like to encourage the Marines to reevaluate the need and fiscal impact of any such expansion. I also encourage the Marines to realistically consider working with the Army at Fort Irwin for their training needs. Captain Nick Mannweiler's remarks at the DAC meeting demonstrate the Marines' unwillingness to do so. This needs to change.

I appreciate the opportunity to comment and look forward to working with the Marines in the future so they can train effectively while still preserving recreation in Johnson Valley.

Sincerely,



Vincent Barbarino

Response to Comment N-00431 (Page 3 of 3):

Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center. Fort Irwin does not have ranges capable of supporting MEB-sized sustained, combined-arms live-fire and maneuver training and the modification of Fort Irwin to better accommodate Marine Corps training requirements would preclude the Army's ability to meet its own training requirements and be optimally prepared for deployment. See Section 2.7 of the EIS for more information about alternatives that were considered but not carried forward for analysis in the EIS.

The Marine Corps appreciates your comment and participation in the NEPA process.

Gentlemen,
The Johnson Valley is an integral part of many, many people's enjoyment of the California desert. We strongly feel that the loss of this area to open desert exploration will hurt many people as well as diversely affecting the economy of the surrounding cities & towns. If the marine base needs to expand, they need to expand in the opposite direction, leaving Johnson Valley open to off road recreation of all kinds. Please hear the voices of the people who use and enjoy the Johnson Valley area. We need this area to remain open for off road exploration and recreation.
Thank you.

Response to Comment N-00432:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps appreciates your comment and participation in the NEPA process.

MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center.

Fairplay, CO 80440

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The Corps excluded the use of Fort Irwin based on false assumptions that scheduling conflicts, current infrastructure deficiencies, and other administrative hurdles cannot be mitigated.

Sincerely,

Tom Naylor

Response to Comment N-00446:

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center.

As a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

I whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, I firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

Wade Leishman
President 2011/2012 - Santa Cruz 4 Wheel Drive Club (831) 332-8264 - Cell

Sincerely,

Wade Leishman

Thank you for your comment. As discussed in Section 2.7 of the EIS, the Marine Corps considered several alternative scenarios for the proposed action (including conducting the proposed MEB-sized Marine Air-Ground Task Force (MAGTF) Training at other military bases in the U.S.) but eliminated them from detailed study. Although the Army and the Marine Corps often serve side-by-side and sometimes execute similar missions, they have very different training requirements. The MAGTF is the Marine Corps' principal organization for conducting missions across the range of military operations. MAGTFs employ and integrate air- and ground-based operations. The Marine Corps is legally required to provide forces of combined arms, which is a unique Marine Corps mission and capability. MAGTF training involves a fully integrated live fire environment. MAGTF training employs a progressive approach, starting with combined arms integration techniques and procedures at the company level and culminating in a final exercise involving all elements of the Exercise Force MAGTF, such as the MEB-sized training proposed for the Combat Center.

Sincerely,

Craig Baum

Response to Comment N-00475:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops.

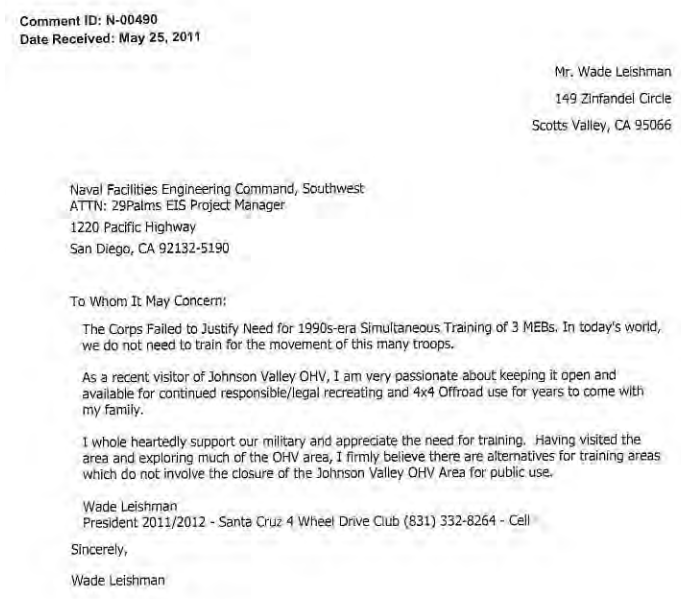
My husband was a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

We whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, we firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

Dewana Leishman



Sincerely,

Dewana Leishman

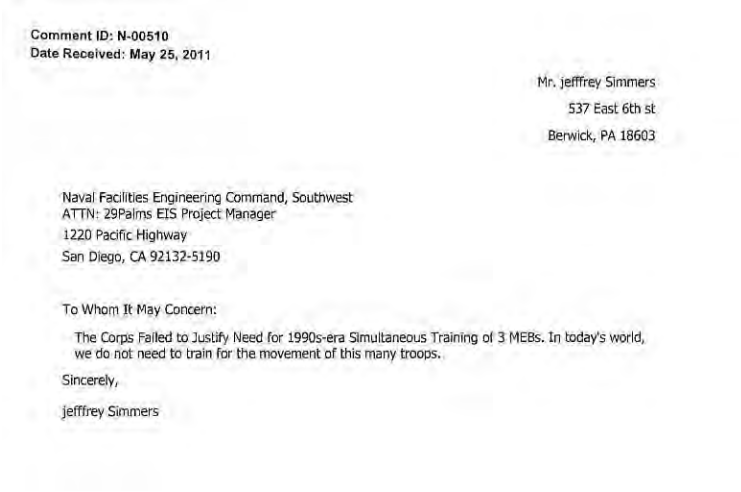
The Marine corps say that their operations strategy is going to change after Operation Iraqi Freedom, perhaps they should wait before considering expansion of the base. It would be a bad deal for all involved if they spend the money expanding, and take this area away from public users only to have it sit and never get used.



Sincerely,

Brandon Lowry

San Diego, CA 92132-5190

To Whom It May Concern:

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops.

Sincerely,

Matt Spencer

Response to Comment N-00511:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

Craig Baum

Response to Comment N-00517:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off -roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Greg Delmage

Response to Comment N-00531:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

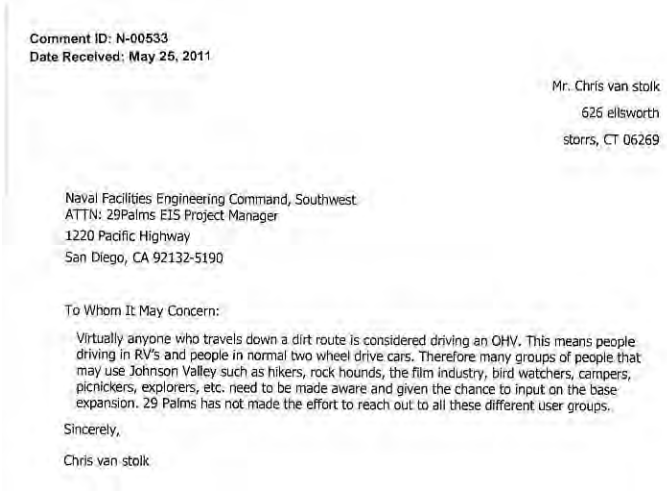
San Diego, CA 92132-5190

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.



Sincerely,

Danny Gaston

Response to Comment N-00532:

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

My husband was a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

We whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, we firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

Dewana Leishman

Sincerely,

Dewana Leishman

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

Thank you for your comment. The Marine Corps has kept the public informed as required by NEPA, including holding public scoping meetings before preparation of the Draft EIS, additional public meetings during the public review period for the Draft EIS, and encouraging the public to comment on the Draft EIS. In addition, the Marine Corps provided a 90-day public comment period for the Draft EIS, twice the minimum duration required by NEPA. The Marine Corps took additional steps to make the document publicly accessible for review and comment (e.g., project website, mailings, press releases, etc.). The Marine Corps has proactively reached out to interested stakeholders to ensure that their concerns were identified.

To Whom It May Concern:

Virtually anyone who travels down a dirt route is considered driving an OHV. This means people driving in RV's and people in normal two wheel drive cars. Therefore many groups of people that may use Johnson Valley such as hikers, rock hounds, the film industry, bird watchers, campers, picnickers, explorers, etc. need to be made aware and given the chance to input on the base expansion. 29 Palms has not made the effort to reach out to all these different user groups.

Sincerely,

james padgett

The OHV industry in itself would take a huge hit if Johnson Valley were to be taken over by the Marines. Currently many companies test products there in events such as the King of the Hammers.

THANK YOU FOR YOUR TIME!

Sincerely,

DJ HARMON

Response to Comment N-00570:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

To Whom It May Concern:

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off -roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Rocky Hill

Response to Comment N-00572:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

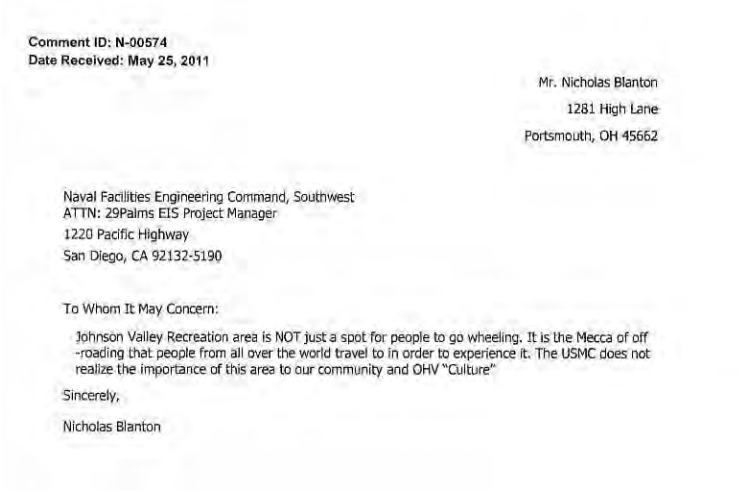
Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off -roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"



Sincerely,

Craig Baum

Response to Comment N-00573:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Corps Failed to Justify Need for 1990s-era Simultaneous Training of 3 MEBs. In today's world, we do not need to train for the movement of this many troops. I fully support our troops, but we need to make sure that we are doing things that will train them for what we face in todays world.

Sincerely,

Daniel Rider

Response to Comment N-00577:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a Marine Corps training requirement. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off -roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture". It is also a BIG part of the areas income. Local business and families who live there, count on the income that is generated from Johnson Valley use. Gas, groceries, parts stores and the like will loose income that will most likely close them down.
I would suggest that you look into going East and leave Johnson Valley to grow and develop long into the future. My family and friends have been going there for 11 years. We look forward to our camping and off-roading trips there, several times a year. Please reconsider and look EAST!
Thanks, Bryan Putman

Sincerely,

Bryan Putman

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off -roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

Ryan Higgins

Response to Comment N-00597:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

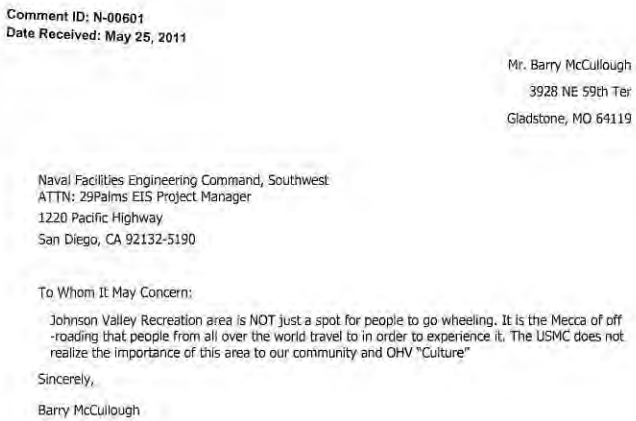
Dear Whomever,

I hope one day to travel to Johnson valley with my family to see it in all its beauty. I hope that when my traveling there that I would help stimulate the local economy and also create a lasting memory for my family. Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off-roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,



mark brixey

Response to Comment N-00600:

Thank you for your comment. The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off -roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture" . This, OUR "Mecca" Deserves to be around for our children and our childrens' children as it was for our their fathers before.
Used as an OHVA, this area is a vastly untapped region for us to enjoy our sport in a responsible and safe venue; without having to worry about disturbing others not as compassionate about our hobby as we. Please consider my lowly plea to not encroach on the Johnson Valley area any further westward with the planned Marine Corps expansion. Please allow us to enjoy this beautiful area as it is!
Thank You for your time, most sincerely:
John Purdy

As a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

I whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, I firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

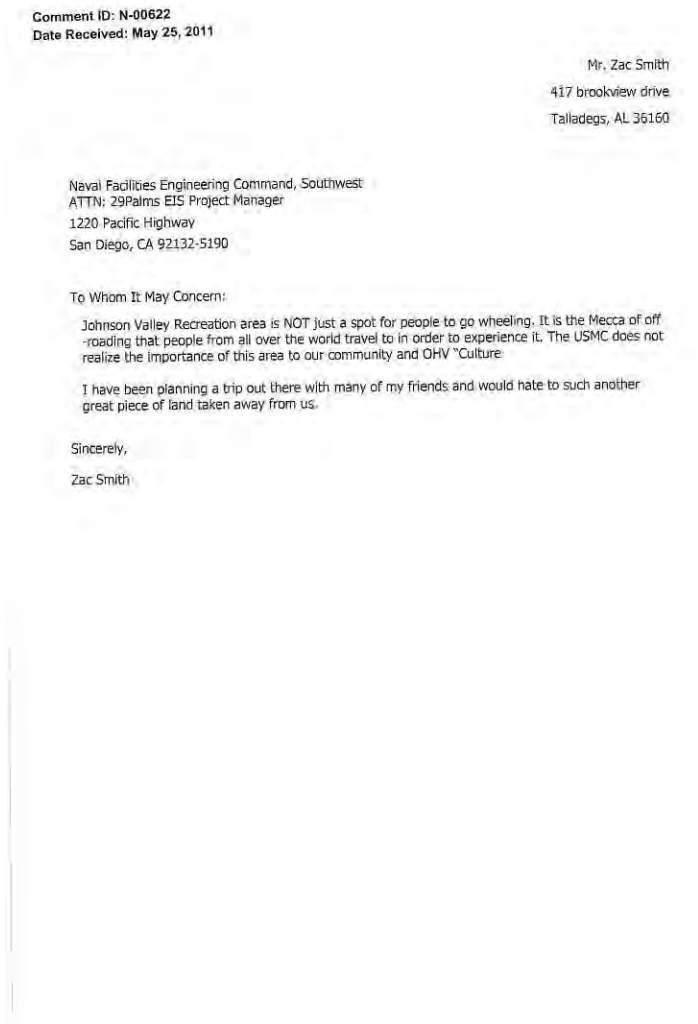
Johnson Valley has a lot of meaning to families around the world. For some like myself it is hard to explain to those who never visited. Telling friends and family I am headed to the California desert leaves some wondering why I would want to do such a thing. Over the past 10 years I have had the opportunity to introduce some of my friends and family to Johnson Valley and now they can communicate on the same level with me about what makes the place so great. Not to mention I have made MANY new friends while camping out on the lake bed. The night time camp fires on the lake bed are just important at the long days exploring the public land. Here on the east coast we do not have wide open public lands to roam around and explore. Johnson Valley should be preserved for many reasons other than people like myself who enjoying off-roading. It should be kept open because it is public land. We pay taxes, vote, and work hard everyday to make America what it is. Keep America open. I want my kids to experience the California desert the way I have been able to.



Sincerely,

Dan DuBose

Response to Comment N-00621:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

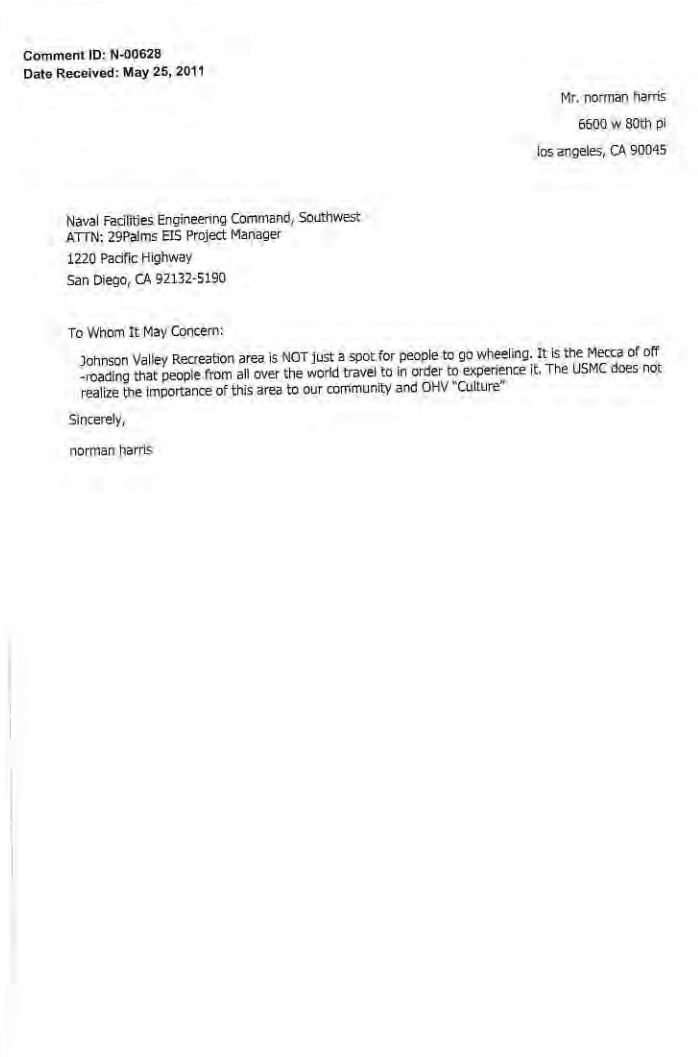
Regardless of the economy, fuel prices, etc... we still plan an annual trip to Johnson Valley. It is an amazing place for us to enjoy our ORV's and the loss of this area would be dramatic to the users, as well as the local small towns' economy.

Thank you

John Mathews

Sincerely,



John Mathews

Response to Comment N-00627:

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

Sincerely,

Matthew Pond

Response to Comment N-00645:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

To Whom It May Concern:

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off -roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture"

Sincerely,

John Turner

Response to Comment N-00646:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Mr. Simon Saines
1101 E Rudasill Road
Tucson, AZ 85718

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Johnson Valley Recreation area is NOT just a spot for people to go wheeling. It is the Mecca of off -roading that people from all over the world travel to in order to experience it. The USMC does not realize the importance of this area to our community and OHV "Culture".

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like myself, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Despite the massive increase of OHV enthusiasts in the United States, The public lands open to them are closing at an alarming rate due to route designation and Wilderness areas. The loss of Johnson Valley will further add to the cumulative loss to OHV. An in-depth study on the effects of the OHV community needs to be done.

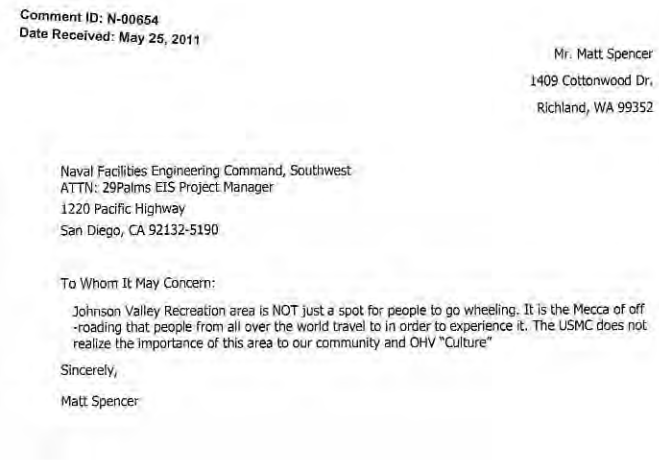
If the Johnson Valley OHV area is taken over by 29 Palms, it will encourage OHV enthusiasts to find other places to go. With the lack of sufficient space, it may encourage illegal OHV use in the area.

Yours Sincerely

Simon Saines

Sincerely,

Simon Saines



Response to Comment N-00653:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The Marine Corps understands the trend in availability of OHV land and has considered the loss of OHV land over time in Chapter 5 under cumulative impacts to Recreation (see Section 5.4.2 of the EIS). The EIS finds that the loss of availability of OHV land would be a significant impact under the proposed action as well as a significant cumulative impact.

As discussed in the EIS, implementation of the proposed action is likely to result in an increase in illegal riding in the form of trespass on BLM, state, or private lands (refer to Section 4.2). The potential for such illegal riding has been considered in the EIS; including potential adverse impacts on the Desert Tortoise (see Section 4.10). The EIS also evaluates several special conservation measures (refer to Section 4.2.2.1) to reduce these potentially significant impacts. Additional information regarding the potential for illegal OHV use has been added to Section 4.2.

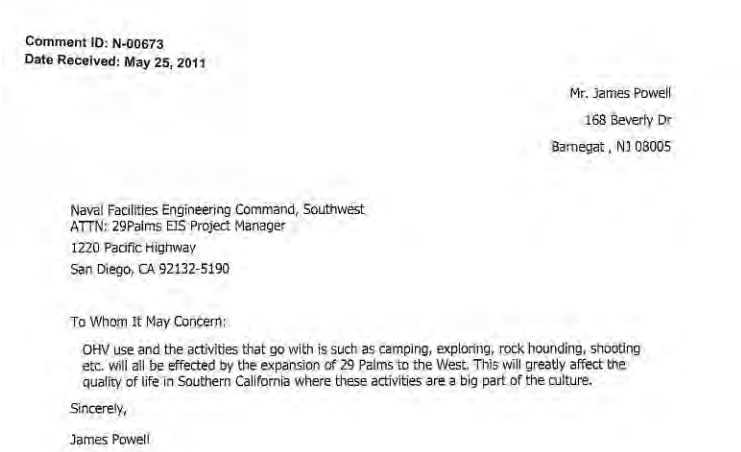
Apt 12
Davis, CA 95616

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

OHV use and the activities that go with is such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture. Another thing to consider is the fact that many of the active duty soldiers at 29 Palms recreate at JV. This would be a very unfortunate thing for your soldiers as well as the rest of the citizens of California, and the United States.



Sincerely,

Nick McMurray

Response to Comment N-00672:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

I make the trip out every year with my family to see a sibling that is stationed in the area and a big part of that trip is our families camping there. As part of this plan you will be removing a MWR area that is used by thousands of active duty and retired military every year. Look around the 29 Palms/SD/Pendelton military housing and every pickup with a dirt bike, or off road vehicle you see will be an indiviual or family goes there.

Sincerely,

David Galvagno

As a Marine Corps veteran I fully understand and suppor the Corps efforts to provide the proper and realistic training to our Marines who are fighting our current conflicts and will take up arms in the future however I do not believe that taking away public land that has been used and enjoyed by so many Americans for so many years is the proper thing to do.

We as tax payers support the military and public lands but we need some support too. Please reconsider your efforts and not shut down or limit access to thousands of American citizens many of whom are veterans the right to view this great country of ours that so many have fought and died for only to be taken away from us so we can "enjoy" it in the form of tv shows or old pictures.

Thanks for taking the time to hear me express my opinion.

Sincerely,

Shawn Ceeko

As a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

I whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, I firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

Response to Comment N-00696:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

To Whom It May Concern:

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

Given the Alternatives presented, I strongly support only a no-action Alternative.

The Marines have stated a desire to expand based on a 2004 goal and 1990's-era training, yet the Commandant of the Marines has noted that the Marines will be a more mobile expeditionary force and not an entrenched land army. The Marines of 2011 do not need an expanded 29 Palms.

The EIS has failed to detail realistic Environmental Impacts to the desert environment.

The EIS has failed miserably to detail the Impact to the recreating public who have traditionally used Johnson Valley.

The National economy is in crisis. Not only would a 29 Palms cause a reduction in income to local small businesses provided by the OHV public, it would also cost American taxpayers hundreds of millions, if not billons, to implement.

For these reasons--fatal flaws in the analysis--the proposed 29 Palms base expansion must be withdrawn.

Sincerely,

Thomas Heath

I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,

Ryan Mohondro

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS.

To Whom It May Concern:

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn. We do not need to expand the base in a time when the federal budget is out of control.

Sincerely,

Michael Boyle

Response to Comment N-00723:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

San Diego, CA 92132-5190

To Whom It May Concern:

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.
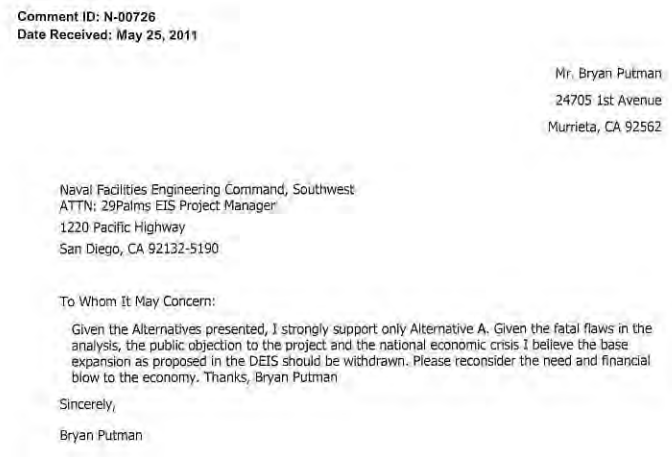
In addition, while I fully support the USMC, is this expansion really currently necessary with the current political situation? Do we still need to train Marines to fight on such a large scale? Another concern of mine is that OHV use and the activities that go with it such as camping, exploring, rock hounding, shooting etc. will all be effected by the expansion of 29 Palms to the West. This will greatly affect the quality of life in Southern California where these activities are a big part of the culture.
Please do not take Johnson Valley away from the citizens. Sincerely, John Mathys

Sincerely,

John Mathys



Response to Comment N-00725:

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

As described in Section 1.3 of the EIS, the purpose of the proposed action is to fulfill a current Marine Corps training requirement. In addition to the high deployment tempo in Afghanistan and Iraq, the Marine Corps must maintain high proficiency for other vital Marine Corps missions, including combined arms maneuver at the MEB level. In November 2006, the Marine Corps validated the need to establish a large-scale training area for live fire and maneuver training of a Marine Expeditionary Brigade (MEB) composed of three battalion task forces. Currently, the Combat Center can only accommodate live-fire and maneuver training for up to two battalion task forces. Additional land area is needed to ensure adequate separation distances for operation of the three battalions required for MEB-sized training.

The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.

As a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

I whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, I firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

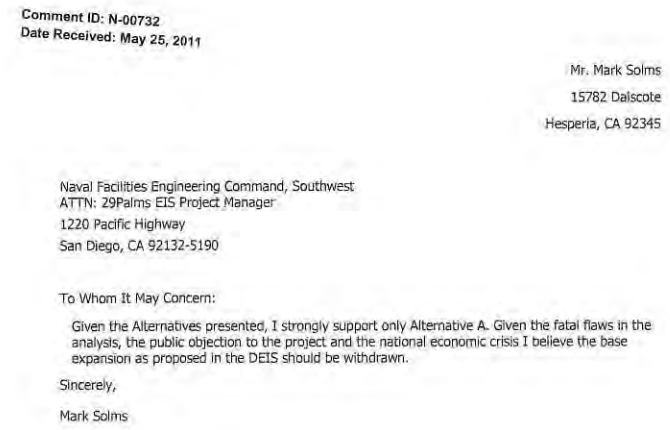
To Whom It May Concern:

Given the Alternatives presented, I strongly support only Alternative A. Given the fatal flaws in the analysis, the public objection to the project and the national economic crisis I believe the base expansion as proposed in the DEIS should be withdrawn.



Sincerely,

matt brister

To Whom It May Concern:

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like me, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Craig Baum

Response to Comment N-00755:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

As a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

I whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, I firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

Wade Leishman
President 2011/2012 - Santa Cruz 4 Wheel Drive Club (831) 332-8264 - Cell

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

San Diego, CA 92132-5190

To Whom It May Concern:

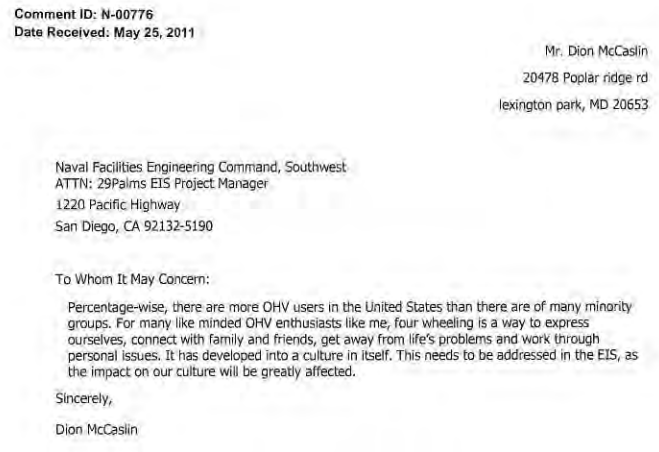
Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like myself, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

My husband was a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

We whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, we firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

Dewana Leishman

Sincerely,



Dewana Leishman

Response to Comment N-00775:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Percentage-wise, there are more OHV users in the United States than there are of many minority groups. For many like minded OHV enthusiasts like myself, four wheeling is a way to express ourselves, connect with family and friends, get away from life's problems and work through personal issues. It has developed into a culture in itself. This needs to be addressed in the EIS, as the impact on our culture will be greatly affected.

Sincerely,

Jessie Polanco

Response to Comment N-00799:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

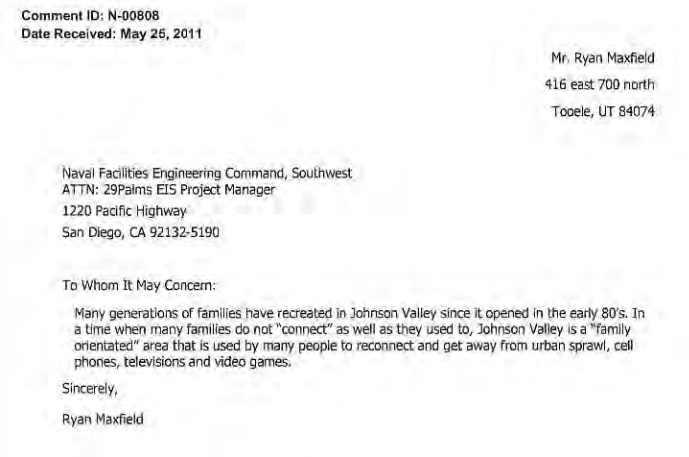
Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.



Sincerely,

Craig Baum

I have a young family who I would love to take to Johnson Valley in the future. Right now I have little ones that are still to young to take out. If Johnson Valley is taken away, my son will never get the chance to experience what I have. Please do not take this great place away from the people. It should be available for everyone to enjoy.

Thank you very much!

Sincerely,

Nick Glaser

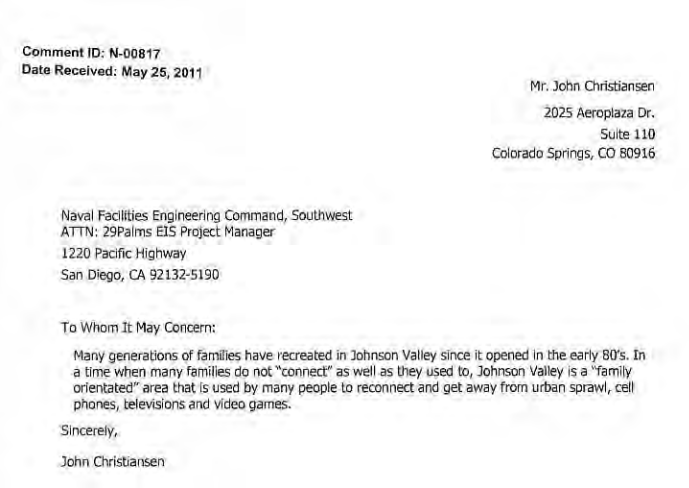
I would like to encourage 29 Palms to expand East instead of West. While this would take a re-designation of Wilderness areas; it is not currently used by the public and it would be easier to patrol than the current Johnson Valley OHV area. Furthermore, it would give the Marines more room to expand 29 Palms.

Sincerely,



Ryan Mohondro

Response to Comment N-00816:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

During the planning process, the Marine Corps determined that the de-designation of wilderness areas was not a viable option. Screening criteria #5 (see Section 2.3.1 of the EIS) states that any alternatives selected would avoid congressionally designated wilderness areas, parks, wildlife refuges, etc. Section 2.4.3 of the EIS describes an action alternative (Alternative 3) that would involve acquisition of land east of the current Combat Center without needing to de-designate wilderness area, and this alternative was carried forward for analysis in the EIS. Ultimately, Congress will make the final decision about proceeding with the proposed action.

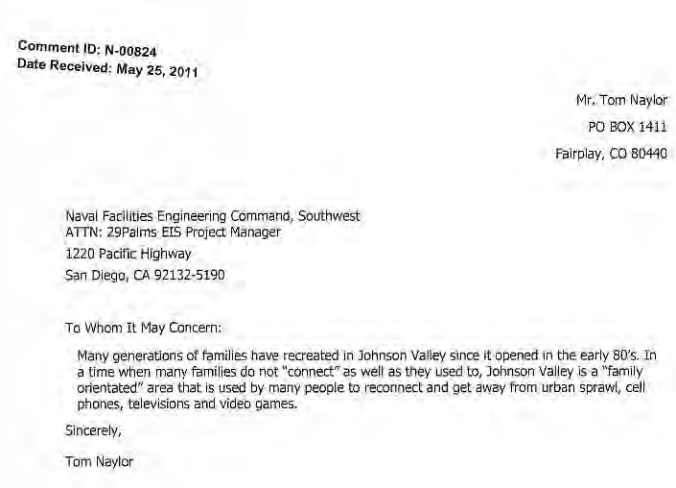
Military organizations require physical space to train and prepare for the defense of our country- Agreed. However, the same military organizations exist to protect our rights and freedom as citizens of the United States. Closing public recreational land inhibits our rights.

The 'Wilderness' land to the East is not open to the public for recreational use. Expansion here would not interfere with the rights of the citizens. Go East!

Thank You

Sincerely,



Todd Dewar

Response to Comment N-00823:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Tom Naylor

As a recent visitor of Johnson Valley OHV, I am very passionate about keeping it open and available for continued responsible/legal recreating and 4x4 Offroad use for years to come with my family.

I whole heartedly support our military and appreciate the need for training. Having visited the area and exploring much of the OHV area, I firmly believe there are alternatives for training areas which do not involve the closure of the Johnson Valley OHV Area for public use.

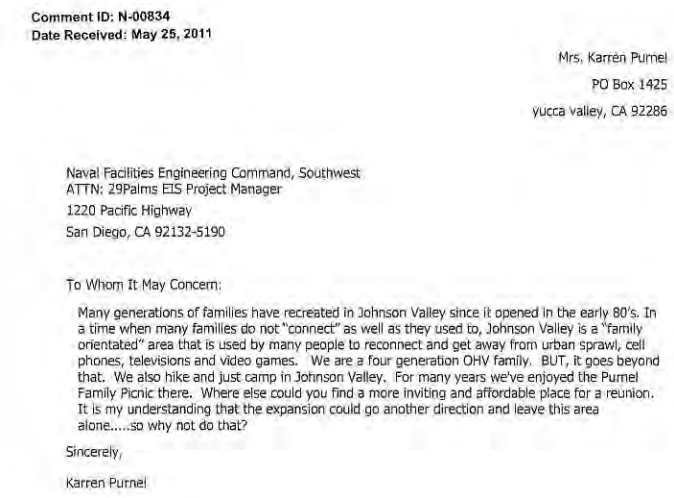
In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games. Times are hard; traveling is difficult for families. Camping in this beautiful desert is not only desirable but affordable. It generates income for the locals as well. We are a four generation off-road family. Not just in vehicles. We hike and camp in this area as well. It's awesome just being there. There are other alternatives to this expansion. Don't take this away from us.

Sincerely,

Larry Purnel



Response to Comment N-00833:

Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (see Section 4.3). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses that are dependent on limited recreational visitor spending and direct regional impacts from lost sales and tax revenue related to reduced recreational and film industry spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

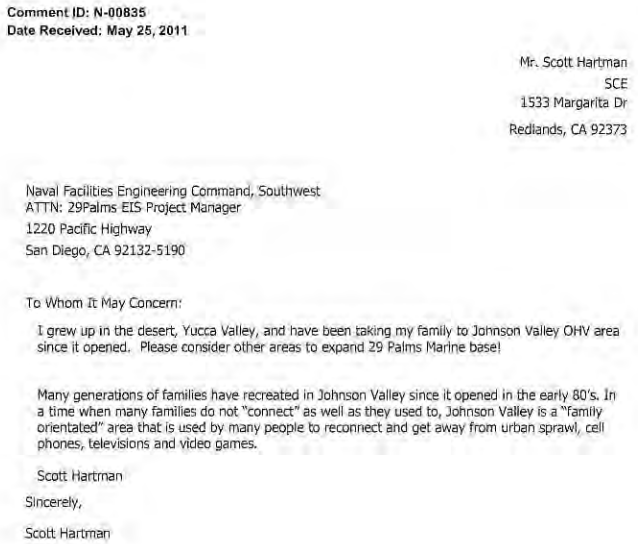
In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games. We are a four generation OHV family. BUT, it goes beyond that. We also hike and just camp in Johnson Valley. For many years we've enjoyed the Purnel Family Picnic there. Where else could you find a more inviting and affordable place for a reunion. It is my understanding that the expansion could go another direction and leave this area alone.....so why not do that?

Sincerely,



Karren Purnel

To Whom It May Concern:

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Sincerely,

Greg Swann

Response to Comment N-00846:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

Thousands of families travel to Johnson Valley to spend time together. In these times family orientation needs to be carefully considered. Children who participate in family activities like off-roading are less likely to join gangs or commit petty crimes for fun.

Sincerely,

Brandon Lowry

Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

Dear United States Marine Corps:

My name is Nick McMurray and I am writing this letter to express my conern, as well as that of my fellow outdoor enthusiasts, in your desire to expand TwentyNine Palms west into Johnson Valley.

Many generations of families have recreated in Johnson Valley since it opened in the early 80's. In a time when many families do not "connect" as well as they used to, Johnson Valley is a "family orientated" area that is used by many people to reconnect and get away from urban sprawl, cell phones, televisions and video games.

Not to mention in a suffering economy, the offroad racing series King of the Hammers has been a huge boost to the local area economy in a time when that revenue is badly needed.

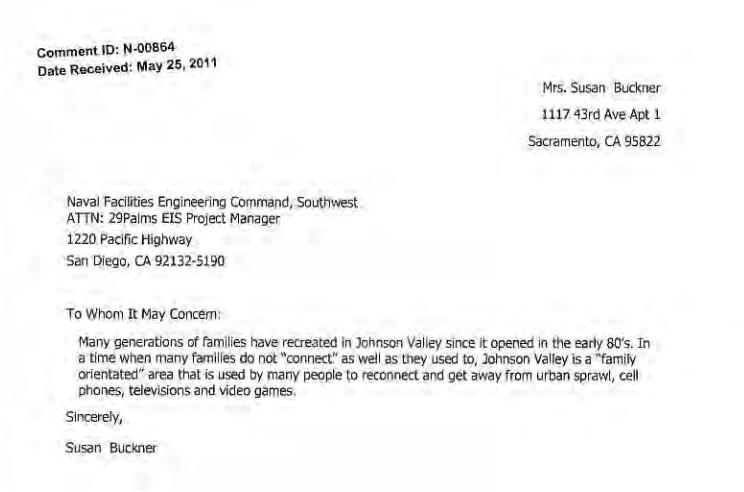
I respect the military, and especially the Marines and want them to continue to train to be the best fighting force on this planet. However, I think this can be accomplished just as easily by expanding EAST not WEST.

I appreciate you taking the time to read this letter, and hope you make the right decison. Thank you.

-Nick McMurray
Friends of Greenhorn
Friends of Tahoe National Forest
President, Nevada County Crawlers

Sincerely,

Nick McMurray



Response to Comment N-00863:

Thank you for your comment. The Marine Corps understands the importance of Johnson Valley for recreation and the EIS analysis finds that acquisition of land within Johnson Valley would cause a significant impact to recreation, even under alternatives involving restricted public access to acquired areas. Under each of the action alternatives, many of the current recreational opportunities and uses would continue to be available within specific portions of Johnson Valley and during various portions of the year.

The EIS evaluates socioeconomic impacts under each of the action alternatives (refer to Section 4.3 of the EIS). As noted in the EIS, there is expected to be a direct economic impact to individual small businesses and direct regional impacts from lost sales and tax revenue related to reduced recreational spending.

Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordinance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

No Alternative has clearly made any substantive, detailed description of how a Shared Use area might work.

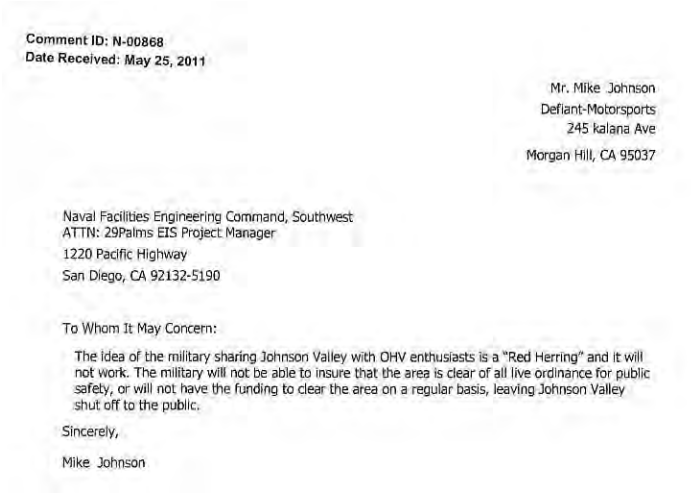
I believe this is a diversionary tactic in the EIS process.

Due to liability concerns and the risk of the public coming in contact with unexploded ordinance, shared use is unlikely.

Due to budget constraints and the time required to clear the area regularly and prior to the public's turn to use the area, shared use is unlikely.

Due to safety and security concerns with the public having access to a military installation, shared use is unlikely.

Please remove the Shared Use Alterntative, as it is not a genuine possibility.



Sincerely,

Thomas Heath

Response to Comment N-00867:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

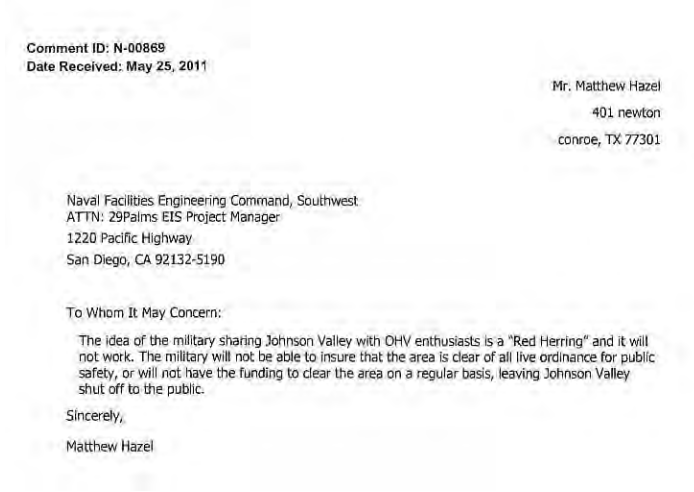
Naval Facilities Engineering Command, Southwest
ATTN: 29Palms EIS Project Manager
1220 Pacific Highway
San Diego, CA 92132-5190

To Whom It May Concern:

The idea of the military sharing Johnson Valley with OHV enthusiasts is a "Red Herring" and it will not work. The military will not be able to insure that the area is clear of all live ordinance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.



Sincerely,

Dave Storm

Response to Comment N-00870:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. If one of these alternatives is selected by the Department of the Navy and approved by Congress, the Marine Corps would be required to implement the selected alternative as described in the Final EIS or they would be legally required to comply with the NEPA process to assess potential impacts of some other course of action.

The military will not be able to insure that the area is clear of all live ordinance for public safety, or will not have the funding to clear the area on a regular basis, leaving Johnson Valley shut off to the public.

This scenario has the same end game as just shutting Johnson Valley down altogether. There is a viable solution which allows both a solution for the Marine Corps and the OHV crowd alike... Go East!

Thank You

Sincerely,

Todd Dewar

Response to Comment N-00873:

Thank you for your comment. The Marine Corps has determined that Alternatives 4, 5, and 6 (all of which provide for Restricted Public Access to some or all of the acquired land area approximately 10 months of the year) are feasible alternatives that would allow it to meet at least the minimum identified training requirement. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and will be evaluated by the Department of the Navy during its decision process. Ultimately, Congress will make the final decision about proceeding with the proposed action. The Marine Corps appreciates your comment and involvement in the NEPA process.

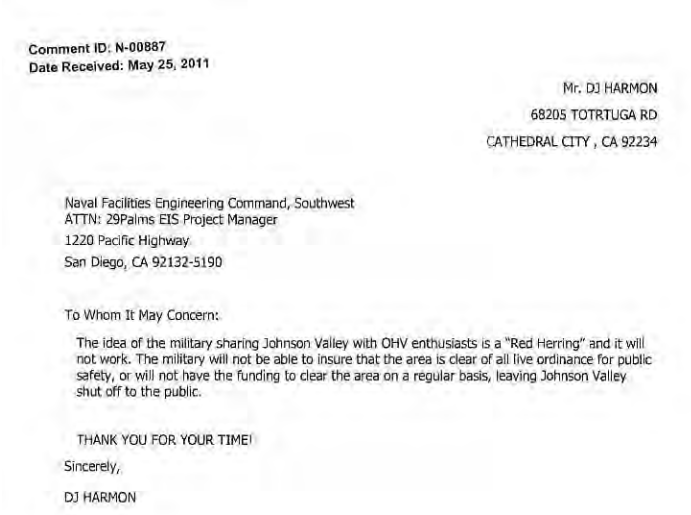
This idea needs to be completely removed from the table. It simply will not work. Coordination of when a group can use the area would be a logistical nightmare, and we all know that the Corps use of it would come before public use.



Sincerely,

brandon Lowry
